The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and projectbased learning in the curriculum)
- PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics

Major in Mathematics (Intensive)

Major in Mathematics/Physics

Minor in Mathematics

Minor in Computational & Financial Mathematics

Required courses (42 credits)

1. Introductory level courses (18 credits) (note 3)

Disciplinary Core Course (6 credits)

University mathematics II (6) MATH1013

Disciplinary Electives (12 credits)

Select either List A or List B:

List A

MATH2101 Linear algebra I (6) Multivariable calculus (6) MATH2211

List B

MATH2012 Fundamental concepts of mathematics (6) Multivariable calculus and linear algebra (6) MATH2014

2. Advanced level courses (24 credits) **Disciplinary Core Courses (12 credits)**

MATH3901 Operations research I (6) Introduction to optimization (6) MATH3904

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

Differential equations (6) MATH3405 Discrete mathematics (6) MATH3600

MATH3905 Queueing theory and simulation (6)

Financial calculus (6) MATH3906

MATH3911 Game theory and strategy (6)

Network models in operations research (6) MATH3943

MATH4902 Operations research II (6)

MATH4907 Numerical methods for financial calculus (6) MATH7502 Topics in applied discrete mathematics (6)

MATH7503 Topics in mathematical programming and optimization (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this minor. Students who do not fulfill this requirement are required to take MATH1011 University mathematics I.
- 3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Offered to students 2016

admitted to Year 1 in

Minor Title Minor in Physics

Offered to students 2020

admitted to Year 1 in

Objectives:

The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
- PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7551 Graduate solid state physics (6)

PHYS7650	Stellar atmospheres (6)	
PHYS7750	Nanophysics (6)	

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks

[previous title: Waves and optics (6)]

Minor Title Minor in Physics

Offered to students 2016

admitted to Year 1 in

Objectives:

The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
- PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics/Physics

Major in Physics

Major in Physics (Intensive)

Required courses (42 credits)

1. Introductory level courses (18 credits)

Disciplinary Core Courses (18 credits)

PHYS1250 Fundamental physics (6)
PHYS2250 Introductory mechanics (6)
PHYS2265 Introductory quantum physics (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to

prerequisite requirements. The current course list includes courses in List A: List A

PHYS3150 Theoretical physics (6)
PHYS3151 Machine learning in physics (6)
PHYS3350 Classical mechanics (6)
PHYS3351 Quantum mechanics (6)
PHYS3450 Electromagnetism (6)

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Offered to students 2020

admitted to Year 1 in

Objectives:

The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 2: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 3: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

NIL

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6)
BIOL1309 Evolutionary diversity (6)

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

BIOL3107 Plant physiology (6)

BIOL3210 Grain production and utilization (6) BIOL3314 Plant structure and evolution (6)

BIOL3408 Genetics (6)
BIOL4209 Functional foods (6)

BIOL4411 Plant and food biotechnology (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students 2016

admitted to Year 1 in

Objectives:

The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 2: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 3: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

NII

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6)
BIOL1309 Evolutionary diversity (6)

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

BIOL3107 Plant physiology (6)

BIOL3210 Grain production and utilization (6)
BIOL3314 Plant structure and evolution (6)

BIOL3408 Genetics (6)
BIOL4209 Functional foods (6)

BIOL4411 Plant and food biotechnology (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Offered to students 2020

admitted to Year 1 in

Objectives:

The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Major in Computing and Data Analytics

Major in Risk Management

Major in Statistics

Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

List A

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits) At least 30 credits selected from the following courses:

STAT3609 The statistics of investment risk (6)
STAT3610 Risk management and insurance (6)
STAT3611 Computer-aided data analysis (6)
STAT3612 Statistical machine learning (6)
STAT3614 Business forecasting (6)
STAT3615 Precise methomotics for investment (6)

STAT3615 Practical mathematics for investment (6) STAT3618 Derivatives and risk management (6) STAT4601 Time-series analysis (6)

STAT4603 Current topics in risk management (6)

STAT4606 Risk management and Basel Accords in banking and finance

(6)

STAT4607 Credit risk analysis (6) STAT4608 Market risk analysis (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

[previous title: Data mining (6)]

Remarks:

Offered to students 2013

admitted to Year 1 in

Objectives:

The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Major in Risk Management

Major in Statistics

Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

List A

STAT1601 Elementary statistical methods (6)

STAT1602 Business statistics (6)
STAT1603 Introductory statistics (6)
STAT2601 Probability and statistics I (6)

List B

STAT2602 Probability and statistics II (6) STAT2603 Data management with SAS (6)

STAT2604 Introduction to R programming and elementary data analysis

(6

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits) At least 30 credits selected from the following courses:

STAT3609 The statistics of investment risk (6)
STAT3610 Risk management and insurance (6)
STAT3611 Computer-aided data analysis (6)
STAT3612 Statistical machine learning (6)

STAT3614 Business forecasting (6)
STAT3615 Practical mathematics for investment (6)

STAT3618 Derivatives and risk management (6) STAT4601 Time-series analysis (6)

STAT4603 Current topics in risk management (6)

STAT4606 Risk management and Basel Accords in banking and finance

(6)

STAT4607 Credit risk analysis (6) STAT4608 Market risk analysis (6)

Notes:

Minor Title Minor in Science Entrepreneurship

Offered to students 2020

admitted to Year 1 in

Objectives:

This Minor aims at broadening the horizon of our undergraduate students with respect to entrepreneurship, so as to arouse their interest in this aspect and better equip them. It is also important for our students to visualize how their training in science (a) is relevant to the real world and (b) can bring about huge insights via critical analysis of the operation of existing enterprises. With the vivid commercial environment and a growing atmosphere for start-ups both locally and globally, this Minor also serves to offer more competitive edge to our students via connecting their academic knowledge with the real world, even though they may not initiate their own start-ups in the short run.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: apprehend the entrepreneurial process and the principles/models relevant to its different key stages (by means of coursework and tutorial classes in the curriculum)
- PLO 2: gain insights into how a broad range of disciplines contribute to the success of the entrepreneurial process (by means of coursework and tutorial classes in the curriculum)
- PLO 3: evaluate how scientific knowledge can cause impact to the society via entrepreneurship (by means of coursework and tutorial classes in the curriculum)
- PLO 4: develop appropriate action plans for transforming ideas into start-up companies (by means of coursework, tutorial classes and training in his/her internship in the curriculum)
- PLO 5: effectively collaborate with team members with different expertise and communicate their ideas to a range of audiences during the entrepreneurial process (by means of coursework, tutorial classes and training in his/her internship in the curriculum)

Impermissible Combinations:

NII

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Core Courses (12 credits)

(Resource, Management and Basic Entrepreneurship)
ENTR2001 Professional and leadership development (6)
IIMT1611 Principles of Technology Entrepreneurship (6)

2. Advanced level courses (24 credits) Disciplinary Core Courses (24 credits)

(Creativity and Innovation)

ENTR3001 Science-based innovation development (6)
ENTR3002 Customer analysis and strategic marketing (6)

(Practical Experience)

ENTR4966 Entrepreneurship internship (6)
ENTR4999 Entrepreneurship project (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students may consider taking the following courses if they wish to pursue a more focused study in topics related to entrepreneurship:BUSI38011 Business Law, BUSI3803 Company Law, STRA3706 China Business Environment.
- 3. Courses with the prefix ENTR are subjected to minor changes.
- 4. Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Minor Title Minor in Statistics

Offered to students

admitted to Year 1 in

Objectives:

The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:

By the end of this programme, students should be able to:

2020

- PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
- PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Survival analysis (6)

STAT4601 Time-series analysis (6) STAT4602 Multivariate data analysis (6) Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 or STAT3955 are mutually exclusvie.

Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 or

STAT3955 are mutually exclusvie.

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc svllabuses.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Minor Title Minor in Statistics

Offered to students

admitted to Year 1 in

Objectives:

The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:

By the end of this programme, students should be able to:

2017

- PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
- PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Major in Computing and Data Analytics

Major in Decision Analytics

Major in Risk Management

Major in Statistics

List A

Minor in Risk Management

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

STAT1601 Elementary statistical methods (6)
STAT1602 Business statistics (6)
STAT1603 Introductory statistics (6)
STAT2601 Probability and statistics I (6)
List B
STAT2602 Probability and statistics II (6)

STAT2602 Probability and statistics if (6)
STAT2603 Data management with SAS (6)

STAT2604 Introduction to R programming and elementary data analysis

(6)

STAT2605 Demographic and socio-economic statistics (6)

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits)

At least 30 credit	s selected from the following courses:
STAT3600	Linear statistical analysis (6)

STAT3602 Statistical inference (6)
STAT3603 Stochastic processes (6)

STAT3604 Design and analysis of experiments (6) STAT3605 Quality control and management (6)

STAT3606 Business logistics (6)

STAT3607 Statistics in clinical medicine and bio-medical research (6)

STAT3608 Statistical genetics (6)

STAT3611 Computer-aided data analysis (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Students taking double Majors,

Major-Minor or double Minors with overlapping course requirements

SCIENCE

SECTION VIII Students taking double Majors, Major-Minor or double Minors with overlapping course requirements

- 1. Double-counting of courses up to a maximum of 24 credits is permissible with double majors. The double-counted courses in both Science majors must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
- 2. The following list shows the major-major combinations that have more than 24 credits of the same 'disciplinary core' courses that appear in both majors and is subject to the rule of double counting:

Major-Major combination	Admission Year (Year 1)	No. of common 'disciplinary core' courses (credits) appear in both majors including SCNC1111 and SCNC1112	No. of replacement courses (credits) to be taken in the 2 nd major ('Major 2')
Major in Astronomy Major in Physics	2015, 2016, 2017	5 (30 credits)	1 (6 credits)
Major in Biochemistry Major in Chemistry	All years	5 (30 credits)	1 (6 credits)
Major in Biochemistry Major in Molecular Biology & Biotechnology	2014	5 (30 credits)	1 (6 credits)
Major in Biological Sciences Major in Ecology & Biodiversity	All years	7 (42 credits)	3 (18 credits)
Major in Biological Sciences	2017, 2018, 2019	6 (36 credits)	2 (12 credits)
Major in Food & Nutritional Science	2015, 2016	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Molecular Biology & Biotechnology	All years	6 (36 credits)	2 (12 credits)
Major in Earth System Science Major in Geology	2015, 2016	5 (30 credits)	1 (6 credits)
Major in Ecology & Biodiversity	2017, 2018, 2019	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science	2015, 2016	6 (36 credits)	2 (12 credits)
Major in Ecology & Biodiversity Major in Molecular Biology & Biotechnology	All years	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science Major in Molecular Biology & Biotechnology	All years	6 (36 credits)	2 (12 credits)

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as 'disciplinary core' courses required in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). The double counted credits should count the following courses in this order: (1) SCNC1111 and SCNC1112, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and the 2nd major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors. The first 3 courses SCNC1111, SCNC1112, and BIOL1110 would first be counted plus either BIOL2102 or BIOL2103 for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course (with a prefix of BIOL at level 2 or above) in the 2nd major in Molecular Biology & Biotechnology to make up for BIOL2102 or BIOL2103.

3. Starting from this academic year, candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111:

- Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1111. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

The eligible students will be informed by the Faculty, via email, of the granting of an exemption from taking SCNC1111 in late August (before the start of your first year of study). You (as an eligible student) can try out courses that suit your academic interest before you commit to a particular major and submit your application form for taking a replacement course for SCNC1111 during the courses add/drop periods in your second/third year of study. The replacement course must be the disciplinary elective in your declared Science major. If you wish to take double Science majors, you should take the disciplinary elective in each of your declared Science majors to replace the course SCNC1111.

Under these circumstances, the following list shows the major-major combinations that have 24 credits (or more) of the same 'disciplinary core' courses that appear in both Science majors and is subject to the rule of double counting:

f Major Combination o r e	Admission Year (Year 1)	Exemption granted	No. of replacement courses (credits) to be taken in the 1 st major ('Major 1')	No. of common 'disciplinary core' courses (credits) appear in both Science majors including SCNC1111 and SCNC1112	No. of replacement courses (credits) to be taken in the 2 nd major ('Major 2')
Major in Biochemistry Major in Chemistry	2020	SCNC1111	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in B ⁸ ochemistry Major in Molecular Biology & Biotechnology	2020	SCNC1111	1 (6 credits)	4 (24 credits)	1 (6 credits) - to replace SCNC1111
Major in Biological Sciences Major in Ecology & Biodiversity	2020	SCNC1111	1 (6 credits)	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Fbod & Nutritional Science e	2020	SCNC1111	1 (6 credits)	6 (36 credits)	2 (12 credits)
Major in Biological Sciences Major in Molecular Biology & Biotechnology	2020	SCNC1111	1 (6 credits)	6 (36 credits)	2 (12 credits)
Major in Earth System Science Major in Geology	2020	SCNC1111	1 (6 credits)	4 (24 credits)	1 (6 credits) - to replace SCNC1111
Major in Ecology & Biodiversity Major in Food & Nutritional Science	2020	SCNC1111	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in Ecology & Biodiversity Major in Molecular Biology & Biotechnology	2020	SCNC1111	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science Major in Molecular Biology & Biotechnology	2020	SCNC1111	1 (6 credits)	6 (36 credits)	2 (12 credits)

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course(s) in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). In light of the exempted course <u>SCNC1111</u>, the double counted credits should count the following courses in this order: (1) SCNC1112, (2) introductory

level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and a second major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors. The 4 courses (SCNC1112, BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course in the second major in Molecular Biology & Biotechnology to make up for SCNC1111.

- 4. Double counting of credits is not permissible for major–minor or double-minors combinations. When a course is required ('disciplinary core') both by the major and minor or by both minors, the student must take a replacement course for the minor. The replacement course must be the disciplinary elective in the minor and have the same prefix and at the same or higher level as the course to be replaced.
- 5. For students taking the Mathematics related majors/minors should note the following exemption and replacement arrangement:

Students who fall into the following exemption situation for the introductory level Disciplinary Core Mathematics courses in Science Majors/Minors are required to take the specified replacement course(s) as prescribed in the table:

Exempted Course	Exemption granted under the following circumstances	Specified Replacement Course	
	For students taking Minor with an overlap of Disciplinary Core Course :		
	MATH1013	Select 6 credits from the following to replace MATH1013:	
	For students taking Programme / Major / Minor with Disciplinary Core Courses :	Any 6-credit level 2 or above Mathematics Disciplinary Elective chosen from the Programme/Major/Minor structure in which MATH1013 is the disciplinary core course	
MATH1013 University mathematics II	MATH1851 and MATH1853 (which are together deemed equivalent to MATH1013)	MATH2012 Fundamental concepts of mathematics (6) (if not the disciplinary core course in the structure)	
	For students taking Professional Core in Bachelor of Science in Actuarial Science with Disciplinary Core Course :	MATH2241 Introduction to mathematical analysis (6) (if not the disciplinary core course in the structure)	
	MATH1821 (which is equivalent to MATH1013)		
MATH2014 Multivariable calculus and	For students taking Programme/Major with Disciplinary Core Course : MATH2101 and MATH2211 (which are together deemed equivalent to MATH2014)	Select 6 credits from the following to replace MATH2014: • Any 6-credit level 2 or above Mathematics Disciplinary Elective chosen from the Programme/Major/Minor structure in which MATH2014 is the disciplinary core course	
Multivariable calculus and linear algebra	For students taking Professional Core in Bachelor of Science in Actuarial Science with Disciplinary Core Course : MATH2822 (which is equivalent to MATH2014)	MATH2012 Fundamental concepts of mathematics (6) (if not the disciplinary core course in the structure) MATH2241 Introduction to mathematical analysis (6) (if not the disciplinary core course in the structure)	

6. For the situations of 2, 3, 4 and 5 above, students have to complete and submit the online application form to the Faculty Office via the <u>Science Online Application Submission System (OASS)</u> by the deadline of course selection or add/drop periods. The application will then be forwarded to the relevant Course Selection Adviser (CSA) for endorsement and comment (if any).

BIOC2600	Basic biochemistry (6 credits)	Academic Year	2020
Offering Department	Biomedical Sciences	Quota	300
Course Co-ordinator	Dr. M Kotaka, Biomedical Sciences (masayo@hku.hk)		
Teachers Involved	(Dr A S L Wong,Biomedical Sciences) (Dr C M Qian,Biomedical Sciences) (Dr C W Lee,Biomedical Sciences)		

Cause Ohia-ti	(Dr. M Kotaka,Biomedical Sciences)							
Course Objectives	This course is designed to present an overview of biochemistry of fundamental importance to the life process. We aim to develop appreciation of the basics in biochemistry as a common ground for science and non-science students to progress into their areas of specialization. Students intending to pursue further studies in Biochemistry and Molecular Biology will find this course particularly helpful.							
Course Contents & Topics		basic bioenergetics; ke	oohydrates, lipids, nuclei ey metabolic processes ir					
Course Learning	On successful completion of this course, students should be able to:							
Outcomes			nctions of major biomolec					
			and significance of bioen			ar signaling		
			and importance of the flo					
	aı	nd/or lipids	nechanisms of disorders					
.			king and collaborating tog		es in group assig	nments		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC1600 or BIOL1110 or ENGG1207 or BMED1207; and Not for students who have passed in BIOL2220 or MEDE2301 or BMED2301, or have already enrolled in thes courses.							
Offer in 2020 - 2021	Y 1st	sem Offer in 2021 - 2	2022 : Y		Examination	Dec		
Grade Descriptors (A+ to F)	A Demonstrates thorough and complete mastery of the entire range of knowledge and analytical skills as required for maximal attainment in all the course learning outcomes; excellence in critical thinking towards application of the knowledge in a range of contexts.							
	B Demonstrates substantial command of a broad range of knowledge and analytical skills as required for attainment of the majority of course learning outcomes; good evidence of critical thinking towards application of the knowledge in a range of contexts.							
	Demonstrates general but incomplete command of knowledge and analytical skills as required for attainment of adequate course learning outcomes; some evidence critical thinking towards application of the knowledge in a range of contexts.							
	D Demonstrates partial but limited command of knowledge and analytical skills as required for attainment of some of the course learning outcomes; limited evidence of critical thinking towards application of the knowledge in a range of contexts.							
	Fail Demonstrates little or no evidence of command of knowledge and analytical skills as required for attainment of the course learning outcomes; lacking in critical thinking towards application of the knowledge in a range of contexts.							
Course Type	Lecture-b	ased course						
Course Teaching	Activities	S	Details			No. of Hours		
& Learning Activities	Lectures					36

	Assignments				40	CLO 1,2,3,4,5		
	Examinat				60	CLO 1,2,3,4		
Required/recommended reading and online materials								
Additional Course Information	Also offered as BMED2301 "Life Sciences I (Biochemistry)" to students of the Faculty of Engineering. Students who have passed BMED2301 (previously known as MEDE2301) is considered to have passed BIOC2600.							

