1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students 2019

admitted to Year 1 in

Objectives:

The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help student understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- PLO 2: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- PLO 3: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- PLO 4: gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:

Major in Environmental Science

Required courses (42 credits)

1. Introductory level courses (18 credits)

Disciplinary Core Courses (6 credits)

ENVS1401 Introduction to environmental science (6)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses (Level 1 & 2):

CHEM1042 General chemistry I (6)

EASC1020 Introduction to climate science (6)

EASC1401 Blue Planet (6)

EASC2404 Introduction to atmosphere and hydrosphere (6)

ENVS1301 Environmental life science (6)
ENVS2001 Methods in environmental science (6)
ENVS2002 Environmental data analysis (6)

2. Advanced level courses (24 credits)

Disciplinary Core Courses (6 credits)

ENVS3004 Environment, society and economics (6)

Disciplinary Electives (18 credits)

At least 18 credits selected from the following courses:

BIOL3110 Environmental toxicology (6) BIOL3303 Conservation biology (6)

BIOL4302 Environmental impact assessment (6)

CHEM3141 Environmental chemistry (6)

CHEM3241 Analytical chemistry II: chemical instrumentation (6) EASC3020 Global change: anthropogenic impacts (6)

EASC3020 Global change: anthropogenic impacts
EASC3405 Environmental remote sensing (6)
ENVS3007 Natural hazards and mitigation (6)

ENVS3017 Natural nazards and mitigation (6)
ENVS3010 Sustainable energy and environment (6)

ENVS3019 Urban ecology (6) ENVS3020 Global change ecology (6)

ENVS3042 Pollution (6)

ENVS3313 Environmental oceanography (6) ENVS4110 Environmental remediation (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students 2018

admitted to Year 1 in

Minor Title Minor in Food & Nutritional Science

Offered to students

2021

admitted to Year 1 in

Objectives:

The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:

Major in Food & Nutritional Science

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 cred	its selected from the following courses:
BIOL1110	From molecules to cells (6)
BIOL1201	Introduction to food and nutrition (6)
BIOL2101	Principles of food chemistry (6)
DIOLOGGO	Dain aintee of his about the (0)

BIOL2220 Principles of biochemistry (6)

> BIOL2220 and BIOC2600 are mutually exclusive. Take either BIOL2220 or BIOC2600 o fulfill

this 12 credits requirement, but not both.

Take either BIOL2220 or BIOC2600 o fulfill

BIOC2600 Basic biochemistry (6)

this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

[previous title: Food and nutritional toxicology

2. Advanced level courses (24 credits) **Disciplinary Electives (24 credits)**

At least 24 credits selected from the following courses:

BIOL3202 BIOL3203	Food microbiology (6)
BIOL3204	Nutrition and the life cycle (6)

Nutrition and sports performance (6) BIOL4202

BIOL4205 Food technology (6)

[previous title: Food processing and engineering (6)]

BIOL4209 Functional foods (6)

BIOL4411 Plant and food biotechnology (6)

Notes:

Remarks:

^{1.} Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Minor Title Minor in Food & Nutritional Science

Offered to students

2020

admitted to Year 1 in

Objectives:

The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:

Major in Food & Nutritional Science

Required of	courses	(36	credits)
4 1 4			

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses: From molecules to cells (6) BIOL1110 Introduction to food and nutrition (6) BIOL1201 Principles of food chemistry (6) BIOL2101

Principles of biochemistry (6) BIOL2220

Take either BIOL2220 or BIOC2600 o fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

BIOC2600 Basic biochemistry (6) Take either BIOL2220 or BIOC2600 o fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually

exclusive.

2. Advanced level courses (24 credits) **Disciplinary Electives (24 credits)**

At least 24 credits selected from the following courses:

BIOL3202	Nutritional biochemistry (6)
BIOL3203	Food microbiology (6)
BIOL3204	Nutrition and the life cycle (6)
BIOL3205	Human physiology (6)
BIOL3207	Principles of toxicology (6)
BIOL3209	Food and nutrient analysis (6)

[previous title: Food and nutritional toxicology

BIOL4411	Plant and food biotechnology (6)	

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Minor Title Minor in Food & Nutritional Science

Offered to students

2013

admitted to Year 1 in

Objectives:

The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:

Major in Food & Nutritional Science

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6)
BIOL1201 Introduction to food and nutrition (6)
BIOL2220 Principles of biochemistry (6)

BIOC2600 Basic biochemistry (6)

Take either BIOL2220 or BIOC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually

exclusive.

Take either BIOL2220 or BIOC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually

exclusive.

Remarks:

Offered to students 2021

admitted to Year 1 in

Objectives:

The field of marine biology has become increasingly popular as interest in and awareness of our marine environment grows. Hong Kong already has strong cultural and historical links with the sea as well as a strong economic and societal interest in natural marine resources. This Minor aims to introduce students to the field of marine biology from species, habitat and ecosystem levels, ranging from the deep ocean to intertidal environments, and from both theoretical and practical perspectives. Material will be global and include organisms and their physical, behavioral and physiological adaptations to the marine environment, as well as techniques for marine study, Major marine issues will be covered including benefits derived from the marine environment and possible implications of climate change for marine systems. Particularly relevant examples from Hong Kong and the Southeast Asia region will be highlighted. This minor will provide students from diverse backgrounds (e.g. business, engineering and social science) an excellent opportunity to enter into a career or research in marine environmentrelated fields such as coastal ecosystem management, fisheries, marine environmental protection, marine resource management, etc.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate the requirements and constraints to life in different marine environments (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 2: gain a comprehensive foundation for pursuing marine-orientated studies (by means of coursework, labtoratorybased, and tutorial classes and project-based learning in the curriculum)
- PLO 3: have a general insight into an ecosystem that covers two-thirds of the planet and supports the only remaining natural resource harvested on a large scale (by means of coursework, labtoratory-based, and tutorial classes and projectbased learning in the curriculum)
- PLO 4: understand the major marine issues both locally and globally (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 5: appreciate the possible implications of climate change on marine systems (by means of coursework, labtoratorybased, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1309 Evolutionary diversity (6) Environmental life science (6) FNVS1301 Ecology and evolution (6) BIOL2306

2. Advanced level courses (24 credits)

Disciplinary Core Courses (12 credits)

BIOL3301 Marine biology (6)

Environmental oceanography (6) **FNVS3313**

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL3303 Conservation biology (6)

Tropical and temperate marine ecology field course (6) **BIOL3305**

Experimental intertidal ecology (6) BIOL3318 Marine invertebrate zoology (6) BIOL3322

BIOL3328 Nearshore marine and estuarine ecology (6)

BIOL4301 Fish and fisheries (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc svllabuses.

- PLO 5: appreciate the possible implications of climate change on marine systems (by means of coursework, labtoratorybased, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1309 Evolutionary diversity (6) Environmental life science (6) FNVS1301 Ecology and evolution (6) BIOL2306

2. Advanced level courses (24 credits)

Disciplinary Core Courses (12 credits)

BIOL3301 Marine biology (6)

Environmental oceanography (6) **FNVS3313**

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL3303 Conservation biology (6)

Tropical and temperate marine ecology field course (6) **BIOL3305**

Experimental intertidal ecology (6) BIOL3318 Marine invertebrate zoology (6) BIOL3322

BIOL3328 Nearshore marine and estuarine ecology (6)

Fish and fisheries (6) BIOL4301

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc svllabuses.

Remarks:

Offered to students 2016

admitted to Year 1 in

Objectives:

The field of marine biology has become increasingly popular as interest in and awareness of our marine environment grows. Hong Kong already has strong cultural and historical links with the sea as well as a strong economic and societal interest in natural marine resources. This Minor aims to introduce students to the field of marine biology from species, habitat and ecosystem levels, ranging from the deep ocean to intertidal environments, and from both theoretical and practical perspectives. Material will be global and include organisms and their physical, behavioral and physiological adaptations to the marine environment, as well as techniques for marine study, Major marine issues will be covered including benefits derived from the marine environment and possible implications of climate change for marine systems. Particularly relevant examples from Hong Kong and the Southeast Asia region will be highlighted. This minor will provide students from diverse backgrounds (e.g.business, engineering and social science) an excellent opportunity to enter into a career or research in marine environment-related fields such as coastal ecosystem management, fisheries, marine environmental protection, marine resource management, etc.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate the requirements and constraints to life in different marine environments (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 2: gain a comprehensive foundation for pursuing marine-orientated studies (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 3: have a general insight into an ecosystem that covers two-thirds of the planet and supports the only remaining natural resource harvested on a large scale (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 4: understand the major marine issues both locally and globally (by means of coursework, labtoratory-based, and tutorial classes and project-based learning in the curriculum)
- PLO 5: appreciate the possible implications of climate change on marine systems (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

NII

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1309 Evolutionary diversity (6)
ENVS1301 Environmental life science (6)
BIOL2306 Ecology and evolution (6)

2. Advanced level courses (24 credits)

Disciplinary Core Courses (12 credits)

BIOL3301 Marine biology (6)

ENVS3313 Environmental oceanography (6)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL3303 Conservation biology (6)

BIOL3305 Tropical and temperate marine ecology field course (6)

BIOL3318 Experimental intertidal ecology (6)
BIOL3320 The biology of marine mammals (6)
BIOL3322 Marine invertebrate zoology (6)

BIOL3328 Nearshore marine and estuarine ecology (6)

BIOL4301 Fish and fisheries (6)

Notes:

Remarks:

Offered to students 2021

admitted to Year 1 in

Objectives:

The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics

Major in Mathematics (Intensive)

Minor in Computational & Financial Mathematics

Minor in Operations Research & Mathematical Programming

Required courses (36 credits)

1. Introductory level courses (18 credits) (note 4)

Disciplinary Core Course (6 credits)

MATH1013 University mathematics II (6)

Disciplinary Electives (12 credits)

Select either List A or List B:

List A

MATH2101 Linear algebra I (6)
MATH2211 Multivariable calculus (6)

List B

MATH2012 Fundamental concepts of mathematics (6)
MATH2014 Fundamental concepts of mathematics (6)
Multivariable calculus and linear algebra (6)

2. Advanced level courses (18 credits)

Disciplinary Electives (18 credits)

At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:

List A

MATH3001 Development of mathematical ideas (6)

MATH3002 Mathematics seminar (6)

MATH3301 Algebra I (6)

MATH3303 Matrix theory and its applications (6) MATH3304 Introduction to number theory (6)

MATH3401 Analysis I (6)

MATH3403 Functions of a complex variable (6)

MATH3405 Differential equations (6)

MATH3408 Computational methods and differential equations with

applications (6)

MATH3541 Introduction to topology (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)
MATH3906 Financial calculus (6)

MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)

MATH3943 Network models in operations research (6)

MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)

MATH4406 Introduction to partial differential equations (6)

MATH4501 Geometry (6)

MATH4511 Introduction to differentiable manifolds (6)

MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)

MATH4907 Numerical methods for financial calculus (6)
MATH7101 Intermediate complex analysis (6)

MATH7201 Topics in geometry (6)
MATH7202 Complex manifolds (6)

MATH7217 Topics in financial mathematics (6)

MATH7219 MATH7224 MATH7501 MATH7502 MATH7503 MATH7504 MATH7505	Topics in applied functional analysis (6) Topics in advanced probability theory (6) Topics in algebra (6) Topics in applied discrete mathematics (6) Topics in mathematical programming and optimization (6) Geometric topology (6) Real analysis (6)	
MATH7504 MATH7505	Real analysis (6)	

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. MATH7502	Topics in applied discrete mathematics (6)
MATH7503	Topics in mathematical programming and optimization (6)
MATH7504	Geometric topology (6)
MATH7505	Real analysis (6)

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.
- 3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.
- 4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:

Offered to students 2018

admitted to Year 1 in

Objectives:

The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics

Major in Mathematics (Intensive)

Minor in Computational & Financial Mathematics

Minor in Operations Research & Mathematical Programming

Required courses (36 credits)

1. Introductory level courses (18 credits) (note 4)

Disciplinary Core Course (6 credits)

MATH1013 University mathematics II (6)

Disciplinary Electives (12 credits)

Select either List A or List B:

List A

MATH2101 Linear algebra I (6)
MATH2211 Multivariable calculus (6)

List B

MATH2012 Fundamental concepts of mathematics (6)
MATH2014 Fundamental concepts of mathematics (6)
Multivariable calculus and linear algebra (6)

2. Advanced level courses (18 credits)

Disciplinary Electives (18 credits)

At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:

List A

MATH3001 Development of mathematical ideas (6)

MATH3002 Mathematics seminar (6)

MATH3301 Algebra I (6)

MATH3303 Matrix theory and its applications (6) MATH3304 Introduction to number theory (6)

MATH3401 Analysis I (6)

MATH3403 Functions of a complex variable (6)

MATH3405 Differential equations (6)

MATH3408 Computational methods and differential equations with

applications (6)

MATH3541 Introduction to topology (6) Discrete mathematics (6) MATH3600 MATH3601 Numerical analysis (6) Probability theory (6) MATH3603 Operations research I (6) MATH3901 Introduction to optimization (6) MATH3904 Queueing theory and simulation (6) **MATH3905** MATH3906 Financial calculus (6)

MATH3911 Game theory and strategy (6)
MATH3943 Network models in operations research (6)

MATH4302 Algebra II (6)

MATH4402 Algebra II (6)
MATH4404 Analysis II (6)
MATH4404 Functional analysis (6)

MATH4406 Introduction to partial differential equations (6)

MATH4501 Geometry (6)

MATH4511 Introduction to differentiable manifolds (6)

MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)

MATH4907 Numerical methods for financial calculus (6)
MATH7101 Intermediate complex analysis (6)

MATH7201 Topics in geometry (6)
MATH7202 Complex manifolds (6)

MATH7217 Topics in financial mathematics (6)

MATH7219 MATH7224 MATH7501	Topics in applied functional analysis (6) Topics in advanced probability theory (6) Topics in algebra (6)
MATH7502	Topics in applied discrete mathematics (6)
MATH7503	Topics in mathematical programming and optimization (6)
MATH7504	Geometric topology (6)
MATH7505	Real analysis (6)

2. Advanced level courses (18 credits)

Disciplinary Electives (18 credits)

At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:

List A

MATH3541

MATH3001 Development of mathematical ideas (6)

MATH3002 Mathematics seminar (6)

MATH3301 Algebra I (6)

MATH3303 Matrix theory and its applications (6) MATH3304 Introduction to number theory (6)

MATH3401 Analysis I (6)

MATH3403 Functions of a complex variable (6)

MATH3405 Differential equations (6)

MATH3408 Computational methods and differential equations with

applications (6)
Introduction to topology (6)

MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)

MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)

MATH3943 Network models in operations research (6)

MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)

MATH4406 Introduction to partial differential equations (6)

MATH4501 Geometry (6)

MATH4511 Introduction to differentiable manifolds (6)

MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)

MATH4907 Numerical methods for financial calculus (6)

MATH7101 Intermediate complex analysis (6)
MATH7201 Topics in geometry (6)
MATH7202 Complex manifolds (6)

MATH7217 Topics in financial mathematics (6)
MATH7219 Topics in applied functional analysis (6)
MATH7224 Topics in advanced probability theory (6)

MATH7501 Topics in algebra (6)

MATH7502 Topics in applied discrete mathematics (6)

MATH7503 Topics in mathematical programming and optimization (6)

MATH7504 Geometric topology (6) MATH7505 Real analysis (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.
- 3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.
- 4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:

Offered to students

2021

admitted to Year 1 in

The Minor in Molecular Biology & Biotechnology aims to provide students with a fundamental understanding of molecular biology and biotechnology which are relevant to many other disciplines of study and our daily life. Students will learn the principles underlying current molecular and cell biology advances, and biotechnological applications and will become literate in biotechnology business and advancements.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: develop and apply basic technical and knowledge-based skills in molecular and cell biology, and biotechnology (by means of coursework and laboratory-based learning in the curriculum)
- PLO 2: develop and apply skills of critical inquiry, teamwork, and effective communication (by means of group projects, tutorial classes and presentation opportunities in the curriculum)
- PLO 3: understand and describe the issues and concerns fundamental to the field (by means of coursework and laboratorybased learning in the curriculum)

Impermissible Combinations:

Major in Molecular Biology & Biotechnology

Major in Molecular Biology & Biotechnology (Intensive)

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6) BIOL1309 Evolutionary diversity (6)

BIOC2600 Basic biochemistry (6)

fulfill this 12 credits requirement, but not both. May take either BIOL2220 or BIOC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually

May take either BIOL1309 or BIOL2306 to

May take either BIOL2220 or BIOC2600 to

exclusive.

Biostatistics (6) **BIOL2102**

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

BIOI 2306 Ecology and evolution (6)

May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.

2. Advanced level courses (24 credits)

Disciplinary Core Courses (6 credits)

BIOL3401 Molecular biology (6)

Disciplinary Electives (18 credits)

At least 18 credits selected from the following courses: BIOL3402 Cell biology and cell technology (6)

BIOL3403 Immunology (6)

Business aspects of biotechnology (6) **BIOL3409** BIOL3508 Microbial physiology and biotechnology (6)

BIOL4411 Plant and food biotechnology (6) BIOL4415 Healthcare biotechnology (6)

1. Introductory lev	el courses (12 credits)	
Disciplinary Elective	ves (12 credits)	
	's selected from the following courses:	
BIOL1110	From molecules to cells (6)	
BIOL1309	Evolutionary diversity (6)	May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.
BIOC2600	Basic biochemistry (6)	May take either BIOL2220 or BIOC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.
BIOL2102	Biostatistics (6)	
BIOL2103	Biological sciences laboratory course (6)	
BIOL2220	Principles of biochemistry (6)	May take either BIOL2220 or BIOC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.
BIOL2306	Ecology and evolution (6)	May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.
2. Advanced level	courses (24 credits)	, ,
Disciplinary Core	Courses (6 credits)	
BIOL3401	Molecular biology (6)	
Disciplinary Elective		
II .	's selected from the following courses:	
BIOL3402	Cell biology and cell technology (6)	
BIOL3403	Immunology (6)	
BIOL3409	Business aspects of biotechnology (6)	T '/ PIOLOTOO PIOL 1400 / 1/5"
BIOL3508	Microbial physiology and biotechnology (6)	Take either BIOL3508 or BIOL4402 to fulfill this 18 credits requirement, but not both. BIOL3508 and BIOL4402 are mutually exclusive.
BIOL4401	Medical microbiology and applied immunology (6)	
BIOL4402	Microbial biotechnology (6)	Take either BIOL3508 or BIOL4402 to fulfill this 18 credits requirement, but not both. BIOL3508 and BIOL4402 are mutually exclusive.
BIOL4411	Plant and food biotechnology (6)	
BIOL4415	Healthcare biotechnology (6)	
BIOL4416	Stem cells and regenerative biology (6)	
BIOL4417	'Omics' and systems biology (6)	
ENVS4110	Environmental remediation (6)	

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students

2012

admitted to Year 1 in

Objectives:

The Minor in Molecular Biology & Biotechnology aims to provide students with a fundamental understanding of molecular biology and biotechnology which are relevant to many other disciplines of study and our daily life. Students will learn the principles underlying current molecular and cell biology advances, and biotechnological applications and will become literate in biotechnology business and advancements.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: develop and apply basic technical and knowledge-based skills in molecular and cell biology, and biotechnology (by means of coursework and laboratory-based learning in the curriculum)
- PLO 2: develop and apply skills of critical inquiry, teamwork, and effective communication (by means of group projects, tutorial classes and presentation opportunities in the curriculum)
- PLO 3: understand and describe the issues and concerns fundamental to the field (by means of coursework and laboratorybased learning in the curriculum)

Impermissible Combinations:

For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students 2021

admitted to Year 1 in

Objectives:

The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics

Major in Mathematics/Physics

Minor in Mathematics

Minor in Computational & Financial Mathematics

Required courses (42 credits)

1. Introductory level courses (18 credits) (note 3)

Disciplinary Core Courses (18 credits)

MATH1013 University mathematics II (6) Linear algebra I (6) MATH2101 MATH2211 Multivariable calculus (6)

2. Advanced level courses (24 credits)

Disciplinary Core Courses (12 credits)

Operations research I (6) MATH3901 MATH3904 Introduction to optimization (6)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

Differential equations (6) MATH3405 MATH3600 Discrete mathematics (6)

Queueing theory and simulation (6) **MATH3905**

Financial calculus (6) **MATH3906** MATH3911 Game theory and strategy (6)

Network models in operations research (6) MATH3943

Operations research II (6) MATH4902

Numerical methods for financial calculus (6) MATH4907 MATH7502 Topics in applied discrete mathematics (6)

MATH7503 Topics in mathematical programming and optimization (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this minor. Students who do not fulfill this requirement are required to take MATH1011 University mathematics I.
- 3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:

Offered to students 2013

admitted to Year 1 in

Objectives:

The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:

Minor Title Minor in Physics

Offered to students 2021

admitted to Year 1 in

Objectives:

The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
- PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7551 Graduate solid state physics (6)
PHYS7650 Stellar atmospheres (6)

PHYS7750 Nanophysics (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks

[previous title: Modern physics (6)]

[previous title: Waves and optics (6)]

Minor Title Minor in Physics

Offered to students 2014

admitted to Year 1 in

Objectives:

The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
- PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:

Major in Mathematics/Physics

Major in Physics

Required courses (42 credits)

1. Introductory level courses (18 credits)

Disciplinary Core Courses (18 credits)

PHYS1250 Fundamental physics (6)
PHYS2250 Introductory mechanics (6)
PHYS2265 Introductory quantum physics (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

PHYS3150 Theoretical physics (6)
PHYS3350 Classical mechanics (6)
PHYS3351 Quantum mechanics (6)
PHYS3450 Electromagnetism (6)

PHYS3550 Statistical mechanics & thermodynamics (6)

PHYS3551 Introductory solid state physics (6)
PHYS3650 Observational astronomy (6)
PHYS3651 The physical universe (6)
PHYS3652 Principles of astronomy (6)

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Offered to students 2021

admitted to Year 1 in

Objectives:

The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 2: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 3: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

NIL

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6)
BIOL1309 Evolutionary diversity (6)

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

BIOL3107 Plant physiology (6)

BIOL3210 Grain production and utilization (6) BIOL3314 Plant structure and evolution (6)

BIOL3408 Genetics (6)
BIOL4209 Functional foods (6)

BIOL4411 Plant and food biotechnology (6)

Notes:

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

BIOL3107 Plant physiology (6)

BIOL3210 Grain production and utilization (6) BIOL3314 Plant structure and evolution (6)

