BIOL3203	Food microbiology (6 credits) Academic Year 20						
Offering Department	Biological Sciences	Quota	80				
Course Co-ordinator	Dr H S El-Nezami, Biological Sciences (elnezami@hku.hk)						
Teachers Involved	(Dr H S El-Nezami,Biological Sciences)						
Course Objectives	This course provides the key concepts and principles of food microbiology with between microorganisms and food., microbial food spoilage and foodborne disease.						
Course Contents & Topics	Detection and enumeration of microbes in foods, Factors that influence microbes in foods, Spores and their significance, Physical methods of food preservation, Chemical preservation and natural antimicrobials, Foodborne pathogens.						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe methods for evaluating microorganisms and their products in foods						

		CLO 2 demonstrate an understanding of the causes of food spoilage, and predict response of a microorga that can spoil a given food					
	CLO 3 de	CLO 3 develop and implement appropriate measures to control the spoilage and pathogenic m food					
	CLO 4 demonstrate the ability to work in a team to investigate and solve problems in food microbiology						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC2600 or BIOL2220 or MEDE2301						
Offer in 2019 - 2020		I sem Offer in 2020 -	2021 : Y	Examination	n May

BIOL3205	Human physiology (6 credits)			Academic Yea	ır 2019		
Offering Department	1 3 03 \			Quota	135		
Course Co-ordinator	Dr W Y Lui, Biological Sciences (wylui@hku.hk)						
Teachers Involved	(Dr C B Chan,Biological Sciences) (Dr Philip C N Chiu,Obstetrics & Gynaecology) (Dr W Y Lui,Biological Sciences)						
Course Objectives	The course covers major aspects of the physiology of the human body using an integrated approach. After completing this course, students will have acquired fundamental principles of how the body works. Students interested in nutrition and human biology will find this course most useful.						
Course Contents & Topics	Overview of the physiological systems and homeostasis; Neural and hormonal communication; Nervous system physiology; The digestive system; Cardiac physiology, the blood vessels and blood pressure; The respiratory system; The urinary system; The skeletal & muscular system; Sensory mechanisms; Biological rhythms; Centra peripheral communication in energy homeostasis.						
Course Learning)·			
Outcomes	On successful completion of this course, students should be able to: CLO 1 comprehend the essence of how the body meets changing conditions while maintaining a relatively constant internal environment						
		derstand the functions o					
	CLO 3 explain normal body functions through integration of basic physiologic concepts						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC2600 or BIOL2103 or BIOL2220 or MEDE2301						
Offer in 2019 - 2020	Y 1st s	sem Offer in 2020 - 20	21 : Y	Examination	Dec		
Grade Descriptors (A+ to F)	Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learn outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to all knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills.						
	B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills.						
	Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills.						
	Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems.						
	Organizational skills are minimally effective or ineffective.

BIOL3207	Principles of toxicology (6 credits)	Academic Year	2019			
Offering Department	Biological Sciences	Quota	80			
Course Co-ordinator	Dr H S El-Nezami, Biological Sciences (elnezami@hku.hk)					
Teachers Involved	(Dr H S El-Nezami, Biological Sciences)					
Course Objectives	To introduce students to methods used in assessing the toxicity of food contaminants, and to develop their confidence in the handling and interpretation of toxicological data. Students will also be introduced to the basic concepts behind toxicological evaluation, and the criteria for setting guidance values for dietary and nondietary exposure to chemicals. Students will understand the role of biochemical, metabolic and toxicokinetic studies in toxicological evaluation. This course aims to equip students with basic skills in conducting food toxicological studies.					
Course Contents & Topics	Topics include a discussion on exposure and entry routes, fates of toxic substances in the body (toxicokinetics), concepts in experimental toxicology, the dose response relationship, actions of toxic substances, target organ effects, the actions and types of carcinogens. A survey of the health effects of common classes of toxic substances is also presented.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 demonstrate an understanding of the processes involved in absorpt excretion of toxicants, including an understanding of the toxicokinetic bell					

	CLO 2 de	emonstrate an understa	nding of the various effects induce	ed after exposure to toxica	ants		
	CLO 3 demonstrate an understanding of the factors which underlie species differences in response to potential toxicants						
		emonstrate the ability to Iman health	work in a team to investigate an	d solve toxicological prob	lems of importance in		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in Bl	OC2600 or BIOL2220 o	or BIOL3205 or MEDE2301

BIOL3216	Food waste	management (6 credits) Academi	c Year	2019				
Offering Department	Biological Scien			30				
Course Co-ordinator	Dr O Habimana	a, Biological Sciences (ohabim@hku.hk)						
Teachers Involved	(Dr O Habiman	(Dr O Habimana, School of Biological Sciences)						
Course Objectives	To allow students to develop an understanding of the propagation, treatment and disposal of food waste relevant within the farm to table chain. To allow students to critically evaluate food waste management and resource recovery potential in Hong Kong in comparison to other countries in Asia/Worldwide.							
Course Contents & Topics	recovery potential in Hong Kong in comparison to other countries in Asia/Worldwide. With our current global population estimated to reach 9.1 billion in 2050, food production will be expected to increase by 70% to meet food demand. However, our current world food supply is instead declining, with 1/4 to 1/3 of all food produced for human consumption lost or wasted. This amounts to a staggering 1 to 2 billion metric tons per year! Clearly we should be worried about food wastage. In this course, the social, economic, and environmental implications associated with food waste will be identified by presenting relevant facts and figures and case studies embodying agricultural, industrial and consumer waste types. Basic waste management concepts will also be covered, examining current waste management in Hong Kong compared to other countries in Asia, while providing the basis for examining our own personal waste footprint. This course will address current applications and limitations of food waste treatment technologies. Course outline: -Background, Definitions, Social & Environmental implications of food waste -Facts and figures related to food Waste -Basic Waste Management concepts (3 R's) -Case studies: Food Industrial waste -Case studies: Food consumer waste -Waste Management in Hong Kong vs other countries in Asia -Individual waste footprint: from awareness to legislation in Hong Kong							
Course Learning Outcomes	CLO 1 underst footprin CLO 2 be able	completion of this course, students should be able to: tand and define the various types of waste as well as create an awaren at. to define the 3 R's in waste management (reduce, reuse, recycle), and be in Hong Kong compared to other countries in Asia /Worldwide.						
	CLO 3 be able to describe current and novel technologies for treating waste, as well as transforming waste into value added resources. CLO 4 to develop written and oral presentation skills necessary to effectively convey technical, economic, and							
	social information related to waste management.							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2101 or BIOL3201

BIOL3302	Systematics and phylogenetics (6 credits)	Academic Year	2019		
Offering Department	Biological Sciences	Quota	60		
Course Co-ordinator	Prof R M K Saunders, Biological Sciences (saunders@hku.hk)				
Teachers Involved	(Prof R M K Saunders, Biological Sciences)				
Course Objectives	To give students an understanding of the principles of systematics and phyl current trends and controversies. Systematics forms an invaluable grounding for anatomy, ecology, population biology and evolutionary biology), and enables techniques (including anatomy, biochemistry, chemistry, molecular biology, cytol	or many fields of I the integration of	oiology (including a wide range of		
Course Contents & Topics	Currrent classificatory theories: phenetic systematics (classifications based on overall resemblances) and cladistics (evolutionary reconstruction). The species concept. Sources of taxonomic data: morphology & anatomy, biochemistry, chemistry, molecular biology, cytology, and ethology. Causes of taxonomies complexity: environmental factors; hybridization; breeding systems. Principles of nomenclature. Laboratory sessions will be aimed at illustrating taxonomic procedures and problems; students will not be expected to memorize large numbers of scientific names.				
Course Learning	On successful completion of this course, students should be able to:				
Outcomes	CLO 1 explain taxon concepts (with particular reference to species) and show h	ow multivariate st	atistical methods		

	ca	an be applied below the s	species level				
	CLO 2 de	escribe the principles be	ehind maximum parsim	ony methods of phylogene nomoplasy and the assessr			
	CLO 3 ev	valuate the diversity of so	ources of taxonomic data	, and explain the important	ce of specifi	c data sources	
	CLO 4 re	cognise the main causes	s of taxonomic complexi	y, and identify appropriate	solutions		
		CLO 5 understand the principles of nomenclature in order to interpret the previous application of scientific na are validly publish new names

BIOL3303	Conservation biology (6 credits)	Academic Year	2019					
Offering Department	Biological Sciences	Quota	100					
Course Co-ordinator	Dr T C Bonebrake, Biological Sciences (tbone @hku.hk)							
Teachers Involved	(Dr J G Gaitan-Espitia,Biological Sciences) (Dr L A Ashton,Biological Sciences) (Dr T C Bonebrake,Biological Sciences)							
Course Objectives	To introduce students to the theory and practice of conservation and to provide students with a thorough understanding of practical, economic and management skills required for proficiency in conservation biology. Our ultimate aim is to promote an understanding of the natural biodiversity, the threats to it, and the best ways to manage them. We hope these will be your aims too, and that you will be able to use the skills and knowledge you learn from the course to reduce the local, regional and global loss of biodiversity.							
Course Contents & Topics	Among the many environmental issues, the most serious is the increasingly rapid loss of biodiversity. This loss is irreversible on a human timescale and will reduce the options available to all future human generations. Conservation Biology/Ecology is the science of preserving biological diversity. This course also provides insights to the many benefits and services that nature offers and explores strategies for management options to sustain ecological integrity and production. It is an inexact, applied, mission-orientated, multidisciplinary science which, like medicine, has built-in values: to a conservation biologist, as to a doctor, it matters whether the patient lives or dies. It is also a very new science, bringing together elements from ecology, environmental science, forestry, resource management and many other fields.							
	The course is designed to provide the knowledge, theories, and rese teaching focuses on biodiversity conservation, conservation issues theoretical underpinning of biodiversity conservation and an introducti We emphasis on the integration of knowledge, skills and abilities the problem based learning approach will require students to actively debate by researching.	s associated with climate on to conservation legislation at are required to practice of	change, the key n and economics. conservation. Our					
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 develop a framework for critical thinking about biodiversity, environment and human interaction							
	CLO 2 understand why species are becoming extinct and predict which ones will be most vulnerable							
	CLO 3 understand the importance of the threat of tropical deforest habitat fragmentation in species extinction, and explain the ma							
	CLO 4 understand the principles of population viability analysis, management and the role of ex situ conservation, ecological r	the basis of single-specie	es conservation

BIOL3305	Tropical and temperate marine ecology field course (6 credits)	Academic Year	2019				
Offering Department	Biological Sciences	Quota	15				
Course Co-ordinator	Dr B Russell, Biological Sciences (brussell@hku.hk)						
Teachers Involved	(Dr B Russell,Biological Sciences) (Dr S Cannicci,Biological Sciences)	(Dr S Cannicci, Biological Sciences)					
Course Objectives	This course uses a field-based approach to provide students with estuarine ecology in both tropical and temperate regions. Students and then apply them to compare these ecosystems in Australia, expecuarse culminates with students developing field-based research proceedings and innovative thinking to overcome problems for successful	will learn scientific technique riencing their similarities and rojects to answer ecological	ies in Hong Kong d differences. The				
Course Contents & Topics	The course will cover the structure and function of mangrove forests, reefs (coral and rocky), and algal forests in both tropical and temperate regions. Students will be introduced to the concepts in the course through a series of lectures and field trips in Hong Kong before travelling to northern and southern Australia to experience the ecosystems in the field. The lectures will provide students with background knowledge about the ecosystems which they will encounter, the structure and function of the systems and how human activities degrade them, sampling techniques, logical experimental design, and good report writing practices. These concepts will be drawn together in the field with students quantifying species richness, observing system structure and testing hypotheses with experiments that they design themselves.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 demonstrate an understanding of the complexity and function of marine ecosystems.						
	CLO 2 explain the role of physical and biological processes in shaping the similarities and differences among marine ecosystems tropical and temperate regions.						
	CLO 3 demonstrate skills for field sampling in marine and estuarine habitats.						
	CLO 4 demonstrate knowledge in hypothesis testing and experimental design.						
	CLO 5 identify a range of marine species and their role in ecosystems.						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in "C" or above in BIOL2306 or BIOL3301 or BIOL3303 or ENVS2001						
Offer in 2019 - 2020	N Offer in 2020 - 2021 : Y	Examination					
Grade Descriptors (A+ to F)	A Evidence of a thorough grasp of the subject and relevant research tech familiarity with relevant background reading and case studies. Exemplar skills. Ample evidence of independent critical thought with excellent us comparative perspective to draw insightful and logical conclusions. Signesentation skills with excellent analytical argumentation. Excellent or	ry handling of field data collection a e of a broad range of fundamental now outstanding abilities of indepe	nd excellent analytical concepts and broader endent work, effective				

		level.						
	В	Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate fam with relevant background reading and case studies. Good handling of field data collection and commendable analytical Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concept consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, eff presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.						
	С	Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate fa relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evide critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader con sufficient for what is required for degree level.						
	D Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.							
	Fail	background reading and no	ninimum grasp of the subject and the roof familiarity with any relevant examples a ation skills with poor argumentation and it	nd case studies. Inadequate evi	dence of coherent logical

BIOL3313	Freshwater ecology (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	30
Course Co-ordinator	Prof D Dudgeon, Biological Sciences (ddudgeon@hku.hk)		
Teachers Involved	(Prof D Dudgeon, School of Biological Sciences)		
Course Objectives	This course introduces freshwater science by integrating the physical a drainage basins in the context of sustaining human livelihoods and bio lakes and maintenance of water quality are considered also. Case striver science and human use of drainage basins. Emphasis will be biodiversity in Asia in the context of increasing human modification of scarcity.	diversity. Conservation and udies are used to illustrate e placed upon conservation	d management of the principles of on of freshwater
Course Contents & Topics	The amount of water on Earth is fixed. Less than 0.01% of the world's hosts 10% of the Earth's species. Global water use has increased 300' Earth's population; many people in Asia already face water stress. The processes involved in the hydrological cycle and flow of water in diffluctuations, and describes the main longitudinal changes that occur flows in freshwater ecosystems are described with particular reference and land and the relative importance of aquatic primary production ver the land. The range of organisms associated with Asian fresh wate explained, and students will become familiar with some common Hon sessions. The dependence of humans on freshwater ecosystems and explained, together with the causes and consequences of human modifor conservation of aquatic biodiversity. Finally the range of manage human impacts on freshwater ecosystems and maintain water quality is	% since 1950 and is growing in the course introduces the drainage basins, as well are along rivers and their flowers to the transfer of material resus energy derived from divers is introduced and their growing species in field trighther role they play in sustain iffication of fresh waters, an ment strategies used to re-	ng faster than the physicochemical is their seasonal odplains. Energy Is between water etrital inputs from functional roles and laboratory ning livelihoods is d the implications
Course Learning	On successful completion of this course, students should be able to:		
Outcomes	CLO 1 describe the global water cycle, the main sources and path influence of land-water interactions on aquatic productivity CLO 2 describe the composition of the freshwater biota (major gro	,	,
	ecosystems, and identify some of the common animals that occ CLO 3 describe the results of modification of freshwater ecosyste freshwater biodiversity in Asia, explain why freshwater biota are the management strategies used to reduce or mitigate them	ms by humans, list the	main threats to
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2102 and BIOL2306

BIOL3318	Experin	nental intertidal eco	ology (6 credits)	Academic Ye	ar 2019	
Offering Department	Biologica	l Sciences		Quota	20	
Course Co-ordinator	Prof G A	Williams, Biological Scient	ences (hrsbwga@hku.hk)			
Teachers Involved		Williams,School of Biol				
Course Objectives	To examine the communities of coastal systems: their distribution, composition and the factors which regulate them. This course will examine, using an experimental approach, patterns exhibited by a range of shores and the deterministic and stochastic processes that create and sustain them. Hong Kong shores will be used as examples but comparisons will be drawn from the coastlines of the world.					
Course Contents & Topics	The first part of this course describes shores of the marine to brackish water continuum and the communities found on them. Lectures will cover the physical environment of the intertidal (e.g. tides; waves; geological and hydrological processes) the resultant variations in exposure and shore types and consequent distribution of animals and algae on these shores (vertical and horizontal zonation patterns) with specific Hong Kong examples. The second part of the course uses an experimental approach (e.g. sampling methodology; manipulative techniques; experimental design and data analysis) to investigate the factors (e.g. predation; herbivory; competition; disturbance; succession; patchiness and recruitment; supply side ecology) that structure these shores, with particular focus on rocky intertidal shores.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe the physical environmental factors (e.g., waves, tides) shaping the intertidal environment and hot they interact with geographic features to produce different kinds of shores (e.g., sandy shores, mangrove cLO 2 understand the factors limiting species distribution patterns on the vertical intertidal gradient an appreciate methods to measure and investigate these patterns CLO 3 identify and quantify the distribution of a variety of local species on different Hong Kong shores CLO 4 review, critique and design experimental studies to investigate patterns (e.g., zonation) and processe (e.g., herbivory, competition) in intertidal areas CLO 5 explain the role of biological processes (e.g., predation, succession) and their interaction with the physic environment in shaping intertidal communities CLO 6 plan, design, execute, analyse and present a simple experimental study on intertidal ecology

Course Objectives	To enable ecology.	motivated students	s to acquire the knowledge a	nd skills needed to solve rea	al problems in terrestria	
Course Contents & Topics	and region their roles functional emphasis terrestrial successio The practi will partici and write literature discussion	This course focuses on the ecology of terrestrial habitats providing an overview of patterns and processes at global and regional scale. Students will learn about the evolution of climate and topography over geological times and their roles in shaping current biodiversity and ecosystems distribution. The course also focuses on the taxonomic, functional and ecological composition of organisms within terrestrial ecosystems of Tropical East Asia with emphasis on the major processes regulating communities. An introduction to several global major threats on terrestrial ecosystems and their mechanisms is provided. Finally, the study of habitats recovery through ecological succession using particular examples in Hong Kong is provided. The practical component of the course will introduce students to basic field techniques used in ecology. Students will participate to a group project, collecting and analysing their own data involving both field and laboratory work, and write a short scientific paper. Particular emphasis will be given on how to efficiently read and write scientific literature and present data efficiently. Attendance and participation in class are encouraged through series of discussions to stimulate critical thinking on chosen topics in terrestrial ecology. Assessment includes problem based learning exercise, group presentation, a final term paper and a final examination covering the content of the

	Fail	studies. Insufficient evidence of background reading, limited abilities of critical independent thinking, and not particularly effective presentation skills with generally weak logical argumentation and restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level. No evidence of basic minimum knowledge and understanding of the subject. No evidence of background reading and infamiliarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentations.				
	C	C Demonstrate an adequate, but not coherent and incomplete grasp of the subject, with limited background reading and limited use of named examples and case studies. Some abilities of logical critical thinking, but not insightful and/or independent; only partial abilities to use acquired knowledge and work independently to draw meaningful conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level. D Demonstrate some grasp of the subject, but partial and limited to the most basic concepts, examples, and limited (or none) case				
	В	B Evidence of a good grasp of the subject as demonstrated by some background reading and appropriate use of named examples and some case studies. Evidence of good critical thought, although not necessarily original. Good and very good (but not outstanding) abilities of independent work, effective presentation skills with good analytical and logical argumentation. Good general command of acquired knowledge to draw meaningful and logical conclusions. Work more than sufficient for what is required at degree level.				
(A+ to F)		excellent use of named examples and case studies. Evidence of independent critical thought with excellent use of a broad range of fundamental concepts to draw insightful and logical conclusions. Show eagerness to learn, great abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.

BIOL3405	Molecular microbiology (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	30
Course Co-ordinator	, Biological Sciences ()		
Teachers Involved	(,Biological Sciences)		
Course Objectives	This course is intended for biology, biotechnology and biochemistry studer modern fundamentals of microbiology. At the end of the course the sphysiological, biochemical and molecular aspects of microbiology.		
Course Contents & Topics	The basic biochemistry of microorganisms will be described. The intrinsic facin the environment will be examined. The adaptation of the microbes to the echanges and genetical alterations will be illustrated. The molecular biology of plasmids and transposable element aspect will be discussed. The use of modern technology in studying microorg	environment by mean ogy of bacteria and s and their associat	s of physiological viruses will be ion with medical
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the intrinsic reorganization of microbes in response to the CLO 2 comprehend the major modes of regulation in the microbe CLO 3 explain the biology of bacteriophages and plasmids CLO 4 realize the importance of transposable elements in the survival of the CLO 5 appreciate the development of modern techniques in studying micro	e microbes	ents

BIOL3406	Reproduction and reproductive biotechnology (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	50
Course Co-ordinator	Prof A O L Wong, Biological Sciences (olwong@hku.hk)		
Feachers Involved	(Prof A O L Wong, Biological Sciences)		
Course Objectives	To provide a comprehensive overview on modern concepts and recen reproductive biotechnology in human and animal models.	t advances in repro	ductive biology &
Course Contents & Topics	 -Basic concepts of reproduction, evolution of sex, human & animal reproduction. -Molecular mechanisms for sex determination, developmental aspects of gasineuroendocrinology of reproductive system and recent advances in kingle feedback via KNDy neuronal circuit. -Environmental endocrine disruptors and recent advances in biotechric reproduction in human. -Recent advances in embryonic stem cells & induced pluripotent stem cell medicine/therapeutic cloning. -New technology for genome editing by TALENT & CRISPR/Cas9 systems primordial germ cell transplantation in animal models. 	ametogenesis and rep sspeptin & GnRH sy nology for fertility co ls and their applicatio	roductive system stem and steroic ntrol & assisted ns in regenerativ
ourse Learning	On successful completion of this course, students should be able to:		
Outcomes	CLO 1 Have a broad understanding of reproductive biology ranging from strategies & sexual behaviors in animals to the regulatory m development of reproductive systems. CLO 2 Have an appreciation of the recent advances on neuroendocrin reproductive cycle, sexual behavior, parental care, and pregnancy models.	nechanisms for sex	determination &
	CLO 3 Have a basic understanding on the adverse effects of environmental possible causes of human infertility & treatment with assisted repro-		s on reproduction
	CLO 4 Comprehend a wide range of modern technologies for genome ed cell transplantation and the applications of embryonic stem ce regenerative medicine/therapeutic cloning.		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2103 or BIOL2220 or BIOC2600 or MEDE2301

BIOL3419	Insect ecology: the little things that run the world (6 credits)	Academic Year	2019	
Offering Department	Biological Sciences	Quota	25	
Course Co-ordinator	Dr B Guenard, Biological Sciences (bguenard@hku.hk)			
Teachers Involved	(Dr B Guenard, School of Biological Siences)			
Course Objectives	This course introduces the students with the biology of terrestrial arthropods. With a main focus on insects and arachnids, students will be introduced to various aspects of their anatomy and physiology, systematics, and ecology to understand the fundamental roles that arthropods play in natural and human-shaped ecosystems. The course will focus particularly on the diversity and importance of insects in South East Asia.			
Course Contents & Topics	With about 1.1 million and 110,000 species described respectively, insects and all species known on the planet. A diversity also reflected in the diversity of behacological interactions played at all trophic levels within ecosystems. As her	aviours, evolutiona	ary adaptations or	

Course Learning Outcomes	agents, predators, parasitoids, disease vectors or decomposers, arthropods are major components in the stabilit and functioning of most ecosystems. Yet their importance is often underestimated by many fields of biology to the profit of larger "charismatic" vertebrates. However, arthropods offer incredible opportunities for scientific discoveries, revealing sometimes attributes in morphology, reproduction or behaviour beyond the most prolific imagination, and challenging existing paradigms in ecology and evolution. This course will propose an introduction to these extremely successful organisms and give them the value the deserve. A first step to the study of arthropods is to learn how to identify them correctly. Part of this course will present the main criteria to recognize major insects and arachnids groups. The second part will focus on their diversity, distribution and ecological functions within ecosystems. Finally the last part of the course will present the impacts of human activities on arthropods, how they have been used historically and nowadays, and what kind of problems or solution they represent for human societies? On successful completion of this course, students should be able to: CLO 1 identify major groups of insects and arthropods CLO 2 understand and use the main collecting methods to sample arthropod diversity CLO 3 understand the ecological diversity of arthropod groups and their importance in ecosystems				
			abiotic factors that drive terrestrial a	rthropod species richness	s and abundance
			ctivities modify insect diversity		
B		· · · · · · · · · · · · · · · · · · ·	s played by insects on human activiti	es	
Pre-requisites (and Co-requisites and Impermissible combinations)		OL1309 and BIOL2306			
Offer in 2019 - 2020 Grade Descriptors		er in 2020 - 2021 : Y		Examination	
(A+ to F)	Demonstration of an excellent understanding of the biological concepts and theories developed during the course. No identification skills and use of taxonomic keys of the different groups of arthropods studied. Present an active and patitude in class. Curation and identification of the collection reaching international scientific standard as presented of course. B Demonstration of a good understanding of the biological concepts and theories developed during the course. Master in identification skills and use of taxonomic keys of the different groups of arthropods. Participation in class more limited and identification of the collection satisfactory for the course. C Demonstration of a general but incomplete understanding of the biological concepts and theories developed during the Identification skills and use of taxonomic keys of the different groups of arthropods insufficient to provide reliable ide Participation in class very limited or irrelevant. Curation and identification of the collection not reaching academic level. D Demonstration of a limited understanding of the biological concepts and theories developed during the course. Identificand use of taxonomic keys of the different groups of arthropods inadequate and mostly inaccurate. No participation in unsettling. Poor curation and identification of the collection. Fail to provide evidence of knowledge on the biological concepts and theories developed during the course. No identification and identification of the collection in class or unsettling. BIOL3502	Conservation genetics (6 credits)	Academic Year	2019		
Offering Department	Biological Sciences	Quota	50		
Course Co-ordinator	Dr M Sun, Biological Sciences (meisun@hku.hk)				
Teachers Involved					
Course Objectives	The course aims to familiarize students with fundamental principles and recent advances in conservation genetic The theories and methods will be taught with a balanced range of examples - mammals, birds, reptiles amphibians, fish, invertebrates, as well as plants - to demonstrate how genetic data can be used to answer a range of important questions in real world conservation practice.				
Course Contents & Topics	Introduction to conservation genetics. Part I. Evolutionary Genetics of Natural Populations: - genetic diversity - characterizing genetic diversity: single loci and quantitative variation - evolutionary impacts of natural selection, mutation, migration and th - genetic consequences of small population sizes; - maintenance of genetic diversity; - population genomics. Part II. Effects of Population Size Reduction: - loss of genetic diversity in small populations; - inbreeding; - inbreeding depression; - population fragmentation; - genetically viable populations. Part III. From Theory to Practice:		ations;		

		•	ities and defining manageme	ent units;		
	- genetic management of wild populations;					
	- genetic issues in introduced and invasive species;					
		management of captive				
	_	management for reintr	orensics and understanding s	species hiology

BIOL3503	Endocrinology: human physiology II (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	60
Course Co-ordinator	Dr C B Chan, Biological Sciences (chancb@hku.hk)		
Teachers Involved	(Dr C B Chan,Biological Sciences) (Prof A S T Wong,Biological Sciences) (Prof B K C Chow,Biological Sciences)		
Course Objectives	To provide an advanced course on hormones and how they regulate me water/salt homeostasis in our body.	tabolism/growth, r	eproduction and
Course Contents & Topics	History: discovery of blood borne factor or hormone. Chemical nature of h signaling. Secondary messengers. Responsivity and hormonal effects. The hypothalamic pituitary axis The GHRH-GH-IGF axis. The TRH-TSH-thyroid hormone axis. The CRH-ACT Catecholamine effects and their pathways. The gastrointestinal system The enteric nervous system. The cephalic phase, stomach phase and in Regulation of acid secretion. Regulation of pancreatic exocrine and endocrine GIP, CCK, secretin, GLP-1, GLP-2 and motilin. Regulation of feeding, energy b Insulin and glucagon. Reproduction The GnRH-gonadotropin-sex hormone axis. Regulation of LH and FSH re Interaction of hormones produced by various cells in the testis to regulate specific production.	H-cortisol axis. Contestinal phase of experiented secretion. Gut he alance and food in the secretion of the secretion of the secretion of the secretion of the secretic secretion of the secretion of the secretic secretion of the secretic secretion of the se	food digestion. from ormones: gastrin, take.