BIOC3601	Basic n	metabo	olism (6 cre	dits)				Academic Year	2020
Offering Department	Biomedic	ical Scier	Sciences Quota 80						80
Course Co-ordinator	Dr N S Wong, Biomedical Sciences (nswong@hku.hk)								
Teachers Involved	(Dr N S V (Dr. L W	Wong,Ĕi √Lim,Bio	Biomedical S, iomedical Scien medical Scien medical Scien	ences) ´ nces)					
Course Objectives	some of applied to energy.	This course aims to provide foundation concepts of metabolism. It will enable students of this course to see how some of the basic concepts in biochemistry (specifically those learned in BIOC1600 and BIOC2600) could be applied to explain one of the most important and cardinal issues of biological life: the acquisition of metabolic energy. The course will lay the foundation for the more advanced courses offered in the Biochemistry Major and will also serve as a useful complement to courses on nutrition and dietetics.							
Course Contents & Topics	organism breakdow also be	This course focuses on the central metabolic pathways involved in the provision of energy needed by living organisms. Major metabolic pathways covered in this course include those that are involved in the synthesis and breakdown of glucose, glycogen, triacylglycerol, and amino acids. The metabolism of purines and pyrimidines will also be considered. Emphasis is on the understanding of the metabolic reactions involved and how they are regulated in relation to environmental cues. Metabolic derangements as a basis of diseases will also be discussed.							
Course Learning	On succe	cessful co	ompletion of the	nis course,	students s	nould be able	e to:		
Outcomes		CLO 1 achieve a vigorous intellectual appreciation of basic principles of functional organization of metabolic networks							
	CLO 2 identify one's own gaps of basic knowledge in metabolism and to fill up those gaps from literature resources through effective means or approaches								
	CLO 3 develop the communication and social skills essential for the acquisition and dissemination of knowledge								
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	BIOC260	00 or BIOL222	20 or MED	E2301 or B	MED2301

BIOC4966	Biochemistry internship (6 credits)	Academic Year	2020
Offering Department	Biomedical Sciences	Quota	20
Course Co-ordinator	Prof J D Huang, Biomedical Sciences (jdhuang@hku.hk)		
Teachers Involved	(All academic staff in Biochemistry Major,Biomedical Sciences) (Prof J D Huang,Biomedical Sciences)		
Course Objectives	This course aims to offer students the opportunities to gain work experience in t study. The workplace learning experience would be of great benefit to the s gained in the study to the real work environments. Students have to take on at either within the University or outside the University arranged by the School/Dep	tudents to apply least 160 hours o	their knowledge

Course Contents & Topics		e university: The studes as instructed by the	ent will be supervised by a staff Supervisor.	member (Supervisor), work	king on a project or	
	be supervise	ed under a staff mem	lent will work in an external agend ber of the external agency (the E (the Internal Supervisor).			
Course Learning			ourse, students should be able to	:		
Outcomes	CLO 1 re	cognize the strengths	and limitations of their area of train	ning or expertise		
	CLO 2 ac	quire problem-solving	skills to solve novel and ill-define	d problems		
	CLO 3 wo	ork effectively with coll	eagues in laboratories or other re	al world environments		
	CLO 4 ex	amine the role of scie	nce in our society			
Pre-requisites (and Co-requisites and Impermissible	including BIG	DC3604.	nced level (level 3 or 4) disciplinates emistry Major students only.	ary core/elective courses in	Biochemistry Major	
combinations)	The earliest	that a student is allow	ed to take this capstone course is	their year 3 study.		
Offer in 2020 - 2021	Y 1st se	m 2nd sem Summ	ner Offer in 2021 - 2022 : Y	Examination	No Exam	
Grade Descriptors (Pass /Pass with distinction /Fail)	Distincti on					
	Pass	Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of "Distinction".				
	Fail	Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job of assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, of clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and ora report, or evaluation by supervisor(s), etc.				
Course Type	Internship

Course Co-ordinator	Dr N S Wong, Biomedical Sciences (nswong@hku					
Teachers Involved	(All academic staff in Biochemistry Major,Biomedica (Dr N S Wong,Biomedical Sciences)					
Course Objectives	To enable students to acquire the basic skills in scientific research emphasizing on critical and analytical reasoning, free and creative thinking, scholarly communication (both orally and in writing), research integrity, teamwork and time management. The course is particularly useful for those students who intend to pursue a career in life science either in research or industry.					
Course Contents & Topics	Project-related topics in biochemistry, cell, molecula Experimental methods in protein and nucleic acid bi Critical appraisal of current science literature Formulation of research questions Design of experiments. Data analysis and interpretation. Scientific writing					
Course Learning Outcomes	On successful completion of this course, students s CLO 1 describe recent research development in a CLO 2 formulate research questions and design e CLO 3 apply appropriate experimental techniques CLO 4 manage and interpret experimental results CLO 5 develop scientific writing skills and logically	defined area of biochemistry and molecular xperiments to address these questions to solve research problems	biology			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (level including 4 of the following 5 courses: BIOL3401, BIOC4610 and BIOC4613 can be taken concurrent. This capstone course is for Biochemistry Major study. This capstone course is ONLY opened to students of the course is ONLY opened.	3 or 4) disciplinary core/elective courses in OC3601, BIOC3604, BIOC4610 and BIOC4 with this course. lents only.	613.

BIOL3404	Protein s	structure and funct	ion (6 credits)	Academic Yea	r 2020	
Offering Department	Biomedica	al Sciences		Quota	70	
Course Co-ordinator	Dr C M Qi	an, Biomedical Science	s (cmqian@hku.hk)			
Teachers Involved	,	(ian,Biomedical Science (nai,Biological Sciences)	,			
Course Objectives	To provide students with a good understanding of protein structure, how structure subserves function, and the methods for study of both. This course provides a strong foundation for advanced courses in biochemistry are biotechnology.					
Course Contents & Topics	quaternary The relation specificity, Methods f microscop How prote function; Protein pu separation purity, opti	Elements of macromolecular structure: sequencing, prediction and determination of secondary, tertiary an quaternary structures; The relationship of protein structure and function: molecular motifs, binding and recognition, enzyme catalysis ar specificity; Methods for protein structure determination: X-ray crystallography, nuclear magnetic resonance and cryo electromicroscopy; How protein works: protein flexibility and dynamics, protein interaction, protein complex, and control of prote function; Protein purification and characterization: various liquid chromatographical methods and their uses in combination separation techniques, methods of determination of molecular mass, activity and purity, optical methods in protein determination, ultracentrifugation, protein polishing, stability and storage, method and devices for protein delivery.				
Course Learning	On succes	ssful completion of this	course, students should be able	e to:		
Outcomes		•	ing of principles of protein struc			
			• • • •	petween protein structure and fur	nction	
				•		
	CLO 3 have a basic understanding of major methods for macromolecular structure determination CLO 4 understand the principles regulating protein function in vivo					
			purify protein and the many ind

Offering Department	Biologica	al Sciences	•	Quota	150
Course Co-ordinator	Dr L Zha	ing, Biological Sciences (Iz	hang17@hku.hk)		
Teachers Involved	(Dr J C Y Lee,Biological Sciences) (Dr L Zhang,Biological Sciences) (Dr T C S Lam,Biological Sciences)				
Course Objectives	To enable student to appreciate the multidisciplinary nature in the study of Food and Nutrition. From the farmer's field to the dinner table, a basic understanding of the general properties of food in production, processing, storage and safety, as well as food security will be covered. Basic macro- and micronutrients from these food and its absorption, distribution, metabolism, and excretion will allow students to understand the function of these nutrients in the human body. This is an independent course which can be taken by students from various disciplines. It also prepares students for further studies in Food and Nutritional Science.				
Course Contents & Topics		nd regulation; food securi		of major nutrients; food additivend practice; essential nutrients;	
Course Learning	On succe	essful completion of this co	ourse, students should be able	to:	
Outcomes	CLO 2 CLO 3	understand the significand understand the concept o	ce of food safety and be able to	discuss their functional properties of identify sources of contamination

BIOL1501	Bioethics (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	40
Course Co-ordinator	, Biological Sciences ()		
Teachers Involved	(,Biological Sciences)		
Course Objectives	The aim is to explore the ethical implications of the latest major advances in biol	ogy and medicine	
Course Contents & Topics	The course will discuss research ethic between student and mentor, and et advancements in biological and medical sciences. Major areas to be discuss genetics, reproduction, disease diagnosis and therapy, development, transplar and the use of animals in research. Ethical and moral principles and implication policy raised by these advances will be discussed.	sed include but a ntation, aging, dyi	re not limited to:

Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 familiarize with the current ethical theories, discussions, and arguments taking place in the field of bioethics specifically related to the advancement of modern molecular biology and genomics						
	CLO 2 reflect upon and formulate in a professional manner their own opinions on these matters as well as to understand and enter into a respectful dialogue with those who possess another point of view						
	CLO 3 u	nderstand the basis of on	e's own position, as well as the basis	of another person's opin	nion		
	CLO 4 deal with the quandaries that arise when facing modern medical technology and advancements						
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL						
Offer in 2020 - 2021	N Off	N Offer in 2021 - 2022 : N Examination					
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use communication skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective individual as well as collaborative-based organizational and presentational skills.						
	В	Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective individual as well as collaborative-based organizational and presentational skills.					
	Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately individual as well as collaborative-based organizational and presentational skills.						
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real world problems. Demonstrate individual as well as collaborative-based organizational and presentational skills of limited effectiveness.					
	Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of countries and logical thinking, and minimal competence in professional-level problem solving. Use communication skills and tech and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to reproblems. Demonstrate ineffectiveness individual as well as collaborative-based organizational and presentational skills.				on skills and techniques conclusions to real-world

BIOL1502	The gene	e (6 credits)			Academic Year	2020
Offering Department	Biological	Sciences			Quota	50
Course Co-ordinator	, Biologi	cal Sciences ()				
Teachers Involved	(,Biologi	cal Sciences)				
Course Objectives	The objective is to expose students to the impacts of genes to the society. Recent completion of the human genome and many agricultural crops and animals genomes, it brings not only promises of a better quality of life as well as lots of technical and ethical issues/challenges that general public need to deal with. The goal of this course is to open up students from all backgrounds to this basic unit of inheritance called the gene and its impact or various scientific and social disciplines.					
Course Contents & Topics	Content/topics include: Introduction and review of basic cell biology Basic genetic - The gene Basic Molecular Biology and Biotechnology - Recombinant DNA and cloning Bacterial Genes - Gene and Environment Human Genes/Human genome - history and its Impacts! Human Genome - The Amazing discovery! Genes and Biotechnology Genes and Disease Genes and Cancer Animal and Plant Cloning Genes and Agricultural/Food Biotechnology					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 demonstrate understanding and to explain the principle of inheritance, recombinant DNA and cloning CLO 2 gain deep understanding about the advancement of biotechnology CLO 3 determine and explain the benefits and shortcomings of the application of biotechnology knowledge

Course Objectives	attention t knowledge analysis.	This course aims to is to introduce students to the core ideas and concepts of statistical analysis with special attention to the modeling approaches used in biological sciences. The course will give students the skills and knowledge to understand how to apply these concepts using the R statistical programming language for data analysis. Although the course covers some basic concepts (experimental design, distributions, hypothesis testing), the main emphasis of the course is on model building and selection, linear models (regression and analysis of					
			nd mixed effects models, and multiva				
Course Contents & Topics	Introduction Explanation Factorial Regression	Introduction to Statistics and Probability; Descriptive Statistics and Estimation; Statistical Inference; Statistical Explanation and Diagnosis; Likelihood and Model Selection, Categorical predictors (ANCOVA and ANOVA); Factorial design, Multiple Comparisons and Block Design; Correlation and Regression Analyses; Multiple Regression Analysis; Introduction to Multivariate Analyses. Students will learn how to use R to conduct the statistical analyses, and correctly interpret the results.					
Course Learning	On succes	ssful completion of this	course, students should be able to:				
Outcomes	CLO 1	formulate biological q	uestions into statistical questions				
	CLO 2	design experiments e	ffectively				
	CLO 3	appreciate and interp	ret statistics in scientific paper				
	CLO 4	use R to carry out cor	mmon statistical computations				
	CLO 5	understand the assur	nptions of commonly used statistical	methods			
	CLO 6	critically evaluate the					
	CLO 7		cal modeling methods				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BI	OC1600 or BIOL1110 o	or BIOL2306 or ENVS1301 or ENVS	2002 or SCNC1111			
Offer in 2020 - 2021	Y 2nd	sem Offer in 2021 - 2	2022 : Y	Examination	No Exam

BIOL2103	Biological sciences laboratory course (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	210
Course Co-ordinator	Dr W Y Lui, Biological Sciences (wylui@hku.hk)		

Teachers Involved	(Dr A Yan,Biological Sciences) (Dr W Y Lui,Biological Sciences)					
		C Chow,Biologica	,			
Course Objectives	The objective is to provide students a comprehensive training in basic laboratory techniques used in modern biological studies. The course will cover a number of techniques used by molecular biologists and microbiologists to conduct scientific research.					
Course Contents & Topics	This cours	se will be divided i	nto three modules and each module w	ill have 3 laboratory sessions	5.	
•		ne: Nucleic acid ar NA isolation, spect	nalysis crometry, gel electrophoresis, restriction	n enzyme analysis and DNA	sequence analysis.	
		vo: Protein analysi ation, chromatogra	s phy and SDS-PAGE electrophoresis.			
	Microscop serial dilu	tion, enumeration	microorganisms and staining of bact of microbial cells by Petroff-Hausser c om natural source and statistical analys	ounting chamber, and turbid		
Course Learning			f this course, students should be able t			
Outcomes		•	edge in proper use of simple research			
	CLO 2 de		edge and understanding of how and		used in a research	
			laboratory techniques for carrying out e			
	aı	nd response to dye	erent ways that microorganisms were one etc. and how they were counted	ategorized according to thei	r size, shape, colour	
Pre-requisites	Pass in B					
and Co-requisites and Impermissible combinations)	Not for stu	udents having take	en any level 3 (or above) Biochemistry	(BIOC) course or BBMS200 ⁻	1.	
Offer in 2020 - 2021	Y 1st	sem 2nd sem	Offer in 2021 - 2022 : Y	Examination	Dec May	
Grade Descriptors (A+ to F)	A	A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.				
	В	Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Evidence of analytical and critical abilities and logical thinking. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.				
	C Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Evidence of some analytical and critical abilities and logical thinking. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.				
	Fail	Demonstrate little or lack of analy	r no evidence of command of knowledge requi tical and critical abilities, logical and coherent tl of data and results and/or unable to draw appro	ninking. Apply minimally effective o	r ineffective lab skills and

provide undergraduate (non-biochemistry major) an ands-on experience in biochemical techniques.	overview of funda	amental concepts			
An introduction to various biomolecules in terms of their structures, functions, syntheses and metabolisms, with emphasis on amino acids, proteins, enzymes, carbohydrates, lipids and nucleic acids. The correlations between their biochemical properties and their roles in various life processes will be illustrated.					
On successful completion of this course, students should be able to:					
CLO 1 describe the key structural features of carbohydrates, proteins, lipids and nucleotides					
CLO 2 understand the basic enzyme kinetic properties					
CLO 3 explain how the common sugars, fatty acids and amino acids are metabolized and synthesized in living cells					
Pass in BIOL1110; and Not for students who have passed in BIOC2600, or have already enrolled in this course.					
, es tr	, proteins, enzymes, carbohydrates, lipids and nucle es and their roles in various life processes will be illust of this course, students should be able to: tructural features of carbohydrates, proteins, lipids and sic enzyme kinetic properties	, proteins, enzymes, carbohydrates, lipids and nucleic acids. Course Objectives	the esse features	This course is intended for students interested in the fundamentals of plant biology. The course will emphasize or the essential attributes of plants to humans. At the end of the course, students are expected to know the distinct features of plants and appreciate the importance of plants in our daily lives. Specific topics such as genetic engineering and the use of plants for food and medicine, will be addressed.						
Course Contents		he importance of plants to human. How to be a plant? Types of plant biotic interactions. Plant-plant interaction						
& Topics	Plants a	Plants and pathogens. Phytohormones. Plants and environment. Genetic improvements in agriculture. You are what you eat? Medicinal plants.						
Course Learning	On succe	essful completion o	f this course, students should be	e able to:				
Outcomes	CLO 1 F	Realize how plant s	tructure enables functions					
	CLO 2 (Comprehend the es	sentials of plant growth and dev	elopment				
		Inderstand the ab environment	ilities of plants to detect, proce	ess, and interpret information from	n their surrounding			
			actions of plants with the living a	and non-living environment

BIOL3101	Animal behaviour (6	credits)	Academic Year	2020

Offering Department	Biological	Sciences		Quota	30		
Course Co-ordinator		Sin, Biological Science	ces (sinyw@hku.hk)	,	1 1 1		
Teachers Involved	(Dr S W Y	Sin, School of Biologi	ical Sciences)				
Course Objectives	The purpose of this course is to introduce students with the diversity in animal behaviour and the means of understanding animal behaviour. The course will teach students the underlying mechanism and function of behaviour, and how did a particular behaviour develop and evolve.						
Course Contents & Topics	influence students v behaviora foraging; I sociality ir field, as w	Why do animal behaviours vary among individuals and species? How do environment and ecological interactions influence behaviours? What are the underlying genetic mechanism of a particular behaviour? In this course, students will learn to think within the ecological and evolutionary perspectives on animal behaviour. Topics include behavioral ecology; behavioral genetics; reproductive behaviour; mating system; parental care; communication; foraging; learning; migration and biological rhythms; evolutionary stable strategies; sexual selection; altruism; and sociality in vertebrates and invertebrates. We will discuss several classical studies that form the foundation of this field, as well as more recent research that have led to current understanding of animal behaviour. This course will give students a unique perspective on the natural world and our own species.					
Course Learning Outcomes	On succes CLO 1 lea CLO 2 ur CLO 3 ap CLO 4 lea CLO 5 thi	On successful completion of this course, students should be able to: CLO 1 learn and appreciate the mechanism, function, development, and evolution of animal behaviour CLO 2 understand the complexity of interactions between natural and sexual selection and animal behaviour CLO 3 appreciate current theories that form basis for modern understanding of animal behaviour CLO 4 learn the scientific reasoning and methodology in the field of Animal Behaviour CLO 5 think analytically, based upon ecological and evolutionary principles, to explain the behaviours observed in

(A+ to F)	В	excellent use of named examples and case studies. Evidence of independent critical thought with excellent use of a broad range of fundamental concepts to draw insightful and logical conclusions. Show eagerness to learn, great abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level. B Evidence of a good grasp of the subject as demonstrated by some background reading and appropriate use of named examples and some case studies. Evidence of good critical thought, although not necessarily original. Good and very good (but not outstanding) abilities of independent work, effective presentation skills with good analytical and logical argumentation. Good					
	С	general command of acquired knowledge to draw meaningful and logical conclusions. Work more than sufficient for what is required at degree level. Demonstrate an adequate, but not coherent and incomplete grasp of the subject, with limited background reading and limited use of named examples and case studies. Some abilities of logical critical thinking, but not insightful and/or independent; only partial abilities to use acquired knowledge and work independently to draw meaningful conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.					
	Demonstrate some grasp of the subject, but partial and limited to the most basic concepts, examples, and limited (or none) case studies. Insufficient evidence of background reading, limited abilities of critical independent thinking, and not particularly effective presentation skills with generally weak logical argumentation and restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level. Fail No evidence of basic minimum knowledge and understanding of the subject. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

