	range of problems in geochemistry, and at the same combine knowledge in geochemistry to understand material fluxes among minerals, fluids and gases over geological time periods and on a global scale. Student shows the ability to apply effective organizational and presentational skills.						
	C Student demonstrates general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply his/her knowledge to a range of problems in geochemistry and how interactions among minerals, fluids and gases impact material fluxes on a global scale. Student shows the ability to apply moderately effective organizational and presentational skills.						
	D Student demonstrates partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to understand key topics in geochemistry and limited capability to transfer this knowledge to geological phenomena.						
	Student shows the ability to apply limited or barely effective organizational and presentational skills.						
	Fail Student demonstrates little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Shows very little or no ability to apply knowledge to understand basic topics related to the geochemistry and the application of these principles to geological problems. Organization and presentational skills are minimally effective or ineffective.

EASC3417	Earth through time (6 credits)	Academic Year	2021				
Offering Department	Earth Sciences	Quota					
Course Co-ordinator	Dr S C Chang, Earth Sciences (suchin@hku.hk)						
Teachers Involved	(Dr N R McKenzie,Earth Sciences) (Dr S C Chang,Earth Sciences)						
Course Objectives	To introduce the concept of geological time and basic geological principles. To provide an understanding of the fossil record and the integration of Earth Systems and plate tectonics. To gain an appreciation of our place in the Universe, an understanding of the evolution of Earth and life on Earth through time.						
Course Contents & Topics	Geological time, the origin of life, fossils and diversification of life through time such as Snowball Earth, the Cambrian explosion of life, the Permian/Triassic Tertiary extinction event, the origins of humans						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 define basic geological principles						
	CLO 2 explain critical geological relationships						
	CLO 3 outline the history of the development of our planet						
	CLO 4 interpret the geological record of evolution through time						
	CLO 5 compare and contrast various hypotheses put forward to explain major events in Earth history						
	CLO 6 describe major fossil groups

EASC3999	Directed studies in earth sciences (6 credits)	Academic Year	2021				
Offering Department	Earth Sciences	Quota					
Course Co-ordinator	Prof Z H Liu, Earth Sciences (zhliu @hku.hk)						
Teachers Involved	(Various teachers in the Department, Earth Sciences)						
Course Objectives	To enhance the student's knowledge of a particular topic and the student's	self-directed lear	ning and critical				

	thinking	skills.					
Course Contents & Topics	The student undertakes a self-managed study on a topic in earth sciences under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject, or a laboratory or field study that would enhance the student's understanding of the subject. The project may not require an element of originality.						
Course Learning Outcomes	CLO 1 e	On successful completion of this course, students should be able to: CLO 1 enhance the ability in self-learning, data-collection and analysis, critical thinking, doing independent research in earth sciences					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in a System S Cumulati This cou Earth Sy	CLO 2 write scientific dissertation, and conduct oral presentation of the research results Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology or Earth System Science Majors; and Cumulative GPA of 2.5 or above. This course is not a capstone course and students cannot use this course to fulfill the capstone requirement of the Earth System Science and Geology Majors. The earliest that a student is allowed to take this course is their year 3 study.					
Offer in 2021 - 2022		ear long Offer in 2022		Examination	No Exam

ENVS1401	Introduction to environmental science (6 credits)	Academic Year	2021
Offering Department	Earth Sciences	Quota	
Course Co-ordinator	Dr C Not, Earth Sciences (cnot@hku.hk)		
Teachers Involved	(Dr C Dingle,School of Biological Sciences)		
	(Dr C Not,Earth Sciences)		

Course Objectives	To provide students with an inter-disciplinary introduction to Environmental Science highlighting the interconnections between biological, geological, and chemical processes. To convey the basic science behind environmental interactions and place it within the context of human impacts and dependence on the natural world. To better understand how humans interact, manage, and sustain the environment within the context of our economies, governments and individual choices.						
Course Contents & Topics	The teaching and learning will be organized around key issues, and loosely divided into three sections. Part I: The basics: application of science to solve environmental problems; key ecological, chemical, and earth science concepts essential to environmental science, understanding the underlying causes of environmental problems (human population growth and economics). Part II: Using and conserving our resources: how we use and misuse key natural resources; the difficulty in assuring a sustainable supply of energy; waste management and air pollution issues. Part III: Global issues: How do our actions change the face of the planet? Urban ecology and understanding our contribution to global climate change.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 Ex	plain and describe	connections between the physic	cal and biological components	of the environment.		
			of human activities on the environ				
		plain the concept on achieve sustainabiles	of environmental sustainability a ity.	nd give examples of how soci	ety can adapt behavior		
			are overusing our resources and	d compare different approache	es to resolving specific		
		oblems presented in	n class.

Offering Department	Earth Scie	ences		Quota				
Course Co-ordinator	Dr N S K	HAN, Earth Sciences	s (nskhan@hku.hk)					
Teachers Involved		Dr N S KHAN,Earth Sciences)						
Course Objectives	landslide natural, a protection	This course introduces students the mechanisms of major natural hazards including earthquake, storm and flood, landslide and tsunami. The teaching emphasizes the fundamental concepts: natural hazards are not entirely natural, and understanding the frequency and processes of these hazards is essential in developing prevention, protection and mitigation measures. With case studies, the course will help students explore the political, economical and engineering means of dealing with natural hazards.						
Course Contents & Topics	Geologica Climatic h Preparedi Risk asse	Key characteristics of natural hazards Geological hazards and mitigation measures Climatic hazards and mitigation measures Preparedness and responses to large natural disasters Risk assessment and disaster management Financial (insurance) instruments for economic recovery						
Course Learning	On succe	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 de	emonstrate knowled		the key characteristics of major r	natural hazards, the

ENVS3313	Environ	mental oceanography (6 credits)	Academic Year	2021				
Offering Department	Earth Scient	ences	Quota					
Course Co-ordinator	Dr C Not,	Earth Sciences (cnot@hku.hk)						
Teachers Involved	(Dr C Not	E,Earth Sciences)						
Course Objectives	importance To conve	To provide students with a thorough introduction to coastal and ocean processes with key questions to highlight t importance of the (paleo)oceanographic processes to environmental and ecological conditions. To convey the basic science behind ocean-atmosphere and ocean-biosphere interactions and place it within the context of human's connectedness and impact to the physical world.						
Course Contents & Topics	their impa the water water, we (paleo)cli	To provide a solid foundation of knowledge about the physical processes dictating the oceans movements and their impacts on the environment and ecosystems. The oceans take up 71% of earth's surface and contain 98% of the water. By looking at the structure of the atmosphere, thermodynamic principals and properties governing sewater, we will evaluate the critical roles the ocean plays in the environmental system including its influence of (paleo)climate, coastal resources, and nutrient cycling. Case studies specifically examining changes in sea lever rise, El Nino, and (paleo)climate will be used to connect oceanographic principles to environmental problems.						
Course Learning	On succe	ssful completion of this course, students should be able to:		•				
Outcomes	CLO 1 describe the major surface and deep currents of the ocean							
	CLO 2 identify and describe important processes in the ocean controlling large scale circulation and nutrient transport CLO 3 describe sources and distribution of critical chemicals and sea water properties in the ocean CLO 4 illustrate connections between physical ocean processes, climate systems and biological activity							
Pre-requisites (and Co-requisites and Impermissible combinations)		Pass in BIOL2306 or EASC2404 or ENVS2001 or ENVS2002

Offering Department	Earth Sc	ciences		Quota					
Course Co-ordinator	Dr C Din	gle, Biological Sciences	(cdingle@hku.hk)						
Teachers Involved		(Various teachers (ERS),Earth Sciences) (Various teachers (SBS),Biological Sciences)							
Course Objectives	knowledg knowledg	This is a Capstone Course designed to provide an opportunity for Environmental Science students to integrate the knowledge obtained through their Environmental Science courses. Through this course, students will enhance thei knowledge on a particular topic in environmental science and critical thinking skills through self-directed learning Both the written and oral report emphasize communication skills.							
Course Contents & Topics	The directed study is typically a review of the literature on a specific topic related to environmental sciences undertaken under the supervision of a staff member. However, the exact format of the project is flexible and alternative formats can be considered with the approval of the supervisor and the Course Coordinator. The topic if flexible, but must be related to the field of environmental science. Students should seek approval from a prospective supervisor prior to selecting this course. After admission to the course is approved by the course coordinator, students will work under the guidance of their supervisor to complete the study and the research report.								
Course Learning	On succe	essful completion of this	s course, students should be able to	o:					
Outcomes	CLO 1	complete a research to	ask independently in one or more t	opical areas of the major					
	CLO 2	show competence in f	ormulating their own scientific argu	ıment					
Pre-requisites (and Co-requisites and Impermissible combinations)	Science This cap	Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmenta Science Major. This capstone course is for Environmental Science Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.							
Offer in 2021 - 2022	Y 1s	st sem 2nd sem Offe	er in 2022 - 2023 : Y	Examination	No Exam				
Grade Descriptors (A+ to F)	A Demonstrates excellent understanding of the topic, excellent development of argument, logical analysis and insight into the topic, with evidence of original thought. Insightful use and critical analysis of information drawn from a full range of high quality sources to draw appropriate and insightful conclusions. Presented in high academic standard. Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.								
	B Most aspects of the chosen topic were addressed and researched adequately. Demonstrates understanding of most key concepts, evidence of elementary analysis and development of argument. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations. Presented in adequate standard.								
	C Demonstrate general but incomplete grasp of the chosen topic. Most aspects of the chosen topic were addressed and researched at a very basic level. Mostly correct but some erroneous use of relevant information from sources, demonstrates mainly description, and shows basic understanding, but lacking depth.								
	D Demonstrate partial but limited grasp of the chosen topic, with retention of some relevant information. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited to draw appropriate conclusions from the sources.								
	Fail Show little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