Course Learning Outcomes	testosterone. The erection reflex. Female reproductive system. Development of ovarian follicles. The menstr cycle: hormonal control: Ovulation, fertilization and implantation. The placenta as an endocrine organ. Endocr regulation of parturition. Hormonal control of milk secretion. Prolactin and broodiness. Osmoregulation Posterior pituitary hormone, ADH. Aldosterone and sodium balance. Angiotensin's effect on blood pressure. Atrial natriuretic peptide and its function in water and sodium balance. On successful completion of this course, students should be able to: CLO 1 understand the definition and natures of hormones CLO 2 explain and describe secondary messenger pathways for hormones CLO 3 describe the connection between pituitary the master gland with higher brain centers and peripheral organical explain and describe hormones involved in the regulation of 3 most important body functions including metabolism/growth, reproduction and water/salt homeostasis					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E	Pass in BIOL2103				
Offer in 2019 - 2020		fer in 2020 - 2021 : Y		Examination		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills.					
	C Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills. Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show					
	evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to are knowledge to solve problems. Apply limited or barely effective organizational skills. Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve proble				w limited ability to apply	
			e minimally effective or ineffective.

BIOL3505	Oyster aquaculture and restoration (6 credits)	Academic Year	2019		
Offering Department	Biological Sciences	Quota	20		
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@hku.hk)				
Teachers Involved					
Course Objectives	Introduce larval biology and hatchery technology; Provide scientific basis for coastal aquaculture through field demonstrations and laboratory exercises; Enable students to design, construct and maintain larval hatchery for production of seeds for aquaculture a restoration of wild oysters; Understand the reasons for restoration of marine, estuarine and coastal ecosystems; Facilitate transfer of academic knowledge to aquaculture for sustainable food production.				
Course Contents & Topics	This experiential learning course is to enhance students' knowledge in a advanced coastal aquaculture production systems that will enable them to de oyster aquaculture facilities for food production and restoration of wild portion endeavor encompassing larval hatchery technology and aquaculture. After recoastal aquaculture, we will focus on hatchery technology and aquaculture pertaining to coastal aquaculture will also be covered using oyster farming in will learn why oyster habitat is declining in HK and would also explore scient oyster habitat. Students will be exposed to few aquaculture facilities in Hc (Malaysia) to learn practical skills of oyster farming. This course is designed sustainable aquaculture in Hong Kong. Students will be exposed to a uniquiculture, and learning opportunities. Career and small scale business opport discussed. Thus, students will be provided adequate knowledge & analytical larval biology research and aquaculture.	sign, construct, ope pulation. This is are ading about basic of the Environmental is thong Kong as an elific and managemental for the meet the needs the learning environmental them diverse raunities in aquacultur	rate and maintain interdisciplinary yster biology and sues, legislation xample. Students it ways to restore taken to Penang of an expanding lent involving notinge of expertise, e industry will be		
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 examine the influence of environmental variables on larval development and recruitment, and consider the potential effects of these variables on hatchery and farming CLO 2 acquire skills and experiential learning opportunities (e.g. hands-on experiences at laboratories and farms) in oyster hatchery and farming CLO 3 explain the importance of oyster farming in coastal habitat restoration CLO 4 plan and execute a commercially important research project in larval biology and aquaculture

This course will be offered subject to a minimum enrollment number and availability of teachers.				visit various oyster	

BIOL3506	Evolutionary biology (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	50
Course Co-ordinator	Dr C Schunter, Biological Sciences (schunter@hku.hk)		
Teachers Involved	(Dr C Schunter,School of Biological Sciences) (Dr J D Gaitan-Espitia,School of Biological Sciences)		
Course Objectives	 The course aims to introduce students to the major themes of contemporary history of evolutionary biology, evolutionary processes, adaptation, speciation framework at all levels of biological organization. The course emphasizes the interplay between theory and empirical tests students with the process of science. 	, and evolution as	s an explanatory
Course Contents & Topics	-Introduction to Evolutionary Biology -The tree of life -Patterns of evolution -Biogeography -The evolution of biodiversity -Mechanisms of evolution (Natural selection, mutation, genetic drift) -Phenotypic evolution -Social interactions in evolution (sex, kinship, co-evolution) -Species and speciation -Evolution of genes and genomes -Evolutionary Development (Evo-Devo) -Macroevolution		
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 identify the facts on theory of evolution CLO 2 describe Darwin's theory of evolution by natural selection and how the lead to speciation	e process of natu	al selection can

	CLO 3 understand mechanisms involved in the modern evolutionary theory						
	CLO 4	apply evolutionary thin	nking to real world problems in a	agriculture, medicine	, and biodivers	ity conservation	
	CLO 5	reflect and theorize al	oout evolutionary processes				
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in BIOL2306 Not for students who have passed in BIOL3501

BIOL3508	Microbial physiology and biotechnology (6 credits)	Academic Year	2019				
Offering Department	Biological Sciences	Quota	60				
Course Co-ordinator	Dr A Yan, Biological Sciences (ayan8@hku.hk)						
Teachers Involved	(Dr A Yan,Biological Sciences)						
Course Objectives	Microbes are amazing and important entities on earth. Knowledge of microbes is widely applied in food, pharmaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology and Biotechnology provides both molecular basis for understanding of these important processes and up-to-date applications in modern Biotechnology, and to serve as essential foundations for sub-disciplines of Microbiology, such as environmental, food, and medicinal Microbiology. Upon completion, students will acquire fundamental knowledge about microorganisms, gain laboratory skills on methodologies for microbial studies, and be able to apply the knowledge in Microbial Biotechnologies.						
Course Contents & Topics	Serving as a course which blends fundamental knowledge about the Microbial Biotechnology, This course is organized and presented in the Breath', and 'Microbial Biotechnology'. Under these three themes, a linteresting topics are presented including: 'Microorganisms and their position of the study of microbes', 'Microbial structures a control', 'Energy Generation', 'Central metabolism', and 'Microbial biotech biofuels and synthetic biology '. Topics are taught in a coherent manner following each of the topics such that students will achieve a high quality, experiences.	ree themes: 'Microbial I proad range of highly esition in the living worl and functions', 'Microbi anological applications in with a highly interactive	Rules', 'Microbial educational and d', 'Fundamental al growth and n biodegradation e tutorial session				
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 appreciate the diversity of microbial metabolisms and application	ns in biotechnology					
	CLO 2 comprehend the principles underlying the dynamic nature of microbial physiology						
	CLO 3 gain laboratory skills on methodologies for microbial studies						
	CLO 4 relate knowledge to practical application of microbes in industry and medicine						
Pre-requisites	Pass in BIOL2103 or BIOL2220 or BIOC2600 or BIOC3604;						
(and Co-requisites	Not for students who have passed in BIOL3108; and

BIOL3606	Diet an	d disease (6 credits)		Academic Year	2019	
Offering Department	Biologica	al Sciences		Quota	70	
Course Co-ordinator	Dr J C Y	Lee, Biological Sciences	(jettylee@hku.hk)			
Teachers Involved	(Dr J C \	Lee, School of Biologica	l Sciences)			
Course Objectives	This course aims to provide understanding and insight into diseases associated with diet and basic dietetics specifically to: 1. Explain the relationships between diet and disease. 2. Describe the role of diet in the development and prevention of common chronic diseases such as diabetes, obesity and anorexia, cardiovascular disease, cancer, immune deficiency and renal failure. 3. Differentiate risk factors that influence dietary choice. 4. Describe the rationales for postoperative nutritional support for hospitalized patients.					
Course Contents & Topics	The basi prevention cardiova	The basics of nutrition for health and fitness and medical nutrition therapy. The role of diet in the development an prevention of chronic diseases such as cancer, diabetes, obesity and anorexia as well as bulimia nervosa cardiovascular diseases, renal failure, etc. Malnutrition. Nutrition and immune function. Medical nutrition therapy for food allergy and food intolerance. Nutrition in pregnancy and lactation.				
Course Learning	On succe	essful completion of this of	course, students should be able to:			
Outcomes	CLO 2 C	describe the role of die cardiovascular disease, ca clearly differentiate and in	ionships between diet and disease et in the development and prever ancer, immune deficiency, and renal atterpret risk factors that influence diet r postoperative nutritional support for	failure ary choice	and anorexia,

Offer in 2019 - 2020		sem Offer in 2020 - 2		Examination	May		
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.						
	B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.						
	C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.						
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.						
	Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

BIOL3951	Ecology & biodiversity field course (6 credits) Academic Year 2019					
Offering Department	Biological Sciences	Quota	20			
Course Co-ordinator	Dr L Karczmarski, Biological Sciences (leszek@hku.hk)					
Teachers Involved	(Dr L Karczmarski,Biological Sciences)					
Course Objectives	This course is offered as a capstone experience and will require intense study of a topic relevant to the Ecology & Biodiversity Major during a field course, inside or outside Hong Kong.					
Course Contents & Topics	Every year a number of different potential courses may be offered. The precise contents will be tailored to best suit the topic and locality involved and will therefore vary according to the specific course being held. The basic contents will involve lectures, seminars and extensive field and follow-up laboratory work. It is essential that					

	students contact the course coordinator for further information on the courses available.					
Course Learning		•	ourse, students should be able to:			
Outcomes			sity and primary habitats in the ecosy			
			eeded to identify target species asso			
	(ecosystems studied	and able to implement sampling t			
			ogy of target species and how biotic	·		
Pre-requisites (and Co-requisites and Impermissible	BIOL4X	Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX o BIOL4XXX) in the Ecology & Biodiversity Major. This capstone course is for Ecology & Biodiversity Major students only.				
combinations)		The earliest that a student is allowed to take this capstone course is their year 3 study.				
Offer in 2019 - 2020

BIOL3994	Directe	d studies in biologic	cal sciences (6 credits)	Academic Year	2019
Offering Department	Biologica	al Sciences		Quota	
Course Co-ordinator	Dr S Can	nicci, Biological Science	es (cannicci@hkuk.hk)		
Teachers Involved	(All acad	emic staff in Biological S	sciences Major,Biological Sciences)		
Course Objectives		•	mulating capstone experience for all E	iological Sciences Major	undergraduates to
	integrate and apply their knowledge and skills obtained from the Major.				
Course Contents & Topics	The directed study can be a review of literature on a specific topic, or a lab or field study that enhances th student's understanding of the topic in the field of biological sciences. The student should obtain the commitment a supervisor in the area of the dissertation topic before submitting the registration form for the course (availab from the General Office of School of Biological Sciences). Supervisor will introduce various methodologies/techniques and guide students to completion of the dissertation. Teaching will be informal an students will gain knowledge through discussion and feedback from their supervisors.				
Course Learning			course, students should be able to:		
Outcomes	CLO 1	acquaint with the proce			
	CLO 2		nding of the nature of biological science		
	CLO 3		s to address important issues in variou		
	_		tual skills that will be valuable for all so		(510/ 510/
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX BIOL4XXX) in the Biological Sciences Major. This capstone course is for Biological Sciences Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.				ses (BIOL3XXX o

BIOL4201	Public health nutrition (6 credits)	Academic Year	2019
Offering Department	Biological Sciences	Quota	90
Course Co-ordinator	Dr J C Y Louie, Biological Sciences (jimmyl@hku.hk)		
Teachers Involved	(Dr J C Y Louie, Biological Science)		
Course Objectives	Public health nutrition unites social sciences and biomedical sciences in preventing disease and improving human health through programs aimed at enhancing good nutritional practices. This course presents a broad overview of the professional practice and essential skills required of a public health nutritionist.		
Course Contents & Topics	Public health nutrition: overview, nature and identification of problems, object epidemiological study of diet: disease associations. Development of dieta		

Additional Course	This cours	se will be offered subject	to a minimum enrollment number	http://moodle.hku.hk/ This course will be offered subject to a minimum enrollment number and availability of teachers.

BIOL4205	Food technology (6 credits) Academic Year 2019								
Offering Department	Biological Sciences Quota 30								
Course Co-ordinator	Prof N P Shah, Biological Sciences (npshah@hku.hk)								
Teachers Involved	(Prof N P Shah,Biological Sciences)								
Course Objectives	To provide students with basic principles and methodologies of food processing and preservation technology. T cover key engineering principles relevant to the food industry. Students will gain hands-on experience with selecte food processing and preservation techniques.								
Course Contents & Topics	Food pro properties production equipmen nutritious methods	Food processing is a multidisciplinary field combining applied physical sciences with knowledge of product properties and requirements. This course introduces the technical knowledge required to implement cost-effective production and commercialization of food products and services. The design and development of processes equipment and machinery used to convert raw agricultural materials and ingredients into safe, convenient, and nutritious consumer food products are covered. We discuss the basic engineering principles and applications of methods in food processing and preservation. Techniques discussed will include those for high and low temperature processing, concentration, dehydration, baking and extrusion.							
Course Learning	On succes	ssful completion of thi	s course, students should be able	e to:					
Outcomes	CLO 1 ur	nderstand basic princi	ples of food processing methods	and preservation technology					
	CLO 2 be	able to apply their kr	nowledge and practical skills to pr	ocess and develop food produ	ıcts

Critically use lab skills and techniques and analysis of draw appropriate and insightful conclusions.							
	В	Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities of that take place in variety of food during preparation, processing and storage, Identifies and uses techniques and equivariety of food-specific purposes. Demonstrates high-level skills in designing, producing and evaluating solutions of for specific food purposes. Use lab skills and techniques and analysis of data and results to draw generally conclusions.							
	C Demonstrate general but incomplete grasp of the subject matter covered. Show adequate evidence of analytical and critica abilities and logical thinking of the changes that take place in variety of food during preparation, processing and storage Identifies and uses appropriate techniques and equipment for a variety of food-specific purposes. Demonstrates adequate skill in designing, producing and evaluating solutions of sound quality for specific food purposes. Use lab skills and techniques an analysis of data and results to draw moderately appropriate conclusions.								
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show son evidence of coherent and logical thinking of the changes that take place in variety of food during preparation, processing at storage. Identifies and uses basic techniques and equipment for a variety of food-specific purposes. Demonstrates basic skills designing, producing and evaluating solutions for specific food purposes. Use lab skills and techniques and analysis of data at results to draw appropriate conclusions occasionally.							
	Fail	and logical thinking of he guidance factors and us guidance, demonstrates	asp, with retention of little relevant information, of the subject matter covered. Show lack of cohere changes that take place in variety of food during preparation, processing and storage. Identifies we some appropriate techniques and equipment for a limited range of food-specific purposes. Winited skills in designing, producing and evaluating solutions for specific food purposes. Use lab skills of data and results ineffectively, leading generally to inappropriate and usually erroneous

	Functional foods (6 credits) Academic Year 2019							2019			
Offering Department	Biological Sciences Quota 40										
Course Co-ordinator	Dr M F Wang, Biological Sciences (mfwang@hku.hk)										
Teachers Involved	(Dr L Zhang,Biological Sciences) (Dr M F Wang,Biological Sciences)										
Course Objectives	To provide a fundamental understanding of the rapidly emerging functional food/nutraceutical industry with ar emphasis on the history, regulation, chemical basis and quality control of healthy ingredients/products and thei effects on human health.										
Course Contents & Topics	nutraceut fibers as containing	Concept, history and global regulation of functional foods and nutraceuticals; classification of functional foods and nutraceuticals based on their chemical structures; unsaturated fatty acids, proteins, food pigments and dietary fibers as healthy food ingredients; health benefits of dietary phenolics, terpenes, phytosterols and sulphur containing compounds; probiotics and prebiotics; small berries, spices, teas and herbs for health; quality control and assurance of functional foods and nutraceuticals.									
Course Learning			npletion of th		,						
Outcomes									utraceuticals		
			stantial chem								
	CLO 3 be able to describe examples of functional foods and interpret critically their claimed health benefits										
	CLO 4 demonstrate understanding of the current functional food and nutraceutical industry										
		CLO 5 understand major techniques and technologies for quality control and manufacturing of healthy products

BIOL4210	Food pr	roduct development	(6 credits)	Academic Year	2019			
Offering Department	Biologica	l Sciences		Quota	40			
Course Co-ordinator	Dr M F W	M F Wang, Biological Sciences (mfwang@hku.hk)						
Teachers Involved	(Dr M F V	Dr M F Wang,Biological Sciences)						
Course Objectives		To introduce the key concepts and techniques used in food product development. To provide small group experience in the design, development and production of a new food product.						
Course Contents & Topics	developm	History and future of the food industry; industrial product development process; idea generation and prototype development for new food products; quality management and legal protection; marketing strategies; food labeling; food package design; new product development for different food industries.						
Course Learning			course, students should be able to:					
Outcomes		understand the food prod						
		know the key steps in nev						
			sight and understanding of current an	d future trends in the food	lindustry			
			ractical experience in new product dev		,			
			stics of different sectors of the food inc	•				
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in BIOL3203 or BIOL4205						
Offer in 2019 - 2020	N Off	fer in 2020 - 2021 : N		Examination				
Grade Descriptors	_		p of the subject matter covered. Show strong a		d logical thinking, wit			
(A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.							
	B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.							
	C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.							
	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness. Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent							
	and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis o data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

BIOL4303	Anima	I behaviour (6 credits)	Academic Year	2019			
Offering Department	Biologic	Biological Sciences Quota 30					
Course Co-ordinator	Dr L Kaı	rczmarski, Biological Sciences (leszek@hku.hk)					
Teachers Involved							
Course Objectives	This course teaches students the ways and means of exploring and understanding animal behaviour; it provides insights into a field of science that investigates everything animals do, including the underlying mechanisms and functions of specific behaviours; the ways in which animals interact with each other, with their physical environment and other organisms; how animals find and defend resources, avoid predators, choose mates, reproduce, and care for their young; how complex animal societies are formed and how behaviour of an individual affects the structure of a population.						
Course Contents & Topics	behavio How do are som the hun complex be expla as poss the rest within th behavio research will also	This course will introduce students to scientific reasoning and conceptual basis of an understanding of animal behaviour and behavioural ecology. What causes specific behaviour and what are the underlying mechanisms? How does behaviour develop within the individual's lifetime and what functions does it serve? For example; why are some species monogamous while others are polygamous? What makes one organism the hunter and another the hunted? Several animal species, including humans, tend to live in groups; social life is among the most complex and effective survival strategy. However, how could, for instance, the birth of sterile castes, like in bees, be explained through an evolving mechanism which emphasizes the reproductive success of as many individual as possible? Why, among animals living in small groups like squirrels, would an individual risk its own life to save the rest of the group? In this course, based upon ecological and evolutionary principles, students will learn to think within the paradigm of behavioural ecology and understand the causes, functions, development, and evolution of behaviour. We will discuss several classical studies that form the foundation of this field, as well as more recent research that represents the current concepts which have led to modern understanding of animal behaviour. We will also illustrate the links between the recent extraordinary advances in behavioural ecology and socio-ecology					
Course Learning Outcomes	CLO 1 CLO 2 CLO 3 CLO 4 CLO 5	with their application in animal conservation. On successful completion of this course, students should be able to: CLO 1 learn to appreciate the causes, functions, development, and evolution of animal behaviour CLO 2 appreciate the complexity of interactions between environmental selective pressures and animal behaviour CLO 3 appreciate current theories that form basis for modern understanding of animal behaviour CLO 4 learn the scientific reasoning and methodology in the field of Animal Behaviour CLO 5 think analytically in terms of behavioural ecology, animal socio-behavioural complexity, and how the understanding of species' behaviour contributes to its conservation

BIOL4304	Ecosyst	tem functioning and	services (6 credits)		Academic Year	2019	
Offering Department	Biological	Sciences			Quota	30	
Course Co-ordinator	Dr B D R	ussell, Biological Science	s (brussell@hku.hk)				
Teachers Involved	(Dr B D R	(Dr B D Russell, Biological Sciences)					
Course Objectives	This cour	se will introduce the func	tioning of terrestrial, fresl	n water and marine e	ecosystems and th	ne services which	
	including how hum increase	vide human populations. financial, cultural, social an activities degrade the the ecosystem services s	and, importantly, the intrese ecosystem services upplied to humans.	insic value that may and how protecting	be priceless. We ecosystems and	will also explo biodiversity ca	
Course Contents & Topics	services of may be p marine er to human can provi	Natural ecosystems provide trillions of dollars' worth of ecosystem services to humans every year. Many of these services go unrecognized and undervalued. In fact, because humans rely on ecosystems many of these services may be priceless. This course will first cover the function of different ecosystems from terrestrial, fresh water and marine environments. Students will then be introduced to the concept of ecosystem services and what they provide to human populations. Finally, human activities which degrade ecosystems and reduce the extent that ecosystems can provide these services, and what that means for human populations, will be covered. Students will develop independent and creative thinking when proposing solutions to the question of how to value ecosystems for their inherent properties rather than perceived monetary value.					
Course Learning	On succe	ssful completion of this co	ourse, students should be	e able to:			
Outcomes	CLO 1 D	emonstrate an understan	ding of the complexity an	d function of ecosyst	tems		
	CLO 2 Explain how ecosystems provide services which humans use						
	CLO 3 Demonstrate knowledge on methods used to calculate the value of ecosystem services						
	CLO 4 Demonstrate knowledge on the limits to the methods used to calculate the value of ecosystems and the dangers of placing a value on nature						
	CLO 5 Demonstrate an understanding of how human activities reduce the function of ecosystems and reduces ecosystem services

BIOL4411	Plant and food biotechnology (6 credits)	Academic Year	2019				
Offering Department	Biological Sciences	Quota	80				
Course Co-ordinator	Dr Juliana Xu, Biological Sciences (julianax@hku.hk)	r Juliana Xu, Biological Sciences <i>(julianax</i> @hku.hk)					
Teachers Involved	Dr Juliana Xu,Biological Sciences)						
Course Objectives	This course covers the principles and key concepts of plant and food biotechnology and its applications in increasing global food supply. The significances of biotechnology in agriculture and food production, and the emerging importance of plant biotechnology in molecular farming for the production of biopharmaceuticals and other high-value proteins will be discussed. The course will also provide an insight on the real-life applications of plant and food biotechnology.						
Course Contents & Topics	 Genetic improvements in agriculture. Transgenic crops in global food production. Tools in plant genetic engineering: promoters and marker genes. Techniques in plant gene transfer: Agrobacterium-mediated transformation, bid. Nuclear and plastid transformation. Gene silencing in plants. Genetic manipulation of commercially useful biosyntt Extending shelf-life of fruits. Prevention of enzymatic browning of potato tuber Genetically-engineered biofortified foods: provitamin A-enriched rice, anthocyanin tomatoes. Biotechnology in plant pest and disease management: Producing crops resistant to phytopathogens and pests. Short-interfering RNAs in gene silencing to defend against plant viruses. Protecting crops in the field using the Bt toxin. Pest-resistant genetically-transformed seeds using the alpha-amylase inhibitor 	netic pathways in o s. omega-3-enriched	crops.				