BIOL3408 Genetics (6)
BIOL4209 Functional foods (6)

BIOL4411 Plant and food biotechnology (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Offered to students 2014

admitted to Year 1 in

Objectives:

The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)
- PLO 2: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the
- PLO 3: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, labtoratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:

NIL

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

BIOL1110 From molecules to cells (6) Evolutionary diversity (6)

BIOL1309

BIOL2103 Biological sciences laboratory course (6)

BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

BIOL3107 Plant physiology (6)

Grain production and utilization (6) BIOL3210 Plant structure and evolution (6) **BIOL3314**

BIOL3408 Genetics (6) Functional foods (6) BIOL4209

BIOL4411 Plant and food biotechnology (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc

Remarks:

Remarks:

Offered to students 2021

admitted to Year 1 in

Objectives:

The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Major in Computing and Data Analytics

Major in Risk Management

Major in Statistics

Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

List A

STAT1601 Elementary statistical methods (6)
STAT1602 Business statistics (6)
STAT1603 Introductory statistics (6)
STAT2601 Probability and statistics I (6)

List B

STAT2602 Probability and statistics II (6) STAT2603 Data management with SAS (6)

STAT2604 Introduction to R programming and elementary data analysis

(6)

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits) At least 30 credits selected from the following courses:

STAT3609 The statistics of investment risk (6) STAT3610 Risk management and insurance (6) Computer-aided data analysis (6) STAT3611 STAT3612 Statistical machine learning (6) Business forecasting (6) STAT3614 Practical mathematics for investment (6) STAT3615 STAT3618 Derivatives and risk management (6) Time-series analysis (6) STAT4601 STAT4603 Current topics in risk management (6) Risk management and Basel Accords in banking and finance STAT4606

(6)

STAT4607 Credit risk analysis (6) STAT4608 Market risk analysis (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Major in Statistics

Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

List A

STAT1601 Elementary statistical methods (6)

STAT1602 Business statistics (6)
STAT1603 Introductory statistics (6)
STAT2601 Probability and statistics I (6)

List B

STAT2602 Probability and statistics II (6) STAT2603 Data management with SAS (6)

STAT2604 Introduction to R programming and elementary data analysis

(6)

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits)

At least 30 credits selected from the following courses:
STAT3609 The statistics of investment risk (6)
STAT3610 Risk management and insurance (6)
STAT3611 Computer-aided data analysis (6)
STAT3612 Statistical machine learning (6)

STAT3614 Business forecasting (6)
STAT3615 Practical mathematics for investment (6)
STAT3618 Derivatives and risk management (6)

STAT4601 Time-series analysis (6)

STAT4603 Current topics in risk management (6)

STAT4606 Risk management and Basel Accords in banking and finance

(6

STAT4607 Credit risk analysis (6) STAT4608 Market risk analysis (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

[previous title: Data mining (6)]

Remarks:

Offered to students 2012

admitted to Year 1 in

Objectives:

The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Minor Title Minor in Science Entrepreneurship

Offered to students 2021

admitted to Year 1 in

Objectives:

This Minor aims at broadening the horizon of our undergraduate students with respect to entrepreneurship, so as to arouse their interest in this aspect and better equip them. It is also important for our students to visualize how their training in science (a) is relevant to the real world and (b) can bring about huge insights via critical analysis of the operation of existing enterprises. With the vivid commercial environment and a growing atmosphere for start-ups both locally and globally, this Minor also serves to offer more competitive edge to our students via connecting their academic knowledge with the real world, even though they may not initiate their own start-ups in the short run.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: apprehend the entrepreneurial process and the principles/models relevant to its different key stages (by means of coursework and tutorial classes in the curriculum)
- PLO 2: gain insights into how a broad range of disciplines contribute to the success of the entrepreneurial process (by means of coursework and tutorial classes in the curriculum)
- PLO 3: evaluate how scientific knowledge can cause impact to the society via entrepreneurship (by means of coursework and tutorial classes in the curriculum)
- PLO 4: develop appropriate action plans for transforming ideas into start-up companies (by means of coursework, tutorial classes and training in his/her internship in the curriculum)
- PLO 5: effectively collaborate with team members with different expertise and communicate their ideas to a range of audiences during the entrepreneurial process (by means of coursework, tutorial classes and training in his/her internship in the curriculum)

Impermissible Combinations:

NII

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Core Courses (12 credits)

(Resource, Management and Basic Entrepreneurship)
ENTR2001 Professional and leadership development (6)
IIMT1611 Principles of Technology Entrepreneurship (6)

2. Advanced level courses (24 credits) Disciplinary Core Courses (24 credits)

(Creativity and Innovation)

ENTR3001 Science-based innovation development (6)
ENTR3002 Customer analysis and strategic marketing (6)

(Practical Experience)

ENTR4966 Entrepreneurship internship (6)
ENTR4999 Entrepreneurship project (6)

Notes:

- 1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
- 2. Students may consider taking the following courses if they wish to pursue a more focused study in topics related to entrepreneurship:BUSI38011 Business Law, BUSI3803 Company Law, STRA3706 China Business Environment.
- 3. Courses with the prefix ENTR are subjected to minor changes.
- 4. Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Minor Title Minor in Statistics

Offered to students 2021

admitted to Year 1 in

Objectives:

The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
- PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

STAT4602 STAT4610

^{1.} Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Minor Title Minor in Statistics

Offered to students

admitted to Year 1 in

Objectives:

The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:

By the end of this programme, students should be able to:

2018

- PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
- PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
- PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:

Major in Computing and Data Analytics

Major in Decision Analytics

Major in Risk Management

Major in Statistics

List A

Minor in Risk Management

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits from List A and List B, with at least 6 credits from List B:

STAT1601 Elementary statistical methods (6) STAT1602 Business statistics (6) STAT1603 Introductory statistics (6) Probability and statistics I (6) STAT2601 List B

STAT2602 Probability and statistics II (6) Data management with SAS (6) STAT2603

Introduction to R programming and elementary data analysis STAT2604

STAT2605 Demographic and socio-economic statistics (6)

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits)

At least 30 credits selected from the following courses: STAT3600 Linear statistical analysis (6)

Statistical inference (6) STAT3602 STAT3603 Stochastic processes (6) Design and analysis of experiments (6) STAT3604

STAT3605 Quality control and management (6)

STAT3606 Business logistics (6)

Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc svllabuses.

Remarks:

Students taking double Majors,

Major-Minor or double Minors with overlapping course requirements

SCIENCE

SECTION VIII Students taking double Majors, Major-Minor or double Minors with overlapping course requirements

- 1. Double-counting of courses up to a maximum of 24 credits is permissible with double majors. The double-counted courses in both Science majors must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
- 2. The following list shows the major-major combinations that have more than 24 credits of the same 'disciplinary core' courses that appear in both majors and is subject to the rule of double counting:

Major-Major combination	Admission Year (Year 1)	No. of common 'disciplinary core' courses (credits) appear in both majors including SCNC1111 and SCNC1112	No. of replacement courses (credits) to be taken in the 2 nd major ('Major 2')
Major in Astronomy Major in Physics	2016, 2017	5 (30 credits)	1 (6 credits)
Major in Biochemistry Major in Chemistry	All years	5 (30 credits)	1 (6 credits)
Major in Biochemistry Major in Molecular Biology & Biotechnology	2014	5 (30 credits)	1 (6 credits)
Major in Biological Sciences Major in Ecology & Biodiversity	All years	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Food & Nutritional Science	2017, 2018, 2019, 2020, 2021	6 (36 credits)	2 (12 credits)
Wajor in Food & Nutritional Science	2016	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Molecular Biology & Biotechnology	All years	6 (36 credits)	2 (12 credits)
Major in Earth System Science Major in Geology	2016	5 (30 credits)	1 (6 credits)
Major in Ecology & Biodiversity	2017, 2018, 2019, 2020, 2021	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science	2016	6 (36 credits)	2 (12 credits)
Major in Ecology & Biodiversity Major in Molecular Biology & Biotechnology	All years	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science Major in Molecular Biology & Biotechnology	All years	6 (36 credits)	2 (12 credits)

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as 'disciplinary core' courses required in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). The double counted credits should count the following courses in this order: (1) SCNC1111 and SCNC1112, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and the 2nd major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors. The first 3 courses SCNC1111, SCNC1112, and BIOL1110 would first be counted plus either BIOL2102 or BIOL2103 for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course (with a prefix of BIOL at level 2 or above) in the 2nd major in Molecular Biology & Biotechnology to make up for BIOL2102 or BIOL2103.

- 3. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111:
 - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
 - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)

- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education
 Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1111. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112:

- Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
- Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
- Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1112. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

The eligible students will be informed by the Faculty, via email, of the granting of an exemption from taking SCNC1111 and/or SCNC1112 in late August (before the start of your first year of study). You (as an eligible student) can try out courses that suit your academic interest before you commit to a particular major and submit your application form for taking a replacement course(s) for SCNC1111 and/or SCNC1112 via the Science Online Application Submission System (OASS) during the courses add/drop periods in your second/third year of study. The replacement course must be the disciplinary elective in your declared Science major. If you wish to take double Science majors, you should take the disciplinary elective in each of your declared Science majors to replace the exempted SCNC course(s).

Under these circumstances, the following list shows the major-major combinations that have 24 credits (or more) of the same 'disciplinary core' courses that appear in both Science majors and is subject to the rule of double counting:

Scenario #1

(a) Admission Year (Year 1): 2020, 2021 Exemption granted: SCNC1111

OR

(b) Admission Year (Year 1): 2021 Exemption granted: SCNC1112

Major-Major combination	Admission Year (Year 1)	Exemption granted	No. of replacement courses (credits) to be taken in the 1 st major ('Major 1')	No. of common 'disciplinary core' courses (credits) appear in both Science majors including SCNC1111 and SCNC1112	No. of replacement courses (credits) to be taken in the 2 nd major ('Major 2')
Major in Biochemistry Major in Chemistry	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in Biochemistry Major in Molecular Biology & Biotechnology	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	4 (24 credits)	1 (6 credits) - to replace SCNC1111 or SCNC1112
Major in Biological Sciences Major in Ecology & Biodiversity	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Food & Nutritional Science	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	6 (36 credits)	2 (12 credits)
Major in Biological Sciences Major in Molecular Biology & Biotechnology	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	6 (36 credits)	2 (12 credits)
Major in Earth System Science Major in Geology	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	4 (24 credits)	1 (6 credits) - to replace SCNC1111 or SCNC1112

Double Counting of Courses in Double Majors,

Major-Minor or Double Minors

Major in Ecology & Biodiversity Major in Food & Nutritional Science	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in Etology & Biodiversity Major in Molecular Biology & Biotechnology	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	5 (30 credits)	1 (6 credits)
Major in Food & Nutritional Science Major in Molecular Biology & Biotechnology	2020, 2021 2021	SCNC1111 or SCNC1112	1 (6 credits)	6 (36 credits)	2 (12 credits)

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course(s) in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and a second major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors.

- (a) In light of the exempted course SCNC1111, the double counted credits should count the following courses in this order: (1) SCNC1112, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. The 4 courses (SCNC1112, BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course in the second major in Molecular Biology & Biotechnology to make up for SCNC1111.
- (b) In light of the exempted course SCNC1112, the double counted credits should count the following courses in this order: (1) SCNC1111, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. The 4 courses (SCNC1111, BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course in the second major in Molecular Biology & Biotechnology to make up for SCNC1112.

Scenario #2

(a) Admission Year (Year 1): 2021

Exemption granted: SCNC1111 & SCNC1112

Major-Major combination	Admission Year (Year 1)	Exemption granted	No. of replacement courses (credits) to be taken in the 1 st major ('Major 1')	No. of common 'disciplinary core' courses (credits) appear in both Science majors including SCNC1111 and SCNC1112	No. of replacement courses (credits) to be taken in the 2 nd major ('Major 2')
Major in Biochemistry Major in Chemistry	2021	SCNC1111 & SCNC1112	2 (12 credits)	5 (30 credits)	2 (12 credits) - to replace SCNC1111 & SCNC1112
Major in Biochemistry Major in Molecular Biology & Biotechnology	2021	SCNC1111 & SCNC1112	2 (12 credits)	4 (24 credits)	2 (12 credits) - to replace SCNC1111 & SCNC1112
Major in Biological Sciences Major in Ecology & Biodiversity	2021	SCNC1111 & SCNC1112	2 (12 credits)	7 (42 credits)	3 (18 credits)
Major in Biological Sciences Major in Food & Nutritional Science	2021	SCNC1111 & SCNC1112	2 (12 credits)	6 (36 credits)	2 (12 credits)
Major in Biological Sciences Major in Molecular Biology & Biotechnology	2021	SCNC1111 & SCNC1112	2 (12 credits)	6 (36 credits)	2 (12 credits)
Major in Earth System Science Major in Geology	2021	SCNC1111 & SCNC1112	2 (12 credits)	4 (24 credits)	2 (12 credits) - to replace SCNC1111 & SCNC1112
Major in Ecology & Biodiversity Major in Food & Nutritional Science	2021	SCNC1111 & SCNC1112	2 (12 credits)	5 (30 credits)	2 (12 credits) - to replace SCNC1111 & SCNC1112

Major in Ecology & Biodiversity Major in Molecular Biology & Biotechnology	2021	SCNC1111 & SCNC1112	2 (12 credits)	5 (30 credits)	2 (12 credits) - to replace SCNC1111 & SCNC1112
Major in Food & Nutritional Science Major in Molecular Biology & Biotechnology	2021	SCNC1111 & SCNC1112	2 (12 credits)	6 (36 credits)	2 (12 credits)

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course(s) in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). In light of the exempted course SCNC1111 & SCNC1112, the double counted credits should count the following courses in this order: (1) introductory level (levels 1 and 2) courses, and (2) advanced level (level 3 or above) courses. For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and a second major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors. The 3 courses (BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take 2 replacement 'disciplinary elective' courses in the second major in Molecular Biology & Biotechnology & Biotechnology to make up for SCNC1111 & SCNC1112.

- 4. Double counting of credits is not permissible for major-minor or double-minors combinations. When a course is required ('disciplinary core') both by the major and minor or by both minors, the student must take a replacement course for the minor. The replacement course must be the disciplinary elective in the minor and have the same prefix and at the same or higher level as the course to be replaced.
- 5. For students taking the Mathematics related majors/minors should note the following exemption and replacement arrangement:

Students who fall into the following exemption situation for the introductory level Disciplinary Core Mathematics courses in Science Majors/Minors are required to take the specified replacement course(s) as prescribed in the table:

Exempted Course	Exemption granted under the following circumstances	Specified Replacement Course
	For students taking Minor with an overlap of Disciplinary Core Course :	
	MATH1013	Select 6 credits from the following to replace MATH1013:
	For students taking Programme / Major / Minor with Disciplinary Core Courses :	Any 6-credit level 2 or above Mathematics Disciplinary Elective chosen from the Programme/Major/Minor structure in which MATH1013 is the disciplinary core course
MATH1013 University mathematics II	MATH1851 and MATH1853 (which are together deemed equivalent to MATH1013)	MATH2012 Fundamental concepts of mathematics (6) (if not the disciplinary core course in the structure)
	For students taking Professional Core in Bachelor of Science in Actuarial Science with Disciplinary Core Course :	MATH2241 Introduction to mathematical analysis (6) (if not the disciplinary core course in the structure)
	MATH1821 (which is equivalent to MATH1013)	
	For students taking Programme/Major with Disciplinary Core Course :	Select 6 credits from the following to replace MATH2014: • Any 6-credit level 2 or above Mathematics Disciplinary
MATH2014	MATH2101 and MATH2211 (which are together deemed equivalent to MATH2014)	Elective chosen from the Programme/Major/Minor structure in which MATH2014 is the disciplinary core course
Multivariable calculus and linear algebra	For students taking Professional Core in Bachelor of Science in Actuarial Science with Disciplinary Core Course:	MATH2012 Fundamental concepts of mathematics (6) (if not the disciplinary core course in the structure) MATH2241 Introduction to mathematical analysis (6)
	MATH2822 (which is equivalent to MATH2014)	(if not the disciplinary core course in the structure)

6. For the situations of 2, 3, 4 and 5 above, students have to complete and submit the online application form to the Faculty Office via the <u>Science Online Application Submission System (OASS)</u> by the deadline of course selection or add/drop periods. The application will then be forwarded to the relevant Course Selection Adviser (CSA) for endorsement and comment (if any).

	`	Y Shum, Biomedical Sciences)			
		Zhou,Biomedical Sciences)			
Course Objectives	students	students a general overview of different experimenta with hands-on experience in basic biochemical and mo	olecular techniq	ues.	•
Course Contents		ncepts in experimental science; writing of lab notebook			
& Topics		r, genomic and others; methods for isolation and ana			
		ocellular fractionation; enzyme assays and spectropho			ulation - PCR, si
		nutagenesis, blotting and hybridization, cloning strateg		napping.	
Course Learning		ssful completion of this course, students should be abl			
Outcomes		escribe and explain the principles underlying various b			
		pply different techniques to isolate and characterize o	carbonydrates, i	ipids, proteins an	d nucleic acids
		ands-on laboratory sessions	aiamtifia lamaua		
		terpret and discuss scientific data using appropriate so		e	
		ollaborate effectively with team members in laboratory	sessions

Teachers Involved	(Dr B Gao,Biomedical Sciences) (Dr. YQ Song,Biomedical Sciences) (Prof D Y Jin,Biomedical Sciences) (Prof K S E Cheah,Biomedical Sciences)						
Course Objectives		To provide up-to-date knowledge of the molecular and cellular basis of selected human diseases including cancer and infection with HIV and influenza viruses, thereby preparing the students for a career in biomedical, biotechnological pharmaceutical and genomic research					
Course Contents & Topics	molecular therapeutics. Specific topics may include cell signaling, mouse mod and tumour suppressor genes, genome instability, HIV science, genetics and molecular approaches to vaccine development, immune checkpoint therapy,	This course covers cell signaling in relation to human diseases, molecular basis of cancer and viral diseases, and molecular therapeutics. Specific topics may include cell signaling, mouse model of human diseases, oncogenes and tumour suppressor genes, genome instability, HIV science, genetics and pathogenesis of influenza viruses, molecular approaches to vaccine development, immune checkpoint therapy, stem cells and stem cell therapy, gene therapy, and nucleic acid therapeutics. Basic knowledge of biochemistry and molecular cell biology is					
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 explain the molecular mechanisms underlying selected human diseases including cancer and emerging infections						

				n medicine with example Il as microbiological pri		
		interpret and communic audience in the commur		molecular aspects of r	nedicine in the	literature to a wider
		CLO 4 integrate and translate knowledge in molecular biology to new approaches in disease prevention				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in	Pass in BIOC2600 or BIOL2220 or MEDE2301 or BMED2301				
Offer in 2021 - 2022	Y 2	nd sem Offer in 2022 -	- 2023 : Y		Examination	May
Grade Descriptors (A+ to F)	A Displays a comprehensive grasp of the key concepts underlying the molecular basis of humerors. Able to articulate clearly with examples how knowledge in molecular biology can prevention and intervention. Evidence of strong analytical and critical thinking when dealing evidence for additional information beyond what is given in the lectures.				logy can lead to ne	ew strategies in disease
	В	, e				
	С	C Displays a general understanding of the key concepts underlying the molecular basis of human disease and is sometimes able to relate knowledge in molecular biology to new strategies in disease prevention and intervention. Sometimes able to apply analytical and critical thinking skills when dealing with scientific data.				
	D	Displays a limited understanding of the key concepts underlying the molecular basis of human disease and is rarely able to relate knowledge in molecular biology to new strategies in disease prevention and intervention. Evidence of weak analytical and critical thinking skills when dealing with scientific data.				
	Fail	Fail Displays an incorrect or incomplete understanding of the key concepts underlying the molecular basis of human disease and is unable to relate this knowledge to effective treatment strategies. No evidence of analytical or critical thinking skills when dealing with scientific data.

BIOC3999	Directed studies in biochemistry (6 credits)	Academic Year 2021				
Offering Department	Biomedical Sciences	Quota 36				
Course Co-ordinator	Dr A C Koon (Sem 1); Dr B H B Yuen (Sem 2 & Summer), Bior yuenbbh @hku.hk)	medical Sciences (alexkoon@hku.hk;				
Teachers Involved	(All academic staff in Biochemistry Major,Biomedical Sciences) (Dr A C Koon,Biomedical Sciences) (Dr B H B Yuen,Biomedical Sciences) (Dr B H B Yuen,Biomedical Sciences)					
Course Objectives	To enhance students knowledge of a particular topic and the students se skills.	lf-directed learning and critical thinking				
Course Contents & Topics	The student undertakes a self-managed study on a topic in biochemistry under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject. A laboratory or field study may also be involved that would enhance the student's understanding of the subject.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 critically appraise research literature in a specific area of biochemist CLO 2 examine the theoretical or experimental basis for existing concepts CLO 3 identify questions and evaluate issues for further research developm CLO 4 interpret scientific data in original research articles and communicat	nent				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core including BIOC2600 or BIOL2220 and BIOL3401. This capstone course is for Biochemistry Major students only. The earliest that a student is allowed to take this capstone course is their year.					
Offer in 2021 - 2022	Y 1st sem 2nd sem Summer Offer in 2022 - 2023 : Y	Examination No Exam				
Grade Descriptors (A+ to F)	A Produces a sophisticated and detailed appraisal of the biochemical litera understanding of the selected topic. Able to contextualize all the ideas within a relevant issues emerging from the study. Works proactively with a supervisor skills. Communicates the findings to a broader audience in an effective way and time-management skills and able to reflect honestly on one's own learning.	personal framework of knowledge and evaluate to enhance understanding and scientific writing responds knowledgeably to questions. Excellent				
	Produces a coherent appraisal of the biochemical literature, displaying a sound understanding of the selected topic. Able to contextualize many of the ideas within a personal framework of knowledge and identify some relevant issues emerging from the study. Works constructively with a supervisor to enhance understanding and scientific writing skills. Clearly communicates the findings to a broader audience and responds knowledgeably to most questions. Able to time-manage effectively and reflect on one's own learning.					
	to contextualize a few of the ideas within a personal framework of knowledge ar issues emerging from the study. BIOL1201	Introduction to food and nutrition (6 credits)	Academic Year	2021			
Offering Department	Biological Sciences	Quota	150			
Course Co-ordinator	Dr L Zhang, Biological Sciences (Izhang17@hku.hk)					
Teachers Involved	(Dr J C Y Lee,Biological Sciences) (Dr L Zhang,Biological Sciences) (Dr T C S Lam,Biological Sciences)					
Course Objectives	To enable student to appreciate the multidisciplinary nature in the study of Food and Nutrition. From the farmer's field to the dinner table, a basic understanding of the general properties of food in production, processing, storage and safety, as well as food security will be covered. Basic macro- and micronutrients from these food and its absorption, distribution, metabolism, and excretion will allow students to understand the function of these nutrients in the human body. This is an independent course which can be taken by students from various disciplines. It also prepares students for further studies in Food and Nutritional Science.					
Course Contents & Topics	Topics will include food composition and functional properties of major relationship.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 understand the key components of food and be able to discuss the	eir functional properties	}			
	CLO 2 understand the significance of food safety and be able to identify s	sources of contamination	n			
	CLO 3 understand the concept of a balanced diet					
	CLO 4 critically assess health problems associate with malnutrition					
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL					
Offer in 2021 - 2022	Y 1st sem Offer in 2022 - 2023 : Y	Examination	Dec			
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show exception knowledge. Demonstrate highly effective organization / writing skills.	•				
(71-101)	B Demonstrate substantial grasp of the subject matter covered. Show full capacity to use the appropriate concepts and assimilate the materials to solve problems. Demonstrate effective organization / writing skills.					
	C Demonstrate general but incomplete grasp of the subject matter covered. S problems. Demonstrate adequate organization / writing skills.	,,				
	D Demonstrate partial but limited grasp, with retention of some relevant Misunderstanding of the materials is not uncommon. Ability to apply concepts a basic organization / writing skills.					
	Fail Demonstrate little or no grasp, with retention of little relevant information, of	the subject matter covered	I. Fail to understand			

	concepts and show	v minimal competence in problem solvin	g. Demonstrate poor organization and writing	skills.

