Master of Science in the field of

FOOD INDUSTRY: MANAGEMENT AND MARKETING

Driving professionalism in modern food industry

2024-25 (September 2024 intake)
Established by the School of Biological Sciences in 1998, the MSc in the field of Food Industry: Management and Marketing programme:

- offers advanced training in management skills and marketing research methodology for food and/or nutritional science graduates working or planning to work in the food industry
- differs from other management programmes in that students are taught marketing and management skills relevant to the food industry, using case studies drawn from the food sector
- opens opportunities in overseas experiential learning in China, Canada, Singapore and other Asian and European countries
- Instruction is given by the academic staff and experts both locally and from overseas with relevant industrial experience

- Quacquarelli Symonds (QS)
  - #26 World Rankings 2024
  - #2 Asia Rankings 2024
- Times Higher Education (THE)
  - #35 World Rankings 2024
  - #4 Asia Rankings 2023

Top-notch Scientists in the Faculty

Clarivate Analytics’ Essential Science Indicators

- 18.3% of our professoriate staff (average over the past decade) are classified Top 1% scholars

World-class rankings of HKU

- #26 Times Higher Education (THE) World Rankings 2024
- #2 Asia Rankings 2024

For food and/or nutritional science graduates – an advanced training in management skills and marketing research methodology

Emphasises practical approaches to:

- quality assurance and safety management in food production, supply chain and distribution of food products
- waste management and control
- market research, business and financial strategies, organisational culture, product development and evaluation
- future foods and biotechnology, food culture and economics

Study load

- Credits: 63 credits
- Learning hours: 1,260-1,890 hours (including 300 hours for project and contact hours of 252-378 hours)
- Teaching takes place mainly on weekdays and some Saturday afternoons
- Students are expected to participate in class discussion, conduct group and individual projects with continuous assessments

Assessment

- Written work forms an essential part of the programme
- Courses in this programme are assessed in different ways, according to the requirements of each course:
  a. by coursework assessment only
  b. by examination only
  c. both by coursework assessment and by examination
- The project report will be assessed by examiners and participation in the seminars at which students present their work is one of the requirements for the completion of this component of the degree curriculum

Programme duration

- Full-time: 1 year

Tuition fees

- Composition fee: HK$180,000 (subject to approval)
- Students are required to pay Caution Money (HK$350, refundable on graduation subject to no claims being made) and Graduation Fee (HK$350)
- All full-time students will be charged a student activity fee of HK$100 per annum to provide support for activities of student societies and campus-wide student events

Network

- Food industries and institutions in Asia Pacific and Mainland China

Transferable skills

- Food product quality control
- Food product development and marketing
- Human resource management in food industry
- Strategic management, economics
- Food security

Career development

- Management in food related cooperations
- Marketing, operations, ESG
- Food retail manager
- Entrepreneurship in food industry
- Food and produce broker
- Food product developer

The fee shall generally be payable in 2 instalments over 1 year.

WHAT YOU WILL LEARN

Design of curriculum (full-time)

Compulsory courses (51 credits)

Core Courses
FOOD7001 Quality assurance and management I (6 credits)
FOOD7002 Food industry management (6 credits)
FOOD7006 Future food (6 credits)

Elective courses (12 credits)
Select any two elective courses from the following list:

- FOOD7003 Advance food technology (6 credits)
- FOOD7004 Food studies: exploring economics, culture, and environmental implications (6 credits)
- FOOD8001 Food innovation & product development (6 credits)
- FOOD8002 Food marketing strategies (6 credits)

Total credits 63

Remark: The programme structure will be reviewed from time to time and is subject to change.

Compulsory courses
FOOD7001 Quality assurance and management I
This course includes an overview of the practical aspects of quality management not only from consumers, but also stakeholders’ perspectives in managing a cost effective quality department in multinational corporations. The application of different quality management systems by international food corporations will be discussed. The management of food laboratories as well as international lab accreditation requirements will be introduced in this course. Students will learn the different phases of crisis management supplemented with case studies for discussion and practice. Students will learn the skills in risk management. Troubleshooting techniques for root cause analysis during product failure including microbiological troubleshooting will be discussed. Quality process improvement tools will also be introduced.

FOOD7006 Future food
Due to social and consumer demands, practical modifications in food industries are inevitable globally. Notwithstanding, the use of advanced technology, AI and urban farming has become essential worldwide. Students will learn up-to-date approaches in sustaining food retail such as resources, digital business and the use of big data, and the application of modern farming in the city. Guest lectures from local and international experts will be invited to exchange real-life experience in the current food industry.

FOOD7007 Marketing management
The course is designed to provide an understanding of the role of marketing in multinational business organisation and to formulate effective marketing programme. Sharing sessions with international industry practitioners will be arranged to deliver the topics on marketing in food industry (F&B operations & marketing, Profiling and tracking system, food safety management and accreditation of ISO 22000 standard to create/deliver customer value) and field work will be arranged to visit food industry settings in Hong Kong.

FOOD7008 Organisational behaviour
The course aims to equip students with a better understanding of the complex array of behaviours in organisational life in global entities. It will analyse the determinants of human behaviour in an organisation at the individual, group and organisational levels. Topics covered will include motivation, performance management, group dynamics, leadership, organisational culture, management of conflict, management ethics, and the leading change of these topics.