	- Herbicio	de-resistant crops.			
	- Plants biopharm Biodegr - Genetic	as bioreactors for molect aceutical proteins. adable plastics. Biofuels. ally-modified crops and f		0	ducing recombinant

BIOL4415	Healthcare biotechn	ology (6 credits)	Academic Year	2019	
Offering Department	Biological Sciences		Quota	70	
Course Co-ordinator	Prof A S T Wong, Biologi	ical Sciences (awong1@hku.hk)			
Teachers Involved	(Dr K W Y Yuen, Biologic				
	(Prof A S T Wong, Biological Sciences)				
Course Objectives	This course discusses the key concepts and principles involved in healthcare biotechnology, and their applications in molecular medicine.				
Course Contents & Topics	Genetic biotechnology in animals (transgenics, knockouts and other related technologies): Transgenic animals as models in the study of human diseases, as bioreactors for the production of hormones, antibiotics and vaccines and organs for xenotransplantation. Advanced molecular biology techniques related to human and animal science basic research, disease diagnosis and development of new therapies. These include but not limited to: applications of DNA technologies in diagnostic medicine and forensic science; tissue engineering. An overview of the drug development process, with a focus on the early-stage, preclinical drug discovery, drug target identification, high-throughput assay development, and screening of chemical libraries (synthetic and natural products). The concept of individualized medicine will also be discussed.				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe key concepts in genetic biotechnology and human health CLO 2 acquire and apply advanced laboratory techniques essential to biotechnology CLO 3 develop scientific inquiry and critical thinking skills to understand, analyze, and evaluate problems in order to develop solutions CLO 4 gain insight into real-world applications in healthcare biotechnology

	This seem	ffiting	amina annotativity there is to	handa an aymanianaa in	field messenab int	
Course Objectives	behaviou students effectivel mobile m	This course offers an exciting experiential learning opportunity through hands-on experience in field research int behavioural ecology and conservation of free-ranging cetaceans (whales, dolphins and porpoises). It provide students with a fundamental knowledge, skills, and the appreciation of what it takes to design, implement, an effectively run field studies in cetacean ecology, behaviour and conservation, and similar studies of other large an mobile marine vertebrates.				
Course Contents	Field-bas	ed studies of cetaceans have bee	en rapidly evolving in rec	ent years. There are r	nany exciting nev	
& Topics	developm compone and on it research definition will learn emphasis the scien to advan informal extensive field-base	developments that allow researchers to tackle previously unexplored avenues of research. However, the primary component of cetacean studies, the direct contact with free-ranging animals out at sea, in their natural environmen and on their terms remains unchanged; both challenging and fascinating. This course, conducted in a field research site outside Hong Kong, will expose students to various aspects of cetacean field studies, from the definition of a research question to project design, and to various stages of data collection and analyses. Students will learn a suite of research techniques, and will exercise their skills in data processing and interpretation. The emphasis will be on delphinid behavioural ecology and conservation applications; students will be guided through the scientific reasoning and methodology, and will develop an understanding how individual projects can contribute to advancing science and benefiting broader conservation management efforts. The course includes lectures, informal discussions of current research and recent discoveries, review of innovative research techniques, and extensive field component with sea-based research surveys performed daily (weather permitting). Following the field-based activities, students are required to write an independent report describing the learning outcome of the course.				
Course Learning		essful completion of this course, stud	ents should be able to:			
Outcomes		nderstand of the biodiversity and prin		stem studied		
		stablish the basic skills needed to ide			Δ	
		e knowledgeable about and able to	to implement sampling te	cilliques for organisms	s in the particular	
	ecosystems studied					
		CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communit				
Pre-requisites		t least one of the following courses:				
(and Co-requisites	This experiential field course is primarily for Ecology & Biodiversity Major students. The earliest that a student is allowed to take this experiential course is their year 3 study; and because					
and Impermissible					and because it i	
combinations)	conducted in early June, this course is best suited for year 3 students.

Boyd, I.L., Bowen, W.D., Iverson, S.J. (eds). 2010. Marine Mammal Ecology and Conservation: A Handbook of Techniques. Oxford University Press.
Course Website	http://www.biosch.hku.hk/ecology/lsc/
Additional Course Information	Enrollment Procedure: The course is open to enrollment only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following: 1. Personal and academic details 2. ID photograph 3. Brief description of academic interests 4. GPA 5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver) All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester.

BIOL4505	Oyster a	quaculture (6 cred	its)	Academic Year	2019		
Offering Department	Biological			Quota	20		
Course Co-ordinator	Dr T Veng	atesen, Biological Scie	nces (rajan@hku.hk)				
Teachers Involved	(Dr T Ven	gatesen,School of Biolo	gical Sciences)				
Course Objectives	-Introduce	oyster biology and ha	tchery technology and aquaculture busir	ness;			
	-Enable s aquacultu -Facilitate	Provide scientific basis for oyster aquaculture through field demonstrations and laboratory exercises; inable students to design, construct and maintain oyster hatchery for production of seeds for sustainable quaculture and restoration of wild oysters; acilitate transfer of academic knowledge to oyster growers and aquaculture industry for sustainable, healthy and life sea-food production;					
Causa Cautanta			is to anhance studental knowledge in a	f the emplied meaning	hialam, fialda i		
Course Contents & Topics	hatchery maintain shellfish pendeavor aquacultu marine la Environme covered u facilities ir course is	his experiential learning course is to enhance students' knowledge in one of the applied marine biology fields, i.e. atchery technology and coastal aquaculture business that will enable them to design, construct, operate and maintain coastal aquaculture facilities and small-scale 'green and environmentally sustainable' business for hellfish production and restoration of wild benthic biodiversity in coastal habitats. This is an interdisciplinary indeavor encompassing larval hatchery technology, seafood quality, and economic dimensions of coastal quaculture business. After reading about basic oyster biology and oyster aquaculture topics, we will focus on how harine larvae will be useful for human society through hatchery technology and aquaculture business. Invironmental issues, legislation pertaining to coastal aquaculture business and community interaction will also be overed using oyster aquaculture in Hong Kong as an example. Students will be exposed to several aquaculture civilities in Hong Kong, Zhanjiang, and Qingdao to learn industrial and business skills of oyster aquaculture. This ourse is designed to meet the needs of an expanding sustainable aquaculture in Hong Kong and in mainland. areer and small scale business opportunities in aquaculture industry will be discussed.					
Course Learning	On succes	n successful completion of this course, students should be able to:					
Outcomes	CLO 2 action CLO 3 ex	CLO 1 gain scientific knowledge required for setting up oyster hatchery, farming and small-scale business, best understanding biology and ecology of larvae and shellfishes and consider potential environmental effection hatchery and farming acquire skills and experiential learning opportunities (e.g. hands-on experiences at laboratories and farming oyster hatchery and aquaculture business, farming and industry acquire skills and experiential learning in coastal habitat restoration plan and execute a commercially important research project in marine science and coastal aquaculture					
Pre-requisites	CLO 5 develop novel ideas, and think creatively, about hatchery production in relation to the aquaculars of BIOL3109 or BIOL3203 or BIOL3301 or BIOL3303 or ENVS3004 or ENVS3313;

BIOL4911	Conse	ervation science in practice (6 credits)	Academic Year	2019		
Offering Department	Biologic	cal Sciences	Quota	9		
Course Co-ordinator	TBC, Bi	iological Sciences ()				
Teachers Involved						
Course Objectives	environi produce science econom scientifi	To build on the foundation acquired by students in the Biological Sciences in the fields of ecology, biodiversity and environmental science by using case studies that stimulate them to integrate the principles and concepts learned to produce and successfully debate a topic in conservation science. Case studies will specifically address the use of science in achieving meaningful conservation outcomes taking into account the need for considering social, economic, and political contexts. Students will be expected to present their cases orally using sound practical and scientific reasoning. This course is a capstone course for Ecology & Biodiversity major / Ecology & Biodiversity Intensive) Major students.				
Course Contents & Topics	specific wider of conduct address wildlife instrume will intro	This course will use directed case studies to give students the opportunity to consider and synthesize solutions to specific problems in conservation and the application of conservation science in the modern world, and within the wider context of economic development, political considerations and scientific uncertainty. Projects will be conducted through collaborations with local organizations, such as WWF-Hong Kong and Ocean Park, and address real-life questions and issues. Possible case studies range from ecosystem services, biological footprints, wildlife trade, to assessment of conservation risk, effectiveness of international conservation and biodiversity instruments, and the relationship between biodiversity and human livelihoods. Tutorials by the course coordinator will introduce practical conservation concepts, develop critical thinking and address specific issues of relevance across case studies				
Course Learning	On succ	cessful completion of this course, students should be able to:				
Outcomes	CLO 1 have an in-depth understanding of the topic studied, the major issues involved and the need prospects for further work in the area					
	CLO 2 have developed investigative skills associated with the case study selected which include synthe organization and presentation of information and innovative and creative thinking around problem solving					
		understand the importance and complexities of conserving biodiversity				
	CLO 4 be able to identify practical and scientifically defensible initiatives and measures for successful conservation intervention					

Pre-requisites		•	tly present the case study and convi of advanced level disciplinary core/e	0,7 0	ırses (BIOL3XXX o

	B C D	with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level. Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level. Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.

Additional Course	Enrollment Procedure:
Information	The course is open to enrollment only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following: 1. Personal and academic details 2. ID photograph 3. Brief description of academic interests 4. GPA 5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver). All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester.

ENVS1301	Environmental life science (6 credits)	Academic Year	2019				
Offering Department	Biological Sciences	Quota	60				
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@hku.hk)						
Teachers Involved	(Dr T Vengatesen, Biological Sciences)						
Course Objectives	This course intended for students who wish to understand the fundamentals of environmental biology/life science and importantly the relationship (connection) between environment and life. Here you will learn about the various biological/ecological principles and concepts of environmental science which are needed for critical discussion and evaluation of current global environmental issues including human ecology, urbanization, ecological economics,						
Course Contents & Topics	and climate change. This course is a combination of lectures, group discussion/debate and field trips cum tutorials. We first explore the fundamental interactions between organisms and their environment. We then explore environmental constraints on life at various ecosystems (like marine, freshwater, and terrestrial). Students will also learn how factors such as urbanization, climate change, and anthropogenic impacts affect life at population and ecosystem levels. Similarly, students will be exposed to the incredible interrelationships that are basic to ecological principles and the impact that human development has upon these interrelationships. After learning basics of environmental life science, students will be stimulated to think about current life science issues such as biodiversity loss, organisms adaptation						

Carrea Lagrerina	science.	On successful completion of this course, students should be able to:

ENVS2001	Methods	Methods in environmental science (6 credits) Academic Year 2019						
Offering Department	Biological	Sciences	Quota	42				
Course Co-ordinator	Dr D M Baker, Biological Sciences (dmbaker@hku.hk)							
Teachers Involved	(Dr D M Baker,Biological Sciences)							
Course Objectives	science. T reporting,	To introduce students to a broad spectrum of field and laboratory methods for data collection in environmental science. Through exposure to environmental data collection, experimental design, data analysis, interpretation and reporting, students will gain a deeper appreciation of the process that underlies environmental science research and it's relevancy to critical thinking and future careers in the sciences.						
Course Contents & Topics	cover basi based exp the biospl experience	This course will involve environmental data collection in both field and laboratory settings. In-class lectures will cover basic principles of specific methodologies and relevant applications in preparation for laboratory and field-based experiential learning. Having an interdisciplinary focus, the course will cover topics relevant to the study of the biosphere, encompassing terrestrial, aquatic, and atmospheric systems. Students will gain hands-on experience with the operation of standard and advanced sampling and analytical equipment, quality control, basic data analysis and reporting.						
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 understand how scientific data is used to address environmental problems CLO 2 have a basic understanding of the techniques and methodologies necessary for collecting environmental data							
	CLO 3 understand some of the problems inherent in data collection, and how this impacts data interpretation CLO 4 understand how data collected in the lab and field can be used to critically evaluate ideas							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL1309 or EASC1401 or ENVS1301 or ENVS1401							
Offer in 2019 - 2020	Y 1st	sem Offer in 2020 - 2021 : Y	Examination	No Exam				
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly effective lab / fieldwork skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.							
	B Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Apply effective lab / fieldwork skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.							
	С	Demonstrate general but incomplete grasp of the subject. Evidence of sapply moderately effective lab / fieldwork skills and techniques. Mostly draw appropriate conclusions. Apply moderately effective organizational	correct but some erroneous use					
	D	Demonstrate partial but limited grasp, with retention of some relevant info	ormation of the subject. Evidence	of some coherent and				

	Fail Demonstrate evide analytical and crit techniques. Course Objectives	To provide students with the ability to analyze data; especially data which are relevant to issues and questions in environmental science. This course will enable students to accurately interpret, organize, display, test and analyze environmental data. The course will also introduce students to principles of a variety of important advanced approaches in analyzing environmental data including spatial analysis, geographic information systems, remote sensing, risk assessment, and time series analysis.						
Course Contents				outions, uncertainty, probabili	itv. and hypothesi		
& Topics	The course will feature lectures on aspects of sampling, distributions, uncertainty, probability, and hypothesis testing in addition to lectures on advanced analysis topics. Special emphasis will be placed on qualities inherent to most environmental datasets such as large size, multivariate, and spatial. All material will be applied and practiced in environmental science contexts (e.g. chemistry, ecology, geology and oceanography) using a variety of datasets in a computer laboratory setting using the 'R Project for Statistical Computing' software (a graphical user interface will be implemented such that prior knowledge of coding or computer science is not required).						
Course Learning			s course, students should be able	• • •

		(Dr T C Bonebrake, School of Biological Sciences)						
Course Objectives	course w	rse will provide students with an understanding and knowle rill highlight the role of cities in a world under environmental	change and rapid developm	nent.				
Course Contents & Topics	concepts developn effects),	Ecological systems within cities and cities as ecological systems will both be covered in this course. Ecological concepts unique to or specialized within cities will be covered including sustainability, conservation, health, development, globalization, and restoration. Specific topics will include climate change (e.g. urban heat island effects), invasive species, infectious diseases and pollution. Examples will be taken globally but special emphasis will be placed on Hong Kong.						
Course Learning		essful completion of this course, students should be able to:						
Outcomes	CLO 1 d	lescribe and evaluate the processes and patterns that chara	acterize urban ecological sy	stems				
		ınderstand biodiversity and ecosystem responses to urbaniz						
		ecognize energy flows within urban ecosystems and how environmental quality	energy use and waste imp	rove or deteriorate				
	CLO 4 c	ritically evaluate management and policy solutions to urban	ecological problems

ENVS3020	Global change ecology (6 credits)	Academic Year	2019				
Offering Department	Biological Sciences	Quota	65				
Course Co-ordinator	Dr C Dingle, Biological Sciences (cdingle@hku.hk)						
Teachers Involved	(Dr C Dingle, School of Biological Sciences)						
Course Objectives	The main goal of this course is to introduce students to the ways in which global environmental change affects biodiversity from organisms to ecosystems. This course will explore the contributions that human population growth and globalization have made to increases in greenhouse gases and associated climate change, biological invasions, land degradation, disease, and, ultimately, impacts on biological systems.						
Course Contents & Topics	Environmental change is a natural phenomenon, with ecosystems continually shifting, rearranging, emerging, and disappearing through geologic time with changes in climatic conditions. The activities of humans have added to this						

. waitional oouldt		tp://moodle.hku.hk/ nis course will be offered subject to a minimum enrollment number and availability of teachers. ffer in alternate year from 2016-2017

ENVS3028	Coastal S	Sustainability (6 credits) Academic Year	2019			
Offering Department	Biological S	Sciences Quota	8			
Course Co-ordinator	Dr T Venga	atesen, Biological Sciences (rajan@hku.hk)				
Teachers Involved		atesen,School of Biological Sciences) Villiams,School of Biological Sciences)				
Course Objectives	ecosystems - Gain an a and stress f - Better und and/or facili - Appreciate	nd the primary drivers of biodiversity and ecosystem function in rocky intertidal, mangres in USA and SE Asia. appreciation for how urban ecosystems in this region are being affected by climate chafrom pollution derstand how history and governance structures of Hong Kong, Malaysia and New litate coastal adaptation strategies the how cultural practices such as seafood preferences and traditional medicine afficies, and how this impacts coastal biodiversity	nge, developmer England constrai			
Course Contents & Topics	The majority of the Earth's population now lives in coastal cities, where people not only depend on ocear resources, but are also experiencing ever increasing threats from the ocean environment. This program will explore the mechanisms by which coastal communities in the US and SE Asia are facing these expanding challenges including their impacts on coastal ecosystems. Using a comparative approach, students will explore the diverse challenges facing coastal societies, and will gain an in-depth understanding of coupled human-natural systems of the coasts of New England and Southeast Asia (Hong Kong and Malaysia). By comparing and contrasting both ecosystems and societies, students will develop an appreciation for both the commonalities of challenges facing the world's coasts, as well as differences that occur due to local ecology. A major emphasis of the program will be on solutions, and how by taking a global perspective we can accelerate methods for climate change adaptation that span traditional cultural barriers. We will blend studies of threats facing both human and natural systems in Hong Kong, Malaysia and the Gulf of Maine with an in-depth exploration of how those societies have (or have not) enacted solutions to those challenges.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 Articulating similarities and differences between how coupled human-natural systems operate in SE Asia and in comparable habitats in the U.S.A. CLO 2 Reading and synthesizing review articles in the primary literature in marine science and social science literature, and explain the connections among these diverse approaches CLO 3 Articulating arguments about how traditional Chinese, Malaysian and American culture affect human impacts on the environment, and to develop potential solutions to these issues based on conversations with peers					
	CLO 4 Bec	coming comfortable collaborating with peers from U.S.A, and gain a greater unde	erstanding of the

ENVS3402		Qualitative data, social science methods and decision- making in environmental science (6 credits)			2019		
Offering Department	Biologica	Sciences		Quota	30		
Course Co-ordinator	Dr Hannah Mumby, Biological Sciences (hsmumby@hku.hk)						
Teachers Involved	(Dr Hannah Mumby,Biological Sciences)						
Course Objectives	This course will introduce social science and qualitative approaches in environmental science. The course will begin with an introduction to the philosophical and epistemological background to different approaches to environmental sciences. The course will then take a problem-based approach, using case studies to introduce methodologies, including the collection and analysis of qualitative and quantitative data from focus groups, surveys, and questionnaires to ethnographic approaches, grounded theory and discourse analysis. We will also investigate how these data are or can be integrated into decision-making processes, linking different approaches that can be used for decision-making.						
Course Contents & Topics	-Research philosophy- how researchers approach questions in environmental science -Research methodology- the rationale and framework for research -Concepts of 'bias', objectivity, truths and the role of the researcher -Methodologies including biography, ethnography, case study, grounded theory -Methods, data and working through case studies, including questionnaires and surveys, interviews, focus groups, and decision-making tools.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 Determine and distinguish a range of social science approaches and qualitative data analysis techniques						
	CLO 2 Design a study appropriate for the research question using those approaches and techniques						
	CLO 3 Discuss the philosophical and epistemological background of different approaches to environmental science questions						
	CLO 4 Critically evaluate studies using social science and/or qualitative approaches.

ENVS4110	Enviror	nmental remed	iation (6 credits)	Academic Yea	r 2019		
Offering Department	Biologica	l Sciences		Quota	30		
Course Co-ordinator		Dr J D Gu, Biological Sciences (jdgu@hku.hk)					
Teachers Involved	(Dr J D Gu,Biological Sciences)						
Course Objectives	To introduce students with the environmental fate information of different pollutants/contaminants in the environment To understand the technologies available for environmental remediation of pollutants in soils and water, and the characteristics of each techniques relevant to the pollutants of concern To learn the fundamental physical, chemical and biochemical reactions involved in the remediation process To obtain skills for critical analysis of the recent technological development and the proposed applications						
Course Contents & Topics	Understanding the types of different pollutants and their fate in the environments including both terrestrial and aquatic; and relevant strategy of pollution control and treatment; advanced oxidation, microbiological treatment and phytoremediation; mechanisms of biochemical transformation of polyaromatic hydrocarbon, polychlorinated biphenols, agrichemicals and phthalate esters as well as both metals and metalloids; biochemical pathways and the specific genes involved in detoxification; chemotaxis and engineering the degradation pathways in bacteria; transport of microorganisms and monitoring in subsurface environment; survival of introduced organisms; evolution of the degradative genes in bacteria; in situ and ex situ remediation techniques; green technologies.						
Course Learning	On succe	essful completion	of this course, students should be able to):			
Outcomes	CLO 1 explain the remediation technologies available to the type of pollutants of concern in reme CLO 2 propose remediation strategies for polluted sites with the best technologies available cor of pollutants and the cost involved CLO 3 differentiate the technologies available for the specific pollutants and the fundamental pr terms of the catalysts and the effectiveness CLO 4 describe several key chemical and biochemical processes used in environmental r adequate background information on their history and development						
Pre-requisites and Co-requisites and Impermissible combinations)	Pass in BIOL3109 or BIOL3110 or BIOL3401 or ENVS3042						
Offer in 2019 - 2020			2020 - 2021 : N	Examination	May		
Grade Descriptors (A+ to F)	A Thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Thorough grasp of the subject matter. Show very strong analytical and critical abilities and high logical thinking, with evidence of original thought. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.						
	В	Substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Substantial grasp of the subject. Show evidence of analytical and critical abilities and logical thinking. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.					
	General but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. General but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.						
	Partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.						
	Fail Little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

CAES1000	Core University English (6 credits) Academic Year 2019						
Offering Department	English			Quota			
Course Co-ordinator		Dr P Wong, English (pmtw2 @hku.hk)					
Teachers Involved	(Dr P Wo	(Dr P Wong,Centre for Applied English Studies)					
Course Objectives							
Course Contents & Topics	proficience Common written act for and u the Mood skills and	The Core University English (CUE) course aims to enhance first-year students' academic English language proficiency in the university context. CUE focuses on developing students' academic English language skills for the Common Core Curriculum. These include the language skills needed to understand and produce spoken and written academic texts, express academic ideas and concepts clearly and in a well-structured manner and search for and use academic sources of information in their writing and speaking. Four online-learning modules through the Moodle platform on academic speaking, academic grammar, academic vocabulary, citation and referencing skills and avoiding plagiarism will be offered to students to support their English learning. This course will help students to participate more effectively in their first-year university studies in English, thereby enriching their first

Grade Descriptors (A+ to F)	A Wholly appropriate productive skills displaying a complete awareness of audience, purpose and structure across all disciplinary work. Students are able to critically analyse a case scenario, convincingly justify analyses and recommendations, and discuss data limitations when relevant. Students are able to successfully evaluate their language performance in all areas and propose specific and relevant future language learning plans. Spoken language is fully comprehensible and fluent. Written language contains a sophisticated range of grammar and vocabulary, with very few systematic errors.						
	В	Mostly appropriate productive skills displaying good awareness of audience, purpose and structure, although there are occasional lapses in areas. Students are able to analyse a case scenario, justify analyses and recommendations, and discuss data limitations when relevant. Students are able to evaluate their language performance in most areas and propose relevant future language learning plans. Spoken language is comprehensible and fluent. Written language contains a good range of grammar and vocabulary, making some systematic errors of language which generally do not impede understanding.					
	C Productive skills are generally appropriate for the intended audience. There is an overall sense that the work is communicating successfully. Purposes are generally clear and tone is generally suitable. Students are generally able to analyse a case scenario and make recommendations, but the analysis and recommendations need more justification. Students are able to evaluate their language performance in a limited number of areas and proposed future language learning plans are rather vague. Spoken language is generally comprehensible and fluent. Written language contains inaccuracies when complex grammar and vocabulary are used.

CHEM1044	Mathematics in chemistry (6 credits) Academic Year 2019				
Offering Department	Chemistry Quota 80				
Course Co-ordinator	Prof C M Che, Chemistry (cmche@hku.hk)				
Teachers Involved	(Dr A M Y Yuen,Chemistry) (Dr J Yang,Chemistry)				
Course Objectives	Mathematical calculations are necessary to explore important concepts in chemistry. This course aims to equip students with a basic knowledge of some of the mathematics that will be used in courses covered in the Chemistry-major curriculum to enable them to apply the mathematical skills to problems in chemistry. Students taking this				

	course are expected to already have achieved level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or a pass in MATH1011 University Mathematics I. As far as possible, the mathematical concepts covered in this course will be put in the context of chemical problems.							
Course Contents & Topics	Applying	mathematical tools, sur, Differential equation, in	ch as Algebra, Trigonor	netry, Calculus, Comple	ex number, Ve	ctor, Matrix, Linear		
Course Learning		essful completion of this						
Outcomes	CLO 1 c	lemonstrate knowledge a	and understanding of the	e essential mathematics	used in chemis	stry		
	CLO 2	apply mathematical skills	to solve basic problems	in chemistry				
		oe more capable of copion najor, in particular, in phy			in relevant cou	irses for chemistry		
Pre-requisites (and Co-requisites and Impermissible combinations)	Level 2 c	CHEM1042 or already er or above in Module 1 or N MATH1011			or

CHEM2041	Principles of chemistry (6 credits)	Academic Year	2019			
Offering Department	Chemistry	Quota	140			
Course Co-ordinator	Dr I K Chu, Chemistry (ivankchu@hku.hk)					
Teachers Involved						
Course Objectives	This course is designed for non-chemistry major students covering be	asic principles of chemistry.				
Course Contents & Topics	Inis course is designed for non-chemistry major students covering basic principles of chemistry. Gas Laws and the Kinetic Theory of Gases Thermodynamics: work, heat, the zeroth and first law of thermodynamics, internal energy, enthalpy, hea capacities, thermochemistry, Hess's Law, Kirchhoff's Law, the second and third laws of thermodynamics, entropy Gibbs free energy, spontaneity, equilibrium, coupled reaction; Transport Phenomena: diffusion, viscosity of gases, diffusion in liquids and viscosity of liquids, ionic conduction; Chemical Kinetics: rate of reactions, orders of reactions, rate laws, reaction mechanism, experimental measurement of reaction rates, enzyme kinetics, enzyme inhibition, temperature effect on rates; Chemical Equilibrium; Equilibria in single-, and two component systems: phase transitions, phase diagrams and the phase rule, chemic potential; liquid/liquid systems; Introduction to acids and bases: calculation on concentration of different chemical species in a solution, diprot and polyprotic acids, activity; Introduction to Spectroscopy: UV/Visible absorption spectroscopy, Beer-Lambert Law; IR Spectroscopy identification of functional groups; NMR Spectroscopy, Larmor frequency & chemical shift, peak integral, spin-sp					
Course Learning Outcomes	coupling multiplicities; Mass Spectrometry, isotopic distribution, determination of molecular formulae. On successful completion of this course, students should be able to: CLO 1 explain the principles of the thermochemistry, chemical kinetics, chemical equilibrium, physical proof solutions and gases CLO 2 explain the principles of the spectroscopy, and spectrometry					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM1042; and Not for students who have passed in CHEM2341, or have already enrolled in this course; and Not for students who have passed in CHEM2441, or have already enrolled in this course; and Not for students who have passed in CHEM2541, or have already enrolled in this course; and Not for Chemistry major students.