	Evolution	nary diversity (6	credits)	Academic Yea	r 2021		
Offering Department	Biological S		•	Quota	250		
Course Co-ordinator	Dr M Yasu	hara, Biological Scie	ences (yasuhara@hku.hk)				
Teachers Involved	(Dr C Schu	unter,Biological Scie	nces)				
	(Dr M Yasuhara, Biological Sciences)						
	(Dr S Cannicci, Biological Sciences)						
		(Prof. R M K Saunders, Biological Sciences)					
Course Objectives	To provide students with an introduction to the diversity of plant and animal life. Recent research has resulted in fundamental changes in our understanding of evolutionary history (phylogeny). Current evolutionary trees will be used as the basis for a survey of different groups in phylogenetic sequence, and for understanding how structures processes and behaviours have changed through time.						
Course Contents & Topics	Introductio (Rhodophy seedless v Ginkgophy Mollusca,	Introduction to the methodology for reconstructing the sequence of past evolutionary events (cladistics); algae (Rhodophyta, Phaeophyta and Chlorophyta); non-vascular plants (Hepatophyta, Anthocerophyta and Bryophyta); seedless vascular plants (Lycophyta, Psilophyta, Sphenophyta and Pterophyta); seed plants (Cycadophyta, Ginkgophyta, Coniferophyta, Gnetophyta and Anthophyta); invertebrates (Cnidaria, Platyhelminthes, Annelida, Mollusca, Nematoda, Arthropoda and Echinodermata); fish (Chondrichthyes and Actinopterygii); amphibians (Batrachomorpha); reptiles (Anapsida, Lepidosauromorpha and Archosauromorpha); and mammals (Monotremata)

BIOL2102	Biostati	istics (6 credits)			Academic Year	2021	
Offering Department		l Sciences			Quota	169	
Course Co-ordinator	Dr E Pick	cett, Faculty (epickett@h	ku.hk)				
eachers Involved	(Dr E Pic	kett,Faculty of Science)					
	(Dr J D G	Saitan-Espitia,School of E	Biological Sciences)				
Course Objectives	attention knowledg analysis. the main	This course aims to is to introduce students to the core ideas and concepts of statistical analysis with speci attention to the modeling approaches used in biological sciences. The course will give students the skills ar knowledge to understand how to apply these concepts using the R statistical programming language for dat analysis. Although the course covers some basic concepts (experimental design, distributions, hypothesis testing the main emphasis of the course is on model building and selection, linear models (regression and analysis).					
Course Contents & Topics	Introducti Explanati Factorial Regressi	variance), basic random effects and mixed effects models, and multivariate statistics (PCA, MANOVA). Introduction to Statistics and Probability; Descriptive Statistics and Estimation; Statistical Inference; Statistica Explanation and Diagnosis; Likelihood and Model Selection, Categorical predictors (ANCOVA and ANOVA) Factorial design, Multiple Comparisons and Block Design; Correlation and Regression Analyses; Multiple Regression Analysis; Introduction to Multivariate Analyses. Students will learn how to use R to conduct the statistical analyses, and correctly interpret the results.					
Course Learning			course, students should be	able to:

	CLO 4			•			
	, i						
	CLO 5 understand the assumptions of commonly used statistical methods CLO 6 critically evaluate the scientific literature						
	CLO 6 critically evaluate the scientific literature CLO 7 apply different statistical modeling methods						
Pre-requisites and Co-requisites and Impermissible combinations)	Pass in B	Pass in BIOC1600 or BIOL1110 or BIOL2306 or ENVS1301 or ENVS2002 or SCNC1111					
Offer in 2021 - 2022	Y 1st	t sem Offer in 2022 - 2	023 : Y	E	Examination	No Exam	
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly effective computational skills and techniques for basic statistical analyses. Be able to critically use data and statistical results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial grasp of the subject and skills required for attaining at least most of the course learning outcomes. Present evidence of analytical and critical abilities and logical thinking. Apply effective computational skills and techniques for basic statistical analyses. Be able to correctly use data and statistical results to draw appropriate conclusions. Apply effective organizational and presentational skills.						
	С	C Demonstrate general but incomplete grasp of the subject and skills required for attaining some of the course learning outcomes. Present evidence of some analytical and critical abilities and logical thinking. Apply moderately effective computational skills and techniques for basic statistical analyses. Demonstrate mostly correct but some erroneous use of data and statistical results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.					
	D						
	Fail Demonstrate evidence of little or no grasp of the subject and skills required for attaining any of the course learning outcomes. Present evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Apply minimally effective or ineffective computational skills and techniques for basic statistical analyses. Demonstrate misuse of data and statistical results and/or unable to draw appropriate conclusions. Apply minimally effective or ineffective organizational and presentational skills.

Course Co-ordinator	Dr W B L	Lim, Biological Sciences (bllim@hku.hk)					
Teachers Involved	(Dr W B L	v,Faculty of Science) Lim,School of Biological Sciences) ecturer,School of Biological Sciences)					
Course Objectives		se will give an overview of the innovative developments in biotec ols in learning how an exciting research idea can be turned into a		the students with			
Course Contents & Topics	The purpose of the course is to introduce you to the entrepreneurial process with a focus on the biotechnology industry. The course will provide a thoughtful, practical guide to the process of successfully launching an entrepreneurial venture. We place a special emphasis on the decision to become a biotech entrepreneur and how to develop successful business ideas, however we will also discuss the process of moving from an idea to a biotech firm. Topics on intellectual properties, patent laws, patent application process, licensing and fundraising will be covered as well. Throughout the course, guest entrepreneurs, managers and directors of the biotech industry will be presenting case studies and explain their involvement in various biotech and pharmaceutical companies. Topics: 1. Introduction to Biotechnology Industry: 4 P in Biotechnology Business (3 hours) 2. IP rights: Patent application, Patent system, USPTO, SIPO, PCT (6 hours) 3. Licensing of IP rights (3 hours) 4. Technology Transfer Office and HKSTP (3 hours) 5. How to raise fund for startup companies (3 hours)? 6. Agrobiotechnology and Green Tech (Monsanto, Novozymes, etc) (4.5 hours) 7. Drug development and clinical trials (Gilead Sciences, Wuxi PharmaTech, etc). (6 hours) 8. Diagnostics business (BGI, Diagcor, etc) (4.5 hours) 9. Company analysis (3 hours)						
Course Learning Outcomes	CLO 1 ur CLO 2 ur CLO 3 na ur CLO 4 ga	On successful completion of this course, students should be able to: CLO 1 understand and demonstrate knowledge of the development and management of biotechnology business CLO 2 understand and demonstrate how discoveries and inventions are commercialized CLO 3 navigate the various steps in the development of a biotechnology derived product: from bench, to scale up,to market CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries					
Pre-requisites (and Co-requisites and Impermissible combinations)	CLO 5 participate and contribute to the business side of scientific enterprises Pass in 1110 NOT for students who have passed in BIOL3409.

	th	ne natural world an	nd our own s	specie				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2306							
Offer in 2021 - 2022			022 - 2023 :		Examination	Dec		
Grade Descriptors (A+ to F)	A Evidence of a thorough grasp of the subject in a broader comparative perspective as demonstrated by background reading and excellent use of named examples and case studies. Evidence of independent critical thought with excellent use of a broad range of fundamental concepts to draw insightful and logical conclusions. Show eagerness to learn, great abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.							
	В	B Evidence of a good grasp of the subject as demonstrated by some background reading and appropriate use of named examples and some case studies. Evidence of good critical thought, although not necessarily original. Good and very good (but not outstanding) abilities of independent work, effective presentation skills with good analytical and logical argumentation. Good general command of acquired knowledge to draw meaningful and logical conclusions. Work more than sufficient for what is required at degree level.						
	C Demonstrate an adequate, but not coherent and incomplete grasp of the subject, with limited background reading and limited use of named examples and case studies. Some abilities of logical critical thinking, but not insightful and/or independent; only partial abilities to use acquired knowledge and work independently to draw meaningful conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.							
	D							
	Fail No evidence of basic minimum knowledge and understanding of the subject. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

BIOL3105	Animal p	hysiology and env	ironmental adaptation (6 credits) Academic Yea	r 2021				
Offering Department	Biological	Sciences	· · · · · · · · · · · · · · · · · · ·	Quota	35				
Course Co-ordinator	Prof A O L	. Wong, Biological Scier	nces (olwong@hku.hk)						
Teachers Involved	(Dr Y L Zh	(Dr W Y Lui,Biological Sciences) (Dr Y L Zhai,Biological Sciences) (Prof A O L Wong,Biological Sciences)							
Course Objectives	The cours habitats. Smechanisr	The course covers the major aspects of animal physiology for environmental adaptation in terrestrial & aquatic habitats. Stress will be given to the functional interactions between animals and the environment, especially on the mechanisms by which animals obtain resources for survival from the environment, detect environmental changes via sensory structures, and respond to adversities in the environment by altering their body forms & functions.							
Course Contents & Topics	metabolism terrestrial l Visual sign & mechan in aquation morpholog	Basic concepts of animal adaptation to environmental changes/extreme environment; Modification of energy metabolism according to oxygen availability; Different models of gaseous exchange for aquatic, inter-tidal, and terrestrial habitats; Cross-adaptation to different environment: air-breathing fish vs diving adaptations in mammals; Visual signals & differential levels of photoreception from protozoa to mammals; Background adaptation: functions & mechanisms for color presentation; Sound wave as environmental signals: functions & mechanisms of detection in aquatic & terrestrial habitats; Echo sounding in bats for navigation without visual signals; Behavioral, modifical & physiological adaptations in hostile environment: extreme hot vs freezing cold; salinity changes in aquatic habitats & water availability in terrestrial habitats on osmoregulation, water balance & nitrogenous metabolism							
Course Learning Outcomes	CLO 1 ha CLO 2 ap	ve a broad understandi preciate the role of the	course, students should be able to: ng on functional interactions between a environment in shaping the evolution of ge of physiological adaptations (both	animal structures & fur	nctions				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in Bl	OL2103 or BIOL2220 o	environmental changes r BIOC2600 or MEDE2301						
Offer in 2021 - 2022	Y 2nd	sem Offer in 2022 - 2	2023 : Y	Examination	May				
Grade Descriptors (A+ to F)	В	Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writings consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts. Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts. Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts or theories but not always with sufficient depth, breadth or understanding.							
	D Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level. Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concepts								
Communication	N	or theories. Writings are irre	elevant or superficial.

BIOL3108	Microbial physiology (6 credits)	Academic Year 2021					
Offering Department	Biological Sciences	Quota 50					
Course Co-ordinator	Dr A Yan, Biological Sciences (ayan8@hku.hk)						
Teachers Involved	(Dr A Yan,Biological Sciences)						
Course Objectives	Microbes are amazing and important entities on earth. Knowledge of microbes is widely applied in food, pharmaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology provides molecular basis for understanding of these important processes and applications, and to serve as essential foundations for sub-disciplines of Microbiology, such as environmental, industrial, and medicinal Microbiology. Upon completion, students will acquire fundamental knowledge and methodologies for microbial studies and be able to relate knowledge to various microbial applications.						
Course Contents & Topics	Serving as a fundamental course for the understanding of the world of microorganized and presented in three themes: 'Microbial Rules', 'Microbial Breat these three themes, a broad range of highly educational and in including: 'Microorganisms and their position in the living world', 'Fundamen microbes', 'Microbial structures and functions', 'Microbial growth and cont metabolism', and 'Regulation and control of metabolic Activities'. Topics are thighly interactive tutorial session following each of the topics such that structures and problem-based learning experiences.	h', and 'Microbial Adaption'. Under teresting topics are presented tal methodologies for the study of rol', 'Energy Generation', 'Central aught in a coherent manner with a					
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 appreciate the diversity of microbial metabolisms and the strategies for their adaptive responses						
	CLO 2 comprehend the principles underlying the dynamic nature of microbial physiology						
	CLO 3 relate knowledge to practical application of microbes in industry and medicine						
	CLO 4 develop abilities to read and assess scientific literature in microbiology area						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC2600 or BIOL2103 or BIOC3604

	Nutritio	n and the life cyc	le (6 credits)	Academic Y	ear 2021			
Offering Department		l Sciences	•	Quota	50			
Course Co-ordinator	Dr J C Y I	Louie, Biological Scie	nces (jimmyl@hku.hk)					
Teachers Involved	(Dr J C Y	Louie, Biological Scient	ences)					
Course Objectives	essential		out different stages of the life cycle. The nutritional and highlight the nutritional					
Course Contents & Topics	issues: n influence	Feaching and learning will take place through an evidence-based approach and will be organized around key ssues: needs of macro- and micronutrients, as well as the physiological and psychological determinants that nfluence nutrient requirements at different stages of the human life cycle. Socio-economic factors that influence dietary habit and nutritional status will also be covered.						
Course Learning Outcomes	CLO 1	On successful completion of this course, students should be able to: CLO 1 be able to critically assess and identify the specific needs at different stages of the life cycle CLO 2 relate the concept of requirement to physiological needs						
			ct of socio-cultural factors on nutritiona	l status				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	ass in BIOL2220 or BIOC2600 or BIOL3202						
Offer in 2021 - 2022	Y 2nd	d sem Offer in 2022		Examination				
Grade Descriptors (A+ to F)	A	identification and solvi	grasp of the subject matter covered. Show ng. Show outstanding ability to critically anal ate highly effective team-based organization and	yze and interpret scientific da				
	B Demonstrate substantial grasp of the subject matter covered. Show full ability on knowledge integration, problem identification and solving. Show reasonable ability to critically analyze and interpret scientific data and draw appropriate conclusions. Demonstrate effective team-based organization and presentation skills.							
	C Demonstrate general but incomplete grasp of the subject matter covered. Might show misunderstanding of the materials. Show some ability on knowledge integration, problem identification and solving. Show some ability to analyze and interpret scientific data and draw proper conclusions. Demonstrate adequately effective team-based organization and presentation skills.							
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Misunderstanding of the materials is not uncommon. Show limited ability on knowledge integration, problem identification and solving. Use elementary approaches to analyze and interpret scientific data and draw sometimes erroneous conclusions. Demonstrate team-based organization and presentation skills of limited effectiveness.

BIOL3206	Clinical nutrition (6 credits)	Academic Year	2021
Offering Department	Biological Sciences	Quota	70
Course Co-ordinator	Dr J M F Wan, Biological Sciences (jmfwan@hku.hk)		
Teachers Involved	(Dr J M F Wan,Biological Sciences)		
Course Objectives	This course aims to provide understanding and insight into diseases associal specifically to: 1. Explain the relationships between diet and disease. 2. Describe the role of diet in the development and prevention of common of obesity and anorexia, cardiovascular disease, cancer, immune deficiency and re 3. Differentiate risk factors that influence dietary choice. 4. Describe the rationales for postoperative nutritional support for hospitalized p	nronic diseases s nal failure.	
Course Contents & Topics	The basics of nutrition for health and fitness and medical nutrition therapy. The prevention of chronic diseases such as cancer, diabetes, obesity and anor cardiovascular diseases, renal failure, etc. Malnutrition. Nutrition and immune ful food allergy and food intolerance. Nutrition in pregnancy and lactation.	exia as well as l	oulimia nervosa,
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 discuss the different relationships between diet and disease CLO 2 describe the role of diet in the development and prevention of cardiovascular disease, cancer, immune deficiency, and renal failure CLO 3 clearly differentiate and interpret risk factors that influence dietary choice CLO 4 describe the rationales for postoperative nutritional support for hospitaliz	·	and anorexia,
Pre-requisites	Pass in BIOL3202 or BIOL3203 or BIOL3204 or BIOL3205	·

BIOL3207	Principle	s of toxicology (6 credits)	Academic Year	2021		
Offering Department	Biological	ciences	Quota	80		
Course Co-ordinator	Dr H S El-Nezami, Biological Sciences (elnezami@hku.hk)					
Teachers Involved	(Dr H S El-	lezami,Biological Sciences)				
	(Guest Lecturer, Biological Sciences)					
Course Objectives	confidence concepts t exposure t	e students to methods used in assessing the tox in the handling and interpretation of toxicological dehind toxicological evaluation, and the criteria for so chemicals. Students will understand the role of bill evaluation. This course aims to equip students	ata. Students will also be introdu etting guidance values for dietar ochemical, metabolic and toxico	uced to the basion y and nondietary kinetic studies in		
Course Contents & Topics	concepts i	Ide a discussion on exposure and entry routes, fate experimental toxicology, the dose response relational actions and types of carcinogens. A survey of the he ented.	onship, actions of toxic substant	ces, target organ		
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 de	nonstrate an understanding of the processes invol	ved in absorption, distribution,	metabolism and		
	exc	retion of toxicants, including an understanding of the	toxicokinetic behavior of toxicants	s in mammals		
	CLO 2 demonstrate an understanding of the various effects induced after exposure to toxicants					
	CLO 3 demonstrate an understanding of the factors which underlie species differences in response to potential toxicants					
	CLO 4 demonstrate the ability to work in a team to investigate and solve toxicological problems of importance in human health					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOC2600 or BIOL2220 or BIOL3205 or MEDE2301

Offer in 2021 - 2022	Y 1st	sem Offer in 20)22 - 2023 : Y		Examination	No Exam
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.					
	В	B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.				
	C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.					
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.					
	Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

BIOL3211	Nutrigenomics (6 credits)	Academic Year	2021
Offering Department	Biological Sciences	Quota	40
Course Co-ordinator	Dr K C Tan-Un, Biological Sciences (kctanun@hku.hk)		
Teachers Involved	(Dr K C Tan-Un,Biological Sciences)		
Course Objectives	Recent advances in the understanding of the human genome have resulted in called Nutrigenomics. This course aims to provide students with an understanding underpinning the science of nutrition and the relation between genes and diet-reform of nutrition at the molecular level and the concepts of nutrigenomics and nutriger	ng of the biochem elated diseases. It	nical mechanisms
Course Contents & Topics	Concepts of nutrigenomics, nutrigenetics, metabolomics and nutritional biochemic Regulation of gene expression; Single Nucleotide Polymorphisms and relation to Overview of lipid metabolism; cholesterol metabolic pathway; hyperlipidaemia, LI Relevance of folate, vitamin B12; hyperhomocysteinemia and gene polymorphis Epigenetics, Barker s hypothesis, influence of maternal nutrition in fetal ge predisposition, candidate genes like leptin, FTO and other hormones involved in Polyunsaturated fatty acid and their roles in the control of gene expression exampathways; Inborn errors of metabolism in the context of genetic mutations and personalized	diseases. DL receptor mutal ms in diseases. ene expression. the control of app nple lipogenesis a	Obesity, genetic etite

Course Learning	On successful completion of this course, students should be able to:				
Outcomes	CLO 1 explain the principles of the control of gene expression				
		monstrate understandi ease	ing of the role of metabolic	c pathways in relationship to diet, g	ene expression and
	CLO 3 dis	cuss how genetic varia	ations are used to study the	e role of genes in nutrient-related co	ellular processes
		•	,	etics and diet-related diseases	
				nutrition based on individual genetic	variation

BIOL3216	Food waste management (6 credits)	Academic Year	2021			
Offering Department	Biological Sciences	Quota	30			
Course Co-ordinator	Dr O Habimana, Biological Sciences (ohabim@hku.hk)					
Teachers Involved	(Dr O Habimana, School of Biological Sciences)					
Course Objectives	,	food waste manageme Norldwide.	nt and resource			
Course Contents & Topics	recovery potential in Hong Kong in comparison to other countries in Asia/Worldwide. With our current global population estimated to reach 9.1 billion in 2050, food production will be exp increase by 70% to meet food demand. However, our current world food supply is instead declining, with of all food produced for human consumption lost or wasted. This amounts to a staggering 1 to 2 billion me per year! Clearly we should be worried about food wastage. In this course, the social, economic, and environmental implications associated with food waste will be in by presenting relevant facts and figures and case studies embodying agricultural, industrial and consume types. Basic waste management concepts will also be covered, examining current waste management Kong compared to other countries in Asia, while providing the basis for examining our own personal footprint. This course will address current applications and limitations of food waste treatment technologies. Course outline: -Background, Definitions, Social & Environmental implications of food waste -Facts and figures related to food Waste -Basic Waste Management concepts (3 R's) -Case studies: Agricultural waste -Case studies: Food Industrial waste -Case studies: Food Industrial waste -Waste Management in Hong Kong vs other countries in Asia -Individual waste footprint: from awareness to legislation in Hong Kong					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand and define the various types of waste as well as confootprint. CLO 2 be able to define the 3 R's in waste management (reduce, reuse, polices in Hong Kong compared to other countries in Asia /Worldw CLO 3 be able to describe current and novel technologies for treating where value added resources. CLO 4 to develop written and oral presentation skills necessary to effect social information related to waste management.	, recycle), and be familia vide. vaste, as well as transfo	rrized with waste

second Reading Week (Second Semester). Students will be expected to live in tented accommodation and contribute to daily camp activities as well as conduct fieldwork in potentially harsh environmental conditions. Extra costs may be involved in the course, which may include airfares. Accommodation, meal costs and internal travel in South Africa are covered by South African hosts.