MATH1013	University mathematics II (6 credits)	Academic Year	2021
Offering Department	Mathematics	Quota	500
Course Co-ordinator	Dr C W Wong, Mathematics (cwwongab@hku.hk)		
Teachers Involved	(Dr C W Wong, Mathematics)		
Course Objectives	This course aims at students with Core Mathematics plus Module 1 or C background and provides them with basic knowledge of calculus and some lir various disciplines. It is expected to be followed by courses such as MATMATH2211, and MATH2241.	ear algebra that o	an be applied in
Course Contents & Topics	 Functions; graphs; inverse functions. Limits; continuity and differentiability. Mean value theorem; Taylor's theorem; implicit differentiation; L'Hopital's rule. Higher order derivatives; maxima and minima; graph sketching. Radian, calculus of trigonometric functions. Definite and indefinite integrals; integration by substitutions; integration by part Complex numbers, polar form, de Moivre's formula. Applications: Solving simple ordinary differential equations. Basic matrix and vector (of orders 2 and 3) operations, determinants of 2x2 or 		artial fractions.
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe properties of functions and inverse functions CLO 2 evaluate limits, and determine continuity and differentiability of functions CLO 3 apply advanced rules/techniques of differentiation and integration to a sketch graphs of functions; approximation of functions CLO 4 solve problems involving complex numbers CLO 5 solve simple first and second order ordinary differential equations		es and integrals;
Pre-requisites (and Co-requisites and Impermissible combinations)	Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalen Pass in MATH1009 or MATH1011; and Not for students who have passed MATH1821, or (MATH1851 and MATH185 course.	•	y enrolled in this

MATH1641	Mathen	natical laboratory a	nd modeling (6 credits)	Academic Yea	ır 2021		
Offering Department	Mathema	Mathematics Quota 30					
Course Co-ordinator	Dr B Kan	ne, Mathematics (bkane	@hku.hk)				
Teachers Involved	Dr S Va	ne,Mathematics) radharajan,Mathematics omiyasu,Mathematics)	5)				
Course Objectives	This cou explore v Python p objects.	This course aims to use SageMath, a Python based free and open source mathematical software system to explore various examples of Mathematical Modeling. The course will begin with the introduction of the basic Python programming language, and a quick introduction of SageMath software along with plotting 2D and 3D objects. The main focus will be on using SageMath to explore topics in Calculus, Linear Algebra and numerical methods for Mathematical Modeling. No prior knowledge on these topics is assumed.					
Course Contents & Topics	SageMat	SageMath/Python. Golden ratio and self-similarity. Power law and linear regression. Elementary linear algebra Differentiation and integration of one variable. Taylor series expansion. Phyllotaxis, HIV modeling, tumor growth					
Course Learning	On succe	essful completion of this	course, students should be able t	to:			
Outcomes	CLO 1	recognize the importar	nce of numerical methods in mathe	ematical modeling			
	CLO 2	demonstrate basic alge	ebraic and arithmetic computation	s in the Scilab environment			
	CLO 3	write and interpret prog	grams in Scilab programming lang	uage			
	CLO 4						
	CLO 5	solve moderately comp	plicated numerical problems by wr	iting Scilab programs

Course Objectives	In this cou with a view various en engineering	in this course, students will be introduced to fundamental concepts of calculus and ordinary differential equations with a view on applications in different engineering fields. A concrete foundation of mathematics that underpins the various engineering subjects will be built. Mathematical concepts and principles, as well as some typical engineering applications, would be emphasized so that students could enhance their mathematical skills in solving engineering problems, and be well prepared in learning a higher level of applied mathematics required in different engineering disciplines.				
Course Contents & Topics	elementar representa decompos - Ordinary separable equations of parame physical in - Laplace derivatives	y functions, derivativation of curves, sition, definite integral differential equation equations, homog with constant coeffitters, higher-order in inplication of resonat transforms [Laplaces and integrals, derivation of curves]	ves by implicit differentiation, polar coordinates, indefinite als, the fundamental theorem ins [first order equations, integeneous equations, exact difficients, characteristic polynominomogeneous linear ordinary ince, Cauchy-Euler equations, be transforms of elementary vatives of Laplace transform,	and continuity, derivatives, (higher- the mean value theorem, L'H\^{o}pi e integrals, integration by parts of calculus, and their applications] grating factors and linear equations, ferential equations, higher-order h ials, methods of undetermined coef of differential equations, choice of pa and their applications] functions, inverse Laplace transfor first and second shifting theorems, e problems) using Laplace transfor	ital's rule, parametric s, partial fractions Bernoulli equations omogeneous linear fficients and variation rticular solutions and orms, transforms of convolutions, partia	
Course Learning Outcomes	CLO 1 de the de inv	emonstrate knowled eir relationship with etails for the solutio volved	some typical physical/engin	c calculus and ordinary differential of eering applications: unerringly per the solution approach with the fur	form the calculation indamental concepts	
	CLO 3 un	CLO 2 apply mathematical skills to model and solve some basic physical/engineering problems: analyze the given problem, identify the appropriate mathematical skills, articulate a convincing rationale for the approach used, clearly give the mathematical formulation, and correctly find the solution CLO 3 understand well established methods to solve differential equations, and correlate qualitatively with potential applications in engineering topics like oscillations and electric circuits. Identify the occurrence of resonance where large amplitude displacements can be expected				
	CLO 4 explore the technique and usage of integral transform, using the Laplace transform as an illustrative example. Appreciate the power of these techniques in initial value problems and applications like vibrations and signal processing CLO 5 be well prepared to cope with a higher level of engineering mathematics required in different engineering disciplines

MATH2211	Multivari	able calculus (6 cre	edits)	Academic Ye	ar 2021		
Offering Department	Mathemati	•	•	Quota			
Course Co-ordinator	Dr T W Ch	ing, Mathematics (Imtcl	hing@maths.hku.hk)				
Teachers Involved	(Dr T W Cl	ning,Mathematics)	· ·				
Course Objectives	practical practical practical student calculus in	Students of this course will learn the theory of multivariable calculus and learn how to apply the theory to solve practical problems. This is a required course for Mathematics and Mathematics/Physics Majors, and is suitable for all students in Science, Engineering, Economics and Finance, and other students who will use multivariable calculus in their areas of study. This is also a required course for all Minors offered by the Department of Mathematics, and is a pre-requisite of many advanced level mathematics courses.					
Course Contents & Topics	- Vectors: and spheri - Differentii - Vector-va operator. - Maxima multipliers; - Multiple ii - Line integ	Vectors: vectors in 2-, 3-, and n-dimensions; dot product and cross product; lines and planes; polar, cylindrical, nd spherical coordinates. Differentiation in several variables: limits and derivatives; the chain rule; directional derivatives and gradients. Vector-valued functions: parametrized curves; arc-length; vector fields; gradient, divergence, curl, and the del perator. Maxima and minima: differentials and Taylor's Theorem of several variables; extrema of functions; Lagrange nultipliers; applications of extrema. Multiple integration: double and triple integrals; change of variables; applications. Line integrals: scalar and vector line integrals; Green's Theorem; conservative vector fields. Surface integrals and vector analysis: parametrized surfaces; surface integrals; Stokes' and Gauss' Theorems.					
Course Learning			course, students should be ab				
Outcomes	CLO 2 eva CLO 3 ap	CLO 1 understand and demonstrate the basic theory of calculus of functions in several real variables CLO 2 evaluate partial derivatives and multiple integrals; compute line integrals and surface integrals CLO 3 apply the knowledge to solve some practical problems, such as constrained optimization problems and other problems involving differentiation and integration of multivariable functions

MATH2822	Mathematical methods for actuarial science II (6 credits) Academic Year 2021						
Offering Department	Mathen	natics	Quota				
Course Co-ordinator	Dr T W	Ching, Mathematics (Imtching@maths.hku.hk)					
Teachers Involved		V Ching, Mathematics)					
Course Objectives	This course is the second of the two mathematics courses designed to provide actuarial science students with a solid background of calculus of one and several variables and an introduction to linear algebra. The course focuses on multivariable calculus and linear algebra. It aims at students with MATH1821. It can be followed by other 2000 or 3000 level mathematics courses.						
Course Contents & Topics	- Gradi - Taylor - Maxin - Doubl - Matric - Vecto	- Functions of several variables; partial differentiation Gradients and directional derivatives Taylor approximation Maxima and minima; Lagrange multipliers Double and triple integrals, areas and volumes Matrices, systems of linear equations, determinants Vector spaces and subspaces Eigenvalues and eigenvectors, diagonalization of matrices.					
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 understand and recognize various topics in linear algebra such as the basic arithmetic of matrices, determinants, systems of linear equations, eigenvalues and eigenvectors, diagonalizable matrices, basis and dimension, and the rank-nullity theorem						
	CLO 2 understand and recognize various topics in functions of several variables including partial differentiation, the Hessian test for local extrema, vector-valued functions, Jacobians, the method of Lagrange multipliers, double/triple integrals and the change of variable formula						

Pre-requisites (and Co-requisites	Pass in MATH1821. For BSc(ActuarSc) students only.					
and Impermissible combinations)		,	,

MATH3304	Introduc	tion to number t	heory (6 credits)	Academic Yea	r 2021	
Offering Department	Mathemat			Quota		
Course Co-ordinator	Dr B Kane	, Mathematics (bkai	ne @maths.hku.hk)	·	'	
Teachers Involved	(Dr B Kane, Mathematics)					
Course Objectives	To provide students with basic concepts about numbers, their properties and basic knowledge on the arithmetic of					
	congruences. The prime numbers are the building blocks of all the natural numbers under multiplication. The interplay between the multiplicative and additive properties of prime numbers is particularly interesting. The cours will study further properties and the distribution of the prime numbers, and some of the longstanding open problems concerning them. Important applications of number theory to modern cryptography will also be introduced.					
Course Contents	-The cours	se will begin with s	ome basic notions in number theory	, including divisibility, greates	st common divisor	
& Topics	Euclidean algorithm, congruences, etc. It will then be followed by several fundamental theorems, such as Chine remainder theorem, solutions of linear and polynomial congruences, Fermat's Little theorem, and the quadraterized reciprocity law. - Many well-known open problems will be introduced. Application of number theory to public key cryptography vibe explained. Some current research on the prime numbers will be discussed. - Depending on the time available, the course will cover a selection of further topics, such as the prime number theorem, sum of squares, Dirichlet's theorem on diophantine approximations, continued fractions, etc.					
Course Learning		•	nis course, students should be able to		,	
Outcomes		olve a system of line				
	CLO 2 so	olve polynomial con	gruences			
	CLO 3 de	etermine the solubili	ty of quadratic congruences by comp	utation of the Legendre symb	ol	
			ce of primitive roots and use them in	solving some exponential con	ngruences	
	CLO 5 understand the prime number theorem					
Pre-requisites		nderstanding some l ATH2101 and MATH	longstanding problems in number the	ory

