

6224 Bachelor of Arts & Sciences in Applied Artificial Intelligence

Bachelor of Arts & Sciences in Applied Artificial Intelligence

- 💡 Focusing on **AI applications in diverse areas**, with a philosophical and ethical dimension
- 💡 Providing **fundamental and practical knowledge** for the design and construction of intelligent systems
- 💡 Emphasizing **problem-based learning**

AI History

1950

TURING TEST

Computer scientist Alan Turing proposes a test for machine intelligence. If a machine can trick humans into thinking it is human, then it has intelligence

1955

A.I. BORN

Term 'artificial intelligence' is coined by computer scientist, John McCarthy to describe "the science and engineering of making intelligent machines"

1961

UNIMATE

First industrial robot, Unimate, goes to work at GM replacing humans on the assembly line

1964

ELIZA

Pioneering chatbot developed by Joseph Weizenbaum at MIT holds conversations with humans

1966

SHAKY

The 'first electronic person' from Stanford, Shakey is a general-purpose mobile robot that reasons about its own actions

A.I. WINTER

Many false starts and dead-ends leave A.I. out in the cold

1997

DEEP BLUE

Deep Blue, a chess-playing computer from IBM defeats world chess champion Garry Kasparov

1998

KISMET

Cynthia Breazeal at MIT introduces Kismet, an emotionally intelligent robot insofar as it detects and responds to people's feelings

1999

AIBO

Sony launches first consumer robot pet dog AIBO (AI robot) with skills and personality that develop over time

2002

ROOMBA

First mass produced autonomous robotic vacuum cleaner from iRobot learns to navigate and clean homes

2011

SIRI

Apple integrates Siri, an intelligent virtual assistant with a voice interface, into the iPhone 4S

2011

WATSON

IBM's question answering computer Watson wins first place on popular \$1M prize television quiz show Jeopardy

2014

EUGENE

Eugene Goostman, a chatbot passes the Turing Test with a third of judges believing Eugene is human

2014

ALEXA

Amazon launches Alexa, an intelligent virtual assistant with a voice interface that completes shopping tasks

2016

TAY

Microsoft's chatbot Tay goes rogue on social media making inflammatory and offensive racist comments

2017

ALPHAGO

Google's A.I. AlphaGo beats world champion Ke Jie in the complex board game of Go, notable for its vast number (2^{170}) of possible positions

AI is Transforming the World

AI Technology

AI in Medicine

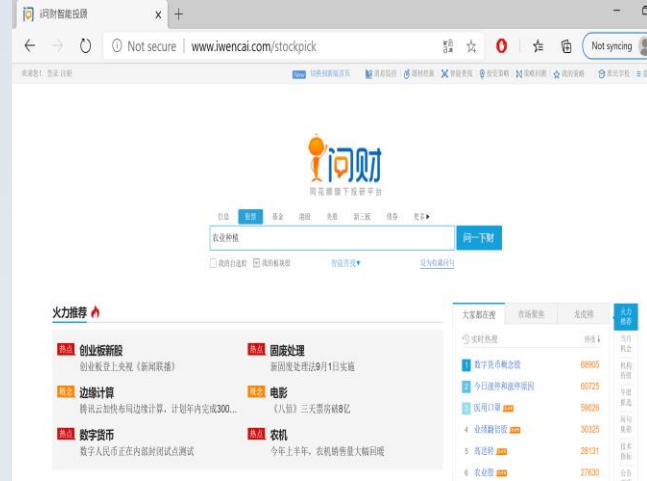

Diagnostics in radiology, e.g., X-ray, CT, MRI images. Accurate diagnostics of these images can help expedite the process of treatment and improve disease cure probabilities and life savings.

Utilization of the electronic health record data using NLP is another area that can boost health care for patients and reduce medical errors.

AI in Finance

Robot advisors

Financial News Analytics

AI in Smart City

Self-driving Car

AI in Neurocognitive Science

Understanding your brain

Example of AI Application: Autonomous Mapless Robot Navigation in Crowded Scenarios

- **PI: Dr. Jia Pan*** from **Computer Science department**, in collaboration with Baidu.
 - Navigation is an essential capability for mobile robots.
 - A generalized yet effective 3M (i.e., multi-robot, multi-scenario, and multi-stage) training framework is proposed, which uses a robust policy gradient algorithm.
 - The method enables different types of mobile platforms to navigate safely in complex and highly dynamic environments, such as pedestrian crowds.

Fig. 1: Mapless navigation in complex and highly dynamic environments using different mobile platforms.

