MATH2012	Fundamental concepts of mathematics (6 credits)	Academic Year	2020
Offering Department	Mathematics	Quota	
Course Co-ordinator	Dr Y M Chan, Mathematics (ymchan@maths.hku.hk)		
Teachers Involved	(Dr Y M Chan, Mathematics)		
Course Objectives	To provide students with solid background on fundamental concepts of mather proofs. Such concepts and methods are important for subsequent studenth mathematics. This course can be taken concurrently with other Level 2 or about 100 per concurrently with other Level 2 or about 100 per concurrently with other Level 2 or about 100 per concurrently with other Level 2 or about 100 per concurrently with other Level 2 or about 100 per concurrently with other Level 2 or about 100 per concurrently with 100 per concurrent with 100 per concurrent wit	lies in all higher I	
Course Contents & Topics	 Elementary set theory. Statement calculus. Mathematical proofs. Relations and functions. Finite and infinite sets. Natural numbers and mathematical induction. Real numbers and the limits of sequences. Examples of groups. 		
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the definition of a set and apply set theory in simple daily CLO 2 construct the truth table of a given statement CLO 3 apply different proof strategies (e.g. proof by contradiction and m	'	on) in proving a

	CLO 4 de	emonstrate the basic	properties of equivalence relations			
			ion of limits of sequences of real num	bers		
		•	ational properties of groups			
Pre-requisites (and Co-requisites and Impermissible combinations)	Students have stro	ass in MATH1013 or MATH1821 or (MATH1851 and MATH1853). Rudents with good grades in HKDSE Math Module 1 or Math Module 2 (or other equivalent qualifications) and ave strong interests in math may also apply for taking this course concurrently with its prerequisites courses ubject to the approval from Course Selection Advisors).

MATH2211	Multivariable calculus (6 credits)	Academic Year	2020				
Offering Department	Mathematics	Quota					
Course Co-ordinator	Dr T W Ching, Mathematics (Imtching@maths.hku.hk)						
Teachers Involved	(Dr T W Ching, Mathematics)						
Course Objectives	Students of this course will learn the theory of multivariable calculus and learn how to apply the theory to solve practical problems. This is a required course for Mathematics and Mathematics/Physics Majors, and is suitable for all students in Science, Engineering, Economics and Finance, and other students who will use multivariable calculus in their areas of study. This is also a required course for all Minors offered by the Department of Mathematics, and is a pre-requisite of many advanced level mathematics courses.						
Course Contents & Topics	 Vectors: vectors in 2-, 3-, and n-dimensions; dot product and cross product; lines and planes; polar, cylindrical and spherical coordinates. Differentiation in several variables: limits and derivatives; the chain rule; directional derivatives and gradients. Vector-valued functions: parametrized curves; arc-length; vector fields; gradient, divergence, curl, and the de operator. Maxima and minima: differentials and Taylor's Theorem of several variables; extrema of functions; Lagrange multipliers; applications of extrema. 						

	- Multiple integration: double and triple integrals; change of variables; applications Line integrals: scalar and vector line integrals; Green's Theorem; conservative vector fields Surface integrals and vector analysis: parametrized surfaces; surface integrals; Stokes' and Gauss' Theorems.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes				calculus of functions in several real va	riables		
	CLO 2 ev	valuate partial deriva	atives and multiple integrals	s; compute line integrals and surface ir	itegrals		
				roblems, such as constrained optimiz	ation problems and		
	of	ther problems involv	ing differentiation and integ	gration of multivariable functions			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in M	IATH1013 or MATH	1821 or (MATH1851 and N	MATH1853)

MATH2241	Introduc	ction to mathematical analysis (6 credits)	Academic Year	2020			
Offering Department	Mathemat	tics	Quota				
Course Co-ordinator	Dr T W Ching (1st sem); Dr Y M Chan (2nd sem), Mathematics (Imtching @maths.hku.hk; ymchan @maths.hku.hk)						
Teachers Involved		Ching,Mathematics) Chan,Mathematics)					
Course Objectives	To introdu	ice students to the basic ideas and techniques of mathemati	ical analysis.				
Course Contents & Topics	 The real number system: the real numbers as an ordered field, supremum and infimum, the completeness axiom denseness of the rational numbers. Sequences and series of real numbers: limits of sequences, properties of convergent sequences, monotone sequences and Cauchy sequences, subsequences, series, tests of convergence for series. Continuity of real-valued functions: properties of continuous functions, the extreme value theorem, the intermediate value theorem, uniform continuity, limits of functions. Differentiation: properties of differentiable functions, the mean value theorem, Taylor's theorem and its applications. Integration: construction of the Riemann integral using Darboux sums and Riemann sums, the fundamenta theorem of calculus. 						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 comprehend and use abstract mathematical arguments such as the epsilon-delta argument CLO 2 demonstrate convergence or non-convergence of a sequence/series using properties of converge sequences/series CLO 3 elucidate important properties of continuous functions such as the extreme value theorem and the intermediate value theorem CLO 4 elucidate important properties of differentiable functions such as the mean value theorem, and understand and apply Taylor's Theorem CLO 5 articulate the construction of the Riemann integral and its relation to differentiation						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in MATH1013 or (MATH1851 and MATH1853) or MATH2822. Students are strongly recommended to have taken MATH2012 if they wish to take this course.

MATH2822	Mathem	natical methods for a	actuarial science II (6 credits)	Academic Y	ear 2020		
Offering Department	Mathema						
Course Co-ordinator	Dr T W C	Ching, Mathematics (Imto	hing @maths.hku.hk)				
Teachers Involved	(Dr T W (Ching, Mathematics)	<u> </u>				
Course Objectives	This course is the second of the two mathematics courses designed to provide actuarial science students with a solid background of calculus of one and several variables and an introduction to linear algebra. The course focuse on multivariable calculus and linear algebra. It aims at students with MATH1821. It can be followed by other 2000 or 3000 level mathematics courses.						
Course Contents & Topics	 - Matrices, systems of linear equations, determinants. - Eigenvalues and eigenvectors, diagonalization of matrices. - Quadratic functions and their standard forms. - Vector spaces and subspaces. - Functions of several variables; partial differentiation. - Gradients and directional derivatives. - Taylor approximation, Newton's method. - Maxima and minima; Lagrange multipliers. - Double and triple integrals, areas and volumes. 						
Course Learning	On succe	essful completion of this of	course, students should be able to:				
Outcomes	CLO 1 understand and recognize various topics in linear algebra such as the basic arithmetic of matrices determinants, systems of linear equations, eigenvalues and eigenvectors, diagonalizable matrices, bas and dimension, and the rank-nullity theorem CLO 2 understand and recognize various topics in functions of several variables including partial differentiation the Hessian test for local extrema, vector-valued functions, Jacobians, the method of Lagrange multiplier double/triple integrals and the change of variable formula						
Pre-requisites			The change of variable formula				
(and Co-requisites and Impermissible combinations)	Pass in MATH1821. For BSc(ActuarSc) students only.

MATH3002	Mathematics seminar (6 credits)	Academic Year	2020				
Offering Department	Mathematics Quota 12						
Course Co-ordinator	Prof T W Ng; Dr Y M Chan, Mathematics (ntw@maths.hku.hk; ymchan@maths.hku.hk)						
Teachers Involved	(Dr Y M Chan,Mathematics) (Prof T W Ng,Mathematics)						
Course Objectives	This is a seminar style course intended for those who have very strong interests and good ability in mathematics. Students will be given book chapters and elementary research articles for private study and then make presentations in front of the whole class. Individual meetings with the instructors will be arranged prior to their presentations. Active participation in all the discussions is expected. The aim of the course is to let students learn how to initiate self/independent study in mathematics.						
Course Contents & Topics	Topics chosen by the instructors, including chapters from books and elementary research articles.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 Initiate private independent study on some interesting mathematical topics						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in MATH2012, MATH2101, MATH2211 and MATH2241 Subject to approval by the Department.						
Offer in 2020 - 2021	Y 2nd sem Offer in 2021 - 2022 : Y	Examination	No Exam

MATH3408	Computational methods and differential equations with applications (6 credits)	Academic Year	2020			
Offering Department	Mathematics	Quota				
Course Co-ordinator	Prof W K Ching, Mathematics (wching@hku.hk)					
Teachers Involved	(Prof W K Ching, Mathematics)					
Course Objectives	This course covers topics in the fields of differential equations, mathema which are of importance to sciences students. The emphasis is practical approximately approxima	•	•			
Course Contents & Topics	 Solution of linear difference equations. Mathematical modelling and dynamical systems. Numerical differentiation and integration. LU factorization for solving linear system of equations. Matrix norms and iterative solutions of matrix equations. Solution of nonlinear systems of equations. Elementary differential equations and power series method. Numerical solutions of ordinary and partial differential equations. Numerical solutions of systems of first-order ordinary differential equations 	·				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 construct and implement numerical methods for numerical integration and differentiation, and the solution of linear and nonlinear system of equations					
	CLO 2 explain mathematical ideas of numerical methods and mathematical modelling in solving linear difference equations, ordinary and partial differential equations					
	CLO 3 construct one-step and linear multistep methods for the numerical solution of initial-value problems for					

		ordinary differential equa properties	tions and systems of suc	ch equations and analyze their sta	ability and accuracy	
	CLO 4			al solution of partial differential eq	uations and analyze	
		implement numerical met MATLAB	thods for solving initial and	d boundary value problems by sof	tware packages like

MATH3541	Introduction to topology (6 credits) Academic Year 201				2020		
Offering Department	Mathema	Quota					
Course Co-ordinator	Prof J H	Prof J H Lu, Mathematics (jhlu@maths.hku.hk)					
Teachers Involved	(Prof J H	Lu,Mathematics)					
Course Objectives	This course aims at introducing students to fundamental knowledge in topology and some of its applications. We will emphasize more on building geometric intuition and links between topology and other subjects. It can help prepare students for more advanced Mathematics and Physics courses and future research in Mathematics Physics, Computer Science and Biology.						
Course Contents & Topics	(i) Basic (ii) Topol (iii) Brou	Topics will be chosen among the following: (i) Basic point-set topology: topological spaces, product and quotient spaces. (ii) Topological groups and orbit spaces. (iii) Brouwer fixed point theorem, winding numbers. (iv) Fundamental groups, covering spaces.					
Course Learning Outcomes	CLO 1 CLO 2	understand basic cons give examples and cou	is course, students should be able tructions in point-set topology unter examples for concepts in the ' s of fundamental groups and its app	course contents"	tion problem		
Pre-requisites and Co-requisites and Impermissible combinations)		Pass in MATH2101, MATH2102 and MATH2241. Students are recommended to have passed or already enrolled in MATH3301 and MATH3401.					
Offer in 2020 - 2021	N Of	ffer in 2021 - 2022 : Y		Examination

MATH4501	Geomet	ry (6 credits)		Academic Year	2020	
Offering Department	Mathema	ics		Quota		
Course Co-ordinator	Dr Z Hua,	Mathematics (huazheng@maths.hku.hk)				
Teachers Involved	(Dr Z Hua	Mathematics)				
Course Objectives	As geometric forms often appear in nature, the study of geometry helps us to understand better the universe in which we live. Moreover, geometry has much intrinsic beauty and the study of it is an excellent training in intuitive thinking. In this course we study the differential geometry of curves and surfaces in 3-space. In the study of regular surfaces in 3-space we exhibit geometric notions that are definable in terms of metrical properties of these surfaces alone, leading to the intrinsic geometry of surfaces.					
Course Contents & Topics	- The Ga Theorem. - Riemani	 Plane and space curves, regular surfaces in three-dimensional Euclidean space. The Gauss map, Gaussian and mean curvatures, Gauss's Theorema Egregium, geodesics, Gauss-Bonnet Theorem. Riemannian Geometry of surfaces; applications. 				
0		plications, e.g. to Maxwell theory of electroma				
Course Learning Outcomes	CLO 1 CLO 2	sful completion of this course, students shoul nderstand the fundamental properties of curv ompute and interpret the Frenet apparatus, fu nderstand the basics of intrinsic geometry of	es and surfaces in space Indamental forms and thei	r derived quantit	ies	
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (N	IATH2101 and MATH2211); and IATH3401 or MATH3403 or MATH3405). are strongly recommended to have taken MAT

Course Co-ordinator	Prof W K Ching, Mathematics (wching @hku.hk)					
Teachers Involved	(Prof W K Ching, Mathematics)					
Course Objectives	To learn some basic theoretical and computational techniques for solving scientific computing problems.					
Course Contents & Topics	This course covers matrix computation problems, least squares problems, numerical methods in differential equations and partial differential equations, etc. The contents may slightly vary from year to year.					
Course Learning	On successful completion of this course, students should be able to:	om year to year.				