BIOL3401	Molecul	ar biology (6 credits	s)	Academic Yea	ar 2021		
Offering Department		Sciences	-	Quota	130		
Course Co-ordinator		ai, Biological Sciences (zhai @hku.hk)	·			
Teachers Involved		nai,Biological Sciences)	,				
Course Objectives	To provid	To provide students with recent knowledge in molecular biology with special emphasis on the study of gene structure and function at the molecular level.					
Course Contents & Topics	replication regulation oligonucle	The course includes a detailed account of the molecular processes in eukaryotic and prokaryotic cells, from DNA replication, RNA transcription, protein translation, to post-translational modifications with special emphasis on the regulation of prokaryotic and eukaryotic gene expression. Recently developed biochemical techniques including oligonucleotide synthesis, DNA sequencing, complementary screening and DNA cloning, site-directed mutagenesis, polymerase chain reaction and transgenic technology will also be discussed.					
Course Learning Outcomes	CLO 1 kr		course, students should be ab of DNA, RNA and protein, an	le to: d how DNA is package in the nu	cleus of eukaryotic		
			cal processes involved in D in prokaryotes and eukaryotes	NA replication, transcription, tra es	anslation and post		
	CLO 3 ex	xplain and describe the r	egulation of gene transcription	n in prokaryotes and eukaryotes			
			and understanding of the under, site-directed mutagenesis, D	erlying concepts associated with NNA sequencing	recently developed		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	IOC2600 or BIOL2103 o	or BIOL2220 or MEDE2301 or	BMED2301			
Offer in 2021 - 2022	Y 1st	sem Offer in 2022 - 20	023 : Y	Examination	Dec		
Grade Descriptors	Α	Demonstrate thorough mas	stery at an advanced level of exter	nsive knowledge required for attaining	all the course learning		
(A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.						
	С	C Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.					
	D Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Apply minimally effective or ineffective lab skills and techniques. Missues of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

BIOL3405	Moiecu	ılar microbiology ((6 credits)	Academic Ye	ear 2021		
Offering Department		al Sciences		Quota	30		
Course Co-ordinator	, Biolo	gical Sciences ()					
Teachers Involved	(,Biolo	gical Sciences)					
Course Objectives	modern	This course is intended for biology, biotechnology and biochemistry students who would like to understand the modern fundamentals of microbiology. At the end of the course the students are expected to know the physiological, biochemical and molecular aspects of microbiology.					
Course Contents					e growth of microbe		
& Topics	in the en changes consider	The basic biochemistry of microorganisms will be described. The intrinsic factors that affect the growth of microbes in the environment will be examined. The adaptation of the microbes to the environment by means of physiological changes and genetical alterations will be illustrated. The molecular biology of bacteria and viruses will be considered. The molecular biology of plasmids and transposable elements and their association with medical aspect will be discussed. The use of modern technology in studying microorganisms will be explored.					
Course Learning	On succe	essful completion of th	nis course, students should be abl	e to:			
Outcomes	CLO 1	understand the intrins	sic reorganization of microbes in re	esponse to the changing enviro	nments		
			or modes of regulation in the micro	bbe			
			bacteriophages and plasmids				
	CLO 4	realize the importance	e of transposable elements in the	survival of the microbes			
	CLO 5	appreciate the develo	pment of modern techniques in st	udying microorganisms

BIOL3409	Business aspects of biotechnology (6 credits)	Academic Year	2021				
Offering Department	Biological Sciences	Quota	40				
Course Co-ordinator	Dr W B L Lim, Biological Sciences (bllim @hku.hk)						
Teachers Involved	(Dr K W Y Yuen,School of Biological Sciences) (Dr Ng,Guest Lecture) (Dr W B L Lim,Biological Science)						
Course Objectives	The course will give an overview of the innovative developments in biotech industry and provide the students with useful tools in learning how an exciting research idea can be turned into a viable business.						
Course Contents & Topics	useful tools in learning how an exciting research idea can be turned into a viable business. The purpose of the course is to introduce you to the entrepreneurial process with a focus on the biotechnology industry. The course will provide a thoughtful, practical guide to the process of successfully launching an entrepreneurial venture. We place a special emphasis on the decision to become a biotech entrepreneur and how to develop successful business ideas, however we will also discuss the process of moving from an idea to a biotech firm. Topics on intellectual properties, patent laws, patent application process, licensing and fundraising will be covered as well. Throughout the course, guest entrepreneurs, managers and directors of the biotech industry will be presenting case studies and explain their involvement in various biotech and pharmaceutical companies. Topics: 1. Introduction to Biotechnology Industry: 4 P in Biotechnology Business (3 hours) 2. IP rights: Patent application, Patent system, USPTO, SIPO, PCT (6 hours) 3. Licensing of IP rights (3 hours) 4. Technology Transfer Office and HKSTP (3 hours) 5. How to raise fund for startup companies (3 hours)? 6. Agrobiotechnology and Green Tech (Monsanto, Novozymes, etc) (4.5 hours) 7. Drug development and clinical trials (Gilead Sciences, Wuxi PharmaTech, etc). (6 hours) 8. Diagnostics business (BGI, Diagcor, etc) (4.5 hours) 9. Company analysis (3 hours) 10. Company Visit 11. Company analysis						
On successful completion of this course, students should be able to: CLO 1 understand and demonstrate knowledge of the development and management of biotechnology classes and inventions are commercialized closses. CLO 3 navigate the various steps in the development of a biotechnology derived product: from bence to market CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries closses. CLO 5 participate and contribute to the business side of scientific enterprises							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in any level 3 BIOL or BIOC or BBMS course; NOT for students who have passed in BIOL2409. This course is only for students admitted in 2017-2018 or before.						

Offer in 2021 - 2022	N O	ffer in 2022 - 2023		Examination		
Grade Descriptors (A+ to F)	Α	Students acquire exceptional skills and knowledge from the course and are capable of independently analyzing the business and technological developments of various biotechnology ventures.				
	В	Students demonstrate a broad and in-depth understanding of the current developments in biotechnology industry and are capable of analyzing the business and technological developments of various biotechnology ventures under guidance.				
	С	Students demonstra	/ industry.			
	D	Students demonstra				
	Fail	Students fail to demonstrate a moderate understanding of the current developments in biotechnology industry.

BIOL3419	Insect ecology: the little things that run the world (6 credits)	Academic Year	2021				
Offering Department	Biological Sciences	Quota	25				
Course Co-ordinator	Dr B Guenard, Biological Sciences (bguenard@hku.hk)						
Teachers Involved	(Dr B Guenard, School of Biological Siences)						
Course Objectives	This course introduces the students with the biology of terrestrial arthropods. With a main focus on insects an arachnids, students will be introduced to various aspects of their anatomy and physiology, systematics, and ecology to understand the fundamental roles that arthropods play in natural and human-shaped ecosystems. The course will focus particularly on the diversity and importance of insects in South East Asia.						
Course Contents & Topics	With about 1.1 million and 110,000 species described respectively, insects and arachnids represent nearly 80% of all species known on the planet. A diversity also reflected in the diversity of behaviours, evolutionary adaptations or ecological interactions played at all trophic levels within ecosystems. As herbivores, pollinators, seed-dispersal agents, predators, parasitoids, disease vectors or decomposers, arthropods are major components in the stability and functioning of most ecosystems. Yet their importance is often underestimated by many fields of biology to the profit of larger "charismatic" vertebrates. However, arthropods offer incredible opportunities for scientific discoveries, revealing sometimes attributes in morphology, reproduction or behaviour beyond the most prolific imagination, and challenging existing paradigms in ecology and evolution. This course will propose an introduction to these extremely successful organisms and give them the value they deserve. A first step to the study of arthropods is to learn how to identify them correctly. Part of this course will present the main criteria to recognize major insects and arachnids groups. The second part will focus on their diversity, distribution and ecological functions within ecosystems. Finally the last part of the course will present the impacts of human activities on arthropods, how they have been used historically and nowadays, and what kind of problems or solution they represent for human societies?						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 identify major groups of insects and arthropods						
	CLO 2 understand and use the main collecting methods to sample arthropod diversity						
	CLO 3 understand the ecological diversity of arthropod groups and their importance in ecosystems						
	CLO 4 understand the biotic and abiotic factors that drive terrestrial arthropod species richness and abundance						
	CLO 5 understand how human activities modify insect diversity						
	CLO 6 describe the multiple roles played by insects on human activities						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL1309 and BIOL2306						
Offer in 2021 - 2022	N Offer in 2022 - 2023 : Y Examination						
Grade Descriptors (A+ to F)	A Demonstration of an excellent understanding of the biological concepts and theo identification skills and use of taxonomic keys of the different groups of arthropoc attitude in class. Curation and identification of the collection reaching internation course.	s studied. Present an ac	ctive and participative				
	B Demonstration of a good understanding of the biological concepts and theories de	Demonstration of a good understanding of the biological concepts and theories developed during the course. Master most of the identification skills and use of taxonomic keys of the different groups of arthropods. Participation in class more limited. Curation					
	Identification skills and use of taxonomic keys of the different groups of arthropod	Demonstration of a general but incomplete understanding of the biological concepts and theories developed during the course. Identification skills and use of taxonomic keys of the different groups of arthropods insufficient to provide reliable identification. Participation in class very limited or irrelevant. Curation and identification of the collection not reaching academic level.					
	Fail by Fail to provide evidence of knowledge on the biological concepts and theories of skills and lack of knowledge on how to use taxonomic keys. No participation in the highly unsatisfactory or work not delivered on time.

Course Objectives	contempo adaptation	Evolution is the cornerstone of modern biology. The course aims to introduce students to the major themes contemporary evolutionary biology, including the history of evolutionary biology, evolutionary processe adaptation, speciation, and evolution as an explanatory framework at all levels of biological organization. The course emphasizes the interplay between theory and empirical tests of hypotheses, thus acquainting stude with the process of principle.					
Course Contents & Topics	with the process of science. Introduction to Evolution - The relevance of evolution to everyday life - Cases for evolutionary thinking Evolution as Fact - Patterns of evolutionary change - The evidence for evolution Evolution as Theory - Before Darwin - Darwinism - The Modern Synthesis & beyond The Mechanisms of Evolution - The origin of genetic variation: mutation - Genetic drift: evolution at random. - Natural selection, sexual selection, and adaptation. - Migration Evolution and Biodiversity - Species - Speciation - Evolution and development - The history of life

BIOL3502	Conserv	vation genetics (6 credits)	Academic Year	2021			
Offering Department	Biological	Sciences	Quota	50			
Course Co-ordinator	Dr M Sun	, Biological Sciences <i>(meisun@hku.hk)</i>					
Teachers Involved							
Course Objectives	The theo amphibiar	The course aims to familiarize students with fundamental principles and recent advances in conservation genetic. The theories and methods will be taught with a balanced range of examples - mammals, birds, reptiles amphibians, fish, invertebrates, as well as plants - to demonstrate how genetic data can be used to answer a range of important questions in real world conservation practice.					
Course Contents & Topics	Introduction	on to conservation genetics.					
	- genetic of character conditions of character conditions of characters	rizing genetic diversity: single loci and quantitative var nary impacts of natural selection, mutation, migration a consequences of small population sizes; ance of genetic diversity; on genomics.		lations;			
	Part II. Effects of Population Size Reduction: - loss of genetic diversity in small populations; - inbreeding; - inbreeding depression; - population fragmentation; - genetically viable populations.						
	Part III. From Theory to Practice: - resolving taxonomic uncertainties and defining management units; - genetic management of wild populations; - genetic issues in introduced and invasive species; - genetic management of captive populations; - genetic management for reintroduction; - use of molecular genetics in forensics and understanding species biology.

BIOL3505	Oyster aquaculture and restoration (6	credits)	Academic Year 2021		
Offering Department	Biological Sciences		Quota 20		
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@	hku.hk)			
Teachers Involved					
Course Objectives	Introduce larval biology and hatchery technology; Provide scientific basis for coastal aquaculture through field demonstrations and laboratory exercises; Enable students to design, construct and maintain larval hatchery for production of seeds for aquaculture ar restoration of wild oysters; Understand the reasons for restoration of marine, estuarine and coastal ecosystems; Facilitate transfer of academic knowledge to aquaculture for sustainable food production.				
Course Contents & Topics	This experiential learning course is to enhance students' knowledge in applied larval biology techniques ar advanced coastal aquaculture production systems that will enable them to design, construct, operate and mainta oyster aquaculture facilities for food production and restoration of wild population. This is an interdisciplinal endeavor encompassing larval hatchery technology and aquaculture. After reading about basic oyster biology are coastal aquaculture, we will focus on hatchery technology and aquaculture. Environmental issues, legislatic pertaining to coastal aquaculture will also be covered using oyster farming in Hong Kong as an example. Studen will learn why oyster habitat is declining in HK and would also explore scientific and management ways to resto oyster habitat. Students will be exposed to few aquaculture facilities in Hong Kong & will be taken to Penar (Malaysia) to learn practical skills of oyster farming. This course is designed to meet the needs of an expandir sustainable aquaculture in Hong Kong. Students will be exposed to a unique learning environment involving nonly HKU but also teachers from Universiti Sains Malaysia (USM), bringing with them diverse range of expertis culture, and learning opportunities. Career and small scale business opportunities in aquaculture industry will to discussed. Thus, students will be provided adequate knowledge & analytical capabilities for a successful career larval biology research and aquaculture.				
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 examine the influence of environmental variables on larval development and recruitment, and consider potential effects of these variables on hatchery and farming CLO 2 acquire skills and experiential learning opportunities (e.g. hands-on experiences at laboratories and far in oyster hatchery and farming CLO 3 explain the importance of oyster farming in coastal habitat restoration CLO 4 plan and execute a commercially important research project in larval biology and aquaculture

BIOL3506	Evolution	nary biology ((6 credits)			Academic Year	2021
Offering Department	Biological	Biological Sciences Quota				50	
Course Co-ordinator	C Schunte	C Schunter, Biological Sciences (Schunter@hku.hk)					
Teachers Involved	(Dr C Schunter, School of Biological Sciences) (Dr J D Gaitan-Espitia, School of Biological Sciences)						
Course Objectives	1. The course aims to introduce students to the major themes of contemporary evolutionary biology, including thistory of evolutionary biology, evolutionary processes, adaptation, speciation, and evolution as an explanate framework at all levels of biological organization. 2. The course emphasizes the interplay between theory and empirical tests of hypotheses, thus acquainting students with the process of science.						s an explanator

BIOL3508	Microbia	al physiology and b	iotechnology (6 credits)	Academic Yea	ar 2021		
Offering Department	Biological	plogical Sciences Quota 60					
Course Co-ordinator	Dr A Yan, Biological Sciences <i>(ayan8@hku.hk)</i>						
Teachers Involved		(Dr A Yan,Biological Sciences)					
Course Objectives	pharmace Biotechno application such as e knowledge	Microbes are amazing and important entities on earth. Knowledge of microbes is widely applied in food, pharmaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology and Biotechnology provides both molecular basis for understanding of these important processes and up-to-date applications in modern Biotechnology, and to serve as essential foundations for sub-disciplines of Microbiology such as environmental, food, and medicinal Microbiology. Upon completion, students will acquire fundamenta knowledge about microorganisms, gain laboratory skills on methodologies for microbial studies, and be able to apply the knowledge in Microbial Biotechnologies.					
Course Contents	Serving a	Serving as a course which blends fundamental knowledge about the world of microorganisms with a					
& Topics	Breath', a interesting methodolo control', 'E biofuels a	Microbial Biotechnology, This course is organized and presented in three themes: 'Microbial Rules', 'Microbial Breath', and 'Microbial Biotechnology'. Under these three themes, a broad range of highly educational and interesting topics are presented including: 'Microorganisms and their position in the living world', 'Fundamental methodologies for the study of microbes', 'Microbial structures and functions', 'Microbial growth and control', 'Energy Generation', 'Central metabolism', and 'Microbial biotechnological applications in biodegradation, biofuels and synthetic biology '. Topics are taught in a coherent manner with a highly interactive tutorial session following each of the topics such that students will achieve a high quality, stimulating, and problem-based learning					
Course Learning	On succes	ssful completion of this	course, students should be able to	:

BIOL3951	Ecology	& biodiversity field course (6 credits)	Academic Year	2021		
Offering Department	Biological	Sciences	Quota	20		
Course Co-ordinator	Dr L Karcz	marski, Biological Sciences (leszek@hku.hk)				
Teachers Involved	(Dr L Karcz	zmarski,Biological Sciences)				
Course Objectives		This course is offered as a capstone experience and will require intense study of a topic relevant to the Ecology & Biodiversity Major during a field course, inside or outside Hong Kong.				
Course Contents & Topics	the topic a	Every year a number of different potential courses may be offered. The precise contents will be tailored to best suit the topic and locality involved and will therefore vary according to the specific course being held. The basic contents will involve lectures, seminars and extensive field and follow-up laboratory work. It is essential that students contact the course coordinator for further information on the courses available.				
Course Learning	On succes	sful completion of this course, students should be able to:				
Outcomes	CLO 1 und	derstand of the biodiversity and primary habitats in the ecosystem s	studied			
	CLO 2 establish the basic skills needed to identify target species associated with the field course					
	CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the particular ecosystems studied					
	CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communities					
Pre-requisites (and Co-requisites and Impermissible	BIOL4XXX	least 24 credits of advanced level disciplinary core/elective biolog) in the Ecology & Biodiversity Major. one course is for Ecology & Biodiversity Major students only.	gical sciences course	es (BIOL3XXX o

BIOL3991	Directed studies in ecology & biodiversity (6 credits)	Academic Year	2021			
Offering Department	Biological Sciences	Quota				
Course Co-ordinator	Dr S W Y Sin, Biological Sciences (sinyw@hku.hk)					
Teachers Involved	(All academic staff in E&B Major / E&B Major (Intensive) Major, Biological	Sciences)				
	(All academic staff in E&B Major / E&B Major (Intensive) Major, Biological	Scineces)				
Course Objectives	Students will undertake a dissertation on a topic related to the field of ecology and biodiversity. The dissertation will not involve any practical research in terms of laboratory or fieldwork, but will take the form of a desk-top study. Conducting a dissertation is an independent learning experience and will enable students to develop skills including the use of library and Web-based resources; the logical development of scientific arguments; writter presentation skills; and personal time management.					
Course Contents & Topics	An appropriate dissertation topic will be selected from a predeterminted list and following discussion with a member of Ecology & Biodiversity staff, who will act as the student's supervisor. Formal teaching will be limited and aimed at introducing students to the techniques necessary for successful completion of their dissertation.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 identify a relevant scientific question or knowledge gap					
	CLO 2 establish a desk-top literature approach to test the question posed / address the knowledge gap					
	CLO 3 undertake the appropriate research to test the question / address the knowledge gap using sound scientific					
	principles; including statistical analyses where appropriate					
	CLO 4 draw appropriate scientific conclusions from their research					
	CLO 5 present their research as a scientific paper					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level disciplinary core / elective courses in the Ecology & Biodiversity Major / Ecology & Biodiversity (Intensive) Major. This capstone course is for Ecology & Biodiversity Major / Ecology & Biodiversity (Intensive) Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.

	Food te	chnology (6 c	redits)				Academic Year	2021
Offering Department		Biological Sciences Quota 30						
Course Co-ordinator	Dr J C Y	Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)						
Teachers Involved		(Dr J C Y Lee,Biological Sciences) (Dr L Zhang,Biological Sciences)						
Course Objectives	cover key	To provide students with basic principles and methodologies of food processing and preservation technology. To cover key engineering principles relevant to the food industry. Students will gain hands-on experience with selected food processing and preservation techniques.						
Course Contents & Topics	properties productio equipmer nutritious methods	Food processing is a multidisciplinary field combining applied physical sciences with knowledge of product properties and requirements. This course introduces the technical knowledge required to implement cost-effective production and commercialization of food products and services. The design and development of processes, equipment and machinery used to convert raw agricultural materials and ingredients into safe, convenient, and nutritious consumer food products are covered. We discuss the basic engineering principles and applications of methods in food processing and preservation. Techniques discussed will include those for high and low temperature processing, concentration, dehydration, baking and extrusion.						
Course Learning	On succe	ssful completion	of this cours	e, students sho	uld be able to:			
Outcomes	CLO 1 u	nderstand basic	rinciples of	food processing	g methods and	preservation	n technology	
	CLO 2 b	e able to apply th	eir knowledg	e and practical	skills to proce	ss and deve	lop food products	
		emonstrate in-dereservation	epth unders	tanding of se	lected method	ds and pro	blems in food	processing and
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in B	IOL3209

Offering Department	Biological :	Sciences		Quota	40	
Course Co-ordinator	TBC, Biolo	gical Sciences ()				
Teachers Involved	(TBC,)					
Course Objectives	abiotic asp - to provid fishery ma - to cover t	 to acquaint students with the principles governing interrelationships among fishes as well as with biotic and abiotic aspects of their environment for an understanding of population dynamics and multispecies interactions. to provide an understanding of how species diversity and selected aspects of their life history are relevant to fishery management challenges, sustainable supply of seafood, and the conservation of threatened species. to cover the theoretical and practical aspects of marine fisheries management, fish farming and fish conservation using local, regional and global examples 				
Course Contents			ic, biological and ecological conc	epts and adaptation. Multispe	cies interactions ir	
& Topics	marine and freshwater fish assemblages. Fishery theory; how do fisheries work? Status of the world's capture fisheries; fish stock assessment and fishery management practices using local, regional and global examples. The roles of mariculture and capture fisheries for seafood supply and relationship to capture fisheries. Fishery management and fish conservation. Conclusion: fish biodiversity and fishery production; ethics of fish research and exploitation; climate change and the future of fish and fisheries.					
Course Learning			ourse, students should be able to):		
Outcomes	CLO 1 understand the basis of fish species diversity in relation to phylogenetic, ecological and biological factors CLO 2 appreciate the direct and indirect impacts and consequences of human activities on fish species and species assemblages and implications for seafood security CLO 3 understand of the functioning of fisheries and standards of fisheries assessment, development and management CLO 4 appreciate the mutual dependency of humans with fished populations in relation to their long-term sustainability CLO 5 enhance the ability for critical and synthetic thinking and to consider innovative approaches to research					
	an	d management				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in Blo	OL3301 or BIOL3303				
Offer in 2021 - 2022	N Offe	er in 2022 - 2023 : N		Examination		
Grade Descriptors (A+ to F)	Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, ability to integrate and synthesize information, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective presentational skills. Strong evidence of clear attention to thoughtful and reflective thinking. B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, integration of materials and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate effective presentational skills. Evidence of clear attention to thoughtful and reflective thinking. C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective presentational skills. Little evidence of clear attention to thoughtful and reflective thinking. D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes.