Teachers Involved	(Prof M K	P Ng, Mathematics	5)				
Course Objectives	This course extends to more general situations some basic results covered in Calculus and introduces some fundamental concepts which are essential for advanced studies in mathematical analysis.						
Course Contents & Topics	completer		onnectedness; pathwise	ness; interior; closure; deriv connectedness; uniform c	,	, ,	
Course Learning			this course, students sho	ould be able to:			
Outcomes			dge and understanding on identify objects that are	of the basic features of math topological equivalent)	nematical analy	sis and point set	
				ematical analysis to analyze specific function is uniformly		vel situations in a	
				ovative examples and solu curate mathematical stateme		andard problems	
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in M	ATH2211					
Offer in 2021 - 2022	Y 1st	sem Offer in 202	22 - 2023 : Y	E	xamination	Dec	
Grade Descriptors (A+ to F)	Demonstrate a thorough understanding of all concepts and ideas by being able to draw complex connections among various concepts and apply the theorems through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation, and with some innovative approaches to solving problems.						
	B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, reasoning, identifying the appropriate theorems, applications, or presentation.						
	Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with acceptable argument and presentation.						
	D Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation.						
	Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

MATH3405	Differe	ntial equations (6 credits)	Academic Year	2021		
Offering Department	Mathema	atics	Quota			
Course Co-ordinator	Dr H Y Z	hang, Mathematics (hyzhang@maths.hku.hk)				
Teachers Involved	(Dr H Y Z	Zhang,Mathematics)				
Course Objectives	importan	The standard topics in the wide field of ordinary differential equations (ODEs) included in this course are o importance to students of sciences and engineering. Our emphasis is on principles rather than routine calculation and our approach is a compromise between diversity and depth.				
Course Contents & Topics	- Existen - Second - Power s - Linear s - Qualitat	of elementary differential equations. ce and uniqueness theorems. order differential equations, Wronskian, variation of paramete series method, Legendre polynomials, Bessel functions. systems, autonomous systems. tive properties of solutions. blace transform.	rs.			
Course Learning	On succe	essful completion of this course, students should be able to:				
Outcomes	CLO 1 solve simple first order and second order (linear or nonlinear) ODEs by various techniques, including auxiliary equations, variation of parameters, Laplace transform, and series method					
	CLO 2 solve systems of first order linear ODEs with constant coefficients, of which the number of equations and the number of unknown functions are no more than three					
	CLO 3 discuss qualitatively the solutions of nonlinear ODEs or systems of nonlinear ODEs by studying their linear approximations or their phase diagrams					
		pply the theory of differential equations to study quantitatively and life sciences	/qualitatively problems aris	ing from physical		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 an	d MATH2822)			
Offer in 2021 - 2022	Y 2n	d sem Offer in 2022 - 2023 : Y	Examination	Mav		
Grade Descriptors (A+ to F)	Α	Demonstrate an excellent understanding of key concepts and ideas by be applications through correctly analysing problems, clearly and elegantly p and being able to carry out computations carefully and correctly, and with	resenting correct logical reasonir	ng and argumentation		
	В					
	Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.					
	D	Demonstrate some understanding of key concepts and ideas by being all substantial inadequacies in applying the theorems through incorrectly anal with substantial computational errors.				
	Fail	Demonstrate poor and inadequate understanding by not being able to ide being able to complete the solution.	ntify appropriate theorems or the	ir applications, or not

Offering Department	Mathemat	tics		Quota			
Course Co-ordinator	Prof J H L	.u, Mathematics <i>(jhlu</i> @ <i>r</i>	maths.hku.hk)				
Teachers Involved		(Prof J H Lu,Mathematics)					
Course Objectives	will emph prepare s	This course aims at introducing students to fundamental knowledge in topology and some of its applications. We will emphasize more on building geometric intuition and links between topology and other subjects. It can help prepare students for more advanced Mathematics and Physics courses and future research in Mathematics, Physics, Computer Science and Biology.					
Course Contents & Topics	(i) Basic p (ii) Topolo	opics will be chosen among the following: Basic point-set topology: topological spaces, product and quotient spaces. Topological groups and orbit spaces. Fundamental groups, covering spaces, surfaces.					
Course Learning			course, students should be	e able to:			
Outcomes			ctions in point-set topology				
			er examples for concepts i				
	CLO 3 ui	nderstand basic ideas o	f fundamental groups and	its application to the surface classifi	cation problem		
Pre-requisites		ATH2101, MATH2102 a					
(and Co-requisites and Impermissible combinations)		,		lled in MATH3301 and MATH3401.			
Offer in 2021 - 2022	Y 2nd	sem Offer in 2022 - 2	2023 : N	Examination	May		
Grade Descriptors (A+ to F)	A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.						
	B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.						
	C Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.						
	D						
	Pail Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

Course Co-ordinator	Dr C W W	ong, Mathematics (cw	wongab @hku.hk)					
Teachers Involved	(Dr C W V	Vong,Mathematics)						
Course Objectives	This course introduces students to the basic knowledge of linear functional analysis, an important branch o modern analysis.							
Course Contents & Topics	 Normed spaces, Banach spaces: Finite dimensional normed spaces and subspaces. Compactness and finite dimension. Bounded linear operators. Normed spaces of operators, dual space. Inner product spaces, Hilbert spaces: Orthogonal complements, direct sums. Orthonormal sets and sequences, series related to orthonormal sets and sequences. Total orthonormal sets and sequences. Special polynomials. Riesz's representation theorem. Adjoint operator, self-adjoint, normal and unitary operators. Fundamental theorems for normed and Banach spaces: Hahn-Banach theorem. Reflexive spaces. Category theorem, uniform boundedness principle. Open mapping theorem. Closed graph theorem. Spectral theory of linear operators. 							
Course Learning	On succes	ssful completion of this	course, students should	l be able to:				
Outcomes	sp ar CLO 2 ur th CLO 3 dis	CLO 1 compare and contrast (i) finite and infinite dimensional linear spaces, (ii) complete and incomplete linear space, and (iii) normed and inner product spaces; in particular, recognize the importance of completeness and discuss how vectors are represented in these spaces CLO 2 understand the notions of Banach spaces and Hilbert Spaces. State and apply fundamental theorems in these spaces CLO 3 discuss the dual spaces of some standard Banach spaces CLO 4 discuss the boundedness of linear operators and the spectra of special linear operators

MATH4501	Geome	try (6 credits)		Academic Year	2021			
Offering Department	Mathema	tics		Quota				
Course Co-ordinator	Dr Z Hua	, Mathematics (huazheng@maths	.hku.hk)					
Teachers Involved	(Dr Z Hu	a,Mathematics)						
Course Objectives	which we thinking. surfaces	As geometric forms often appear in nature, the study of geometry helps us to understand better the universe in which we live. Moreover, geometry has much intrinsic beauty and the study of it is an excellent training in intuitive thinking. In this course we study the differential geometry of curves and surfaces in 3-space. In the study of regular surfaces in 3-space we exhibit geometric notions that are definable in terms of metrical properties of these surfaces alone, leading to the intrinsic geometry of surfaces.						
Course Contents & Topics	- The G Theorem - Rieman	 Plane and space curves, regular surfaces in three-dimensional Euclidean space. The Gauss map, Gaussian and mean curvatures, Gauss's Theorema Egregium, geodesics, Gauss-Bonnet Theorem. Riemannian Geometry of surfaces; applications. Some applications, e.g. to Maxwell theory of electromagnetism. 						
Course Learning	On succe	ssful completion of this course, st	udents should be able to:					
Outcomes	CLO 1 understand the fundamental properties of curves and surfaces in space							
	CLO 2 compute and interpret the Frenet apparatus, fundamental forms and their derived quantities							
	CLO 3	understand the basics of intrinsic	geometry of surfaces					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (MATH2101 and MATH2211); and MATH3401 or MATH3403 or MAT are strongly recommended to hav

Course Objectives	articles an	This seminar style capstone course aims to provide students with the experience of intense reading of journal articles and book chapters, followed by group discussions through which knowledge acquisition and synthesis wipe attained. Students will look at particular mathematical topics in depth, and will master the topics through eading, listening, discussing and writing.					
Course Contents & Topics	This semir seminar p brought al involves of arguments developments responsive	This seminar course may be in the form of research seminar, reading seminar, or a combination of both. Research seminar provides first-hand research experience to students, who will discuss the advancement of knowledge brought about by the readings, and the difficulties they encounter in the research process. Reading seminar involves discussions on arguments delivered by the authors of books or articles, and how convincing the arguments are. Participants will experience the process of argumentation in the construction of knowledge and development of research idea. Student performance is manifested in their preparedness, quality of comments, responsiveness to comments and overall engagement in the seminar. The end product is a research paper or written report and oral presentations. Topics will be chosen by the instructors, including journal articles and book