	CIO1	CLO 1 apply direct methods to solve linear systems					
Outcomes	CLO 2 apply iterative methods to solve linear systems						
	CLO 3 apply basic numerical methods to compute eigenvalues and eigenvectors of a matrix						
			e decomposition and understand				
		•	and numerical methods for leas				
		117	s to solve differential equations	and partial differential equation	ns

Course Objectives	articles a	This seminar style capstone course aims to provide students with the experience of intense reading of journal articles and book chapters, followed by group discussions through which knowledge acquisition and synthesis will be attained. Students will look at particular mathematical topics in depth, and will master the topics through				
Course Contents & Topics	reading, listening, discussing and writing. This seminar course may be in the form of research seminar, reading seminar, or a combination of both. Research seminar provides first-hand research experience to students, who will discuss the advancement of knowledge brought about by the readings, and the difficulties they encounter in the research process. Reading seminar involves discussions on arguments delivered by the authors of books or articles, and how convincing the arguments are. Participants will experience the process of argumentation in the construction of knowledge and development of research idea. Student performance is manifested in their preparedness, quality of comments, responsiveness to comments and overall engagement in the seminar. The end product is a research paper or written report and oral presentations. Topics will be chosen by the instructors, including journal articles and book chapters.					
Course Learning Outcomes	CLO 1 ex CLO 2 cr CLO 3 or	xplain and discuss the ritique and argue abo	nis course, students should be able to: e contents of the topics they studied out the ideas and theories of the work they s size the material they have learned, a		in writing using

	В						
	C Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.						
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills and minimally effective or ineffective.

Sophomore or above tudents who have declared Major in Mathematics/Mathematics (Intensive) will receive emails in June. The application results will be announced in late July or early August. For enquiry, please contact the Department. The final report must be submitted by the end of the 2nd semester. The deadline for submission will be announced in the due course.					

MATH7101	Intermediate complex analysis (6 credits)	Academic Year	2020		
Offering Department	Mathematics	Quota			
Course Co-ordinator	Prof T W Ng; Dr. X Zhang, Mathematics (ntw@maths.hku.hk; xzhang@maths.hl	ku.hk)			
Teachers Involved	(Dr X Zhang,Mathematics) (Prof T W Ng,Mathematics)				
Course Objectives	The objective is to familiarize students with analytic, algebraic and geometric concepts and techniques in the study of Complex Analysis in a single variable beyond an introductory course on functions of a complex variable.				
Course Contents & Topics	 In the course we study meromorphic functions on compact Riemann surface using analytic and algebraic techniques. Topics on meromorphic function meromorphic functions on compact Riemann surfaces, elliptic functions, P Problem and the Weierstrass Problem on compact Riemann surfaces and on op 	ns include the o oincare series, tl	constructions of he Mittag-Leffler		

			orphic functions, sheaf cohomology	theory and cohomology	theories in terms of	
	differential forms will be introduced A choice of other topics may be included. Examples of possible topics include normal families, the Riemann Mapping Theorem, Little Picard Theorem, geometric theory of holomorphic mappings, potential theory in one complex variable, complex dynamics, and special functions.					
Course Learning			ourse, students should be able to:			
Outcomes	fu	ınctions, on elliptic curve:				
	C	ohomological problems, b	l existence problems on meromorph peing able to solve them in certain type	pical cases	•	
	O	n compact Riemann surfa	s in the proofs of various mathematica aces or on plain domains and apply t	hem in solving problems	· ·	
	а	pply them in solving prob				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in a	first course in Complex	Analysis such as MATH3403, and ap	proval by the course coc	ordinator.

Course Objectives			e foundation of the theory of compleing on compact complex manifolds.	ex manifolds and to intro	duce students to a	
Course Contents & Topics	cohomolo vector bui - It proce manifolds decompos - The coi manifolds (i) Siegel's (ii) geome	This course contains an introductory part on basic notions on complex manifolds including sheaf cohomology obnomology theories in terms of differential forms, Hermitian and Kahler manifolds, and Hermitian holomorphic ector bundles. It proceeds to introduce the theory of harmonic forms, establishing fundamental results on compact complet anifolds including Serre duality, the Kodaira Vanishing Theorem, the Kodaira Embedding Theorem and Hodge ecomposition on compact Kahler manifolds. The course concludes with a choice of topics on analytic and geometric aspects of the theory of completanifolds. Examples of such topics include Siegel's Theorem on the field of meromorphic functions on a compact complex manifold; geometry of compact quotients of bounded symmetric domains and Hermitian symmetric manifolds; an introduction to the deformation theory of compact complex submanifolds in a complex manifold.				
Course Learning	On succe	ssful completion of this	course, students should be able to:			
Outcomes	gl m CLO 2 gr m	obal holomorphic sect anifolds asp the relationship bake use of the relatio	omorphic line bundles, understand va tions of line bundles, and to relate the between sheaf cohomology, de Rhar inship to solve various existence pro	nem to the embedding of m cohomology and d-bal	f compact complex cohomology, and

PHYS1000	Introdu	ction to astronom	y (6 credits)	Academic Yea	r 2020		
Offering Department	Physics			Quota			
Course Co-ordinator	Dr K M Le	ee, Physics <i>(kmlee</i> @/	lily.physics.hku.hk)				
Teachers Involved	(Dr K M L	.ee,Physics)					
Course Objectives	This is an introductory course on astronomy, including both the observational aspect of the field and a descriptive survey of the solar system, the Sun, stars, galaxies and the universe. Selected special topics such as neutron stars, black holes and dark matter will also be included.						
Course Contents & Topics	our solar provides	Topics covered include the observational aspect of astronomy (including constellations and planets), the physics o our solar system, and our own Sun, stars and their evolution, galaxies, black holes, and cosmology. It also provides students with a basic understanding of the relationship of the science of astronomy to life, and how our nature works on the macroscopic level.					
Course Learning Outcomes	CLO 1 id	lentify and describe alaxies), and explain	is course, students should be able the major objects in our Solar their main properties e model to describe the apparent	System and our universe (inc	cluding stars and

Pre-requisites (and Co-requisites and Impermissible combinations)	Nil						
Offer in 2020 - 2021	N Of	fer in 2021 - 2022 : N		Examination			
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.						
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS1055	How this	ngs work (6 cre	dits)	Academic Yea	r 2020		
Offering Department	Physics	Quota					
Course Co-ordinator	Dr M K Yi	p, Physics (mankit)	@hku.hk)				
Teachers Involved	(Dr M K Y	'ip,Physics)					
Course Objectives	This course is designed for students in all disciplines and all years who are curious about science in daily life. Th course covers the working principles and mechanisms of the things and phenomena around us. Logical thinking and appreciation of science are emphasized with mathematics kept at a minimum. Students are trained to develo scientific intuition and to understand that many "magical" things in everyday life can be predictable.						
Course Contents & Topics	Topics inc are explor and the m	Topics include: the science in the household and the science of driving, sports and amusement. Daily applicat are explored with simple and lucid explanations. Developments in optical recording, medical imaging for diagn and the magnetic levitated trains in public transportation are introduced as examples of the modern technology. Contents of the course are constantly updated to reflect the advances in modern science and technology.					
Course Learning Outcomes	On succes CLO 1 de iss	On successful completion of this course, students should be able to: CLO 1 describe and discuss the physical principles that are behind the household appliances and the sc issues in daily life CLO 2 demonstrate their knowledge to related topics qualitatively					
	CLO 3 cri	iticize and express	views in logical and effective w	/ays			
	CLO 4 re	cognize the signific	cance of science and technolog	У

PHYS1056	Weather, climate and climate change (6 credits)	Academic Year	2020
Offering Department	Physics	Quota	
Course Co-ordinator	Dr K M Lee, Physics (kmlee@lily.physics.hku.hk)		
Teachers Involved	(Dr K M Lee,Physics) (Dr P W Li,Hong Kong Observatory) (Mr H W Tong,Hong Kong Observatory) (Mr W K Wong,Hong Kong Observatory)		
Course Objectives	Weather and climate play an important role in human activities and history. It students the fundamentals of weather, climate and climate changes, to arouse technological advancements.		
Course Contents & Topics	The course will encompass topics on: basic physical principles on weather p humidity, cold/warm fronts, thunderstorms and tropical cyclones; introducto climate. Through real life examples, students will get familiarized with interpretation of meteorological information, climatology and climate change. Experts from the Hong Kong Observatory (HKO) will participate in the course forecasts, public weather services, local severe weather phenomena, tropical cand climate change. Tentatively, there will be visit to the HKO to study the met	ry weather analys the weather/clima to cover aspects cyclones, climatolo	sis, forecast and te science and on daily weather gy of Hong Kong,

	the operational activities on weather and climate.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 recall the basic principles of weather and climate						
		ipply the principles to inte or media	erpret weather / climate inforr	mation, for example from the HK	O web site, interne		
		dentify and explain the divorld	fferences of weather and clim	nate in Hong Kong as compared	to other parts of the

Course Objectives	sets that focus on analytica series, n Mathema	This is the first course in our course series that introduces problem solving, mathematical and computational sk sets that are commonly used in the study of university-level physics. Instead of adopting a cookbook approach, v focus on training students how to think and work as physicists through tackling simple physics problems by bo analytical and numerical means. After completion, interested students may take the second level courses in th series, namely, PHYS2150 and/or PHYS2155 and/or PHYS2160. (Knowledge of Module 1 or Module 2 in HKDS Mathematics, or MATH1011, or equivalent is advantageous, though not required.)				
Course Contents & Topics	This course trains students to think and act as physicists by introducing basic problem solving, mathematical a computational skills that are commonly used in the study of university-level physics. Topics include: the use vectors and their operations, differentiation, integration, differential equations, several variables differentiation matrix operation, complex numbers, and rudiment of numerical methods in tackling simple physic problems. Basic MATLAB commands will be introduced and used in this course.

PHYS1250	Fundamental physics (6 credits) Acad	demic Year	2020				
Offering Department	Physics Quot	ota					
Course Co-ordinator	Dr F C C Ling, Physics (ccling@hku.hk)						
Teachers Involved	(Dr F C C Ling,Physics) (Dr J C S Pun,Physics)						
Course Objectives	This is the first physics course for those who want to minor in physics or astronomy a to have an overview in physics. It covers the fundamental blocks in physics in one so physics are emphasized and the mathematical treatment is moderate. Those who also take this course as one of their astronomy, math/physics or physics major require	semester. Co enter HKU b	nceptual ideas in				
Course Contents & Topics	Topics include: Mechanics, Wave Motions, Geometric and Physical Optics, Thermod and Modern Physics.	odynamics, E	lectromagnetism,				
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 describe and explain the fundamental physical principles						
	CLO 2 apply these principles, together with logical and mathematical reasoning, to situations of the physical world						
	CLO 3 analyse and solve problems with the aids of mathematics						
	CLO 4 acquire and interpret experimental data to examine the physical laws						
Pre-requisites	Level 3 or above in HKDSE Physics or equivalent, or Pass in PHYS1240; and						
(and Co-requisites	Not for students who have passed in PHYS1050, or already enrolled in this course; an	nd					
and Impermissible combinations)	Not for students who have passed in any level 2 PHYS course or above.