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, ability to integrate and synthesize information, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective presentational skills. Strong evidence of clear attention to thoughtful and reflective thinking.						
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, integration of material sand ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate effective presentational skills. Evidence of clear attention to thoughtful and reflective thinking.						
Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective presentational skills. Little evidence of clear attention to thoughtful and reflective thinking.						
Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities and little attempt at integration. Show limited ability to apply knowledge to solve problems. Apply limited effectiveness in presentational skills. Lack of attention to thoughtful and reflective thinking.						
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

BIOL4303	Animal behaviour (6 credits)	Academic Year	2021	
Offering Department	Biological Sciences Quota 30			
Course Co-ordinator	Dr L Karczmarski, Biological Sciences (leszek@hku.hk)			
Teachers Involved				
Course Objectives	This course teaches students the ways and means of exploring and understanding animal behaviour; it provides insights into a field of science that investigates everything animals do, including the underlying mechanisms and functions of specific behaviours; the ways in which animals interact with each other, with their physical environment and other organisms; how animals find and defend resources, avoid predators, choose mates, reproduce, and care for their young; how complex animal societies are formed and how behaviour of an individual affects the structure of a population.			
Course Contents & Topics	This course will introduce students to scientific reasoning and conceptual basis of an understanding of animal behaviour and behavioural ecology. What causes specific behaviour and what are the underlying mechanisms? How does behaviour develop within the individual's lifetime and what functions does it serve? For example; why are some species monogamous while others are polygamous? What makes one organism the hunter and another the hunted? Several animal species, including humans, tend to live in groups; social life is among the most complex and effective survival strategy. However, how could, for instance, the birth of sterile castes, like in bees, be explained through an evolving mechanism which emphasizes the reproductive success of as many individuals as possible? Why, among animals living in small groups like squirrels, would an individual risk its own life to save the rest of the group? In this course, based upon ecological and evolutionary principles, students will learn to think			

	behaviour research	thin the paradigm of behavioural ecology and understand the causes, functions, development, and evolutionary. We will discuss several classical studies that form the foundation of this field, as well as more search that represents the current concepts which have led to modern understanding of animal behaviors.					
		vill also illustrate the links between the recent extraordinary advances in behavioural ecology and socic vith their application in animal conservation.					
Course Learning		successful completion of this course, students should be able to:

BIOL4304	Ecosystem functioning and services (6 credits)	Academic Year	2021		
Offering Department	Biological Sciences	Quota	30		
Course Co-ordinator	Dr B Russell, Biological Sciences (brussell@hku.hk)				
Teachers Involved	(Dr B Guenard,Biological Sceinces) (Dr B Russell,Biological Sciences) (Dr C Dingle,Biological Sciences) (Dr S Cannicci,Biological Sciences) (Guester Lecturer,Biological Sciences)				
Course Objectives	This course will introduce the functioning of terrestrial, fresh water and marine ecosystems and the services which they provide human populations. The concept of ecosystem services will be further expanded into "value", including financial, cultural, social and, importantly, the intrinsic value that may be priceless. We will also explore how human activities degrade these ecosystem services and how protecting ecosystems and biodiversity can increase the ecosystem services supplied to humans.				
Course Contents & Topics	Natural ecosystems provide trillions of dollars' worth of ecosystem services to his services go unrecognized and undervalued. In fact, because humans rely on ecomy be priceless. This course will first cover the function of different ecosystem marine environments. Students will then be introduced to the concept of ecosystem to human populations. Finally, human activities which degrade ecosystems and rocan provide these services, and what that means for human populations, will be independent and creative thinking when proposing solutions to the question of h	osystems many s from terrestrial em services and veduce the extent oe covered. Stud	of these service, fresh water and what they provide that ecosystem ents will develop		

	inherent	nherent properties rather than perceived monetary value.

BIOL4401	Medical microbiology and applied immunology (6 credits)	Academic Year	2021				
Offering Department	Biological Sciences	Quota	40				
Course Co-ordinator	Dr W Y Lui, Biological Sciences (wylui@hku.hk)						
Teachers Involved	(Dr A Yan,Biological Sciences) (Dr C G Zheng,Biological Sciences) (Dr W Y Lui,Biological Sciences)						
Course Objectives	The objective is to provide students the knowledge on the practical application biological research, clinical analysis and disease diagnosis.	ons of immunology ar	d microbiology ir				
Course Contents & Topics	Application of antigen-antibody interaction in advanced research such as chromatin. immunoprecipation assay, communoprecipitation and dual immunofluorescence analysis. Principles of flow cytometry and its application. Tumor immunology and immunotherapy such as FDA-approved checkpoint inhibitor immunotherapy and chimeric antigen receptor (CAR) T-cell therapy. Microbial pathogens and associated diseases, host immune response, antimicrobial agents and multidrug resistance, epidemiology and prevention of microbial infections. Clinical laboratory analysis in haematology, chemical pathology, and clinical microbiology. The application of these testing methods in the diagnosis of disease associated with major systems of the human body and the diagnosis of						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 apply the principles of antigen-antibody interaction in various advanced research techniques						
	CLO 2 demonstrate knowledge on microbial pathogens, mechanisms for their disease-causing, and principles of antibiotic development						
	CLO 3 understand the scientific principles of various clinical laboratory analyses						
	CLO 4 promote public attention on control of microbial infection and the spread of antibiotic resistance						
Pre-requisites (and Co-requisites	Pass in BIOL3401						

and Impermissible combinations)

BIOL4402	Microb	ial biotechnology (6 credits)		Academic Year	2021		
Offering Department	Biologica	al Sciences		Quota	30		
Course Co-ordinator	, Biolo	gical Sciences ()					
Teachers Involved	(,Biolo	gical Sciences)					
Course Objectives	biotechn the end	This course is intended for students who would like to understand the application of modern microbiology in biotechnology. The microbial systems being used include different types of viruses, bacteria, fungi and algae. At the end of the course the students are expected to know the parameters and conditions that affect the yield of production and the systems available for the expression of vaious types of biotechnology products.					
Course Contents & Topics	microbia algae wi limited to	Upstream and downstream processing will be briefly described to equip the students with the background for microbial biotechnology. The latest advances in microbial expression systems using viruses, bacteria, yeasts and algae will be reviewed. Specific examples on the use of these systems will be provided. These include but no limited to production of recombinant vaccines, secondary metabolites, food and food additives, industrial enzymes and biopesticides as well as bioremediation and medical diagnostics.					
Course Learning	On succ	essful completion of this course, students she	ould be able to:				
Outcomes	l	explain the fundamental biochemical conception of the fundamental biochemical conceptions.	, 0	•			
	CLO 2 understand the importance of the current recombinant technology for large-scale manufacturing of various protein products						
	CLO 3 describe the major expression systems, understand their purposes, advantages, and disadvantages						
	CLO 4 deliver a professional group presentation on a self-decided topic related to microbial biotechnology

BIOL4411	Plant ar	nd food biotechr	ology (6 credits)	Academic Y	ear 2021
Offering Department		l Sciences	,	Quota	50
Course Co-ordinator			ences (mlchye@hku.hk)	, , ,	
Teachers Involved	(mlchye@	hku.hk,Biological S	ciences)		
Course Objectives	This course covers the principles and key concepts of plant and food biotechnology and its applications in increasing global food supply. The significances of biotechnology in agriculture and food production, and the emerging importance of plant biotechnology in molecular farming for the production of biopharmaceuticals and other high-value proteins will be discussed. The course will also provide an insight on the real-life applications of plant and food biotechnology.				
Course Contents & Topics	 Genetic improvements in agriculture. Transgenic crops in global food production. Tools in plant genetic engineering: promoters and marker genes. Techniques in plant gene transfer: Agrobacterium-mediated transformation, biolistics and microinjection. Nuclear and plastid transformation. Gene silencing in plants. Genetic manipulation of commercially useful biosynthetic pathways in crops. Extending shelf-life of fruits. Prevention of enzymatic browning of potato tubers. Genetically-engineered biofortified foods: provitamin A-enriched rice, omega-3-enriched soy and high anthocyanin tomatoes. Biotechnology in plant pest and disease management: Producing crops resistant to phytopathogens and pests. Genome editing. Short-interfering RNAs in gene silencing to defend against plant viruses. Protecting crops in the field using the Bt toxin. Pest-resistant genetically-transformed seeds using the alpha-amylase inhibitor Herbicide-resistant crops. Plants as bioreactors for molecular farming: transgenic and transplastomic plants for producing recombinant biopharmaceutical proteins. Biodegradable plastics. Biofuels. Genetically-modified crops and food products: regulation, testing and labelling. Status of GM food in North America, Europe and Hong Kong. 				
				ing and laboling.	
Course Learning			this course, students should be ab	le to:

BIOL4415	Healthca	are biotechnology ((6 credits)	Academic Ye	ear 2021	
Offering Department	Biological			Quota	70	
Course Co-ordinator	Dr G Y W	Chan, Biological Scien	ces (gywchan@hku.hk)			
Teachers Involved	(Dr G Y W Chan,Biological Sciences) (Dr K W Y Yuen,Biological Sciences) This course discusses the key concepts and principles involved in healthcare biotechnology, and their application					
Course Objectives		se discusses the key co lar medicine.	oncepts and principles involv	red in healthcare biotechnology, a	and their applications	
Course Contents & Topics	Genetic biotechnology in animals (transgenics, knockouts and other related technologies): Transgenic animals a models in the study of human diseases, as bioreactors for the production of hormones, antibiotics and vaccine and organs for xenotransplantation. Advanced molecular biology techniques related to human and animal science basic research, disease diagnosi and development of new therapies. These include but not limited to: applications of DNA technologies in diagnosti medicine and forensic science; tissue engineering. An overview of the drug development process, with a focus on the early-stage, preclinical drug discovery, drug target identification, high-throughput assay development, and screening of chemical libraries (synthetic and natura products). The concept of individualized medicine will also be discussed.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 de	escribe key concepts in	genetic biotechnology and h	uman health		
	CLO 2 ac	cquire and apply advance	ced laboratory techniques es	sential to biotechnology		
	CLO 3 de			understand, analyze, and evalua	te problems in order	
	CLO 4 ga	ain insight into real-worl	d applications in healthcare	biotechnology		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BI	OL3401		•		
Offer in 2021 - 2022	Y 2nd	sem Offer in 2022 - :	2023 : Y	Examination	May	
Grade Descriptors	Α			tensive knowledge required for attaining	,	
(A+ to F)	outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writings consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.					
	B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.					
	Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts or theories but not always with sufficient depth, breadth or understanding.					
	D Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level.					
	Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concepts or theories. Writings are irrelevant or superficial.

Course Objectives	Recent progress in high-throughput omics technology has revolutionized the profiling of various biomolecules simultaneously by omics technology generate the potential to obtain a global and holistic view of the system. This course ain Omics and Systems Biology, and overview of various applications of omics techn Synthetic biology is set to be the heart of future economy, promising to create in	s huge amounts ons to introduce the nology.	of data, providing e technologies of

	synthetic			iGEM competition. In this course, we	ted by the worldwide will introduce some	
				tills needed for iGEM competition.		
Course Contents & Topics	The course covers various OMICS techniques with special focus on sequence alignment, next generation sequencing, computational modeling, and statistic programming. This course will also provide students hands-on experience in large scale data analysis, and experiment methodologies involved in: Systems biology and functional genomics - the study of the interactome/network between components of a biological system, and modeling to discover the integrated function and emergent properties of that system; Synthetic biology- the design and building of synthetic protocells using basic biochemical building blocks from scratch.					
Course Learning	On succes	ssful completion of	this course, students shou	ld be able to:		
Outcomes	ар	proach, and discu	ss the pros and cons of bo	• • • • • • • • • • • • • • • • • • • •	traditional one-gene	
			ethodologies used in iGEM	,	v IOwainal atrudina

	CLO 5 ide	entify questions tha	at can be addressed by 'Or	nics' and Synthetic Biology studies		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BI	OC3601 or BIOC3	604 or BIOL3211 or BIOL3	401 or BIOL3402 or BIOL3403 or BIO	L3404 or BIOL3408	
Offer in 2021 - 2022	Y 2nd	sem Offer in 20	22 - 2023 : Y	Examination	n May	
Grade Descriptors (A+ to F)	A Demonstrate thorough and complete mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.				
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.				
	D	Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.				
	Fail	of analytical and cri		rledge and skills required for attaining the cours ont thinking. Show very little or no ability to a inimally effective or ineffective.

Information	The course is open to enrollment only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following: 1. Personal and academic details 2. ID photograph 3. Brief description of academic interests					
	 4. GPA 5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver) All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester. 					

BIOL4501	Molecular phylogenetics and evolution (6 credits)	Academic Year	2021	
Offering Department	Biological Sciences	Quota	25	
Course Co-ordinator	TBC, Biological Sciences ()			
Teachers Involved	(TBC,Biological Sciences)			
Course Objectives	The purpose of this course is to provide a comprehensive overview of state-of phylogenetic research, focusing on in depth coverage of the latest techniques. in formal lectures is coupled with practical workshops. - acquisition of the sequences from the databases - DNA and protein sequence assembly and alignment - phylogeny reconstruction using parsimony, distance based, and maximum like - introduction to relevant software for phylogenetics - methods for the evaluation of phylogene trees	The treatment of t	théoretical issues	
Course Contents & Topics	Introduction to molecular systematics and phylogenetics. Tree of life. Obtaining, storing and archiving specimens and tissue samples for use in molecular studies. Sources of molecular data, experimental design for molecular studies, taxon sampling and marker choice. Overview of basic laboratory methods for data collection (DNA isolation, PCR, DNA sequencing). Sequence editing and aligning; utilizing public sequence databases. Estimation of nucleotide polymorphism and diversity. Methods for phylogeny reconstruction: parsimony, distance methods. maximum likelihood, Bayesian methods. Statistical methods for the evaluation of phylogenetic trees. Software for phylogeny reconstruction. Molecular markers in conservation and ecological genetics. Phylogenies for different			

		s. Biogeography vs. phylog					
Course Learning	On succe	ssful completion of this co	urse, students should be	e able to:

BIOL4505	Oyster aquaculture: business and technology (6 credits)	Academic Year	2021			
Offering Department	Biological Sciences	Quota	20			
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@hku.hk)					
Teachers Involved	(Dr T Vengatesen, School of Biological Sciences)					
Course Objectives	 Introduce oyster biology and hatchery technology and aquaculture business; Provide scientific basis for oyster aquaculture through field demonstrations and laboratory exercises; Enable students to design, construct and maintain oyster hatchery for production of seeds for sustainable aquaculture and restoration of wild oysters; Facilitate transfer of academic knowledge to oyster growers and aquaculture industry for sustainable, healthy and safe sea-food production; 					
Course Contents & Topics	This experiential learning course is to enhance students' knowledge in one hatchery technology and coastal aquaculture business that will enable the maintain coastal aquaculture facilities and small-scale 'green and envishellfish production and restoration of wild benthic biodiversity in coastal endeavor encompassing larval hatchery technology, seafood quality, a aquaculture business. After reading about basic oyster biology and oyster a marine larvae will be useful for human society through hatchery technormental issues, legislation pertaining to coastal aquaculture business covered using oyster aquaculture in Hong Kong as an example. Students facilities in Hong Kong, Zhanjiang, and Qingdao to learn industrial and bus course is designed to meet the needs of an expanding sustainable aquaculture and small scale business opportunities in aquaculture industry will be	nem to design, construction and the conomic dimension and economic dimension according to the conology and aquacts and community interacts will be exposed to sessiness skills of oyster culture in Hong Kong	uct, operate and object business for interdisciplinary sions of coasta will focus on how the business action will also be veral aquaculture. This aguaculture.			
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 gain scientific knowledge required for setting up oyster hatchery, far understanding biology and ecology of larvae and shellfishes and con hatchery and farming CLO 2 acquire skills and experiential learning opportunities (e.g. hands-on	onsider potential envir	onmental effect

Course Contents & Topics	specific prol wider conte conducted the address rea wildlife trad instruments	This course will use directed case studies to give students the opportunity to consider and synthesize solutions to specific problems in conservation and the application of conservation science in the modern world, and within the wider context of economic development, political considerations and scientific uncertainty. Projects will be conducted through collaborations with local organizations, such as WWF-Hong Kong and Ocean Park, and address real-life questions and issues. Possible case studies range from ecosystem services, biological footprints wildlife trade, to assessment of conservation risk, effectiveness of international conservation and biodiversity instruments, and the relationship between biodiversity and human livelihoods. Tutorials by the course coordinate will introduce practical conservation concepts, develop critical thinking and address specific issues of relevance.					
Course Learning	On success	ful completion of this course, students should be able to:					
Outcomes	CLO 1 have	e an in-depth understanding of the topic studied, the	e major issues involved and	I the needs and			
	prospects for further work in the area						
	CLO 2 have developed investigative skills associated with the case study selected which include synthesis, organization and presentation of information and innovative and creative thinking around problem solving CLO 3 understand the importance and complexities of conserving biodiversity						
	CLO 4 be able to identify practical and scientifically defensible initiatives and measures for successful						
	conservation intervention						
	CLO 5 be able to competently present the case study and convincingly argue their case

Offer in 2021 - 2022	N Offe	er in 2022 - 2023 : N		Examination			
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.						
	B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.						
	С	Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.					
	D	Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.					
	Fail	Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coheren and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis o data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

Follow	eting and analysing in their field study a suite of research understanding how hary processes and ing and thoughtfuling the field-based	
Course Learning	Report.	ssful completion of this	course, students should be able to:			
Outcomes	On successful completion of this course, students should be able to: CLO 1 understand of the biodiversity and primary habitats in the ecosystem studied CLO 2 establish the basic skills needed to identify target species associated with the field course CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the					
	ec	osystems studied	, , ,		·	
	CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal community					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL3101; and Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX electric BIOL4XXX) in the Ecology & Biodiversity Major. This capstone course is for Ecology & Biodiversity Major students only.					
Offer in 2021 - 2022		st that a student is allov er in 2022 - 2023 : N	ved to take this capstone course is the	Examination		
Grade Descriptors	A		sp of the subject and relevant research techniq		m to learn and excellent	
(A+ to F)	A Evidence of a thorough grasp of the subject and relevant research techniques. Eagerness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.					
	Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.					
	C Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work					
	sufficient for what is required for degree level. Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted shifts of drawing appropriate conclusions. Work barely meets what is required at degree level.					
	ability of drawing appropriate conclusions. Work barely meets what is required at degree level. No evidence of basic a minimum grasp of the subject and the minimum relevant research techniques. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

BIOL4962	Food & nutritional science internship (6 credits)	Academic Year	2021				
Offering Department	Biological Sciences	Quota					
Course Co-ordinator	Dr J Č Y Lee, Biological Sciences (jettylee@hku.hk)						
Teachers Involved	(All academic staff in Food & Nutritional Science Major, Biological Sciences)						
Course Objectives	To provide a stimulating experience for all Food & Nutritional Science Major undergraduates to integrate and apply their knowledge and skills obtained from the Food & Nutritional Science Major through gaining work experience in the field of Food & Nutritional Science that are related to the major of study.						
Course Contents & Topics	Students taking this course will work as an intern for at least 160 hours in at least 20 working days within the University or outside the University in a company, government department or NGO. The internship may be arranged by the School or obtained by students themselves. In the latter case, the internship must be in a relevant field to the Food & Nutritional Science Major that the students are taking and prior approval by the course coordinator is required						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 gain first hand work experience in a job placement related to their Food & Nutritional Science Major						
	CLO 2 apply the knowledge in their Food & Nutritional Science Major in solving practical problems in the work place						
	CLO 3 acquire an understanding and appreciation of the real work environment						
	CLO 4 extend their network in their field of study						
Pre-requisites	Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Food & Nutritional Science Major. This capstone course is for Food & Nutritional Science Major students only.						
(and Co-requisites							
and Impermissible							
combinations)	The earliest that a student is allowed to take this capstone course is their year 3

ENVS1301	Environmental life science (6 credits)	Academic Year	2021
Offering Department	Biological Sciences	Quota	60
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@hku.hk)		
Teachers Involved	(Dr T Vengatesen,Biological Sciences)		
Course Objectives	This course intended for students who wish to understand the fundamentals of and importantly the relationship (connection) between environment and life. He		0,

				l science which are needed for c numan ecology, urbanization, e		
		•	nonnental issues molading i	raman coology, arbanization, c	oological coolicitios,	
Course Contents & Topics	This cours fundamen life at var urbanizati students v that huma students v	and climate change. This course is a combination of lectures, group discussion/debate and field trips cum tutorials. We first explore the fundamental interactions between organisms and their environment. We then explore environmental constraints on life at various ecosystems (like marine, freshwater, and terrestrial). Students will also learn how factors such as urbanization, climate change, and anthropogenic impacts affect life at population and ecosystem levels. Similarly, students will be exposed to the incredible interrelationships that are basic to ecological principles and the impact that human development has upon these interrelationships. After learning basics of environmental life science, students will be stimulated to think about current life science issues such as biodiversity loss, organisms adaptation to climate change, tragedy of commons (human ecology) and applied life science topics such as biomaterial				
Course Learning		ssful completion of this	course, students should be a	ble to:		
Outcomes	CLO 1 ur	nderstand life, environm	nent and their interactions			
	CLO 2 ar	ppreciate species and ϵ	ecosystem responses to huma	an-induced environmental chang	е	
	CLO 3 at	tain ability to critically the	hink and discuss about curren	nt environ-life science issues		
		e motivated and equipp nvironmental science co	· ·	nmental science questions and	to choose advanced	
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL					
Offer in 2021 - 2022	Y 2nd	d sem Offer in 2022 -	2023 : Y	Examination	May	
Grade Descriptors (A+ to F)	Α	multidimensional thinking outcomes. Demonstrate environmental life science	about the study subject. Extensive kexcellent ability to apply what you issues. Show highly effective organize	ntal life science issues. Show evidence knowledge and skills required for attaini have learned in the class room to c zational, presentational and field trip skill	ng all the course learning ritically analyze the real s.	
	B Show substantial knowledge and thought during the analysis of environmental life science issues. Show some evidence of some analytical, critical and multidimensional thinking about the study subject. Good knowledge and skills required for attaining all the course learning outcomes. Demonstrate good ability to apply what you have learned in the class room to critically analyze the real environmental life science issues. Show effective organizational, presentational and field trip skills.					
	C Show general but incomplete knowledge and original thought during the analysis of environmental life science issues. Fair knowledge and skills required for attaining all the course learning outcomes. Demonstrate fair ability to apply what you have learned in the class room to critically analyze the real environmental life science issues. Show considerable organizational, presentational and field trip skills.					
	Evidence to show a minimum knowledge (i.e. knowledge is very incomplete) and thought during the analysis of environmental life science issues. Show insufficient knowledge and skills required for attaining all the course learning outcomes. Demonstrate poor ability to apply what you have learned in the class room to critically analyze the real environmental life science issues. Show very little organizational, presentational and field trip skills.					
	Fail Evidence of meager or inadequate knowledge and understanding of environmental life science issues. Show no evidence of knowledge and skills required for attaining all the course learning outcomes. Demonstrate no ability to apply what you have learned in the class room to critically analyze the real environmental life science issues. Show no evidence of familiarity with relevant reading material and field trip demonstrations, or any knowledge of organizational and presentational skills.