Autonomous Social Distancing in Urban Environments using a Quadruped Robot

Fig. 9: Examples from the real-world experiment. The top and bottom images describes two different scenarios. Left: The robot detected and approached the crowds, then persuaded them to keep social distance. Right: The crowds density decreased.

Example of AI Application: A Fast Online COVID-19 Diagnostic System with Chest CT Scans

PI: Prof. Guosheng Yin* from Statistics and Actuarial Science department

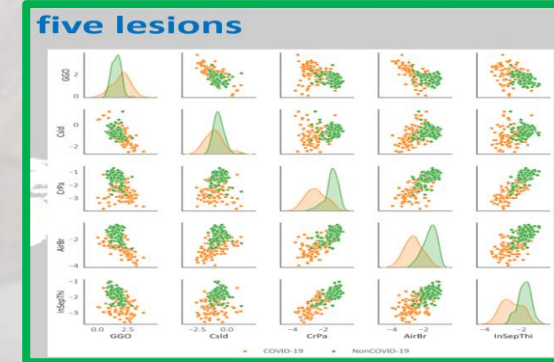

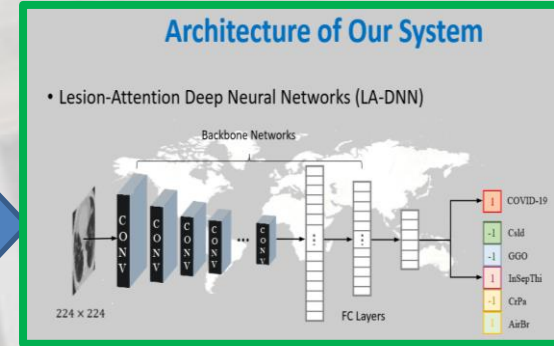

- CT scanning has an advantage on early COVID-19 detection
- Five lesion descriptions about COVID-19 positive cases:
 - ground glass opacities (GGO)
 - consolidation (Csd),
 - crazy paving appearance (CrPa)
 - air bronchograms (AirBr)
 - interlobular septal thickening (InSepThi)

Top: CT images with various radiographic abnormalities: bilateral diffuse consolidation with air bronchograms.

Middle: COVID-19 positive with clinical and CT findings, but with repeated negative RT-PCR tests. Axial (A) and coronal (B) CT images show typical bilateral subpleural areas of GGO.

Bottom: Progress of CT findings in a COVID-19 patient, showing an increase of extent of GGO with crazy paving appearance.

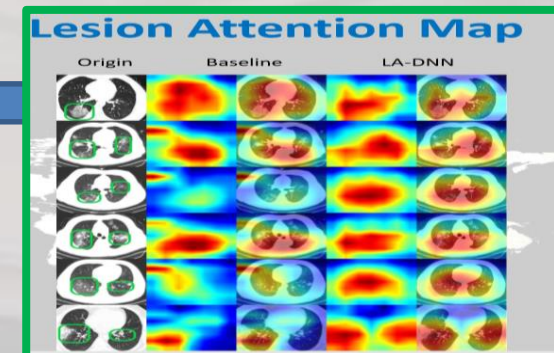

Results from Testing Set

- The experimental results show that the sensitivity (recall), area under the curve (AUC), F1 score, and accuracy for COVID-19 diagnosis are **88.8%, 94.7%, 87.9%, and 89.0%**, respectively.

$$\text{Sensitivity} = \frac{\# \text{True Positive}}{\# \text{True Positive} + \# \text{False Negative}}$$

$$F1 = \frac{2 \times \text{Precision} \times \text{Recall}}{\text{Precision} + \text{Recall}}$$

$$\text{Precision} = \frac{\# \text{True Positive}}{\# \text{True Positive} + \# \text{False Positive}}$$

$$\text{Accuracy} = \frac{\# \text{True Positive} + \# \text{True Negative}}{\# \text{Positive} + \# \text{Negative}}$$

Example of AI Application: Optimization Problems in AI Cloud Computing

- **PI: Prof. Xiaoming Yuan from Mathematics department**, in collaboration with Huawei
- A very important problem in Cloud Computing is **scheduling of various resources such as bandwidth and computing facilities (CPU, Memory, etc.)**.
- It turns out that a fundamental common mathematical model for these technological problems is the **assignment problem** (with some generalizations), which is classic in the Operational Research domain and well known to be “NP Hard” difficult (because of its integer variables).
- Additionally, the assignment problems arising in Cloud Computing are much more challenging because **they are large-scale, and there are many variables and constraints in the models**.