PHYS1650	Nature of the universe (6 credits)		Academic Year	2020		
Offering Department	Physics		Quota			
Course Co-ordinator	Dr K M Lee, Physics (kmlee@lily.physics.hku.	hk)				
Teachers Involved	(Dr K M Lee,Physics)					
Course Objectives	This is an introductory course in astronomy for students in all disciplines and all years. This is also the first cour in our series of two compulsory courses to introduce basic astronomy knowledge, methods and recent advance for astronomy minor. No prior knowledge in astronomy, physics, and higher mathematics is required, but whelp. After completing this course, interested students may take the second course in this series, named PHYS2650.					
Course Contents & Topics	Topics covered include the observational aspect of astronomy (including constellations and planets), the physics of our solar system, and our own Sun, stars and their evolution, galaxies, blackholes, and cosmology. It also provides students with a basic understanding of the relationship of astronomy to life and how our nature works of the macroscopic level. Students are expected to participate actively in the night sky observations.					
Course Learning	On successful completion of this course, stude	ents should be able to:				
Outcomes	CLO 1 identify and describe the major objet galaxies), and explain their main properties.	erties	<u> </u>	uding stars and

PHYS2150	Methods in physics I (6 credits)	Academic Year	2020			
Offering Department	Physics	Quota				
Course Co-ordinator	Dr F K Chow, Physics (judychow@hku.hk)					
Teachers Involved	(Dr F K Chow, Physics)					
Course Objectives	This is one of the second level courses in our series of courses that introduces problem solving, mathematical and					

	computational skill sets that are commonly used in the study of university-level physics. Instead of the cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the other second level courses in this series PHYS2155 and/or PHYS2160 or the third level course in this series PHYS3150.					
Course Contents & Topics	studying dimensio and vector Further M	This course introduces the principles and theories of various mathematical methods and skills that are essential for studying university physics. Topics include: ordinary differential equations, partial differential equations, three-dimensional coordinate geometry, partial differentiation, multiple integration, vector functions and motion in space, and vector analysis. Applications to physical systems and various practical problems solving skills are discussed. Further MATLAB commands and basic MATLAB programming will be introduced and used in this course.				
Course Learning Outcomes	CLO 1 rd CLO 2 d CLO 3 s CLO 4 d CLO 5 s	On successful completion of this course, students should be able to: CLO 1 review the theory and principles of mathematical methods and compare the features of various methods CLO 2 describe the connections between mathematical equations and physical problems State and set up mathematical equations to describe the dynamics and evolution of physics systems CLO 3 demonstrate knowledge of choosing correct solution of mathematical equations CLO 5 solve various problems and operate the calculations with computer CLO 6 interpret and judge the physical meaning of result after calculations

Teachers Involved	(Dr K M Lee, Physics)						
Course Objectives	This is one of the second level courses in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. Instead of the cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the other second level courses in this series PHYS2150 and/or PHYS2160 or the third level course in this series PHYS3150.						
Course Contents & Topics	This course introduces the principles and theories of various mathematical methods and skills that are essential for studying university physics. Topics include: matrices and vector spaces, systems of linear algebraic equations and systems of linear differential equations, Line integrals, surface integrals and volume integrals, Fourier analysis, and further numerical computation techniques in physics. Applications to physical systems and various practical						
Course Learning Outcomes	problems solving skills are discussed. Further MATLAB programming will be introduced and used in this course. On successful completion of this course, students should be able to: CLO 1 review the theory and principles of mathematical methods and compare the features of various methods CLO 2 describe the connections between mathematical equations and physical problems CLO 3 state and set up mathematical equations to describe the dynamics and evolution of physics systems CLO 4 demonstrate knowledge of choosing correct solution of mathematical equations CLO 5 solve various problems and operate the calculations with computer CLO 6 interpret and judge the physical meaning of result after calculations						
Pre-requisites (and Co-requisites	Pass in MATH1013 or MATH1821 or MATH1851 or PHYS1150						

and Impermissible combinations)

Course Objectives	This is one of the second level courses in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. This course introduces computational tools, techniques, and methods in physics and related fields using the Python programming language. Students are expected to spend a substantial amount of time in writing computer programs to solve physical problems. After completion, interested students may take the sequel courses PHYS3151, PHYS4150 or PHYS4151 to further their studies in computational physics.						
Course Contents & Topics	oriented in scien numerio	Topics include: basics of computer programming; Python programming for physicists; introduction to object- oriented programming in Python; scientific programming with Matplotlib, NumPy, and SciPy; simple error analysis in scientific programming; solution of non-linear equations with application to projectile motion; Calculus and numerical methods with relevant examples in physics; numerical solution of ordinary differential equations with application to planetary motion.					
Course Learning	On succ	essful completion of this course, students should be able to:					
Outcomes	CLO 1 demonstrate knowledge in basic computational techniques and methods in physics						
	CLO 2 apply Python programming language and relevant packages to solve simple physical problems						
	CLO 3 employ appropriate numerical methods for solving ordinary differential equations that commonly arise in physics						
	CLO 4 review the numerical methods for simulation of various physical systems						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in	MATH1013 or MATH1821 or MATH1851 or PHYS1150

PHYS2265	Introdu	ctory quantum phys	sics (6 credits)	Academic Ye	ar 2020		
Offering Department	Physics		,	Quota			
Course Co-ordinator	Dr F K Cl	now, Physics (judychow	@hku.hk)				
Teachers Involved	(Dr F K C	Chow,Physics)					
Course Objectives	physics r fundamer mathema skills occ	This calculus-based course covers the foundation of quantum physics in one semester. It is a core course for physics major, a discipline elective for physics minor, as well as an elective course for those who want to lear fundamental quantum physics and to link them up with their studies in fields like engineering, chemistry an mathematics. Problem solving and analytical skills will be extensively used. They are supplemented by numeric skills occasionally. Upon completion, interested students may take PHYS3351 to further their study in quantum mechanics.					
Course Contents & Topics	waves; th	ne Schrodinger equation		netic waves behaving as particles; ependent Schrodinger equation to be electron atoms.			
Course Learning			course, students should I				
Outcomes			fundamental physical prir				
				athematical reasoning, to situations o	f the physical world		
	CLO 3 a	nalyse and solve proble	ms with the aids of mathe	ematics	. ,		
		· · · · · · · · · · · · · · · · · · ·	erimental data to examin				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	PHYS1050 or PHYS1150	or PHYS1250 or ENGG	1300

PHYS2650	Modern	astronomy (6 credit	ts)	Academic Ye	ar 2020		
Offering Department	Physics			Quota			
Course Co-ordinator		im, Physics (jjlim@hku.h	nk)				
Teachers Involved		Lim,Physics)					
Course Objectives	course in advances the recer PHYS365	This is an intermediate course in astronomy for students in all disciplines and all years. This is also the seccourse in our series of two compulsory courses to introduce basic astronomy knowledge, methods and reciplination advances for astronomy minor. This course aims at deepening student knowledge of astronomy, with emphasis the recent discoveries and modern techniques. After completing this course, interested students may tale PHYS3650, PHYS3653 and/or PHYS3660, which are core or discipline elective courses for astronomy minor a astrophysics theme of physics major.					
Course Contents & Topics	Topics inc	Topics include: exoplanets; general relativity; gravitational waves; neutrinos in astronomy; stellar physics; garay bursts; inflation and cosmology.					
Course Learning	On succe						
Outcomes	CLO 1	recall the various detec	ction techniques of exoplanets	3			
	CLO 2	state the basic ideas of	f general relativity and gravita	tional waves			
	CLO 3	describe the significand	ce of neutrinos physics in astr	ronomy			
	CLO 4	recall the different aspe	ects of gamma-ray bursts				
	CLO 5	explain the principles of	f inflation and how it solves p	roblems in cosmology			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	HYS1650					
Offer in 2020 - 2021	Y 2nd	d sem Offer in 2021 - 2	2022 : Y	Examination	May

•	Machine learning is a technique that enables computers to learn without being explicitly "programmed". It is ar essential part of big data science and has been widely used in different fields of physics. This course introduces							
	the basics of machine learning, from key concepts to practical algorithms, with a focus on real-world applications in							
	physics. It is an elective course for the computational physics theme. This is also an essential course for those who plan to apply machine learning techniques in their postgraduate studies or in their future work.							
Course Contents	Machine learning software packages in Python, Supervised and Unsupervised learning, Regression, Classification, Principal component analysis, Singular value decomposition, Support vector machines, Clustering, K-Nearest							
& Topics		•	,				•	
	Neighbors, Decision trees, Neural Networks, Deep Learning, Application of machine with examples drawing from fields such as astrophysics, particle physics and complex

PHYS3350	Classica	al mechanics (6	credits)	Academic Year	2020		
Offering Department	Physics			Quota			
Course Co-ordinator	Prof S Q	Prof S Q Shen, Physics (sshen@hku.hk)					
Teachers Involved	(Prof S Q	Shen, Physics)					
Course Objectives	This course covers Lagrangian mechanics in the advanced undergraduate level with rigorous mathematical treatment. It is one of the core electives for physics major and an elective course for the theoretical physics theme. This is also an essential course for those who plan to pursue postgraduate studies in physics or relate disciplines. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally.						
Course Contents & Topics	This course will be essentially divided into two parts. In the first part, fundamental concepts related to Lagrangian mechanics will be treated. Topics include the variational principle, conservation laws and its relation to Newtonian mechanics. In the second part, we shall discuss applications of the Lagrangian mechanics. Topics include the central force problem, the coupled harmonic oscillators and rigid-body dynamics. Lagrangian mechanics in not inertial frame will also be discussed.						
Course Learning Outcomes	CLO 1 ur	nderstand the log ormulation;	this course, students should be able tical structure of Lagrangian mecha	nics and its advantage over			
	Ca	ases	of Lagrangian for a mechanical syst		uations in simple		
Pre-requisites		nderstand the conr HYS2150 and PH\	ection between classical mechanics a	id other mechanics			
rre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	m (52 150 and Pm)	(\$2250				
Offer in 2020 - 2021	Y 1st	sem Offer in 202	21 - 2022 : Y	Examination	Dec		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lac of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solv problems. Organization and presentational skills are minimally effective or ineffective.

PHYS3351	Quantum mechanics (6 credits)	Academic Year	2020			
Offering Department	Physics	Quota				
Course Co-ordinator	Prof W Yao, Physics (wangyao@hku.hk)					
Teachers Involved	(Prof W Yao, Physics)					
Course Objectives	This course covers the basics of quantum mechanics in the advanced mathematical treatment. It is one of the core electives for physics major and a physics theme. This is also an essential course for those who plan to pursue related disciplines. Problem solving and analytical skills will be extensively numerical skills occasionally. Upon completion, interested students may take further their studies in quantum mechanics.	n elective course to postgraduate studused. They are s	for the theoretica dies in physics of supplemented by			
Course Contents & Topics	Time-dependent Schrodinger equation; statistical interpretation of wave function; probability density; probability current and continuity equation; momentum; physical observable and expectation value; Heisenberg uncertainty principle; time-independent Schrodinger equation; Hamiltonian and stationary states; particle in a square well transmission and reflection at a barrier; harmonic oscillator problem using ladder operators; free particle and wavepacket; delta function potential; Dirac notations; state vectors; Hilbert space; Hermitian operators; eigenstate and eigenvalues; generalized statistical interpretation; generalized uncertainty principle; angular momentum; hydrogen atom; atomic orbits; spin; non-degenerate perturbation theory.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe the statistical interpretation of quantum mechanical systems and uncertainty of physical observables	, and calculate ex	pectation values			

	CLO 2 formulate energy eigenvalue problems, and solve them in examples where potentials have simple analytical forms						
	CLO 3 formulate time evolution of the wavefunction and the expectation value of physical observables with known energy eigenfunctions						
	CLO 4 j	udge the applicability	of time-independent perturbation turbations applied to the physical s		mulate leadi	ng order energy	
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in	Pass in PHYS2150 and PHYS2265, knowledge of PHYS2155 will be advantageous					
Offer in 2020 - 2021	Y 19	st sem Offer in 2021 - :	2022 : Y	Ex	amination	Dec	
Grade Descriptors (A+ to F)	A	learning outcomes. Show	astery at an advanced level of extensive strong analytical and critical abilities and I wide range of complex, familiar and unfa	ogical thinking, with e	vidence of origin	nal thought, and ability	
	В	·					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail	Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS3550	Statistic	al mechanics	& thermodynamics (6 credits)	Academic Y	'ear 2020		
Offering Department	Physics		·	Quota			
Course Co-ordinator	Dr S Z Zha	Dr S Z Zhang, Physics (shizhong@hku.hk)					
Teachers Involved	(Dr S Z Zhang,Physics)						
Course Objectives	This course covers statistical mechanics in the advanced undergraduate level with rigorous mathematica treatment. It is one of the core electives for physics major and an elective course for the theoretical physics theme. This is also an essential course for those who plan to pursue postgraduate studies in physics or related disciplines. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. Upon completion, interested and able students may take PHYS7550 to study graduate lever statistical mechanics.						
Course Contents & Topics	constituen mechanics	This course includes the following topics: statistical description of macroscopic systems in terms of its microscopic constituents; canonical distribution and its applications in simple systems; classical and quantum statistical mechanics: Bose and Fermi distributions; Bose and Fermi gas; condensation; photon gas and Planck radiation law first order and continuous phase transition.					
Course Learning	On succes	ssful completion o	f this course, students should be able t	0:			
Outcomes	CLO 1 un	derstand the logi	cal structure of statistical mechanics

Offering Department	Physics		Quota					
Course Co-ordinator	Dr J J L Lim, Ph	Dr J J L Lim, Physics (jjlim@hku.hk)						
Teachers Involved	(Dr J J L Lim,Ph	ysics)						
Course Objectives	This course introduces tools of contemporary observational astronomy, with a focus on those used at optica wavelengths. The course concludes with an introduction to the basic physical aspects of stars and galaxies derived from astronomical observations. It is a core course for astronomy minor and an elective course for the astrophysics theme.							
Course Contents & Topics	of light, effects and magnitude	Topics include: properties and workings of optical telescopes and astronomical detectors (e.g., CCDs); properties of light, effects of Earth's atmosphere and interstellar medium on astronomical observations; astronomical imaging and magnitude system; astronomical photometry and spectroscopy; observations of stars and galaxies including blackbody radiation, color-magnitude system, emission and absorption spectrum, and astronomical redshifts.						
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 describe and explain the workings of astronomical telescopes and detectors at optical wavelengths							
	CLO 2 describe how the inherent properties of light, the Earth's atmosphere, and the interstellar medium affect astronomical observations							
	CLO 3 explain how astronomical photometry and spectroscopy are conducted							
	CLO 4 perform computations to demonstrate competence on and understanding of the concepts learnt							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in PHYS2	:55 or PHYS2650

Course Objectives	This course is a beginner course in astrophysics - we will introduce the most basic and direct connection between astronomy and physics, which will help you gain a better understanding of various astronomical objects and phenomena from first principles. This course will also aim to develop skills in approaching problems in astrophysics, which will set the stage for taking more advanced astrophysics courses and conducting scientific research. It is one of the core electives for astronomy minor and an elective course for the astrophysics theme. Upon completion, interested student may take its sequel PHYS4656 to further their studies in astrophysics.

