SECTION I Aim and Learning Outcomes

Degree : Bachelor of Arts and Sciences in Applied Artificial Intelligence

Aim : The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to recruit excellent students, equip them with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences.

Learning Outcomes of Applied AI Programme

By the end of this programme, students should be able to:

- apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (2) be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (4) communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (5) gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)

SECTION II Credit Unit Statement of the BASC(AppledAI) Degree Curriculum

1. General guideline for contact hour requirement in the BASc(AppliedAI) Degree Curriculum

- (a) A 6-credit course has around 120 total study hours, including contact hours, study time, assignment and assessment.
- (b) About 30% of the total study hours are actual contact hours in the form of a class, e.g. lecture and tutorial/discussion hours.
- (c) A 6-credit course has around 24-36 lecture hours.
- (d) For lecture-based courses, normally there will be tutorial/discussion sessions.
- (e) For courses employing a non-lecture or lab-based approach, e.g. IT-based or project-based courses, students are expected to devote about 120-180 hours for a 6-credit course, and 240-360 hours for a 12-credit course.

2. Credit Unit Statement of the BASc(AppliedAI) Degree Curriculum

The BASc(AppliedAI) degree curriculum consists of three major types of courses based on the learning activities. The majority of courses in the programmes are 6 credits. Examples of the contact hour requirements for the three categories of courses are described as follows.

(a) Lecture-based courses (6 credits)

Contact hours: 24-36 hours of lectures and/or tutorials for 6 credits

These courses are taught predominantly by lectures and tutorials. Assessment is by a combination of examination (0-75%) and continuous assessment (25-100%). Continuous assessment tasks include written assignments (totaling no more than 8,000 words) such as essays and project reports, and oral presentations. The requirement for a 3-credit lecture-based course will be about one-half of that of a 6-credit lecture-based course. Details of the assessment tasks can be found in the description of individual courses.

(b) Lecture with laboratory component courses (6 credits)

Contact hours for 30-36 hours of lectures and/or tutorial

These courses are taught by a combination of lectures and laboratory/practical sessions. Assessment is by a combination of examination (0-50%) and continuous assessment (50-100%). Continuous assessment tasks include coursework (totalling no more than 8,000 words) such as assignments, essays, laboratory reports, and project reports, and oral presentations. Details of the assessment tasks can be found in the description of individual courses.

(c) Project-based courses (6 and 12 credits)

These courses aim at providing students with an opportunity to pursue their own research interest under the supervision of a teacher. The teacher normally meets with the student weekly to discuss project progress. Assessment task is normally through research reports or a dissertation (totalling no more than 10,000 words for a 6-credit course and 20,000 words for a 12-credit course). Oral presentation will form part of the assessment. Details of the assessment tasks can be found in the description of individual courses.

Biology	3 or above	Biology (SL/HL)	Biology (AL)	Biology	Biology					
Chemistry	3 or above	Chemistry (SL/HL)	Chemistry (AL)	Chemistry	Chemistry					
Physics	3 or above	Physics (SL/HL)	Physics (AL)	Physics	Physics B or C	Equivalent to				
Mathematics	2 or above	Mathematics (SL)/Mathematical Studies (SL)	Mathematics (AL)	Mathematics Level 1 or 2		fulfillment of all HKDSE requirements				
Mathematics + (M1 or M2)	2 or above	Mathematics (HL)/Mathematical Studies (HL)	Pure Mathematics (AL) Further Mathematics (AL)		Calculus AB or BC					

Table of Equivalence between HKDSE and Other Qualifications

Note:

HL: Higher Level SL: Standard Level AL: Advanced Level

Remarks:

For science students admitted through non-JUPAS scheme, the equivalent subject qualification(s) to HKDSE, if possessed, can be identified by the SIS for on-line course selection.