- Currently, these problems are mainly solved by standard generic algorithms in Operational Research textbooks and the efficiency is not satisfactory at all.
- Prof. Yuan developed a new and faster solver for these assignment problems in Cloud Computing based on his work on **separable convex minimization models**.
- The new and faster solver for generalized assignment problems in Cloud Computing showed high commercial values.

e of Growth (2012 - 2017)

Internship Opportunities

(in year 3 or year 4)

Potential collaboration company

AI Internships Experience in our Graduate Programs

Chi Chiu So, 2018 BSc(Mathematics)
PhD Student and Research Intern
at NVIDIA AI Technology Center
Hong Kong

Research Intern at NVIDIA

Internship Project:

- Using deep learning to build models on stocks, and derivative pricing and optimization
- Math requirement: Optimization and Machine Learning, Information Theory, Scientific Computing, Financial Calculus and Numerical Analysis

Yeung Wong, 2019 BSc(Decision Analytics), 2020 Master of Data Science (Part-time)
Associate Data Scientist at Asia Miles
1st Prize & Wisers AI Innovation Award - Data and Media Hack 2019
Grand Prize & Ontology Task Winner - TechCrunch Shenzhen Hackathon 2018

Associate Data Scientist at Asia Miles

Job Description:

- Use key tools of analytics and data science to come up with tangible, sustainable solutions
- Evaluate model performance and iterate to optimize