Course Objectives	This course trains students with basics of extracting scientific information with astronomical observations. The focus is on practical experience in operating telescopes, data acquisition and reduction, and interpretation of the results rather than verification of known astronomical theories. It is one of the core electives for astronomy minor and an elective course for the astrophysics and experimental physics themes. Upon completion, interested students may apply the techniques learnt here in observational astronomy related capstone courses.					
Course Contents & Topics	This course will cover the following topics: basics working principles of optical telescopes and CCDs; setting up and hands-on operations of small optical telescopes; error analysis and basic statistics related to the astronomy laboratories; introduction to the magnitude system and celestial coordinates, the color magnitude diagram; observations and data reduction techniques in multi-wavelength astronomy; introduction to data analysis software packages.					
Course Learning	On succes	ssful completion of this	course, students should be able to	:		
Outcomes		quire astronomy obse				
			verify the physical principle(s) in as			
	CLO 4 us	• • •	required to interpret and analyze re and verbal communication skills

Offering Department	Physics	Q	luota				
Course Co-ordinator	TBC, P	nysics ()					
Teachers Involved	(TBC,P	nysics)					
Course Objectives	concep	This course is designed to let senior undergraduate students and fresh postgraduate students know fundamental concepts and physical properties of nanomaterials including two-dimensional quantum wells, one-dimensional quantum wires and zero-dimensional quantum dots.					
Course Contents & Topics	nanoma Physica nanocry	Introduction to nanomaterials and quantum size effect. Dimensionalities and density of states of various nanomaterials. Optical and transport properties of quantum wells, superlattices and two-dimensional electron gas Physical properties of carbon nanotubes and semiconductor nanowires. Physical properties of quantum dots and nanocrystals. Fundamental principles of scanning tunneling microscopy and advanced thin-film growth techniques such as molecular beam epitaxy and metalorganic chemical vapor deposition.					
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 recall basic concepts and knowledge of dimensionality, density of states, quantum size effect						
	CLO 2 identify and compare optical and transport properties of quantum wells, superlattices and two-dimensional electron gas						
	CLO 3 recognise the fundamental principles of scanning tunneling microscopy and advanced thin-film growth techniques such as molecular beam epitaxy and metalorganic chemical vapor deposition						
	CLO 4 describe the basic physics of carbon nanotubes and semiconductor nanowires						
	CLO 5 explain physical properties of zero-dimensional quantum dots and nanocrystals						
Pre-requisites (and Co-requisites and Impermissible combinations)		PHYS3351; and PHYS3551, or already enrolled in this course.

Offering Department	Physics	• ,		Quota	16		
Course Co-ordinator	Dr J H C	Dr J H C Lee, Physics (jleehc @hku.hk)					
Teachers Involved	,	C Lee,Physics) .uu,Physics)					
Course Objectives	physics acquisition electives	This course trains students with experimental knowledge and skills, as well as the understanding on how to prove physics principles with measurements. The focus is on advanced lab skills and techniques, including data acquisition, and data analysis by computers rather than verification of known physical theories. It is one of the core electives for physics major and a required course for the experimental physics theme. Upon completion, interested students may apply the techniques learnt here in experiment-oriented capstone courses.					
Course Contents & Topics	This coulevel ph thermody the way small gro	This course equips students with the necessary experimental techniques commonly used in advanced university level physics experiments drawn from classical mechanics, electromagnetism, statistical mechanics and thermodynamics, and quantum mechanics. After introducing the basics in a few lectures, students have to work all the way from experimental setup, data acquisition to data analysis, possibly with the aid of a computer, either in a small group or an individual. In addition to eight labs, they also have to conduct a small experimental project and present their result orally. Contents of the experiments and small projects may vary from year to year.					
Course Learning	On succe	essful completion of th	nis course, students should be a	able to:			
Outcomes	CLO 2 d	CLO 1 acquire advanced physics experimental techniques CLO 2 design and conduct experiments to verify the physics principle(s) commonly used in advanced level physics courses					
	CLO 4 n			alyze results, and draw conclusion tion skills through written laborate			
Pre-requisites and Co-requisites and Impermissible combinations)		Pass in any two of the following courses: PHYS3350, PHYS3351, PHYS3450, PHYS3550					
Offer in 2020 - 2021	Y 2n	nd sem Offer in 2021		Examination	May		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.						
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lac of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective la skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

PHYS3999	Directed studies in physics (6 credits)	Academic Year	2020						
Offering Department	Physics Quota								
Course Co-ordinator	Dr F C C Ling, Physics (ccling@hku.hk)								
Teachers Involved	(Various teachers in the department,Physics)								
Course Objectives	This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. I should be taken normally in their final year of study. Students investigate a small problem, either theoretical experimental or numerical, under the supervision of an academic staff using the subject materials they have learn in all years of their major studies. The available projects range from small scale research, critical literature review and comment, and to development of university-level physics teaching tools. Passing a pre-approved directed studies is recognized as having completed an elective in one of the four themes.								
Course Contents & Topics	contents and the nature of their projects in the coming academic year. prospective supervisor and the course coordinator to take this course. Students will receive training in research literature reading and reviewmember. For theoretical project, students may need to fill in mathematic and the critically analyze the research methods used in the field. For it	Students interested in taking this course should contact their prospective supervisors in May to determine to contents and the nature of their projects in the coming academic year. They must get the approval from both prospective supervisor and the course coordinator to take this course. Students will receive training in research literature reading and reviewing, under the supervision of a st member. For theoretical project, students may need to fill in mathematical gaps of some sophisticated derivation and the critically analyze the research methods used in the field. For numerical projects, students need to computers to reproduce existing numerical or simulation results. For experimental projects, students have							
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 review the knowledge of a physics or astronomy problem in dep research journals based on what they have learnt in their majors CLO 2 criticize existing approaches for solving the selected physics or as CLO 3 describe and explain connections between the physical principles	stronomy problem	ew of books and						
	CLO 4 (for theoretical or computational projects) identify the key issues of the problem and solve them independently either by analytical or numerical means, and compare the results with predictions or existing solutions CLO 5 (for experimental projects) propose and execute physics experiments or astronomical observations, analyze results and sources of errors of the experiment or observation in comparison with predictions CLO 6 (for projects involving team work) collaborate and communicate effectively in the team, which may

PHYS4151	Data an	alysis and mod	deling in physics (6 credits)	Academic Ye	ear 2020		
Offering Department	Physics			Quota			
Course Co-ordinator		Prof H F Chau, Physics (hfchau@hku.hk)					
Teachers Involved		(Prof H F Chau,Physics)					
Course Objectives	special er basic prin for studer	This course covers general modeling and data analysis techniques used in physics and related subjects with special emphasis on their uses in complex systems, nonlinear systems and adaptive systems. The focus is on the basic principles and concepts rather than the use of computer packages. This course provides a solid foundation for students who intended to do computational physics and complex systems research. It also prepares students to work in related industries.					
Course Contents & Topics	basic hyp difference complex a data anal physical r be drawn	Topics include basic data analysis techniques, linear and non-linear fittings, determining the goodness of the fit, basic hypothesis testing techniques, modeling physical and related systems via differential (ordinary and/or partial), difference equations as well as discrete models such as cellular automata, introduction to complex systems, complex adaptive systems and nonlinear dynamics, the use of computer package such as Matlab in modeling and data analysis. The emphasis is on the basic principles and concepts rather than a particular software package or physical model. Depending on the mutual interests of the coordinators and the students, illustrative examples will be drawn from conventional fields such as classical mechanics, electromagnetism and quantum mechanics as well as more recent fields like biophysics, econophysics and sociophysics.					
Course Learning	On succe	ssful completion of	of this course, students should be able t	:0:

PHYS4350	Advanced classical mechanics (6 credits) Academic Ye				ar 2020			
Offering Department	Physics							
Course Co-ordinator	Prof S Q	Prof S Q Shen, Physics (sshen@hku.hk)						
Teachers Involved	(Prof S Q	(Prof S Q Shen, Physics)						
Course Objectives	mathema	Build on the advanced undergraduate level course PHYS3350, this course further discusses concepts and mathematical techniques in classical mechanics through special topics and applications. It serves as an elective course to better prepare students for their postgraduate studies in physics or other related disciplines.						
Course Contents & Topics	Topics include: Hamiltonian principles, Lagrangian formulation of dynamics, nonlinear problems, many-body systems, variational principle, generalized coordinates, simple application of Lagrangian equation.							
Course Learning	On succe	essful completion of the	nis course, students should be a	able to:				
Outcomes	CLO 1 e	xplain the difference	between Newtonian mechanics	and analytical mechanics				
			problems using Lagrangian form					
			n between classical mechanics a rinciple to real physical situation	and quantum mechanics from Hanns	niltonian formalism			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	ass in PHYS3350						
Offer in 2020 - 2021	N Of	fer in 2021 - 2022 : N		Examination				
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.							
	Demonstrate substantial command of the knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.							
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.							
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS4650	Stellar p	hysics (6 credits)		Academic Yea	r 2020		
Offering Department	Physics			Quota			
Course Co-ordinator	Dr S C Y	Ng, Physics (ncy@astro	.physics.hku.hk)	<u>'</u>			
Teachers Involved	(Dr S C Y	S C Y Ng, Physics)					
Course Objectives	stresses o	o introduce the basic theory of stellar structure and evolution. It follows a vigorous mathematical treatment that resses on the underlying physical processes. Knowledge in quantum mechanics and statistical mechanics will be dvantageous.					
Course Contents & Topics	stellar rad sequence explosion and plane	pics include: Definition of stars. The H-R diagram. Stellar structure equations. Polytropic model. Elementary llar radiation processes. Simple stellar nuclear processes. Saha equation. Stability of stars. Zero-age main quence stars and their evolution. The solar neutrino problem. Late stage evolution of stars. Supernova plosion. If time permits, special topics selected from below will be briefly mentioned: star formation, brown dwarfs d planets, AGB stars and planetary nebulae, binary stars and their evolution, Cepheid variables and theory of llar pulsation, and introduction to helioseismology.					
Course Learning			course, students should be abl	le to:			
Outcomes	CLO 1 de	escribe what is stars and	to classify different types of s		ncluding the use of		
	CLO 3 cr	ellar structure equations itically examine the physically stars	•	stars and how these processes a	ffect the evolution		
	CLO 4 as	ssess selected research	papers in the field of stellar as	strophysics			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	HYS3351 and PHYS365	:1				
Offer in 2020 - 2021	N Off	er in 2021 - 2022 : Y		Examination			
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В						
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve						
			presentational skills are minimally eff		, 3

Course Objectives	include ra introductio physical p	Built on PHYS3653, this course covers selected astrophysics topics at the advanced undergraduate level. Foci include radiation mechanism and high energy processes, basic theory of stellar structure and evolution, and introduction to compact objects. It follows a vigorous mathematical treatment that stresses on the underlying physical processes. This is an elective course for the astrophysics theme. This is also an essential course for those who plan to pursue postgraduate studies in astrophysics.					
Course Contents & Topics	processes	; simple stellar nuclear	nisms; stellar structure equations processes; stellar formation; late dditional selected topics will be co	stage of stellar evolution; su			
Course Learning	On succes	sful completion of this	course, students should be able to	0:

Pre-requisites (and Co-requisites and Impermissible combinations)	TBC						
Offer in 2020 - 2021	N Offe	er in 2021 - 2022 : N			Examination		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В	Demonstrate substantial command of the knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities, reasoned logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations using effective organizational and presentation skills.					
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective observation skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.						
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems using limited or barely effective organizational and presentational skills.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS7750	Nanoph	/sics (6 credits)		Academic Year	2020	
Offering Department	Physics Quota					
Course Co-ordinator	Dr D K K	Physics (dkki@hku.hk)				
Teachers Involved	(Dr D K k	,Physics)				
Course Objectives	physics,	This course is designed to let fresh postgraduate students know fundamental concepts and principles of nano physics, such as two-dimensional electron gas, quantum Hall effects, one-dimensional electron system, quantum wires and nanotubes, zero-dimensional electron systems, single electron effects and quantum dots.				
Course Contents & Topics	propertie external and semi Quantum	wires and nanotubes, zero-dimensional electron systems, single electron effects and quantum dots. Introduction to nano physics and quantum size effect. Dimensionalities and density of states. Optical and transport properties of two-dimensional electron gas formed at heterostructures and within novel graphene monolayers with external fields. Quantum Hall Effects. Physics of one-dimensional electron systems including carbon nanotubes and semiconductor nanowires. Fundamental physics of zero-dimensional electron systems. Single electron effects. Quantum dots and nanocrystals. Fundamental principles and applications of scanning tunneling microscopy in the study of nano physics. If time permits, the making and application aspects of nanomaterials will also be discussed.				
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 re	call basic concepts and knowled	lge of dimensionality, density of state	s, quantum size eff	ect	
	CLO 2 identify and compare optical and transport properties of two-dimensional electron gas with external fields, especially quantum Hall effects					
	CLO 3	cognize the fundamental princip	oles and important applications of so	anning tunneling m	nicroscopy in the	

	s	tudy of nano physics					
			sics of one-dimension	al electron systems including carb	on nanotubes and		
	semiconductor nanowires						
			•	nal quantum dots and nanocrystals, si	ngle electron effects

ENTR3002	Customer analysis and strategic marketing (6 credits)	Academic Year	2020					
Offering Department	Faculty	Quota	24					
Course Co-ordinator	Dr R Law, Faculty (rockylaw@hku.hk)							
Teachers Involved	(Dr R Law,Faculty of Science)							
Course Objectives	This course is to provide opportunity for: 1. Students to master techniques to identify customers' needs and market situations. 2. Students to learn how to define strategies to satisfy customers' needs and to capture market shares 3. Students to learn how to develop systematic approaches for commercializing an innovation from the resanalyzing the current market condition and customers' need. 4. Students to evaluate local and international cases on disruptive/market driven innovation. 5. Students to synthesize and implement their own approaches to invent for the need and develop a bus proposal to commercialize such an innovation.							
Course Contents & Topics	This course focuses on data collection and analysis of market and custor commercial opportunities could be identified together with systematic application will learn about practical way of data collection and analysis and about hade wisely. Local and international case studies on disruptive/market drevaluated.	proaches addressing the low data-driven busines	em. The students s decision will be					
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 to master techniques of data collection and analysis particular for market and customer analysis							
	CLO 2 to acquire knowledge of interpretation of the result of market and customer analysis, and then to define a solution to address the need by an innovative idea/new product							
	CLO 3 to synthesize systematic approaches to commercialize an innovation with regard to the existing market condition and customers' need							
	CLO 4 to analyze local and international cases on disruptive/market drive	n innovation						
	CLO 5 to integrate principles discussed in this course via synthesizing and implementing systematic approaches to commercialize an innovation							
	CLO 6 to draft a business proposal							
Pre-requisites	Pass in IIMT1611 and FNTR2001

ENTR4966	Entrepre	neurship interr	nship (6 credits)	Academic Yea	r 2020		
Offering Department	Faculty	•	· ` `	Quota	24		
Course Co-ordinator	Dr R Law, I	Faculty (rockylaw	@hku.hk)				
Teachers Involved	(All acaden	nic staff in Faculty	of Science,)				
Course Objectives	To pract environmer	This course is to provide opportunity for students: 1. To practice what they learned related to entrepreneurship through prior university coursework in real-life work environment. 2. To acquire first-hand experience in industries for the preparation of their own business ventures.					
Course Contents & Topics	Students taking this course will work as an intern for at least 160 hours in at least 20 working days University or outside the University in a company (preferably technology based startup company). The may be arranged by the Faculty or obtained by students themselves. 1. Within the university: The student will be supervised by a staff member (Supervisor), working on a pro-						
	various tas 2. Outside Supervisor	various tasks as instructed by the Supervisor. 2. Outside the university: The student will be supervised under a staff member of the external agency (the Exterr Supervisor) and a staff member of the Faculty/School /Department of the student (the Internal Supervisor).					
Course Learning Outcomes	CLO 1 to it	ntegrate and apply	this course, students should be able to / knowledge gained in coursework in a	real-life setting			
	CLO 3 to f	urther improve progain hand-on expe	ture of a real organization and challeng oblem-solving and collaborative skills in erience from external startup compan I activities that will help them to prepar	n a real-life setting ies or internal research group	about their daily

Course Objectives	 Apply engained fro proposals. Studen 	his course is to provide opportunity for students to: Apply entrepreneurship-related knowledge gained through prior university coursework and hand-on experiences ained from prior Internship course to carry out in-depth business potential evaluation and to develop start-up roposals. Students to further develop leadership and teamwork experience via collaboration in multi-disciplinary nvironments.					
Course Contents & Topics	the superv years of st and produ result from	This course is offered to students as the final course in the minor programme in Science Entrepreneurship. Under the supervision and guidance of an academic staff, students are to use the knowledge they have gained in all ears of study to practice entrepreneurship. This can be achieved by conducting technology trend, market analysis and product identification for defining market-product fit solutions. Students are expected to participate, with the esult from their hands-on experience in projects, competitions (such as the HKU DreamCatchers initiative, various lackathon activities and "Challenge Cup" National Competition etc.) and to develop start-up companies					
Course Learning	On succes	sful completion of this c	ourse, students should be abl	e to:			
Outcomes	CLO 1 to	integrate and apply the	oretical knowledge in a real-lif	e setting			
	CLO 2 to	adopt appropriate tools	to analyze real-life entreprene	eurship issues			
	CLO 3 to	further improve present	ation, problem-solving and co	llaborative skills in tackling real-	life problems		
	CLO 4 to	build a team, with mem	bers from different specialized	d areas, that is ready for busines	ss venture		
	CLO 5 to	prepare a viable busine	ss plan that is ready for fund i	raising activities			
Pre-requisites (and Co-requisites and Impermissible combinations)		NTR3001 and ENTR300 nust be in their Year 3 s		noring in Science Entrepreneurs	ship.		
Offer in 2020 - 2021	Y 1st	sem Offer in 2021 - 20	22 : Y	Examination	No Exam

Biological Sciences (elnezami@hku.hk)					
BC Faculty of Land and Food Systems) Biological Sciences)					
This course is designed to provide students with the opportunity to experience the inner-workings of a sustainable campus farming operation, and to make connections between the ecosystems that nourish the thriving, urba communities surrounding the farm. Students will participate in plenary sessions with course instructors and guest lecturers from the UBC Faculty of Land and Food Systems, in guided group discussions, field trips on and o campus, and in a variety of seasonal, hands-on farming activities.					
The MacMillan building, home of the UBC Faculty of Land and Food Systems, will be the site of the plena sessions, guest speaker lectures, and morning group discussion sessions. The south campus farm in UBC is the site of the majority of farming activities, including afternoon group discussions, harvest Fridays and mark Saturdays. Students will have a chance to explore the UBC campus sustainability hot-spots, including the LF orchard garden, the world-class CIRS green building, Place Vanier, home of an innovative campus chef, Ster Golieb, and the wiggle worm project in the Student Union Building/SUB. Students will also venture off-campus two the Vancouver Farmers' Market and to Granville Island Public Market to provide a comparative view marketing systems and the regionally grounded food system context. The main approach to learning with this course is student-centered learning and hands-on experience. To me course learning objectives, students are expected to attend and participate in all sessions, to contribute to ground discussions and the group oral presentation, and to complete a series of reflective journals on each of the formain course themes-soils, biodiversity, seeds, marketing. On successful completion of this course, students should be able to: CLO 1 connect underlying agroecosystem concepts and soil science fundamentals with principles and practices.					
of sustainable farming CLO 2 observe and compare multiple models of agricultural food production in an urban and campus farm s CLO 3 identify multiple strategies for creating on-farm biodiversity CLO 4 demonstrate a basic understanding of composting fundamentals CLO 5 demonstrate the ability to perform a select set of basic crop maintenance, harvest, washing, and p techniques in a sustainable campus farm setting CLO 6 demonstrate best practices with post-harvest handling and food safety protocols Students are expected to have passed at least 30 credits of level 1 and/or level 2 science courses. Stude

Course Objectives	biology thr will learn interactions to human.	Marine Life Science is an integrated study of how the oceans influence large and small scale patterns of marine biology through biophysical interactions. By studying the temperate cold waters of the NE Pacific Ocean, students will learn marine habitats as habitable planet, to appreciate the dynamics of marine biodiversity, the complex interactions between the physical and biological components, fishery, and the services the coastal oceans provide to human. This course will provide an excellent opportunity for students to experience the diversity of marine life on the other side of the Pacific.				
Course Contents & Topics	abundance The cours change mi series of fi opportunity northern ty the Marina intertidal z Marine bio will be exp teachers a	rom both HKU and UBC teachers will introduce 'marine life and distribution of species, productivity, coastal pollution, fis e will also introduce the commercial aspects of marine life, itigation through management of coastal ecosystems. All the eld observations, presentations from guest lecturers and grouy to touch and learn about Canada's wonderful marine life di ancouver Fish Hatchery. Students will be learning Canada's coal (Reed point marina) and the Sea-grass habitat. There will also one, exposed and protected coastal habitats, sandy beaches diversity survey techniques and methods of studying marine life bosed to a different learning environment involving not only Hond students, bringing diverse range of expertise, cultures, and Ocean to focus on the diversity, dynamic interactions and three	sheries, aquaculture and i.e. eel-grass, aquacul ise lectures will be disc p discussions. There wi iversity in the Vancouver acastal plankton biodivers so be several opportunit and estuaries in the Verein the field will be empt KU teachers and studer learning opportunities fi	I climate change, ture and climate ussed through a ll be an excellenter Aquarium, and itty through visinglies to explore the ancouver Island, hasized. Students but also UBC		
Course Learning		sful completion of this course, students should be able to:				
Outcomes		derstand the basics of marine life science and the marine habita	able planet			
	CLO 2 exp wa thr CLO 3 des CLO 4 dis	plain the major types, causes, and effects of marine threat irming and ocean acidification, and invasive species, as well eats for marine communities and ecosystem services scribe the difference between coastal marine biodiversity and history the reasons why marine biodiversity and ecosystem services. SCNC3111	Frontier	s of science hor	ours seminar course (6 credits)	Academic Year	2020		
Offering Department	Faculty		, ,	Quota	120		
Course Co-ordinator	Dr R K W	Lui, Faculty (lui2012	2 @hku.hk)				
Teachers Involved	(Dr C Zheng,Biological Sciences) (Dr E K M Leung,Faculty of Science) (Dr R K W Lui,Faculty of Science) (Dr W M Y Cheung,Faculty of Science)						
Course Objectives	To introduce the research being done by our Faculty's professors To broaden and enrich students' scientific knowledge in and outside of their chosen major To foster intellectual discussions between our research professors and students To observe how research is done and note the thinking processes and paths that lead to scientific discoveries To enhance students' awareness of the importance of science to solve some of the problems facing the society To collaborate with and learn from peers from different academic backgrounds in a scientific setting To develop essential written and spoken communication skills To serve as a potential mentor-mentee matching platform for faculty members and students To develop an awareness of research ethics						
Course Contents & Topics	latest resorders, a for condu	Professors from different departments will be featured in the honours seminar course, and they will discuss thei latest research with students. The topics will span the areas of Biological Sciences, Chemistry, Earth Sciences Physics, as well as Mathematics/Statistics & Actuarial science. In addition, the following topics to prepare student for conducting and communicating research will also be introduced: Introduction to Different Search Engines fo Scientific Journals and/or Decoding a Scientific Paper and/or Effective Communication for Scientists (Writing, Ora