CHEM2441	Organic	chemistry I (6 cre	dits)	Academic Yea	r 2019		
Offering Department	Chemistry			Quota	200		
Course Co-ordinator	Dr X Y Li	(1st sem); Prof P Chiu	(2nd sem), Chemistry (xiaoyuli@hku.	hk; pchiu@hku.hk)			
Teachers Involved	,	,Chemistry) niu,Chemistry)					
Course Objectives	examples This cours	provide students with the basic principles to understand the structure and reactivity of organic molecules, with amples illustrating the role of organic chemistry in daily life and industry. It is course serves as the first part of the complete program on fundamental organic chemistry, to be followed up CHEM3441 Organic Chemistry II.					
Course Contents & Topics	stereoche	ucture and bonding of organic compounds, three dimensional structures of organic molecules, conformational reochemistry, chirality. Chemistry of alkanes, cycloalkanes, alkenes, alkynes, haloalkanes, dienes, aromatic mpounds, alcohols, thiols, and ethers. Organometallic chemistry for organic synthesis. Principles of organic thesis. Detailed considerations of reaction mechanisms.					
Course Learning Outcomes	CLO 1 un CLO 2 vi CLO 3 re CLO 4 un CLO 5 un	n successful completion of this course, students should be able to: LO 1 understand basic concepts and employ the vocabulary of organic chemistry LO 2 visualize and draw three-dimensional, stereochemically correct representations of organic molecules recognize, discriminate and name chiral stereoisomers and diastereomers LO 4 understand the reactivity of the functional groups LO 5 understand reaction mechanisms and apply mechanistic knowledge to solve chemistry problems

Pre-requisites (and Co-requisites and Impermissible combinations)	students a Pass in C	ss in CHEM1042; and NOT for students who have passed in CHEM2041, or already enrolled in this course (for dents admitted in 2014-15 or before); ss in CHEM1042; and Pass in CHEM1043, or already enrolled in this course; and NOT for students who have ssed CHEM2041, or already enrolled in this course (for students admitted in 2015-16 or thereafter)					
Offer in 2019 - 2020		sem 2nd sem Offe	,	Examination	Dec May		
Grade Descriptors (A+ to F)	A Demonstrate a thorough mastery at an advanced level of knowledge and understanding of facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show a strong ability to integrate knowledge and theory, and a strong ability to analyze and solve novel organic chemistry problems. Demonstrate highly effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.						
	B Demonstrate substantial command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of ability to integrate knowledge and theory, and evidence of ability to analyze and solve novel organic chemistry problems. Demonstrate effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.						
	Demonstrate a general but incomplete command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of some ability to integrate knowledge and theory, and evidence of some ability to analyze novel problems. Show a mostly correct use of knowledge to solve most familiar problems. Demonstrate adequately effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.						
	Demonstrate a partial but limited command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of limited ability to integrate knowledge and theory, and a limited ability to analyze novel problems. Show some correct but also erroneous use of knowledge to solve most familiar problems. Demonstrate a partially effective organization, understanding and application of lab skills and techniques in organic chemistry experiments.						
	Fail	Demonstrate little or no even chemical properties, react knowledge and theory, an problems. Demonstrate rechemistry experiments.	vidence of command of knowledge and unders tions and mechanisms of organic chemistry. S d little or no ability to analyze novel problems. ninimal or no organization, understanding a	how little or no evidence of ability Show little or no evidence of abilit	to apply and integrate y to solve most familiar

CHEM2442	Fundamentals of organic chemistry (6 credits)	Academic Year	2019		
Offering Department	Chemistry	Quota	130		
Course Co-ordinator	Dr P H Toy, Chemistry (phtoy@hku.hk)				
Teachers Involved	(Dr P H Toy, Chemistry)				
Course Objectives	The major objective of this course is to give the students a basic understanding of organic chemistry, especially in the context of daily life. This will be achieved through the introduction of the chemistry of organic functional groups that form the basis of organic molecules. The concepts presented in the lectures will be reinforced by a series of laboratory experiments.				
Course Contents & Topics	The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones, carboxylic acids and their derivatives, and amines will be discussed, as will the general concepts of molecular structure, conformation and stereochemistry.				

Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1	demonstrate basic un	derstanding of the structi	ure of organic molecules			
	CLO 2 demonstrate basic understanding of the reactivity of organic molecules						
	CLO 3	appreciate how organ	ic chemistry plays an imp	oortant role in everyday life			
Pre-requisites (and Co-requisites and Impermissible combinations)		in CHEM1042; and or students who have passed CHEM2441, or have already enrolled in this course.

Course Co-ordinator		hemistry (jinyao@hi	ku.hk)	4.51		
Teachers Involved	(Dr J Y Tang,C		,			
Course Objectives	The course ai Students are re chemical reach properties of n	The course aims to provide a rigorous understanding of equilibrium thermodynamics and chemical kinetics students are required to apply mathematical skills (derivations and integrations) and basic physics to understan hemical reactions and related processes. Topics include the three laws of thermodynamics, thermodynami roperties of mixtures, solutions, chemical equilibrium, electrochemistry, rates of chemical reactions and reactio ynamics. Students will gain a good foundation of knowledge and skills for further study in Physical Chemistry.				
Course Contents & Topics	Properties of G States of gases	ases s and the gas laws v	vith applications.			
	Basic concepts		ergy, expansion work, heat transac y and materials science.	ctions, enthalpy and adia	batic changes and	
		nd Third Laws of The contaneous change, o	ermodynamics entropy and the Third Law of Therm	odynamics.		
			xtures, partial molar quantities, and ions in solution.	d chemical potentials of I	iquids. Activities of	
	Chemical Equilibrium Spontaneous chemical reactions, the Gibbs energy minimum and equilibrium. Response of equilibria to pressure, temperature.					
	Electrochemistry Electrochemical cell, relationship of electrochemical potential to thermodynamic functions. Applications of electrochemistry in energy, material science, sensing.					
	Molecules in Motion Molecular motion in gases and liquids, kinetic model, collisions with surfaces, the rate of effusion and transport properties, conductivities of electrolyte solutions.					
	Rates of Chemical Reactions Empirical chemical kinetics including experimental methods, rates of reactions, integrated rate laws and temperature dependence of reactions and Reaction mechanism On expensely the projection of this course attribute about the other temperature.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 demonstrate knowledge and understanding of the properties of gases, molecules in motion and the rates of chemical reactions					
	CLO 2 understand and demonstrate knowledge of the three laws of thermodynamics					
	CLO 3 understand and apply the concepts of chemical equilibrium and the response of chemical equilibria to					
	temperature and pressure CLO 4 understand and demonstrate knowledge of electrochemistry and its relationship to thermodynamics, can build electrochemical cell and calculate thermodynamic functions from electrochemical reactions					
	CLO 5 demonstrate knowledge and understanding of basic reaction dynamics including reaction mechanism and how mechanism determines reaction rate law

CHEM3441	Organic chemistry II (6 credits)	Academic Year	2019
Offering Department	Chemistry	Quota	300
Course Co-ordinator	Dr X Y Li (1st sem); Prof D Yang (2nd sem), Chemistry (xiaoyuli@hku.hk; yanga	lan @hku.hk)	
Teachers Involved	(Dr X Li,Chemistry) (Dr X Y Li,Chemistry) (Prof D Yang,Chemistry)		

Course Objectives	As a continuation from CHEM2441 Organic Chemistry I, this course aims to provide a solid foundation of organic chemistry together with CHEM2441. It focuses primarily on the basic principles to understand the structure and reactivity of organic molecules, with examples illustrating the role of organic chemistry in daily life and industry.					
Course Contents & Topics	Chemistry of common organic functional groups: ketones and aldehydes; carboxylic acids and their derivatives; amines; aromatic compounds. Principles of organic synthesis. Detailed considerations of reaction mechanisms. Spectroscopic tools (UV-Vis, IR, NMR, and MS) for characterization and identification of organic compounds.					
Course Learning	On succes	sful completion of this o	course, students should be able to:			
Outcomes	CLO 1 dra	aw correct structural rep	presentations of organic molecules			
	CLO 2 un	derstand the basic princ	ciples of structure and reactivity of o	rganic molecules		
	CLO 3 de	termine structures of or	ganic compounds based on spectro	scopic data		
	со		isms for transformations of common tetones, carboxylic acids, acyl halic			
	CLO 5 ap	preciate the importance	of organic chemistry in daily life			
	CLO 6 de	vise synthetic pathways	to organic compounds using functi	onal group chemistry		
Pre-requisites (and Co-requisites and Impermissible combinations)	students v	CHEM3441 has been who admitted in 2014-1	n changed to lecture-based course 15 or before, they must enroll also meet the Chemistry Major requiren	CHEM3443 for enrollin		
Offer in 2019 - 2020	Y 1st	sem 2nd sem Offer	in 2020 - 2021 : Y	Examination	Dec May	
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations.					
,	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations.				
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations.				
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lac of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems					
Carriera Trena	Lastuma ha		ities, logical and coherent thinking. Show ver	y little or no ability to apply know	riedge to solve problems.

CHEM3542	Physical theory (6	chemistry: statistical thermodynamics and kinetics credits)	Academic Year	2019			
Offering Department	Chemistry		Quota	50			
Course Co-ordinator	Dr. J Yang,	Chemistry (juny@hku.hk)					
Teachers Involved	(Dr J Yang,	Chemistry)					
Course Objectives		presents fundamental principles and topics on statistical thermolid foundation for students intending to further their studies in pl					
Course Contents & Topics	- Thermody - Ensemble - Systems of - Molecular - Ideal gas - Quantum	Principles of Statistical Thermodynamics - Thermodynamic laws - Ensembles and partition functions: microcanonical, canonical and grand-canonical - Systems of independent molecules: ideal gas - Molecular degrees of freedom: translation, rotation, vibration, and electronic - Ideal gas mixture: chemical equilibrium, binding, and titration - Quantum statistics Chemical equilibrium and kinetics theory - Rate theory: collision theory, transition state theory, electron transfer					
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 understand and use the terminology and nomenclature in statistical thermodynamics and topics discussed in the course CLO 2 demonstrate knowledge and understanding of basic concepts in statistical thermodynamics						
	CLO 3 understand correlation between macroscopic observables and microscopic statistical model systems						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CH	Pass in CHEM2541					
Offer in 2019 - 2020	Y 2nd	sem Offer in 2020 - 2021 : Y	Examination	May			
Grade Descriptors (A+ to F)	A Thorough mastery at an advanced level of extensive knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of strong analytical / critical abilities and logical thinking. Can apply the knowledge to practical questions in Physical Chemistry.						
		General but incomplete command of knowledge of statistical thermodynamics analytical thinking. Can apply the knowledge to familiar situations.	<u> </u>				
	D Partial but limited command of knowledge of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate limited evidence of analytical thinking. Understand the question to be solved with knowledge.						

	Fail Little or no evidence of command of knowledge of statistical thermodynamics and reaction dynamics.					
Course Type	Lecture with laboratory component course

CHEM4147	Supram	olecular chemistry	(6 credits)	Academic Yea	ar 2019			
Offering Department	Chemistr	y		Quota	40			
Course Co-ordinator	Dr H Y Au	u-Yeung, Chemistry (ho	yuay @hku.hk)					
Teachers Involved		(Dr H Y Au-Yeung,Chemistry) (Dr Y F Wang,Chemistry)						
Course Objectives	Supramo students	Supramolecular chemistry concerns the chemistry beyond that of molecules. This course aims at introducing students to concepts and techniques in supramolecular chemistry, demonstrating how molecular assembly and supramolecular structures leads to functions and properties, and their relevance to material and biological science.						
Course Contents & Topics	building bas macro	Basic concepts in molecular recognition and self-assembly; non-covalent interactions and common supramolecular building blocks; methods in supramolecular chemistry. Selected topics in modern supramolecular chemistry, suc as macrocycles and cages, molecular capsule and container molecules, synthetic receptors, interlocked structures supramolecular polymers and supramolecular chemistry of biomolecules and biomaterials, will also be discussed.						
Course Learning			course, students should be a					
Outcomes			nciples and concepts in supra	•				
	Co			ture of non-covalent interactions structures, properties and fund				
			hysical characterization data explain the properties of the su	a of supramolecular systems ar upramolecular systems	d extract relevant			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in C	CHEM3341 and CHEM34	441					
Offer in 2019 - 2020	Y 2nd	d sem Offer in 2020 - :	2021 : Y	Examination	May			
Grade Descriptors (A+ to F)	Α	A Demonstrate thorough knowledge and understanding of essential facts, concepts and principles in supramolecular chemistry, especially those relating to non-covalent interactions, molecular recognition and self-assembly. Show strong ability to apply and integrate knowledge in supramolecular chemistry in explaining the formation and properties of, and in designing different supramolecular systems. Show strong ability to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of supramolecular systems.						
	B Demonstrate substantial knowledge and understanding of essential facts, concepts and principles in supramolecular chemistry, especially those relating to non-covalent interactions, molecular recognition and self-assembly. Show evidence to apply and integrate knowledge in supramolecular chemistry in explaining the formation and properties of, and in designing different supramolecular systems. Show evidence to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of supramolecular systems.							
	С	Demonstrate general but incomplete amount of knowledge and understanding of essential facts, concepts and principles in supramolecular chemistry, especially those relating to non-covalent interactions, molecular recognition and self-assembly. Show some ability to apply and integrate knowledge in supramolecular chemistry in explaining the formation and properties of, and in designing different supramolecular systems. Show some ability to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of supramolecular systems.						
	D							
	Fail Demonstrate little or no evidence of command of knowledge and understanding of essential facts, concepts and principles supramolecular chemistry, especially those relating to non-covalent interactions, molecular recognition and self-assembly. Sho little or no ability to apply and integrate knowledge in supramolecular chemistry in explaining the formation and properties of, at in designing different supramolecular systems. Show little or no ability to analyse and interpret experimental data to dra appropriate conclusions relating to the advanced principles and properties of supramolecular systems.

CHEM4541		cal chemistry III: statistica cs theory (6 credits)	l thermodynamics and	Academic Year	2019	
Offering Department			Quota	40		
Course Co-ordinator	, Cher	mistry ()				
Teachers Involved						
Course Objectives	The course presents fundamental principles and topics on statistical thermodynamics and kinetic theory in order t provide a solid foundation for students intending to further their studies in physical chemistry and related fields.					
Course Contents & Topics	Principles of Statistical Thermodynamics - Thermodynamic laws - Ensembles and partition functions: microcanonical, canonical and grand-canonical - Systems of independent molecules: ideal gas - Molecular degrees of freedom: translation, rotation, vibration, and electronic - Ideal gas mixture: chemical equilibrium, binding, and titration - Lattice statistics: Ising model and phase transition - Quantum statistics Chemical equilibrium and kinetics theory - Rate theory: collision theory, transition state theory					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand and use the terminology and nomenclature in statistical thermodynamics and topics discussed in the course					
	CLO 2 demonstrate knowledge and understanding of basic concepts in statistical thermodynamics CLO 3 understand correlation between macroscopic observables and microscopic statistical model systems					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM3541					
Offer in 2019 - 2020	N O	N Offer in 2020 - 2021 : N		Examination		
Grade Descriptors (A+ to F)	A Thorough mastery at an advanced level of extensive knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of strong analytical / critical abilities and logical thinking. Can apply the knowledge to practical questions in Physical Chemistry.					
	В	B Substantial command of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of analytical / critical abilities and logical thinking. Understand the scope of Physical Chemistry questions that can be applied with the knowledge.				
	С	General but incomplete command of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of analytical thinking. Can apply the knowledge to familiar situations.				
	D Partial but limited command of knowledge of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate limited evidence of analytical thinking. Understand the question to be solved with knowledge.					
O	Fail Little or no evidence of command of knowledge of statistical thermodynamics and reaction dynamics.

CHEM4911	Capstone experience for chemistry undergraduates: HKUtopia (6 credits)	Academic Year	2019
Offering Department	Chemistry	Quota	
Course Co-ordinator	Dr A P L Tong, Chemistry (apltong@hku.hk)		
Teachers Involved	(Various teachers in the Department, Chemistry)		

Course Objectives	This project-based course with the theme of Chemistry for a Better Living in a Foreseeable Future aims to provide students with a capstone experience. It aims to enable students to think what are the key issues the world is facing with that have to be solved by chemistry and related technology. Students will need to apply what they have learnt in classroom and conduct literature search regarding advanced chemistry research and related technology under development to solve the problems identified in their project using various channels. No formal teaching. It is expected that students are actively engaged and should devote 120-140 hours to working						
Course Contents & Topics	on this pro	oject. will work in groups of to	d that students are actively engaged a wo or three, under the supervision of s. The time of running this project-bas	the course coordinator.	The duration of the		
Course Learning Outcomes	CLO 1 ob	serve and evaluate the	course, students should be able to: e various issues we are facing with and	d determine ways in which	ch chemistry can be		
	CLO 2 int		ns tice, and to understand limitations of tl llaborate with people with different bac	-			
			ffectively in both written and oral forms	•			
	CLO 5 de	evelop further logical, cr	ritical thinking and creativity				
	CLO 6 ac	lvocate to others the ap	preciation for chemistry as to its relev	ance to our daily life			
Pre-requisites (and Co-requisites and Impermissible combinations)	least 24 construction Students May. Late	tudents are expected to have satisfactorily completed all introductory chemistry disciplinary core courses and at ast 24 credits of advanced level disciplinary core/elective chemistry courses in the Chemistry Major. tudents who are interested in taking the course should contact the course coordinator for application in April - lay. Late application may not be considered. his capstone course is for Chemistry Major students only. he earliest that a student is allowed to take this capstone course is their year 3 study.

CHEM4966	Chemistry internship (6 credits)	Academic Year	2019					
Offering Department	Chemistry	Chemistry Quota						
Course Co-ordinator	Dr H Y Au-Yeung, Chemistry (hoyuay@hku.hk)							
Teachers Involved	(Dr H Y Au-Yeung, Chemistry)							
Course Objectives	This course aims to offer students the opportunities to gain work experience in the industry related to their major of study. The workplace learning experience would be of great benefits to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the School/Departments.							
Course Contents & Topics	 - Within the University: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor. - Outside the University: The student will work in an external agency related to the major of study. The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Department/School of the student (the Internal Supervisor). The work to be performed by the student will normally 							
Course Learning Outcomes	be instructed by the External Supervisor, with prior agreement of the Internal Supervisor. On successful completion of this course, students should be able to: CLO 1 apply knowledge in their major study in solving practical problems in the work place CLO 2 gain first hand work experience in the industry related to their major study							
Pre-requisites (and Co-requisites and Impermissible	Pass in at least 24 credits of advanced level disciplinary core/elective chemestal CHEM4XXX) in the Chemistry Major. This capstone course is for Chemistry Major/ Chemistry Major (Intensive) students.	,	(CHEM3XXX or					

combinations)	The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2019 - 2020	Y 1st	sem 2nd sem	Summer	Offer in 2020 - 2021 : Y	Examination	No Exam
Grade Descriptors (Pass /Pass with distinction /Fail)	Pass	assigned by super the job. Successfu	visor(s). Esta lly fulfills the	e problems in the workplace. Successfull blishes effective collaboration and comr requirements set out in the Course Desc), etc. Students demonstrating excellent	nunication with supervisor(s), corription regarding working hours	olleagues, and clients in , written and oral report,
	Fail	Fail Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.				
Course Type	Internship					
Course Teaching	Activities	3	D	etails	No. of Hours	
& Learning Activities	Internship work			is expected that students are to r the equivalent of 4 weeks full-ti	160	
Assessment Methods and Weighting	Methods		D	etails	Weighting in final course grade (%)	Assessment Methods to CLO Mapping
	Written report			ritten report, employer's edback and oral presentation	100	CLO 1,2
Additional Course Information	be record interested Enrolment	feedback and oral presentation Satisfactory completion of this course can be counted towards the Capstone requirement. Details of internship per recorded on the student's transcript. This course will be assessed on "Pass/Fail" basis. Students who anterested to enrol in this course should contact the Department to obtain the approval. Enrolment of this course is not conducted via the online course selection system and should be made through relevant Department/School office after approval has been obtained from the course coordinator.

Offering Department	Earth Sciences Quota					
Course Co-ordinator	Dr P Bach, Earth Sciences (pabach@hku.hk)					
Teachers Involved	(Dr P Bach,Earth Sciences)					
Course Objectives	The aim is to provide those students who are taking a first course in Earth System Sciences with a fundamental knowledge of how our diverse and living planet Earth works with weaving together an understanding of the dynamic and interactive processes in the Earth's lithosphere, hydrosphere, biosphere and atmosphere. In addition, students should become familiar with the way the study of Earth Sciences blends observation, information, hypothesis, communication and decision making for a better understanding of the future of our planet.					
Course Contents & Topics	The course will introduce and discuss the following topics: - Introduction to Earth Systems and Habitable Planet Earth, - Lithosphere (Earth Materials, Plate Tectonics, Volcanism, Earthquakes, Surface Processes and Rock Cycle) - Hydrosphere (Surface- and Groundwater, Oceans and Water Cycle) - Atmosphere (Composition, Weather, Climate, Green House Effect, Oxygen Cycle) - Biosphere (Life, Ecosystems, Evolution and Extinction, Geochemical Cycles, - Concepts and Evolution of Dynamic Earth Systems, Human Interactions with Planet Earth (Earth Resources,					
Geological Hazards, Climate Change, Human Impact and Environmental Changes) On successful completion of this course, students should be able to: CLO 1 understand the terminology and nomenclature appropriate to the introductory study of Earth Science CLO 2 demonstrate knowledge and understanding of the underlying concepts associated with the study Earth Systems and their dynamic interactive processes CLO 3 understand the extent and nature of global change and environmental concerns around us CLO 4 demonstrate the ability to make and record observations on Earth Systems processes in nature

Course Objectives	This course focuses on the origins of life. It provides an overview of Earth's early environments, how life is thought to have originated on Earth, and how the Earth's dynamic environment impacted the origin of life. This course will also provide a basic overview of habitable environments on Earth and elsewhere in the Solar system.				
Course Contents & Topics	oceans; t Solar sys	the central role of water stem; possible conditions	ving topics: the composition and pr in life; abundance of biological elem for the synthesis of life's first buildir signatures in the solar system and b	nents on the early Earthing blocks; the (geo)chem	and elsewhere in the

EASC2408	Planetary geology (6 credits)	Academic Year	2019				
Offering Department	Earth Sciences	Quota					
Course Co-ordinator	Dr M H Lee, Earth Sciences (mhlee @hku.hk)						
Teachers Involved	(Dr M H Lee,Earth Sciences)						
Course Objectives	This course provides students with an introduction to the origin, evolution, structure, composition and distribution of matter in the Solar System condensed in the form of planets, satellites, comets, asteroids and rings, with particular emphasis on surface features, internal structures and histories from a geological point of view. The course incorporates the findings from recent space investigations, planetary imagery, remote sensing and Earth analogues to extraterrestrial features into a fascinating portrayal of the geological activities and histories in our Solar System.						
Course Contents & Topics	Formation, evolution, internal structure and surface processes of planetary bodies; the terrestrial planets Mercury, Venus, the Earth-Moon system, and Mars; the giant planets Jupiter, Saturn, Uranus, and Neptune and their moons; Pluto, Charon and the Kuiper Belt; asteroids, meteorites, comets and the Oort cloud; Origin of our Solar System.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 describe the basic features of our Solar System and its constituents						
	CLO 2 explain how this knowledge is acquired through observations and experiments						
	CLO 3 demonstrate knowledge and understanding of the key geological, physical and chemical processes governing the structure, formation and evolution of planetary bodies						
	CLO 4 compare and contrast our own planet Earth with other planetary bodies						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in EASC1401 or EASC1402 or PHYS1650						
Offer in 2019 - 2020	Y 2nd sem Offer in 2020 - 2021 : Y	Examination	May				

Grade Descriptors (A+ to F)	A	Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.				
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.				
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.				
	D	Show evidence of some coh	nerent and logical thinking, but wil	skills required for attaining some of the countries the limited analytical and critical abilities. She organizational and presentational skills.		
	Fail	Demonstrate little or no evic of analytical and critical at	dence of command of knowledge	and skills required for attaining the course nking. Show very little or no ability to ap

EASC3406	Recons	struction of past climate (6 credits) Academic Year	2019			
Offering Department	Earth Sci	iences Quota				
Course Co-ordinator	Dr S H Li	i, Earth Sciences (shli@hku.hk)				
Teachers Involved	(Dr S H L	Li,Earth Sciences)				
Course Objectives		rse provides students with an understanding of how dynamic earth is and how it has cha in years. This course introduces the theory and methods of climate reconstructions.	nged over the las			
Course Contents & Topics	Climate control Driven for Quantitating Pollen and Climate control Climate control Climate control Climate control Global was	ternary period (1), changes in the last 2.6 million years (1), process of climate change (1) tive reconstruction methods (1) nalysis and biological proxies (2) change in arid regions (1) ary geochronology (1) changes in East Asia (1) change impacts on human evolution and society (1) arming and future climate change (1) change in Asia and Europe				
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 understand the earth climate change during last 2.6 million years					
	CLO 2	understand the driving forces of climate changes in different scales				
	CLO 3	learn the methods for palaeo-environment reconstruction				
	CLO 4	understand the impacts of climate changes				
	CLO 5	synthesize and interpret data sets of climate change proxies				

Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E.	ASC2401				
Offer in 2019 - 2020	Y 2nd	sem Offer in 2020	- 2021 : N	E	Examination	No Exam

Course Objectives	To review the concepts and processes that shape the configuration o This course is intended to provide students with an understanding of global outcome of these processes through an examination of dire	the driving forces of Earth p	processes and the					
	hypotheses, and critical thinking.							
Course Contents & Topics	 Plate tectonics; orogenesis; accretionary and collisional orogensis. Mantle convection; hot spots and plumes; Methods of investigation of large scale structures and processes; Structure and physical properties of the planet; Sea floor spreading; ocean ridges; transform faults; Subduction zones; mountain belts and orogenesis; Formation of continental crust; Continental rifts and continental margins; Sedimentary basins; Mechanism, consequence and implication of plate tectonics. Hadean Earth: Accretion of the Earth from the solar nebula; differ atmosphere and oceans; the earliest felsic crust; Late Heavy Bombar Archean cratons: greenstones and TTG gneisses; origin of komattiformation and evolution; when did plate tectonics start on Earth? Paleoproterozoic collision tectonics. Supercontinents in Earth history: the assembly, outgrowth and b Rodinia and Pangea. 	dment. tes; role of mantle plumes i	n Archean crusta					
Course Learning	On successful completion of this course, students should be able to:							
Dutcomes	CLO 1 have an appreciation of the Earth as a dynamic planet							
	CLO 2 understand how energy release within the Earth is translated into geological processes							
	CLO 3 appreciate the importance of a knowledge of the history of investigation of global scale tectonic processes							
	CLO 4 distill of a wide range of data to differentiate competing geological theories							
	CLO 5 produce concise written and oral summaries of literature research on specific topics in global dynamics							
Pre-requisites (and Co-requisites and Impermissible	Pass in EASC3403 or EASC3404 or EASC3408 or EASC3409							
combinations) Offer in 2019 - 2020	Y 2nd sem Offer in 2020 - 2021 : Y	Examination	Mav					
Grade Descriptors	The student should show a thorough mastery of the knowledge and skill							
(A+ to F)	In depth grasp of the subject, and provide evidence of strong analytical Show outstanding and effective organizational and presentation skills, a sources to undertake a high level of critical analysis and draw appropriate theories, principles, and evidence.	and logical thinking, where possible nd the insightful use of data, literat	with original thought ure reviews and othe					
	B The student should show a substantial knowledge of a significant range of the skills necessary for attaining most, if not all, of the course outcomes, and have a substantial grasp of the subject. Show evidence of the ability to think critically and to have effective organizational and presentational skills and make critical use of relevant information from different sources, showing the ability to make comparisons between consequent interpretations. Be capable of the general integration of theories, principles and evidence.							
	C The student should have a general command of the knowledge, compet course outcomes, and a general grasp of the subject. Show some evide effective organizational and presentational skills. The student should appropriate conclusions, should be able to use relevant information different interpretations, through partial integration of theories, principles	ence of critical ability and logical thing the moderately effective in the from sources and able to make of	inking and moderatel use of data to drav					
	The student should have a partial but limited command of the knowle number of the course learning outcomes, and a limited grasp of the sub-	edge, competencies and skills nec						

		critical thinking and at least marginally effective organizational and presentational skills. Have limited ability to results to draw appropriate conclusions and use and reference a variety of sources mainly in summary rather analysis and comparison.						
	Fail	outcomes, lacks an little ability to a apply	The student shows little or no evidence of knowledge and skills required for attaining even the minority of course learn outcomes, lacks an overall grasp of the subject area and shows an absence of analytical and critical thinking abilities. She little ability to a apply knowledge to solve problems and has poor and ineffective presentation and/or organizational skills. She little evidence of the integration of theories, principles and evidence.