BIOL3201	Food c	hemistry (6 cr	edits)			Academic Year	2020
Offering Department	Biologica	al Sciences				Quota	60
Course Co-ordinator	Dr J C Y	Lee, Biological S	Sciences (jettylee@	Dhku.hk)			
Teachers Involved		(Dr J C Y Lee,School of Biological Sciences) (Dr L Zhang,School of Biological Sciences)					
Course Objectives		To provide a basic understanding of chemistry in food systems, and to provide practical training in chemistry related to food science and nutrition.					
Course Contents & Topics	The course will cover the components of food, including water, proteins, carbohydrates and lipids, and minor components such as enzymes, vitamins, minerals, colorants, flavorants and additives. The physical and chemical properties of these important constituents of foods are covered in detail, and form the basis for understanding the reactions which occur during the production, processing, storage and handling of foods, and in understanding the methods used in analyzing foods. A series of laboratory sessions will cover analysis of food components, protein chemistry, lipid oxidation, properties of sugars and starches, enzymatic and non-enzymatic browning reactions, and sensory analysis of foods.						
Course Learning	On succe	essful completion	of this course, stu	idents should be a	able to:		
Outcomes	CLO 1 u	understand the fu	nctions and prope	rties of major and	minor food compor	nents	
	CLO 2 understand the basic chemistry behind food processing						
	CLO 3 h	CLO 3 have integrated their knowledge of biological and chemical principles into a food science and nutrition context					
Pre-requisites (and Co-requisites and Impermissible combinations)			L2103 or BIOL222 dents admitted in		and NOT for stude ore.	nts who have pas	sed in BIOL2101
Offer in 2020 - 2021	Y 1s	st sem Offer in :	2021 - 2022 : Y			Examination	Dec
Grade Descriptors (A+ to F)	Α		pply this knowledge. C		now extensive knowledon nd techniques and anal		
	В	Demonstrate substantial grasp of the subject matter covered. Show thorough knowledge and understanding of the content and a high level of competence in the topics covered and able to apply this knowledge and skills to most situations. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions.					
	С	Demonstrate general but incomplete grasp of the subject matter covered. The student has a sound knowledge and understanding of the main areas of content and has achieved an adequate level of competence in the topics covered. Use lab skills and techniques and analysis of data and results to draw moderately appropriate conclusions.					
	D	knowledge and u	nderstanding of the cor	ntent and has achieved	relevant information of d a limited level of comp priate conclusions occa	etence in the topics o

BIOL3208	Food safety and quality management (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	45
Course Co-ordinator	Dr O Habimana, Biological Sciences (ohabim@hku.hk)		
Teachers Involved			
Course Objectives	To provide exposure to some key management concepts used to product succeed in the marketplace. To introduce students to analysis and problem in food safety management.		
Course Contents & Topics	- The regulatory, social and business imperative for food safety Basic concepts in TQM - Statistical Process Control - Quality Function Deployment - Quality management standards (ISO 9000) - Development and implementation of a Hazard Analysis Critical Control food safety management system/ supply chain approach) - Role of environmental management systems (ISO 14000) in the food inclined intellectual Property issues in the food industry - Religious, ethical, and cultural food choices - Illustrative business case studies on food safety management will be dis	dustry	nin an ISO 22000
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the historical development of government regulation of CLO 2 be familiar with a set of management techniques applicable in the CLO 3 be able to analyze food production problems and make recomme safety	food industry	prove quality and

BIOL3215	Principles of dietary assessment (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	30
Course Co-ordinator	Dr J C Y Louie, Biological Sciences (jimmyl@hku.hk)		
Teachers Involved	(Dr J C Y Louie, Biological Sciences)		
Course Objectives	This course examines the various methods used to measure dietary intake in p how to assess these measurements against international standards, and ho improvement.		
Course Contents & Topics	Topics covered will include the validity and reliability of different methods, estimuse of food composition databases, nutrition screening tools and the plannin monitoring and evaluation. Students will conduct project work and produce and using dietary assessment tools.	g and use of nati	ional surveys for
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the principles of dietary assessment methods, and the streng CLO 2 evaluate the validity and reliability of dietary assessment tools CLO 3 choose the most appropriate nutrition assessment methods for different CLO 4 explain the meaning and uses of Dietary Reference Intakes CLO 5 competently use dietary assessment software with local and internation individual dietary intake	purposes

BIOL3216	Food waste management (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	30
Course Co-ordinator	Dr O Habimana, Biological Sciences (ohabim@hku.hk)		
Teachers Involved	(Dr O Habimana, School of Biological Sciences)		
Course Objectives	To allow students to develop an understanding of the propagation, treatment a within the farm to table chain. To allow students to critically evaluate food recovery potential in Hong Kong in comparison to other countries in Asia/Worldw	waste ['] manageme vide.	ent and resource
Course Contents & Topics	With our current global population estimated to reach 9.1 billion in 2050, for increase by 70% to meet food demand. However, our current world food supply of all food produced for human consumption lost or wasted. This amounts to a per year! Clearly we should be worried about food wastage. In this course, the social, economic, and environmental implications associated by presenting relevant facts and figures and case studies embodying agriculture types. Basic waste management concepts will also be covered, examining current compared to other countries in Asia, while providing the basis for exported to the countries in Asia, while providing the basis for exported to exported to other countries in Asia, while providing the basis for exported to exported to other countries in Asia, while providing the basis for exported to exported to exported the basis for exported to exported the providing the basis for exported to exported the providing the basis for exported to exported the basis for exported to exported the basis for exported to exported the basis for exported to exported the basis for exported to exported the basis for exported to exported the basis for exported to exported the basis for exported the basis for exported the basis for exported to exported the basis for exported the basis	is instead declinir staggering 1 to 2 d with food waste ral, industrial and arrent waste mana amining our own	ng, with 1/4 to 1/3 billion metric tons will be identified, consumer waste- agement in Hong personal waste
Course Learning	On successful completion of this course, students should be able to:		
Outcomes	CLO 1 understand and define the various types of waste as well as create footprint. CLO 2 be able to define the 3 R's in waste management (reduce, reuse, recycle).		
	polices in Hong Kong compared to other countries in Asia /Worldwide.		
	CLO 3 be able to describe current and novel technologies for treating waste, value added resources.		
	CLO 4 to develop written and oral presentation skills necessary to effectively social information related to waste management.	convey technical	, economic, and

BIOL3217	Food, environment and health (6 credits)	Academic Yea	r 2020
Offering Department	Biological Sciences	Quota	50
Course Co-ordinator	Dr T. Sobko, Biological Sciences (tsobko@hku.hk)		
Teachers Involved	(Dr T Sobko, School of Biological Sciences)		
Course Objectives	A cross-disciplinary exploration of the environmental, socio-economic, public of food systems. To focus on how our food choices influence the environm our diet. To examine the interactions among environment (e.g. pollution, so food resources (growth, production, consumption, processing, distribution an	ent and how the en oil and water quality	vironment impacts , climate change),
Course Contents & Topics	The environment, human well-being and the functioning of society are high consumption. Are we destroying the environment as we struggle to feed grobecoming increasingly toxic for our health? The course will consist of the consumption on the environment; 2) The impact of environment on food an improve these interactions, through evidence-based case examples approach will be used with emphasis on 'real-life' cases connecting human health. Topics will include impacts of certain dietary habits and demands on sources of calories, rise of meat consumption, demand for year-round luxur increased fertilizers' use. We will consider how toxins, known as xenobiotics, decisions are influenced by the environment. The holistic approach used will environmental and food-related decisions and expressions, both public and evaluate the sociocultural, socio-behavioural, ethical and economic aspunderstand the importance of biologically sustainable food production and highealthy individual, environment and overall society.	owing populations? ree blocks: 1) The d human health, ar. A Problem Base-nutrition, well-being food systems (e.g. y foods) and the de affect human health help the students to private. Students weets of food and	Is the environment influence of food and 3) What actions declarating (PBL) and environmental demand for cheap epletion of soil and an and how sensory of navigate complex ill learn to critically environment and
Course Learning	On successful completion of this course, students should be able to:		
Outcomes	CLO 1 To understand multifactorial and interdisciplinary relations in sustaina	ıble environment an	d nutrition
	CLO 2 To address today's national and global challenges in the environmen	tal and food sectors	
	CLO 3 To understand historical and current aspects (agricultural production worldwide	, policy initiatives) l	ocally, in Asia and
	CLO 4 To address and analyze food/environment issues including food fulfilment of the right to adequate food; strengths and weaknesse policies and other interventions		
	CLO 5 To demonstrate skills to become effective environmental educators to environment to a variety of audiences and to apply theoretical known intervention in public setting

BIOL3302	Systematics and phylogenetics (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	60
Course Co-ordinator	Prof R M K Saunders, Biological Sciences (saunders@hku.hk)		
Teachers Involved	(Prof R M K Saunders, Biological Sciences)		
Course Objectives	To give students an understanding of the principles of systematics and phyl current trends and controversies. Systematics forms an invaluable grounding franatomy, ecology, population biology and evolutionary biology), and enables techniques (including anatomy, biochemistry, chemistry, molecular biology, cytol	or many fields of l the integration of	biology (including a wide range of
Course Contents	Currrent classificatory theories: phenetic systematics (classifications based on o	verall resemblanc	es) and cladistics

& Topics	(evolutionary reconstruction). The species concept. Sources of taxonomic data: morphology & anatomy, biochemistry, chemistry, molecular biology, cytology, and ethology. Causes of taxonomies complexity: environmental factors; hybridization; breeding systems. Principles of nomenclature. Laboratory sessions will be aimed at illustrating taxonomic procedures and problems; students will not be expected to memorize large numbers of scientific names.					
Course Learning Outcomes	CLO 1 ex	•		ble to: ecies) and show how multivariate	e statistical methods	
	CLO 2 de	escribe the principles be	ehind maximum parsimony	methods of phylogenetic recorpoplasy and the assessment of cla		
	CLO 3 ev	aluate the diversity of so	ources of taxonomic data, an	d explain the importance of spec	cific data sources	
	CLO 4 re	cognise the main causes	s of taxonomic complexity, a	nd identify appropriate solutions		
		nderstand the principles re validly publish new na		interpret the previous applicatior	of scientific names

combinations)	Y 1st	Offer in 2024 20	222 . V	Evenination	Dee	
Offer in 2020 - 2021		sem Offer in 2021 - 20		Examination	Dec	
Grade Descriptors (A+ to F)	A	A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining most or all of the course learning outcomes, with evidence of extensive background reading and use of named examples. Show evidence of significant critical abilities and logical thinking. Apply highly effective presentation skills. Demonstrate effective use of data and results to draw appropriate and insightful conclusions. Show evidence of integration of a wide range of appropriate theories, principles, evidence and techniques.				
	Demonstrate substantial command of knowledge required for attaining most of the course learning outcomes, with evidence of some background reading and use of named examples. Show evidence of critical abilities and logical thinking. Apply effective presentation skills. Demonstrate use of data and results to draw appropriate and insightful conclusions. Show evidence of general integration of appropriate theories, principles, evidence and techniques.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes, with evidence of limited background reading and use of named examples. Show evidence of some critical abilities and logical thinking. Apply moderately effective presentation skills. Demonstrate mostly correct use of data and results to draw appropriate and insightful conclusions. Show evidence of partial integration of appropriate theories, principles, evidence and techniques.				
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes, with insufficient evidence of background reading and use of named examples. Show evidence of limited abilities and logical thinking. Apply limited presentation skills. Demonstrate limited ability to use data and results to draw appropriate and insightful conclusions. Show evidence of limited integration of appropriate theories, principles, evidence and techniques.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes, with no evidence of background reading or use of named examples. Show little or no evidence of critical abilities and logical thinking. Presentational skills are minimally effective or ineffective. Misuse of data and results to draw appropriate conclusions. Little or no evidence of integration of appropriate theories, principles, evidence and techniques.

BIOL3305	Tropical and temperate marine ecology field course (6 credits)	Academic Year	2020				
Offering Department	Biological Sciences	Quota	22				
Course Co-ordinator	Dr B Russell, Biological Sciences (brussell@hku.hk)						
Teachers Involved	(Dr B Russell,Biological Sciences) (Dr S Cannicci,Biological Sciences)						
Course Objectives	This course uses a field-based approach to provide students with an advestuarine ecology in both tropical and temperate regions. Students will lear and then apply them to compare these ecosystems in Australia, experiencing course culminates with students developing field-based research projects to creative and innovative thinking to overcome problems for successful outcomes.	n scientific technique their similarities and answer ecological	es in Hong Kong d differences. The				
Course Contents & Topics	The course will cover the structure and function of mangrove forests, reefs both tropical and temperate regions. Students will be introduced to the conclectures and field trips in Hong Kong before travelling to northern and secosystems in the field. The lectures will provide students with background kr they will encounter, the structure and function of the systems and how hum techniques, logical experimental design, and good report writing practices. T in the field with students quantifying species richness, observing system sexperiments that they design themselves.	epts in the course the couthern Australia to converge about the earn activities degrade hese concepts will be	rough a series of experience the ecosystems which e them, sampling e drawn together				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 demonstrate an understanding of the complexity and function of marine ecosystems. CLO 2 explain the role of physical and biological processes in shaping the similarities and differences amountaine ecosystems tropical and temperate regions. CLO 3 demonstrate skills for field sampling in marine and estuarine habitats.						
	CLO 4 demonstrate knowledge in hypothesis testing and experimental design. CLO 5 identify a range of marine species and their role in ecosystems.						
Pre-requisites	Pass in "C" or above in BIOL2306 or BIOL3301 or BIOL3303 or ENVS2001

BIOL3313	Freshwater ecology (6 credits)	Academic Year	2020				
Offering Department	Biological Sciences	Quota	30				
Course Co-ordinator	TBC, Biological Sciences ()						
Teachers Involved	(TBC,School of Biological Sciences)						
Course Objectives	This course introduces freshwater science by integrating the physical and biological components of rivers and their drainage basins in the context of sustaining human livelihoods and biodiversity. Conservation and management of lakes and maintenance of water quality are considered also. Case studies are used to illustrate the principles of river science and human use of drainage basins. Emphasis will be placed upon conservation of freshwater biodiversity in Asia in the context of increasing human modification of ecosystems, habitat degradation and water scarcity.						
Course Contents & Topics	The amount of water on Earth is fixed. Less than 0.01% of the world's water hosts 10% of the Earth's species. Global water use has increased 300% sinc Earth's population; many people in Asia already face water stress. This co processes involved in the hydrological cycle and flow of water in drainag fluctuations, and describes the main longitudinal changes that occur along flows in freshwater ecosystems are described with particular reference to the and land and the relative importance of aquatic primary production versus en the land. The range of organisms associated with Asian fresh waters is i explained, and students will become familiar with some common Hong Kong sessions. The dependence of humans on freshwater ecosystems and the role explained, together with the causes and consequences of human modification for conservation of aquatic biodiversity. Finally the range of management is human impacts on freshwater ecosystems and maintain water quality is introduced.	e 1950 and is growing urse introduces the basins, as well a rivers and their flower transfer of materia dergy derived from de introduced and their groups species in field trip at they play in sustain of fresh waters, and trategies used to re	ng faster than the physicochemical is their seasonal odplains. Energy ils between water etrital inputs from functional roles and laboratory ning livelihoods is d the implications				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe the global water cycle, the main sources and pathways of energy in freshwaters, and the influence of land-water interactions on aquatic productivity CLO 2 describe the composition of the freshwater biota (major groups) and their functional roles in aquatic ecosystems, and identify some of the common animals that occur in Hong Kong fresh waters						
	CLO 3 describe the results of modification of freshwater ecosystems by	humans, list the	main threats to				

			/ in Asia, explain why freshw egies used to reduce or mition	ater biota are vulnerable to human in	npacts, and indicate

BIOL3314	Plant st	ructure and evolution (6 credits)		Academic Year	2020		
Offering Department		Sciences		Quota	30		
Course Co-ordinator	Prof R M	Prof R M K Saunders, Biological Sciences (saunders @hku.hk)					
Teachers Involved	(Prof R M K Saunders,Biological Sciences)						
Course Objectives		y the form and function of the vascuce of structures. This course forms a ba etics.					
Course Contents & Topics	explanati Information taxonomi water coi	The course will investigate various cell, tissue and organ types in the vascular plant body, with functional explanations for their diversity and discussions of the value of such knowledge in understanding plant phylogeny. Information on plant structure will be integrated with our current understanding of developmental genetics and taxonomic relationships derived from molecular phylogenetic research. Topics such as food storage, strength, water conduction, growth and development, pollination, fertilization, fruit and seed dispersal, germination, etc., will be discussed					
Course Learning	On succe	ssful completion of this course, students	should be able to:				
Outcomes	CLO 1 recognise the main plant cell types and explain how cells are integrated to form specific primary tissues (such as the xylem and phloem)						
	CLO 2 describe the developmental changes that occur in primary tissues with the onset of secondary growth						
	CLO 3 describe the structure, function and development of secondary vegetative structures (wood and bark)						
	CLO 4 integrate knowledge of the genetic control of floral development with the evolution of organ diversity						
	CLO 5 describe the structure of fruits from a functional perspective, and recognise how these structures are derived from the flower						
		xplain how seeds develop after fertilization patterns	on of the ovule, and how differ	ences in seed str	ucture influence		
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in BIOL1309; and Any level 2 BIOL course

BIOL3318	Experim	nental intertidal ecology (6 credits)	Academic Yea	ar 2020		
Offering Department		I Sciences	Quota	20		
Course Co-ordinator	Prof G A	Williams, Biological Sciences (hrsbwga@hku.hk)	'			
Feachers Involved	(Prof G A	Williams, School of Biological Sciences)				
Course Objectives	them. The determinis	ine the communities of coastal systems: their distribu- nis course will examine, using an experimental approact stic and stochastic processes that create and sustain the arisons will be drawn from the coastlines of the world.	h, patterns exhibited by a rang	e of shores and the		
Course Contents & Topics	on them hydrologic animals examples manipulate herbivory	The first part of this course describes shores of the marine to brackish water continuum and the communities found on them. Lectures will cover the physical environment of the intertidal (e.g. tides; waves; geological and hydrological processes) the resultant variations in exposure and shore types and consequent distribution of animals and algae on these shores (vertical and horizontal zonation patterns) with specific Hong Kong examples. The second part of the course uses an experimental approach (e.g. sampling methodology; manipulative techniques; experimental design and data analysis) to investigate the factors (e.g. predation; herbivory; competition; disturbance; succession; patchiness and recruitment; supply side ecology) that structure these shores, with particular focus on rocky intertidal shores.				
Course Learning		essful completion of this course, students should be able	e to:			
Outcomes	CLO 1 describe the physical environmental factors (e.g., waves, tides) shaping the intertidal environment and how they interact with geographic features to produce different kinds of shores (e.g., sandy shores, mangroves) CLO 2 understand the factors limiting species distribution patterns on the vertical intertidal gradient and					
	appreciate methods to measure and investigate these patterns CLO 3 identify and quantify the distribution of a variety of local species on different Hong Kong shores					
	CLO 4 review, critique and design experimental studies to investigate patterns (e.g., zonation) and processes (e.g., herbivory, competition) in intertidal areas					
	CLO 5 explain the role of biological processes (e.g., predation, succession) and their interaction with the physical environment in shaping intertidal communities					
	eı	nvironment in shaping intertidal communities

Course Objectives	introduced marine inv benthic ar	This course introduces the students to the diversity, biology and ecology of marine invertebrates. Students will be introduced to various aspects of the systematics, anatomy, physiology and functional ecology of the major phyla of marine invertebrates to appreciate the diversity of body plans and ecological roles these animals play in costal, benthic and pelagic ecosystems. The course will particularly focus on the South East Asian seas, which are the most diverse marine systems in the world.					
Course Contents			all animal species. While insects	dominate the terrestrial	landscapes, marine		
& Topics	environme worms), C the seas. of all mar relatives. This cour- structure relationshi pathways, students v of the fund	This course will lead the students through the discovery of the amazing variety of body plans, adaptations, structure and function of marine invertebrates. In the first part of the course, the study of the phylogenetic relationships and the body plans of marine invertebrates groups, together with the associated evolutionary pathways, will be described to provide students with an evolutionary grand tour of life on Earth. In the second part, students will learn the mechanisms underpinning the ecological functions of marine ecosystems, through the study of the functional biology and ecology of the dominant groups. The diversity of invertebrates present in South East Asian seas will be introduced, and students will become familiar the commonest Hong Kong taxa and species in					
Course Learning		•	course, students should be able to:

BIOL3402	Cell biology and cell technology (6 credits)	Academic Year	2020		
Offering Department	Biological Sciences	Quota	120		
Course Co-ordinator	Prof A S T Wong, Biological Sciences (awong1@hku.hk)	'			
Teachers Involved	(Dr W Y Lui,Biological Sciences) (Prof A S T Wong,Biological Sciences) (Prof. M L Chye,Biological Sciences)				
Course Objectives	To provide a coherent understanding of the structure and function of cell cell culture and instrumentation in biology and biotechnology	s, and the principles ar	nd applications of		
Course Contents & Topics	I. Cell Biology Cell membranes. Organelles. Cellular transport: ions transport and ions Membrane potentials, Action potentials. Cell junctions. Extracellular Minteractions. II. Techniques in animal cell culture Mammalian cells in culture. Primary and continuous cell lines. Cell typ formulation, growth factors and design of serum-free media. Culture lab cryopreservation. III. Techniques in plant cell culture Root and shoot cultures. Explant regeneration. Protoplasts. Secondary me	latrix. Cell-cell interact les and cell growth pa facilities and sterilizatio	ions. Cell-matrix		
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 acquire fundamental knowledge on cell biology and cell technology CLO 2 demonstrate basic laboratory techniques on cell culture CLO 3 gain insight into real-life applications in cell biology and cell technology				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC2600 or BIOL2103 or BIOL2220 or MEDE2301				

Offer in 2020 - 2021	Y 1st	sem Offer in 2021 - 20	022 : Y	Examination	Dec		
Grade Descriptors (A+ to F)	A	Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to appl knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writing consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.					
	В	Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.					
	С	Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts or theories but not always with sufficient depth, breadth or understanding.					
	D	Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level.					
	Fail	Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concepts or theories. Writings are irrelevant or superficial.