For other non-science students admitted through non-JUPAS scheme, they are still required to obtain the written approval from the Course Selection Adviser of the course offering department/school even they have possessed the equivalent HKDSE subject qualification(s) to meet the course prerequisite requirement. Once approval is given, they need to forward it to their home faculties to add the course on-line.

SECTION V BASc(AppliedAI) Programmes on offer in 2019/2020

	Bachelor of Arts and Sciences in Applied Artificial Intelligence
Offered to students	2019
dmitted to Year 1 in	
)bjectives:	
he aim of this curriculum that sp neoretical foundations of artificia nalytical skills, and nurture then nd technological innovations, g	pans across Architecture, Engineering, Science and Social Sciences is to equip students with a intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and n to transfer interdisciplinary scientific knowledge into a wide range of integrated applications generating in the process valuable practical experiences. Students will learn to develop the meeting new challenges and resolving new problems in the future.
earning Outcomes:	
by the end of this programme,	, students should be able to:
PLO 1 : apprehend the concep disciplinary areas (by n	ots of artificial intelligence and its underlying theory in relation to a broad range of related neans of coursework and tutorial classes and/or research-based project in the curriculum)
	cial intelligence techniques, and offer effective recommendations for innovative initiatives and coursework and tutorial classes and/or research-based project in the curriculum)
collaboration (by mean	r critical thinking, creative problem solving and communication skills for effective work and is of coursework and tutorial classes and/or research-based project in the curriculum)
	e effectively and efficiently with professionalism and accuracy (by means of coursework and research-based project in the curriculum)
	ent advances and comprehensive knowledge of artificial intelligence to solve real-life problems ork and tutorial classes and/or research-based project in the curriculum)
mpermissible Combinations	s:
lajor in Decision Analytics	
his programme will not be offere	ed to non-BASc(AppliedAI) students as a second major.
Required courses of the M	ajor in Applied Artificial Intelligence (96 credits)
	inary Core Courses (48 credits)
APAI1001	Artificial intelligence: foundation, philosophy and ethics (6)
COMP1117	Computer programming (6)
COMP2119	Introduction to data structures and algorithms (6)
COMP2120	Computer organization (6)
MATH1013	University mathematics II (6)
MATH2014	Multivariable calculus and linear algebra (6)
STAT2601	Probability and statistics I (6)
STAT2602	Probability and statistics II (6)
2. Advanced Level Disciplina	
APAI3001	Deep learning (6)
MATH3904	Introduction to optimization (6)
STAT3612	Statistical machine learning (6)
	v Electives) (24 credits)
3. Concentration (Disciplinar	
At least 24 credits selected	from the following courses:
At least 24 credits selected i (For fulfilling the requirement	from the following courses: In of a concentration, students should choose at least 18 credits, with at least 6 credits of
At least 24 credits selected i (For fulfilling the requiremen which should be at advance	from the following courses: In of a concentration, students should choose at least 18 credits, with at least 6 credits of Ind-level, from the corresponding list)
At least 24 credits selected a (For fulfilling the requirement which should be at advance (a) Concentration: Al Techno	from the following courses: In of a concentration, students should choose at least 18 credits, with at least 6 credits of Ind-level, from the corresponding list) Inogy (at least 18 credits)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010 APAI4011	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099 (b) Concentration: Al in Busin	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of d-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) ness and Finance (at least 18 credits)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099 (b) Concentration: Al in Busin COMP3320	from the following courses: at of a concentration, students should choose at least 18 credits, with at least 6 credits of ad-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) ness and Finance (at least 18 credits) Electronic commerce technology (6)
At least 24 credits selected i (For fulfilling the requiremen which should be at advance (a) Concentration: Al Techno COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099 (b) Concentration: Al in Busin COMP3320 MATH3901	from the following courses: Int of a concentration, students should choose at least 18 credits, with at least 6 credits of Ind-level, from the corresponding list) Dogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) ness and Finance (at least 18 credits) Electronic commerce technology (6) Operations research I (6)
At least 24 credits selected i (For fulfilling the requirement which should be at advanced (a) Concentration: Al Technol COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4012 APAI4099 (b) Concentration: Al in Busin COMP3320 MATH3901 MATH3906	from the following courses: Int of a concentration, students should choose at least 18 credits, with at least 6 credits of Int d-level, from the corresponding list) Plogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) ness and Finance (at least 18 credits) Electronic commerce technology (6) Operations research I (6) Financial calculus (6)