Course Objectives		urse explores regional g cal questions.	geologies as well as the approa	aches that geologists use	to resolve regiona		
Course Contents & Topics	can test various of East America	We will use case studies to explore how regional investigations integrating field-based and analytical research tools can test models for the evolution of large-scale geological systems. Likely case studies include exploration of various climate-tectonic interactions across mountain belts (Andes, Himalaya), the complex intraplate deformation of East Asia, and the progressive development of metamorphic core complexes via low-angle normal faults (N. America, NE China). Students will advance their abilities to synthesize and communicate geological knowledge by creating new Wikipedia pages complete with original figures on regional geological topics of their interest.					
Course Learning Outcomes	CLO 1	appreciate the influential (course, students should be able to and commonly conflicting) model		to explain a range o

EASC4911	Earth system: contemporary issues (6 credits)	Academic Year	2019			
Offering Department	Earth Sciences	Quota				
Course Co-ordinator	Dr S C Chang, Earth Sciences (suchin@hku.hk)					
Teachers Involved	(Dr S C Chang,Earth Sciences)					
Course Objectives	This is a capstone course that provides students with an opportunity to synthesize and correlate the knowledge gained in previous courses in Earth System Science for them to gain a more in-depth appreciation and awareness of the Earth System, the interplay between its component parts, and some of the global issues. Students will also get some basic concepts on how to do strategic analysis on global trends of natural resources.					
Course Contents	The Earth as an integrated system.					

& Topics	The intera	ctions between Earth's c	component parts.			
	The evolution of Earth's global climates in deep time.					
		as a fine-tuning system.				
	Natural resource and managements.					
		zards and management	S.			
		ces and Bioethics.				
		nd in oil and natural gas.				
		Global trend in mineral resources (non-metals, ferrous metals and rare earth elements).				
Course Learning		•	ourse, students should be able to:			
Outcomes			h the nature of the issues confronti	•		
			errelationships through feedback lo			
	CLO 3 sy	nthesize scientific data	available from a variety of source	ces and apply the data t	o problem solving,	
	pa	rticularly in areas of con	temporary concern			
	CLO 4 un	derstand how past and p	present activities on the planet will	affect its future

EASC4955	Integrated field studies (6 credits)	Academic Year	2019
Offering Department	Earth Sciences	Quota	35
Course Co-ordinator	Dr J A King, Earth Sciences (jessking@hku.hk)		
Teachers Involved	(Dr A A G Webb,Earth Sciences) (Dr J A King,Earth Sciences) (Dr R McKenzie,Earth Sciences)		
Course Objectives	The aims of a geological field camp activities are to provide: 1) essential training and experience in geological mapping techniques. 2) the opportunity to gain confidence in independently applying these skills to complexity. 3) opportunities to study at first-hand areas of particular geological interest an The course requires integration of geological knowledge from multiple geological states.	d importance of an c	
Course Contents & Topics	Students will visit areas of geological interest and will undertake independent solving exercises in each area. The curriculum comprised 3 x 6-day long printerest), where each week long project is typically scheduled as follows: Day 1-2: Instructor-lead learning. Day 3-5: Technique application/independent field mapping and site visit. Day 6: Field examination. Day 7: Write up/Rest.		
	For each project area students is required to produce: A detailed geologic map of the area. $(15\% \times 3 = 45\%)$ A cross-section of the area. $(5\% \times 3 = 15\%)$ To accompany these maps, the students must prepare ONE report (15%) tectonic evolution of region, synthesized from the all three projects and site of the section		

	depositional environments, magmatic events and structural data. To assess field skills: 3 one-day field exam, where students, working INDEPENDENTLY of other students and faculty, construct a

Offering Department	Earth Sci		,	Quota			
Course Co-ordinator	Dr C A N	ot, Earth Sciences <i>(cnot</i> @	Dhku.hk)	<u>'</u>	'		
Teachers Involved	(Dr C A N	lot,Earth Sciences)	,				
Course Objectives	important To conve	To provide students with a thorough introduction to coastal and ocean processes with key questions to highlight the importance of the (paleo)oceanographic processes to environmental and ecological conditions. To convey the basic science behind ocean-atmosphere and ocean-biosphere interactions and place it within the context of human's connectedness and impact to the physical world.					
Course Contents & Topics	their impa the water water, we (paleo)cli	To provide a solid foundation of knowledge about the physical processes dictating the oceans movements and their impacts on the environment and ecosystems. The oceans take up 71% of earth's surface and contain 98% of the water. By looking at the structure of the atmosphere, thermodynamic principals and properties governing sea water, we will evaluate the critical roles the ocean plays in the environmental system including its influence on (paleo)climate, coastal resources, and nutrient cycling. Case studies specifically examining changes in sea level rise, El Nino, and (paleo)climate will be used to connect oceanographic principles to environmental problems.					
Course Learning	On succe	essful completion of this co	ourse, students should be able to:				
Outcomes	CLO 1 d	escribe the major surface	and deep currents of the ocean				
		lentify and describe imporansport	ortant processes in the ocean co	ntrolling large scale circulat	ion and nutrient

Course Learning			f this course, students should be able to:				
Outcomes	CLO 1		ch task independently in one or more top				
	CLO 2	show competence	e in formulating their own scientific argume	ent			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major. Cumulative GPA of 2.5 or above in Environmental Science Major. This capstone course is for Environmental Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.						
Offer in 2019 - 2020			Offer in 2020 - 2021 : Y	Examination	No Exam		
Grade Descriptors (A+ to F)	A Demonstrates excellent understanding of the topic, excellent development of argument, logical analysis and insight into the topic, with evidence of original thought. Insightful use and critical analysis of information drawn from a full range of high quality sources to draw appropriate and insightful conclusions. Presented in high academic standard. Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.						
	B Most aspects of the chosen topic were addressed and researched adequately. Demonstrates understanding of most key concepts, evidence of elementary analysis and development of argument. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations. Presented in adequate standard.						
	C Demonstrate general but incomplete grasp of the chosen topic. Most aspects of the chosen topic were addressed and researched at a very basic level. Mostly correct but some erroneous use of relevant information from sources, demonstrates mainly description, and shows basic understanding, but lacking depth.						
	D Demonstrate partial but limited grasp of the chosen topic, with retention of some relevant information. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited to draw appropriate conclusions from the sources.						
	Fail Show little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Course Objectives	This course offers students the opportunity to gain work experience related to their major of study. This work experience will allow the students to apply their knowledge gained in their studies to the real environmental issues.					
Course Contents & Topics	In the case of the work being carried out in an external agency, students will be supervised by a staff member of the external agency (the External Supervisor) and a staff member of the University (the Internal Supervisor). If the work is carried out within HKU, there is no need for an additional internal supervisor. The work to be performed by students will normally be instructed by the External Supervisor, with prior agreement of the Internal Supervisor.					
Course Learning	On successful completion of this course, students should be able to:					

Outcomes	CLO 1 gain at least 4 weeks of work experience environmental-related firm or the Government						
	CLO 2	acquire an understandi	ng and appreciation of t	the real work environment			
	CLO 3	have some experience	with applying learned k	nowledge to solving real world problem	S		
Pre-requisites (and Co-requisites and Impermissible combinations)	Science M This caps	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major. This capstone course is for Environmental Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2019 - 2020			mer Offer in 2020 - 20		No Exam		
Grade Descriptors (Pass /Pass with distinction /Fail)	Pass	assigned by supervisor(s) the job. Successfully fulfill	. Establishes effective collabors the requirements set out in	place. Successfully handles and carries out the woration and communication with supervisor(s), or the Course Description regarding working hours strating excellent performance in the above working the course of t	olleagues, and clients in , written and oral report,		
	Fail Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.

Satisfactory completion of this course can be counted towards the Capstone requirement. Details of internship will be recorded on the student's transcript. This course will be assessed on "Pass/Fail" basis. Students who are interested to enrol in this course should contact the Department to obtain the approval. Enrolment of this course is not conducted via the online course selection system and should be made through the elevant Department/School office after approval has been obtained from the course coordinator.					

ENVS4999	Enviror	nmental science	e project (12 credits)	Academic Ye	ar 2019		
Offering Department	Earth Sc	Earth Sciences Quota					
Course Co-ordinator	Dr C Din	gle, Biological Scie	nces (cdingle@hku.hk)				
Teachers Involved		teachers (ERS), Ea					
		teachers (SBS),Bio					
Course Objectives	To enhance students knowledge and research skills in advanced level of environmental science.						
Course Contents & Topics	member.	Students undertake a research project in the form of an undergraduate dissertation under the supervision of a staff member. The project could be based on one of the four areas covered by the major and must show elements of interdisciplinary nature. The dissertation should show an element of originality and the research in a non-trivial manner					
Course Learning	On succe	essful completion o	f this course, students should be	able to:			
Outcomes	CLO 1	complete a disserta	ation project of undergraduate lev	el in one of the four areas of the m	najor		
	CLO 2	show competence	in formulation, data collection, an	alysis, and presentation of a resea	arch project		
Pre-requisites (and Co-requisites and Impermissible combinations)	Science Students This cap	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major; and Students must have a cumulative GPA of 3.0 or above in Environmental Science Major. This capstone course is for Environmental Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2019 - 2020			2020 - 2021 : Y	Examination	No Exam		
Grade Descriptors (A+ to F)	A Demonstrates excellent understanding of the topic, excellent development of argument, logical analysis and insight into the topic, with evidence of original thought. Insightful use and critical analysis of information drawn from a full range of high quality sources to draw appropriate and insightful conclusions. Presented in high academic standard. [Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.]						
	В	Most aspects of the chosen topic were addressed and researched adequately. Demonstrates understanding of most key concepts, evidence of elementary analysis and development of argument. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations. Presented in adequate standard.					
	С	Demonstrate general but incomplete grasp of the chosen topic. Most aspects of the chosen topic were addressed and researched at a very basic level. Mostly correct but some erroneous use of relevant information from sources, demonstrates mainly description, and shows basic understanding, but lacking depth.					
	Demonstrate partial but limited grasp of the chosen topic, with retention of some relevant information. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited to draw appropriate conclusions from the sources.						
	Fail Show little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective

MATH1851	Calculus and ordinary differential equations (6 credits)	Academic Year	2019		
Offering Department	Mathematics	Quota	700		
Course Co-ordinator	Dr Y K Lau, Mathematics (yklau@maths.hku.hk)				
Teachers Involved	(Dr L Xu,Mechanical Engineering) (Dr X Zhang,Mathematics) (Dr Y Chen,Mechanical Engineering) (Dr Y K Lau,Mathematics) (Prof K W Chow,Mechanical Engineering)				
Course Objectives	In this course, students will be introduced to fundamental concepts of calculus and ordinary differential equations with a view on applications in different engineering fields. A concrete foundation of mathematics that underpins the various engineering subjects will be built. Mathematical concepts and principles, as well as some typical engineering applications, would be emphasized so that students could enhance their mathematical skills in solving engineering problems, and be well prepared in learning a higher level of applied mathematics required in different engineering disciplines.				
Course Contents & Topics	 Differential and integral calculus (single variable) [limits and continuity, derivelementary functions, derivatives by implicit differentiation, the mean value the representation of curves, polar coordinates, indefinite integrals, integral decomposition, definite integrals, the fundamental theorem of calculus, and the Ordinary differential equations [first order equations, integrating factors and limits and continuity. 	orem, L'H\^{o}pital' ation by parts, p ir applications]	s rule, parametric partial fractions		

Course Website Additional Course	2008, 5th ed.) http://moodle.hku.hk/ There will be no 'make-up' for a missed test or assignment under normal circumstances. Students are advised not to take MATH1851 and MATH1853 together in the same semester.

MATH1853	Linear algebra, probability and statistics (6 credits)	Academic Year	2019		
Offering Department	Mathematics	Quota	700		
Course Co-ordinator	Dr G Han, Mathematics (ghan @maths.hku.hk)				
Teachers Involved	(Dr G Han,Mathematics) (Dr N Wong,Electrical & Electronic Engineering) (Prof S H Lo,Civil Engineering) (Prof Z Q Yue,Civil Engineering)				
Course Objectives	As the complementary course of MATH1851, students will be introduced to more topics of mathematics commonly applied in engineering so that students could be further enhanced with a concrete skill in mathematics underpinned for different engineering subjects. The course emphasizes mathematical concepts, principles, analysis, and their relationship to the modelling of engineering systems. Students could be furnished with the essential mathematical skills to analytically tackle some typical engineering problems to prepare for all the engineering subjects.				
Course Contents & Topics	 Linear algebra [vectors and scalars, inner product, vector projection, linear matrix, determinant, matrix inverse, system of linear equations, matrix equations, matrix rule, matrix rank, eigenvalue, eigenvector, matrix diagonalization, positive, netheir applications] Elementary complex variables [arithmetics of complex numbers, representations] 	on, Ġaussian elimi gative and semi-c	ination, Cramer's definiteness, and

MATH2102	Linear al	gebra II (6 credits)		Academic Ye	ar 2019	
Offering Department	Mathemati			Quota		
Course Co-ordinator	Dr T W Ch	ing, Mathematics (Imtcl	hing @maths.hku.hk)			
Teachers Involved	(Dr T W Cl	ning,Mathematics)				
Course Objectives	subspaces students' f	his is a follow-up of the course Linear Algebra I. It aims at introducing the general concept of vector spaces ubspaces, dimensions, inner product spaces, etc. The course prepares the foundation on linear algebra for tudents' future study in mathematics and other disciplines. Many examples of applications will be drawn on ifferent subject areas.				
Course Contents & Topics	2. Linear determinar 3. Linear o diagonaliza 4. Inner pro 5. Linear o diagonaliza	Vector spaces: definition of field, subspaces/quotient spaces, direct sum, existence of basis, dual space Linear transformations: kernel and image, isomorphisms, matrix representations of linear transformations, sterminant Linear operator: eigenvalues and eigenspaces, algebraic/geometric multiplicity, agonalizability, Cayley-Hamilton theorem, canonical form (optional) Inner product space: Inner product, orthonormal basis, orthogonal complement and projection Linear operators on inner product space: adjoints of operators, orthogonal/unitary operators, orthogonal/unitary agonalization of self-adjoint/normal operators, symmetric bilinear form and quadratic form Additional selected topics up to the instructor				
Course Learning	On succes	sful completion of this o	course, students should be able to:			
Outcomes		· · · · · · · · · · · · · · · · · · ·	tures and apply relevant knowledge	to some practical probler	ns	
			ubspaces and compute basis, dime			
			nature of linear transformations/o		culations of linear

MATH2211	Multivariable calculus (6 credits)	Academic Year	2019
Offering Department	Mathematics	Quota	
Course Co-ordinator	Dr T W Ching (1st sem); Dr Z Hua (2nd sem), Mathematics (Imtching@maths.hk	u.hk; huazheng@	maths.hku.hk)
Teachers Involved	(Dr T W Ching,Mathematics) (Dr Z Hua,Mathematics)		
Course Objectives	Students of this course will learn the theory of multivariable calculus and learn practical problems. This is a required course for Mathematics and Mathematics, all students in Science, Engineering, Economics and Finance, and other stucial calculus in their areas of study. This is also a required course for all Minc Mathematics, and is a pre-requisite of many advanced level mathematics course	Physics Majors, and the state of the state o	and is suitable for use multivariable
Course Contents & Topics	 Vectors: vectors in 2-, 3-, and n-dimensions; dot product and cross product; land spherical coordinates. Differentiation in several variables: limits and derivatives; the chain rule; direction vector-valued functions: parametrized curves; arc-length; vector fields; gradit operator. Maxima and minima: differentials and Taylor's Theorem of several variables multipliers; applications of extrema. Multiple integration: double and triple integrals; change of variables; application 	onal derivatives and ent, divergence, s; extrema of fun	nd gradients. curl, and the del

				neorem; conservative vector fields. ces; surface integrals; Stokes' and 0	Gauss' Theorems		
Course Learning			this course, students should b		Jaaco Tricoromic.

Course Objectives	To introduce students to the basic ideas and techniques of mathematical analysis.							
Course Contents & Topics	denseness - Sequence sequences - Continui intermedia - Different application - Integratio	 The real number system: the real numbers as an ordered field, supremum and infimum, the completeness axiom, denseness of the rational numbers. Sequences and series of real numbers: limits of sequences, properties of convergent sequences, monotone sequences and Cauchy sequences, subsequences, series, tests of convergence for series. Continuity of real-valued functions: properties of continuous functions, the extreme value theorem, the intermediate value theorem, uniform continuity, limits of functions. Differentiation: properties of differentiable functions, the mean value theorem, Taylor's theorem and its applications. Integration: construction of the Riemann integral using Darboux sums and Riemann sums, the fundamental theorem of calculus. 						
Course Learning Outcomes	CLO 1 cor CLO 2 der sec CLO 3 elu intr CLO 4 elu un	theorem of calculus. On successful completion of this course, students should be able to: CLO 1 comprehend and use abstract mathematical arguments such as the epsilon-delta argument CLO 2 demonstrate convergence or non-convergence of a sequence/series using properties of convergent sequences/series CLO 3 elucidate important properties of continuous functions such as the extreme value theorem and the intermediate value theorem CLO 4 elucidate important properties of differentiable functions such as the mean value theorem, and to understand and apply Taylor's Theorem						
Pre-requisites (and Co-requisites and Impermissible combinations)		CLO 5 articulate the construction of the Riemann integral and its relation to differentiation Pass in MATH1013 or (MATH1851 and MATH1853) or MATH2822. Students are strongly recommended to have taken MATH2012 if they wish to take this course.

MATH3304	Introduction to number theory (6 credits)	Academic Year	2019
Offering Department	Mathematics	Quota	
Course Co-ordinator	Dr B Kane, Mathematics (bkane@maths.hku.hk)		
Teachers Involved	(Dr B Kane,Mathematics) (Dr S Banerjee,Mathematics)		
Course Objectives	To provide students with basic concepts about numbers, their properties congruences. The prime numbers are the building blocks of all the interplay between the multiplicative and additive properties of prime numbers are the distribution of the prime number problems concerning them. Important applications of number theo introduced.	natural numbers under m mbers is particularly intere ers, and some of the lo	ultiplication. The sting. The coursengstanding open
Course Contents & Topics	 -The course will begin with some basic notions in number theory, incleudidean algorithm, congruences, etc. It will then be followed by sever remainder theorem, solutions of linear and polynomial congruences, reciprocity law. - Many well-known open problems will be introduced. Application of nube explained. Some current research on the prime numbers will be disc. - Depending on the time available, the course will cover a selection of theorem, sum of squares, Dirichlet's theorem on diophantine approxima 	ral fundamental theorems, Fermat's Little theorem, a Imber theory to public key ussed. If further topics, such as the	such as Chinese and the quadratic cryptography will ne prime number
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 solve a system of linear congruences

Course Co-ordinator	Dr Z Qu, I	r Z Qu, Mathematics (zhengqu@maths.hku.hk)					
Teachers Involved	(Dr Z Qu,I	Dr Z Qu,Mathematics)					
Course Objectives	The objective is to provide a fundamental account of the basic results and techniques of Linear Programming (LP and its related topics in operations research. The topics include the simplex method, the dual simplex method parametric programming, decomposition method, cutting plane methods and branch and bound. There is an equal emphasis on all the three aspects of theories, algorithms and applications. The course serves together with the course MATH3943 Network Models in Operations Research, as essential concept and background for more advanced studies in operations research.						
Course Contents & Topics	- Linear pr - Duality the - Sensitivi	- Linear programming - Duality theory - Sensitivity analysis and parametric linear programming - Integer programming methods					
Course Learning			is course, students should be able	to:			
Outcomes	of CLO 2 de ex	CLO 1 understand the fundamental concept and approach of linear programming appropriate to the further study of operations research CLO 2 demonstrate knowledge and understanding of the underlying techniques of the simplex method and its extensions such as the dual simplex algorithm and the decomposition method CLO 3 understand and apply the theory of integer programming

MATH3911	Game theory and strategy (6 credits)	Academic Year	2019			
Offering Department	Mathematics					
Course Co-ordinator	Dr K H Law, Mathematics (lawkaho@maths.hku.hk)					
Teachers Involved	(Dr K H Law, Mathematics)					
Course Objectives	Game theory is the logical analysis of situations of conflict and cooperation. This to the basic ideas and techniques of mathematical game theory in an interdiscipl		duce the students			
Course Contents & Topics	 Combinatorial games and Zermelo's Theorem; Prisonner's Dilemma; pure and mixed strategies, minimax theorem; mixed Nash equilibria. Application to biology: evolutionary stable strategies; games in coalition form; Shapley value. Application to politics: Shapley-Shubik power index; core and von Neumann-Morgenstern solution; bargaining set. 					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the basic terminology and solution concepts in game theory CLO 2 compute explicitly different solution concepts for some simple cooperative and non-cooperative games CLO 3 apply game theoretical ideas and methods to solve some problems in economics and biology					
Pre-requisites (and Co-requisites and Impermissible	Pass in (MATH2101 and MATH2211) or (MATH1821 and MATH2822)					

combinations)						
Offer in 2019 - 2020	Y 2nd	d sem Offer in 2020 - 2	021 : Y	Examinatio	n May	
Grade Descriptors (A+ to F)	A Demonstrate an excellent understanding of key concepts and ideas of Game Theory by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.					
	В	Demonstrate a good understanding of key concepts and ideas of Game Theory by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.				
	С	Demonstrate an acceptable understanding of key concepts and ideas of Game Theory by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

MATH3943	Netwo	rk models in ope	rations research (6 credits)	Academic Ye	ar 2019		
Offering Department	Mathem	atics	•	Quota			
Course Co-ordinator	Prof W Z	Prof W Zang, Mathematics (wzang@maths.hku.hk)					
Teachers Involved	(Prof W	(Prof W Zang,Mathematics)					
Course Objectives	operatio applicati	The objective is to provide a fundamental account of the basic results and techniques of network models in operations research. There is an equal emphasis on all three aspects of understanding, algorithms and applications. The course serves, together with a course on linear programming, to provide essential concept and background for more advanced studies in operations research.					
Course Contents & Topics	- Trees, - Networ - Ford-F - Applica	 Graphs and algorithms. Trees, matchings and paths. Network models of transportation and assignment problems. Ford-Fulkerson network flow theory and computation for maximum flow and minimum cost flow algorithms. Applications to combinatorial optimization problems such as allocation, location and sequencing. Project networks, if time permits. 					
Course Learning Outcomes	CLO 1 CLO 2	On successful completion of this course, students should be able to: CLO 1 understand the fundamental concept and approach of graphs and network models appropriate to the further study of operations research CLO 2 demonstrate knowledge and understanding of the underlying techniques of the various graph and network algorithms and their extensions					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in	CLO 3 understand the theory of network flows and the duality aspects in such methods of flow computations Pass in (MATH2101 and MATH2211) or MATH2014; and Pass in MATH3901, or already enrolled in this course.