BIOL3408	Genetics (6 credits)	Academic Year	2020	
Offering Department	Biological Sciences	Quota	50	
Course Co-ordinator	Dr G Y W Chan, Biological Sciences (gywchan@hku.hk)			
Teachers Involved	(Dr C Schunter,Biological Sciences) (Dr G Y W Chan,Biological Science)			
Course Objectives	This course aims to provide students with fundamental knowledge of classical, molecular and population genetics			
Course Contents & Topics	Topics will include cellular reproduction, principles and chromosomal basis of M and mapping, concept and definition of the gene, molecular mechanisms recombination, DNA transposition, extranuclear inheritance, developmental genetics. Students are strongly encouraged to take BIOL2303 Molecular Biolecoverage of topics in molecular genetics.	s of mutation, [netics, quantitativ	ONA repair and e and population	

Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 appreciate the beauty of genetic organizations in nature					
	CLO 2 ι	use different genetic prir	nciples to explain hereditary traits obs	erved in nature and labora	atories	
	CLO 3 apply qualitative and quantitative experimental methodologies for genetic analysis at individual and population levels					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL1110; and BIOL2102 or BIOL2103					
Offer in 2020 - 2021	Y 1s	st sem Offer in 2021 -	2022 : Y	Examination	Dec	
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Integration of the full range of appropriate theories, principles, evidence and techniques					
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. General integration of theories, principles, evidence and techniques					
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Some partial integration of theories, principles, evidence and techniques					
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Limited integration of theories, principles, evidence and techniques					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Little or no or inapt integration of theories, principles, evidence and techniques

BIOL3409	Busine	ss aspects of biotechnology (6 credits)	Academic Year	2020	
Offering Department	Biologica	al Sciences	Quota	40	
Course Co-ordinator	Dr W B I	Lim, Biological Sciences (bllim@hku.hk)			
Teachers Involved	(Dr K W Y Yuen,School of Biological Sciences) (Dr Ng,Guest Lecture) (Dr W B L Lim,Biological Science)				
Course Objectives	The course will give an overview of the innovative developments in biotech industry and provide the students with useful tools in learning how an exciting research idea can be turned into a viable business.				
Course Contents	The purpose of the course is to introduce you to the entrepreneurial process with a focus on the biotechnology				
& Topics	industry. The course will provide a thoughtful, practical guide to the process of successfully launching an entrepreneurial venture. We place a special emphasis on the decision to become a biotech entrepreneur and how to develop successful business ideas, however we will also discuss the process of moving from an idea to a biotech firm. Topics on intellectual properties, patent laws, patent application process, licensing and fundraising wil be covered as well. Throughout the course, guest entrepreneurs, managers and directors of the biotech industry will be presenting case studies and explain their involvement in various biotech and pharmaceutical companies. Topics: 1. Introduction to Biotechnology Industry: 4 P in Biotechnology Business (3 hours) 2. IP rights: Patent application, Patent system, USPTO, SIPO, PCT (6 hours) 3. Licensing of IP rights (3 hours) 4. Technology Transfer Office and HKSTP (3 hours) 5. How to raise fund for startup companies (3 hours)? 6. Agrobiotechnology and Green Tech (Monsanto, Novozymes, etc) (4.5 hours) 7. Drug development and clinical trials (Gilead Sciences, Wuxi PharmaTech, etc). (6 hours) 8. Diagnostics business (BGI, Diagcor, etc) (4.5 hours) 9. Company analysis (3 hours) 10. Company Visit 11. Company analysis				
Course Learning Outcomes		essful completion of this course, students should be able to			
	CLO 1 understand and demonstrate knowledge of the development and management of biotechnology business				
	CLO 2 understand and demonstrate how discoveries and inventions are commercialized				
	CLO 3 navigate the various steps in the development of a biotechnology derived product: from bench, to scale-up, to market				
	CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries				
	CLO 5 participate and contribute to the business side of scientific enterprises				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in any level 3 BIOL or BIOC or BBMS course; NOT for students who have passed in BIOL2409. This course is only for students admitted in 2017-2018 or before.				
Offer in 2020 - 2021	N O	ffer in 2021 - 2022 : N	Examination		
Grade Descriptors (A+ to F)	A	Students acquire exceptional skills and knowledge from the course a technological developments of various biotechnology ventures.		ring the business and	
(0.)	В	Students demonstrate a broad and in-depth understanding of the	current developments in biotechnolo	gy industry and are	

		capable of analyzing the bu	siness and technological dev	elopments of various biotechnology ventures ur	nder guidance.
	С	Students demonstrate a bro	oad and in-depth understandi	ng of the current developments in biotechnology	industry.
	D	Students demonstrate a mo	derate understanding of the	current developments in biotechnology industry.	
	Fail	Students fail to demonstrate	e a moderate understanding	of the current developments in biotechnology inc	dustry.

Additional Course	Taught and trained by several teachers, guest lecturers from government and aquaculture business sector;
Information	This course is offered in close collaboration with USM (Penang, Malaysia);
	Tentative duration: 1-15 June, 2016;
	In Part 1 - First 5 days at HKU for lectures, practicals and field visits - then flight to Penang to visit various oyster
	aquaculture facilities;
	Few USM (Malaysia) students may join the course;
	Fund for the Penang visit will be collected from students (about 6000 HKD including airfare, accommodation and
	selective meals for 7 days).
	This course will be offered subject to a minimum enrollment number and availability of teachers.
	This course will be offered in alternative year.

BIOL3508	Microbial physiology and biotechnology (6 credits)	Academic Year	2020

Offering Department	Biological			Quota	60			
Course Co-ordinator	-	Biological Sciences (a)	yan8@hku.hk)					
Teachers Involved	-	Biological Sciences)						
Course Objectives	pharmace Biotechno application such as e knowledge	probes are amazing and important entities on earth. Knowledge of microbes is widely applied in food immaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology and technology provides both molecular basis for understanding of these important processes and up-to-dai disciplines of Microbiology, and to serve as essential foundations for sub-disciplines of Microbiology has environmental, food, and medicinal Microbiology. Upon completion, students will acquire fundament will be about microorganisms, gain laboratory skills on methodologies for microbial studies, and be able by the knowledge in Microbial Biotechnologies.						
Course Contents & Topics	Microbial Breath', a interesting methodolo control', 'E biofuels a	robial Biotechnology, This course is organized and presented in three themes: 'Microbial Rules', 'Microbial ath', and 'Microbial Biotechnology'. Under these three themes, a broad range of highly educational and resting topics are presented including: 'Microorganisms and their position in the living world', 'Fundamental hodologies for the study of microbes', 'Microbial structures and functions', 'Microbial growth and trol', 'Energy Generation', 'Central metabolism', and 'Microbial biotechnological applications in biodegradation, uels and synthetic biology '. Topics are taught in a coherent manner with a highly interactive tutorial session owing each of the topics such that students will achieve a high quality, stimulating, and problem-based learning						
Course Learning	On succes	ssful completion of this	course, students should be able	to:

BIOL3606	Diet and disease (6 credits)	Academic Year	2020			
Offering Department	Biological Sciences	Quota	70			
Course Co-ordinator	Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)					
Teachers Involved	(Dr J C Y Lee,School of Biological Sciences)					
Course Objectives	This course aims to provide understanding and insight into diseases associal specifically to: 1. Explain the relationships between diet and disease. 2. Describe the role of diet in the development and prevention of common chronic obesity and anorexia, cardiovascular disease, cancer, immune deficiency and respectively. Differentiate risk factors that influence dietary choice. 4. Describe the rationales for postoperative nutritional support for hospitalized particular.	ic diseases such a enal failure.				
Course Contents & Topics	The basics of nutrition for health and fitness and medical nutrition therapy. The prevention of chronic diseases such as cancer, diabetes, obesity and anor cardiovascular diseases, renal failure, etc. Malnutrition. Nutrition and immune fu	exia as well as	bulimia nervosa,			

	food aller	rgy and food intolerance.	Nutrition in pregnancy and lactation	on.				
Course Learning	On succe	essful completion of this c	ourse, students should be able to	•				
Outcomes	CLO 1 discuss the different relationships between diet and disease							
			t in the development and pre ancer, immune deficiency, and ren		esity and anorexia,			
			erpret risk factors that influence d					
			postoperative nutritional support

BIOL4210	Food p	product development (6 credits) Academic	'ear	2020		
Offering Department	Biologic	al Sciences Quota		40		
Course Co-ordinator	Dr M F Wang, Biological Sciences (mfwang@hku.hk)					
Teachers Involved	(Dr M F	Wang, Biological Sciences)				
Course Objectives		To introduce the key concepts and techniques used in food product development. To provide small group experience in the design, development and production of a new food product.				
Course Contents & Topics	develop	History and future of the food industry; industrial product development process; idea generation and prototype development for new food products; quality management and legal protection; marketing strategies; food labeling; food package design; new product development for different food industries.				
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1	erstand the food product development cycle				
	CLO 2 know the key steps in new product development					
	CLO 3 demonstrate enhanced insight and understanding of current and future trends in the food industry					
	CLO 4	have professional level practical experience in new product development				
	CLO 5 know the main characteristics of different sectors of the food industry					

Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL3203 or BIOL4205						
Offer in 2020 - 2021	N Of	fer in 2021 - 2022 : N		Examination			
Grade Descriptors (A+ to F)	Α						
	В						
	С						
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.

BIOL4301	Fish and	I fisheries (6 credits) Academ	ic Year	2020		
Offering Department	Biological	Sciences Quota		40		
Course Co-ordinator	TBC, Biol	ogical Sciences ()				
Teachers Involved	(TBC,)					
Course Objectives	 to acquaint students with the principles governing interrelationships among fishes as well as with biotic and abiotic aspects of their environment for an understanding of population dynamics and multispecies interactions. to provide an understanding of how species diversity and selected aspects of their life history are relevant to fishery management challenges, sustainable supply of seafood, and the conservation of threatened species. to cover the theoretical and practical aspects of marine fisheries management, fish farming and fish conservation using local, regional and global examples 					
Course Contents & Topics	marine ar fisheries; roles of managem	Introduction to course: phylogenetic, biological and ecological concepts and adaptation. Multispecies interactions in marine and freshwater fish assemblages. Fishery theory; how do fisheries work? Status of the world's capture fisheries; fish stock assessment and fishery management practices using local, regional and global examples. The roles of mariculture and capture fisheries for seafood supply and relationship to capture fisheries. Fishery management and fish conservation. Conclusion: fish biodiversity and fishery production; ethics of fish research and exploitation; climate change and the future of fish and fisheries.				
Course Learning	On succe	ssful completion of this course, students should be able to:				
Outcomes	CLO 1 understand the basis of fish species diversity in relation to phylogenetic, ecological and biological factors CLO 2 appreciate the direct and indirect impacts and consequences of human activities on fish species and species assemblages and implications for seafood security CLO 3 understand of the functioning of fisheries and standards of fisheries assessment, development and					
	management					
	CLO 4 appreciate the mutual dependency of humans with fished populations in relation to their long-term sustainability					
	CLO 5 enhance the ability for critical and synthetic thinking and to consider innovative approaches to research and management					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	Pass in BIOL3301 or BIOL3303

they provincluding how hum						
Natural ed services of may be p marine er to human can provide	Natural ecosystems provide trillions of dollars' worth of ecosystem services to humans every year. Many of these services go unrecognized and undervalued. In fact, because humans rely on ecosystems many of these services may be priceless. This course will first cover the function of different ecosystems from terrestrial, fresh water and marine environments. Students will then be introduced to the concept of ecosystem services and what they provide to human populations. Finally, human activities which degrade ecosystems and reduce the extent that ecosystems can provide these services, and what that means for human populations, will be covered. Students will develop independent and creative thinking when proposing solutions to the question of how to value ecosystems for their

BIOL4411	Plant ar	nd food biotechnolog	gy (6 credits)	Academic Year	2020	
Offering Department	Biologica	al Sciences		Quota	60	
Course Co-ordinator	Prof M L	Chye, Biological Science	es (mlchye@hku.hk)			
Teachers Involved	(mlchye@	@hku.hk,Biological Scienc	ces)			
Course Objectives	This course covers the principles and key concepts of plant and food biotechnology and its applications in increasing global food supply. The significances of biotechnology in agriculture and food production, and the emerging importance of plant biotechnology in molecular farming for the production of biopharmaceuticals and other high-value proteins will be discussed. The course will also provide an insight on the real-life applications of plant and food biotechnology.					
Course Contents & Topics	 Genetic improvements in agriculture. Transgenic crops in global food production. Tools in plant genetic engineering: promoters and marker genes. Techniques in plant gene transfer: Agrobacterium-mediated transformation, biolistics and microinjection. Nuclear and plastid transformation. Gene silencing in plants. Genetic manipulation of commercially useful biosynthetic pathways in crops. Extending shelf-life of fruits. Prevention of enzymatic browning of potato tubers. Genetically-engineered biofortified foods: provitamin A-enriched rice, omega-3-enriched soy and hanthocyanin tomatoes. Biotechnology in plant pest and disease management: Producing crops resistant to phytopathogens and pests. Short-interfering RNAs in gene silencing to defend against plant viruses. Protecting crops in the field using the Bt toxin. Pest-resistant genetically-transformed seeds using the alpha-amylase inhibitor Herbicide-resistant crops. Plants as bioreactors for molecular farming: transgenic and transplastomic plants for producing recombin biopharmaceutical proteins. Biodegradable plastics. Biofuels. Genetically-modified crops and food products: regulation, testing and labelling. 					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 acquire key concepts in plant and food biotechnology and basic laboratory techniques in plant biotechnology					
	CLO 2 gain insight into real-life applications in plant and food biotechnology					
		develop scientific inquiry a	and critical thinking skills			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	BIOL3211 or BIOL3401

Offer in 2020 - 2021	Y 2nd	I sem Offer in 2021	2022 · V	Examination	May	
Grade Descriptors	A 2110					
(A+ to F)	Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to appl knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writing consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.					
	В	outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.				
	С	Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Sho evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts of theories but not always with sufficient depth, breadth or understanding.				
	D	evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to appl knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level.				
	Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concept or theories. Writings are irrelevant or superficial.

BIOL4417	'Omics' and systems biology (6 credits)	Academic Year	2020
Offering Department	Biological Sciences	Quota	40
Course Co-ordinator	Dr J W Zhang, Biological Sciences (jzhang1 @hku.hk)		

Teachers Involved	(Dr J W Zhang,Biological Sciences)					
Course Objectives	Recent progress in high-throughput omics technology has revolutionized the biological research. Genome-wide profiling of various biomolecules simultaneously by omics technology generates huge amounts of data, providing the potential to obtain a global and holistic view of the system. This course aims to introduce the technologies of Omics and Systems Biology, and overview of various applications of omics technology. Synthetic biology is set to be the heart of future economy, promising to create new drugs, industrial materials and energy sources similar to chemical synthesis. The significance of this field has been promoted by the worldwide synthetic biology competition organized by MIT, i.e., iGEM competition. In this course, we will introduce some innovative ideas in synthetic biology and practice the skills needed for iGEM competition.					
Course Contents & Topics	The course covers various OMICS techniques with special focus on sequence alignment, next generation sequencing, computational modeling, and statistic programming. This course will also provide students hands-on experience in large scale data analysis, and experiment methodologies involved in: Systems biology and functional genomics - the study of the interactome/network between components of a biological system, and modeling to discover the integrated function and emergent properties of that system; Synthetic biology- the design and building of synthetic protocells using basic biochemical building blocks from scratch.					
Course Learning Outcomes	CLO 1 ex ap CLO 2 de CLO 3 de CLO 4 de sy	On successful completion of this course, students should be able to: CLO 1 explain the conceptual differences between 'Omics'/Systems Biology studies and traditional one-gene approach, and discuss the pros and cons of both approaches CLO 2 describe common methodologies used in iGEM and Synthetic biology CLO 3 describe basic analytical methods, and access database resources generated in major 'Omics' studies CLO 4 describe how 'Omics' data are used in Systems Biology to understand the integrated functions of the system				
Pre-requisites (and Co-requisites and Impermissible combinations)	CLO 5 identify questions that can be addressed by 'Omics' and Synthetic Biology studies Pass in BIOC3601 or BIOC3604 or BIOL3211 or BIOL3401 or BIOL3402 or BIOL3403 or BIOL3404 or BIOL3404					
Offer in 2020 - 2021	Y 2nd	l sem Offer in 2021 -	· 2022 : Y	Examination	May	
Grade Descriptors (A+ to F)	A Demonstrate thorough and complete mastery at an advanced level of extensive knowledge and skills required for attaining course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thoug ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organization presentational skills. B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the learning outcomes. Evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to family some unfamiliar situations. Apply effective organizational and presentational skills. C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course leaves outcomes. Evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most situations. Apply moderately effective organizational and presentational skills. D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning out Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcome of analytical and critical abilities, logical and coherent thinking. BIOL4505	Oyster aquaculture (6 d	credits)	Academic Year	2020			
Offering Department	Biological Sciences		Quota	20			
Course Co-ordinator	Dr T Vengatesen, Biological	Sciences (rajan@hku.hk)					
Teachers Involved	(Dr T Vengatesen, School of	Biological Sciences)					
Course Objectives	-Introduce oyster biology and hatchery technology and aquaculture business; -Provide scientific basis for oyster aquaculture through field demonstrations and laboratory exercises; -Enable students to design, construct and maintain oyster hatchery for production of seeds for sustainable aquaculture and restoration of wild oysters; -Facilitate transfer of academic knowledge to oyster growers and aquaculture industry for sustainable, healthy and safe sea-food production:						
Course Contents & Topics	hatchery technology and comaintain coastal aquacultus shellfish production and reendeavor encompassing la aquaculture business. After marine larvae will be use Environmental issues, legisl covered using oyster aquacufacilities in Hong Kong, Zha	safe sea-food production; This experiential learning course is to enhance students' knowledge in one of the applied marine biology fields, i.e. hatchery technology and coastal aquaculture business that will enable them to design, construct, operate and maintain coastal aquaculture facilities and small-scale 'green and environmentally sustainable' business for shellfish production and restoration of wild benthic biodiversity in coastal habitats. This is an interdisciplinary endeavor encompassing larval hatchery technology, seafood quality, and economic dimensions of coastal aquaculture business. After reading about basic oyster biology and oyster aquaculture topics, we will focus on how marine larvae will be useful for human society through hatchery technology and aquaculture business. Environmental issues, legislation pertaining to coastal aquaculture business and community interaction will also be covered using oyster aquaculture in Hong Kong as an example. Students will be exposed to several aquaculture facilities in Hong Kong, Zhanjiang, and Qingdao to learn industrial and business skills of oyster aquaculture. This course is designed to meet the needs of an expanding sustainable aquaculture in Hong Kong and in mainland.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 gain scientific knowledge required for setting up oyster hatchery, farming and small-scale business, beside understanding biology and ecology of larvae and shellfishes and consider potential environmental effects on hatchery and farming						
	CLO 2 acquire skills and experiential learning opportunities (e.g. hands-on experiences at laboratories and farms) in oyster hatchery and aquaculture business, farming and industry						

	CLO 3 ex	plain the importance of	oyster farming in coastal habitat restora	tion			
	CLO 4 plan and execute a commercially important research project in marine science and coastal aquaculture						
	CLO 5 de	evelop novel ideas, and t	hink creatively, about hatchery product	on in relation to the aqu	aculture industry

Grade Descriptors (A+ to F)	Α	Demonstrate a thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly				
	В	thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based				
	organizational and presentational skills. Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate					
	moderately effective team-based organizational and presentational skills. Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.					
	Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

It the excitement it ning, conducting,		
	Conducted in a field research site outside Hong Kong, this course teaches st	udents how to think	and a load and the calculation		
	analysing, and successfully completing field studies of animal behaviour and behavioural ecology. Conducted in a field research site outside Hong Kong, this course teaches students how to think analytically about animal behaviour, how to design a field research protocol, construct a conceptual framework of a research project and how to put this framework into a practice of collecting and analysing data. The course includes lectures informal discussions, review of research techniques, and extensive field component with daily research activities. It provides experiential learning through (i) direct participation in an ongoing field-based research, (ii) hands-on experience in application of diverse research techniques, (iii) hands-on involvement in collecting and analysing data, and (iv) engagement in scientific debates with researchers and research teams directly in their field study location. Students will be guided through the scientific reasoning and methodology, will learn a suite of research techniques and will exercise their skills in data gathering and interpretation, and will develop an understanding how individual research projects contribute to a greater understanding of behavioural and evolutionary processes and contribute to advancing science at large. The emphasis is placed on independent thinking and thoughtful application of the knowledge acquired previously during relevant classroom courses. Following the field-based component, students are required to give a seminar-type presentation on a selected topic and write a Course Report.				