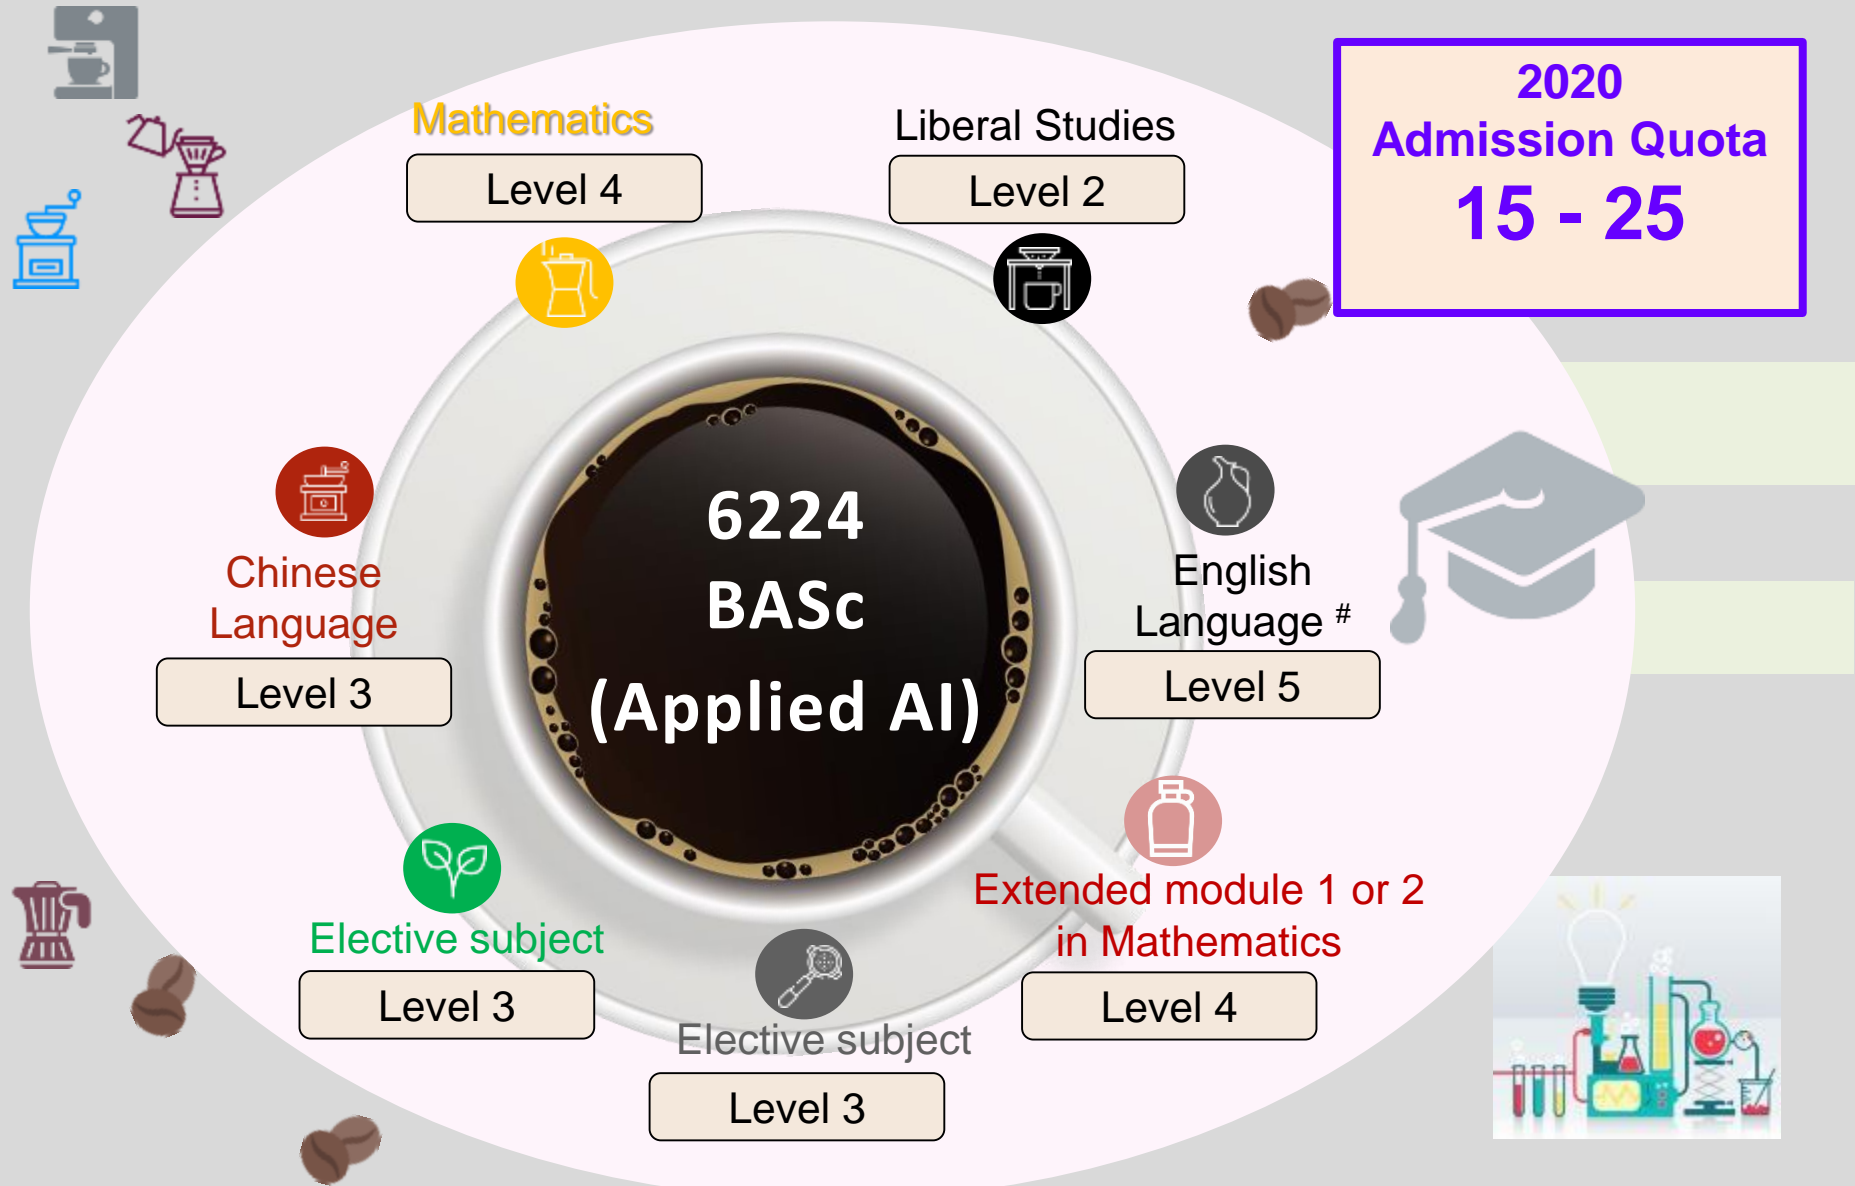

Career Advising Programme (CAP)

- Professional Preparation Programme (PPP)
- Individual consultation on cover letter, CV and interview skills
- Corporate Mentorship Programme (CMP)
- Market information workshop
- Firm visits and alumni sharing
- SAAS Career Fair