ENVS2001	Methods in environmental science (6 credits)	Academic Year	2021			
Offering Department	Biological Sciences	Quota	42			
Course Co-ordinator	Dr M Yasuhara, Biological Sciences (yasuhara@hku.hk)					
Teachers Involved	(Dr M Yasuhara, Biological Sciences)					
Course Objectives	To introduce students to a broad spectrum of field and laboratory methods for data collection in environmental science. Through exposure to environmental data collection, experimental design, data analysis, interpretation and reporting, students will gain a deeper appreciation of the process that underlies environmental science research and it's relevancy to critical thinking and future careers in the sciences.					
Course Contents & Topics	This course will involve environmental data collection in both field and laboratory settings. In-class lectures will cover basic principles of specific methodologies and relevant applications in preparation for laboratory and field-based experiential learning. Having an interdisciplinary focus, the course will cover topics relevant to the study of the biosphere, encompassing terrestrial, aquatic, and atmospheric systems. Students will gain hands-on experience with the operation of standard and advanced sampling and analytical equipment, quality control, basic data analysis and reporting.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 understand how scientific data is used to address environmental problems					
	CLO 2 have a basic understanding of the techniques and methodologies necessary for collecting environmental data					

	CLO 3 understand some of the problems inherent in data collection, and how this impacts data interpretation					
	CLO 4 understand how data collected in the lab and field can be used to critically evaluate ideas

ENVS2002	Environ	nmental data analysis (6 credits)	Academic Year	2021				
Offering Department	Biologica	iological Sciences Quota 65						
Course Co-ordinator	Dr T C Bo	onebrake, Biological Sciences (tbone@hku.hk)						
Teachers Involved	(Dr T C B	Bonebrake, School of Biological Sciences)						
Course Objectives	environm environm approach sensing,	To provide students with the ability to analyze data; especially data which are relevant to issues and questions in environmental science. This course will enable students to accurately interpret, organize, display, test and analyze environmental data. The course will also introduce students to principles of a variety of important advanced approaches in analyzing environmental data including spatial analysis, geographic information systems, remote sensing, risk assessment, and time series analysis.						
Course Contents	The cour	rse will feature lectures on aspects of sampling, distribution	s, uncertainty, probability	, and hypothesis				
& Topics	most env	addition to lectures on advanced analysis topics. Special emprironmental datasets such as large size, multivariate, and spatinmental science contexts (e.g. chemistry, ecology, geology and outer laboratory setting using the 'R Project for Statistical Comp	al. All material will be app d oceanography) using a v	lied and practiced variety of datasets				
Course Learning		essful completion of this course, students should be able to:						
Outcomes	CLO 1	accurately interpret methods and approaches in the scientific						
	CLO 2	evaluate critically data analyses in the environmental sciences						
	CLO 3 perform standard and appropriate statistical analyses on a variety of data sources							
	CLO 4 work comfortably with large datasets using applied software (e.g. R)							
	CLO 5 present results of data analyses in a clear and transparent manner							
Pre-requisites (and Co-requisites and Impermissible combinations)		BIOL1309 or EASC1401 or ENVS1301 or ENVS1401						
Offer in 2021 - 2022	Y 2n	d sem Offer in 2022 - 2023 : Y	Examination	May				
Grade Descriptors (A+ to F)	A	Demonstrate thorough grasp of the subject and skills required for attair analytical and critical abilities and logical thinking, with evidence of origina and techniques for basic statistical analyses. Be able to critically use of insightful conclusions. Apply highly effective organizational and presentation	I thought. Apply a highly effectived data and statistical results to d	e computational skills				
	B Demonstrate substantial grasp of the subject and skills required for attaining at least most of the course learning outcomes. Present evidence of analytical and critical abilities and logical thinking. Apply effective computational skills and techniques for basic statistical analyses. Be able to correctly use data and statistical results to draw appropriate conclusions. Apply effective organizational and presentational skills.							
	C Demonstrate general but incomplete grasp of the subject and skills required for attaining some of the course learning outcomes. Present evidence of some analytical and critical abilities and logical thinking. Apply moderately effective computational skills and techniques for basic statistical analyses. Demonstrate mostly correct but some erroneous use of data and statistical results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

Course Objectives	urban env natural en environme environme	This course follows up issues highlighted in the introductory course and provides in-depth studies about rural and urban environments for students to examine the problems of resource scarcity and pollutant accumulation in the natural environment, which are the problems human society is currently confronted. The course will focus on major environmental problems and explore how Environmental Economics can be applied for resource management and environmental restoration/protection. Students will analyze the nature of key natural resources such as land, air, water and biomass, and explore ways to improve resource management, protect the environment and develop

Additional Course Information	http://www.biosch.hku.hk/ecology/lsc/ Enrollment Procedure: The actual capacity of this course is limited and will vary year by year, regardless of quota set. So, interested student must apply for the course with a short proposal (2 pages max.) and CV via et to Dr M Yasuhara (yasuhara@hku.hk) and Ms. Maria Lo (gylo@hku.hk) not later than 1st August (Note: this is semester course, but we need applications well in advance, by this date). Late applications will not be accept The proposal should include the following: (1) specific reason(s)/motivation why you are interested in joining course; (2) merit that you expect to receive from this course, especially regarding your future academic/capath; (3) brief description of academic interests. The CV should include: (1) Personal & academic details; (2 photograph; (4) GPA; (5) Pre-requisite courses taken & grades received. The selection will be made based on the quality of proposal and the justification of academic merit, in conside other factors. Only accepted students through this application process will be able to register this course. The residential field trip will be organized in the reading week. Students will need to pay for their own travel cost the trip (please contact us for details & financial difficulty). It will be good to take this course before taking the final year project to have relevant hands-on experience. This course will be offered subject to a minimum enrollment no. and availability of teachers.				and CV via e-mail ust (Note: this is 2nd vill not be accepted. rested in joining this are academic/career demic details; (2) ID merit, in considering is course.	

ENVS3028	Coastal Sustainability (6 credits)	Academic Year	2021		
Offering Department	Biological Sciences	Quota	8		
Course Co-ordinator	Dr T Vengatesen, Biological Sciences (rajan@hku.hk)				
Teachers Involved	(Dr T Vengatesen,School of Biological Sciences) (Prof G A Williams,School of Biological Sciences)				
Course Objectives	 Understand the primary drivers of biodiversity and ecosystem function in rocky intertidal, mangrove and coral reef ecosystems in USA and SE Asia. Gain an appreciation for how urban ecosystems in this region are being affected by climate change, development and stress from pollution Better understand how history and governance structures of Hong Kong, Malaysia and New England constrain and/or facilitate coastal adaptation strategies Appreciate how cultural practices such as seafood preferences and traditional medicine affect harvesting of marine species and how this impacts coastal biodiversity 				
Course Contents & Topics	marine species, and how this impacts coastal biodiversity The majority of the Earth's population now lives in coastal cities, where people not only depend on ocean resources, but are also experiencing ever increasing threats from the ocean environment. This program will explore the mechanisms by which coastal communities in the US and SE Asia are facing these expanding challenges, including their impacts on coastal ecosystems. Using a comparative approach, students will explore the diverse challenges facing coastal societies, and will gain an in-depth understanding of coupled human-natural systems or the coasts of New England and Southeast Asia (Hong Kong and Malaysia). By comparing and contrasting both ecosystems and societies, students will develop an appreciation for both the commonalities of challenges facing the world's coasts, as well as differences that occur due to local ecology. A major emphasis of the program will be on solutions, and how by taking a global perspective we can accelerate methods for climate change adaptation that span traditional cultural barriers. We will blend studies of threats facing both human and natural systems in Hong Kong, Malaysia and the Gulf of Maine with an in-depth exploration of how				
Course Learning Outcomes	those societies have (or have not) enacted solutions to those challenges. On successful completion of this course, students should be able to: CLO 1 Articulating similarities and differences between how coupled human-natural systems operate in SI and in comparable habitats in the U.S.A.				

				and social science	
CLO 3 A	Articulating arguments mpacts on the environ	s about how traditional Chinese, Malay	sian and American cul

ENVS3202	Plant physiology and climate change (6 credits)	Academic Year	2021		
Offering Department	Biological Sciences	Quota	40		
Course Co-ordinator	Dr J Wu, Biological Sciences (jinwu@hku.hk)				
Teachers Involved	(Dr J Wu,Biological Sciences)				
Course Objectives	In this course students will learn different quantitative methods for measuring and evaluating climate change impacts on terrestrial ecosystems. This interdisciplinary course draws on aspects of plant physiology ecology micrometeorology and ecosystem ecology to describe impacts and patterns of global change. We will explore how the "breathing" of the biosphere impacts and is impacted by climate change by scaling plant physiology from leaf to canopy, and ultimately to global scales. Students will examine the biophysical processes that affect the exchange of material (water, CO2, and atmospheric trace gases) and energy between terrestrial biosphere and the atmosphere. In addition, students will learn cutting-edge techniques to help monitor, model and diagnose these processes.				
Course Contents & Topics	1. Overview of plant physiology, with particular focus on the interactions between plants and climate. 2. Fundamental biophysical principles that regulate the strengths of ecosystem metabolism (i.e. photosynthetranspiration and etc). 3. Introduction to various remote sensing and modelling approaches to quantify the impacts of climate variability plant metabolism (e.g. proximate and satellite remote sensing, ecosystem modelling, biological scaling process etc). 4. Case studies introducing practical applications of cutting edge technology to current ecological a environmental issues.				
Course Learning	On successful completion of this course, students should be able to:				
Outcomes	CLO 1 understand the fundamental principles that regulate terrestrial ecosyste	m metabolism			
	CLO 2 understand the basic of remote sensing data and how to analyz ecophysiology	e remote sensing	data for plant		

Pre-requisites			environmental problems associated	grazar aminata ariang) -
(and Co-requisites and Impermissible combinations)	Pass in BIOL2306 or ENVS2001 or ENVS2002 or EASC2404. Priority will be given to students majoring in Environmental Science, Biological Science, and Earth System Science.

ENVS3401	Understanding tropical ecosystems in a changing world (6 credits) Academic Year					
Offering Department	Biological Sciences	Biological Sciences Quota 20				
Course Co-ordinator	Dr A L Ashton, Biological Sciences (lashton@hku.hk)					
Teachers Involved	(Dr A L Ashton,Biological Sciences) (Dr C Dingle,Biological Sciences) (Dr T Bonebrake,Biological Sciences)					
Course Objectives	In this field course, students will learn how to use natural history and ecology to answer important environmental questions relevant to tropical ecoystems. Through field studies in both degraded and prisitine habitats, students will gain an understanding of the major drivers of ecosystem change and biodiversity loss in a tropical landscape in Sabah, Borneo and learn about measures to mitigate the impacts of human activities in these vital ecosystems. Students will work in groups to develop and carry out a research project to address ecological or environmental questions. After the field portion of the course, students will write up the results of their projects in the style of a scientific paper.					
Course Contents & Topics	services such as nutrient cycling, carbon storage and new medicines. anthropogenic pressure due to logging, burning and conversion to agriculture conservation efforts over the next few decades are essential if we are to secosystems. In this course, through a series of lectures, tutorials and fieldw rainforest ecosystems, investigate the environmental impacts of land use measures which can help mitigate these impacts. Students will also learn tecl field research projects, and about the importance of data generated from resimpact of human activities in such important ecosystems. The bulk of the Valley, a primary tropical rainforest located in Sabah, Malaysia. We will vactivities, including palm oil plantations, to observe how land-use changes in	Scientific paper. Tropical rainforests are the most biologically rich terrestrial ecosystems, providing important environmental services such as nutrient cycling, carbon storage and new medicines. Rainforests are under increasing anthropogenic pressure due to logging, burning and conversion to agriculture, as well as climate change. Effective conservation efforts over the next few decades are essential if we are to slow down our impacts on these vital ecosystems. In this course, through a series of lectures, tutorials and fieldwork, students will learn about tropical rainforest ecosystems, investigate the environmental impacts of land use change, and discuss conservation measures which can help mitigate these impacts. Students will also learn techniques for designing and carrying out field research projects, and about the importance of data generated from research to inform efforts to minimize the impact of human activities in such important ecosystems. The bulk of the course will be carried out in Danum Valley, a primary tropical rainforest located in Sabah, Malaysia. We will visit some sites impacted by human activities, including palm oil plantations, to observe how land-use changes impact biodiversity and observe in situ conservation efforts. Students will work in groups to conduct research projects which will tie together the concepts				
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 demonstrate an understanding of the importance of ecological conservation	and natural history	knowledge for			
	CLO 2 understand the major impacts of human activity on tropical rainforest ecosystems					
	CLO 3 work collaboratively to design and carry out a research project (collect and analyze data and present results) on an ecological or environmental topic					
	CLO 4 carry out a range of field sampling and observational techniques for collecting data in the field					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in ENVS2001 or ENVS2002 or BIOL2306

ENVS3402		ve data, social science methods and decision- in environmental science (6 credits)	Academic Year	2021		
Offering Department	Biological	Sciences	Quota	30		
Course Co-ordinator	Dr Hannal	n Mumby, Biological Sciences (hsmumby@hku.hk)				
Teachers Involved	(Dr Hanna	h Mumby,Biological Sciences)				
Course Objectives	This course will introduce social science and qualitative approaches in environmental science. We will introduce the historical context and philosophical background to different approaches to environmental sciences. The course will then take a case study-based approach, using the case studies to introduce methodologies and methods. These include the ethical process, collection and analysis of qualitative and quantitative data from focus groups, surveys, interviews and questionnaires. We will also discuss wider methodologies including ethnographic approaches. Attention will be paid to suitability of methods to research questions, how studies are conducted and what analyses are used. We will also investigate how these data are or can be integrated into decision-making processes, including different tools that can be used for decision-making.					
Course Contents & Topics	-Research -Ethical co -Methodol -Methods,	philosophy- how researchers approach questions in environment methodology- the rationale and framework for research onsiderations, concepts of 'bias', objectivity, truths and the role of ogies including biographical techniques, ethnography and case sampling data and analyses, including questionnaires and taking tools.	f the researcher studies.	cus groups, an		
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 Determine and distinguish a range of social science approaches and qualitative data analysis techniques					
	CLO 2 Design a study appropriate for the research question using those approaches and techniques					
	CLO 3 Discuss the philosophical and epistemological background of different approaches to environmental science questions					
	CLO 4 Critically evaluate studies using social science and/or qualitative approaches.

Students can clearly and concisely e ways use appropriate academic sources t t all times. Students demonstrate an ability ge contains very few, if any, systematic e fluent.	explain academic concepts and critical to support their ideas in writing and to fully comprehend and critically inte	ally argue for a detaile speaking. They cite an rpret spoken and writte		
	В	Good to very good result. Students are able to produce spoken and written academic texts which are appropriately structured with only minor errors. Students can almost always clearly and concisely explain academic concepts and almost always critically argue for a detailed position. Students almost always use appropriate academic sources to support their ideas in writing and speaking. They cite and reference correctly with only a few non-systematic errors. Students can comprehend and interpret texts with ease, although they may miss some implied meanings and opinions. Written language is mostly accurate but contains a few systematic errors in complex grammar and vocabulary. Spoken language is mostly comprehensible and fluent.					
	С	Satisfactory to reasonably good result. Spoken and written academic texts produced by students are sometimes not-well structured but there is some evidence of this ability. Students are sometimes unable to clearly and concisely explain academic concepts. While they can argue for a position, it is not very detailed and tend to be simplistic rather than critical. Students sometimes use sources which are nonacademic and/or not appropriate to support their ideas in writing and speaking. There are some systematic errors in citation and referencing but also evidence of correct systematic use. Students have some difficulty comprehending and critically interpreting texts. They can always understand the main ideas but may miss some of the writer's views and attitudes. Written language is sometimes inaccurate, although errors, when they occur, are more often in complex grammar and vocabulary and there is some evidence of control of simple grammatical structures. Spoken language is generally comprehensible and fluent but at times places strain on the listener.					
	D	Barely satisfactory re may be some eviden for a position. There Students often use s are many systematic of citation and refere	isult. Spoken and written academic texts proceed this ability. Course Objectives	skills for of science a presenting spoken of	This 6-credit English-in-the-Discipline course aims to develop students' professional and technical communication skills for disciplinary studies in the sciences. There are three main components in the course: 1) Writing a popula science article 2) An oral presentation and 3) Independent language learning. Students will learn rhetorical skills for presenting and explaining scientific concepts to a cross-disciplinary and non-specialist audience in both written and spoken communication. Students will also be given an opportunity to design a personalised language learning				
Course Contents		overed in the course v	flect on their own independent languag will he	c learning experience.		
& Topics	- Finding, - Compilir - Contrast - Writing f - Organiz grammar; - Critically	Finding, evaluating and using appropriate academic source materials; Compiling an academic bibliography; Contrasting academic and popular genres of Science; Writing for a specific audience, including stance, shared knowledge, levels of formality; and Organizing and articulating ideas in an academically suitable format including appropriate vocabulary and rammar; and Critically examine their own language proficiency and analyze how that relates to their ability to perform uccessfully within their discipline. Developing self-directed learning strategies.				
Course Learning		•	his course, students should be able to:

(A+ to F)	using original language. Text uses sources appropriately and demonstrates accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are clearly identified and aligned with evidence of planning, self-study and reflection. B Good to very good result. Usually demonstrates ability to summarize salient points accurately using mostly original language. Text mostly uses sources appropriately and demonstrates mostly accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are stated with some reference to evidence of planning and reflection					
	although there is some misalignment between goals and self-study completed. C Satisfactory to reasonably good result. Demonstrates some ability to summarize salient points using mostly original language although some inaccuracies are present. Text uses some sources appropriately and demonstrates appropriate but simple grammatical and lexical characteristics with some organizational flaws. Language learning needs are stated with some limited evidence of planning and reflection but goals and self-study are misaligned.					
	D Barely satisfactory result. Demonstrates a limited ability to summarize salient points from sources with inaccuracies and little original language. Text uses sources inappropriately and demonstrates grammatical inaccuracy, inappropriate lexical choices and organizational flaws. There is a minimal statement of language learning needs, planning and reflection with little or no apparent alignment between goals and self-study. Fail Unsatisfactory result. Does not demonstrate ability to summarize salient points identify, interpret or appropriately paraphrase					
	reliable sources. Text uses no sources and demonstrates serious grammatical, lexical and/or organizational errors. Does not demonstrate any meaningful attempt to identify language learning needs or implement a plan.

CHEM1044	Mathematics in chemistry (6 credits)	Academic Year	2021
Offering Department	Chemistry	Quota	80

Course Co-ordinator	Dr A M Y Yuen, Chemistry (maiyan @hku.hk)					
Teachers Involved	(Dr A M Y Yuen,Chemistry) (Dr J Yang,Chemistry) (Dr. J Z Liu,Chemistry)					
Course Objectives	Mathematical calculations are necessary to explore important concepts in chemistry. This course aims to equip students with a basic knowledge of some of the mathematics that will be used in courses covered in the Chemistry-major curriculum to enable them to apply the mathematical skills to problems in chemistry. Students taking this course are expected to already have achieved level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or a pass in MATH1011 University Mathematics I. As far as possible, the mathematical concepts covered in this course will be put in the context of chemical problems.					
Course Contents & Topics	Applying mathematical tools, such as Algebra, Trigonometry, Calculus, Complex number, Vector, Matrix, Linear equation, Differential equation, in solving chemistry problems.					
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 demonstrate knowledge and understanding of the essential mathematics used in chemistry CLO 2 apply mathematical skills to solve basic problems in chemistry CLO 3 be more capable of coping with a higher level of mathematics required in relevant courses for chemistry					
Pre-requisites (and Co-requisites and Impermissible combinations)	major, in particular, in physical chemistry courses Pass in CHEM1042 or already enrolled in this course; and Level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011 or SCNC1111					
Offer in 2021 - 2022	Y 2r	nd sem Offer in 2	022 - 2023 : Y	Examination	May	
Grade Descriptors (A+ to F)	A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.					
	В	Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.				
	С	Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.				
	D	Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors. Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not

	(Dr I K Ch	u,Chemistry)					
Course Objectives	The course aims to introduce the basic principles of chemical analysis. The principles of chemical measurement including error analysis, quality assurance and calibration, data acquisition and processing, will be discussed wit reference to methods of chemical analysis that are based on chemical equilibrium and stoichiometric reactions. The laboratory classes will include experiments demonstrating modern approaches of data acquisition and processing as well as chemical analysis based on chemical equilibrium.						
Course Contents	Measurement: analog and digital measurement, accuracy and precision, comparing means and deviations						
& Topics	calibration	n curves and least squa	are method for linear plots				
	Chemical	•	analytical procedures nical analysis: aqueous solu y, precipitation reactivity	ution and chemical	equilibrium; analy	rsis by acid-bas	
Course Learning	On succes	ssful completion of this	course, students should be	able to:			
Outcomes	CLO 1 e	xplain the basic princip	oles of chemical measureme	ents			
	CLO 2 e	explain the principles of	classical methods of chemi	cal analysis such as	acid-base neutra	lization	
	CLO 3 u	se laboratory apparatu	s for chemical analysis	•

Offering Department	Chemistr			Quota	100		
Course Co-ordinator	Dr P H T	oy, Chemistry (phtoy@	Phku.hk)				
Teachers Involved	(Dr P H 1	(Dr P H Toy,Chemistry)					
Course Objectives	the conte	The major objective of this course is to give the students a basic understanding of organic chemistry, especially in the context of daily life. This will be achieved through the introduction of the chemistry of organic functional groups that form the basis of organic molecules. The concepts presented in the lectures will be reinforced by a series of aboratory experiments.					
Course Contents & Topics	carboxyli	The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones carboxylic acids and their derivatives, and amines will be discussed, as will the general concepts of molecula structure, conformation and stereochemistry.					
Course Learning	On succe	On successful completion of this course, students should be able to:					
Outcomes	CLO 1	demonstrate basic u	nderstanding of the structure of	organic molecules			
	CLO 2	demonstrate basic u	nderstanding of the reactivity of	organic molecules			
	CLO 3	appreciate how orga	inic chemistry plays an importan	t role in everyday life			
Pre-requisites (and Co-requisites and Impermissible combinations)		ass in CHEM1042; and ot for students who have passed CHEM2441, or have already enrolled in this course.