Course Objectives			udents an experience of engaging in a knowledge they have acquired.	project which requires	integration and/or	
Course Contents & Topics	of this ca students. corporate analysis, o problem u portfolio, a	application of the mathematical knowledge they have acquired. Students will work collaboratively in small groups on a project under the guidance of their supervisor(s). Emphasis of this capstone project is on the integration and/or application of mathematical knowledge acquired by the students. The project topic is not limited to academic context, but can also be extended to a community or corporate outreach project. Projects may take the form of a combination of literature research, survey, data analysis, creation of artifacts or media contents, exhibition, public lectures, development of solution plan for the problem under study, etc. Assessment may take the form of written report, oral presentation, media production, portfolio, and/or peer evaluation, etc. Topics are either chosen by the supervisor(s), or proposed by the students and approved by their supervisor(s).				
Course Learning			course, students should be able to:			
Outcomes		1 integrate and apply mathematical knowledge they have previously acquired				
	CLO 3 co	O 2 work collaboratively with others O 3 communicate their project topic to experts and/or lay audiences through suitable media using appropriate mathematical terms and language

		articulate their findings ar					
			r work in a written report				
Pre-requisites (and Co-requisites and Impermissible combinations)	only. The Pass in MATH4X	This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department.					
Offer in 2021 - 2022		ar long Offer in 2022 -		Examination	No Exam		
Grade Descriptors (A+ to F)	В	Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence o original thought. Insightful use and critical evaluation of information drawn from a broad range of high quality sources and to reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use o relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and					
		presentational skills.					
	С	Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.					
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.						
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

MATH7219	Topics in applied functional analysis (6 credits)	Academic Year	2021

Offering Department	Mathema	tics		Quota			
Course Co-ordinator	TBC, Mat	hematics ()					
Teachers Involved							
Course Objectives	This is a graduate to advanced undergraduate university level course on applied functional analysis, which aims a introducing to students the basic knowledge of using functional analysis on various applied topics in mathematics. This course would lay a foundation for students in studying more advanced mathematical courses.						
Course Contents & Topics	 Generalized functions (also called distributions), delta function, generalized Fourier Transform. Applications to differential equations, Fundamental solution, Green's function. Sobolev spaces, Sobolev Embedding Theorem, Trace. Hilbert space linear operator theory (bounded operators, compact operators, closed unbounded operators) spectral theory. Applications to differential equations (infinitesimal generator, semigroup of linear operators). Applications to optimization problems. Wherever needed, we shall also review techniques for Metric spaces (Category Theorem), Banach spaces (Hahl Banach Theorem, Opening Mapping Theorem, Closed Graph Theorem and Uniform Boundedness Principle) and

Offer in 2021 - 2022	Y 2		022 - 2023 : Y	Examination			
Grade Descriptors (A+ to F)	A Demonstrate an excellent understanding of key concepts and ideas by being able to identify appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and to solve problems with some innovative approaches.						
	B Demonstrate a good understanding of key concepts and ideas by being able to identify appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.						
	С	Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.					
	D						
	Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

Offering Department	Physics	Quota				
Course Co-ordinator	Dr F K Chow, Physics (judychow@hku.hk)					
Teachers Involved	(Dr F K Chow, Physics)					
Course Objectives	This is an introductory, calculus-based physics course for the students who want to have an overview in physics at the university level.					
Course Contents & Topics	It covers mechanics, gravitation, oscillations, waves and sound, heat and thermodynamics, electricity and magnetism, and physical optics. Conceptual ideas in physics are emphasized and the mathematical treatment is moderate.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 describe and explain the fundamental physical principles					
	CLO 2 apply these principles, together with logical and mathematical reasoning, to situations of the physical world					
	CLO 3 analyse and solve problems with the aids of mathematics					
	CLO 4 acquire and interpret experimental data to examine the physical laws

PHYS1050	Physics	for engineering students (6 credits)	Academic Year	2021
Offering Department	Physics	,	Quota	
Course Co-ordinator	Dr C C Ling, Physics (ccling@hku.hk)			
Teachers Involved	(Dr C C Ling, Physics)			
Course Objectives	This course offers a comprehensive training of physics for engineers. It covers the major physical laws of mechanics, electricity and magnetism. A calculus-based approach is adopted.			
Course Contents & Topics	This course will introduce and discuss the following topics: Units and Dimensional Analysis, Motion of a Particle in One and Two Dimensions, Newton's Laws of Motion Friction, Circular Motion, Force, Impulse and Momentum, Force Polygon and Static Equilibrium, Work and Energy System of Particles, Moment of Inertia and Rotation of a Rigid Boody, Simple Harmonic Motion and Pendulum Electrostatic Fields and Potential, Gauss's Law, DC circuits, Magnetic field due to Moving Charges, Force on a Moving Charge in Magnetic Field, Biot-Savart law, Ampere's law, Electromagnetic Induction, Faraday's Law, Edd Currents, AC circuits, Phases in Capacitive and Inductive Circuits, Power, DC and AC Generators, Transformer.			
Course Learning Outcomes	On successful completion of this course, students should be able to:			
	CLO 1 describe and explain the physical principles of mechanics, electricity and magnetism			
	CLO 2 apply these principles to situations of the physical and engineering world			
	CLO 3 analyze and solve basic problems using the calculus-based approach			
	CLO 4 acquire and interpret experimental data to examine the physical laws			
(and Co-requisites and Impermissible combinations)	(Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011) (This course is exclusive for Engineering students.)

PHYS1650	Nature of the universe (6 credits)	Academic Year	2021
Offering Department	Physics	Quota	
Course Co-ordinator	Dr K M Lee, Physics (kmlee@lily.physics.hku.hk)		
Teachers Involved	(Dr K M Lee,Physics)		
Course Objectives	This is an introductory course in astronomy for students in all disciplines and a in our series of two compulsory courses to introduce basic astronomy knowle for astronomy minor. No prior knowledge in astronomy, physics, and highe help. After completing this course, interested students may take the secon PHYS2650.	dge, methods and r mathematics is	recent advances required, but will
Course Contents & Topics	Topics covered include the observational aspect of astronomy (including constrour solar system, and our own Sun, stars and their evolution, galaxies, be provides students with a basic understanding of the relationship of astronomy the macroscopic level. Students are expected to participate actively in the night	lackholes, and co to life and how ou	smology. It also nature works on
Course Learning	On successful completion of this course, students should be able to:		
Outcomes	CLO 1 identify and describe the major objects in our Solar System and galaxies), and explain their main properties	our universe (incl	uding stars and
	CLO 2 use the celestial sphere model to describe the apparent trajectories of c	elestial objects	
	CLO 3 review the evolution of the world-view from the geocentric model to		model and the

		discovery of the expans	ion of the universe on our world	-view		
	CLO 4 a	apply quantitative phys	sical laws, including Kepler's to oppler shift formula and Hubble	hree laws of planetary motion		
	CLO 5 e	explain the evolution of	stars and the evolution of the ur	niverse		
		communicate astronom English	ical problems and solutions usi	ng appropriate astronomical ter	rminology and good

Offering Department	Physics			Quota			
Course Co-ordinator	Dr S Z Zh	ang, Physics <i>(shizhong)</i>	@hku.hk)				
Teachers Involved		nang,Physics)					
Course Objectives	This calculus-based course covers the basics of thermodynamics and kinetic theory in one semester. It is a core course for physics major, a discipline elective for physics minor, as well as an elective course for those who want to learn fundamental thermodynamics concepts and to link them up with their studies in fields like engineering, chemistry and mathematics. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. Upon completion, interested students may take PHYS3550 to further their study in thermodynamics and statistical mechanics.						
Course Contents & Topics	Topics include: thermodynamic system, equilibrium state and its characterization; thermodynamic state function and equation of state and state transformation; first law of thermodynamics, adiabatic process, Carnot cycle; entropy and second law of thermodynamics; various thermodynamic potentials and their applications in phase equilibrium and mixtures; third law of thermodynamics and Nernst theorem. It also includes a discussion on kinetic theory.						
Course Learning	On succe	On successful completion of this course, students should be able to:					
Outcomes			undamental physical principles				
			ether with logical and mathemati	cal reasoning, to situations	of the physical world		
			ns with the aids of mathematics				
			rimental data to examine the phy	sical laws

Course Objectives	This is the third level course in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. We focus on the analytica and computer algebra techniques in solving physics problems. It is one of the core electives for physics major and an elective course for the computational physics and theoretical physics themes. This is also an essential course for those who plan to pursue postgraduate studies in mathematical and theoretical physics.						
Course Contents & Topics	This cours application differential singular p Bessel fur	This course will introduce and address the following topics: (i) Functions of a complex variable and their applications (Cauchy's integral formula, calculus of residues, etc); (ii) Advanced methods in solving and classifying differential equations commonly appears in physics (such as series solution, second solution, Green's function, and singular points); (iii) Properties of special functions widely used in Physics (Gamma functions, Bessel functions, spherical harmonics etc.), (iv) Integral transforms (Fourier transforms and Laplace transforms); (v) The use of Mathematica in solving simple analytical problems appearing in topics (i)-(iv).					
Course Learning	On succes	ssful completion of	this course, students should be able t	0:

PHYS3151	Machin	e learning in phys	sics (6 credits)	Academic Yea	r 2021	
Offering Department	Physics	J J	,	Quota		
Course Co-ordinator		leng, Physics (zymen	g@hku.hk)	, 24. 2.2.		
Teachers Involved	(Dr Z Y Meng, Physics)					
Course Objectives	Machine learning is a technique that enables computers to learn without being explicitly "programmed". It is an essential part of big data science and has been widely used in different fields of physics. This course introduces the basics of machine learning, from key concepts to practical algorithms, with a focus on real-world applications in physics. It is an elective course for the computational physics theme. This is also an essential course for those who plan to apply machine learning techniques in their postgraduate studies or in their future work.					
Course Contents & Topics	Machine learning software packages in Python, Supervised and Unsupervised learning, Regression, Classification, Principal component analysis, Singular value decomposition, Support vector machines, Clustering, K-Nearest Neighbors, Decision trees, Neural Networks, Deep Learning, Application of machine learning in physics research with examples drawing from fields such as astrophysics, particle physics and complex systems.					
Course Learning Outcomes	CLO 1 c	demonstrate knowledo ohysics	nis course, students should be abl ge in essential methods and tech	niques for machine learning and	d its application in	
			of machine learning in data analys earning packages to solve simple			
	CLO 4 L	use of effective written	and verbal communication skills	through oral presentation		
Pre-requisites (and Co-requisites and Impermissible combinations)	Working	knowledge of Python	2101 or MATH2211 or PHYS2155 is needed (please talk to the cour	se instructor in case of doubt).		
Offer in 2021 - 2022	Y 2r	nd sem Offer in 2022		Examination	May	
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.					
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.				
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.				
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective or ineffective. Offering Department	Physics	Quota				
Course Co-ordinator	Prof S Q Shen, Physics (sshen@hku.hk)					
Teachers Involved	(Prof S Q Shen, Physics)					
Course Objectives	This course covers Lagrangian mechanics in the advanced undergraduate treatment. It is one of the core electives for physics major and an elective theme. This is also an essential course for those who plan to pursue postgrad disciplines. Problem solving and analytical skills will be extensively used. The skills occasionally.	course for the the	eoretical physics hysics or related			
Course Contents & Topics	This course will be essentially divided into two parts. In the first part, fundamental concepts related to Lagrangian mechanics will be treated. Topics include the variational principle, conservation laws and its relation to Newtonian mechanics. In the second part, we shall discuss applications of the Lagrangian mechanics. Topics include the central force problem, the coupled harmonic oscillators and rigid-body dynamics. Lagrangian mechanics in non-inertial frame will also be discussed.					