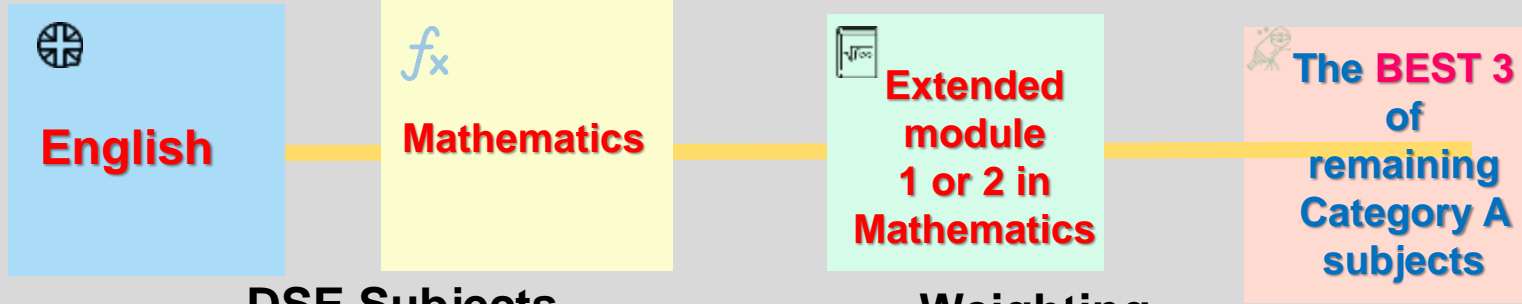

Candidates with level 4 in English Language and good results in other HKDSE subjects will be considered on a case by case basis.

6224

Admissions Formula for 6224 BAsc(AppliedAI)