Outcomes	CLO 1 understand of the biodiversity and primary habitats in the ecosystem studied						
	CLO 2 establish the basic skills needed to identify target species associated with the field course CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the particular						
	ecosystems studied CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communities						
Pre-requisites	Pass in BIOL3101: and

Grade Descriptors							
(A+ to F)	A Evidence of a thorough grasp of the subject and relevant research techniques. Eagerness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.						
	B Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.						
	С	relevant background reading critical thinking (although no	and case studies, but no interest in t always independent), with mostly n mostly correct argumentation, bu	ct and relevant research techniques. learning beyond the adequate averag- good use of fundamental concepts to t limited (or no) abilities to integrate	e level. Additional Course		nt Procedure:					
Information	The course is open to enrollment only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following: 1. Personal and academic details 2. ID photograph 3. Prief description of academic interests						
	 3. Brief description of academic interests 4. GPA 5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver). All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester. 						

BIOL4922	Food product development and evaluation (6 credits)	Academic Year	2020		
Offering Department	Biological Sciences	Quota	20		
Course Co-ordinator	Dr M F Wang, Biological Sciences (mfwang@hku.hk)				
Teachers Involved	(Dr M F Wang,Biological Sciences)				
Course Objectives	To introduce the key concepts and techniques used in food product development. To provide small group experience in the design, development and production of a new food product.				
Course Contents & Topics	History and future of the food industry; industrial product development process; idea generation and prototype development for new food products; quality management and legal protection; marketing strategies; food labeling; food package design; new product development for different food industries.				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the food product development cycle CLO 2 know the key steps in new product development CLO 3 demonstrate enhanced insight and understanding of current and future trends in the food industry CLO 4 have professional level practical experience in new product development CLO 5 know the main characteristics of different sectors of the food industry				
Pre-requisites	Pass in at least 24 credits of advanced level disciplinary core/elective biologic	cal sciences course	es (BIOL3XXX or		

(and Co-requisites and Impermissible	BIOL4XXX) included BIOL3203 and / or BIOL4205 in the Food & Nutritional Science Major. This capstone course is for Food & Nutritional Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Not for students who have passed in BIOL4210 Food product development.

Offering Department	Biologica	l Sciences	•	Quota	42		
Course Co-ordinator	Dr D M B	Dr D M Baker, Biological Sciences (dmbaker@hku.hk)					
Teachers Involved	(Dr D M Baker,Biological Sciences)						
Course Objectives	To introduce students to a broad spectrum of field and laboratory methods for data collection in environmental science. Through exposure to environmental data collection, experimental design, data analysis, interpretation and reporting, students will gain a deeper appreciation of the process that underlies environmental science research and it's relevancy to critical thinking and future careers in the sciences.						
Course Contents & Topics	cover ba based ex the bios experience	This course will involve environmental data collection in both field and laboratory settings. In-class lectures will cover basic principles of specific methodologies and relevant applications in preparation for laboratory and field based experiential learning. Having an interdisciplinary focus, the course will cover topics relevant to the study of the biosphere, encompassing terrestrial, aquatic, and atmospheric systems. Students will gain hands-on experience with the operation of standard and advanced sampling and analytical equipment, quality control, basic data analysis and reporting.					
Course Learning			course, students should be able	e to:

ENVS3020	Global	change ecology (6 credits)	Academic Yea	ar 2020	
Offering Department	Biologica	l Sciences	·	Quota	65	
Course Co-ordinator	Dr C Ding	Dr C Dingle, Biological Sciences (cdingle @hku.hk)				
Teachers Involved	(Dr C Dingle,School of Biological Sciences)					
Course Objectives	The main goal of this course is to introduce students to the ways in which global environmental change affects biodiversity from organisms to ecosystems. This course will explore the contributions that human population growtl and globalization have made to increases in greenhouse gases and associated climate change, biological invasions, land degradation, disease, and, ultimately, impacts on biological systems.					
Course Contents & Topics	disappea natural va focus prin topics re- synergisti how it is i use chan investigat organism	Environmental change is a natural phenomenon, with ecosystems continually shifting, rearranging, emerging, and disappearing through geologic time with changes in climatic conditions. The activities of humans have added to this natural variation, increasing the magnitude and speed with which environmental change occurs. This course wil focus principally on the effects of climate change on organisms and ecosystems but will also investigate other topics registering on a global scale including land use change, biological invasions, and pollution, as well as synergistic interactions between all of the environmental stressors. We will explore (1) what climate change is and how it is manifested including climate warming, sea level rise, and ocean acidification; (2) types and extents of land use change; (3) how globalization has contributed to the spread of alien species and disease. The course will investigate how these human-caused stressors affect the morphology, phenology, distribution, and evolution or organisms and their impacts on ecosystem functioning and biodiversity in freshwater, marine, and terrestrial ecosystems.				
Course Learning			nis course, students should be abl	e to:		
Outcomes					s such as land use	
	CLO 1 develop a basic understanding of climate change and other human-associated impacts, such as land use change, and how they are manifested on a global scale					
	CLO 2 explain the ways that global change affects organisms' traits and distributions, and biodiversity at the					
	ecosystem level					
	CLO 3 understand the differences between climate change on a geologic time scale and recent climate change					
	CLO 3 understand the differences between climate change of a geologic time scale and recent climate change.

The residential field trip will be organized in the reading week. Students will need to pay for their own travel cost for the trip (please contact us for details & financial difficulty). It will be good to take this course before taking the final year project to have relevant hands-on experience. This course will be offered subject to a minimum enrollment no. and availability of teachers.

	2nd week:	Lectures and field trip	d field trips in the University of Hong K s in University Sains Malaysia, Penang field trips in Northeastern University, N	(Malaysia)	SV)		

This is an introductory overseas experiential learning course designed for all science students as free elective. it is especially suitable for students aiming to major in environmental science, ecology & biodiversity or biological sciences.

"Note: Field trips in New England (Boston, USA) will NOT be considered for assessment and, therefore, those field trips in USA are only exploratory in nature and are NOT part of any HKU's credit bearing course".

ENVS3202	Plant ph	ysiology and clima	te change (6 credits)	Academic Ye	ar 2020			
Offering Department	Biological	50						
Course Co-ordinator		Or J Wu, Biological Sciences <i>(jinwu@hku.hk)</i>						
eachers Involved		(Dr J Wu,Biological Sciences) In this course students will learn different quantitative methods for measuring and evaluating climate change						
Course Objectives	impacts o micromete the "breatl canopy, a of materia	impacts on terrestrial ecosystems. This interdisciplinary course draws on aspects of plant physiology ecology, micrometeorology and ecosystem ecology to describe impacts and patterns of global change. We will explore how the "breathing" of the biosphere impacts and is impacted by climate change by scaling plant physiology from leaf to canopy, and ultimately to global scales. Students will examine the biophysical processes that affect the exchange of material (water, CO2, and atmospheric trace gases) and energy between terrestrial biosphere and the atmosphere. In addition, students will learn cutting-edge techniques to help monitor, model and diagnose these						
Course Contents & Topics	1. Overvir Fundamen transpirati 3. Introduc plant meta etc). 4. Case	1. Overview of plant physiology, with particular focus on the interactions between plants and climate. 2. Fundamental biophysical principles that regulate the strengths of ecosystem metabolism (i.e. photosynthesis, transpiration and etc). 3. Introduction to various remote sensing and modelling approaches to quantify the impacts of climate variability on plant metabolism (e.g. proximate and satellite remote sensing, ecosystem modelling, biological scaling processes,						
Course Learning	On succes	ssful completion of this of	course, students should be able to:					
Outcomes	CLO 2 un	derstand how to access namics in plant metabo	tal principles that regulate terrestria s satellite data and how to utilize sa lism scientific understanding of plant p	tellite data to map and und				
			environmental problems associated

CAES1000	Core Un	niversity English (6 c	credits)	Academic Yea	ar 2020		
Offering Department	English			Quota			
Course Co-ordinator	Dr P Won	ig, English (pmtw2@hku.	.hk)				
Teachers Involved	(Dr P Wor	ng,Centre for Applied Eng	glish Studies)				
Course Objectives							
Course Contents & Topics	proficienc Common written ac for and us the Mood skills and students to	The Core University English (CUE) course aims to enhance first-year students' academic English language proficiency in the university context. CUE focuses on developing students' academic English language skills for the Common Core Curriculum. These include the language skills needed to understand and produce spoken and written academic texts, express academic ideas and concepts clearly and in a well-structured manner and search for and use academic sources of information in their writing and speaking. Four online-learning modules through the Moodle platform on academic speaking, academic grammar, academic vocabulary, citation and referencing skills and avoiding plagiarism will be offered to students to support their English learning. This course will help students to participate more effectively in their first-year university studies in English, thereby enriching their first-year experience.					
Course Learning			ourse, students should be able to	•

Course Objectives	skills for d science ar presenting spoken co	This 6-credit English-in-the-Discipline course aims to develop students' professional and technical communication skills for disciplinary studies in the sciences. There are three main components in the course: 1) Writing a popular science article 2) An oral presentation and 3) Independent language learning. Students will learn rhetorical skills for presenting and explaining scientific concepts to a cross-disciplinary and non-specialist audience in both written and spoken communication. Students will also be given an opportunity to design a personalised language learning plan, carry out the plan and reflect on their own independent language learning experience.					
Course Contents		vered in the cours		5 !			
& Topics	- Finding, - Compilin - Contrast - Writing fo - Organiz grammar; - Critically	Finding, evaluating and using appropriate academic source materials; Compiling an academic bibliography; Contrasting academic and popular genres of Science; Writing for a specific audience, including stance, shared knowledge, levels of formality; and Organizing and articulating ideas in an academically suitable format including appropriate vocabulary an rammar; and Critically examine their own language proficiency and analyze how that relates to their ability to perforr uccessfully within their discipline. Developing self-directed learning strategies.					
Course Learning							
Outcomes			rize disciplinary sources related to a spec				
	CLO 2 pr	CLO 2 produce texts (written and spoken) appropriate for a cross-disciplinary audience based on their chowledge					
	CLO 3 ide	entify their own lar	nguage learning needs and implement a	plan to meet those needs

	B Good to very good result. Usually demonstrates ability to summarize salient points accurately using mostly original language. Text mostly uses sources appropriately and demonstrates mostly accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are stated with some reference to evidence of planning and reflection although there is some misalignment between goals and self-study completed.						
	C Satisfactory to reasonably good result. Demonstrates some ability to summarize salient points using mostly original language although some inaccuracies are present. Text uses some sources appropriately and demonstrates appropriate but simple grammatical and lexical characteristics with some organizational flaws. Language learning needs are stated with some limited evidence of planning and reflection but goals and self-study are misaligned.						
	D Barely satisfactory result. Demonstrates a limited ability to summarize salient points from sources with inaccuracies and little original language. Text uses sources inappropriately and demonstrates grammatical inaccuracy, inappropriate lexical choices and organizational flaws. There is a minimal statement of language learning needs, planning and reflection with little or no apparent alignment between goals and self-study. Fail Unsatisfactory result. Does not demonstrate ability to summarize salient points identify, interpret or appropriately paraphrase reliable sources. Text uses no sources and demonstrates serious grammatical, lexical and/or organizational errors. Does not

Course Objectives	Mathematical calculations are necessary to explore important concepts in che students with a basic knowledge of some of the mathematics that will be used in		

	major curriculum to enable them to apply the mathematical skills to problems in chemistry. Students taking this course are expected to already have achieved level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or a pass in MATH1011 University Mathematics I. As far as possible, the mathematical concepts covered in this course will be put in the context of chemical problems. Applying mathematical tools, such as Algebra, Trigonometry, Calculus, Complex number, Vector, Matrix, Linear					
Course Contents & Topics			ch as Algebra, Trigonome solving chemistry probler		lex number, Ve	ector, Matrix, Linear
Course Learning Outcomes	CLO 1 c CLO 2 a CLO 3 l	On successful completion of this course, students should be able to: CLO 1 demonstrate knowledge and understanding of the essential mathematics used in chemistry CLO 2 apply mathematical skills to solve basic problems in chemistry CLO 3 be more capable of coping with a higher level of mathematics required in relevant courses for chemistry major, in particular, in physical chemistry courses				
Pre-requisites (and Co-requisites and Impermissible combinations)	Level 2	Pass in CHEM1042 or already enrolled in this course; and Level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011 or SCNC1111

Grade Descriptors (A+ to F)	A	applications through corre	understanding of key concepts a ctly analysing problems, clearly t computations carefully and corr	and elegantly presenting of	correct logical reaso	oning and argumentation
	В	Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.				
	С	Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.				
	D	Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.				
	Fail Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

CHEM2041	Principles of chemistry (6 credits)	Academic Year	2020				
Offering Department	Chemistry	Quota	140				
Course Co-ordinator	Dr I K Chu, Chemistry (ivankchu@hku.hk)						
Teachers Involved							
Course Objectives	This course is designed for non-chemistry major students covering basic pri	inciples of chemistry.					
Course Contents & Topics	Gas Laws and the Kinetic Theory of Gases Thermodynamics: work, heat, the zeroth and first law of thermodynamics, internal energy, enthalpy, heat capacities, thermochemistry, Hess's Law, Kirchhoff's Law, the second and third laws of thermodynamics, entropy Gibbs free energy, spontaneity, equilibrium, coupled reaction; Transport Phenomena: diffusion, viscosity of gases, diffusion in liquids and viscosity of liquids, ionic conduction; Chemical Kinetics: rate of reactions, orders of reactions, rate laws, reaction mechanism, experimental measurement of reaction rates, enzyme kinetics, enzyme inhibition, temperature effect on rates; Chemical Equilibrium; Equilibria in single-, and two component systems: phase transitions, phase diagrams and the phase rule, chemical potential; liquid/liquid systems; Introduction to acids and bases: calculation on concentration of different chemical species in a solution, diprotic and polyprotic acids, activity; Introduction to Spectroscopy: UV/Visible absorption spectroscopy, Beer-Lambert Law; IR Spectroscopy, identification of functional groups; NMR Spectroscopy, Larmor frequency & chemical shift, peak integral, spin-spir						
Course Learning Outcomes	On successful completion of this course, students should be able to:	CLO 1 explain the principles of the thermochemistry, chemical kinetics, chemical equilibrium, physical properties of solutions and gases					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM1042; and Not for students who have passed in CHEM2341, or have already enrolled in this course; and Not for students who have passed in CHEM2441, or have already enrolled in this course; and Not for students who have passed in CHEM2541, or have already enrolled in this course; and Not for Chemistry major students.

Offering Department	Chemistr	У	•	Quota	120		
Course Co-ordinator	Dr E C M	Tse (1st sem); Dr	I K Chu (2nd sem), Chemistry (ecmtse@hku.hk; ivankchu@hku.hk	:)		
Teachers Involved	,	// Tse,Chemistry) nu,Chemistry)	, , ,		,		
Course Objectives	The course aims to introduce the basic principles of chemical analysis. The principles of chemical measurement, including error analysis, quality assurance and calibration, data acquisition and processing, will be discussed with reference to methods of chemical analysis that are based on chemical equilibrium and stoichiometric reactions. The laboratory classes will include experiments demonstrating modern approaches of data acquisition and processing as well as chemical analysis based on chemical equilibrium.						
Course Contents & Topics	Measurer	ment: analog and		cy and precision, comparing mea	ns and deviations		
			n of analytical procedures chemical analysis: aqueous sol	lution and chemical equilibrium; ar	nalysis by acid-bas		
	reactivity,	, complexation rea	ctivity, precipitation reactivity	•	•		
Course Learning			f this course, students should be	e able to:			
Outcomes	CLO 1	explain the basic p	rinciples of chemical measurem	ents			
	CLO 2	CLO 2 explain the principles of classical methods of chemical analysis such as acid-base neutralization					
	CLO 3	CLO 3 use laboratory apparatus for chemical analysis					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in C	Pass in CHEM1042 (for students admitted in 2014-15 or before); Pass in CHEM1042; and Pass in CHEM1043, or already enrolled in this course (for students admitted in 2015-16 or thereafter)

CHEM2442	Fundamentals of organic chemistry (6 credits)	2020	
Offering Department	Chemistry	Quota	100
Course Co-ordinator	Dr P H Toy, Chemistry (phtoy@hku.hk)		
Teachers Involved	(Dr P H Toy, Chemistry)		
Course Objectives	The major objective of this course is to give the students a basic understanding the context of daily life. This will be achieved through the introduction of the chat that form the basis of organic molecules. The concepts presented in the lectur laboratory experiments.	emistry of organic	functional groups

Course Contents & Topics	The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones, carboxylic acids and their derivatives, and amines will be discussed, as will the general concepts of molecular						
-	structure, o	conformation and stere	ochemistry.		· ·	•	
Course Learning		On successful completion of this course, students should be able to:					
Outcomes	CLO 1	demonstrate basic und	lerstanding of the str	ucture of organic m	olecules		
	CLO 2	demonstrate basic und	lerstanding of the rea	ctivity of organic m	olecules		
	CLO 3	appreciate how organi	c chemistry plays an	important role in ev	eryday life		
Pre-requisites (and Co-requisites and Impermissible combinations)		HEM1042; and dents who have passed	d CHEM2441, or have	e already enrolled i	n this course.