At least 24 credits selected i (For fulfilling the requirement which should be at advanced (a) Concentration: Al Technol COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099 (b) Concentration: Al in Busin COMP3320 MATH3901 MATH3906 STAT3613 STAT4601 APAI4099 (c) Concentration: Al in Medi STAT3955 STAT4610 APAI3021 APAI4022 APAI4023 APAI4023 APAI4099 (d) Concentration: Al in Smart URBS1003 URBS1005 GEOG2090 GEOG3202	from the following courses: th of a concentration, students should choose at least 18 credits, with at least 6 credits of dd-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) Deparations research I (6) Financia calculus (6) Marketing analytics (6) Time-series analysis (6) Special topics of applied AI (6) ictine (at least 18 credits) Survival analysis (6) Bayesian learning (6) Modern biostatistics (6) Omics data analysis (6) Special topics of applied AI (6) rt City (at least 18 credits) Theories and Global Trends in Urban Development (6) Urban Problems, Interventions and Design Thinking (6) Introduction to geographic information systems (6) GIS in environmental studies (6)
At least 24 credits selected i (For fulfilling the requirement which should be at advanced (a) Concentration: Al Technol COMP3271 COMP3356 APAI3010 APAI4011 APAI4012 APAI4099 (b) Concentration: Al in Busin COMP3320 MATH3906 STAT3613 STAT4601 APAI4099 (c) Concentration: Al in Medi STAT3955 STAT4610 APAI3021 APAI4022 APAI4023 APAI4023 APAI4099 (d) Concentration: Al in Smart URBS1003 URBS1005 GEOG2090	from the following courses: th of a concentration, students should choose at least 18 credits, with at least 6 credits of d-level, from the corresponding list) blogy (at least 18 credits) Computer graphics (6) Robotics (6) Image processing and computer vision (6) Natural language processing (6) High-performance computing (6) Special topics of applied AI (6) ness and Finance (at least 18 credits) Electronic commerce technology (6) Operations research I (6) Financial calculus (6) Marketing analytics (6) Time-series analysis (6) Special topics of applied AI (6) icine (at least 18 credits) Survival analysis (6) Bayesian learning (6) Modern biostatistics (6) Omics data analysis (6) Special topics of applied AI (6) it City (at least 18 credits) Theories and Global Trends in Urban Development (6) Urban Problems, Interventions and Design Thinking (6) Introduction to geographic information systems (6)

(e) Concentration: AI in Neu	rocognitive Science (at least 18 credits)
PSYC1001	Introduction to psychology (6)
PSYC2051	Perception (6)
PSYC2066	Foundations of cognitive science (6)
PSYC2101	Foundations of neuroscience (6)
PSYC3054	Human neuropsychology (6)
APAI4099	Special topics of applied AI (6)
List of Other Elective Cours	es:
COMP3250	Design and analysis of algorithms (6)
COMP3278	Introduction to database management systems (6)
COMP3327	Computer and network security (6)
MATH3601	Numerical analysis (6)
MATH3911	Game theory and strategy (6)
MATH3943	Network models in operations research (6)
STAT3600	Linear statistical analysis (6)
STAT3622	Data visualization (6)
STAT4602	Multivariate data analysis (6)
4. Capstone Requirement (6	credits)
At least 6 credits selected t	rom the following courses:
(If students take the 12-cre	dit 'Applied AI project', they do not need to take a 6-credit elective from the 'List of Other
Elective' Courses above. C	In the other hand, students who do not take the 12-credit 'Applied AI project' are allowed to
take a course in one of the	Concentrations as an elective.)
APAI3799	Directed studies in Applied AI (6)
APAI4766	Applied AI internship (6)
APAI4798	Applied AI project (12)

Notes:

1. Students are expected to be in full-time status for eight academic semesters (in additional to their 6-month or longer full-time internships) in order to fulfill the degree requirements.