Course Learning	On succ	essful completion of th	is course, students should be able t	0:			
Outcomes		understand the logica formulation;	al structure of Lagrangian mecha	nics and its advantage of	over the Newtonian		
	CLO 2 write down the form of Lagrangian for a mechanical system and solve the dynamic equations in simple cases						
	CLO 3	understand the connec	tion between classical mechanics a	nd other mechanics			
Pre-requisites	Pass in	PHYS2150 and PHYS	2250				
(and Co-requisites and Impermissible combinations)

Course Co-ordinator	Dr K M L	ee, Physics (kmlee	@lily.physics.hku.hk)				
Teachers Involved	(Dr K M I	Lee,Physics)					
Course Objectives	To introd	luce basic physical	principles of astronomy and build a	foundation in modern astrophysi	CS.		
Course Contents & Topics		pics include: the sky and celestial coordinates, spherical geometry, optics and telescopes, basic celestic echanics, two-body problem, radiative transfer, and blackbody radiation.					
Course Learning	On succe	essful completion of	f this course, students should be abl	e to:			
Outcomes	CLO 1 calculate the transformation between different celestial coordinate systems						
	CLO 2 describe the formation of spectral lines and basic structures of telescopes						
	CLO 3		in two body problem from first princi	ole			
	CLO 4	CLO 4 recall the radiative transfer equation					
Pre-requisites (and Co-requisites and Impermissible combinations)		iss in PHYS1650 and (PHYS2250 or PHYS2265)					
Offer in 2021 - 2022	N Of	ffer in 2022 - 2023 :	N	Examination			
Grade Descriptors (A+ to F)	A	learning outcomes.	gh mastery at an advanced level of extens Show strong analytical and critical abilities at to a wide range of complex, familiar and	nd logical thinking, with evidence of orig	inal thought, and ability		
	В						
	and some unramiliar situations. Apply effective organizational and presentational skills. Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.						
	D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	D	Demonstrate partial Show evidence of so	but limited command of knowledge and skill ome coherent and logical thinking, but with lir	s required for attaining some of the counited analytical and critical abilities. Show

PHYS3652	Principles of astronomy (6 credits)	Academic Year	2021
Offering Department	Physics	Quota	
Course Co-ordinator	Dr L X Dai, Physics (lixindai@hku.hk)		
Teachers Involved	(Dr L X Dai, Physics)		
Course Objectives	To introduce or review a number of basic physical principles, and explain ho astronomy to gain knowledge of the Universe.	w these principle	es are applied in
Course Contents & Topics	Topics include: special relativity, Doppler effect; interaction of light and m telescopes and interferometers; binary stars and stellar parameters, exoplanets;		
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe and explain the physical principles discussed CLO 2 associate the correct physical principles with the observed properties of cCLO 3 apply their understanding of the physical principle discussed to exproperties of select astronomical objects		•

Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in	PHYS1650 and (PHYS	S2250 or PHYS2265)

Course Objectives		This course is a beginner course in astrophysics - we will introduce the most basic and direct connection between						
	phenome astrophys research It is one	astronomy and physics, which will help you gain a better understanding of various astronomical objects and phenomena from first principles. This course will also aim to develop skills in approaching problems in astrophysics, which will set the stage for taking more advanced astrophysics courses and conducting scientific research. It is one of the core electives for astronomy minor and an elective course for the astrophysics theme. Upon completion, interested student may take its sequel PHYS4656 to further their studies in astrophysics.						
Course Contents & Topics	Topics ir astronom	nclude: celestial or ny; basics of radiati ctral lines; order-of-t	rbital dyna ve process	mics, gravitation, ses including blacl	binary syste kbody radiatio	ems; special on, emission a	relativity and i and absorption,	ts application i

PHYS3660	Astrono	my laboratory (6 o	credits)	Academic Yea	ar 2021		
Offering Department	Physics	, ,	•	Quota	9		
Course Co-ordinator	DrSCY	Ng, Physics (ncy@asi	tro.physics.hku.hk)				
Teachers Involved	(Dr S C Y	(Dr S C Y Ng,Physics)					
Course Objectives	This course trains students with basics of extracting scientific information with astronomical observations. The focus is on practical experience in operating telescopes, data acquisition and reduction, and interpretation of the results rather than verification of known astronomical theories. It is one of the core electives for astronomy minor and an elective course for the astrophysics and experimental physics themes. Upon completion, interested students may apply the techniques learnt here in observational astronomy related capstone courses.						
Course Contents & Topics	and hand laboratori	This course will cover the following topics: basics working principles of optical telescopes and CCDs; setting up and hands-on operations of small optical telescopes; error analysis and basic statistics related to the astronomy laboratories; introduction to the magnitude system and celestial coordinates, the color magnitude diagram; observations and data reduction techniques in multi-wavelength astronomy; introduction to data analysis software					
Course Learning			s course, students should be able	to:			
Outcomes	CLO 1 ad	cquire astronomy obse	ervation techniques				
	CLO 2 co	onduct observations to	verify the physical principle(s) in	astronomy			
	CLO 3 ap	oply analytical method	s required to interpret and analyze	e results, and draw conclusions	s from the data		
		se of effective writter resentation	n and verbal communication ski	lls through written laboratory	reports and oral		
Pre-requisites	Pass in (F	PHYS2265 or PHYS26	550); and Pass in PHYS3650, or a	Iready enrolled in this course.

Course Objectives	physics principles with acquisition, and data an electives for physics ma	This course trains students with experimental knowledge and skills, as well as the understanding on how to prove physics principles with measurements. The focus is on advanced lab skills and techniques, including data acquisition, and data analysis by computers rather than verification of known physical theories. It is one of the core electives for physics major and a required course for the experimental physics theme. Upon completion, interested students may apply the techniques learnt here in experiment-oriented capstone courses.					
Course Contents & Topics	This course equips students with the necessary experimental techniques commonly used in advanced university level physics experiments drawn from classical mechanics, electromagnetism, statistical mechanics and thermodynamics, and quantum mechanics. After introducing the basics in a few lectures, students have to work all the way from experimental setup, data acquisition to data analysis, possibly with the aid of a computer, either in a small group or an individual. In addition to eight labs, they also have to conduct a small experimental project and present their result orally. Contents of the experiments and small projects may vary from year to year.

PHYS3851	Atomic and nuclear physics (6 credits)	Academic Year	2021
Offering Department	Physics	Quota	
Course Co-ordinator	Dr J H C Lee, Physics (jleehc @hku.hk)		
Teachers Involved	(Dr J H C Lee,Physics)		

Course Objectives	This course covers the fundamentals of atomic physics and nuclear physics and their applications in astrophysics and atomic and nuclear science in the advanced undergraduate level. Experimental topics will also be included, such as detection methods and principles of experiments with hand-on experience. It is an elective course for the experimental physics theme. This is also an essential course for those who plan to pursue postgraduate studies or				
	experimental physics theme. This is also an essential course for those who plan to pursue postgraduate studies or work in atomic and nuclear physics and related disciplines.				
Course Contents & Topics	Properties gamma d	s of atoms and nuclei;	nuclear composition; liquid dr	op model; shell model in atoms ar astrophysics; frontier research	
Course Learning			course, students should be a	able to:	
Outcomes	On successful completion of this course, students should be able to: CLO 1 describe and explain the basic features of atoms and nuclei				
	CLO 2	apply general consider	ations of quantum mechanics	to atomic and nuclear system	
	CLO 3	make general orders of	magnitude in estimation of p	hysical effects in atoms and nucl	ei
	CLO 4	describe nuclear decay	processes and nuclear react	tions in nucleosynthesis	
	CLO 5	apply basic experiment	al skill for radiation detection		
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in P	HYS2265; and Pass in	PHYS3351, or already enroll	ed in this course.	
Offer in 2021 - 2022	N Off	er in 2022 - 2023 : Y		Examination

PHYS3999	Directed studies in physics (6 credits)	Academic Year	2021			
Offering Department	Physics	Quota				
Course Co-ordinator	Dr F C C Ling, Physics (ccling@hku.hk)					
Teachers Involved	(Various teachers in the department, Physics)					
Course Objectives	This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It should be taken normally in their final year of study. Students investigate a small problem, either theoretical, experimental or numerical, under the supervision of an academic staff using the subject materials they have learn in all years of their major studies. The available projects range from small scale research, critical literature review and comment, and to development of university-level physics teaching tools. Passing a pre-approved directed studies is recognized as having completed an elective in one of the four themes.					
Course Contents & Topics	Students interested in taking this course should contact their prospective supervisors in May to determine the contents and the nature of their projects in the coming academic year. They must get the approval from both the prospective supervisor and the course coordinator to take this course. Students will receive training in research literature reading and reviewing, under the supervision of a staff member. For theoretical project, students may need to fill in mathematical gaps of some sophisticated derivations and the critically analyze the research methods used in the field. For numerical projects, students need to use computers to reproduce existing numerical or simulation results. For experimental projects, students have to					
Course Learning Outcomes	,					