CHEM2541	Introduc	tory physical chemistry (6 credits)	ademic Year	2020		
Offering Department	Chemistry		ıota	100		
Course Co-ordinator		ng (2nd sem), Chemistry (jinyao@hku.hk)				
Teachers Involved		ng,Chemistry)				
Course Objectives	Students a chemical reproperties dynamics.	se aims to provide a rigorous understanding of equilibrium thermodyr are required to apply mathematical skills (derivations and integrations) are reactions and related processes. Topics include the three laws of the of mixtures, solutions, chemical equilibrium, electrochemistry, rates of c Students will gain a good foundation of knowledge and skills for further st	nd basic physi ermodynamics chemical reacti	cs to understand thermodynamic ons and reactior		
Course Contents & Topics	Properties States of g	of Gases gases and the gas laws with applications.				
	Basic cond	Law of Thermodynamics cepts of work, heat transactions, enthall in relation to biochemistry and materials science.	py and adiaba	itic changes and		
		nd and Third Laws of Thermodynamics of spontaneous change, entropy and the Third Law of Thermodynamics.				
		xtures namic description of mixtures, partial molar quantities, and chemical po olute, regular solutions and ions in solution.	otentials of liqu	uids. Activities of		
	Chemical Equilibrium Spontaneous chemical reactions, the Gibbs energy minimum and equilibrium. Response of equilibria to pressure, temperature.					
	Electrochemistry Electrochemical cell, relationship of electrochemical potential to thermodynamic functions. Applications of electrochemistry in energy, material science, sensing.					
	Molecules in Motion Molecular motion in gases and liquids, kinetic model, collisions with surfaces, the rate of effusion and transport properties, conductivities of electrolyte solutions.					
	Rates of Chemical Reactions Empirical chemical kinetics including experimental methods, rates of reactions, integrated rate laws and temperature dependence of reactions and Reaction mechanism					
Course Learning Outcomes	CLO 1 de	esful completion of this course, students should be able to: emonstrate knowledge and understanding of the properties of gases, molechemical reactions	lecules in moti	on and the rates		
	CLO 2 understand and demonstrate knowledge of the three laws of thermodynamics					
	CLO 3 understand and apply the concepts of chemical equilibrium and the response of chemical equilibria to temperature and pressure					
	CLO 4 understand and demonstrate knowledge of electrochemistry and its relationship to thermodynamics, can build electrochemical cell and calculate thermodynamic functions from electrochemical reactions					
Due ve avieltee	CLO 5 demonstrate knowledge and understanding of basic reaction dynamics including reaction mechanism and how mechanism determines reaction rate law Pass in CHEM1042; and NOT for students who have passed CHEM2041, or already enrolled in this course (for					
Pre-requisites (and Co-requisites and Impermissible combinations)	students a Pass in Cl	newrouse, and NOT for students who have passed Chew2041, or alle idmitted in 2014-15 or before); HEM1042 and CHEM1043; and NOT for students who have passed CH e (for students admitted in 2015-16 or thereafter)				
Offer in 2020 - 2021			amination	May

Course Learning	On succe	ssful completion of t	this course, students should be able to:				
Outcomes	CLO 1 u	nderstand the basic	principles and applications of IR, UV/Vis	s, MS and N	IMR spectroscop	oic techniques	
	CLO 2 d	escribe and explain	the terminology of IR, UV/Vis, MS and N	NMR spectro	oscopies		
	CLO 3 p	erform chemical stru	ucture elucidation and analysis based on	uV/Vis, M	S and NMR spec	troscopic data	
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in a	ny CHEM2XXX leve	n course				
Offer in 2020 - 2021	N Off	er in 2021 - 2022 : N	V		Examination		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations.						
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems.

CHEM3242	Food and water analysis (6 credits)	Academic Year	2020			
Offering Department	Chemistry	Quota	50			
Course Co-ordinator	Dr W T Chan, Chemistry (wtchan@hku.hk)					
Teachers Involved	(Dr W T Chan, Chemistry)					
Course Objectives	To cover areas in the application and new methodology development in an water analysis.	alytical chemistry with t	focus on food and			
Course Contents & Topics	Chemical Ánalysis in Practicing Laboratories: Use of standard methods, guidelines and standards for water analysis; good laboratory practice; reliability and quality issues in chemical analysis. Food Analysis: Requirement of nutritional labeling; determination of food nutritional value (e.g. total prot sodium content); detection of food adulteration and contamination (e.g. presence of banned addition undeclared components); recent issues and case studies in food analysis.					
	Water Analysis: Water quality standards; sampling, pretreatment, storage of water samples; theory and technologies for field, laboratory and automated analysis of selected types of water (e.g. drinking water, recreational water, waste water).					
	Analytical Method Development: Selection, application and combination of analytical (e.g. sample digestion, solid phase extraction) and instrumental (e.g. GC, LC, MS) techniques for food and water analysis; method validation (e.g. recovery analysis, analysis of certified reference materials)					
Course Learning	On successful completion of this course, students should be able to:					

Outcomes	CLO 1 identify and determine errors and uncertainty of analytical results							
	CLO 2		en to control quality and ensure relia					
	CLO 3	demonstrate a gener	ral knowledge in food and water ana	alysis				
	CLO 4	CLO 4 understand issues in public health protection related to chemical analysis						
	CLO 5	carry out analytical to	echniques used in practicing food a	nd water laboratories				
Pre-requisites	Pass in (CHEM2041 or CHEM2	241 or CHEM2341 or CHEM2441 o	or CHEM2541.				
(and Co-requisites and Impermissible combinations)	Please note that School of Biological Sciences stipulates that students who have passed in CHEM3242 are not allowed to take BIOL3209 Food and nutrient analysis.

CHEM3243	Introductory instrumental chemical analysis (6 credits)	Academic Year	2020				
Offering Department	Chemistry	Quota	30				
Course Co-ordinator	Dr X Li, Chemistry (xiangli@hku.hk)						
Teachers Involved	(Dr K C J Wong,Pharmacology and Pharmacy) (Dr X Li,Chemistry)						
Course Objectives	This course is designed for non-chemistry major students covering basic prir for chemical analysis. This course provides a general foundation for furth environmental sciences.						
Course Contents & Topics	Optical methods: Beer's Law; UV-visible, infrared, and atomic spectrometry; fluorescence; atomic mass spectrometry; grating spectrometer; photon detectors and thermal detectors. Separation methods: partition; chromatography theories; high performance liquid chromatography (HPLC) and ga chromatography (GC); instrumental set up of HPLC and GC. Mass spectrometry: fundamental concept of mass spectrometry; electrospray ionization (ESI) and matrix-assiste laser desorption ionization (MALDI); time-of-flight (TOF) and quadrupole (Q) mass analyzers. NMR: basic principle of nuclear magnetic resonance. Analysis and quality assurance: statistical analysis of small sets of data, control chart.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 explain the principles of the optical methods, separation methods, mass spectrometry, and NMR						
	CLO 2 describe the basic experimental set up and the properties of the basic components of the instruments used in the laboratory classes						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM2041 or CHEM2241; and Not for students who have passed CHEM3241, or have already enrolled in the	nis course.					
Offer in 2020 - 2021	Y 2nd sem Offer in 2021 - 2022 : Y	Examination	May				
Grade Descriptors (A+ to F)	 Demonstrate thorough grasp of the subject Show evidence of strong analytical abilities, logical and independent thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations Demonstrate highly proficient lab skills and techniques and critical use of data and results to draw appropriate and insightful conclusions Demonstrate highly effective organization and presentation skills.

Offering Department	Chemistry	,	<u> </u>	Quota	300			
Course Co-ordinator	Dr X Y Li	(1st sem); Prof D Yang	(2nd sem), Chemistry (xiaoyuli@hk	ru.hk; yangdan @hku.hk)				
Teachers Involved		hemistry) ,Chemistry) ang,Chemistry)						
Course Objectives	As a cont chemistry	As a continuation from CHEM2441 Organic Chemistry I, this course aims to provide a solid foundation of organic chemistry together with CHEM2441. It focuses primarily on the basic principles to understand the structure and eactivity of organic molecules, with examples illustrating the role of organic chemistry in daily life and industry.						
Course Contents & Topics	amines; a	Chemistry of common organic functional groups: ketones and aldehydes; carboxylic acids and their derivatives amines; aromatic compounds. Principles of organic synthesis. Detailed considerations of reaction mechanisms Spectroscopic tools (UV-Vis, IR, NMR, and MS) for characterization and identification of organic compounds.						
Course Learning	On succe	ssful completion of this	course, students should be able to:					
Outcomes	CLO 1 dr	aw correct structural rep	presentations of organic molecules					
			ciples of structure and reactivity of o	•				
			ganic compounds based on spectro	•				
	cc		isms for transformations of common ketones, carboxylic acids, acyl hali					
	CLO 5 ap	preciate the importance	e of organic chemistry in daily life					
	CLO 6 de	evise synthetic pathways	s to organic compounds using funct	ional group chemistry				
Pre-requisites (and Co-requisites and Impermissible combinations)	[Remarks students	who admitted in 2014-	n changed to lecture-based cours 15 or before, they must enroll als o meet the Chemistry Major requirer	o CHEM3443 for enrollin				
Offer in 2020 - 2021		sem 2nd sem Offer		Examination	Dec May			
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations.							
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems.							
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems							
Course Type	Lecture-h	ased course	intes, logical and conferent trilliking. Show ve	if y little of 110 ability to apply know	neage to solve problems.

Course Objectives	and the chemistry multistep	To provide students with intensive hands-on training of experimental chemistry techniques on organic rand the opportunity to develop analytical and critical thinking skills through scientific investigations in chemistry experiments. The course focuses on the practical aspects of a variety of organic reactions, inclumultistep syntheses. Chromatographic, instrumental, and spectroscopic techniques are also discussed holistic training of experimental organic chemistry.					
Course Contents				laboratory safety pra	ctice: preparation		
& Topics	purification	The course will include the following laboratory skills and practices: laboratory safety practice; prepara purification, and characterization of organic compounds; gas and liquid chromatography; ultraviolet-vi spectrophotometry; infrared spectroscopy; NMR spectroscopy and melting point determination					
Course Learning	On succe	essful completion of	this course, students should be able to:				
Outcomes	L	usage of chemicals	practice of laboratory safety and exercise		safe handling and		
			analyze the results of chemical experiment				
		apply modern instrur he results	mentation techniques to characterize organi	c compounds and drav	v conclusions from		
			ults of their work to others				
			n-solving skills, critical thinking and analytica	l reasoning			
Pre-requisites			s in CHEM3441, or already enrolled in this

CHEM3542	Physical chemistry: statistical thermodynamics and kinetics theory (6 credits) Academic Yea					
Offering Department	Chemistry	Quota	50			
Course Co-ordinator	Dr. J Yang, Chemistry (juny@hku.hk)					
Teachers Involved	(Dr J Yang,Chemistry)					
Course Objectives	The course presents fundamental principles and topics on statistical thermod provide a solid foundation for students intending to further their studies in physical provides a solid foundation for students intending to further their studies in physical provides a solid foundation for students intending to further their studies in physical provides a solid foundation for students.					
Course Contents & Topics	Principles of Statistical Thermodynamics - Thermodynamic laws - Ensembles and partition functions: microcanonical, canonical and grand-can - Systems of independent molecules: ideal gas - Molecular degrees of freedom: translation, rotation, vibration, and electronic - Ideal gas mixture: chemical equilibrium, binding, and titration - Quantum statistics Chemical equilibrium and kinetics theory - Rate theory: collision theory, transition state theory, electron transfer	onical				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand and use the terminology and nomenclature in statistical thermodynamics and topics discussed in the course CLO 2 demonstrate knowledge and understanding of basic concepts in statistical thermodynamics CLO 3 understand correlation between macroscopic observables and microscopic statistical model systems					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM2541		·			

Offer in 2020 - 2021	Y 2nd	sem Offer in 2021 - 2	2022 : Y	Exam	nination	May
Grade Descriptors (A+ to F)	Thorough mastery at an advanced level of extensive knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of strong analytical / critical abilities and logical thinking. Can apply the knowledge to practical questions in Physical Chemistry.					
	В	Substantial command of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate evidence of analytical / critical abilities and logical thinking. Understand the scope of Physical Chemistry questions that can be applied with the knowledge.				
	С	General but incomplete cor analytical thinking. Can app		statistical thermodynamics and reaction d liar situations.	ynamics. Der	nonstrate evidence of
	D	Partial but limited command of knowledge of knowledge of statistical thermodynamics and reaction dynamics. Demonstrate limited evidence of analytical thinking. Understand the question to be solved with knowledge.				
	Fail	Little or no evidence of com	nmand of knowledge of st	atistical thermodynamics and reaction dyr	namics.

CHEM4144	Advanced materials (6 credits) Academic Year 2020					
Offering Department	Chemistry	Quota	30			
Course Co-ordinator	Dr E C M Tse, Chemistry (ecmtse@hku.hk)					
Teachers Involved	(Dr E C M Tse,Chemistry) (Dr K Okuro,Chemistry)					
Course Objectives	This course is a continuation from Introdution to Materials Chemistry. I on materials chemistry and application of materials in advanced tech materials chemistry will also be discussed.					
Course Contents & Topics	Advanced polymerization methods: copolymerization and applications of copolymers, coordination polymerization, control of stereochemistry in polymers; ionic and radical living polymerization. Materials for specialty applications: high strength materials; high temperature polymers, polyelectrolytes, conducting polymers, optical information storage, sensors, photonics, electronics, nanotechnology. Advanced materials characterization techniques.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 describe the mechanisms and kinetics of copolymerizations, coordination polymerizations, and living polymerizations					
	CLO 2 identify examples of some engineering polymers for high temperature/high strength applications, and how are their properties affected by the molecular structures					
	CLO 3 demonstrate knowledge in advanced materials characterization techniques					
	CLO 4 understand the working principles of materials for information sto	orage and opto-electronic	applications

		ang,Chemistry)					
0		Chemistry)	La de la de la Manada de la companya		.:-!:		
Course Objectives	Modern chemistry is thought to be the "central science" as it plays a critical role in related biological, physical medical, and engineering disciplines. This course aims to introduce students to the newest concepts and technological breakthroughs in chemical sciences. Throughout the course, students will be introduced to how the interplay among molecules, materials, and interfaces leads to unprecedented functionalities that contribute to innovations in biology and medicine, smart materials, and sustainable energy schemes.						
Course Contents			interdisciplinary area of chemistry with bio		es. Covered topi		
& Topics	stimuli-res conversio materials,	include chemical genetics, epigenetics and proteomics; chemical biology for drug discovery and development; stimuli-responsive nanomaterials; autonomous macromolecular motion; future power landscape; renewable energy conversion and utilization. Examples in protein posttranslational modifications, active colloidal, thermoelectric materials, molecular machines, advanced rechargeable batteries, and next-generation fuel cells and electrolysers will be discussed.					
Course Learning		n successful completion of this course, students should be able to:					
Outcomes		•	nt principles and topical trends in chemical	sciences			
	CLO 3 in	CLO 2 demonstrate understanding of future directions in biomedical chemistry, nanomatertials, and energy sciences and applying this knowledge in comparing and contrasting various emergent technologies CLO 3 interpret and analyse recent published research data in the field of chemistry and extract relevant chemical information to explain the observed properties and phenomena associated to the chemical systems					
Pre-requisites and Co-requisites and Impermissible combinations)	Pass in CHEM3341 and CHEM3441.						
Offer in 2020 - 2021	Y 2nd	d sem Offer in 20	021 - 2022 : Y	Examination	May		
Grade Descriptors (A+ to F)	A	Demonstrate thorough knowledge and understanding of essential facts, concepts and principles in chemical sciences, especially those relating to biomedical chemistry, nanomaterials, and energy sciences. Show strong ability to apply and integrate knowledge in chemical sciences in explaining the formation and properties of chemical species and in designing different chemical systems. Show strong ability to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of chemical systems.					
	Demonstrate substantial knowledge and understanding of essential facts, concepts and principles in chemical sciences, especially those relating to biomedical chemistry, nanomaterials, and energy sciences. Show evidence to apply and integrate knowledge in chemical sciences in explaining the formation and properties of chemical species and in designing different chemical systems. Show evidence to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of chemical systems.						
	C Demonstrate general but incomplete amount of knowledge and understanding of essential facts, concepts and principles in chemical sciences, especially those relating to biomedical chemistry, nanomaterials, and energy sciences. Show some ability to apply and integrate knowledge in chemical sciences in explaining the formation and properties of chemical species and in designing different chemical systems. Show some ability to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of chemical systems.						
	Demonstrate partial but incomplete command of knowledge and understanding of essential facts, concepts and principles in chemical sciences, especially those relating to biomedical chemistry, nanomaterials, and energy sciences. Show evidence of limited ability to apply and integrate knowledge in chemical sciences in explaining the formation and properties of chemical species and in designing different chemical systems. Show evidence of limited ability to analyse and interpret experimental data to draw appropriate conclusions relating to the advanced principles and properties of chemical systems.						
	Fail Demonstrate little or no evidence of command of knowledge and understanding of essential facts, concepts and principles chemical sciences, especially those relating to biomedical chemistry, nanomaterials, and energy sciences. Show little or a ability to apply and integrate knowledge in chemical sciences in explaining the formation and properties of chemical species a in designing different chemical systems. Show little or no ability to analyse and interpret experimental data to draw appropria conclusions relating to the advanced principles and properties of chemical systems.

Grade Descriptors (A+ to F)	A	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities, logical thinking and capability to apply knowledge learnt to solv a wide range of complex issues and problems related to chemical analysis. Apply highly effective organization and presentatio skills as shown in class work.				
	В	Demonstrate a substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and capability to apply knowledge learnt to solve a wide range of complex issues and problems related to chemical analysis. Apply effective organization and presentation skills as shown in class work.				
	С	Demonstrate a general command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and ability to apply knowledge learnt to solve a wide range of complex issues and problems related to chemical analysis. Apply effective organization and presentation skills as shown in class work.				
	D	Demonstrate a partial but limited command of knowledge and skills required for attaining some of the course learning outcomes in Food and Water Analysis. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems related to chemical analysis. Apply limited or barely effective organization and presentation skill as shown in class work.				
	Fail Demonstrate little or no evidence for the command of knowledge and skills required for attaining the course learning outcome: Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solv problems related to chemical analysis. Organization and presentation skills are minimally effective or ineffective as shown i class work.