STAT1601	Elementary statistical methods (6 credits)	Academic Year	2020			
Offering Department	Statistics & Actuarial Science	Quota				
Course Co-ordinator	TBC, Statistics & Actuarial Science ()					
Teachers Involved						
Course Objectives	Research findings are usually supported by data. Data collected in an estructions involving variability and uncertainty. They are used to estimatest the acceptability of a certain new hypothesis. Valid methods of a successful investigation. The course aims to present the fundament researchers. Microsoft Excel might be used to carry out some states sophisticated technical mathematics.	ate the true value of a cert nalysing the data are thus als of statistical methods	ain quantity or to essential to any widely used by			
Course Contents & Topics	The course will introduce and study the following topics: Presentation of data, Measures of Central Tendency, Measures of Variability and Uncertainty, Basic Probal Laws, Common Probability Distributions such as Uniform, Binomial, Poisson, Hyper-geometric, Geometric Normal distributions, Random Sampling, Distribution of the Mean, Normal Sampling Theorem, Point Estimal Confidence Intervals, Sample Size Determination, Hypothesis Testing, Inferences for Mean and Proportion, squared tests, Simple Regression and Correlation					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 select and use appropriate statistical methods to analyze data					
	CLO 2 perform statistical analysis with calculator and Microsoft Excel					
	CLO 3 understand and apply basic concepts of probability					
	CLO 4 gain familiarity with the fundamental concepts of random variable	es				
	CLO 5 make inferences on a population based on sample data					
	CLO 6 determine the most appropriate statistical method to use for a gi	iven statistical problem				
	CLO of determine the most appropriate statistical method to use for a given statistical problem.					
	CLO 8 understand the basic principles of simple linear regression and correlation and their applications to practical problems					
Pre-requisites	Level 2 or above in HKDSE Mathematics or equivalent; and					
(and Co-requisites	Not for students with Level 2 or above in HKDSE Mathematics Extended	d Module 1 or 2; and				
and Impermissible combinations)	Not for students who have passed or already enrolled in any of the STAT2601, STAT1603, ECON1280	following courses: STAT2	901, STAT1602,

Course Objectives	The discipline of statistics is concerned with situations involving uncertainty and variability. Variability greatly affects the interpretation of data. Thus statistics forms an important descriptive and analytical tool. This elementary course, which is taught without much technical mathematics, presents many standard situations of data analysis and interpretation with emphases on business examples. The statistical tests of these situations are presented. Microsoft Excel might be used to carry out some statistical analysis.						
Course Contents & Topics	Measures Binomial, Point Esti Means ar	The course will introduce and discuss the following topics: Presentation of Data, Measures of Central Tendency, Measures of Variability and Uncertainty, Elementary Probability Rules and Basic Probability Distributions such as Binomial, Normal, Poisson, Hyper-geometric and Geometric, Random Sampling, the Normal Sampling Theorem, Point Estimation, Confidence Intervals and Sample Size Determination, Hypothesis Testing involving Inferences for Means and Proportions as well as the Chi-square tests, Simple Regression and Correlation, Elementary Time Series and Index Numbers					
Course Learning	On succes	ssful completion of	this course, students should be able	to:			
Outcomes	CLO 1 ur	nderstand the meth	ods for describing sets of data				
	nı	ımerical summarie:	analysis with calculator and Micros s y basic concepts of probability	oft Excel, draw conc	usions	from data using

STAT2604	Introduc	tion to R progra	amming and elementary data analy	sis Academic Ye	ar 2020	
	(6 credit	s)			2020	
Offering Department	Statistics 8	& Actuarial Science		Quota	50	
Course Co-ordinator	Dr Z Liu, S	Or Z Liu, Statistics & Actuarial Science (zhhliu@hku.hk)				
Teachers Involved	(Dr Z Liu,S	Statistics & Actuaria	l Science)			
Course Objectives	language elementar work with	R. This course foci y statistical analysi different data typ	provide a first-level introduction to the po- uses on learning the basic programming s s. The programming skills involved can be ses, manipulation and transformation of rofessional summary reports with high-qua	kills in R with examples e applied to input and data, random samplin	and applications in output of data sets	
Course Contents & Topics	2. The R e 3. Probabi continuous 4. Descrip summary	 R basics: first steps; language essentials. The R environment: session management; the graphics subsystem; R programming; data entry. Probability and distributions: random sampling; probability calculations and combinatorics; discrete distributions; continuous distributions; the built-in distributions in R. Descriptive statistics and graphics: summary statistics for a single group; graphical display of distributions; summary statistics by groups; graphics for grouped data; graphical display of tables. Simple linear regression: residuals and fitted values; prediction and confidence bands; correlation. 				
Course Learning	On succes	ssful completion of	this course, students should be able to:			
Outcomes	CLO 1	access online help	and documents for R			
	CLO 2	use R to input data	a, perform data transformation and merging	g, output data		
	CLO 3	summarize data in	tables and graphs for descriptive data and	alysis		
	CLO 4	work with numeric	, character, and other unstructured data ty	pes		
	CLO 5		nctions, loops and control flows			
	CLO 6 perform data management using SQL language in R					
	CLO 7		rlo simulations to validate statistical conce	ots		
(and Co-requisites and Impermissible combinations)		,		-

Teachers Involved	(Ms L M S	(Ms L M S Kwan,Statistics & Actuarial Science)					
Course Objectives	evidence- aims to p adopted s	The course covers the major methods for studying demographic and socio-economic statistics, with a quantitative evidence-based approach to understand the socio-economic well-being of residents in a territory. The course aims to provide students with 1) essential underlying principles and the pertinent methods behind internationally adopted statistical indicators; and 2) skills in the statistical descriptions and further analysis for application to planning, policy-making and commercial endeavours of a territory.					
Course Contents & Topics	Socio-eco Economic pertaining Sources,	Demographic statistics on population structure, fertility, mortality, migration, life tables, population projections; Socio-economic statistics on housing, labour, and social equity; Economic statistics on external trade, innovation, prices and GDP measurements (with emphasis on methods pertaining to some important economic sectors in the case of GDP). Sources, theory and methods of such statistics; Examples would be especially drawn from Hong Kong, neighbouring economies or comparable economies.					
Course Learning	On succes	ssful completion of this	course, students should be able to:				
Outcomes	CLO 1 de	scribe and interpret m	ajor official & other publicly dissemina	ated socio-economic stati	stics of a territory		
	CLO 3 pr	ong, neighbouring ecoredict a future situation	alyse the socio-economic well-being on the socio-economic well-being on the social soc		r reference to Hong

STAT3603	Stochastic processes (6 credits)	Academic Year	2020			
Offering Department	Statistics & Actuarial Science	Quota				
Course Co-ordinator	Dr J T Y Wong, Statistics & Actuarial Science (jefftywong@hku.hk)	Dr J T Y Wong, Statistics & Actuarial Science (jefftywong@hku.hk)				
Teachers Involved	(Dr J T Y Wong, Statistics & Actuarial Science)					
Course Objectives	This is an introductory course in stochastic processes.					
Course Contents & Topics	Introduction to probability theory, conditional probability and expectation, Markov chains, random walk models, classification of states in a Markov chain, calculation of limiting probabilities and mean time spent in transient states, Poisson process, distribution of inter-arrival time and waiting time, conditional distribution of the arrival time, Brownian Motion, hitting time and maximum variable, geometric Brownian motion, the Black-Scholes option pricing formula, Gaussian bridge, and stationary processes. Birth-and-death process, branching process and renewal process may also be covered (if time permits).					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 apply the conditioning method to calculate the mean and probability CLO 2 understand the essentials of Markov chains, the Poisson process, and Brownian motion CLO 3 understand how stochastic models can be applied to the study of real-life phenomena					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2601; and Not for students who have passed in MATH3603, or have already enrolled in this course; and Not for students who have passed in STAT3903, or have already enrolled in this course.

STAT3604	Design a	Design and analysis of experiments (6 credits) Academic Yea			r 2020		
Offering Department	Statistics	& Actuarial Science		Quota	23		
Course Co-ordinator	Dr D Y Zh	ang, Statistics & Actuar	ial Science (doraz@hku.hk)				
eachers Involved	(Dr D Y ZI	hang,Statistics & Actuar	rial Science)				
Course Objectives	basic prin	ientific research often requires proper design and analysis of experiments. This course aims to introduce the sic principles of experimental design; to explain the concepts and to develop the statistical skills in model-base alysis of experiment.					
Course Contents & Topics	randomise	ed block, crossed and	s for designing experiments. Analy I nested factorial structure. Balanced/random effects models.				
Course Learning	On succes	ssful completion of this	course, students should be able to:				
Outcomes	CLO 1 de	CLO 1 develop a conceptual understanding of experimental design					
	CLO 2 ac		statistical tools of experimental d	esign and the understand	ding to use then		
			mental designs for different problems				
	CLO 4 se	elect appropriate statisti	cal model and to know how to validat	te the model			
Pre-requisites and Co-requisites and Impermissible combinations)	Pass in S	TAT2602 or STAT3611	or STAT3902				
Offer in 2020 - 2021	Y 1st	sem Offer in 2021 - 2	022 : N	Examination	Dec		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and abilit to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. L of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to so problems. Organization and presentational skills are minimally effective or ineffective.

	Quality (control and manage	ment (6 credits)	Academic Year	r 2020	
Offering Department	Statistics 8	& Actuarial Science	<u>'</u>	Quota		
Course Co-ordinator	TBC, Stati	istics & Actuarial Science	e ()	·		
Teachers Involved						
Course Objectives	course propresents a reliability, six-sigma,	ne successful control of quality in production is a matter of primary importance to a company's prosperity. The purse provides an overview of quality compromise which involves both the producer and the consumer. The esents a variety of statistical solutions including control charts, acceptance and sequential sampling plan diability, and life-testing. Contemporary quality management systems such as total quality control, zero defectively. The student is brought to the frontier of today's quality control anagement ideas.				
Course Contents & Topics	control, va sampling testing. E	ariables and attributes of plans. MIL-STD-105D	r applications, process variability, control charts. Operating characte and Dodge-Romig schemes. designs. Management of quality of	ristic curves. Single, doub Variables sampling. Re	ole and sequential liability and life	
Course Learning	On succes	ssful completion of this c	course, students should be able to:			
Outcomes	CLO 1 a	ppreciate the practicality	y of statistical concepts and method	pts and methods in general		
			fit various production situat	tions		
		CLO 3 know the traditional and modern systems of quality management				
Pre-requisites (and Co-requisites and Impermissible combinations)	course) or		0 and any University level 2 cours iniversity level 2 course) or STAT26

STAT3606	Business logistics (6 credits)	Academic Year	2020		
Offering Department	Statistics & Actuarial Science	Quota			
Course Co-ordinator	Dr O T K Choi, Statistics & Actuarial Science (ochoi@hku.hk)				
Teachers Involved	(Dr O T K Choi, Statistics & Actuarial Science)				
Course Objectives	Modern business corporations are increasingly using logistics as a management tool, for example, in capital budgeting problems, production planning, scheduling, transportations and deciding location for a new factory. This course addresses the business applications of logistics.				
Course Contents & Topics	In this course, students will apply the analytical skills with aid of computer logistic problems. Topics include optimization techniques applied in allocation transportation, assignment, inventory control and queuing problems.				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 solve linear programming with Graphical approach, Simplex method an	d hands-on Excel \$	Solving function		
	CLO 2 set up and solve network flow problems using least-cost appro approximation.	ach, MODI metho	od and Vogel's		
	CLO 3 understand decision theory and its applications				
	CLO 4 evaluate the cost and effectiveness of service systems				
Pre-requisites (and Co-requisites	Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1602 and any University level 2 course) or STAT2601 or (STAT2601				

and Impermissible combinations)	,	r STAT2901; and udents who have passed	MATH3901, or have already enrol	led in this course.

STAT3609	The statistics of investment risk (6 credits)	Academic Year	2020				
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)	Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)					
Teachers Involved	(Dr K P Wat,Statistics & Actuarial Science)						
Course Objectives	Most investments involve some risk. The decision to invest or not is usuall	y made against a	a background of				

	uncertainty. Whilst prediction of the future is difficult, there are statistical modelling techniques which provide a rational framework for investment decisions, particularly those relating to stock markets and the markets for interest rates, commodities and currencies. Building upon research, both in Hong Kong and abroad, this course presents the prevailing statistical theories for prices and price-change in these vital markets.