	CLO 2 c	riticize existing appro	aches for solving the selected physic	cs or astronomy problem	
			onnections between the physical pri		lem
	CLO 4 (for theoretical or computational projects) identify the key issues of the problem and solve them independently either by analytical or numerical means, and compare the results with predictions or existing solutions				
	à	inalyze results and so	ects) propose and execute physi- urces of errors of the experiment or	observation in comparison	with predictions
			team work) collaborate and com different culture, gender and nationa		e team, which may
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advanced level (3XXX level or above) disciplinary core/elective courses of the Physic Major, Physics (Intensive) Major, Mathematics/Physics Major or Astronomy Major curriculum. This capstone course is for Astronomy, Mathematics/Physics, Physics, and Physics (Intensive) Majors student only. The earliest that a student is allowed to take this capstone course is their year 3 study.				•
Offer in 2021 - 2022	Y 1s	t sem 2nd sem Su	ımmer Offer in 2022 - 2023 : Y	Examinatio	n No Exam
Grade Descriptors (A+ to F)	A Demonstrate thorough grasp of the subject. Show evidence of strong logical and independent thinking. Insightful use and critical analysis/evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.				
	B Demonstrate substantial grasp of the subject. Show evidence of logical and independent thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.				
	C Demonstrate general but incomplete grasp of the subject. Show some evidence of logical and independent thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.				
	D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Show limited evidence of logical and independent thinking. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.				
	Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Show little or no evidence of logical and independent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

PHYS4351	Advanced quantum mechanics (6 credits)	Academic Year	2021
Offering Department	Physics	Quota	
Course Co-ordinator	Dr C Xiao, Physics (congxiao@hku.hk)		
Teachers Involved	(Dr C Xiao,Physics)		
Course Objectives	Build on the advanced undergraduate level course PHYS3351, this course mathematical techniques in quantum mechanics through special topics and applications.		

	for the theoretical physics theme. This is also an essential course for those who plan to pursue postgraduate studies in physics or related disciplines.					
Course Contents & Topics	Identical particles; Pauli exclusion principle; fermion and bosons; WKB approximation; time-independent, nor degenerate and degenerate perturbation theory; time dependent perturbation theory; scattering, cross section, partial waves and Born approximation; variational method.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 r	eview the perturbation the	neory and some other approxim	nation methods on various quar	ntum systems	
	CLO 2 a	apply physics principles	to describe the physical propert	ties of various quantum system	S	
	CLO 3 demonstrate knowledge and discuss the underlying physical concepts associated with the selected quantum systems					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in (PHYS2155 or PHYS3150) and PHYS3351					
Offer in 2021 - 2022	Y 2r	nd sem Offer in 2022 -	2023 : Y	Examination	May	
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Objectives	astrophysi theoretical	This is an introductory course on general relativity. It provides conceptual skills and analytical tools necessary for astrophysical and cosmological applications of the theory. This is an elective course for the astrophysics and theoretical physics themes. This is also an essential course for those who plan to pursue postgraduate studies in astrophysics or theoretical physics.						
Course Contents & Topics	transport a	opics include: the principle of equivalence; inertial observers in a curved space-time; vectors and tensors; parall ransport and covariant differentiation; the Riemann tensor; the stress-energy tensor; the Einstein gravitational fie equations; the Schwarzschild solution; black holes; gravitational waves detected by LIGO, and Freidman						
Course Learning	On succes	sful completion of t	his course, students should be	e able to:				
Outcomes	sy	stems in astrophysi	cs and cosmology	theory of general relativity for the	,

(A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.							
	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.							
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.							
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.							
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS4850	Particle physics (6 credits) Academic Year 2021							
Offering Department	Physics Quota							
Course Co-ordinator	Dr Y J Tu, Physics (yanjuntu@hku.hk)							
Teachers Involved	(Dr Y J Tu,Physics)							
Course Objectives	This course covers both theoretical and experimental aspects of particle physics at the advanced undergraduate level. This is an elective course for the theoretical physics and experimental physics themes. This is also an essential course for those who plan to pursue postgraduate studies or work in high energy particle physics.							
Course Contents & Topics	Topics include: fundamental particles and interactions; symmetry and conservation law; the Standard Model; particle accelerator; particle detection; frontier particle experiments; Large Hadron Collider data analyses.							
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 describe and explain the fundamental physical principles for the standard model of particle physics.							
Outcomes	CLO I describe and explain the fundamental physical principles for the standard	u model of particle	priysics.					

	CLO 2 apply these principles, together with logical and mathematical reasoning, to analyze particle physics processes.						
	CLO 3 capture the frontier and progress of particle physics.						
			ntal skill in particle physics

PHYS7351	Gradua	te quantum mechanics (6 credits) Acad	lemic Year	2021				
Offering Department	Physics	Quota	а					
Course Co-ordinator	Prof S Q	Prof S Q Shen, Physics (sshen@hku.hk)						
Teachers Involved	(Prof S C	(Prof S Q Shen,Physics)						
Course Objectives		This graduate level course covers the theory and advanced techniques in quantum mechanics, and their applications to select topics in condensed matter physics. This is an elective course for the theoretical physics theme.						
Course Contents & Topics	and con	The course will cover the following topics: Dirac notation, quantum dynamics, the second quantization, symmetry and conservation laws, permutation symmetry and identical particles, perturbation and scattering theory, introduction of relativistic quantum mechanics.						
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 formulate and solve problems in quantum mechanics using Dirac notation							
	CLO 2 examine and predict the properties of identical quantum particles							
	CLO 3	CLO 3 argue the importance of symmetry and conservation laws in quantum mechanics						
	CLO 4 explain physical phenomena in the modern language of quantum mechanics							
	CLO 5 analyse physical system in a quantum mechanical way							
	CLO 6 recognise the connection between relativity and quantum mechanics							

Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in F	PHYS3150 and PHYS43	51			
Offer in 2021 - 2022	Y 1s	t sem Offer in 2022 - 2	2023 : Y		Examination	Dec
Grade Descriptors (A+ to F)	A	Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.				
	В	B Demonstrate substantial command of the knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.				
	С	outcomes. Show evidence	incomplete command of knowled e of some analytical and critical al noderately effective organizational	bilities and logical thinkin		
	D	familiar situations. Apply moderately effective organizational and presentational skills. Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

ENTR3001	Science-based innovation development (6 credits)	Academic Year	2021				
Offering Department	Faculty	Quota	24				
Course Co-ordinator	Dr M Kotaka, Biomedical Sciences (masayo @hku.hk)						
Teachers Involved	(Dr B B H Yuen,Biomedical Sciences) (Dr M Kotaka,Biomedical Sciences) (Mr J E Broer,Biomedical Sciences)						
Course Objectives	1. Stimulate students to contemplate how business opportunities can be generated from science and technology. 2. Teach students the process of translating scientific ideas to commercial products and/or services and the challenges therein. 3. Help students to understand the different regulatory requirements for science and technology based business opportunities, including the different stages of clinical trial required for biomedical-related products/ services. 4. Inspire students to identify potential business ideas from science and technology research and to synthesise a feasible action plan for a start-up company.						
Course Contents & Topics	Topics will include identification of business opportunities from science and technology, the stages involved in translation of science into a commercial product, understanding the challenges of translating scientific ideas into products, understanding the regulatory requirements for technology-based products.						
Course Learning	On successful completion of this course, students should be able to:						

	CLO I de	emonstrate an understar	iding on how science and technology	can generate business of	pportunities	
	CLO 2 acquire knowledge of the process and stages involved in translating a scientific idea into a commercial product					
		entify the challenges enterate solutions to thos	ncountered in translating scientific ic e challenges	deas into product and ur	nderstand how to	
	CLO 4 ha	ave a clear understand	ling of the different regulatory requifferent stages of clinical trials required			
		emonstrate the ability to	critically evaluate cases of science-ba	ased business success or	r failures in written	
	CLO 6 ev	valuate cutting-edge scie	ence and technology research to ider asible action plan to bring the scie digital aid			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in III	MT1611 and ENTR2001	, or already enrolled in these courses

ENTR3002	Customer analysis and strategic marketing (6 credits)	Academic Year	2021			
Offering Department	Faculty	Quota	24			
Course Co-ordinator	Dr R Law, Faculty (rockylaw@hku.hk)					
Teachers Involved	(Dr R Law,Faculty of Science)					
Course Objectives	This course is to provide opportunity for: 1. Students to master techniques to identify customers' needs and market situations. 2. Students to learn how to define strategies to satisfy customers' needs and to capture market shares 3. Students to learn how to develop systematic approaches for commercializing an innovation from the result of analyzing the current market condition and customers' need. 4. Students to evaluate local and international cases on disruptive/market driven innovation. 5. Students to synthesize and implement their own approaches to invent for the need and develop a business proposal to commercialize such an innovation.					
Course Contents & Topics	This course focuses on data collection and analysis of market and customers' need, through which innovation and commercial opportunities could be identified together with systematic approaches addressing them. The students will learn about practical way of data collection and analysis and about how data-driven business decision will be made wisely. Local and international case studies on disruptive/market driven innovation will also be analyzed and evaluated.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 to master techniques of data collection and analysis particular for market and customer analysis					
	CLO 2 to acquire knowledge of interpretation of the result of market and customer analysis, and then to define a solution to address the need by an innovative idea/new product					
	CLO 3 to synthesize systematic approaches to commercialize an innovation with regard to the existing market condition and customers' need					
	CLO 4 to analyze local and international cases on disruptive/market driver	n innovation				
	CLO 5 to integrate principles discussed in this course via synthesizing and implementing systematic approaches to commercialize an innovation					