2. Students may optionally take Majors or Minors outside the BASc(Applied AI) programme, provided that they fully satisfy the requirements.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the programme in order to satisfy the degree graduation requirements.

CAES1000	Core Un	niversity English	(6 credits)	Academic Yea	r 2019				
Offering Department	English			Quota					
Course Co-ordinator	Dr P Won	ig, English <i>(pmtw2</i> @	Phku.hk)						
Feachers Involved	(Dr P Wor	ng,Centre for Applied	d English Studies)						
Course Objectives									
Course Contents	The Core	University English	(CUE) course aims to enhance	first-year students' academic	English languag				
& Topics	proficienc	y in the university co	ontext. CUE focuses on developing	students' academic English lar	guage skills for th				
	Common	Core Curriculum. T	These include the language skills r	needed to understand and pro	oduce spoken ar				
	written ac	ademic texts, expre-	ss academic ideas and concepts cl	early and in a well-structured i	manner and sear				
	for and us	se academic source	es of information in their writing and	I speaking. Four online-learnin	g modules throug				
			lemic speaking, academic gramma						
			n will be offered to students to sup						
			effectively in their first-year univers	ity studies in English, thereby	enriching their fir				
	year expe

Grade Descriptors (A+ to F)	 A Excellent result. Consistently demonstrates ability to summarize salient points accurately from appropriate and reliable sources using original language. Text uses sources appropriately and demonstrates accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are clearly identified and aligned with evidence of planning, self-study and reflection. B Good to very good result. Usually demonstrates ability to summarize salient points accurately uses mostly original language. Text mostly uses sources appropriately and demonstrates mostly accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are stated with some reference to evidence of planning and reflection 								
	although there is some misalignment between goals and self-study completed. C Satisfactory to reasonably good result. Demonstrates some ability to summarize salient points using mostly original language although some inaccuracies are present. Text uses some sources appropriately and demonstrates appropriate but simple grammatical and lexical characteristics with some organizational flaws. Language learning needs are stated with some limited evidence of planning and reflection but goals and self-study are misaligned. D Barely satisfactory result. Demonstrates a limited ability to summarize salient points from sources with inaccuracies and little or not organizational flaws. There is a minimal statement of language learning needs, planning and reflection with little or not apparent alignment between goals and self-study. Fail Unsatisfactory result. Does not demonstrate ability to summarize salient points identify, interpret or appropriately paraphrase reliable sources. Text uses no sources and demonstrates grammatical, lexical and/or organizational errors. Does not								
			aningful attempt to identify language learning need	ls or implement a plan.

MATH3904	Introduction to optimization (6 credits) Academic Mathematics Quota				ar 2019			
Offering Department	Mathemat							
Course Co-ordinator	Prof W Za	of W Zang, Mathematics (wzang@maths.hku.hk)						
Teachers Involved	(Prof W Z	rof W Zang,Mathematics)						
Course Objectives		This course introduces students to the theory and techniques of optimization, aiming at preparing them for further studies in operations research, mathematical economics and related subject areas.						
Course Contents & Topics	- Necessa	Unconstrained and constrained optimization. Necessary conditions and sufficient conditions for optimality, convexity, duality. Algorithms and numerical examples.						
Course Learning			f this course, students should b	e able to:				
Outcomes				pasic theory and techniques of optim	zation			
			zation problems encountered in					
		nderstand the con ehavior of algorithn		nalytical character of an optimizatio	n problem and the			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (N	/ATH2101 and MA	ATH2211) or MATH2014 or (MA	ATH1821 and MATH2822)				
Offer in 2019 - 2020	Y 1st	sem Offer in 202	20 - 2021 : Y	Examination	Dec			
Grade Descriptors (A+ to F)	A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.							
	B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the approximate theorems or their applications and presentation or with some minor computational errors.							
	C Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.							
	D Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.							
	Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