CHEM4341	Advar	ed inorganic chemistry (6 credi	ts)	Academic Year	2020				
Offering Department	Chemis	y	•	Quota	50				
Course Co-ordinator	Prof C I	Che, Chemistry (cmche@hku.hk)							
Teachers Involved	(Prof H	l Che,Chemistry) Sun,Chemistry) / W Yam,Chemistry)							
Course Objectives	topics in	This course is a continuation from Intermediate Inorganic Chemistry, giving further and more detailed treatment to topics in Inorganic Chemistry and new areas of interest. Problem based learning on selected advance topics will be introduced in the later part of the course. This course also aims to prepare students for graduate work.							
Course Contents & Topics	bonds,	Selected advanced topics of current interest. Examples include metal-metal bonds and metal-ligand multiple bonds, inorganic and supramolecular photochemistry, lanthanide chemistry, bio-inorganic and medicinal chemistry, and activation of small molecules by metal complexes.							
Course Learning	On successful completion of this course, students should be able to:								
Outcomes	CLO 1 understand the principles and concepts of inorganic and supramolecular photochemistry								
	CLO 2 understand the electronic structure and bondings of novel metal-metal and metal-ligand multiple bonded metal complexes								
	CLO 3 understand and realize the activation of small molecules by transition metal complexes and realize the importance of such activation in chemical catalysis of global interest, green chemistry and energy saving reactions								
	CLO 4	CLO 4 understand the role of metal complexes in bio-inorganic and medicinal chemistry

Offering Department	Chemistry			Quota	50		
Course Co-ordinator	Dr Huang	Z X, Chemistry (huanga	zx@hku.hk)				
Teachers Involved	(Dr Huang	Z X,Chemistry)					
Course Objectives	To introduce aspects of modern organic reactions with relevance to and in the context of the synthesis of natural products, drugs and medicinal chemistry to provide an integrated approach to the subject, and to provide training advanced organic laboratory skills, and further hands-on experience in synthesis and characterization, as preparation for graduate studies or research in organic chemistry.						
Course Contents & Topics	Building on the organic chemistry covered in the foundational courses CHEM1003 and CHEM2402, this coupresent modern synthetic methods and synthetic planning. The course is organized into units based on targ molecules. In each unit, the chemical biology of these compounds are briefly presented and the synthethese molecules are introduced, accompanied by in-depth discussions of the reactions involved with empth their mechanisms, selectivity, stereochemistry, scope and limitations. Concept of synthetic design incretrosynthetic analysis, stereoselectivity and enantioselective control elements will be emphasized. A lab section provides training in the practical skills of synthesis.						
Course Learning			course, students should be ab	le to:			
Outcomes	CLO 1 un	derstand the rationale emistry		ms of various reactions and re	eagents in organic		
	CLO 3 pe	rform organic synthesis		level of technical difficulty, using	g additional skills ir		
		0	and literature search, to learn	chemistry independently			
Pre-requisites (and Co-requisites and Impermissible combinations)		HEM3441; or HEM3441 (without lab c	component) and CHEM3443				
Offer in 2020 - 2021	Y 2nd	sem Offer in 2021 - 2	2022 : Y	Examination	May		
Grade Descriptors	Α	Demonstrate a thorough m	astery at an advanced level of know	ledge and understanding of concepts, p	principles, reactions an		
(A+ to F)		mechanisms related to synthetic organic chemistry. Show a strong ability to integrate knowledge and theory, and a strong abil to analyze novel synthetic organic chemistry situations and problems. Show a critical use of knowledge and data to apply to t solution of novel and complex synthetic problems. Demonstrate highly effective organization and application of lab skills a techniques in synthetic experiments.					
	В	Demonstrate a substantial command of knowledge and understanding of concepts, principles, reactions and mechanisms relate to synthetic organic chemistry. Show evidence of ability to integrate knowledge and theory, and evidence of ability to analyz synthetic organic chemistry situations and problems. Show a correct use of knowledge and data to apply to the solution of son novel and most familiar synthetic problems. Demonstrate effective organization and application of lab skills and techniques synthetic experiments.					
	Demonstrate a general but incomplete command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show evidence of some ability to integrate knowledge and theory, and evidence of some ability to analyze synthetic organic chemistry situations and problems. Show a correct use of knowledge to apply to the solution of most familiar problems. Demonstrate moderately effective organization and application of lab skills and techniques in synthetic experiments.						
	Demonstrate a partial but limited command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show evidence of a limited ability to integrate knowledge and theory, and a limited ability to analyze familiar situations and problems. Show some correct but erroneous use of knowledge to apply to the solution of most familiar problems. Demonstrate partially effective organization and application of lab skills and techniques in synthetic experiments.						
	Fail Demonstrate little or no evidence of command of knowledge and understanding of concepts, principles, react mechanisms related to synthetic organic chemistry. Show little or no evidence of ability to integrate knowledge and synthetic organic chemistry, and little or no ability to analyze most familiar situations and problems. Show mostly error of knowledge to apply to the solution of familiar problems. Demonstrate minimally effective organization and applications and techniques in synthetic experiments.

Grade Descriptors (A+ to F)	Α							
	B Substantial command of a broad range of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of analytical and critical abilities and logical thinking, with ability to apply knowledge to practical problems in physical chemistry.							
	Command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of some analytical and critical abilities and logical thinking, with ability to apply knowledge to familiar problems in physical chemistry.							
	Partial but limited command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of some coherent analytical and critical abilities and logical thinking, with limited ability to apply knowledge to practical problems in physical chemistry.							
	Fail Little or no evidence of command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Lack of analytical and critical abilities and logical thinking, with very little or no ability to apply knowledge to practical problems in physical chemistry.

CHEM4544	Electrochemical science and technology (6 credits)	Academic Year	2020				
Offering Department	Chemistry Quota 36						
Course Co-ordinator	Prof G K Y Chan, Chemistry (hrsccky@hku.hk)						
Teachers Involved	(Prof G K Y Chan,Chemistry) (Visiting Professor,Chemistry)						
Course Objectives	To understand the science of electrochemistry, methods to characterise electrochemical cells, and factors affecting electrochemical applications and technologies.						
Course Contents & Topics	Thermodynamics, kinetics, and transport of electrochemical processes. Electrochemical characterization by controlled potential, current, and hydrodynamics. Voltammetry for analytical chemistry. Electrochemical power sources, sensors, synthesis and separation processes. Electrolytes, separators, and electrode materials. Models of electrochemical processes.						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 Understand the thermodynamic and kinetics of a charge transfer process at the electrode-electrolyte interface and transport of relevant species in molecular and macroscopic scales. CLO 2 Apply voltammetry methods to characterize an electrochemical process. CLO 3 Correlate performance of electrochemical cells to materials, design, and operation parameters.						
Pre-requisites (and Co-requisites and Impermissible	Pass in CHEM3241 or CHEM3541 or CHEM3542						

combinations)						
Offer in 2020 - 2021		offer in 2021 - 2022 : Y		Examination		
Grade Descriptors (A+ to F)	A	Demonstrate thorough knowledge of electrochemical science and technology, and mastery of skills required for attaining all of the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to solve problems in a wide range of complex, familiar and unfamiliar situations. Critical use of data and sourcing of references. Apply highly effective organizational and presentational skills.				
	В	Demonstrate substantial knowledge of electrochemical science and technology and command of skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems in familiar and some unfamiliar situations. Correct use of data and sourcing of references. Apply effective organizational and presentational skills.

CHEM4911		ne experience for ia (6 credits)	chemistry undergraduates:	Academic Yea	r 2020		
Offering Department	Chemistry	,		Quota			
Course Co-ordinator	Dr A P L 1	Γong, Chemistry <i>(apl</i>	ltong@hku.hk)				
Teachers Involved	(Various t	eachers in the Depa	rtment,Chemistry)				
Course Objectives	students with that he in classro	This project-based course with the theme of Chemistry for a Better Living in a Foreseeable Future aims to provide students with a capstone experience. It aims to enable students to think what are the key issues the world is facing with that have to be solved by chemistry and related technology. Students will need to apply what they have learnt in classroom and conduct literature search regarding advanced chemistry research and related technology under development to solve the problems identified in their project using various channels.					
Course Contents & Topics	No formal teaching. It is expected that students are actively engaged and should devote 120-140 hours to working on this project. Students will work in groups of two or three, under the supervision of the course coordinator. The duration of the project will be two to three months. The time of running this project-based course is in the summer (May - August).						
Course Learning			nis course, students should be able to:		() 0 ,		
Outcomes	CLO 3 wo	CLO 1 observe and evaluate the various issues we are facing with and determine ways in which chemistry can be used to solve the problems CLO 2 integrate theory and practice, and to understand limitations of their current knowledge CLO 3 work in a team and to collaborate with people with different background CLO 4 express scientific ideas effectively in both written and oral forms CLO 5 develop further logical, critical thinking and creativity					
			appreciation for chemistry as to its releva	•			
Pre-requisites (and Co-requisites and Impermissible combinations)	Students are expected to have satisfactorily completed all introductory chemistry disciplinary core courses and at least 24 credits of advanced level disciplinary core/elective chemistry courses in the Chemistry Major. Students who are interested in taking the course should contact the course coordinator for application in April - May. Late application may not be considered. This capstone course is for Chemistry Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.						
Offer in 2020 - 2021		nmer Offer in 2021	•	Examination	No Exam		
Grade Descriptors	A		grasp of the subject. Show strong analytical and				
(A+ to F)	to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Show integration of the full range of appropriate theories, principles, evidence and techniques. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.] B Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Show general integration of theories, principles, evidence and techniques. Apply effective organizational and presentational skills. C Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Show some partial integration of theories, principles, evidence and techniques. Apply moderately effective organizational and presentational skills.						
	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Show limited integration of theories, principles, evidence and techniques. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Show little or no or inapt integration of theories, principles, evidence and techniques. Organization and presentational skills are minimally effective or ineffective.

EASC1401	Blue Planet (6 credits)	Academic Year	2020			
Offering Department	Earth Sciences	Quota				
Course Co-ordinator	Dr P Bach, Earth Sciences (pabach@hku.hk)					
Teachers Involved	(Dr P Bach,Earth Sciences)					
Course Objectives	The aim is to provide those students who are taking a first course in Earth System Sciences with a fundamental knowledge of how our diverse and living planet Earth works with weaving together an understanding of the dynamic and interactive processes in the Earth's lithosphere, hydrosphere, biosphere and atmosphere. In addition, students should become familiar with the way the study of Earth Sciences blends observation, information, hypothesis, communication and decision making for a better understanding of the future of our planet.					
Course Contents	This introductory course will introduce and discuss the following topic	s:				
& Topics	Introduction to Earth Systems and Habitable Planet Earth, - Lithosphere (Earth Materials, Plate Tectonics, Volcanism, Earthquakes, Surface Processes and Rock Cycle) - Hydrosphere (Surface- and Groundwater, Oceans and Water Cycle) - Atmosphere (Composition, Weather, Climate, Green House Effect, Oxygen Cycle) - Biosphere (Life, Ecosystems, Evolution and Extinction, Geochemical Cycles, - Concepts and Evolution of Dynamic Earth Systems, Human Interactions with Planet Earth (Earth Resources, Geological Hazards, Climate Change, Human Impact and Environmental Changes)					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 understand the terminology and nomenclature appropriate to the introductory study of Earth Sciences					
	CLO 2 demonstrate knowledge and understanding of the underlying concepts associated with the study of the Earth Systems and their dynamic interactive processes					
	CLO 3 understand the extent and nature of global change and enviro	onmental concerns around us	3			
	CLO 4 demonstrate the ability to make and record observations of	on Earth Systems processes	s in natural field			

	е	nvironments					
	CLO 5 develop skills to synthesize observation and knowledge in a report in essay form						
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL						
Offer in 2020 - 2021	Y 1st	t sem 2nd sem Offe	r in 2021 - 2022 : Y	Examinatio	n Dec May		
Grade Descriptors (A+ to F)	Α	Demonstrate thorough mastery of extensive knowledge / competencies/skills at an Earth Science introductory level required for attaining most or all of the course learning outcomes. Shows clear understanding of introductory terminology and concepts and strong abilities to apply and relate them in a range of complex interactive processes between Earth Systems. Demonstrates highly effective observational skills in field as well as organizational skills to present important observations made and uses them to draw appropriate and insightful conclusions with an impressive level of depth and original thoughts.					
	В						
	C Demonstrate general but incomplete command of knowledge / competencies/skills at an Earth Science introductory level required for attaining most of the course learning outcomes. Shows evidence for some understanding of introductory terminology and concepts and some abilities to apply and relate them in some interactive processes between Earth Systems. Demonstrates moderately effective observational skills in field as well as organizational skills to present observations made mostly correct but with some erroneous use and results to draw appropriate conclusions.						
	D Demonstrate partial but limited command of knowledge / competencies/skills at an Earth Science introductory level required for attaining some of the course learning outcomes. Shows evidence of limited understanding of introductory terminology and concepts and limited abilities to apply and relate them in some interactive processes between Earth Systems. Demonstrates limited observational skills in field. Applies limited or barely effective organizational and presentational skills to present observed details and facts correctly. Limited ability to draw appropriate conclusions.						
	Fail	for attaining the course I concepts and little or no a observational skills in field	idence of command of knowledge / compete earning outcomes. Shows little or no evit bilities to apply and relate them in interactiv . Applies incoherent organizational and poo le to draw appropriate conclusions.	dence of understanding of into we processes between Earth Sy	oductory terminology and estems. Demonstrates poo

EASC1404	Early life on earth (6 credits)	Academic Year	2020
Offering Department	Earth Sciences	Quota	50

Course Co-ordinator	TBC, Earl	th Sciences ()				
Teachers Involved						
Course Objectives	This course focuses on the origins of life. It provides an overview of Earth's early environments, how life is thought to have originated on Earth, and how the Earth's dynamic environment impacted the origin of life. This course will also provide a basic overview of habitable environments on Earth and elsewhere in the Solar system.					
Course Contents & Topics	This course will cover the following topics: the composition and properties of the early Earth and Earth's first oceans; the central role of water in life; abundance of biological elements on the early Earth and elsewhere in the Solar system; possible conditions for the synthesis of life's first building blocks; the (geo)chemical roots of early life on Earth and the search for life's signatures in the solar system and beyond.					
Course Learning			course, students should be able to:	,		
Outcomes	CLO 2 ex	xplain and describe the nolecules	al and chemical conditions on the extreme geocher role of water and extreme geocher ifferent geological environments pla	mical conditions in the syr		
	CLO 4 id	entify challenges associa	ated with each step in the origins of	life		
	CLO 5 in	vestigate a current origir	ns of life topic			
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL

EASC1405	Peaceful use of nuclear technologies (6	credits) Aca	demic Year	2020			
Offering Department	Earth Sciences	Quo	ota				
Course Co-ordinator	Dr S H Li, Earth Sciences (shli@hku.hk)						
Teachers Involved	(Dr S H Li,Earth Sciences)						
Course Objectives		To provide students with the science backgrounds and knowledge on application of nuclear technologies in daily life and to invoke an awareness of current applications of nuclear sciences by case studies.					
Course Contents & Topics	engineering, biological, physical and social scie	Man and radiation; principles of nuclear technology; case studies of nuclear techniques applied in arts, engineering, biological, physical and social sciences; radiation on earth and beyond; industrial application of nuclear techniques; nuclear techniques in medical study. Future development in nuclear technologies.					
Course Learning	On successful completion of this course, students	should be able to:					
Outcomes	CLO 1 recognize the science fundamentals in nuclear technologies						
	CLO 2 explain and describe the principles of nuclear technologies applied						
	CLO 3 have the awareness of current applications of nuclear sciences						
	CLO 4 demonstrate the knowledge and understanding of the underlying concepts associated with nuclear technologies						
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL

EASC2402	Field and laboratory methods (6 credits)	Academic Year	2020		
Offering Department	Earth Sciences	Quota	40		
Course Co-ordinator	Dr J A King, Earth Sciences (jessking@hku.hk)				
Teachers Involved	(Dr J A King,Earth Sciences) (Dr M C Cheung,Earth Sciences)				
Course Objectives	This course is hands-on field and laboratory-based that introduces basic ge mapping techniques and the use of geological equipment and air photogratural environment of Hong Kong.				
Course Contents & Topics	- Maps and map reading, map reference system (lectures and class practice) - Interpretation of geological and topographic maps: topographic and geological cross sections, geological structures from outcrop patterns and structural contour lines (horizontal, inclined strata, folded, and faulted strata, unconformities (lectures and class practice) - Interpretation and use of air photographs (class practice) - Field observation and description of rocks, outcrops (with fieldtrips in Hong Kong) - Field observation and description of landscape units (with fieldtrips in Hong Kong) - Laboratory equipment and technicues (lectures and lab sessions)				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 read geological maps and comprehend 3-D geological structures fro CLO 2 construct a geological cross section showing interpreted subsurfal landscape units CLO 3 demonstrate techniques for basic field observations, measurements	ace rocks and structu			

	CLO 4 create and interpret an internally consistent geological and landscape maps from a set of collected field observations and data					
	CLO 5 develop skills in integrating geological field data in determining a geological and landscape history and writing a structured field report					
	CLO 6 L	CLO 6 understand to the basics of a series of laboratory techniques for geological and environmental st

Additional Course Information	(November) due to the University	by any chance it is not possible for the group presentations to carried out, as was the case in Semester 1 2019 ovember) due to the University campus activities being suspended, the associated individual essay mark will be creased from 25 to 30 and the group presentation score will be dropped.					

EASC2406	Geoch	emistry (6 credits)		Academic Yea	r 2020				
Offering Department	Earth So	ciences		Quota					
Course Co-ordinator	Dr S H L	i, Earth Sciences (shl	i@hku.hk)						
Teachers Involved	(Dr S H	Li,Earth Sciences)							
Course Objectives		This course provides an understanding of the fundamentals and approaches for geochemical analysis. It introduces students to the basic chemical principles, modern techniques and quantitative analysis for studying the earth.							
Course Contents & Topics	- Differer - Aqueor - Trace e - Chemis - Chemic - Radioa - Stable - Oxidati	- Physical and chemical state of the earth, - Differentiation of and cosmic abundance of elements, - Aqueous solutions and chemistry of natural water, - Trace element, - Chemistry of igneous rocks, - Chemical controls on soil formation, - Radioactive isotope geochemistry, - Stable isotope geochemistry, - Oxidation and reduction, - Chemical weathering							
Course Learning	On succ	successful completion of this course, students should be able to:							
Outcomes	CLO 1 CLO 2 CLO 3	CLO 1 demonstrate an understanding of basic principles of geochemistry and their applications to geological studies CLO 2 describe element distribution in major rocks CLO 3 apply the principles of isotopes to dating and studies of petrogenesis and climate changes CLO 4 demonstrate knowledge of the chemical weathering processes							
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in EASC1402							
Offer in 2020 - 2021	Y 19	st sem Offer in 2021	- 2022 : Y	Examination	Dec				
Grade Descriptors (A+ to F)	A Demonstrate extensive knowledge and skills at an advanced level required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, and ability to apply highly effective lab skills and techniques to solve problems. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.								
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply effective lab skills and techniques to solve problems. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.								
	С	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply moderately effective lab skills and techniques to solve problems. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities, and limited ability to apply partially effective lab skills and techniques to solve problems. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.								
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking, and ability to apply minimally effective or ineffective lab skills and techniques to solve problems. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Course Co-ordinator	Dr M H Lee, Earth Sciences (mhlee @hku.hk)				
Teachers Involved	(Dr J Michalski,Earth Sciences) (Dr M H Lee,Earth Sciences)				
Course Objectives	This course provides students with an introduction to the origin, evolution, structure matter in the Solar System condensed in the form of planets, satellites, comets, as emphasis on surface features, internal structures and histories from a geologi incorporates the findings from recent space investigations, planetary imagery, remote to extraterrestrial features into a fascinating portrayal of the geological activities and	steroids and ring ical point of vi ote sensing and	gs, with particula ew. The course Earth analogue		
Course Contents & Topics	Formation, evolution, internal structure and surface processes of planetary bodies; the terrestrial planets Mercury, Venus, the Earth-Moon system, and Mars; the giant planets Jupiter, Saturn, Uranus, and Neptune and their moons; Pluto, Charon and the Kuiper Belt; asteroids, meteorites, comets and the Oort cloud; Origin of our Solar System.				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe the basic features of our Solar System and its constituents	-			

Required/recommended reading and online materials	N. McBri	Test 15 CLO 1,2,3,4 I. McBride and I. Gilmour: An Introduction to the Solar System (Cambridge University Press, 2004)

EASC3412	Earth resources (6 credits)	Academic Year	2020
Offering Department	Earth Sciences	Quota	40
Course Co-ordinator	Prof M F Zhou, Earth Sciences (mfzhou@hku.hk)		
Teachers Involved	(Prof G Zhao,Earth Sciences) (Prof M F Zhou,Earth Sciences)		
Course Objectives	To provide students with knowledge about the classification of mineral dep understand the processes that lead to their formation; to gain hand on expe addition, students should gain knowledge about the world wide distributions of n	rience with minin	g procedures. In
Course Contents & Topics	Concepts in mineral deposits and mining industrial; exploration and mining deposit, mineral deposit models, magmatic oxide and sulfide deposits, sk volcanogenic massive sulfide deposits, coal, oil and gas, resource evaluation.	,	
Course Learning	On successful completion of this course, students should be able to:		