FOOD8009 Project
This is an individual or group research project to be carried out under the supervision of one or more faculty members in local or overseas institutions. Students may propose their own topics and approach potential supervisors, or they may consider those suggested by the faculty members. The proposed project title must be submitted for approval before starting the study. The candidate shall make a formal presentation on the subject of his/her project during the final semester of the teaching programme.

FOOD8010 Quality assurance and management II
This course includes an overview on the practical aspects of quality management not only from consumers, but also stakeholders’ perspectives in managing a cost effective quality department in multinational corporations. The application of different quality management systems by international food corporations will be discussed. The management of food laboratories as well as international lab accreditation requirements will be introduced in this course. Students will learn the different phases of crisis management supplemented with case studies for discussion and practice. Students will learn the skills in risk management. Troubleshooting techniques for root cause analysis during product failure including microbiological troubleshooting will be discussed. Quality process improvement tools will also be introduced.

FOOD8011 Food innovation & product development
The course aims to equip students with a better understanding of the complex array of behaviours in organisational life in global entities. It will analyse the determinants of human behaviour in an organisation at the individual, group and organisational levels. Topics covered will include motivation, performance management, group dynamics, leadership, organisational culture, management of conflict, management ethics, and the leading change of these topics.

FOOD8012 Food marketing strategies
This course covers the essential worldwide. Students will learn up-to-date approaches in sustaining food retail such as resources, digital business and the use of big data, and the application of modern farming in the city. Guest lectures from local and international experts will be invited to exchange real-life experience in the current food industry.
WHAT YOU WILL LEARN

GMP and other international safety standards and religious related standards (GFSI, ISO, BRC, Halal, Kosher) will be introduced in this course. Through these foundations and exercises of problem solving, students will be able to apply the knowledge in decision making of crisis and the use of modern communications for intervention.

**FOOD8013 Business and financial strategies**

This course aims to prepare the student for a successful business career with a broad understanding of the importance and complexity of strategic decisions and the way they integrate other aspects of formulating business, and financial strategy. It examines the rationale of decisions that determine the future direction and effectiveness of organisations. The perspective taken is that of the general manager, the owner, CEO, president, or further CFO. It focuses on the skills required for formulating and implementing solutions for critical problems in complex business situations and implementing them. Practically the course covers not only financial management, but also business/ corporate level strategies.

**Elective courses**

**FOOD7003 Advance food technology**
The effects of processing and packaging on the shelf lives and changes in physical and chemical characteristics of food products will be discussed. Emphasis will be placed on the food preservation methods to extend product shelf lives as applicable to the popular local food products. Methods for sensitive nutrients and techniques to preserve the characteristic aroma and taste of a product in processing modification will be reviewed. Issues related to nutrient enrichment and fortification will be discussed. Global case studies will be used to dispel the many misplaced information on food preservation and alternatives to extending shelf life of foods without the use of the traditional food preservatives. In addition, understanding of various newly world-visionic food ingredients for health will be introduced; reformulation to reduce sugar and fat as well as reinforcement of fibres to foods are to be discussed.

**FOOD7004 Food studies: exploring economics, culture, and environmental implications**
The course will explore a range of themes related to food from various disciplines including but not limited to economics, social sciences, cultural studies, environmental studies, and food sciences. The course will have two distinct parts. In part one, traditional approaches of food studies from the economics and agri-business perspectives will be examined. Various historical and contemporary social issues across the globe that intervene our daily food consumption with an interdisciplinary perspective will also be discussed. In part two, current applications and limitations of food waste treatment technologies will be addressed. The handling and management of food waste is an important part of the green circular economy strategy which focuses on food waste minimization, conversions and valorization. These components will be further explored, by including the social, economic, and environmental implications associated with food waste.

**FOOD8011 Food innovation & product development**
The role of research from the management perspective in global corporations, the R&D process and the impact of technological innovation on the development of new products will be discussed. The impact of global issues in the direction of research and development for food corporations. The risks and opportunities of new product development for international markets. Interrelationship between product recipes, processing and food packaging in the food product development process will be discussed together with the effect of product formulations on food safety, sustainability, fair trade and business ethics will be highlighted.

Cultural aspects will be emphasised as an important consideration in developing new market frontiers. Differences between basic research and application research as applied in food product development will be deliberated along with career prospects. The difference in the product development process among food companies as compared to more established FMCG global food companies will also be discussed with case studies, together with illustrations in actual product formulations. Consumer survey and data analysis will be covered. The application of information technology in food manufacturing and catering, and the concepts of logistics in supply chain and new regulations in cold chain and food delivery will be discussed.

**FOOD8012 Food marketing strategies**
Marketing approaches and techniques applied for food products include test marketing, segmentation, positioning, branding, targeting and consumer research. Notwithstanding the approach of market strategy including product choice, pricing, promotion and distribution in relation to the food industry will be discussed. In course, advanced knowledge of the factors specific to food effecting the global sustainability of food production and the role that innovation can play in the sector will be addressed. Appreciation of the complex and global environment in which the food business currently operates and the uncertainties and risks attached to food production will be examined. The course cover issues and tasks that marketing managers face in dynamic marketplaces and the concepts that can be used for decision making and understand consumer behaviours towards food products sold in domestic and international market will be discussed.