Course Objectives	staff me be a cri	The student undertakes a self-managed study on an applied topic in artificial intelligence under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject, or a laboratory or field study that would enhance students' understanding of the subject. The project may not require an element of originality.

STAT2602	Probabil	ity and statistics II	(6 credits)	Academic Ye	ar 2019	
Offering Department		& Actuarial Science		Quota		
Course Co-ordinator	Dr K Zhu,	Statistics & Actuarial S	cience (mazhuke@hku.hk)			
Teachers Involved	(Dr K Zhu,Statistics & Actuarial Science) (Dr Z Liu,Statistics & Actuarial Science)					
Course Objectives	This course builds on STAT2601, introducing further the concepts and methods of statistics. Emphasis is on ti two major areas of statistical analysis: estimation and hypothesis testing. Through the disciplines of statistic modelling, inference and decision making, students will be equipped with both quantitative skills and qualitative perceptions essential for making rigorous statistical analysis of real-life data.					
Course Contents & Topics	 Overview: random sample; sampling distributions of statistics; moment generating function; large-sample theory laws of large numbers and Central Limit Theorem; likelihood; sufficiency; factorisation criterion; Estimation: estimator; bias; mean squared error; standard error; consistency; Fisher information; Cramer-Ra Lower Bound; efficiency; method of moments; maximum likelihood estimator; Hypothesis testing: types of hypotheses; test statistics; p-value; size; power; likelihood ratio test; Neyma Pearson Lemma; generalized likelihood ratio test; Pearson chi-squared test; Wald tests; Confidence interval: confidence level; confidence limits; equal-tailed interval; construction based on hypothesis 					
Course Learning			course, students should be able to:			
Outcomes			s of statistics and its relation to proba	2		
			to a formal framework for statistical i		·	
			netric statistical inference by means of		sis testing	
Pre-requisites (and Co-requisites and Impermissible	CLO 4 reckon the general applicability of statistics in a broad range of subject areas Pass in STAT2601; and Not for students who have passed in STAT3902, or already enrolled in this course.

STAT3600	Linear st	tatistical analysis	(6 credits)	Academic Y	ear 2019	
Offering Department	Statistics & Actuarial Science Quota					
Course Co-ordinator	Prof T W k	K Fung, Statistics & A	ctuarial Science (wingfung@hku.hk)			
Teachers Involved	(Dr W T Li,Statistics & Actuarial Science) (Prof T W K Fung,Statistics & Actuarial Science)					
Course Objectives	The analysis of variability is mainly concerned with locating the sources of the variability. Many statistic techniques investigate these sources through the use of 'linear' models. This course presents the theory ar practice of these models.					
Course Contents & Topics	 Simple linear regression: least squares method, analysis of variance, coefficient of determination, hypothesis tests and confidence intervals for regression parameters, prediction. Multiple linear regression: least squares method, analysis of variance, coefficient of determination, reduced full models, hypothesis tests and confidence intervals for regression parameters, prediction, polynomial regression (3) One-way classification models: one-way ANOVA, analysis of treatment effects, contrasts. Two-way classification models: interactions, two-way ANOVA for balanced data structures, analysis of treatment effects, contrasts, randomised complete block design. Universal approach to linear modelling: dummy variables, 'multiple linear regression' representation of one-way and two-way (unbalanced) models, ANCOVA models, concomitant variables. Regression diagnostics: leverage, residual plot, normal probability plot, outlier, studentized residual, influent observation, Cook's distance, multicollinearity, model transformation. 					
Course Learning Outcomes	CLO 1 U CLO 2 U	Inderstand linear regr	s course, students should be able to: ession model with one or multiple inde odels for one and two factors lear model with categorical and contin	•	les	
Pre-requisites (and Co-requisites and Impermissible combinations)	CLO 3 understand general linear model with categorical and continuous independent variables Pass in STAT2602; and Not for students who have passed in STAT3907, or have already enrolled in this course.