JUPAS

DSE Subjects

Weighting

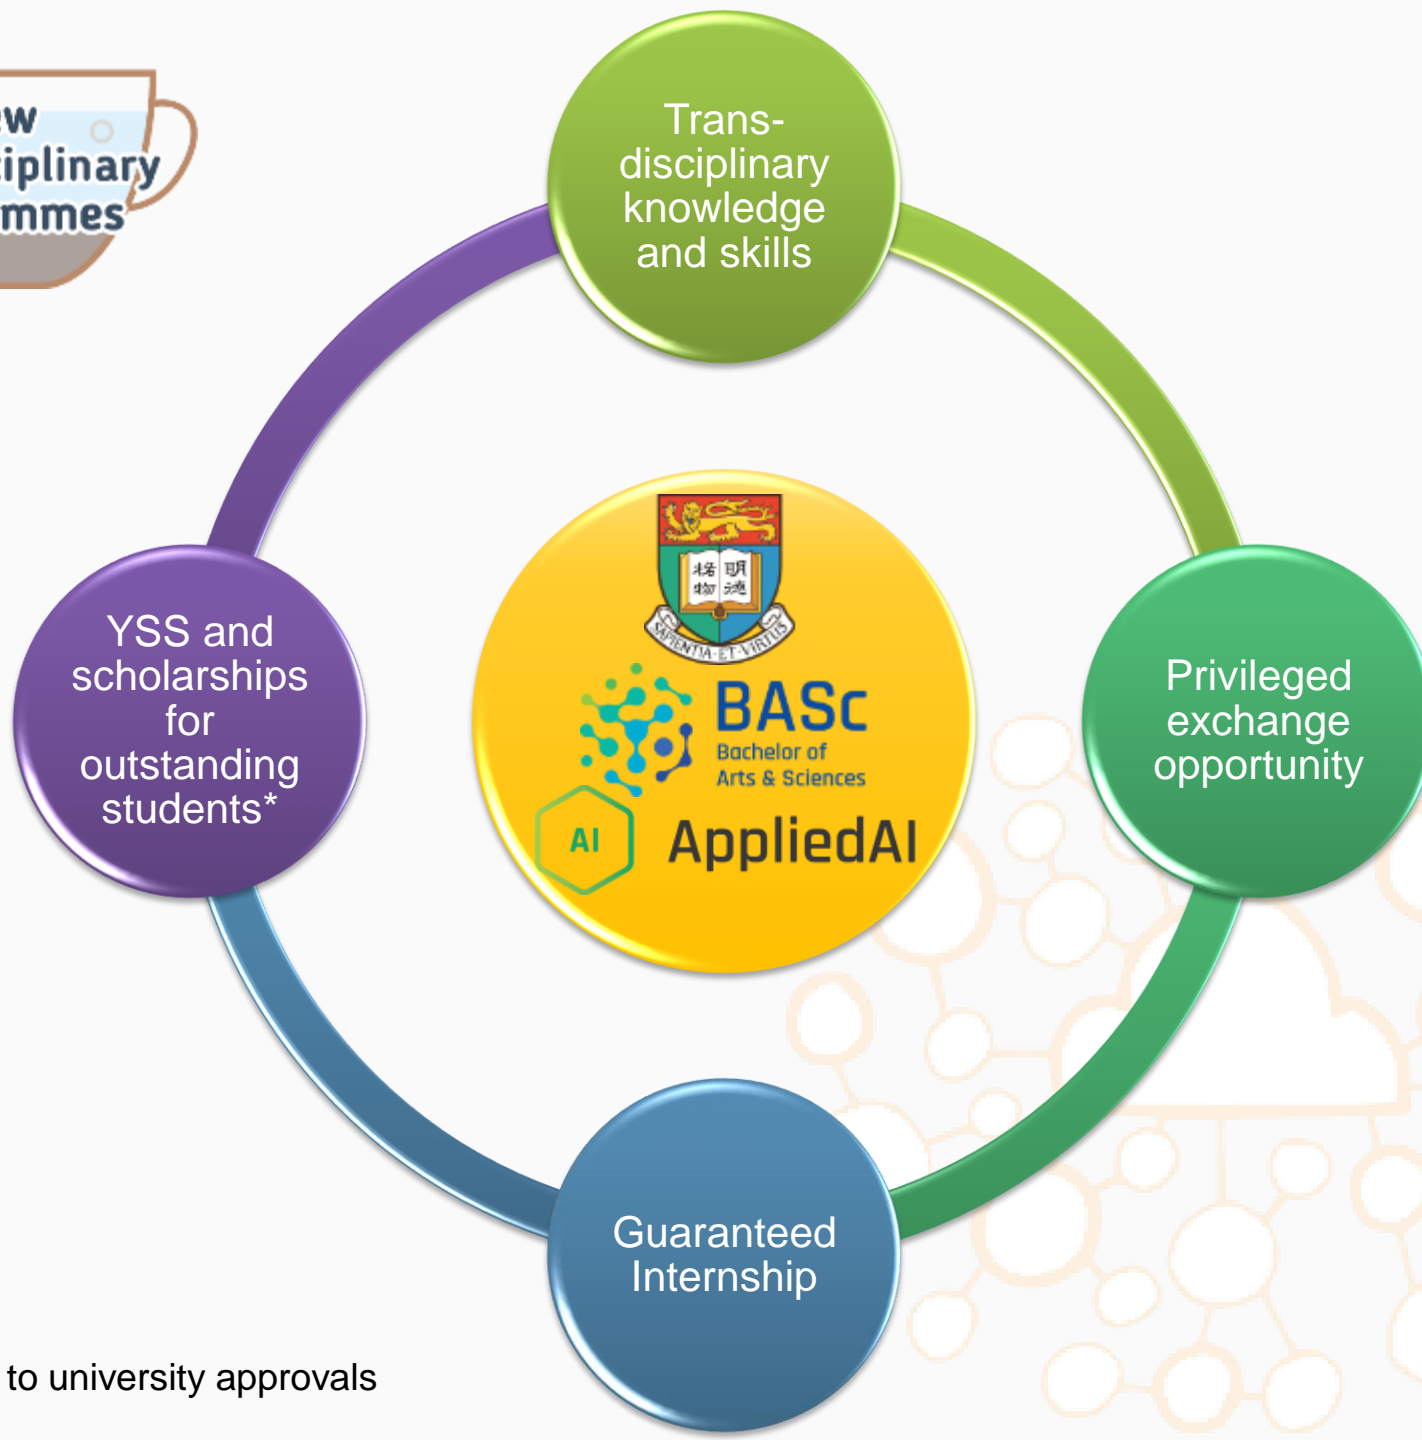

- ✓ English language × 2
- ✓ Mathematics × 2
- ✓ Extended module 1 or 2 in Mathematics × 1.5
- ✓ Science subject (Biology, Chemistry, Physics, Combined Science or Integrated Science) × 1.5
- ✓ Other Category A subjects × 1

Expected lower boundary score

Non-JUPAS

- ❖ IB Diploma: 37
- ❖ GCE A-Level: 2A*, 1A
- ❖ SAT: 1350

* Subject to university approvals