CHEM2443	Fundamentals of organic chemistry for pharmacy students (6 credits)	Academic Year	2021			
Offering Department	Chemistry	Quota	60			
Course Co-ordinator	Dr P H Toy, Chemistry (phtoy@hku.hk)					
Teachers Involved	(Dr P H Toy, Chemistry)					
Course Objectives	The major objective of this course is to give pharmacy students a basic understanding of organic chemistry, especially in the context of daily life. This will be achieved through the introduction of the chemistry of organic functional groups that form the basis of organic molecules. The concepts presented in the lectures will be reinforced by a series of laboratory experiments.					
Course Contents & Topics	The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones, carboxylic acids and their derivatives, and amines will discussed, as will the general concepts of molecular structure, conformation and stereochemistry.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 demonstrate basic understanding of structure of organic molecules					
	CLO 2 demonstrate basic understanding of the reactivity of organic molecules					
	CLO 3 appreciate how organic chemistry plays an important role in everyday life					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in CHEM1042; and Not for students who have passed CHEM2442, or already enrolled in this course. (This course is for BPharm students only)					
Offer in 2021 - 2022	N Offer in 2022 - 2023 : N	Examination				

Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive organic chemistry knowledge, and skills required for attaining all the course learning outcomes. CHEM2541	Introductory physical chemistry (6 credits)	Academic Year	2021				
Offering Department	Chemistry	Quota	100				
Course Co-ordinator	Dr J Y Tang, Chemistry (jinyao @hku.hk)						
eachers Involved	(Dr J Y Tang,Chemistry)						
Course Objectives	The course aims to provide a rigorous understanding of equilibrium thermodynamics and chemical kinetics. Students are required to apply mathematical skills (derivations and integrations) and basic physics to understar chemical reactions and related processes. Topics include the three laws of thermodynamics, thermodynam properties of mixtures, solutions, chemical equilibrium, electrochemistry, rates of chemical reactions and reaction dynamics. Students will gain a good foundation of knowledge and skills for further study in Physical Chemistry.						
Course Contents & Topics	Properties of Gases States of gases and the gas laws with applications.						
	The First Law of Thermodynamics Basic concepts of work, heat, energy, expansion work, heat transactions, enthalpy and adiabatic changes an examples in relation to biochemistry and materials science.						
	The Second and Third Laws of Thermodynamics Direction of spontaneous change, entropy and the Third Law of Thermodynamics.						
	Simple Mixtures Thermodynamic description of mixtures, partial molar quantities, and chemical potentials of liquids. Activities of solvent, solute, regular solutions and ions in solution.						
	Chemical Equilibrium Spontaneous chemical reactions, the Gibbs energy minimum and equilibrium. Response of equilibria to pressure temperature.						
	Electrochemistry Electrochemical cell, relationship of electrochemical potential to the electrochemistry in energy, material science, sensing.	ermodynamic functions.	Applications				
	Molecules in Motion Molecular motion in gases and liquids, kinetic model, collisions with suproperties, conductivities of electrolyte solutions.	urfaces, the rate of effusi	on and transp				
	Rates of Chemical Reactions Empirical chemical kinetics including experimental methods, rates temperature dependence of reactions and Reaction mechanism	of reactions, integrated	rate laws a				
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 demonstrate knowledge and understanding of the properties of of chemical reactions	<u> </u>	on and the rat				
	CLO 2 understand and demonstrate knowledge of the three laws of the CLO 3 understand and apply the concepts of chemical equilibrium at		ical equilibria				
	temperature and pressure	•					
	CLO 4 understand and demonstrate knowledge of electrochemistry an build electrochemical cell and calculate thermodynamic functions	s from electrochemical rea	ections

Course Co-ordinator	Dr Y Li, C	Dr Y Li, Chemistry (yingli0e @hku.hk)						
Teachers Involved		(Dr I K Chu,Chemistry) (Dr Y Li,Chemistry)						
Course Objectives		To cover the basic principles and applications of chemical instrumentation. This course aims to provide working knowledge, in addition to the principles, of instruments that are commonly used in chemical laboratories.						
Course Contents			Law; UV-visible, infrared, and atomic s					
& Topics	spectrom Separation chromator Mass spe	spectrometry; grating spectrometer; photon detectors and thermal detectors. Separation methods: partition; chromatography theories; high performance liquid chromatography (HPLC) and gas chromatography (GC); instrumental set up of HPLC and GC. Mass spectrometry: fundamental concept of mass spectrometry; electrospray ionization (ESI) and matrix-assisted laser desorption ionization (MALDI); time-of-flight (TOF) and quadrupole (Q) mass analyzers.						
Course Learning		On successful completion of this course, students should be able to:						
Outcomes		•	es of the optical methods, separation method	ds. and mass spectrome	etrv			
			experimental set up and the properties of the					
	ir	n the laboratory cla	asses	•				
			skills in chemical analysis including sample on, and matrix effects correction (standard a	• •	solution preparation			
Pre-requisites		CHEM2241		,				
(and Co-requisites and Impermissible combinations)

(A+ to F)	analysis to acquire accurate results with full interpretation for analytical application as described in all the course learning outcomes. Show strong analytical and critical abilities, logical thinking and capability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply highly effective organization and presentation skills as shown in class work. B Demonstrate a substantial command of a broad range of knowledge and skills required for attaining at least most of the course								
	learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and capability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply effective organization and presentation skills as shown in class work.								
	C Demonstrate a general command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and ability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply effective organization and presentation skills as shown in class work.								
	Demonstrate a partial but limited command of knowledge and skills required for attaining some of the course learning outcomes in Food and Water Analysis. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems related to the analysis of food and water. Apply limited or barely effective organization and presentation skill as shown in class work.								
	Fail Demonstrate little or no evidence for the command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems related to the analysis of food and water. Organization and presentation skills are minimally effective or ineffective as shown in class work.

CHEM3243	Introductory instrumental chemical analysis (6 credits)	Academic Year	2021
Offering Department	Chemistry	Quota	30
Course Co-ordinator	Dr X Li, Chemistry (xiangli @hku.hk)		
Teachers Involved	(Dr K C J Wong, Pharmacology and Pharmacy)		

	(Dr X Li,	Chemistry)					
Course Objectives	for chen	This course is designed for non-chemistry major students covering basic principles of separation and spectroscopy for chemical analysis. This course provides a general foundation for further studies in pharmacology, life and environmental sciences.					
Course Contents & Topics	Optical methods: Beer's Law; UV-visible, infrared, and atomic spectrometry; fluorescence; atomic m spectrometry; grating spectrometer; photon detectors and thermal detectors. Separation methods: partition; chromatography theories; high performance liquid chromatography (HPLC) and chromatography (GC); instrumental set up of HPLC and GC.						
	laser de	ass spectrometry: fundamental concept of mass spectrometry; electrospray ionization (ESI) and matrix-assisted er desorption ionization (MALDI); time-of-flight (TOF) and quadrupole (Q) mass analyzers. MR: basic principle of nuclear magnetic resonance. alysis and quality assurance: statistical analysis of small sets of data, control chart.

CHEM3244	Analy	tical techniques for pharmacy students (6 credits)	Academic Year	2021					
Offering Department	Chemis	stry	Quota	35					
Course Co-ordinator	Dr X Li,	Chemistry (xiangli@hku.hk)							
Teachers Involved	١,	(Dr K C J Wong,Pharmacology and Pharmacy) (Dr X Li,Chemistry)							
Course Objectives	Samplii fluoreso	The course covers theories and practicals on various analytical techniques used in pharmaceutical industry. Sampling and data analysis, method validation with respect to regulatory guidelines, ultraviolet/visible, infrared, fluorescence, atomic spectrophotometry, separation techniques such as gas chromatography and liquid chromatography, and modern mass spectrometry with its applications in protein sequencing will be covered in this course							
Course Contents & Topics	Analysi Optical Separa Moderr	es and applications of different analytical and measurement techniques is and quality assurance: method validation, sampling, statistics, hypothe spectroscopy: Beer's law, UV/Vis, infrared, fluorescence, and atomic spetion and purification: gas chromatography and liquid chromatography mass spectrometry: ionization techniques (ESI, MALDI), mass analysequencing.	sis tests ectroscopy						
Course Learning	On successful completion of this course, students should be able to:								
Outcomes	CLO 1 demonstrate knowledge and understanding of principles of data analysis, optical spectroscopic methods, separation techniques, and modern mass spectrometry								
	CLO 2 describe the basic experimental setup and the properties of the basic components of the instruments used in the laboratory classes								
	CLO 3 apply experimental skills in experiments including sample preparation, standard solution preparation, instrument calibration, and matrix effect correction								

Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BPHM2136 (This course is for BPharm students only)

CHEM3341	Inorgar	nic chemistry	II (6 credits)			Academic Year	2021	
Offering Department	Chemistr		•			Quota	90	
Course Co-ordinator	Prof V W	Prof V W W Yam, Chemistry (wwyam@hku.hk)						
Teachers Involved	(Prof V V	Y Yuen,Chemis W W Yam,Chem	istry)					
Course Objectives	inorganio	This course is a continuation from CHEM2341 Inorganic Chemistry I, with a more detailed treatment of general inorganic chemistry, with examples relevance to biological processes and material science, suited to the needs of those intending to extend their studies in chemistry.						
Course Contents & Topics	their read	Chemistry of selected classes of inorganic, coordination and organometallic compounds including mechanisms of their reaction where appropriate. Structure, bonding, magnetism and spectral properties of inorganic systems including examples in bioinorganic systems.						
Course Learning	On succe	essful completion	n of this course,	students should	pe able to:			
Outcomes		demonstrate kno compounds	wledge of chem	nistry of selected	l classes of inorganic	, coordination and	d organometallic	
	CLO 2 understand structure, bonding, magnetism and spectral properties of inorganic systems							
	CLO 3 understand mechanisms of selected chemical reactions that are essential to coordination and organometallic compounds							
	CLO 4 gain appropriate knowledge of coordination compounds in biological systems							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (CHEM2341						
Offer in 2021 - 2022	Y 1s	st sem Offer in	2022 - 2023 : Y			Examination	Dec

CHEM3342	Bioinorg	ganic ch	emistry (6 credi	ts)				Academic Yea	r 20	021
Offering Department	Chemistry	nistry					Quota	50	50		
Course Co-ordinator	Prof H Z Sun, Chemistry (hsun @hku.hk)										
Teachers Involved	(Dr H Y Au Yeung, Chemistry)										
	(Prof H Z Sun,Chemistry)										
Course Objectives	This course is a continuation from Basic Inorganic Chemistry and Basic Organic Chemistry, giving further and more details of inorganic chemistry in biological system, with examples relevance to biological processes and medical science, suited to the needs of those intending to extend their studies in (bio)chemistry and biomedical science.										
Course Contents & Topics	Bioinorganic Chemistry of selected topics of interest. Examples include the inorganic chemistry (and biochemistry) behind the requirement of biological cells for metals such as zinc, iron and copper; and metals in medicine such as mechanisms by which organisms obtain required metal ions from their environment, and use of metal-containing compounds in treating diseases such as cancer.										
Course Learning Outcomes	On successful completion of this course, students should be able to:										
	CLO 1 understand the principles and concepts of inorganic/organic chemistry in biological system										
	CLO 2 understand structure, bonding, and spectral properties of selected metals in proteins and nucleic acids										
	CLO 3 understand chemical mechanisms of selected metal homeostasis (i.e. uptake, transport and storage)										
	CLO 4 understand the role of metal complexes medicine										
(and Co-requisites and Impermissible combinations)											
Offer in 2021 - 2022	Y 2nd	d sem O	ffer in 2022	2 - 2023 :	Υ				Examination	M	lay
Grade Descriptors (A+ to F)	Demonstrate thorough knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard-soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show strong ability to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show strong ability to analyze novel problems and critical use of data and experimental results to draw appropriate and insightful conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate highly effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.										
	B Demonstrate substantial command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard-soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show evidence to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show evidence to analyze novel problems and correct use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.

CHEM3441	Organic	chemistry II (6 cred	dits)		Academic Year	2021		
Offering Department	Chemistry	,	•		Quota	300		
Course Co-ordinator	Dr Z X Huang (1st sem); Prof X Y Li (2nd sem), Chemistry (huangzx@hku.hk; xiaoyuli@hku.hk)							
Teachers Involved	(Dr Z X Huang,Chemistry) (Prof X D Li,Chemistry) (Prof X Y Li,Chemistry)							
Course Objectives	As a continuation from CHEM2441 Organic Chemistry I, this course aims to provide a solid foundation of organic chemistry together with CHEM2441. It focuses primarily on the basic principles to understand the structure and reactivity of organic molecules, with examples illustrating the role of organic chemistry in daily life and industry.							
Course Contents & Topics	Chemistry of common organic functional groups: ketones and aldehydes; carboxylic acids and their derivatives; amines; aromatic compounds. Principles of organic synthesis. Detailed considerations of reaction mechanisms. Spectroscopic tools (UV-Vis, IR, NMR, and MS) for characterization and identification of organic compounds.							
Course Learning	On succes	ssful completion of this	course, students should be	able to:				
Outcomes	CLO 1 dr	aw correct structural re	presentations of organic mo	olecules				
	CLO 2 un	nderstand the basic prin	ciples of structure and read	ctivity of organic mo	lecules			
	CLO 3 de	etermine structures of o	ganic compounds based o	n spectroscopic dat	ta			
	CLO 4 write reasonable mechanisms for transformations of common functional groups (alcohols, ethers, carbonyl compounds, aldehydes, ketones, carboxylic acids, acyl halides, anhydrides, esters, amides, nitriles, and amines)							
	CLO 5 appreciate the importance of organic chemistry in daily life							
	CLO 6 devise synthetic pathways to organic compounds using functional group chemistry							
Pre-requisites (and Co-requisites and Impermissible combinations)	students v	: CHEM3441 has been who admitted in 2014-	n changed to lecture-base 15 or before, they must e meet the Chemistry Major	enroll also CHEM3				
Offer in 2021 - 2022	Y 1st	sem 2nd sem Offer	in 2022 - 2023 : Y		Examination	Dec May

Course Objectives	on mate	This course is a continuation from Introdution to Materials Chemistry. It provides a more compreheisive overview on materials chemistry and application of materials in advanced technology. The most recent development in materials chemistry will also be discussed.										
Course Contents & Topics	control o	Advanced polymerization methods: copolymerization and applications of copolymers, coordination polymerization, control of stereochemistry in polymers; ionic and radical living polymerization. Materials for specialty applications: high strength materials; high temperature polymers, polyelectrolytes, conducting polymers, optical information storage, sensors, photonics, electronics, nanotechnology. Advanced materials characterization techniques.										
Course Learning	On succe	cessful cor	npletion of th	is course	, studer	nts shou	ld be al	ble to:				
Outcomes	p	polymeriz	ations				. ,		•	nation polymeriza		,

Teachers Involved	(Prof X D	ang,Chemistry) Li,Chemistry)								
Course Objectives	medical, technolog interplay	odern chemistry is thought to be the "central science" as it plays a critical role in related biological, physical, edical, and engineering disciplines. This course aims to introduce students to the newest concepts and chnological breakthroughs in chemical sciences. Throughout the course, students will be introduced to how the terplay among molecules, materials, and interfaces leads to unprecedented functionalities that contribute to novations in biology and medicine, smart materials, and sustainable energy schemes.								
Course Contents & Topics	include of stimuli-re conversion materials	urrent topics focus on the interdisciplinary area of chemistry with biology, and material sciences. Covered topics clude chemical genetics, epigenetics and proteomics; chemical biology for drug discovery and development; imuli-responsive nanomaterials; autonomous macromolecular motion; future power landscape; renewable energy onversion and utilization. Examples in protein posttranslational modifications, active colloidal, thermoelectric laterials, molecular machines, advanced rechargeable batteries, and next-generation fuel cells and electrolysers ill be discussed.								
Course Learning	On succe	essful completion of this	course, students should be able to:							
Outcomes Pre-requisites	CLO 2 d sc CLO 3 ir ir	CLO 1 understand important principles and topical trends in chemical sciences CLO 2 demonstrate understanding of future directions in biomedical chemistry, nanomatertials, and energy sciences and applying this knowledge in comparing and contrasting various emergent technologies CLO 3 interpret and analyse recent published research data in the field of chemistry and extract relevant chemical information to explain the observed properties and phenomena associated to the chemical systems Pass in CHEM3341 and CHEM3441.

CHEM4241	Modern chemical instrumentation and applications (6 credits)	Academic Year	2021
Offering Department	Chemistry	Quota	50
Course Co-ordinator	Dr I K Chu, Chemistry (ivankchu@hku.hk)		
Teachers Involved	(Dr I K Chu,Chemistry) (Dr K Okuro,Chemistry)		
Course Objectives	The aim of the course is to provide an understanding of modern instrumed principles and practical aspects of instrument design. The course will be of phigher research degree or a career in technical sales/service.	,	
Course Contents & Topics	Biological Mass spectrometry: Liquid Chromatography-Tandem Mass Metabolomics. Laser Spectroscopy: Principle of laser; three-level and four-level lasers; laser frequency conversion); laser-induced fluorescence; laser atomic spectromet	er instrumentation	(Q-switching and

			ntegration and photon counting.						
			alysis: Dynamic light scattering; z	eta-potential measurement; la	aser trapping (optica				
	tweezers								
	Laser Microscopy: Confocal laser scanning microscopy; super-resolution microscopy; fluorescence correlation spectroscopy.								
Course Learning		• •	s course students should be able	to:					
Outcomes	On successful completion of this course, students should be able to:								
	CLO 1 explain the principles of the modern mass spectrometric methods for proteins and metabolites identification and quantification CLO 2 explain how proteins are identified and sequenced experimentally and how data is generated in								
		roteomics experiments		experimentally and now date	a is generated in				
		•	hing techniques and software tool	s to analyze high-throughout	proteomics data

CHEM4242	Analytical chemistry (6 credits)	Academic Year	2021				
Offering Department	Chemistry	Quota	50				
Course Co-ordinator	Dr K K H Ng, Chemistry (kkhn3@hku.hk)						
Teachers Involved	(Dr K K H Ng,Chemistry)						
Course Objectives	This course focuses on the basic principle, practice and methodology in chemical and biochemical analysis. The course emphasizes on the integration of analytical concepts and technologies to solve practical analytical and bioanalytical problems. This course will be particularly useful for students who plan to pursue their career related to analytical and bioanalytical chemistry.						
Course Contents & Topics	Analytical measurement concepts: Statistical treatment & evaluation of merits of analytical methods; Validation of analytical methods; Quality as laboratories		, 0				
	Theoretical background and practical techniques of sample preparar preparation and enrichment techniques for biomedical, pharmaceutical a separation technologies for complex mixture analysis (e.g. multidime chromatographic analysis and spectroscopic detection; Analytes characton mass spectrometry	and forensic chemical an nsional LC); Derivatizat	alysis; Advanced ion methods for				
	Problem-based design of analytical strategy for chemical & biochemical analysis: Expert sharing of practical knowledge and experience related to selected fields of research; Case study and review of analytical chemistry literature/ scenario.						
Course Learning	On successful completion of this course, students should be able to:						

Outcomes	CLO 1 apply statistical methods to assess analytical measurement data quality and interpret their significance, validate analytical methods and results						
	CLO 2 demonstrate understanding on the working principle of different analytical techniques and recognize their advantages and limitations						
	CLO 3 int	tegrate different analy	tical techniques to solve analytical	and bioanalytical problems			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in C	Pass in CHEM3241 or CHEM3242					
Offer in 2021 - 2022	Y 2nd	2nd sem Offer in 2022 - 2023 : Y Examination May

CHEM4341	Advance	ed inorganic chemistry (6 credits)		Academic Year	2021			
Offering Department	Chemistry	· · · · · · · · · · · · · · · · · · ·		Quota	50			
Course Co-ordinator	Prof C M	Che, Chemistry (cmche@hku.hk)						
Teachers Involved	(Prof H Z	Che,Chemistry) Sun,Chemistry) W Yam,Chemistry)						
Course Objectives	topics in I	This course is a continuation from Intermediate Inorganic Chemistry, giving further and more detailed treatment to topics in Inorganic Chemistry and new areas of interest. Problem based learning on selected advance topics will be introduced in the later part of the course. This course also aims to prepare students for graduate work.						
Course Contents & Topics	bonds, ind	Selected advanced topics of current interest. Examples include metal-metal bonds and metal-ligand multiple bonds, inorganic and supramolecular photochemistry, lanthanide chemistry, bio-inorganic and medicinal chemistry, and activation of small molecules by metal complexes.						
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 understand the principles and concepts of inorganic and supramolecular photochemistry							
	CLO 2 understand the electronic structure and bondings of novel metal-metal and metal-ligand multiple bonded metal complexes							
	CLO 3 understand and realize the activation of small molecules by transition metal complexes and realize the importance of such activation in chemical catalysis of global interest, green chemistry and energy saving reactions							
	CLO 4 understand the role of metal complexes in bio-inorganic and medicinal chemistry

Course Objectives	products, advanced preparati	To introduce aspects of modern organic reactions with relevance to and in the context of the synthesis of natura products, drugs and medicinal chemistry to provide an integrated approach to the subject, and to provide training in advanced organic laboratory skills, and further hands-on experience in synthesis and characterization, as preparation for graduate studies or research in organic chemistry.							
Course Contents & Topics	present remolecule these mother metrosynthese mother metrosynthese mothers are the control of th	Building on the organic chemistry covered in the foundational courses CHEM1003 and CHEM2402, this course will present modern synthetic methods and synthetic planning. The course is organized into units based on target drug molecules. In each unit, the chemical biology of these compounds are briefly presented and the syntheses of these molecules are introduced, accompanied by in-depth discussions of the reactions involved with emphasis on their mechanisms, selectivity, stereochemistry, scope and limitations. Concept of synthetic design including retrosynthetic analysis, stereoselectivity and enantioselective control elements will be emphasized. A laboratory section provides training in the practical skills of synthesis.							
Course Learning Outcomes	CLO 1 u	On successful completion of this course, students should be able to: CLO 1 understand the rationale, selectivities, and mechanisms of various reactions and reagents in organization.