Offering Department		& Actuarial Science		Quota		
Course Co-ordinator	Dr A J Zhang, Statistics & Actuarial Science (ajzhang@hku.hk)					
Teachers Involved	(Dr A J Zhang,Statistics & Actuarial Science)					
Course Objectives	Machine learning is the study of computer algorithms that build models of observed data in order to make predictions or decisions. Statistical machine learning emphasizes the importance of statistical theory and methodology in the algorithmic development. This course provides a comprehensive and practical coverage or essential machine learning concepts and a variety of learning algorithms under supervised and unsupervised settings. The course materials are presented with lots of examples and reproducible codes.					
Course Contents & Topics	Data science, data exploration, generalized linear models, variable selection, basis expansion, regularization cross-validation, tree-based methods, kernel methods, neural networks, dimension reduction, principal componer analysis, cluster analysis, stochastic optimization, interpretable machine learning.					
Course Learning			ourse, students should be able to			
Outcomes		•				
	 CLO 1 get familiar with the workflow of a data science or machine learning project CLO 2 understand and apply a wide range of statistical machine learning methods, and recognize characteristics, strengths and weaknesses CLO 3 identify and use appropriate techniques for a particular data science project CLO 4 evaluate the quality of the resulting model in terms of prediction accuracy and model explainability 					
			ing for solving data-scientific prob		, ,

		Actuarial Science		Quota	50	
Course Co-ordinator	Prof T W K	K Fung, Statistics & Actu	arial Science (wingfung@hku.hk)			
Teachers Involved	(Prof T W K Fung, Statistics & Actuarial Science)					
Course Objectives	In many designed experiments or observational studies, the researchers are dealing with multivariate data, wher each observation is a set of measurements taken on the same individual. These measurements are ofter correlated. The correlation prevents the use of univariate statistics to draw inferences. This course develops the statistical methods for analysing multivariate data through examples in various fields of application and hands-o experience with the statistical software SAS.					
Course Contents & Topics	Problems with multivariate data. Multivariate normality and transforms. Mean structure for one sample. Tests c covariance matrix. Correlations: Simple, partial, multiple and canonical. Multivariate regression. Principal components analysis. Factor analysis. Problems for means of several samples. Multivariate analysis of variance. Discriminant analysis. Classification. Multivariate linear model.

SECTION VII Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF ARTS AND SCIENCES IN APPLIED ARTIFICIAL INTELLIGENCE [BASc(AppliedAI)]

For students admitted in 2019-2020 and thereafter

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

AAI 1 In these Regulations, and in the Syllabuses for the degree of BASc(AppliedAI), unless the context otherwise requires

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabus.

'Credits' means the value assigned to each course to indicate its study load relative to the total load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classrooms, and includes contact hours and time spent on assessment tasks and examinations.

'Pre-requisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

This regulation should be read in conjunction with UG 1 of the Regulations for First Degree Curricula.

Admission to the degree

AAI 2 To be eligible for admission to the degree of BASc(AppliedAI), candidates shall

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

AAI 3 The curriculum shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years, unless otherwise permitted or required by the Board of the Faculty.

Curriculum requirements and progression in curriculum

- AAI 4 (a) Candidates shall satisfy the requirements prescribed in UG 5 of the Regulations for First Degree Curricula¹, except that in the case of the Common Core Curriculum, 24 credits shall be required, comprising one course from each Area of Inquiry. Specific requirements are spelt out in the syllabuses.
 - (b) Candidates shall complete not fewer than 240 credits of courses.