Course Objectives	The objective is to provide a fundamental account of the basic results and techniques of dynamic programming (DP), Markov decision processes (MDP), Queueing Theory (QT) and simulation in operations research. There is emphasis on aspects of algorithms as well as applications. The course serves, together with courses on linea programming and network models, to provide essential optimization concept and algorithms for more advanced studies in operations research.						
Course Contents & Topics	- Markov - Queuei	- Dynamic programming (deterministic/stochastic) - Markov decision process (discounted/average costs) - Queueing Theory - Simulation					
Course Learning	On succe	essful completion of this	course, students should be able to:				
Outcomes	p	rocess, queueing theory		, , ,			
	ti	neory and simulation	iques employed in dynamic progra				
	CLO 3 demonstrate the knowledge on algorithms for a variety of problems in operations research

MATH4910	Senior mathematics seminar (6 credits)	Academic Year	2019			
Offering Department	Mathematics	Quota	12			
Course Co-ordinator	Prof T W Ng, Mathematics (ntw@maths.hku.hk)					
Teachers Involved	(Prof Michael KP Ng,Mathematics)					
Course Objectives	This seminar style capstone course aims to provide students with the experience of intense reading of journal articles and book chapters, followed by group discussions through which knowledge acquisition and synthesis will be attained. Students will look at particular mathematical topics in depth, and will master the topics through reading, listening, discussing and writing.					
Course Contents & Topics	reading, listening, discussing and writing. This seminar course may be in the form of research seminar, reading seminar, or a combination of both. Research seminar provides first-hand research experience to students, who will discuss the advancement of knowledge brought about by the readings, and the difficulties they encounter in the research process. Reading seminar involves discussions on arguments delivered by the authors of books or articles, and how convincing the arguments are. Participants will experience the process of argumentation in the construction of knowledge and development of research idea. Student performance is manifested in their preparedness, quality of comments, responsiveness to comments and overall engagement in the seminar. The end product is a research paper or written report and oral presentations. Topics will be chosen by the instructors, including journal articles and book

MATH4999	Mathematics project (12 credits)	Academic Year	2019			
Offering Department	Mathematics	Quota				
Course Co-ordinator	Prof T W Ng, Mathematics (ntw@maths.hku.hk)					
Teachers Involved	(All teaching staff,Mathematics)					
Course Objectives	The aim of the course is to provide students with the opportunity to formulate an	d to investigate, ir	depth, problems			

	of practical interest and/or to have a foretaste of mathematical research. The work, to be done on an indivibasis, is considered a highly desirable part of the training of a mathematician.					
Course Contents & Topics	The subject matter of the project will be determined by consultation between the student and his/her supervisor. The projects will be selected from areas of pure and applied mathematics. Students must achieve good standing and get the approval from both the prospective supervisor and the course co-ordinator to take this course.					
Course Learning	On succe	essful completion of this o	course, students should be able to	o:		
Outcomes	CLO 1 study independently and in depth an advanced topic that is not available in the regular curriculum					
	CLO 2	analyze and synthesize ir	nformation gathered from differen	t sources		
		articulate their findings ar				
		give an exposition of thei	•			
Pre-requisites (and Co-requisites and Impermissible combinations)	MATH4X Subject t This cap	Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors. Subject to approval by the Department. This capstone course is for Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study.				
Offer in 2019 - 2020		ear long Offer in 2020 -	•	Examination	n No Exam	
Grade Descriptors (A+ to F)	Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinki original thought. Insightful use and critical evaluation of information drawn from a broad range of high queference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Appropriate and insightful conclusions. Appropriate and insightful conclusions.					
	В	Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.				
	С	Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.				
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.				
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Course Objectives		tive is to familiarize students with analytic, algebraic and geometric concepts and tecl ox Analysis in a single variable beyond an introductory course on functions of a comple					
Course Contents & Topics	using ana meromorp Problem a - In the co differential - A choice Mapping T	 In the course we study meromorphic functions on compact Riemann surfaces and on open Riemann surfaces using analytic and algebraic techniques. Topics on meromorphic functions include the constructions of meromorphic functions on compact Riemann surfaces, elliptic functions, Poincare series, the Mittag-Leffler Problem and the Weierstrass Problem on compact Riemann surfaces and on open Riemann surfaces. In the course of study of meromorphic functions, sheaf cohomology theory and cohomology theories in terms of differential forms will be introduced. A choice of other topics may be included. Examples of possible topics include normal families, the Riemann Mapping Theorem, geometric theory of holomorphic mappings, potential theory in one complex variable, complex dynamics, and special functions. 					
Course Learning		ssful completion of this course, students should be able to:					
Outcomes	CLO 1 analyze rational functions on the Riemann Sphere and analyze elliptic functions, equivalently meromorphic functions, on elliptic curves						
	CLO 2 formulate various classical existence problems on meromorphic functions and reduce them to analytic or cohomological problems, being able to solve them in certain typical cases						
	CLO 3 identify the key arguments in the proofs of various mathematical results concerning meromorphic functions on compact Riemann surfaces or on plain domains and apply them in solving problems						
	CLO 4 identify the key elements in the theoretic foundation of various additional topics covered in the course and apply them in solving problems						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in a f	Pass in a first course in Complex Analysis such as MATH3403, and approval by the course coordinator.

Course Objectives	survey of planets,	This is an introductory course on astronomy, including both the observational aspect of the field and a descriptive survey of the solar system, the Sun, stars, galaxies and the universe. Selected special topics such as extrasolar planets, neutron stars, black holes and dark matter will also be included. The course will include observing sessions with telescopes (subject to weather conditions).				
Course Contents & Topics	our solar provides nature we	Topics covered include the observational aspect of astronomy (including constellations and planets), the physics of our solar system, and our own Sun, stars and their evolution, galaxies, black holes, and cosmology. It also provides students with a basic understanding of the relationship of the science of astronomy to life, and how our nature works on the macroscopic level. The course will arrange for observing activities of the Sun and the night sky with telescopes.				
Course Learning	On succe	essful completion of thi	s course, students should be able	to:

PHYS1056	Weather, climate and climate change (6 credits)	Academic Year	2019
Offering Department	Physics	Quota	
Course Co-ordinator	Dr K M Lee, Physics (kmlee@lily.physics.hku.hk)		
Teachers Involved	(Dr K M Lee,Physics) (Dr P W Li,Hong Kong Observatory) (Mr H W Tong,Hong Kong Observatory) (Mr W K Wong,Hong Kong Observatory)		
Course Objectives	Weather and climate play an important role in human activities and history. In students the fundamentals of weather, climate and climate changes, to arouse technological advancements.		

Course Contents & Topics	The course will encompass topics on: basic physical principles on weather phenomena like: wind, temperature, humidity, cold/warm fronts, thunderstorms and tropical cyclones; introductory weather analysis, forecast and climate. Through real life examples, students will get familiarized with the weather/climate science and interpretation of meteorological information, climatology and climate change. Experts from the Hong Kong Observatory (HKO) will participate in the course to cover aspects on daily weather forecasts, public weather services, local severe weather phenomena, tropical cyclones, climatology of Hong Kong, and climate change. Tentatively, there will be visit to the HKO to study the meteorological facilities and understand the operational activities on weather and climate.						
Course Learning		On successful completion of this course, students should be able to:					
Outcomes	CLO 2 ap	call the basic principles opply the principles to inte	of weather and climate erpret weather / climate informat	tion, for example from the HK	O web site, internet		
	CLO 3 id		ferences of weather and climate	e in Hong Kong as compared	to other parts of the

PHYS1057	Kitchen science (6 credits)	Academic Year	2019				
Offering Department	Physics	Quota					
Course Co-ordinator	Prof A B Djurisic, Physics (dalek@hku.hk)						
Teachers Involved	(Prof A B Djurisic, Physics)						
Course Objectives	The course aims to improve students' understanding of basic science behind the common daily activities related to food and cooking and to develop their critical thinking skills.						
Course Contents & Topics	The course will introduce basic scientific concepts and principles necessary to understand different methods food preparation, as well as kitchen tools. The introduced concepts will be illustrated in recipes and practic demonstrations. The topics include: basic food molecules (water, carbohydrates, fats, protein); foams and bubbles (various examples, beer, sodas, ice-cream); colloids, emulsions, gelation (various sauce jelly); crystallization (sugar, sugar syrups, honey, chocolate); taste and flavor (herbs, spices); cooking process and chemical reactions (Maillard reactions, caramelization, etc.); chemical reactions for rising dough wi application to cakes, bread and cookies; fermentation (alcoholic beverages, fermented dairy products, tofu); process in cooking, natural and artificial food colorings, culinary curiosities; molecular gastronomy (novel flavors a textures); principles of operation of kitchen tools, such as non-stick cookware, pressure cookers, induction heatir ranges, microwave ovens, etc.						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe principles of operation of kitchen tools encountered in daily CLO 2 explain basic physical and chemical processes involved in food prep CLO 3 illustrate how preparation method affects the flavor and texture of food CLO 4 analyze common methods of food preparation and understandard procedures in certain ways	aration od	for performing

	Problem s	solving in physic	s (6 credits)		Academic Y	'ear 2019	
Offering Department	Physics		•		Quota		
Course Co-ordinator	Dr M K Yip,	Physics (mankit@hk	ku.hk)				
Teachers Involved	(Dr M K Yip	,Physics)					
Course Objectives	This is the first course in our course series that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. Instead of adopting a cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the second level courses in this series, namely, PHYS2150 and/or PHYS2155 and/or PHYS2160. (Knowledge of Module 1 or Module 2 in HKDSE Mathematics, or MATH1011, or equivalent is advantageous, though not required.)						
Course Contents & Topics	This course trains students to think and act as physicists by introducing basic problem solving, mathematical and computational skills that are commonly used in the study of university-level physics. Topics include: the use of vectors and their operations, differentiation, integration, differential equations, several variables differentiation, matrix operation, complex numbers, and rudiment of numerical methods in tackling simple physics problems. Basic MATLAB commands will be introduced and used in this course.						
Course Learning	On success	ful completion of this	course, students should	d be able to:			
Outcomes	read	d physics	by the language of math	nematics and empl	oy mathematical lo	ogic and reasoning	
		ly calculus to solve p		hyeice ac well ac	nlan and coloct an	proprieto toolo who	
	CLO 3 review the features of various solving tools in physics as well as plan and select appropriate tools when solving physical problems						
	CLO 4 describe the connections between mathematical equations and physical problems						
	CLO 5 formulate and operate physical problems both qualitatively and quantitatively						
	CLO 6 interpret and judge the physical meaning of result after calculations

Course Objectives	This course aims at providing students a solid background and knowledge in physics as well as its connection with our daily life phenomena and activities. It is targeted to those with little physics background and is conducted with no descriptions in differential and integral calculus. After completing this course, interested students may move or to take PHYS1150 or PHYS1250.						
Course Contents & Topics	The course has a general coverage in most physics topics and is conducted with no descriptions in differential and integral calculus. Emphasis will be stressed on the understanding of various physical phenomena in daily life through qualitative and simple quantitative analysis. The course contents cover: Mechanics, Heat, Optics, Waves, Electricity and Magnetism.						
Course Learning	On succes	ssful completion of this	course, students should be able to:				
Outcomes	CLO 1	lescribe and distinguish	the concepts and principles in introd	luctory study of physics			
	CLO 2 r	ecognize the underlying	g physical principles behind various o	laily life phenomena			
	CLO 3 e	explain physical phenon	nena using proper physical laws and	theories			
	CLO 4	apply simple mathemati	cal techniques for quantitative analys	sis in solving physics proble	ms

Teachers Involved	(Dr F K Chow, Physics)					
Course Objectives	This is one of the second level courses in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. Instead of the cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the other second level courses in this series PHYS2155 and/or PHYS2160 or the third level course in this series PHYS3150.					
Course Contents & Topics	This course introduces the principles and theories of various mathematical methods and skills that are essential for studying university physics. Topics include: ordinary differential equations, partial differential equations, three dimensional coordinate geometry, partial differentiation, multiple integration, vector functions and motion in space, and vector analysis. Applications to physical systems and various practical problems solving skills are discussed. Further MATLAB commands and basic MATLAB programming will be introduced and used in this course.					
Course Learning			course, students should be able to			
Outcomes	CLO 1 re	eview the theory and prir	nciples of mathematical methods	and compare the features o	f various methods

Offering Department	Physics		•	Quota		
Course Co-ordinator	Dr M K Y	ip, Physics (mankit@hku	ı.hk)			
Teachers Involved	\ \	Yip,Physics) u,Physics)				
Course Objectives	physics fundame chemistr supplem	major, a discipline electi ntal Newtonian mechan y and mathematics. P	is the foundation of Newtonian mecha we for physics minor, as well as an ics concepts and to link them up ward roblem solving and analytical sk is occasionally. Upon completion, in the mechanics.	elective course for those was with their studies in fields ills will be extensively used.	who want to learr like engineering used. They are	
Course Contents & Topics	Conserva Inertia, A Harmoni	Topics include: Kinematics, Newton's Laws of Motion and Their Applications, Linear Momentum and its Conservation, Variable Mass Problems, System of Particles and Centre of Mass, Torque and Rotation, Moment of Inertia, Angular Momentum and its Conservation, Work, Energy and its Conservation, Gravitation, Simple Harmonic Motions, Damped and Driven Oscillations, Wave Equation, Energy in Wave Motion, Interference and the Principle of Superposition.				
Course Learning	On succe	essful completion of this	course, students should be able to:			
Outcomes	CLO 1 c	lescribe and explain the f	undamental physical principles			
	CLO 2 a	apply these principles, too	ether with logical and mathematical	reasoning, to situations of the	he physical world	
	CLO 3 a	nalyse and solve probler	ns with the aids of mathematics	<u> </u>	. ,	
	CLO 4 a	acquire and interpret expe	erimental data to examine the physic	al laws

Offering Department	Physics		•	Quota			
Course Co-ordinator	Dr J J L Li	m, Physics (jjlim@hku.i	hk)				
Teachers Involved	(Dr J J L L	im,Physics)	,				
Course Objectives	This is an intermediate course in astronomy for students in all disciplines and all years. This is also the second course in our series of two compulsory courses to introduce basic astronomy knowledge, methods and recent advances for astronomy minor. This course aims at deepening student knowledge of astronomy, with emphasis on the recent discoveries and modern techniques. After completing this course, interested students may take PHYS3650, PHYS3653 and/or PHYS3660, which are core or discipline elective courses for astronomy minor and astrophysics theme of physics major.						
Course Contents & Topics		Topics include: exoplanets; general relativity; gravitational waves; neutrinos in astronomy; stellar physics; gamma ray bursts; inflation and cosmology.					
Course Learning			course, students should be abl	e to:			
Outcomes	CLO 1		ction techniques of exoplanets				
outeemee	CLO 2		f general relativity and gravitat				
	CLO 3		ce of neutrinos physics in astro

PHYS2850	Atomic and nuclear physics (6 credits)	Academic Year	2019
Offering Department	Physics	Quota	

Course Co-ordinator	Dr S Z Zł	nang, Physics <i>(shizhong</i> (@hku.hk)			
Teachers Involved						
Course Objectives	to provide research	This course will introduce students to the fundamentals of atomic physics and rudimentary nuclear physics. It aims o provide a coherent and concise coverage of traditional atomic and nuclear physics. Important topics of curren research interest will be also discussed, such as laser cooling and trapping which plays an important role in the realization of Bose-Einstein condensate in atomic vapors.				
Course Contents	Topics in	clude: Atomic structure of	f hydrogen and hydrogen-l	ike atom, multi-electron atom, ato	m in electromagnetion	
& Topics		field, spectroscopy, laser trapping and cooling; nuclear structure, shell model and nuclear reactions. Applications o the basic principles of atomic and nuclear physics will be mentioned when appropriate.				
Course Learning	On succe	essful completion of this c	ourse, students should be	able to:		
Outcomes		pply general consideration of nagnitude of estimation of		atomic and nuclear system; make	ke general orders of	
	CLO 2 e	xplain how light interactin	ig with atom; the working p	rinciple of laser trapping and cooli	ng	
			ures of atomic/nuclear spe-			
	CLO 4 a	pply quantum physics to	understand the basic featu	res of simple nuclei, binding of de	uteron et al

Course Co-ordinator	Prof Z D Wang, Physics (zwang @hku.hk)					
Teachers Involved	(Prof Z D Wang, Physics)					
Course Objectives	The aim of this course is to provide students with the conceptual skills and key analytical tools for solving real problems in all major areas of physics.					
Course Contents & Topics	This course will introduce and address the following topics: Application of complex variables including the Cauchy's integral formula and calculus of residues, Partial differential equations (the general wave equation, the Schrodinger equation, the Poisson equation, and the diffusion equation), Properties of special functions widely used in Physics (Gamma functions, Beta functions, Bessel functions, spherical harmonics etc.), Fourier Series, and Fourier Transform.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 analyse and examine the analytical properties of complex functions CLO 2 calculate various definite integrals using the method of residues CLO 3 analyse and solve the first and second order ordinary equations, and typical partial differential equations CLO 4 apply the special functions in handling various physical problems CLO 5 use the Fourier Series and Fourier transform in describing, respectively, any periodic function and wave

Course Objectives	Machine essentia the basic physics.	Machine learning is a technique that enables computers to learn without being explicitly "programmed". It is an essential part of big data science and has been widely used in different fields of physics. This course introduces the basics of machine learning, from key concepts to practical algorithms, with a focus on real-world applications in physics. It is an elective course for the computational physics theme. This is also an essential course for those who plan to apply machine learning techniques in their postgraduate studies or in their future work.						
Course Contents & Topics	Machine Principal Neighbo	Machine learning software packages in Python, Supervised and Unsupervised learning, Regression, Classification Principal component analysis, Singular value decomposition, Support vector machines, Clustering, K-Nearest Neighbors, Decision trees, Neural Networks, Deep Learning, Application of machine learning in physics research with examples drawing from fields such as astrophysics, particle physics and complex systems.						
Course Learning			nis course, students should be able					
Outcomes	CLO 2 a	CLO 1 demonstrate knowledge in essential methods and techniques for machine learning and its application physics CLO 2 apply the techniques of machine learning in data analysis CLO 3 use Python machine learning packages to solve simple problems

PHYS3351	Quantum mechanics (6 credits)	Academic Year	2019
Offering Department	Physics	Quota	
Course Co-ordinator	Prof W Yao, Physics (wangyao@hku.hk)		
Teachers Involved	(Prof W Yao, Physics)		
Course Objectives	Build on the foundation course PHYS2265, this course discusses quantuundergraduate level with rigorous mathematical treatment. It serves as a core as well as an elective core for those who are interested to gain a deep underst to apply related techniques in their own majors. This is also an essential coupostgraduate studies in physics or related disciplines. Both conceptual ideas emphasized.	course for physic anding of quantur urse for those wh	s major students n mechanics and o plan to pursue

Course Contents & Topics	current an principle; transmissi wavepack and eiger	Time-dependent Schrodinger equation; statistical interpretation of wave function; probability density; probability current and continuity equation; momentum; physical observable and expectation value; Heisenberg uncertainty principle; time-independent Schrodinger equation; Hamiltonian and stationary states; particle in a square well; transmission and reflection at a barrier; harmonic oscillator problem using ladder operators; free particle and wavepacket; delta function potential; Dirac notations; state vectors; Hilbert space; Hermitian operators; eigenstates and eigenvalues; generalized statistical interpretation; generalized uncertainty principle; angular momentum; hydrogen atom; atomic orbits; spin; non-degenerate perturbation theory.				
Course Learning	On succes	sful completion of this c	ourse, students should be able	to:		
Outcomes	CLO 2 for	d uncertainty of physica	erpretation of quantum mechar I observables alue problems, and solve ther		•	
	en	ergy eigenfunctions	f the wavefunction and the expe			
	co	rrections in certain pertu	time-independent perturbation irbations applied to the physical	system	ding order energy	
		· · · · · · · · · · · · · · · · · · ·	rimental data to examine the ph	ysical laws		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in Ph	1YS2265				
Offer in 2019 - 2020	Y 1st	sem Offer in 2020 - 20	021 : Y	Examination	Dec	
Grade Descriptors	Α	Demonstrate thorough mas	tery at an advanced level of extensive	knowledge and skills required for	attaining all the course	
(A+ to F)	learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and abilit to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational an presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate an insightful conclusions.					
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the cours learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familia and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques Correct use of data of results to draw appropriate conclusions.				
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.				
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

PHYS3450	Electromagnetism (6 credits)	Academic Year	2019				
Offering Department	Physics	Quota					
Course Co-ordinator	Prof X D Cui, Physics (xdcui@hku.hk)						
Teachers Involved	(Prof X D Cui,Physics)						
Course Objectives	Build on the foundation course PHYS2255, this course discusses electromagnetism in the advanced undergraduate level with vigorous mathematical treatment. It serves as a core course for physics major students as well as an elective core for those who are interested to gain a deep understanding of electromagnetism and to apply related techniques in their own majors. This is also an essential course for those who plan to pursue postgraduate studies in physics or related disciplines. Both conceptual ideas and mathematical treatment are emphasized.						
Course Contents & Topics	Topics include electric fields and potential, methods in electrostatics, conducte and electromagnetic induction, magnetic properties of materials and Maxwell's e		, magnetostatics				
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 identify the fundamental physics in electrostatics and magnetism						
	CLO 2 apply mathematical tools to describe electrostatics and magnetism						
	CLO 3 use the Maxwell's equations to explain various electrostatic and magnetic phenomena						
	CLO 4 differentiate between electrostatics in vacuum and in dielectric materials						
	CLO 5 differentiate between magnetism in vacuum and in magnetic materials						
	CLO 6 apply essential skills of making measurements with appropriate instruments in physics. experiments; Interpret the experimental data and compare with the prediction of underlying physical principle						
Pre-requisites (and Co-requisites	Pass in PHYS2255						

and Impermissible combinations)

PHYS3660	Astrono	omy laboratory (6 credits)	Academic Year	2019				
Offering Department	Physics		Quota	10				
Course Co-ordinator	Dr S C Y	Ng, Physics (ncy@astro.physics.hku.hk)						
Teachers Involved								
Course Objectives	focus is or results ra and an o	This course trains students with basics of extracting scientific information with astronomical observations. The focus is on practical experience in operating telescopes, data acquisition and reduction, and interpretation of the results rather than verification of known astronomical theories. It is one of the core electives for astronomy mino and an elective course for the astrophysics and experimental physics themes. Upon completion, interested students may apply the techniques learnt here in observational astronomy related capstone courses.						
Course Contents & Topics	and hand laborator blackbod	This course will cover the following topics: basics working principles of optical telescopes and CCDs; setting up and hands-on operations of small optical telescopes; error analysis and basic statistics related to the astronomy laboratories; introduction to the magnitude system and celestial coordinates, the color magnitude diagram, and blackbody radiation; observations and data reduction techniques in multi-wavelength astronomy; introduction to data analysis software packages.						
Course Learning		ssful completion of this course, students should be able to:						
Outcomes		cquire astronomy observation techniques						
	CLO 2 conduct observations to verify the physical principle(s) in astronomy							
	CLO 3 apply analytical methods required to interpret and analyze results, and draw conclusions from the data							
	CLO 4 use of effective written and verbal communication skills through written laboratory reports and oral presentation							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (I	PHYS2261 or PHYS2650); and Pass in PHYS3650, or already enrolled	d in this course.

			wed to take this capstone course	is their year 3 study.					
Offer in 2019 - 2020	Y 1st		nmer Offer in 2020 - 2021 : Y	Examination					
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject. Show evidence of strong logical and independent thinking. Insightful use and critical analysis/evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.								
	B Demonstrate substantial grasp of the subject. Show evidence of logical and independent thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.								
	C Demonstrate general but incomplete grasp of the subject. Show some evidence of logical and independent thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.								
	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Show limited evidence of logical and independent thinking. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.								
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Show little or no evidence of logical and independent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

	Data ar	nalysis and modeling in physics (6 credits)	Academic Year	2019			
Offering Department	Physics	·	Quota				
Course Co-ordinator	Prof H F	Chau, Physics (hfchau@hku.hk)					
Teachers Involved	(Prof H F	F Chau, Physics)					
Course Objectives	special e basic pri for stude	This course covers general modeling and data analysis techniques used in physics and related subjects wit special emphasis on their uses in complex systems, nonlinear systems and adaptive systems. The focus is on the basic principles and concepts rather than the use of computer packages. This course provides a solid foundation for students who intended to do computational physics and complex systems research. It also prepares student to work in related industries.					
Course Contents & Topics	basic hyp differenc complex data ana physical be drawr	Topics include basic data analysis techniques, linear and non-linear fittings, determining the goodness of the fit, basic hypothesis testing techniques, modeling physical and related systems via differential (ordinary and/or partial), difference equations as well as discrete models such as cellular automata, introduction to complex systems, complex adaptive systems and nonlinear dynamics, the use of computer package such as Matlab in modeling and data analysis. The emphasis is on the basic principles and concepts rather than a particular software package or physical model. Depending on the mutual interests of the coordinators and the students, illustrative examples will be drawn from conventional fields such as classical mechanics, electromagnetism and quantum mechanics as well as more recent fields like biophysics, econophysics and sociophysics.					
Course Learning	On succ	essful completion of this course, students should be able to:					
Outcomes	CLO 1 c	describe and explain state-of-the-art modeling methods used in ph	nysics				
	CLO 3	CLO 2 apply basic modeling techniques, together with logical and mathematical reasoning, to situations of physical world CLO 3 analyse and solve problems with the aid of computer packages such as Matlab CLO 4 critically interpret experimental data from physics experiments

PHYS4550	Advanc	ed statistical mech	anics (6 credits)		Academic Year	2019
Offering Department	Physics				Quota	
Course Co-ordinator	Dr Y J Tu	i, Physics (yanjuntu@hk	ku.hk)			
Teachers Involved		u,Physics)				
Course Objectives	mathema	Build on the advanced undergraduate level course PHYS3550, this course further discusses concepts ar mathematical techniques in statistical mechanics through special topics and applications. It serves as an electi course to better prepare students for their postgraduate studies in physics or other related disciplines.				
Course Contents & Topics			bles for isolated and open s Landau theory. Classical idea			
Course Learning			course, students should be a	•		
Outcomes	CLO 1 d	escribe and explain the	fundamental physical princip	les		
	CLO 2 a	pply these principles, to	gether with logical and mathe	ematical reasoning	, to situations of t	he physical world
	CLO 3 a	CLO 3 analyses and solve problems with the aids of mathematics				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	PHYS3550				
Offer in 2019 - 2020	N Off	fer in 2020 - 2021 : Y			Examination	
Grade Descriptors (A+ to F)	A	learning outcomes. Show s	stery at an advanced level of exte strong analytical and critical abilities wide range of complex, familiar an	and logical thinking, v	vith evidence of origin	al thought, and ability
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail	of analytical and critical a	idence of command of knowledge a abilities, logical and coherent think d presentational skills are minimally	ing. Show very little	or no ability to apply

PHYS4551	Solid sta	ate physics (6 credits)	Academic Year	2019		
Offering Department	Physics		Quota			
Course Co-ordinator	Prof M H 2	Xie, Physics (mhxie@hku.hk)				
Teachers Involved	(Prof M H	Xie,Physics)				
Course Objectives	This course covers a broad introduction to modern theory of the solid state physics. Some selected advanced topics will also be discussed. This is an elective course for the theoretical and experimental physics themes. This is also an essential course for those who plan to pursue postgraduate studies in condensed matter, solid state physics and material science or to work in related industries.					
Course Contents & Topics	free electr and optica	ructures and symmetry; the reciprocal lattice and X-ray diffraction; leads of metals; band structures and Bloch theory; nearly free electroal properties; semi-classical model of electron dynamics; if time per Hall effect, superconductivity will also be covered.	ons and tight binding	model; electronic		
Course Learning Outcomes	CLO 1 de CLO 2 de CLO 3 ap	On successful completion of this course, students should be able to: CLO 1 demonstrate knowledge for crystal structures and characterization CLO 2 describe the behavior of solid matter and explain the underlying physical concepts apply physical principles and mathematical equations to discuss the physical properties of materials CLO 4 discuss the physics of semiconductors, quantum Hall effect and superconductivity				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (P	PHYS2255 or PHYS2260) and PHYS3351	·			
Offer in 2019 - 2020	Y 1st	sem Offer in 2020 - 2021 : Y	Examination	Dec		
Grade Descriptors (A+ to F)	Α	Demonstrate thorough mastery at an advanced level of extensive knowledge: learning outcomes. Show strong analytical and critical abilities and logical thinkin to apply knowledge to a wide range of complex, familiar and unfamiliar situati	ng, with evidence of origina	al thought, and ability		

		presentational skills.			
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the cours learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familia and some unfamiliar situations. Apply effective organizational and presentational skills.			
	С	Demonstrate general but i outcomes. Show evidence	ncomplete command of knowledge	and skills required for attaining most es and logical thinking, and ability to a	
	D	Demonstrate partial but liming Show evidence of some colling to the colling and the colling and the colling are colling at the	ited command of knowledge and skil nerent and logical thinking, but with li	ls required for attaining some of the committed analytical and critical abilities. Shiganizational and presentational skills.	
	Fail	of analytical and critical al		I skills required for attaining the course g. Show very little or no ability to ap fective or ineffective.