	CLO 6 t	O 6 to draft a business proposal				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in IIMT1611 and ENTR2001, or already enrolled in these courses

	Entrepre	eurship internship (6 credits)	Academic Year	2021			
Offering Department	Faculty		Quota	24			
Course Co-ordinator	Dr R Law, F	aculty (rockylaw@hku.hk)					
Teachers Involved	(All academic staff in Faculty of Science,)						
Course Objectives	This course is to provide opportunity for students: 1. To practice what they learned related to entrepreneurship through prior university coursework in real-life work environment. 2. To acquire first-hand experience in industries for the preparation of their own business ventures.						
Course Contents & Topics	Students taking this course will work as an intern for at least 160 hours in at least 20 working days within the University or outside the University in a company (preferably technology based startup company). The internship may be arranged by the Faculty or obtained by students themselves. 1. Within the university: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor. 2. Outside the university: The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Faculty/School /Department of the student (the Internal Supervisor).						
Course Learning Outcomes	On successful completion of this course, students should be able to: CLO 1 to integrate and apply knowledge gained in coursework in a real-life setting CLO 2 to experience the culture of a real organization and challenges encountered in entrepreneurship CLO 3 to further improve problem-solving and collaborative skills in a real-life setting CLO 4 to gain hand-on experience from external startup companies or internal research group about their daily operation and special activities that will help them to prepare for their own startup venture in the near future						
Pre-requisites and Co-requisites	Pass in ENTR3001 and ENTR3002 Students must be in their Year 3 study or beyond, as well as minoring in Science Entrepreneurship.

Course Objectives			ortunity for students to:				
	gained from proposals 2. Studer	 Apply entrepreneurship-related knowledge gained through prior university coursework and hand-on experiences gained from prior Internship course to carry out in-depth business potential evaluation and to develop start-up proposals. Students to further develop leadership and teamwork experience via collaboration in multi-disciplinary environments. 					
Course Contents & Topics	the super years of s and produ result from	This course is offered to students as the final course in the minor programme in Science Entrepreneurship. Under the supervision and guidance of an academic staff, students are to use the knowledge they have gained in all years of study to practice entrepreneurship. This can be achieved by conducting technology trend, market analysis and product identification for defining market-product fit solutions. Students are expected to participate, with the result from their hands-on experience in projects, competitions (such as the HKU DreamCatchers initiative, various Hackathon activities and "Challenge Cup" National Competition etc.) and to develop start-up companies					
Course Learning	On succes	ssful completion of the	his course, students should be ab	le to:			
Outcomes	CLO 1 to	integrate and apply	theoretical knowledge in a real-li	fe setting			
			ools to analyze real-life entreprer				
	CLO 4 to	build a team, with r	sentation, problem-solving and con members from different specialize usiness plan that is ready for fund	d areas, that is ready for busine			
Pre-requisites	Pass in El	NTR3001 and ENTR	3002	-			
(and Co-requisites and Impermissible combinations)	Students	must be in their Yea	r 3 study or beyond, as well as m	inoring in Science Entrepreneurs	ship.

Course Objectives	By exploring the Big History of our planet: from the Big Bang of the Univer substances, through the evolution of various species on Earth, to the establ course aims to: (1) discuss the process of scientific discovery, and how our current be established; (2) develop students' understanding of the multi-disciplinary nature of science (3) develop students' understanding of the importance of science and tec policies in the society, and solving the future problems of our planet; (4) increase scientific literacy.	ishment of modern hu dy of knowledge ab e;	uman society, the		
Course Contents & Topics	Part I: From the Cosmos to the Atom Main theme: How fundamental interactions between the building blocks of n know it; Topics include: Big bang, nucleosynthesis, cosmic expansion, cooling of the equilibrium of our planet Earth. Part II: From the Atom to Life Main theme: How we understand the transition from non-living matter to the of Topics include: Origin of life, evolution, natural selection and tree of life. Part III: From Life to Mind to Society Main theme: How our modern civilised society emerges through the develop of knowledge; how science, technology, human society and environment influ Topics include: Neural network and the emergence of intelligence, historica role of science in human civilisation and the contemporary world.	e universe, star formativersified biosphere of the original original	tion, and thermaton earth today;		
Course Learning	Part IV: Looking into the Future Main theme: Outlook on the future of science, technology, human society a faced by humankind that could be addressed by science and technology; Topics include: Students will attend one of several parallel modules on topic technology, climate change, energy crisis, bioethics and artificial intelligence. On successful completion of this course, students should be able to:	s that suit their intere	· ·		
Outcomes	CLO 1 appreciate and elaborate on the significance of major events in the development and formation of our Universe, our Earth system and our modern society				
	 CLO 2 explain, with some level of depth and details, how a number of major theories allows us to understand the workings of the world CLO 3 understand how different science disciplines fit and emerge from one another as a collective effort of the humankind to understand Nature CLO 4 critically assess the mutual influence between science and human society, the role of science in our society as well as the making of science policy in our local region CLO 5 evaluate some of the major challenges faced by humankind, and discuss solutions from a multi-disciplinary perspective CLO 6 test claims and engage in historical analysis based on theories and practices from multiple disciplines 				

Pre-requisites (and Co-requisites and Impermissible	Level 3 or above in at least one science subject at the pre-university level (HKDSE Physics, Chemistry, Biology Combined/Integrated Science or equivalent) This course is not offered to students in the 6901 BSc or 6119 BEd&BSc programmes.

Course Objectives	data need descriptive this cours	The discipline of statistics is concerned with situations involving uncertainty and variability. The interpretation of data needs special techniques when variability plays a role, as it usually does. Thus statistics forms an important descriptive and analytical tool of many scientific disciplines. Candidates with a mathematical background will finish course suitable, because the language of mathematics allows the subject of statistics to be presented with economy and clarity.				
Course Contents & Topics	Probabilit Estimation	Presentation of data, Variability and Uncertainty, Measures of Central Tendency, Measures of Dispersion, Basic Probability Theory and Techniques, Random Variables and Probability Distributions, Random Samples, Point Estimation, Normal Sampling Theorem, Confidence Intervals, Hypotheses Testing, Simple Linear Regression and Correlation.				
Course Learning	On succe	ssful completion of t	his course, students should be able to:

Grade Descriptors	Α	Demonstrate thorough	mastery at an advance	ed level of extensive k	nowledge and skills required for a	ttaining all the course
(A+ to F)		learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.				
		Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.				
		Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.				
		Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT2603	Data management with SAS (6 credits)	Academic Year	2021
Offering Department	Statistics & Actuarial Science	Quota	
Course Co-ordinator	Dr G C S Lui, Statistics & Actuarial Science (csglui@hku.hk)		
Teachers Involved	(Dr G C S Lui, Statistics & Actuarial Science)		
Course Objectives	This course is designed for students who want to learn the statistical software elementary data analysis. This course focuses on using SAS to manage dat different data types, manipulate and transform data, perform random sampling create summary reports and graphics.	ta`set input and o	output, work with
Course Contents & Topics	Data management system for statistical projects. Data validation and cleanin topics, including the following: Data set input and output. Working v manipulation. Data transformation. File manipulation. File management. I presentation and graphics. Basic data analysis. Structured query language.	vith different da	ta types. Data

Course Learning	On succes	ssful completion of this c	ourse, students should be able to:			
Outcomes	CLO 1 ac	cess online help and do	cument			
	CLO 2 us	e Data Step to create da	ata files			
	CLO 3 st	mmarize data by PROC	MEANS, PROC FREQ, and PROC	UNIVARIATE		
	CLO 4 we	ork with numeric, charac	ter, and date variables and function	s in Data Step		
	CLO 5 pe	erform conditional proces	sing in Data Step			
	S/ PI	AS data sets by Data S ROC APPEND; present	ng in Data Step including the followi tep and PROC TRANSPOSE; sub data in a readable way by PROC T output by ODS; procedure SQL for	set and merge data sets ABULATE; produce high	by Data Step and resolution graphics

STAT2604	Introdu (6 credi	ction to R programming and elementary data analysis ts)	Academic Year	2021	
Offering Department	Statistics	& Actuarial Science	Quota		
Course Co-ordinator	Dr Z Liu,	Statistics & Actuarial Science (zhhliu@hku.hk)			
Teachers Involved		Statistics & Actuarial Science)			
Course Objectives	language elementa work with	se is designed to provide a first-level introduction to the popular a R. This course focuses on learning the basic programming skills in ry statistical analysis. The programming skills involved can be appendifferent data types, manipulation and transformation of data, and production of professional summary reports with high-quality grammary reports with high-quali	R with examples and lied to input and out random sampling,	nd applications in	
Course Contents & Topics	2. The R 3. Probat continuou 4. Descri summary	cs: first steps; language essentials. environment: session management; the graphics subsystem; R prog bility and distributions: random sampling; probability calculations and s distributions; the built-in distributions in R. ptive statistics and graphics: summary statistics for a single grou statistics by groups; graphics for grouped data; graphical display of linear regression: residuals and fitted values; prediction and confide	l combinatorics; disc p; graphical display tables.	rete distributions of distributions;	
Course Learning		essful completion of this course, students should be able to:	,		
Outcomes	CLO 1 access online help and documents for R				
	CLO 2 use R to input data, perform data transformation and merging, output data				
	CLO 3 summarize data in tables and graphs for descriptive data analysis				
	CLO 4 work with numeric, character, and other unstructured data types				
	CLO 5	be able to write functions, loops and control flows			
	CLO 6 perform data management using SQL language in R				
	CLO 7	perform Monte Carlo simulations to validate statistical concepts			
Pre-requisites (and Co-requisites and Impermissible	Pass or a	lready enrolled in STAT1600 or MATH1821.			