¹ Candidates who have achieved Level 5 or above in English Language in the Hong Kong Diploma of Secondary Education Examination (HKDSE), or equivalent, are exempted from taking "CAES1000 Core University English". In exceptional circumstances, strong candidates who have achieved Level 4 may be considered for admission to the curriculum but they will be required to take "CAES1000 Core University English" as supplementary credits and complete 246 credits for graduation from the University.

- (c) Candidates shall successfully complete not fewer than 96 credits of courses for the major, including 66 credits of core courses, 18-24 credits of disciplinary electives, 6-12 credits of capstone experience requirement.
- (d) Candidates shall successfully complete 18 credits of BASc core courses.
- (e) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the final semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (f) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in AAI 3, save as provided for under AAI 4(g).
- (g) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in AAI 3.

Selection of courses

AAI 5 Candidates who wish to change their selection of courses at the beginning of each semester may do so up to 2 weeks after the commencement of the semester. Requests for changes beyond the 2-week deadline will not be permitted, except for medical or other reasons accepted by the Board of the Faculty, and candidates' withdrawal from any course without permission will result in a fail grade.

Assessment

AAI 6 Candidates shall be assessed in each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits. Grades shall be awarded in accordance with UG 8 of the Regulations for First Degree Curricula.

AAI 7 Candidates are required to make up for failed courses in the following manner

- (a) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
- (b) re-submitting failed coursework, without having to repeat the same course of instruction; or
- (c) repeating the failed course by undergoing instruction and satisfying the assessments; or
- (d) for elective courses, taking another course in lieu and satisfying the assessment requirements.

AAI 8 Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

AAI 9 There shall be no appeal against the results of examinations and all other forms of assessment.

Discontinuation of studies

AAI 10 Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

- (a) failed to complete 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters; or
- (b) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester); or
- (c) exceeded the maximum period of registration specified in AAI 3.

Absence from examination

AAI 11 Candidates who are unable, because of illness, to be present at the written examinations of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the first semester of the following academic year. Any such application shall normally be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

Advanced standing

AAI 12 Advanced standing may be granted to candidates in recognition of studies successfully completed before admission to the curriculum in accordance with UG 2 of the Regulations for First Degree Curricula. Advanced credits shall not normally be included in the calculation of the GPA unless otherwise permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

Credit transfer

AAI 13 Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

Award of the degree

AAI 14 To be eligible for award of the degree of BASc(AppliedAI), candidates shall have

- (a) achieved a Graduation GPA of 1.00 or above;
- (b) passed a minimum of 240 credits, comprising 96 credits of the required courses of the Applied Artificial Intelligence major as prescribed in the degree of BASc(Applied AI) curriculum, and 18 credits of BASc core courses; and
- (c) satisfied the requirements in UG 5 of the Regulations for First Degree Curricula, and specified in AAI 4(a).

Honours classification

AAI 15 (a) Honours classification shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduation GPA (GGPA) scores, with all courses taken (including failed courses) carrying weightings which are proportionate to their credit values:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in AAI 15(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all the degree requirements shall be posted on Faculty noticeboards.

REGULATIONS FOR FIRST DEGREE CURRICULA¹

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2019-20 and thereafter)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

¹ These regulations are applicable to candidates admitted from 2019-20 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum_{i} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum_{i} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so

(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

² Candidates who have achieved Level 5^{**} in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

exempted must replace the number of exempted credits with courses of the same credit value.

UG 7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	ו		4.3
А	}	Excellent	4.0
A-	J		3.7
B+	ו		3.3
В	}	Good	3.0
B-	J		2.7
C+	ו		2.3
С	}	Satisfactory	2.0
C-	J		1.7
D+	l	Pass	1.3
D	ſ	r ass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

<u>Class of honours</u>	<u>GGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.