STAT3610	Risk management and insurance (6 credits)	Academic Year	2020				
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	Dr R W L Wong, Statistics & Actuarial Science (rwong @hku.hk)						
Teachers Involved	(Dr R W L Wong, Statistics & Actuarial Science)						
Course Objectives	This course provides knowledge on basic risk and its management, as well as basic financial planning through insurance products, to students. It allows students to understand the statistical, financial and legal principles underlying the techniques for managing the insurable risks faced by organisations and individuals. This course aims at students who have minimal background in quantitative methods, it involves very minimal quantitative calculations.						
Course Contents & Topics	The course introduces and explains: - risk in our society, - insurance and risk, - introduction to risk management, - fundamental legal principles, and analysis of insurance contracts, - life insurance, their contractual provisions,						
Course Learning Outcomes	 - individual health insurance coverages. On successful completion of this course, students should be able to: CLO 1 understand the general risks faced by organisations and individuals and the generic risk management principle CLO 2 demonstrate knowledge and understanding of the underlying financial and legal principles of the insurance industry CLO 3 understand how risk can be managed through insurance CLO 4 compare and contrast different types of commercial and personal insurance products CLO 5 plan for and arrange their own personal insurance needs 						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or STAT2601 or (STAT1603 and any University level 2 course) or STAT2901. (Not available to Actuarial Science students)

Course Objectives	scientific several v statistics. statistics.	A wide range of statistical analyses and methods are presented using data sets from social sciences research and scientific studies. Measuring uncertainty, describing patterns of variability and the inter-relationship between several variables are essential aspects of scientific investigations that require good understanding of statistics. This computer-oriented but non-mathematical course develops the important concepts and methods of statistics. The course makes extensive use of computers through the user friendly statistical software JMP. No knowledge of a programming language is required.					
Course Contents & Topics		lata exploration, formulation of testable hypotheses, the evaluation of evidence and forecasting on the basis of ast experience.					
Course Learning	On succe	ssful completion o	f this course, students should be a	able to:			
Outcomes	CLO 1 st	CLO 1 summarize and describe the quantitative and qualitative data using some simple statistical measures

STAT3616	Advanced SAS programming (6 credits)	Academic Year	2020
Offering Department	Statistics & Actuarial Science	Quota	50
Course Co-ordinator	TBC, Statistics & Actuarial Science ()		
Teachers Involved			
Course Objectives	This course aims to equip students, who have taken STAT2603, with a programming for automation of procedures and data processing in solving comp		

Course Contents & Topics	Overview of SAS underlying parts. Macro programming. Advanced programming techniques including data simulation, advanced data look-up techniques, modifying transaction datasets and controlling I/O processing and memory.							
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 l	Jnderstand the system o	f SAS and basic programming					
		•	parallel processing to aid automati	on				
			ithout printing to OUTPUT windows		ition			
			elop customized and automated ap					
	CLO 5 Use advanced SAS programming statements and techniques to solve complex problems							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2601 or STAT2901 (Students are strongly recommended to take STAT2603 or STAT2604 prior to taking this course.)							
Offer in 2020 - 2021	N Off	er in 2021 - 2022 : N		Examination				
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.							
	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.							
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.							
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3617	Sample	survey me	thods (6 credi	its)		Academic Year	2020		
Offering Department	Statistics	& Actuarial S	cience			Quota			
Course Co-ordinator	Ms O T K Choi, Statistics & Actuarial Science (ochoi@hku.hk)								
Teachers Involved	(Ms O T K Choi, Statistics & Actuarial Science)								
	(Prof F W H Ho, Statistics & Actuarial Science)								
Course Objectives	This course will cover design and implementation of sample surveys and analysis of statistical data thus obtained Survey design includes overall survey design, design of sampling schemes and questionnaires, etc. Sampling methods include sample size determination, sampling and non-sampling errors and biases, methods of estimation of parameters from survey data, imputation for missing data etc.								
Course Contents & Topics	Topics may include: survey design and planning; survey quality and ethics; implementation matters like management of survey staff, respondent relationship and logistical issues; and sampling methods like simple random sampling, systematic sampling, stratified sampling, cluster sampling, multi-stage sampling, sample size determination, post-stratification, ratio and regression estimation methods, non-sampling errors and biases, non-responses and missing data. Case studies of major applications of sample survey methods in the public and private sectors, with some examples on the analysis and application of the statistical data thus produced, will be discussed.								
Course Learning Outcomes	On successful completion of this course, students should be able to:								
	CLO 1 demonstrate knowledge and understanding of the various steps to be taken in the planning and implementation of sample surveys								
	CLO 2 design different sample schemes and select the most efficient and suitable one for adoption for a particular survey - make statistical inference on parameters based on a sample								
	CLO 3 judge whether the statistics presented by other survey takers are trustworthy								
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass or already enrolled in BIOL2102, or (ECON1280 and any University level 2 course), or (STAT1601 and any University level 2 course), or (STAT1602 and any University level 2 course), or STAT2601, or (STAT1603 and any University level 2 course), or STAT2901.								
Offer in 2020 - 2021	Y 2nd	d sem Offer	in 2021 - 2022 :	Υ		Examination	May		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.								
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.								
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.								
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply								

	Fail	Demonstrate little or of analytical and cr	knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to problems. Organization and presentational skills are minimally effective or ineffective.

STAT3621	Statistical data analysis (6 credits)	Academic Year	2020			
Offering Department	Statistics & Actuarial Science	Quota	50			
Course Co-ordinator	Dr D Y Zhang, Statistics & Actuarial Science (doraz@hku.hk)					
Teachers Involved	(Dr D Y Zhang, Statistics & Actuarial Science)					
Course Objectives	Building on prior coursework in statistical methods and modeling, students will get a deeper understanding of the entire process of data analysis. The course aims to develop skills of model selection and hypotheses formulation so that questions of interest can be properly formulated and answered. An important element deals with model review and improvement, when one's first attempt does not adequately fit the data. Students will learn how to explore the data, to build reliable models, and to communicate the results of data analysis to a variety of audiences.					
Course Contents & Topics	Descriptive statistics, presentation and visualization of data; Simple statistical are sample case using parametric and nonparametric methods; Regression analyst and model diagnostic checking; Analysis of Variance (ANOVA): 1-way, two Covariance analysis; Categorical and count data: binary logistic regression, Pois Real data sets will be presented for modelling and analysis using statistic experience.	es: model fitting; vo-way and high eson regression.	variable selection er-way ANOVA;			
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 make good sense of the problem and identify what to measure for the qu	estion of interest				
	CLO 2 summarize and describe the quantitative and qualitative data using some simple appropriate statistical measures					
	CLO 3 identify the association among several continuous or discrete variables					
	CLO 4 carry out appropriate and comprehensive statistical analyses based on real life data including model selection, perform model diagnostics, formulate testable hypotheses, make appropriate statistical inferences, make interpretations on the findings and report writing					
Pre-requisites	Pass in STAT3600 or STAT3907					

(and Co-requisites and Impermissible combinations)	(Students	are strongly recommend	ded to take STAT2603 or STAT260	04 prior to taking this cours	se.)

STAT3655	Survival	analysis (6 credits))	Academic Yea	r 2020		
Offering Department	Statistics 8	& Actuarial Science		Quota			
Course Co-ordinator	Dr J F Xu,	Dr J F Xu, Statistics & Actuarial Science (xujf@hku.hk)					
Teachers Involved	(Dr J F Xu,Statistics & Actuarial Science)						
Course Objectives	This course is concerned with how models which predict the survival pattern of humans or other entities are						
	established. This exercise is sometimes referred to as survival-model construction.						
Course Contents & Topics	The nature and properties of parametric and nonparametric survival models will be studied. Topics to be covered include: the introduction of some important basic quantities like the hazard function and survival function; some commonly used parametric survival models; concepts of censoring and/or truncation; parametric estimation of the survival distribution by maximum likelihood estimation method; nonparametric estimation of the survival functions from possibly censored samples by means of the Kaplan-Meier estimator, the Nelson-Aalen estimator; and the kernel density estimator or the Ramlau-Hansen estimator and comparisons of k independent survival functions by means of the generalized log-rank test; parametric regression models; Cox's semiparametric proportional hazards regression model; and multivariate survival analysis.						
Course Learning			course, students should be able to

STAT3799	Directed studies in statistics (6 credits)	Academic Year	2020
Offering Department	Statistics & Actuarial Science	Quota	50
Course Co-ordinator	Prof S M S Lee, Statistics & Actuarial Science (smslee@hku.hk)		
Teachers Involved	(Various teachers as the assessors of oral presentations and written reports, Sta	atistics & Actuarial	Science)
Course Objectives	To enhance students' knowledge of a particular topic and students' self-directed	l learning and critic	al thinking skills.
Course Contents & Topics	The student undertakes a self-managed study on a topic in statistics under the topic is preferably one not sufficiently covered in the regular curriculum. The di or a synthesis of published work on the subject, or a laboratory or field stunderstanding of the subject. The project may not require an element of original	rected study can b udy that would e	e a critical review
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 gain first-hand experience in solving a research or applied problem in si CLO 2 develop skills in important technical tools, including the use of comput		

	s	tatistical research and da	ta analyses			
			ne findings of a research study			
	CLO 4 m	ake concise oral present	tation of the findings of a research	study		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics Majors; and Not for students who have already enrolled in STAT4799 in this academic year. This capstone course is only for students majoring in Decision Analytics/Risk Management/Statistics; and subject to the consent of course coordinator. This course is mutually exclusive with STAT4710. The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2020 - 2021	Y 1st	sem 2nd sem Offer	in 2021 - 2022 : Y	Examination	No Exam	
Grade Descriptors (A+ to F)	A	original thought. Insightful us to quote/reference aptly. Cr organizational and presenta areas relevant to the topic.]	p of the subject. Show strong analytical se and critical analysis / evaluation of infor itical use of data and results to draw approximational skills. [Work of A+ should show cor	rmation drawn from a full range o propriate and insightful conclusio nsiderable additional work beyond	f high quality sources and ns. Apply highly effective d that is required in wider	
	В	relevant information from so	asp of the subject. Evidence of analytica purces, showing ability to make meaningfu /. Correct use of data of results to draw a	I comparisons between different	secondary interpretations	
	С	·				
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.				
	Fail	Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Teachers Involved	(Prof K C	Yuen, Statistics & Actua	rial Science)			
Course Objectives	until-dea financial	The major objectives of this course are to integrate life contingencies into a full probabilistic framework. The time until-death random variable is the basic building block by which models for life insurances, designed to reduce the financial impact of the random event of untimely death, are developed. This course introduces the concepts of life contingencies and the basic mathematical skills for modelling life insurance products.				
Course Contents & Topics			butions; life table functions; select and ultimate dom variable; benefit premiums.	tables; life insur	ance models; life	
Course Learning	On succe	essful completion of this	course, students should be able to:			
Outcomes	CLO 1 c	calculate the expected va	lues, variances, probabilities, and percentiles for	r survival-time ra	ndom variables	
	CLO 2 d	define the continuous su	rvival-time random variable that arises from th	ne discrete survi	val-time random	
		ariable using some assu	mptions for fractional ages			
	CLO 3 c	define present-value-of-b	enefit random variables defined on survival-time	random variable	·S	
	CLO 4 c	define and calculate the	expected values, variances and probabilities for	present-value-o	f-benefit random	
	\	/ariables, present-value-o	of-loss-at-issue random variables, and present-va	alue-of-loss rand	om variables	
	CLO 5 calculate benefit premiums for life insurances and annuities

Course Contents & Topics	covered in measures important pricing mo	first part of the course will give an introduction to corporate finance and provide an overview of some topics red in STAT2902 and STAT3615. These include financial markets and companies, time value of money, and sures and performance assessment of financial performance. The main part of the course will focus on some retant topics of corporate finance including: portfolio theory, Markowitz mean-variance analysis, capital asset g model, weighted average cost of capital, market efficiency, capital structure and dividend policy, financial age and firm value, and option pricing models.					
Course Learning	On succes	ssful completion of this course, students should be able to:					
Outcomes	CLO 1 describe the tasks of a financial manager and the financial decisions made by a corporation						
	CLO 2 recall the use of present and future values in calculating the value of bonds and stocks						
	CLO 3 assess financial performance using various investment criteria and techniques of project analysis						
	CLO 4 analyze the mean-variance portfolio theory, capital asset pricing model and arbitrage pricing theory						
	CLO 5 identify the factors to be considered by a company when deciding on its capital structure and dividend policy, and also the impact of financial leverage and long/short term financing policies on capital structure						
	CLO 6 describe the various forms of market efficiency						
	CLO 7 calculate the value of options using the binomial option pricing model

Course Co-ordinator	Prof G M	Prof G Ma, Statistics & Actuarial Science (gma328@hku.hk)					
Teachers Involved	(Prof G I	(Prof G Ma, Statistics & Actuarial Science)					
Course Objectives	of pension	This course covers the basics of pension plan design and pension fund management, as well as the fundamentals of pension plan valuations using different actuarial cost methods. The students will be introduced to the application of actuarial valuation techniques to the funding and accounting of pension plans.					
Course Contents & Topics	The follo	The following topics will be covered: Fundamentals of private pension plans; pricing and valuation of pension obligations; actuarial cost methods and their effects on cost patterns; selection of actuarial assumptions; principles of asset and liability management.					
Course Learning	On succ	essful completion of this course, students should be able to:					
Outcomes	CLO 1	calculate the pension benefits in accordance with the provisions	of a pension plan				
	CLO 2 calculate the normal cost and actuarial liabilities using different actuarial cost methods						
	CLO 3 perform gain and loss analyses for pension valuations						
	CLO 4 select appropriate assumptions and methods for funding or accounting purposes						
	CLO 5 interpret the valuation results presented in actuarial valuation reports						
	CLO 6 understand the principles of asset and liability modeling as related to pension plans						
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in STAT3909; and For BSc(Actuarial Science) students only.