CHEM4911		one experience for opic (6 credits)	chemistry undergraduates:	Academic Yea	r 2021	
Offering Department	Chemist			Quota		
Course Co-ordinator	Dr A P L	Tong, Chemistry <i>(aplt</i> o	ong@hku.hk)			
Teachers Involved	(Various	teachers in the Depart	ment,Chemistry)			
Course Objectives	This project-based course with the theme of Chemistry for a Better Living in a Foreseeable Future aims to provide students with a capstone experience. It aims to enable students to think what are the key issues the world is facing with that have to be solved by chemistry and related technology. Students will need to apply what they have learn in classroom and conduct literature search regarding advanced chemistry research and related technology under development to solve the problems identified in their project using various channels.					
Course Contents & Topics	No formal teaching. It is expected that students are actively engaged and should devote 120-140 hours to working on this project. Students will work in groups of two or three, under the supervision of the course coordinator. The duration of the project will be two to three months. The time of running this project-based course is in the summer (May - August).					
Course Learning Outcomes	On succ	essful completion of this	s course, students should be able to: ne various issues we are facing with and			
		used to solve the proble	· ·	•	,	
			actice, and to understand limitations of t	heir current knowledge		
			ollaborate with people with different bac	-		
			effectively in both written and oral form			
		•	critical thinking and creativity			
			appreciation for chemistry as to its relev	ance to our daily life		
Pre-requisites and Co-requisites and Impermissible combinations)	Students are expected to have satisfactorily completed all introductory chemistry disciplinary core courses and a least 24 credits of advanced level disciplinary core/elective chemistry courses in the Chemistry Major. Students who are interested in taking the course should contact the course coordinator for application in April May. Late application may not be considered. This capstone course is for Chemistry Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.					
Offer in 2021 - 2022		ummer Offer in 2022	•	Examination	No Exam	
Grade Descriptors (A+ to F)	В	Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Show integration of the full range of appropriate theories, principles, evidence and techniques. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.] Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. EASC1401	Blue Planet (6 credits)	Academic Year	2021		
Offering Department	Earth Sciences	Quota			
Course Co-ordinator	Dr P Bach, Earth Sciences ()				
Teachers Involved	(Dr P Bach,Earth Sciences)				
Course Objectives	The aim is to provide those students who are taking a first course in Earth System Sciences with a fundamental knowledge of how our diverse and living planet Earth works with weaving together an understanding of the dynamic and interactive processes in the Earth's lithosphere, hydrosphere, biosphere and atmosphere. In addition, students should become familiar with the way the study of Earth Sciences blends observation, information, hypothesis, communication and decision making for a better understanding of the future of our planet.				
Course Contents & Topics	 - Hydrosphere (Surface- and Groundwater, Oceans and Water Cycle) - Atmosphere (Composition, Weather, Climate, Green House Effect, Oxygen Cy - Biosphere (Life, Ecosystems, Evolution and Extinction, Geochemical Cycles, 	 Introduction to Earth Systems and Habitable Planet Earth, Lithosphere (Earth Materials, Plate Tectonics, Volcanism, Earthquakes, Surface Processes and Rock Cycle) Hydrosphere (Surface- and Groundwater, Oceans and Water Cycle) Atmosphere (Composition, Weather, Climate, Green House Effect, Oxygen Cycle) Biosphere (Life, Ecosystems, Evolution and Extinction, Geochemical Cycles, Concepts and Evolution of Dynamic Earth Systems, Human Interactions with Planet Earth (Earth Resources, 			
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 understand the terminology and nomenclature appropriate to the introductory study of Earth Sciences CLO 2 demonstrate knowledge and understanding of the underlying concepts associated with the study of the Earth Systems and their dynamic interactive processes				

	CLO 3	understand the exte	nt and nature of global change and	d environmental concerns aroun	d us	
	CLO 4	CLO 4 demonstrate the ability to make and record observations on Earth Systems processes in natural field environments				
	CLO 5 develop skills to synthesize observation and knowledge in a report in essay form					
Pre-requisites (and Co-requisites and Impermissible combinations)	NIL					
Offer in 2021 - 2022	Y 1s	Y 1st sem Offer in 2022 - 2023 : Y Examination De				
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery of extensive knowledge / competencies/skills at an Earth Science introductory level required for attaining most or all of the course learning outcomes. Shows clear understanding of introductory terminology and concepts and strong abilities to apply and relate them in a range of complex interactive processes between Earth Systems. Demonstrates highly effective observational skills in field as well as organizational skills to present important observations made and uses them to draw appropriate and insightful conclusions with an impressive level of depth and original thoughts.					
	В	attaining most of the some abilities to ap effective observation	untial command of knowledge / compete course learning outcomes. Shows evidenn ply and relate them in a range of comple nal skills in field as well as organizational d insightful conclusions with some level of or	ce for understanding of introductory term ex interactive processes between Earth skills to present important observations	inology and concepts and Systems. Demonstrates	
	C Demonstrate general but incomplete command of knowledge / competencies/skills at an Earth Science introductory level required for attaining most of the course learning outcomes. Shows evidence for some understanding of introductory terminology and concepts and some abilities to apply and relate them in some interactive processes between Earth Systems. Demonstrates moderately effective observational skills in field as well as organizational skills to present observations made mostly correct but with some erroneous use and results to draw appropriate conclusions.					
	D					
	Fail	Demonstrate little or no evidence of command of knowledge / competencies/skills at an Earth Science introductory level require for attaining the course learning outcomes. Shows little or no evidence of understanding of introductory terminology an concepts and little or no abilities to apply and relate them in interactive processes between Earth Systems. Demonstrates por observational skills in field. Applies incoherent organizational and poor presentational skills. Ineffective presentation of observed details and facts and unable to draw appropriate conclusions.

	The Dinosauria (2nd edition). Weishampel, D.B., Dodson, P., Osmolska, H. (eds.). 2004. University of California Press: Berkeley. 861pp. [more technical; HKU main library: 567.9 D58]
Additional Course Information	This course is a flipped-classroom version of the award-winning HKU MOOC Dinosaur Ecosystem (Faculty of Science Teaching Innovation in E-learning Award and nominee of edX Prize for Exceptional Contributions in Online Teaching and Learning). E-learning components are hosted on the easy-to-use HKU Online Learning platform (https://learning.hku.hk/catalog/), whilst tutorials and labs are in person and include fossil specimens from the Department of Earth Sciences, Stephen Hui Geological Museum and the HKU Vertebrate Palaeontology Laboratory.

EASC2401	Fluid/so	lid interaction	s in earth processes (6 credits)	Academic Ye	ar 2021	
Offering Department	Earth Scie		· · · · · ·	Quota		
Course Co-ordinator	Dr K H Lei	mke, Earth Scien	ces (kono@hku.hk)			
Teachers Involved	(Dr K H Le	emke,Earth Scien	ces)			
Course Objectives	This cours	se provides an ov	erview of the physical and chemical principle	s that govern Earth pro	cesses	
Course Contents			number of weeks	•		
& Topics	- Earth in t	the laboratory, sc	aling time and space (1)			
	- Introduct	tion to thermodyna	amics, and the concept of equilibrium (2)			
	- States of	f matter, phase di	agrams - sublimation, condensation, crystalli	isation and melting (2)		
		solution interfaces	` '			
			environments: convection, conduction and r			
			d isotope fractionation on geological time sc	ales(1)		
			d basic laws of motion (1)			
		v and particle trar				
Course Learning			and centripetal forces (1)			
Course Learning Outcomes			of this course, students should be able to: rinciples of equilibrium thermodynamics as a	policed to the Earth Scien	2000	
Odicomes			s to explain processes of fluid/solid interacti	• •		
		e priase diagram id solids	s to explain processes of fluid/solid interacti	oris, iri particular syster	ns containing mens	
			y is exchanged throughout the Earth System			
			derstanding of principles governing isotope e		nala nhasa svetams	
				Acriange reactions in sil	igic priase systems	
	and across fluid/solid and fluid/gas interfaces. CLO 5 comprehend the principles of motion and the basic forces affecting movement of gases, liquids and solids					
		ı Earth		and the remain of gases.	o, iiqaiao aira oonac

EASC2408	Planeta	ry geology (6 cre	dits)		Academic Ye	ar 2021
Offering Department	Earth Scie		,		Quota	
Course Co-ordinator	Dr M H Lee, Earth Sciences (mhlee @hku.hk)					
Teachers Involved	(Dr M H Lee,Earth Sciences)					
Course Objectives	This course provides students with an introduction to the origin, evolution, structure, composition and distribution of matter in the Solar System condensed in the form of planets, satellites, comets, asteroids and rings, with particulal emphasis on surface features, internal structures and histories from a geological point of view. The course incorporates the findings from recent space investigations, planetary imagery, remote sensing and Earth analogues to extraterrestrial features into a fascinating portrayal of the geological activities and histories in our Solar System.					
Course Contents & Topics	Formation, evolution, internal structure and surface processes of planetary bodies; the terrestrial planets Mercury Venus, the Earth-Moon system, and Mars; the giant planets Jupiter, Saturn, Uranus, and Neptune and their moons Pluto, Charon and the Kuiper Belt; asteroids, meteorites, comets and the Oort cloud; Origin of our Solar System.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 de	escribe the basic feat	tures of our Solar Syster	m and its constituents		
	CLO 2 ex	kplain how this know	ledge is acquired throug	h observations and expe	riments	
	CLO 3 demonstrate knowledge and understanding of the key geological, physical and chemical processes governing the structure, formation and evolution of planetary bodies					
	CLO 4 cc	ompare and contrast	our own planet Earth wi	th other planetary bodies		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E	ASC1401 or EASC1	402 or PHYS1650			
Offer in 2021 - 2022	Y 2nd sem Offer in 2022 - 2023 : Y Examination May					
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	С					
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

EASC2409	Regional field studies (6 credits)	Academic Year	2021		
Offering Department	Earth Sciences	Quota	10		
Course Co-ordinator	Dr J R Ali, Earth Sciences (jrali @hku.hk)				
Teachers Involved	(Dr A A G Webb (Japan Field Trip),Earth Sciences) (Dr J R Ali (Taiwan Field Trip),Earth Sciences)				
Course Objectives	This course is field-based and introduces geology of China, Taiwan, Japan and/or regions in the vicinity of Hong Kong through hands on studies and field excursions. The course is compulsory for students doing the Geology (Intensive) major.				
Course Contents & Topics	The course will introduce the following topics: Geological studies in Southern China, Japan, and/or Taiwan - Geological history of S. China, Japan, and/or Taiwan - Recognition of rock units and minerals in the field - Field recognition and description of geological structures - Stratigraphic measurements				

	- Field geology of active and passive margins, volcanic systems - Engineering geology - Management of geological hazards - Basic geological mapping techniques					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 ha	•		gy of east Asia, in particular, Tai	wan, Japan and/or	
	CLO 2 be		c field observations, stratig	raphic measurements and identific	ations of rocks and	
			avs of experience in indepe	endent stratigraphic logging and ge	eological mapping	
	CLO 3 have acquired at least 3 days of experience in independent stratigraphic logging and geological mapping CLO 4 develop skills in integrating geological field data in determining a geological history and writing a structured field report					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E	Pass in EASC1401 or EASC1402; and consent of course coordinator				
Offer in 2021 - 2022	Y Yea	er long Offer in 2022 - 1	2023 · Y	Examination	No Exam	
Grade Descriptors (A+ to F)	Y Year long Offer in 2022 - 2023 : Y Demonstrate an advanced level of understanding of the geology of the study sites, ability to give a detailed account of the geological history of the study region, as well as strong ability to produce good-quality reports on independent field measurements.					
	B Demonstrate a satisfactory understanding of the geology of the study sites with evidence on efforts to unravel the geological history of the study region and acceptable level of competence in field measurement techniques.					
	С	Could only demonstrate an incomplete understanding of the geology of the study sites and some ability to make field observations and a basic knowledge on field measurement techniques.				
	D			y sites and limited ability to apply field meas	surement techniques.	
	Fail Show no or little knowledge of the geology of the study sites and lack of ability in making field observations and applying field measurement techniques.

	Report			100	CLO 1,2,3,4	
Required/recommended reading and online materials	Comprehe	ensive course notes prov	ided			
Additional Course Information	Priority for being able to take this course is given to Year 3 and 4 students, especially those who have already participated in the linked field trip in the preceding academic year and completed the associated assignment(s), and those doing the Geology/Geology Intensive majors.					
	The Taiwan trip will be in early January of each year, the Kyushu trip will start in March of each year. However, in light of the current COVID-19 outbreak situation, the exact arrangement of Taiwan trip and Kyushu trip for 2020-2021 have yet to be confirmed.					
	The Jan 2020 fieldtrip to Taiwan (part of EASC2409) will be led by Dr Jason Ali. If the COVID-19 pandemic development makes it not viable to go to Taiwan in Jan, the Taiwan field trip will be postponed to May 2020 or a 6-day session for local field exposures will be an alternative of the Taiwan field trip (to run it preferably in early January but possibly in late May/early June)					
	A virtual version of Kyushu field trip (or somewhere else) will be an alternative option for the second part of EASC2409 to be carried out during the March Reading/Field trip week, subject to the COVID-19 development.					

EASC2410	Data ana	lysis and modeling in earth sciences (6 credits)	Academic Year	2021			
Offering Department	Earth Scie	nces	Quota				
Course Co-ordinator	Dr B Zhang	Zhang, Earth Sciences (binzh@hku.hk)					
Teachers Involved	(Dr B Zhan	(Dr B Zhang,Earth Sciences)					
Course Objectives	This course uses a hands-on approach to introduce the basic principles of data analysis and mathematical modeling in earth sciences using Python through practical examples.						
Course Contents & Topics	data analy	gramming basics; NumPy and Matplotlib; Data wrangling with F sis including distributions, hypothesis testing, regression; Time tion; Introduction to geospatial data analysis; numerical solutions	series analysis includi	ng spectrum and			
Course Learning Outcomes	On successful completion of this course, students should be able to:						
	CLO 1 Explain basic statistical concepts and their applications to earth science data processing and modeling						
	CLO 2 Demonstrate knowledge in basic numerical methods, their applications in earth sciences, and limitations						
	CLO 3 Apply appropriate methods to analyze, process and visualize earth science data, with the help of computer software						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in EA	SC1401					
Offer in 2021 - 2022	Y 1st s	sem Offer in 2022 - 2023 : Y	Examination	No Exam

Offering Department	Earth Scie	ences		Quota		
Course Co-ordinator	Dr Y Li, E	arth Sciences (yiliang	(@hku.hk)			
Teachers Involved	(Dr Y Li,Earth Sciences)					
Course Objectives	This course provides students with an introduction to the biosphere, including physical, chemical, geological and biological interpretations on the co-evolution of life, atmosphere, hydrosphere and geosphere through deep geological time, the current Earth-Life interactions with the influence of human impact and the future of the Huma Earth system.					
Course Contents & Topics			on cycle; plate tectonics, climate life; life in the Phanerozoic; the Ea			
Course Learning		ssful completion of thi	is course, students should be able to) :		
Outcomes		nderstand the coevolume	ution of the inanimate world and the	e living world on Earth thro	ugh deep geologica	
	CLO 2 ex	cplain why the Earth is	s a habitable planet			
	CLO 3 ur	nderstand the biologic	al process as an agent of the mode	rn and past Earth system		
	CLO 4 de	emonstrate knowledge	e and understanding of the natural c	arbon cycle and the impact	s of human activities	
	CLO 5 ar	nalyse qualitatively qu	estions related to systematic structu	ire and evolution of the Ear	h-life system	
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in E. Not for stu	ASC1401 udents who have pass	sed in EASC1406			
Offer in 2021 - 2022	Y 2nd	sem Offer in 2022	- 2023 : Y	Examination	No Exam	
Grade Descriptors (A+ to F)	Demonstrate thorough and complete grasp of the subject in order to fulfil most or all learning outcomes. Show clear understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Able to understand the interactions between human beings and the nature only happens as the latest processes on Earth. B Demonstrate understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Can demonstrate the interactions between human beings and the nature only happen in the					
	С	latest geological time. C Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.				
	D Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Get no or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability for solving problems. Poor organization and presentational skills.

EASC3404	Structural geology (6 credits) Academic Y				Academic Yea	r 2021	
Offering Department	Earth Scie		•			Quota	40
Course Co-ordinator	Dr J R Ali	, Earth Sciences	(jrali @hku.hk)				
Teachers Involved	(Dr A A G	Webb,Earth Sci	ences)				
	(Dr J R Al	li,Earth Sciences)				
Course Objectives	Structural Geology is the study of rock deformation. Participants in this course will learn about the geometries kinematics, and mechanics of rock deformation, and how to answer structural geology questions. The course w involve heavy use and generation of geological maps and cross sections and explore their utility for interpretin structure.						
Course Contents	Class-roo	m based: lecture	and laboratory				
& Topics	- Stress - Stereone - Deforma - Strain - Joints - Rheolog - Faults a - Fault pla - Folds - Shear Z - Fabrics - Contract - Kink me - Structure - Balance - Key Stru	ets ation mechanism y nd fault systems ane solutions ones (foliations, lineati tional and extens thod for cross-se ally focused map d cross sections actures in HK	ons) ional systems ction constructi interpretation	ess-strain relation on ociated day of self-surve	y work		
	- Folds plus - Ma Shi Chau - Shear zone - Sai O; and overturned fold limb Ma Tso Lung

EASC3405	Environ	mental remote se	ensing (6 credits)	Academic \	Year 2021		
Offering Department	Earth Sci			Quota	54		
Course Co-ordinator	Dr J Mich	alski, Earth Sciences	(jmichal@hku.hk)				
Teachers Involved	(Dr J Mic	halski,Earth Sciences)				
	(Dr J Wu	(Dr J Wu,Biological Sciences)					
Course Objectives	on remot	This course serves as an introduction to remote sensing of the Earth and other planets. In this course, we wi on remote sensing of the Earth using visible, infrared, and microwave radiation. Familiarity with remote sensing data is an essential skill for the modern day geoscientist and environments.					
	such as:	1) how to obtain rem	h you not only about the fundamen ote sensing data, 2) how to process h) how to report on your results, 5) h	, correct and interpret im	ages, 3) how to app		
	represen	t your new skills on yo	our CV.				
Course Contents			ntals of remote sensing				
& Topics			ensing platforms, sensers and their pu	ırposes.			
			on Earth and other planets.				
		interpret remote sens	d correct remote sensing data.				
		•	ote sensing. You will be an expert in	highly employable skills it	f vou work hard		
			sing data with Geographic Information		you work nard.		
			ng to modern problems in geoscience		tary science, and vo		
	science.	11.7	3	, , , , ,	, ,		
	9. How to		igger career goals and how to be a p				
	10. How	to integrate your new :	skills into your CV so that you have a	n advantage in the job ma	arket.		
Course Learning	On succe	essful completion of th	is course, students should be able to	:			
Outcomes	CLO 1	demonstrate knowle	edge of how remotely sensed data are	e acquired			
	CLO 2	comprehend the bas	sic techniques of image processing				
	CLO 3		nsed data within geographic informati				
	CLO 4	understand how ren	notely sensed be used for environme	ntal assessment			
	CLO 5	CLO 5 evaluate and interpret remotely sensed data					
	CLO 6	present and discuss	s results				
Pre-requisites	Pass in E	ASC2404 or EASC24	106 or EASC2407 or ENVS2002				
(and Co-requisites and Impermissible combinations)							
Offer in 2021 - 2022	N Of	fer in 2022 - 2023 : Y		Examinatio	n		
Grade Descriptors (A+ to F)	A	Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Sho strong analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of complex, familiar an unfamiliar situations. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.					
	В	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familia and some unfamiliar situations. Correct use of data and results to draw appropriate conclusions. Apply effective organizations

EASC3415	Meteoro	logy (6 credits	5)	Academic Yea	ar 2021		
Offering Department	Earth Scie	nces		Quota			
Course Co-ordinator	-	Dr Jed Kaplan, Earth Sciences <i>(jkaplan @hku.hk)</i>					
Teachers Involved		ıplan,Earth Scien	,				
Course Objectives	(3) observato provide	ation and analysi students with a	five major components of meteorologis, (4) dynamics, and (5) weather sys modern understanding of drivers and ructure and behavior, weather elemer	tems (cyclones, fronts, thunder behavior of weather by exam	rstorms). The aim is		
Course Contents & Topics	- Atmosphi - Solar & Ir - Thermod - Water Va - Atmosphi - Clouds - Precipital - Satellites - Weather	eric Basics nfrared Radiation ynamics por eric Stability tion Processes	Analysis	,			
	- Thunders - Thunders - Tropical (Air Masses storm Fundament storm Hazards Cyclones					
Course Learning Outcomes	CLO 1	describe key asp	of this course, students should be able ects of weather phenomena elements of atmospheric processes				
			inciples to construct models for some				
			charts (weather maps)				
			ong weather (typhoons etc.)				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in EA	ASC2404					
Offer in 2021 - 2022	Y 1st	sem Offer in 20)22 - 2023 : Y	Examination	No Exam		
Grade Descriptors (A+ to F)	В	Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate critical use of data and results to draw appropriate and insightful conclusions. Show insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate correct use of data and results to draw appropriate conclusions. Show critical use of relevant information from sources and ability to make meaningful comparisons between different secondary interpretations					
	С	and to quote/reference aptly. Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Demonstrate mostly correct but some erroneous use of data and results to draw appropriate conclusions. Show use of relevant information from sources and ability to make comparisons between different interpretations and to quote/reference aptly.					
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Demonstrate limited ability to use data and results to draw appropriate conclusions. Show use and reference of several sources, but mainly through summary rather than analysis and comparison.						
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Demonstrate misuse of data and results and/or unable to draw appropriate conclusions. Show limited use of secondary sources and no critical comparison of them.

EASC3416 Advanced geochemistry and geochronology (6 credits) Academic Year 2021		
---	--	--

Offering Department	Earth Scie	ences		Quota	50		
Course Co-ordinator	Prof M F Z	Zhou, Earth Scier	nces (mfzhou@hku.hk)				
Teachers Involved			·				
Course Objectives	To present key concepts of modern geochemistry and geochronology and their application to environmental and Earth science problems.						
Course Contents	Principles of radiogenic isotopic dating and modern instruments						
Topics	2. Zircon l	J-Pb isotopic dati	ing and its application				
	3. Principl	es and technique	es for dating mineral deposits				
			ry geochronology				
			and applications of Luminescence da				
Course Learning			of this course, students should be ab				
Outcomes			edge of concepts and ideas of mode	rn geocnemistry			
			of radiogenic isotopic dating odern analytical techniques are appli	and to dating earth materials