	Stellar p	physics (6 cred	its)	Academic Y	ear 2019	
Offering Department	Physics		•	Quota		
Course Co-ordinator	Dr S C Y	Ng, Physics (ncy@	@bohr.physics.hku.hk)			
Teachers Involved	(Dr S C Y	Ng,Physics)				
Course Objectives	stresses	o introduce the basic theory of stellar structure and evolution. It follows a vigorous mathematical treatment that tresses on the underlying physical processes. Knowledge in quantum mechanics and statistical mechanics will be dvantageous.				
Course Contents & Topics	stellar rad sequence explosion and plane	opics include: Definition of stars. The H-R diagram. Stellar structure equations. Polytropic model. Elementa tellar radiation processes. Simple stellar nuclear processes. Saha equation. Stability of stars. Zero-age ma equence stars and their evolution. The solar neutrino problem. Late stage evolution of stars. Supernox xplosion. If time permits, special topics selected from below will be briefly mentioned: star formation, brown dwa nd planets, AGB stars and planetary nebulae, binary stars and their evolution, Cepheid variables and theory tellar pulsation, and introduction to helioseismology.				
Course Learning	On succe	ssful completion o	f this course, students should be able	e to:		
Outcomes	CLO 1 de	CLO 1 describe what is stars and to classify different types of stars				
			e and solve problems related to the s ations and Saha equations	structure and evolution of stars	s including the use o	
		ritically examine th f stars	ne physical processes occurring in st	tars and how these processes	s affect the evolution	
			earch papers in the field of stellar as	trophysics

Apply effective organizational and presentational skills.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learn outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to make familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcom Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to ap knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lac of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Teachers Involved	(Dr M H Le	e,Earth Sciences)					
Course Objectives	absorption	This course provides students with an advanced-level understanding of the processes responsible for the absorption and emission of continuum and line radiation from gas and dust in stellar atmospheres and interstell space, and their astrophysical applications and implications.					
Course Contents & Topics				radiative properties o s, nebulae, supernovae		um and heavier	
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 express what exists between stars in spiral and elliptical galaxies						
	CLO 2 apply physical principles to describe excitation/ionization and de-excitation/recombination of atoms and ions						
	CLO 3 recognize which process or processes occur or dominate in which object or phase of the interstellar medium

PHYS4999	Physics project (12 credits)	Academic Year	2019			
Offering Department	Physics	Quota				
Course Co-ordinator	Dr J J L Lim, Physics (jjlim@hku.hk)					
Teachers Involved	(Various teachers in the department, Physics)					
Course Objectives	This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It is designed for those who are interested in tackling a research project in physics and/or astronomy. It should be taken normally in their final year of study. It provides students with the opportunity to study a specific problem by themselves, either theoretical, experimental or numerical, under the supervision of an academic staff using the knowledge the student gained in all years of his/her major study. The available projects are close to postgraduate level research in physics and/or astronomy.					
Course Contents & Topics	Students interested in taking this course should contact their prospective supcontents and the nature of their projects in the coming academic year. They muprospective supervisor and the course coordinator to take this course. For theoretical and numerical projects: Students will receive training in research and make investigation which is close to research work in nature, under the sustudent may need to perform some original calculations, to fill in mathemat derivations, or a combination of both. For numerical projects, students also numerical or simulation results.	ust get the appro n literature readin pervision of a sta ical gaps of sor	val from both the g and reviewing aff member. The ne sophisticated			
	For experimental projects: Students will carry out experiments in research labs under the supervision of a staff member. The student will receive a comprehensive training in advanced experimental techniques, including preparation of samples, determination of physical properties, measurement of small signals obscured by noise, laser, high-vacuum and low-temperature techniques and so on. Wide reading of the relevant scientific literature

Course Objectives	The aim of this course is to provide students with the advanced level of comprehending on the theory of classic electromagnetic field, enabling them to master key analytical tools for solving real physics problems.					
Course Contents & Topics	This course will introduce and discuss the following topics: Boundary-value problems in electrostatics and Green Function method, Electrostatics of Media, Magnetostatics, Maxwell's equations and conservation laws, Gauge transformations, Electromagnetic waves and wave guides.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 analyse and solve various electrostatic and magnetostatic problems with Green's Function					
	CLO 2 comprehend and explain many electromagnetic phenomena					
	CLO 3 recognise and comprehend the important concepts of conservation laws and gauge transformations, which should be very helpful for doing research in future

Course Objectives	technolog technolog	this course, the students will learn about sustainability and environmental impact of different energy chnologies, including conventional energy sources as well as renewable and/or clean energy sources. The chnological challenges, potential for future development, and environmental impacts (community, regional, an obal) will be discussed.						
Course Contents & Topics	making t	The course will cover energy production and use, environmental impact of energy use, fossil fuels and methods making them more sustainable, clean fuels, electricity generation, renewable energy technologies (with empha on biomass, wind and solar energy), hydrogen, energy storage, and energy conservation.						
Course Learning			s course, students should be able to:	3,				
Outcomes	CLO 1	define the concept of	sustainable development					
	CLO 2	explain the challenge	s and potential for development of vari	ous energy technologies				
	CLO 3	compare the environn	nental impact of conventional and new	energy technologies				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in 0	CHEM2041 or ENVS20	001 or ENVS2002 or PHYS2260

ENTR4999	Entrepre	neurship project	t (6 credits)	Academic Ye	ar 2019	
Offering Department	Faculty			Quota	20	
Course Co-ordinator	Dr R Law,	Faculty (rockylaw@	hku.hk)			
Teachers Involved	(All acade	mic staff in Faculty o	f Science,)			
Course Objectives	 Apply engained fro proposals. Studen 	This course is to provide opportunity for students to: 1. Apply entrepreneurship-related knowledge gained through prior university coursework and hand-on experiences gained from prior Internship course to carry out in-depth business potential evaluation and to develop start-up proposals. 2. Students to further develop leadership and teamwork experience via collaboration in multi-disciplinary environments.				
Course Contents & Topics	This course is offered to students as the final course in the minor programme in Science Entrepreneurship. Under the supervision and guidance of an academic staff, students are to use the knowledge they have gained in all years of study to practice entrepreneurship. This can be achieved by conducting technology trend, market analysis and product identification for defining market-product fit solutions. Students are expected to participate, with the result from their hands-on experience in projects, competitions (such as the HKU DreamCatchers initiative, various Hackathon activities and "Challenge Cup" National Competition etc.) and to develop start-up companies thereafter.					
Course Learning	On succes	sful completion of th	is course, students should be able	to:		
Outcomes	CLO 1 to	integrate and apply	theoretical knowledge in a real-life	setting		
			ools to analyze real-life entrepreneu	•		
	CLO 3 to	further improve pres	sentation, problem-solving and colla	borative skills in tackling real	-life problems	
	CLO 4 to	build a team, with m	embers from different specialized a	reas, that is ready for busine	ss venture	
	CLO 5 to	prepare a viable bus	siness plan that is ready for fund rai	sing activities		
Pre-requisites and Co-requisites and Impermissible combinations)		NTR3001 and ENTR: nust be in their Year	3002 3 study or beyond, as well as mino	ring in Science Entrepreneurs	ship.	
Offer in 2019 - 2020	N Offe	er in 2020 - 2021 : Y		Examination		
Grade Descriptors (A+ to F)	A Candidate has consistently demonstrated a thorough understanding and skills required for attaining all the course learning outcomes. S/he has shown the ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. S/he has demonstrated highly effective organizational and presentation skills. B Candidate frequently demonstrated a substantial understanding and skills required for attaining at least most of the course					
	С	learning outcomes. S/he has shown the ability to apply knowledge to familiar and unfamiliar situations. S/he has demonstrated effective organizational and presentation skills. Candidate demonstrated general but incomplete understanding and skills required for attaining most of the course learning				
		outcomes. Some of the responses are well organized, clear but with insufficient elaboration – there is significant room for improvement to achieve a more satisfactory level. S/he has demonstrated moderately effective organizational and presentation skills.				
	D Fail	Solutions to questions a the subject. S/he has de Candidate showed little	d partial but limited understanding and skills and problems contain unstructured but relev emonstrated limited or barely effective organi or no evidence of basic familiarity with the	vant observations. Candidate has sh izational and presentation skills. subject, nor demonstration of sufficie	own marginal interest i	
	D :		. Organizational and presentation skills are r	ninimally effective or ineffective.

SCNC1112	Fundamentals of modern science (6 credits)	Academic Year	2019
Offering Department	Faculty	Quota	
Course Co-ordinator	Dr J C S Pun, Physics (jcspun@hku.hk)		
Teachers Involved	(Dr E K M Leung,Faculty of Science) (Dr H Y Au-Yeung,Chemistry) (Dr J C S Pun,Physics) (Dr J D Gaitan-Espitia,Biological Sciences) (Dr L Ashton,Biological Sciences) (Dr M H Lee,Earth Sciences)		
Course Objectives	This course aims to provide students an overview of the giant web of kno course adopts an integrated approach and encompasses physics, astron biology, and focuses on the general principles and unifying concepts of s	omy, earth sciences	, chemistry, and

		developments and tuced and highlighted	the modern frontiers, and the interco	illiecteuriess of different sci	ience disciplines w	
Course Contents			nifying concepts of science			
& Topics		mental structure of r				
•	- Structure of matter					
	- The quantum world					
		tary particles and sta	indard model			
	\ <i>'</i>	and molecules	adia tabla			
		and atoms: The peri al bonds and chemic				
			carbon, molecular cluster			
		ence and nanotechn				
	(4) DNA/0		0,7			
	- Molecule					
		cs and DNA; Genetic	cs and inheritance			
	\ <i>'</i>	and systems				
	` '	iism and environmen iin and evolution of li				
		and environment				
	0,	and Beyond				
			ere and hydrosphere			
	- Earth's r	motion in space				
		the Sun, and the so	lar system			
Course Learning	- Cosmolo		his course students should be all t	٥٠		
Course Learning Outcomes			his course, students should be able to ading of the historical development		sence and enirit of	
Jacounica			ods, and the role of science in the ad			
			miliar with the fundamental scientific		or unio	
			ty of different scientific disciplines ar		and interdisciplina	
		erspectives on scien	·			
			y appraise received ideas and establi	shed knowledge

	(Dr W M Y Cheung, Faculty of Science)		
	(Prof Q A Parker, Physics)		

Course Objectives By exploring the Big History of our planet: from the Big Bang of the Universe, the synthesis of different chemical substances, through the evolution of various species on Earth, to the establishment of modern human society, the course aims to: (1) discuss the process of scientific discovery, and how our current body of knowledge about Nature was established; (2) develop students' understanding of the multi-disciplinary nature of science; (3) develop students' understanding of the importance of science and technology to our society, in formulating policies in the society, and solving the future problems of our planet; (4) increase scientific literacy. Course Contents Part I: From the Cosmos to the Atom & Topics Main theme: How fundamental interactions between the building blocks of matter shape the Universe today as we know it: Topics include: Big bang, nucleosynthesis, cosmic expansion, cooling of the universe, star formation, and thermal equilibrium of our planet Earth. Part II: From the Atom to Life Main theme: How we understand the transition from non-living matter to the diversified biosphere on earth today; Topics include: Origin of life, evolution, natural selection and tree of life. Part III: From Life to Mind to Society Main theme: How our modern civilised society emerges through the development of intelligence and accumulation of knowledge; how science, technology, human society and environment influence one another; Topics include: Neural network and the emergence of intelligence, historical development of modern science, the role of science in human civilisation and the contemporary world. Part IV: Looking into the Future Main theme: Outlook on the future of science, technology, human society and environment; key challenges to be faced by humankind that could be addressed by science and technology; Topics include: Students will attend one of several parallel modules on topics that suit their interests, such asnanotechnology, climate change, energy crisis, bioethics and artificial intelligence. Course Learning On successful completion of this course, students should be able to: Outcomes CLO 1 appreciate and elaborate on the significance of major events in the development and formation of our Universe, our Earth system and our modern society CLO 2 explain, with some level of depth and details, how a number of major theories allows us to understand the workings of the world CLO 3 understand how different science disciplines fit and emerge from one another as a collective effort of the humankind to understand Nature CLO 4 critically assess the mutual influence between science and human society, the role of science in our society as well as the making of science policy in our local region CLO 5 evaluate some of the major challenges faced by humankind, and discuss solutions from a multi-disciplinary perspective CLO 6 test claims and engage in historical analysis based on theories and practices from multiple disciplines Pre-requisites Level 3 or above in at least one science subject at the pre-university level (HKDSE Physics, Chemistry, Biology, (and Co-requisites Combined/Integrated Science or equivalent) and Impermissible This course is not offered to students in the 6901 BSc or 6119 BEd&BSc programmes. combinations) Offer in 2019 - 2020 Ν Offer in 2020 - 2021 : Y Examination Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Show **Grade Descriptors** Α strong analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of familiar and unfamiliar (A+ to F) situations. Carry out computations carefully and correctly. Apply highly effective organizational and presentational skills. Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Carry out computations mostly in a careful and correct way, but commit some minor В computational errors. Apply effective organizational and presentational skills. Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning С outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Commit a number of minor computational errors. Apply moderately effective organizational and presentational Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Commit some substantial computational errors. Apply limited or barely effective organizational and D Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Commit serious computational errors. Organization and presentational skills are minimally effective or ineffective. Fail Course Type Lecture-based course Course Teaching **Activities** Details No. of Hours & Learning Activities Lectures 36 12 **Tutorials** Reading / Self study 100 **Assessment Methods** Methods Details Weighting in final Assessment and Weighting course grade (%) Methods to CLO Mapping About 3 reading assignments will be given. Students will then be CLO 40 Assignments assessed in various forms such as 1,2,3,4,5,6 drawing mind maps, short quizzes or reflective journals. CLO Presentation **Tutorial participation** 10 1,2,3,4,5,6 Project reports 30 CLO 1,3,4,5,6 20 CLO 1,2,3,4,6 Test Required/recommended Steven Weinberg: The First Three Minutes: A Modern View of the Origin of the Universe (Basic Books) reading and Charles Darwin: The Origin of Species

Enrolment of this course is not conducted via the online course selection system. Students will be enrolled manually by the Faculty after approval has been obtained from the course coordinator.

This course is taught by staff in UBC and the end of trip report is graded by Dr H S El-Nezami.

Remarks:

Students will divided into groups of 3-4. Each group will submit a 7-10 pages report (not including the references). Please use Times New Roman (12 points), single space and 2 cm margins from all sides. The report should summarize the group HACCP plan, issues, problems and approaches and suggestions to address any farm related food safety issues. The marking criteria are the scientific quality and clear identification of the issues listed above. In addition each group will be presenting 12-15 minutes on the topic of their report.

SCNC2122	Marine life science: a North East Pacific perspective (6 credits) Academic Year				2019	
Offering Department	Faculty			Quota	32	
Course Co-ordinator	Dr T Ver	ngatesen, Biological Sci	ences (rajan@hku.hk)			
Teachers Involved	(Prof G /	engatesen,Biological Sci A Williams,Biological Sc S S Wu,Biological Scien Kwok,Earth Sciences)	ciences)			
Course Objectives	Marine Life Science is an integrated study of how the oceans influence large and small scale patterns of marine biology through biophysical interactions. By studying the temperate cold waters of the NE Pacific Ocean, students will learn marine habitats as habitable planet, to appreciate the dynamics of marine biodiversity, the complex interactions between the physical and biological components, fishery, and the services the coastal oceans provide to human. This course will provide an excellent opportunity for students to experience the diversity of marine life or the other side of the Pacific.					
Course Contents & Topics	Lectures from both HKU and UBC teachers will introduce 'marine life science'; with a focus on biodiversity, abundance and distribution of species, productivity, coastal pollution, fisheries, aquaculture and climate change. The course will also introduce the commercial aspects of marine life, i.e. eel-grass, aquaculture and climate change mitigation through management of coastal ecosystems. All these lectures will be discussed through a series of field observations, presentations from guest lecturers and group discussions. There will be an excellent opportunity to touch and learn about Canada's wonderful marine life diversity in the Vancouver Aquarium, and northern Vancouver Fish Hatchery. Students will be learning Canada's coastal plankton biodiversity through vising the Marina (Reed point marina) and the Sea-grass habitat. There will also be several opportunities to explore the intertidal zone, exposed and protected coastal habitats, sandy beaches and estuaries in the Vancouver Island. Marine biodiversity survey techniques and methods of studying marine life in the field will be emphasized. Students will be exposed to a different learning environment involving not only HKU teachers and students but also UBC teachers and students, bringing diverse range of expertise, cultures, and learning opportunities from both sides of the Pacific Ocean to focus on the diversity, dynamic interactions and threats to marine life.

STAT1600	Statistics: ideas and concepts (6 credits) Academic				r 2019		
Offering Department	Statistics & Actuarial Science Quota						
Course Co-ordinator	Dr C W Kv						
Teachers Involved	`	(Dr C W Kwan,Statistics & Actuarial Science) (Dr Y K Chung,Statistics & Actuarial Science)					
Course Objectives	The course aims at providing a broad overview of statistics for students who aspire to major in Statistics or Risk Management. It focuses on the roles of statistics as a scientific tool with applications to a wide spectrum of disciplines, and as a science of reasoning which has revolutionized modern intellectual endeavours. It lays a panoramic foundation for a formal study of statistics at the university level.						
Course Contents & Topics	 Data collection: observational studies versus designed experiments Data presentation: tables; graphs; frequency distributions; correlations; trends Probability: randomness; probability models; distributions; measures of central tendency and dispersion Inference: estimation; tests of significance and hypotheses; confidence intervals; regression; prediction Further issues: controversies; misuse of statistics; ethics. 						
Course Learning	On succes	ssful completion of this o	course, students should be able to:				
Outcomes			tistics as a tool for scientific reasonin	g			
		esent data in a useful a	•				
			nd perspectives of statistical modellin	g and inference			
			and bad statistical practices				
			tatistics or Risk Management with a				
Pre-requisites (and Co-requisites and Impermissible combinations)	Not for students who have passed in any of the following courses: STAT1602, STAT1603, STAT3902.

STAT1601	Elementary statistical methods (6 credits)	Academic Year	2019				
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	TBC, Statistics & Actuarial Science ()						
Teachers Involved	· ·						
Course Objectives	Research findings are usually supported by data. Data collected in an experiment/survey are often concerned with situations involving variability and uncertainty. They are used to estimate the true value of a certain quantity or to test the acceptability of a certain new hypothesis. Valid methods of analysing the data are thus essential to any successful investigation. The course aims to present the fundamentals of statistical methods widely used by researchers. Microsoft Excel might be used to carry out some statistical analysis. There is no demand of sophisticated technical mathematics.						
Course Contents & Topics	The course will introduce and study the following topics: Presentation of data, Measures of Central Tendency, Measures of Variability and Uncertainty, Basic Probability Laws, Common Probability Distributions such as Uniform, Binomial, Poisson, Hyper-geometric, Geometric and Normal distributions, Random Sampling, Distribution of the Mean, Normal Sampling Theorem, Point Estimation, Confidence Intervals, Sample Size Determination, Hypothesis Testing, Inferences for Mean and Proportion, Chi- squared tests, Simple Regression and Correlation						
Course Learning Outcomes	e Learning On successful completion of this course, students should be able to:						

	CLO 7 write appropriate conclusions based on the statistical results								
	CLO 8 understand the basic principles of simple linear regression and correlation and their applications to practical problems								
Pre-requisites	Level 2 or above in HKDSE Mathematics or equivalent; and								
(and Co-requisites	Not for students with Level 2 or above in HKDSE Mathematics Extended Module 1 or 2; and								
and Impermissible	Not for students who have passed or already enrolled in any of the following courses: STAT2901, STAT1602,

Additional Course Information	Students who intend to major in "Decision Analytics" or "Risk Management" or "Statistics" should take STAT2601 instead of this course. Other references: Wonnacott, T. H. and Wonnacott, R. J.: Introductory Statistics (Wiley, New York, 1972, 2nd edition) Dixon, W. J. and Massey, Jr, F. J.: Introduction to Statistical Analysis (McGraw Hill, 1983, 4th edition)

STAT2601	Probabi	ity and statistics I (6	6 credits)	Academic Yea	r 2019			
Offering Department	Statistics	& Actuarial Science	•	Quota				
Course Co-ordinator	Dr K P Wa	at, Statistics & Actuarial S	Science (watkp@hku.hk)	<u>'</u>	'			
Teachers Involved	(Dr K P W	at,Statistics & Actuarial	Science)					
Course Objectives	forms an i	the discipline of statistics is concerned with situations in which uncertainty and variability play an essential role and sums an important descriptive and analytical tool in many practical problems. Against a background of motivating roblems this course develops relevant probability models for the description of such uncertainty and variability.						
Course Contents & Topics	Discrete in binomial, general Probability Joint distr	Sample spaces; Operations of events; Probability and probability laws; Conditional probability; Independence; Discrete random variables; Cumulative distribution function (cdf); Probability mass function (pmf); Bernoulli, pinomial, geometric, and Poisson distributions; Continuous random variables; Cumulative distribution function (cdf); Probability density function (pdf); Exponential, Gamma, and normal distributions; Functions of a random variable; joint distributions; Marginal distributions; Independent random variables; Functions of jointly distributed random variables; Expected value; Variance and standard deviation; Covariance and correlation.						
Course Learning	On succes	On successful completion of this course, students should be able to:						
Outcomes	CLO 1	understand the basic	concepts in probability theory					
	CLO 2	gain some insights to	statistics and inference					
	CLO 3	solve real-world prob	lem by using probability calculation	าร				
	CLO 4	pursue their further s	tudies in statistics					
Pre-requisites (and Co-requisites and Impermissible combinations)	thereafter; Pass in M. Pass in M. STAT2602	Probability and statistics II (6 credits)	Academic Year	2019
Offering Department	Statistics & Actuarial Science	Quota	
Course Co-ordinator	Dr K Zhu, Statistics & Actuarial Science (mazhuke@hku.hk)		
Teachers Involved	(Dr K Zhu, Statistics & Actuarial Science)		

Course Objectives	(Dr Z Liu,Statistics & Actuarial Science) This course builds on STAT2601, introducing further the concepts and methods of statistics. Emphasis is on the						
oddise Objectives	two major areas of statistical analysis: estimation and hypothesis testing. Through the disciplines of statistical modelling, inference and decision making, students will be equipped with both quantitative skills and qualitative perceptions essential for making rigorous statistical analysis of real-life data.						
		•	9				
Course Contents & Topics	1. Overview: random sample; sampling distributions of statistics; moment generating function; large-sample theory laws of large numbers and Central Limit Theorem; likelihood; sufficiency; factorisation criterion; 2. Estimation: estimator; bias; mean squared error; standard error; consistency; Fisher information; Cramer-Rac Lower Bound; efficiency; method of moments; maximum likelihood estimator; 3. Hypothesis testing: types of hypotheses; test statistics; p-value; size; power; likelihood ratio test; Neymar Pearson Lemma; generalized likelihood ratio test; Pearson chi-squared test; Wald tests; 4. Confidence interval: confidence level; confidence limits; equal-tailed interval; construction based on hypothesis tests.						
Course Learning		essful completion of this c	ourse, students should be able to:				
Outcomes			of statistics and its relation to proba	ability theory			
	CLO 2	relate a real-life problem t	o a formal framework for statistical	inference			
	CLO 3	conduct standard parame	tric statistical inference by means o	of estimation and hypothes	sis testing		
	CLO 4	reckon the general applica	ability of statistics in a broad range	of subject areas			
Pre-requisites (and Co-requisites and Impermissible combinations)		STAT2601; and udents who have passed	in STAT3902, or already enrolled in	n this course.

STAT2604		Introduction to R programming and elementary data analysis (6 credits) Academic Year 2019							
Offering Department	Statistics	& Actuarial Science	Quota	50					
Course Co-ordinator	Dr Z Liu,	Dr Z Liu, Statistics & Actuarial Science (zhhliu@hku.hk)							
Teachers Involved	(Dr Z Liu	Statistics & Actuarial Science)							
Course Objectives	language elementa work with	rse is designed to provide a first-level introduction to the popular as R. This course focuses on learning the basic programming skills in ary statistical analysis. The programming skills involved can be apply h different data types, manipulation and transformation of data, and production of professional summary reports with high-quality gra	R with examples a lied to input and ou random sampling,	nd applications in tput of data sets					
Course Contents & Topics	2. The R 3. Probal continuou 4. Descri summary 5. Simple	1. R basics: first steps; language essentials. 2. The R environment: session management; the graphics subsystem; R programming; data entry. 3. Probability and distributions: random sampling; probability calculations and combinatorics; discrete distributions continuous distributions; the built-in distributions in R. 4. Descriptive statistics and graphics: summary statistics for a single group; graphical display of distributions summary statistics by groups; graphics for grouped data; graphical display of tables. 5. Simple linear regression: residuals and fitted values; prediction and confidence bands; correlation.							
Course Learning		essful completion of this course, students should be able to:							
Outcomes	CLO 1	access online help and documents for R							
	CLO 2 use R to input data, perform data transformation and merging, output data								
	CLO 3 summarize data in tables and graphs for descriptive data analysis								
	CLO 4 work with numeric, character, and other unstructured data types								
	CLO 5 be able to write functions, loops and control flows								
	CLO 6 perform data management using SQL language in R								
	CLO 7 perform Monte Carlo simulations to validate statistical concepts								
Pre-requisites (and Co-requisites and Impermissible combinations)		already enrolled in STAT1600 or MATH1821.