Outcomes	CLO 1	understand the terminological	ogy and nomenclature in t	he mining industrial and mineral dep	osits	
	CLO 2	understand factors that a	are key to the formation of	f metallic and industrial resources		
	CLO 3	understand the controls	of earth resources in a glo	obal scale		
	CLO 4	understand methods of e	exploration and exploitatio	n for mineral deposits		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E	EASC2402 or EASC3402	2			
Offer in 2020 - 2021	Y 1s	t sem Offer in 2021 - 2	022 : Y	Examination	Dec

	В					
	С	C Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.				
	Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail	No or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability for field observation and for solving problems. Poor organization and presentational skills.				
Course Type	Lecture v	with laboratory componer	nt course			
Course Teaching	Activitie	es	Details		No. of Hours	
& Learning Activities	Lectures	3	2 hour lectures per week for 10 weeks		20

EASC3415	Meteorology (6 credits)	Academic Year	2020			
Offering Department	Earth Sciences	Earth Sciences Quota				
Course Co-ordinator	Dr Jed Kaplan, Earth Sciences (jkaplan@hku.hk)					
Teachers Involved	(Dr J O Kaplan,Earth Sciences)					
Course Objectives	This course will cover the five major components of meteorology: (1) thermodynamics, (2) physical meteorology, (3) observation and analysis, (4) dynamics, and (5) weather systems (cyclones, fronts, thunderstorms). The aim is to provide students with a modern understanding of drivers and behavior of weather by examining the processes that govern atmospheric structure and behavior, weather elements, and weather systems.					
Course Contents & Topics	- Atmospheric Basics - Solar & Infrared Radiation - Thermodynamics - Water Vapor - Atmospheric Stability - Clouds - Precipitation Processes - Satellites & Radar - Weather Reports & Map Analysis - Atmospheric Forces & Winds - General Circulation - Fronts & Air Masses - Thunderstorm Fundamentals - Thunderstorm Hazards - Tropical Cyclones					

Course Learning	On succe	ssful completion of this c	ourse, students should be able to:				
Outcomes	CLO 1 describe key aspects of weather phenomena						
	CLO 2	CLO 2 explain essential elements of atmospheric processes governing weather					
	CLO 3	apply physical principles	to construct models for some bas	sic aspects of weather			
	CLO 4	explain synoptic charts ((weather maps)				
	CLO 5	interpret Hong Kong we	ather (typhoons etc.)				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E	Pass in EASC2404

EASC4407	Regional geology (6 credits)	Academic Year	2020			
Offering Department	Earth Sciences	Quota	40			
Course Co-ordinator	Dr A A G Webb, Earth Sciences (aagwebb@hku.hk)					
Teachers Involved	(Dr A A G Webb,Earth Sciences) (Dr J R Ali,Earth Sciences)					
Course Objectives	This course explores regional geologies as well as the approaches that geologists use to resolve regional geological questions.					
Course Contents & Topics	We will use case studies to explore how regional investigations integrating to can test models for the evolution of large-scale geological systems. Like various climate-tectonic interactions across mountain belts (Andes, Himala of East Asia, and the progressive development of metamorphic core com America, NE China). Students will advance their abilities to synthesize and creating new Wikipedia pages complete with original figures on regional geo	ely case studies includ ya), the complex intra nplexes via low-angle I communicate geologi	de exploration of plate deformation normal faults (N. cal knowledge by			
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 appreciate the influential (and commonly conflicting) models that ha regional tectonic phenomena CLO 2 understand the various "tools" that are commonly used by geo-sc the evolution of tectonically complicated regions CLO 3 carry out an in-depth scientific literature review on a key regional findings via visual and written communication in an engaging, comp	ientists to test and de	velop models for

EASC4408	Special t	topics in earth sciences (6 credits) Acade	emic Year	2020			
Offering Department	Earth Scie	nces Quota	а	30			
Course Co-ordinator	Dr M H Le	e, Earth Sciences (mhlee @hku.hk)					
eachers Involved		· · · · · · · · · · · · · · · · · · ·					
Course Objectives	Topic: Planetary system and Biogeochemistry The overall aim of this special topic is to develop an advanced understanding of our planet's place within the wide universe, the origins of our planetary system, and geological processes in extreme extraterrestrial environments Students will explore the concept of abiotic chemical evolution and learn about various important biomarker targeted for life detection in modern space exploration missions. The course also provides opportunities to student meteorites and their relationship to the origin of the Earth, solar system & universe, and survey planetary topics including impacts, differentiation, and volcanism on planetary objects.						
Course Contents & Topics	Including impacts, differentiation, and volcanism on planetary objects. The course will cover the following aspects of planetary science. The following topics will be covered in lectures 1. The interstellar medium 2. Star formation and the accretion of planets 3. Meteorites and comets 4. Impacts and craters 5. Evolution of other terrestrial planets 6. Prebiotic chemistry and the origins of life 7. Biosynthetic isotopic fractionations 8. Biomarker and molecular signatures 9. Symmetry-breaking mechanisms 10. Mass spectrometry for organic geochemists 11. Planetary mission concepts 12. Life detection on habitable planet and moons						
Course Learning	On succes	ssful completion of this course, students should be able to:					
	CLO 1 identify various planetary materials in the Solar System and understand how they formed and evolve CLO 2 understand how planetary events shaped the history of the Earth and the structure of our solar system recognise and differentiate between the organic signatures of biotic and abiotic materials, and appropriate use of particular chemical structures as molecular fossils to interpret past life based on understant of extant life. CLO 4 evaluate contemporary theories on the origin of life and the formation of complex organic molecular space and their delivery to planetary surfaces. CLO 5 use modern analytical techniques to reconstruct organic constituents in samples and interpret generated from the latest planetary missions						
Ore requisites		rture their interests and curiosity in the field of planetary science					
Pre-requisites (and Co-requisites and Impermissible combinations)		ny EASC3XXX or EASC4XXX course					
Offer in 2020 - 2021	N Offe		nination				
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes, and evidence of productive reading supplementing lectures. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to synthesize and apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate critical use of data, literature reviews, and other sources to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to synthesize and apply knowledge to familiar and some unfamiliar situations, but falling short on excellence in some of these aspects. Demonstrate correct use of data, literature reviews, and other sources to draw appropriate conclusions. Apply effective organizational and presentational skills.						
	С	Demonstrate general but incomplete command of knowledge and skills required for attai outcomes. Show evidence of some analytical and critical abilities and logical thinking, an knowledge to most familiar situations. Demonstrate mostly correct but some erroneous use o sources to draw appropriate conclusions. Apply moderately effective organizational and preserved.	nd ability to sy of data, literatur	ynthesize and appl re reviews, and oth

	Earth s	system: contempo	rary issues (6 credits)	Academic Yea	r 2020			
Offering Department	Earth Sc	ciences		Quota				
Course Co-ordinator	Dr S C C	Dr S C Chang, Earth Sciences (suchin@hku.hk)						
Teachers Involved	(Dr S C	(Dr S C Chang, Earth Sciences)						
Course Objectives	This is a capstone course that provides students with an opportunity to synthesize and correlate the knowledge gained in previous courses in Earth System Science for them to gain a more in-depth appreciation and awareness of the Earth System, the interplay between its component parts, and some of the global issues. Students will also get some basic concepts on how to do strategic analysis on global trends of natural resources.							
Course Contents & Topics	Introduct Overpop Overpop Global T Global T	Introductions to Contemporary Environmental Issues Overpopulation & Natural Resources Overpopulation & Waste Management Global Trend in Green Technology Global Trend in Space Exploration Contemporary Environmental Issues & Solutions						
Course Learning	On succ	essful completion of th	nis course, students should be able	to:				
Outcomes	CLO 1	comprehend in some of	depth the nature of the issues confr	onting humankind as part of the	e Earth System			
	CLO 2 i	understand the basis of	of interrelationships through feedba	ck loops within the Earth System	m			
			data available from a variety of so contemporary concern	ources and apply the data to	problem solving			
	CLO 4 I	understand how past a	and present activities on the planet	will affect its future				
Pre-requisites	Pass in	at least 24 credits of	advanced level (level 3 or 4) discip	plinary core/elective courses in	the Earth Syste			
and Co-requisites	Science	Major including at least	st two of the following courses: EAS	SC3410, EASC3415 or ENVS3	313.			
and Impermissible			arth System Science Major students					
combinations)	The earl	iest that a student is a	Illowed to take this capstone course	e is their year 3 study.

EASC4966	Earth scie	nces internship (6	credits)	Academic Year	2020		
Offering Department	Earth Science	ces		Quota			
Course Co-ordinator	Dr M C Chei	Dr M C Cheung, Earth Sciences (hmcc@hku.hk)					
Teachers Involved	(Dr M C Cheung, Earth Sciences)						
Course Objectives	This course aims to offer students the opportunities to gain work experience in the industry related to their major o study. The workplace learning experience would be of great benefits to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the School/Departments.						
Course Contents & Topics	(1) Within the university: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor. (2) Outside the university: The student will work in an external agency related to the major of study. The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Department/School of the student (the Internal Supervisor). The work to be performed by the student will normally be instructed by the External Supervisor, with prior agreement of the Internal Supervisor.						
Course Learning	On successf	ful completion of this c	ourse, students should be able to:				
Outcomes	CLO 1 gai	n at least 4 weeks of v	vork experience in a geosciences-re	elated firm or the Governme	ent		
	CLO 2 acc	quire an understanding	g and appreciation of the real work	environment			
	CLO 3 hav	e some experience w	ith applying learned knowledge to s	solving real world problems

EASC4999	Earth sciences project (12 credits)	Academic Year	2020
Offering Department	Earth Sciences	Quota	
Course Co-ordinator	Dr Y Li, Earth Sciences (yiliang @hku.hk)		
Teachers Involved	(Various teachers in the Department, Earth Sciences)		
Course Objectives	To enhance the student's knowledge, ability and interest in advanced stud the student with an opportunity to be engaged in an advanced research project.		ices by providing
Course Contents & Topics	The student undertakes a research project in the form of a senior thesis un The project could be based on a particular component of a staff member's roby the student. The student must involve in the project in a non-trivial mann formulation, data collection and analysis, and presentation. The project should	esearch or one propos ner, and play a major i	sed and designed role in the project
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 acquire first-hand research experience in earth sciences by d independently under the supervision of a supervisor CLO 2 select research topics, design research path, choose research to critical thinking CLO 3 enhance the ability in doing independent earth/environmental research	echnology, and more	importantly use
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/e System Science Majors; and Cumulative GPA of 2.7 or above. This course is not a capstone course and students cannot use this course to Earth System Science and Geology Majors. The earliest that a student is allowed to take this course is their year 3 study	elective courses in the	Geology or Earth
Offer in 2020 - 2021	Y Year long Offer in 2021 - 2022 : Y	Examination	No Exam

Grade Descriptors (A+ to F)	A	Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and creative thinking, with evidence of original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quotel/reference aptly. Critical use of first-hand data and results to draw insightful conclusions and solve problems. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable creative thinking and additional work beyond that is required in wider areas relevant to the topic.]					
	В	Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and creative thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of first-hand data of results to draw appropriate conclusions to draw insightful conclusions and solve problems. Apply effective organizational and presentational skills.					
	С	Use of relevant informatio quote/reference aptly. Most	complete grasp of the subject. Evidence of n from sources, showing ability to make ly correct but some erroneous use of first- organizational and presentational skills.	comparisons between different	t interpretations and to		
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use first-hand data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

ENVS1401	Introdu	ction to environmenta	al science (6 credits)	Academic Year	2020		
Offering Department	Earth Sci	ences	11				
Course Co-ordinator	Dr C Not	C Not, Earth Sciences (cnot@hku.hk)					
Teachers Involved	(Dr C Dingle,School of Biological Sciences) (Dr C Not,Earth Sciences)						
Course Objectives	To provide students with an inter-disciplinary introduction to Environmental Science highlighting the interconnections between biological, geological, and chemical processes. To convey the basic science behind environmental interactions and place it within the context of human impact and dependence on the natural world. To better understand how humans interact, manage, and sustain the environment within the context of our economies, governments and individual choices.						
Course Contents & Topics	Part I: TI science problems Part II: U assuring Part III: (The teaching and learning will be organized around key issues, and loosely divided into three sections. Part I: The basics: application of science to solve environmental problems; key ecological, chemical, and earth science concepts essential to environmental science, understanding the underlying causes of environmental problems (human population growth and economics). Part II: Using and conserving our resources: how we use and misuse key natural resources; the difficulty in assuring a sustainable supply of energy; waste management and air pollution issues. Part III: Global issues: How do our actions change the face of the planet? Urban ecology and understanding our contribution to global climate change.					
ourse Learning	On succe	essful completion of this co	urse, students should be able t	0:			
Outcomes				d biological components of the	environment.

Course Objectives	This course introduces students the mechanisms of major natural hazards including earthquake, storm and flood landslide and tsunami. The teaching emphasizes the fundamental concepts: natural hazards are not entirely natural, and understanding the frequency and processes of these hazards is essential in developing prevention protection and mitigation measures. With case studies, the course will help students explore the political economical and engineering means of dealing with natural hazards.

Offering Department	Earth Scie	nces		Quota	50		
Course Co-ordinator	Dr B Thibo	deau, Earth Sciences	(bthib@hku.hk)				
Teachers Involved	(Dr B Thibodeau,Earth Sciences)						
Course Objectives	This multi-disciplinary course will introduce students to the most important physical, chemical and biological contaminants that pollute the environment. The course will provide the basics of contaminant transport, toxicology pollution monitoring and environmental risk assessment. The course will also explore in details different mechanisms and pathways for water, atmosphere, soil and land pollution. The student will also be invited to reflect on the socio-economic aspect of pollution and remediation.						
Course Contents & Topics Course Learning Outcomes	Physical-C Physical, C Contamina Environme Water Poll Atmosphe Soil, Land Urban and Monitoring Introductic Global sys On succes CLO 1 ii CLO 2 c CLO 3 c	Overview of Global Pollution Physical-Chemical Characteristic of Soils, water and the atmosphere Physical, Chemical and Biological Contaminants Contaminants Transport Processes Environmental Toxicology Water Pollution Atmospheric Pollution Soil, Land and subsurface Pollution Urban and Household pollution Monitoring and Risk Assessment Strategy Introduction to remediation, restoration, treatment and reuse Global system and the human dimensions to environmental pollution On successful completion of this course, students should be able to: CLO 1 identify the most important pollutants CLO 2 describe the mechanisms responsible for the transport of pollutants in the environment CLO 3 evaluate the environmental toxicity of different type of contamination					
	CLO 4 present the most important cases of environmental pollution CLO 5 analyze lab-generated data and communicate the results and interpretations

Information	quota set. So, interested student must apply for the course with a short proposal (2 pages maximum) and CV via e-mail to Dr. Moriaki Yasuhara (yasuhara@hku.hk) and Ms. Maria Lo (gylo@hku.hk) not later than 1st August (Note: this is 2nd semester course, but we need applications well in advance, on or before this date). Late applications will not be accepted. The proposal should include the following: (1) the specific reason(s)/motivation why you are interested in joining this course; (2) merit that you expect to receive from this course, especially regarding your future academic/career path; (3) brief description of academic interests. The CV should include: (1) Personal and academic details; (2) ID photograph; (4) GPA; (5) Pre-requisite courses taken and grades received. The selection will be made based on the quality of proposal and the justification of academic merit, in considering other factors. Only accepted students through this application process will be able to register this course.						
	The reside	ential field trip will b	pe organized in the reading week. See contact us for details and financi	Students will need to pay for the			

ENVS4966	Environmental science internship (6 credits)	Academic Year	2020
Offering Department	Earth Sciences	Quota	
Course Co-ordinator	Dr C Dingle, Biological Sciences (cdingle@hku.hk)		
Teachers Involved	(Dr C Dingle, Biological Sciences)		
Course Objectives	This course offers students the opportunity to gain work experience related	o their major of	study. This work

	experience will allow the students to apply their knowledge gained in their studies to the real environmental issues.					
Course Contents & Topics	In the case of the work being carried out in an external agency, students will be supervised by a staff member of the external agency (the External Supervisor) and a staff member of the University (the Internal Supervisor). If the work is carried out within HKU, there is no need for an additional internal supervisor. The work to be performed by students will normally be instructed by the External Supervisor, with prior agreement of the Internal Supervisor.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes				ntal-related firm or the Governme	ent	
			ing and appreciation of the rea			
			, .	edge to solving real world problen		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major. This capstone course is for Environmental Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.

Additional Course Information	Students a This cours Timetable: http://hkum	re advised not to take Ne is offered by the Depanath.hku.hk/~math/Time	ssed test or assignment under norm IATH1851 and MATH1853 together introduced from the fact table/timetable2021_S1.pdf table/timetable2021_S2.pdf	in the same semester.	

MATH1853	Linear algebra, probability and statistics (6 credits)	Academic Year	2020		
Offering Department	Mathematics	Quota	700		
Course Co-ordinator	Prof G Han, Mathematics (ghan @maths.hku.hk)				
Teachers Involved	(Dr N Wong, Electrical & Electronic Engineering) (Prof G Han, Mathematics) (Prof S H Lo, Civil Engineering) (Prof Z Q Yue, Civil Engineering)				
Course Objectives	As the complementary course of MATH1851, students will be introduced to more topics of mathematics commonly applied in engineering so that students could be further enhanced with a concrete skill in mathematics underpinned for different engineering subjects. The course emphasizes mathematical concepts, principles, analysis, and their relationship to the modelling of engineering systems. Students could be furnished with the essential mathematical skills to analytically tackle some typical engineering problems to prepare for all the engineering subjects.				
Course Contents & Topics	 Linear algebra [vectors and scalars, inner product, vector projection, matrix, determinant, matrix inverse, system of linear equations, matrix e rule, matrix rank, eigenvalue, eigenvector, matrix diagonalization, positi their applications] 	equation, Gaussian elim	ination, Cramer's		

Course Learning Outcomes	Moivre's the Basic proformula, rapplication - Common Normal disense standard for application On success CLO 1 destandard for standard f	Elementary complex variables [arithmetics of complex numbers, representations of complex numbers, De loivre's theorem, roots of unity, complex functions, and their applications] Basic probability theory [axioms of probability, conditional probability, Bayes' theorem, the total probability ormula, random variable, (joint) probability distribution, expectation, variance, independence, and their pplications] Commonly used distributions [Bernoulli, Binomial, Geometric, Negative Binomial, Exponential, Poisson and lormal distribution, and their applications] Basic statistics [point estimates, sample mean, sample variance with known or unknown mean, confidence terval for a population mean with known or unknown population variances, inference for proportion, and their pplications] In successful completion of this course, students should be able to: CLO 1 demonstrate knowledge and understanding of linear algebra, complex numbers, probability theory and statistics as well as their relationship with some typical physical/engineering applications: unerringly perform the calculation details for the solution, and accurately correlate the solution approach with the fundamental concepts involved CLO 2 apply such knowledge and understanding to solve certain practical problems that are relevant to physical/engineering applications: analyze the given problem, identify the appropriate mathematical skills, articulate a convincing rationale for the approach used, and clearly give the mathematical formulation, and correctly find the solution be well prepared to cope with a higher level of engineering mathematics required in different engineering			
			with a higher level of engineering	ng mathematics required in o	different engineering
Pre-requisites (and Co-requisites and Impermissible combinations)	Level 2 or	disciplines evel 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011, or take MATH1011 and MATH1853 concurrently in the same semester. (This course is exclusively for Engineering tudents.)			
Offer in 2020 - 2021	Y 1st	sem 2nd sem Offer	in 2021 - 2022 : Y	Examination	Dec May
Grade Descriptors (A+ to F)	Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and methods and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