Teachers Involved	(Dr G Li,Sta	atistics & Actuarial Sc	cience)			
Course Objectives	climatology series are different typ	A time series consists of a set of observations on a random variable taken over time. Time series arise naturally in climatology, economics, environment studies, finance and many other disciplines. The observations in a time series are usually correlated; the course establishes a framework to discuss this. This course distinguishes different type of time series, investigates various representations for the processes and studies the relative merits of different forecasting procedures. Students will analyse real time-series data on the computer.				
Course Contents & Topics	,	Stationarity and the autocorrelation functions; linear stationary models; linear non-stationary modes; models identification; estimation and diagnostic checking; seasonal models and forecasting methods for time series.				
Course Learning	On successful completion of this course, students should be able to:

Offering Department	Statistics 8	& Actuarial Science	•	Quota	50	
Course Co-ordinator	Prof T W I	K Fung, Statistics & Actu	arial Science (wingfung@hku.hk)			
Teachers Involved	(Prof T W K Fung, Statistics & Actuarial Science)					
Course Objectives	In many designed experiments or observational studies, the researchers are dealing with multivariate data, where each observation is a set of measurements taken on the same individual. These measurements are ofter correlated. The correlation prevents the use of univariate statistics to draw inferences. This course develops the statistical methods for analysing multivariate data through examples in various fields of application and hands-or experience with the statistical software SAS.					
Course Contents & Topics	Problems with multivariate data. Multivariate normality and transforms. Mean structure for one sample. Tests o covariance matrix. Correlations: Simple, partial, multiple and canonical. Multivariate regression. Principal components analysis. Factor analysis. Problems for means of several samples. Multivariate analysis of variance. Discriminant analysis. Classification. Multivariate linear model.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 analyze multivariate data with main SAS procedures, such as PROC IML PROC CANCORR, PROC PRINCOMP, PROC FACTOR, PROC DISCRIM,					
		mpare the mean struc ultivariate MANOVA and	ture of multiple measurements for profile analysis	or one or more than one	population(s) by	
	со	rrelation and multivariate				
	an	alysis and factor analysi				
			oopulation with one or more than or	ne measurements by discrir	ninant analysis

Course Objectives	methods f techniques stress test	Financial risk management has experienced a revolution in the last decade thanks to the introduction of new methods for measuring risk, particularly Value-at-Risk (VaR). This course introduces modern risk management echniques covering the measurement of market risk using VaR models and financial time series models, and stress testing.				
Course Contents & Topics	factor map	Risk Measures; Value-at-Risk (VaR) models (parametric, Monte Carlo simulation and Historical simulation); Ris actor mapping; Advanced VaR models (GARCH-type models, extreme-value theory and normal-mixture); Princip Component Analysis and VaR; Backtesting and stress testing.				
Course Learning	On succes	sful completion of this c	ourse, students should be able to:			
Outcomes	CLO 1	understand VaR and	expected shortfall as risk measures	3		
	CLO 2	O 2 compute VaR and expected shortfall				
	CLO 3	model volatility using	GARCH-type models			
	CLO 4	understand extreme-	value theory			
	CLO 5	understand backtest	ing and stress testing

STAT4799	Statistics project (12 credits)	Academic Year	2020			
Offering Department	Statistics & Actuarial Science	Quota	50			
Course Co-ordinator	Prof S M S Lee, Statistics & Actuarial Science (smslee@hku.hk)					
Teachers Involved	(Various teachers as the assessors of oral presentations and written reports	S,Statistics & Actuarial	Science)			
Course Objectives	Each year a few projects suitable for students majoring in Decision Analyti offered to provide students with practical experience in approaching a reapresentation.					
Course Contents & Topics	These projects, under the supervision of individual staff members, involved probability in a wide range of problems of practical and/or academic interest		statistics and/or			
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 gain first-hand experience in solving a research or applied problem in statistics or related areas					
	CLO 2 develop skills in important technical tools, including the use of computer software or programs, for typical statistical research and data analyses					
	CLO 3 write succinct reports on the findings of a research study					
	CLO 4 make concise oral presentation of the findings of a research study					
Pre-requisites (and Co-requisites	Pass in at least 24 credits of advanced level disciplinary core/elective of Management/Statistics Majors including STAT3600; and	courses in the Decision	on Analytics/Risk			
and Impermissible combinations)	Pass or already enrolled in at least one of the following courses: STAT36 and	12, STAT3911, STAT4	1601, STAT4602;			
	Not for students who have already enrolled in STAT3799 in this academic year.					
	This capstone course is only for students majoring in Decision Analytics/R to the consent of course coordinator.	isk Management/Stati	stics; and subject			
	This course is mutually exclusive with STAT4710.					
	The earliest that a student is allowed to take this capstone course is their ye	ear 3 study.				
Offer in 2020 - 2021	Y Year long Offer in 2021 - 2022 : Y	Examination	No Exam			
Grade Descriptors	A Demonstrate thorough grasp of the subject. Show strong analytical and critical	al abilities and logical think	ng, with evidence of

Course Co-ordinator	Dr J T Y V	Vong, Statistics & A	Actuarial Science (jefftywong@hku.hk)				
Teachers Involved	(Dr J T Y V	Nong,Statistics & A	Actuarial Science)				
Course Objectives		s course is an advanced course in actuarial science which discusses selected topics which potential graduate lents will find useful. It focuses on tools that are in the frontier of actuarial risk management with examples on lications.					
Course Contents & Topics	Enterprise	e contents will be chosen from the following topics: iterprise risk management; Risk identification and taxonomy; Copulas; Extreme value theory; Applications to risl anagement with emphasis in insurance; Other topics as determined by the instructor					
Course Learning	On succes	sful completion of	this course, students should be able to	0:			
Outcomes	CLO 1						
	CLO 2	understand and	d apply copula to model risk depender	nce			
	CLO 3	understand and	d apply extreme value theory				
	CLO 4	explain approa	ches for managing risks				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in S	ГАТ3906					
Offer in 2020 - 2021	N Offe	er in 2021 - 2022 : `	Υ	Examination			
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.						
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT7611	Computational statistics (6 credits) Academic Year 202						
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	Prof G Yin, Statistics & Actuarial Science (gyin@hku.hk)						
Teachers Involved	(Prof G Yin, Statistics & Actuarial Science)						
Course Objectives	This course aims to give undergraduate and postgraduate students in statistics a background in modern computationally intensive methods in statistics. It emphasizes the role of computation as a fundamental tool of discovery in data analysis, of statistical inference, and for development of statistical theory and methods.						
Course Contents & Topics	Contents include: Bayesian statistics, Markov chain Monte Carlo methods in Hastings algorithm, and data augmentation; Generation of random varial rejection sampling, the sampling/importance resampling method; Optimiz method, expectation-maximization (EM) algorithm and its variants, and mino Integration including Laplace approximations, Gaussian quadrature, the im topics such as Hidden Markov models, neural networks, and Bootstrap meth	les including the invaliding the invaliding techniques including the invaliding t	version methods, luding Newton' s (MM) algorithms;				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the importance of the technique for generating random variables in Bayesian statistics, Mon Carlo integration and bootstrapping methods						

CLC	O 3 understand the essence a their range of application, O 4 apply EM-type algorithms generate posterior sample O 5 apply Bootstrap methods parameters for both parameters in STAT3600 or STAT3907 1st sem Offer in 2021 - 20 Demonstrate thorough mas learning outcomes. Show st to apply knowledge to a wipresentational skills. Demonstrate substantial coil	to obtain estimated standard errors netric and non-parametric cases	blems ply Markov chain Monte s of estimators and conf Examination wledge and skills required for all thinking, with evidence of original thinking, with evidence of original thinking, with evidence of original thinking.	e Carlo methods to fidence intervals of Dec attaining all the course		
Pre-requisites (and Co-requisites and Impermissible combinations) Offer in 2020 - 2021 Grade Descriptors (A+ to F)	O 4 apply EM-type algorithms generate posterior sample O 5 apply Bootstrap methods parameters for both parameters in STAT3600 or STAT3907 1st sem Offer in 2021 - 20 Demonstrate thorough mas learning outcomes. Show st to apply knowledge to a wipresentational skills. STAT7615	Advanced quantitative risk management and finance (6 credits)							
Offering Department		& Actuarial Science		Quota				
Course Co-ordinator			al Science (zhangz08@hku.hk)	14				
Teachers Involved	(Dr Z Zhang, Statistics & Actuarial Science)							
Course Objectives	This course covers statistical methods and models of importance to risk management and finance and links finance theory to market practice via statistical modeling and decision making. Emphases will be put on empirical analyse to address the discrepancy between finance theory and market data.							
Course Contents & Topics	Contents include: Elementary Stochastic Calculus; Basic Monte Carlo and Quasi-Monte Carlo Methods; Varianc Reduction Techniques; Simulating the value of options and the value-at-risk for risk management; Review o univariate volatility models; multivariate volatility models; Value-at-risk and expected shortfall; estimation, bac testing and stress testing; Extreme value theory for risk management.							
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1	apply Monte Carlo met	thods to determine the value of options	and other derivative secu	rities			
	CLO 2	predict volatility of a se	et of securities using appropriate model	s				
	CLO 3	estimate the value-at-r	isk under extreme value theory					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in S	STAT4608

Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.							
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.							
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.							
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.							
			Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Degree Regulations

SCIENCE

SECTION X Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic year 2017-18 and thereafter, students admitted directly to the second year in the academic year 2018-19 and thereafter, and students admitted directly to the third year in the academic year 2019-20.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

"Syllabus" means courses taught by departments, centres, and schools, offered under a degree curriculum.

"Credits" or "credit-units" means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

SECTION X Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic year 2017-18 and thereafter, students admitted directly to the second year in the academic year 2018-19 and thereafter, and students admitted directly to the third year in the academic year 2019-20 and thereafter.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

"Syllabus" means courses taught by departments, centres, and schools, offered under a degree curriculum.

"Credits" or "credit-units" means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- Sc8 To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying weightings which are proportionate to their credit values²:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year '2012 curriculum' to the BSc degree curriculum to the first year in the academic year 2015-16 and 2016-17, students admitted directly to the second year in the academic year 2017-18, and students admitted directly to the third year in the academic years 2017-18 and 2018-19.

Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- **Sc8** To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying equal weighting:

Class of honours	<u>CGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2019-20 and thereafter)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

¹ These regulations are applicable to candidates admitted from 2019-20 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum\limits_{i}^{\Sigma} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments;
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

	Standard	Grade Point
1		4.3
}	Excellent	4.0
J		3.7
1		3.3
}	Good	3.0
J		2.7
1		2.3
}	Satisfactory	2.0
J	•	1.7
l	Dogg	1.3
ſ	rass	1.0
	Fail	0
	<pre>} } }</pre>	<pre> Excellent } Good Satisfactory Pass</pre>

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

<u>Class of honours</u>	<u>GGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2018-19, and students admitted directly to the second year in the academic year 2019-20)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

¹ These regulations are applicable to candidates admitted from 2018-19 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum\limits_{i}^{\Sigma} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
\mathbf{C}	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Dogg	1.3
D	ſ	Pass	1.0
F		Fail	0

(b) Special permission may be given by Senate for courses in individual curricula to be

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic year 2017-18, students admitted directed to the second year in the academic year 2018-19 and students admitted directly to the third year in the academic year 2019-20)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

¹ These regulations are applicable to candidates admitted from 2017-18 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\sum} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\sum} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of

assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

֡֡֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜֜

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA¹

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic years in 2014-15, 2015-16 and 2016-17, students admitted directed to the second year in the academic year 2017-18, and students admitted directed to the third year in the academic years 2016-17, 2017-18 and 2018-19)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the

⁵⁻year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

⁽The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

- 3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.
 - (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+)		2.3
C	}	Satisfactory	2.0
C-	J		1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

Class of honours	CGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year '2012 curriculum' to the first year in the academic years 2012-13 and 2013-14, and students admitted directly to the third year in 2014-15 and 2015-16)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

¹ These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which

administer first degree curricula.

⁽The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

- (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	Pass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

Class of honours	CGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.