Course Objectives	evidence- aims to p adopted s	The course covers the major methods for studying demographic and socio-economic statistics, with a quantitative evidence-based approach to understand the socio-economic well-being of residents in a territory. The course aims to provide students with 1) essential underlying principles and the pertinent methods behind internationally adopted statistical indicators; and 2) skills in the statistical descriptions and further analysis for application to						
Course Contents & Topics	Demographics Socio-economics pertaining Sources, Examples	planning, policy-making and commercial endeavours of a territory. Demographic statistics on population structure, fertility, mortality, migration, life tables, population projections; Socio-economic statistics on housing, labour, and social equity; Economic statistics on external trade, innovation, prices and GDP measurements (with emphasis on methods pertaining to some important economic sectors in the case of GDP). Sources, theory and methods of such statistics; Examples would be especially drawn from Hong Kong, neighbouring economies or comparable economies.						
Course Learning Outcomes		On successful completion of this course, students should be able to:						
	CLO 2 fu Ko CLO 3 pr	rther appraise an ong, neighbouring	ret major official & other publicly dissemin d analyse the socio-economic well-being economies or comparable economies ation by extrapolating or referencing from tistics reporting	of a territory with particul

Course Objectives	The analysis of variability is mainly concerned with locating the sources of the variability. Many statistical techniques investigate these sources through the use of 'linear' models. This course presents the theory an practice of these models.					
Course Contents	(1) Simple linear regress	sion: least squares method, analysis	of variance, coefficient of determi	nation, hypothesi		
& Topics	tests and confidence intervals for regression parameters, prediction. (2) Multiple linear regression: least squares method, analysis of variance, coefficient of determination, reduced vs full models, hypothesis tests and confidence intervals for regression parameters, prediction, polynomial regression. (3) One-way classification models: one-way ANOVA, analysis of treatment effects, contrasts. (4) Two-way classification models: interactions, two-way ANOVA for balanced data structures, analysis of treatment effects, contrasts, randomised complete block design. (5) Universal approach to linear modelling: dummy variables, 'multiple linear regression' representation of one-way and two-way (unbalanced) models, ANCOVA models, concomitant variables. (6) Regression diagnostics: leverage, residual plot, normal probability plot, outlier, studentized residual, influential observation, Cook's distance, multicollinearity, model transformation.					
Course Learning		of this course, students should be a

STAT3605	Quality c	control and manage	ement (6 credits)	Academic Yea	r 2019	
Offering Department	Statistics 8	& Actuarial Science		Quota		
Course Co-ordinator	TBC, Statis	stics & Actuarial Science	ce ()			
Teachers Involved						
Course Objectives	course pro presents a reliability, a six-sigma,	The successful control of quality in production is a matter of primary importance to a company's prosperity. This ourse provides an overview of quality compromise which involves both the producer and the consumer. It resents a variety of statistical solutions including control charts, acceptance and sequential sampling plans, eliability, and life-testing. Contemporary quality management systems such as total quality control, zero defects ix-sigma, and ISO-9000 will be introduced. The student is brought to the frontier of today's quality control and ranagement ideas.				
Course Contents & Topics	control, va sampling testing. El	Probability distributions and their applications, process variability, sampling and statistical inference. Process control, variables and attributes control charts. Operating characteristic curves. Single, double and sequential sampling plans. MIL-STD-105D and Dodge-Romig schemes. Variables sampling. Reliability and lifetesting. Elementary experimental designs. Management of quality control, total quality control, zero defects, six-sigma, and ISO 9000.				
Course Learning	On succes	sful completion of this	course, students should be able to:			
Outcomes	CLO 1 a	ppreciate the practicalit	ls in general			
			specific statistical methods can bene	•	tions	
			modern systems of quality manager

Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.						
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Objectives	the clinica designs. I size and p	In clinical research, medical data are often observed which motivates the application of statistical methodology to the clinical observational and decision-making process. Also, statistical problems often arise from clinical trial designs. It involves phase I, II, III and IV clinical trial designs, both Bayesian and frequentist approaches, sample size and power calculation. No knowledge in biology or medicine is assumed; the course provides the necessary biomedical background when the statistical problems are introduced.				
Course Contents & Topics	The conte	The contents of the course include contingency tables, regression models, survival analysis, categorical data analysis, Bayesian designs, dose-finding methods, sample size and power calculation, phase I, II and III trial designs, hypothesis testing, adaptive designs.				
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1	understand the basic concepts in medical statistics				
	CLO 2	design clinical trials and compute sample sizes				
	CLO 3	conduct statistical inference and apply regression models				
	CLO 4	CLO 4 solve medical problems by using various statistical tests

Course Co-ordinator	Dr R W L Wong, Statistics & Actuarial Science (rwong@hku.hk)				
Teachers Involved	(Dr R W L Wong, Statistics & Actuarial Science)				
Course Objectives	This course provides knowledge on basic risk and its management, as well as basic financial planning through insurance products, to students. It allows students to understand the statistical, financial and legal principles underlying the techniques for managing the insurable risks faced by organisations and individuals. This course aims at students who have minimal background in quantitative methods, it involves very minimal quantitative calculations.				
Course Contents & Topics	The course introduces and explains: - risk in our society, - insurance and risk, - introduction to risk management,				

		ental legal principles, a rance, their contractual	nd analysis of insurance contracts, provisions.			
	- individual health insurance coverages.					
Course Learning	On succe	ssful completion of this	s course, students should be able to:			
Outcomes		nderstand the general rinciple	risks faced by organisations and in	dividuals and the generic	risk management	
		emonstrate knowledge dustry	and understanding of the underlying	financial and legal princip	les of the insurance	
	CLO 3 ui	nderstand how risk car	be managed through insurance

Course Objectives	prediction methodolo essential	Machine learning is the study of computer algorithms that build models of observed data in order to make predictions or decisions. Statistical machine learning emphasizes the importance of statistical theory and methodology in the algorithmic development. This course provides a comprehensive and practical coverage of essential machine learning concepts and a variety of learning algorithms under supervised and unsupervised settings. The course materials are presented with lots of examples and reproducible codes.				
Course Contents & Topics	Data scie	Data science, data exploration, generalized linear models, variable selection, basis expansion, regularization cross-validation, tree-based methods, kernel methods, neural networks, dimension reduction, principal component analysis, cluster analysis, stochastic optimization, interpretable machine learning.				
Course Learning	On succes	ssful completion of	this course, students should be a	able to:		
Outcomes	CLO 1 ge	et familiar with the v	workflow of a data science or mad	chine learning project		
	CLO 3 id CLO 4 ev	naracteristics, stren entify and use approvaluate the quality of	gths and weaknesses ropriate techniques for a particula of the resulting model in terms of	prediction accuracy and model exp

STAT3617	Sample survey methods (6 credits)	Academic Year	2019				
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	Ms O T K Choi, Statistics & Actuarial Science (ochoi@hku.hk)						
Teachers Involved	(Ms O T K Choi,Statistics & Actuarial Science) (Prof F W H Ho,Statistics & Actuarial Science)						
Course Objectives	This course will cover design and implementation of sample surveys and analysis of statistical data thus obtained. Survey design includes overall survey design, design of sampling schemes and questionnaires, etc. Sampling methods include sample size determination, sampling and non-sampling errors and biases, methods of estimation of parameters from survey data, imputation for missing data etc.						
Course Contents & Topics	of parameters from survey data, imputation for missing data etc. Topics may include: survey design and planning; survey quality and ethics; implementation matters like management of survey staff, respondent relationship and logistical issues; and sampling methods like simple random sampling, systematic sampling, stratified sampling, cluster sampling, multi-stage sampling, sample size determination, post-stratification, ratio and regression estimation methods, non-sampling errors and biases, non-responses and missing data. Case studies of major applications of sample survey methods in the public and private sectors, with some examples on the analysis and application of the statistical data thus produced, will be discussed.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 demonstrate knowledge and understanding of the various steps to be taken in the planning and implementation of sample surveys						
	CLO 2 design different sample schemes and select the most efficient and suitable one for adoption for a particular survey - make statistical inference on parameters based on a sample						

	CLO 3 judge whether the statistics presented by other survey takers are trustworthy

Offer in 2019 - 2020	Y 1s	t sem 2nd sem Of	fer in 2020 - 2021 : Y	Examination	No Exam			
Grade Descriptors (A+ to F)	Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources are to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable additional work beyond that is required in widereas relevant to the topic.] Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretation and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational are presentational skills.							
	C Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.							
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions Apply limited or barely effective organizational and presentational skills.							
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills at minimally effective or ineffective.

STAT3904	Corporate finance for actuarial science (6 credits)	Academic Year	2019

Offering Department	Statistics	Statistics & Actuarial Science Quota						
Course Co-ordinator	Dr D Lee	Dr D Lee, Statistics & Actuarial Science (leedav@hku.hk)						
Teachers Involved	(Dr D Lee	e,Statistics & Actuarial S	cience)					
Course Objectives	Finance principles	This course is designed for actuarial science students to receive finance component of VEE Accounting and Finance from the Society of Actuaries. The objective of this course is to introduce students to the fundamental principles of corporate finance. The course will provide students with a systematic framework within which to evaluate investment and financing decisions for corporations.						
Course Contents & Topics	covered imeasures important pricing m	The first part of the course will give an introduction to corporate finance and provide an overview of some topics covered in STAT2902 and STAT3615. These include financial markets and companies, time value of money, and measures and performance assessment of financial performance. The main part of the course will focus on some important topics of corporate finance including: portfolio theory, Markowitz mean-variance analysis, capital asset pricing model, weighted average cost of capital, market efficiency, capital structure and dividend policy, financial leverage and firm value, and option pricing models.						
Course Learning	On succe	essful completion of this	course, students should be able to:					
Outcomes			nancial manager and the financial de		ation			
		•	and future values in calculating the v					
		•	ance using various investment criteria		•			
			ce portfolio theory, capital asset prici	0 .				
			considered by a company when d ct of financial leverage and long/shor					
	CLO 6 d	escribe the various form	s of market efficiency	-				
	CLO 7 c	alculate the value of opti	ions using the binomial option pricing	j model				
Pre-requisites			902) or (Pass in STAT3610 and STA

and Impermissible								
combinations)								
Offer in 2019 - 2020		d sem Offer in 2020 - 2		Examination	May			
Grade Descriptors (A+ to F)	A	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.							
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lacl of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3908	Credibil	ity theory and loss distributions (6 credits)	Academic Year	2019				
Offering Department	Statistics	& Actuarial Science	Quota					
Course Co-ordinator	Dr A G Be	enchimol, Statistics & Actuarial Science (benchi@hku.hk)						
Teachers Involved	(Dr A G B	Senchimol, Statistics & Actuarial Science)						
Course Objectives	calculation particular	Credibility is an example of a statistical estimate. The idea of credibility is very useful in premium calculation. Insurance loss varies according to the business nature, what distribution should be used to fit a particular loss is both of theoretical interest and practical importance. This course covers important actuarial and statistical methods.						
Course Contents & Topics	constructi determina	Limited fluctuation approach; Buhlman's approach; Bayesian approach; empirical Bayes parameter estimations; construction and selection of parametric models; properties and estimation of failure time and loss distributions, determination of the acceptability of a fitted model; comparison of fitted models; simulation of both discrete and continuous random variables.						
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 apply limited fluctuation (classical) credibility including criteria for both full and partial credibility							
	CLO 2 perform Bayesian analysis using both discrete and continuous models							
	CLO 3 apply Buhlmann and Buhlmann-Straub models and understand the relationship of these to the Bayesian model							
	CLO 4 apply conjugate priors in Bayesian analysis and in particular the Poisson-gamma model							
	CLO 5 apply empirical Bayesian methods in the nonparametric and semiparametric cases							
	CLO 6 construct and select empirical models							
	CLO 7 determine the acceptability of a fitted model and/or compare models							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2602 or STAT3902 or STAT3906

Course Co-ordinator	Prof H L Yang, Statistics & Actuarial Science (hlyang@hku.hk)						
Teachers Involved	Prof H L Yang, Statistics & Actuarial Science)						
Course Objectives	This course is an advanced course on the option pricing theory. The course covers Black-Scholes equation and stochastic calculus, and interest models.						
Course Contents & Topics	Brownian motion; introduction to stochastic calculus; arithmetic and geometric Brownian motion; Ito formula; Sharpe ratio and risk premium; Black-Scholes equation; risk-neutral stock-price process and option pricing; option's elasticity and volatility; Vasicek, Cox-Ingersoll-Ross, and Black-Derman-Toy models; delta-hedging for bonds and the Sharpe-ratio equality constraint; Black's model; options on zero-coupon bonds; interest-rate caps and caplets.						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand Brownian motion and its properties CLO 2 understand the Ito calculus and Ito formula CLO 3 understand the Black-Scholes model and option pricing theory CLO 4 understand the delta hedging and some basic risk management methods CLO 5 understand some basic interest rate models						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in MATH3603 or STAT3603 or STAT3903 or STAT3910

Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	TBC, Statistics & Actuarial Science ()						
Teachers Involved							
Course Objectives	This course aims at providing practical elements for actuarial students included basic capability to understand, research in and handle the laws as and benefit students in their coming future career.						
Course Contents & Topics	This course covers a full range of topics related to both areas including Actuaries' Legal Thinking.	,	,				
	For Practical Actuarial Practice: It covers the major practical topics in Insurance, it covers the full picture of actuarial control cycle including Reporting and Experience Analysis. For General Insurance, it covers the band Valuation.	g Product Pricing, Val	uation, Financial				
	For Actuaries' Legal Thinking: This is the 7th year of the course and the full start of a new course structure echoing changes in the market for basic legal and general insurance skills for actuaries. Intellectually stimulating recent legal materials with heavy involvement of actuarial and other general insurance expertise would dominate the course, alongside with basic legal research skills and fundamental legal thinking. Sharing of experience from quests from the General Insurance Industry would also infiltrate the course.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 have a basic understanding regarding Actuarial Control Cycle from A to Z for Life Insurance and General Insurance						
	CLO 2 possess some experience regarding fundamental actuarial practice through practical project						
	CLO 3 possess basic understanding of the legal system in Hong Kong						
	CLO 4 possess fundamental knowledge in certain core legal aspects such as the law of contract and the law of tort						
	CLO 5 possess fundamental knowledge of the law of insurance						
	CLO 6 conduct elementary legal researches when facing with legal problems						
	CLO 7 understand the basic elements of a routine judgment, the matrix of	the facts and the law ir	volved

The students will be introduced to the application of actuarial valuation techniques to the funding and accounting of pension plans.					
Course Contents & Topics	obligation	he following topics will be covered: Fundamentals of private pension plans; pricing and valuation of pension bligations; actuarial cost methods and their effects on cost patterns; selection of actuarial assumptions; principles f asset and liability management.					
Course Learning	On succe	ssful completion of this c	course, students should be able to:				
Outcomes	CLO 1	calculate the pension be	enefits in accordance with the provisi	ons of a pension plan			
	CLO 2	calculate the normal cos	st and actuarial liabilities using differe	ent actuarial cost methods			
	CLO 3	perform gain and loss ar	nalyses for pension valuations				
	CLO 4	select appropriate assun	mptions and methods for funding or a	accounting purposes			
		•	sults presented in actuarial valuation				
	CLO 6	understand the principles	s of asset and liability modeling as r	elated to pension plans			
Pre-requisites (and Co-requisites and Impermissible combinations)		TAT3909; and Actuarial Science) studer	nts only.				
Offer in 2019 - 2020	Y 1st	sem Offer in 2020 - 20	021 : Y	Examination	Dec		
Grade Descriptors	Α			wledge and skills required for a	attaining all the course		
(A+ to F)		Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

Course Co-ordinator	Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)		
Teachers Involved	(Dr K P Wat, Statistics & Actuarial Science)		
Course Objectives	For a commercial bank, credit risk has always been the most significant. It is the risk of default on debt, swap, or other counterparty instruments. Credit risk may also result from a change in the value of an asset resulting from a change in the counterparty's creditworthiness. This course will introduce students to quantitative models for measuring and managing credit risk. It also aims to provide students with an understanding of the credit risk methodology used in the financial industry and the regulatory framework in which the credit risk models operate.		
Course Contents & Topics	Probabilities of default, recovery rates and loss given default; Default and credit migration; credit scoring and internal rating models; Credit portfolio models such as CreditMetrics, CreditPortfolioView, KMV and actuarial approach; Credit derivatives.		
Course Learning Outcomes	On successful completion of this course, students should be able to:		
	CLO 1 understand the Basel requirements for credit risk		
	CLO 2 estimate credit scores using the logit model		

		0.3 understand and estimate default probabilities using various approaches such as Moody's KMV and the					
		ortality method	of credit value-at-risk and the C	reditMetrics ann	roach		
		stimate default correlat		reditivietrics app	ioacii

STAT4608	Market	sk analysis (6 credits)		Academic Year	2019		
Offering Department	Statistics	Actuarial Science		Quota			
Course Co-ordinator	Dr K Zhu,	Statistics & Actuarial Science (mazhuke@hku.hk)				
Teachers Involved	(Dr K Zhu	Dr K Zhu,Statistics & Actuarial Science)					
Course Objectives	methods technique	Financial risk management has experienced a revolution in the last decade thanks to the introduction of new methods for measuring risk, particularly Value-at-Risk (VaR). This course introduces modern risk management techniques covering the measurement of market risk using VaR models and financial time series models, and stress testing.					
Course Contents & Topics	factor ma	itisk Measures; Value-at-Risk (VaR) models (parametric, Monte Carlo simulation and Historical simulation); Risk actor mapping; Advanced VaR models (GARCH-type models, extreme-value theory and normal-mixture); Principal component Analysis and VaR; Backtesting and stress testing.					
Course Learning	On succe	sful completion of this course,	students should be able to:				
Outcomes	CLO 1	understand VaR and expec	ted shortfall as risk measures				
	CLO 2	compute VaR and expected shortfall					
	CLO 3	model volatility using GARCH-type models					
	CLO 4	understand extreme-value theory					
	CLO 5	CLO 5 understand backtesting and stress testing

STAT4710	Capstone experience for statistics undergraduates (6 credits) Academic Year 2019					
Offering Department	Statistics & Actuarial Science Quota 50					
Course Co-ordinator	Prof G Yin, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)					
Teachers Involved	(Prof G Yin, Statistics & Actuarial Science)					
Course Objectives	This project-based course aims to provide students with capstone experience to formulate and investigate real lift problems in the area of statistics, risk management, finance, climate, social science, medicine and scientific research by integrating and applying the statistical theories and quantitative techniques learnt in their junio university years.					
Course Contents & Topics	No formal teaching. Students are expected to devote 120-140 hours working on this project. Students will work groups of four or five under the supervision of a teacher. Students are required to give a presentation on their wo two to three weeks before the end of the semester, and submit their final report at the end of the semester. It aims to help the students to establish a good and solid foundation of life-long learning skills, and to enable students to equip with hands-on experience in solving real life problems starting from identification of the k variable(s) of interest, literature search, model formulation, data analysis or simulation, technical report writing a presentation of the results. Students will need to find an interesting topic of their own, conduct literature sear regarding the most recent research related to the problem, make suggestions to improve the current situations even solve the problem identified in their project.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 formulate a problem using statistical or risk management ideas for a particular issue we are facing with and determine ways in which statistics/risk management can be used to solve the problems or to make predictions CLO 2 integrate theory and practice, and to understand limitations of their current knowledge CLO 3 work in a team and to collaborate with people with different background CLO 4 express ideas effectively in both written and oral forms CLO 5 develop further logical, critical thinking, creativity, technical report writing, communication and consultation skills					
Pre-requisites (and Co-requisites and Impermissible combinations)	CLO 6 advocate to others the appreciation of statistics/risk management as to its relevance to our daily life Students are expected to have satisfactorily completed at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics Majors. Students who are interested in taking the course should submit their applications to the Department. This capstone course is only for students majoring in Decision Analytics/Risk Management/Statistics, and is mutually exclusive with STAT3799, STAT4766 and STAT4799. The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2019 - 2020	Y 1st sem 2nd sem Offer in 2020 - 2021 : Y Examination No Exam

STAT7610	Advanced probability (6 credits) Academic Year 2019						
Offering Department	Statistics	Statistics & Actuarial Science Quota					
Course Co-ordinator	Prof H L Yang, Statistics & Actuarial Science (hlyang@hku.hk)						
Teachers Involved	(Prof H L Yang, Statistics & Actuarial Science)						
Course Objectives	This course provides an introduction to measure theory and probability. The course will focus on some basic concepts in theoretical probability which are important for students to do research in actuarial science, probability and statistics.						
Course Contents & Topics	Contents include: sigma-algebra, measurable space, measure and probability, measure space and probability space, measurable functions, random variables, integration theory, characteristic functions, convergence of random variables, Hilbert spaces, conditional expectation, martingales.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 u	inderstand the fundamen	ntal measure theory and probability	theory			
		earn the general conceptand dominated converger	t of integration, understand the monce theorem	onotone convergence theorer	n, Fatou's lemma		
	CLO 3 u	inderstand the concept o	f conditional expectation				
	CLO 4 h	nave some elementary kr	nowledge of martingale				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT3603 or STAT3903						
Offer in 2019 - 2020	Y 1s	t sem Offer in 2020 - 2	021 : Y	Examination	Dec		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В	•					
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Course Co-ordinator	Prof G Yin	, Statistics & Actuarial S	Science (gyin@hku.hk)				
Teachers Involved	(Prof G Yii	n,Statistics & Actuarial S	Science)				
Course Objectives	This course aims to give undergraduate and postgraduate students in statistics a background in modern computationally intensive methods in statistics. It emphasizes the role of computation as a fundamental tool of discovery in data analysis, of statistical inference, and for development of statistical theory and methods.						
Course Contents & Topics	Contents include: Bayesian statistics, Markov chain Monte Carlo methods including Gibbs sampler, the Metropolis Hastings algorithm, and data augmentation; Generation of random variables including the inversion methods, rejection sampling, the sampling/importance resampling method; Optimization techniques including Newton's method, expectation-maximization (EM) algorithm and its variants, and minorization-maximization (MM) algorithms; Integration including Laplace approximations, Gaussian quadrature, the importance sampling method; and other topics such as Hidden Markov models, neural networks, and Bootstrap methods.						
Course Learning			course, students should be able to:				
Outcomes		derstand the importance and integration and boot	e of the technique for generating rates trapping methods	ndom variables in Bayesi	an statistics, Monte		
			and disadvantages of the Newton-l to fit generalized linear models	Raphson algorithm and	the Fisher scoring		
	the	eir range of application,	and basic principle of the EM-type and apply them to solve practical pro-	oblems			
	ge	nerate posterior sample					
			to obtain estimated standard error netric and non-parametric cases	rs of estimators and conf	fidence intervals of

STAT7614	Advanced statistical modelling (6 credits)	2019				
Offering Department	Statistics & Actuarial Science Quota					
Course Co-ordinator	Dr Y K Chung, Statistics & Actuarial Science (yukchung@hku.hk)					
Teachers Involved	(Dr Y K Chung, Statistics & Actuarial Science)					
Course Objectives	This course introduces modern methods for constructing and evaluating statistical models and their implementation using popular computing software, such as R or Python. It will cover both the underlying principles of each modelling approach and the model estimation procedures.					
Course Contents & Topics	Topics from: (i) Generalized linear models; (ii) Mixed models; (iii) Kernel and local polynomial regression; selection of smoothing parameters; (iv) Generalized additive models; (v) Hidden Markov model and Bayesian network.					
Course Learning	On successful completion of this course, students should be able to:					

Outcomes	CLO 1 u	CLO 1 understand the basic characteristic and rationale behind the formulation of each statistical model					
	CLO 2 id	dentify for a given set of c	del and tools to use				
	CLO 3 develop computational skills of building scoring models for various management and prediction, prol involving binary and count responses; employing the powerful tool of kernel smoothing using R or P						
			ems; and analysing data with R pa	ckages gimz, ime4, gan	i, depriix54, brilearii

Degree Regulations

SCIENCE

SECTION X Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic year 2017-18 and thereafter, students admitted directly to the second year in the academic year 2018-19 and thereafter, and students admitted directly to the third year in the academic year 2019-20.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

"Syllabus" means courses taught by departments, centres, and schools, offered under a degree curriculum.

"Credits" or "credit-units" means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- **Sc8** To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying weightings which are proportionate to their credit values²:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic year 2015-16 and 2016-17, students admitted directly to the second year in the academic year 2017-18, and students admitted directly to the third year in the academic years 2017-18 and 2018-19.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

"Syllabus" means courses taught by departments, centres, and schools, offered under a degree curriculum.

"Credits" or "credit-units" means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- **Sc8** To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying weightings which are proportionate to their credit values²:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic years 2014-15, and students admitted directly to the third year in the academic years 2016-17.

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- **Sc8** To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying equal weighting:

Class of honours	<u>CGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2019-20 and thereafter)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

¹ These regulations are applicable to candidates admitted from 2019-20 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments;
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

Class of honours	<u>GGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA 1

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2018-19, and students admitted directly to the second year in the academic year 2019-20)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

These regulations are applicable to candidates admitted from 2018-19 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum\limits_{i}^{\Sigma} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
\mathbf{C}	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

(b) Special permission may be given by Senate for courses in individual curricula to be

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

<u>Class of honours</u>	<u>GGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2017-18, students admitted directed to the second year in the academic year 2018-19 and students admitted directly to the third year in the academic year 2019-20)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

_

¹ These regulations are applicable to candidates admitted from 2017-18 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\sum} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum\limits_{i}^{\sum} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of

assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement

and should take an elective course in lieu, see Regulation UG6.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

֡֡֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

<u>Class of honours</u>	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA¹

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic years in 2014-15, 2015-16 and 2016-17, students admitted directed to the second year in the academic year 2017-18, and students admitted directed to the third year in the academic years 2016-17, 2017-18 and 2018-19)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

-

¹ These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

⁽The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

- 3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.
 - (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

	Standard	Grade Point
1		4.3
}	Excellent	4.0
J		3.7
)		3.3
}	Good	3.0
J		2.7
1		2.3
}	Satisfactory	2.0
J	•	1.7
l	Dogg	1.3
ſ	rass	1.0
	Fail	0
	<pre>} } }</pre>	<pre> Excellent } Good Satisfactory Pass</pre>

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

Class of honours	CGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic years 2012-13 and 2013-14, and students admitted directly to the third year in 2014-15 and 2015-16)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

_

¹ These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

⁽The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

curriculum within the maximum period of registration:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

- (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

	Standard	Grade Point
1		4.3
}	Excellent	4.0
J		3.7
1		3.3
}	Good	3.0
J		2.7
1		2.3
}	Satisfactory	2.0
J	•	1.7
l	Dogg	1.3
ſ	rass	1.0
	Fail	0
	<pre>} } }</pre>	<pre> Excellent } Good Satisfactory Pass</pre>

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

Class of honours	CGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

946

 $^{^{7}\,}$ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.