	Y 1st	t sem Offer in 2022 -	2023 : Y	Examination	No Exam	
Grade Descriptors (A+ to F)	A	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

STAT2902	Financia	al mathematics (6 cr	edits)	Academic Year	2021	
Offering Department	Statistics	& Actuarial Science	•	Quota		
Course Co-ordinator	Prof K C Yuen, Statistics & Actuarial Science (kcyuen@hku.hk)					
Teachers Involved	(Prof K C Yuen, Statistics & Actuarial Science)					
Course Objectives	This course introduces the fundamental concepts of financial mathematics which plays an important role in the					
-	development of basic actuarial techniques. Practical applications of these concepts are also covered.					
Course Contents & Topics	Key topics include: measurement of interest, annuities certain; discounted cash flow analysis; yield rates amortization schedules and sinking funds; bonds and related securities; practical applications such as real esta mortgage and short sales; stochastic approaches to interest; and key terms of financial analysis such as yield curves, spot rates, forward rates, duration, convexity, and immunization.					
Course Learning			ourse, students should be able to:			
Outcomes	CLO 1		epts of financial mathematics			
	CLO 2		ate elementary financial problems			
	CLO 3	apply compound interes	st theory to tackle some practical fina	incial problems		
	CLO 4	show an understanding	of the term structure of interest rates	S		
	CLO 5	show an understanding	of simple stochastic models for inve	stment returns		
Pre-requisites	Pass in S	TAT2901, or already enr				
(and Co-requisites and Impermissible combinations)	Not for stu	udents who have passed	in STAT3615, or already enrolled in	this course.		
Offer in 2021 - 2022	Y 2nd	d sem Offer in 2022 - 2	023 : Y	Examination	May	
Grade Descriptors (A+ to F)	A					
	В					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.				
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.				
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3602	Statistical inference (6 credits)	Academic Year	2021
Offering Department	Statistics & Actuarial Science	Quota	
Course Co-ordinator	Prof S M S Lee, Statistics & Actuarial Science (smslee@hku.hk)		
Teachers Involved	(Prof S M S Lee, Statistics & Actuarial Science)		
Course Objectives	This course covers the advanced theory of point estimation, interval estimatio mathematically-oriented approach, the course provides a solid and rigorous statistical methodologies and the underlying concepts and theory. It is suitable	treatment of infer	rential problems,

	to further their studies or to develop a career in statistical research.					
Course Contents & Topics	Decision problem - frequentist approach: loss function; risk; decision rule; admissibility; minimaxity; unbiasedness; Bayes' rule. Decision problem - Bayesian approach: prior and posterior distributions, Bayesian inference. Estimation theory: exponential families; likelihood; sufficiency; minimal sufficiency; completeness; UMVU estimators; information inequality; large-sample theory of maximum likelihood estimation. Hypothesis testing: uniformly most powerful test; monotone likelihood ratio; UMP unbiased test; large-sample theory of likelihood ratio; confidence set.					
Course Learning	On succes	ssful completion of t	his course, students should be able to):		
Outcomes	CLO 1 form a panoramic view of classical developments in mathematical statistics CLO 2 gain thorough insight into the essentials of statistical inference CLO 3 build a solid foundation for future research studies in statistics and related areas					
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2602 or STAT3902

STAT3603	Stochast	tic processes (6 credits)	Academic Year	2021			
Offering Department		Actuarial Science		Quota			
Course Co-ordinator	Prof J J F Yao, Statistics & Actuarial Science (jeffyao@hku.hk)						
Teachers Involved	(Prof J J F Yao, Statistics & Actuarial Science)						
Course Objectives	This is an introductory course in stochastic processes. It will cover the basic concepts of the theory of stochastic processes and explore different types of stochastic processes including Markov chains, Poisson processes and Brownian motions.						
Course Contents & Topics	Introduction to probability theory, conditional probability and expectation, Markov chains, random walk models, classification of states in a Markov chain, calculation of limiting probabilities and mean time spent in transient states, Poisson process, distribution of inter-arrival time and waiting time, conditional distribution of the arrival time, Brownian Motion, hitting time and maximum variable, geometric Brownian motion, the Black-Scholes option pricing formula, Gaussian bridge, and stationary processes. Birth-and-death process, branching process and renewal process may also be covered (if time permits).						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 apply the conditioning method to calculate the mean and probability						
	CLO 2 understand the essentials of Markov chains, the Poisson process, and Brownian motion						
	CLO 3 understand how stochastic models can be applied to the study of real-life phenomena						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2601; and Not for students who have passed in MATH3603, or have already enrolled in this course; and Not for students who have passed in STAT3903, or have already enrolled in this course.

STAT3604	Design and analysis of experiments (6 credits) Academic Year 2				ear 2021		
Offering Department	Statistics & Actuarial Science Quota			23			
Course Co-ordinator	Dr D Y Zhang, Statistics & Actuarial Science (doraz@hku.hk)						
Teachers Involved	(Dr D Y Zhang, Statistics & Actuarial Science)						
Course Objectives	Scientific research often requires proper design and analysis of experiments. This course aims to introduce the basic principles of experimental design; to explain the concepts and to develop the statistical skills in model-base analysis of experiment.						
Course Contents & Topics	Basic principles and guidelines for designing experiments. Analysis for experiments with a single factor randomised block, crossed and nested factorial structure. Balanced incomplete factorial experiments. Latir squares and related designs. Fixed/random effects models.						
Course Learning	On succes	sful completion o	f this course, students should be able t	o:			
Outcomes	CLO 1 de	velop a conceptu	al understanding of experimental desig	n			
	CLO 2 acquire the fundamental statistical tools of experimental design and the understanding to use then appropriately						
			xperimental designs for different proble				
			tatistical model and to know how to val	idate the model			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT2602 or STAT3611 or STAT3902						
Offer in 2021 - 2022	N Offe	er in 2022 - 2023 :	: N	Examination			
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.						
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.						
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	Fail	Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lac of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Objectives	course propresents a reliability, six-sigma,	The successful control of quality in production is a matter of primary importance to a company's prosperity. This course provides an overview of quality compromise which involves both the producer and the consumer. It presents a variety of statistical solutions including control charts, acceptance and sequential sampling plans, reliability, and life-testing. Contemporary quality management systems such as total quality control, zero defects, six-sigma, and ISO-9000 will be introduced. The student is brought to the frontier of today's quality control and management ideas.					
Course Contents	Probability	distributions and their	applications, process variability,	sampling and statistical i	nference. Process		
& Topics	sampling testing. El	control, variables and attributes control charts. Operating characteristic curves. Single, double and sequential sampling plans. MIL-STD-105D and Dodge-Romig schemes. Variables sampling. Reliability and lifetesting. Elementary experimental designs. Management of quality control, total quality control, zero defects, six-sigma, and ISO 9000.					
Course Learning	On succes	sful completion of this c	ourse, students should be able to:				
Outcomes	CLO 1 a	ppreciate the practicality	of statistical concepts and methods	s in general			
			pecific statistical methods can bene	•	tions		
			nodern systems of quality managen

Course Co-ordinator	Dr K P Wa	at, Statistics & Actuarial Science	(watkp@hku.hk)				
Teachers Involved	(Dr K P W	/at,Statistics & Actuarial Science)					
Course Objectives	uncertaint rational fra rates, con	Most investments involve some risk. The decision to invest or not is usually made against a background of incertainty. Whilst prediction of the future is difficult, there are statistical modelling techniques which provide a ational framework for investment decisions, particularly those relating to stock markets and the markets for interest ates, commodities and currencies. Building upon research, both in Hong Kong and abroad, this course presents he prevailing statistical theories for prices and price-change in these vital markets.					
Course Contents & Topics	Concept of	of market efficiency, mean-varian performance and management, be	ce portfolio theory, capital a		age pricing theory,		
Course Learning	On succe	ssful completion of this course, st	udents should be able to:

STAT3610	Risk management and insurance (6 credits)	Academic Year	2021
Offering Department	Statistics & Actuarial Science	Quota	
Course Co-ordinator	Dr R W L Wong, Statistics & Actuarial Science (rwong@hku.hk)	·	
Teachers Involved	(Dr R W L Wong, Statistics & Actuarial Science)		
Course Objectives	This course provides knowledge on basic risk and its management, as well insurance products, to students. It allows students to understand the stati underlying the techniques for managing the insurable risks faced by organis aims at students who have minimal background in quantitative methods, it calculations.	stical, financial and ations and individu	l legal principles lals. This course
Course Contents & Topics	The course introduces and explains: - risk in our society, - insurance and risk, - introduction to risk management, - fundamental legal principles, and analysis of insurance contracts, - life insurance, their contractual provisions, - individual health insurance coverages.		

Course Learning	OII Succe	ssful completion of this	course, staderite critatia de abie te.				
Outcomes		nderstand the general rinciple	risks faced by organisations and ir	ndividuals and the generi	c risk management		
	CLO 2 demonstrate knowledge and understanding of the underlying financial and legal principles of the insurance industry						
	CLO 3 understand how risk can be managed through insurance						
	CLO 4 co	ompare and contrast dif	ferent types of commercial and pers	onal insurance products			
	CLO 5 pl	lan for and arrange thei	r own personal insurance needs				
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University course) or (STAT1602 and any University level 2 course) or STAT2601 or (STAT1603 and any University course) or STAT2901. (Not available to Actuarial Science students)

Course Objectives	Machine learning is the study of computer algorithms that build models of observed data in order to make predictions or decisions. Statistical machine learning emphasizes the importance of statistical theory and methodology in the algorithmic development. This course provides a comprehensive and practical coverage of essential machine learning concepts and a variety of learning algorithms under supervised and unsupervised settings.						
Course Contents & Topics		Basics of machine learning, generalized linear models, variable selection, regularization, cross-validation, tree based methods, dimension reduction, principal component analysis, cluster analysis.					
Course Learning	On succe	essful completion of	this course, students should be	able to:			
Outcomes	CLO 1 g	et familiar with the v	vorkflow of a data science or ma	chine learning project

STAT3615	Practic	al mathematics for i	investment (6 credits)	Academic Year	2021		
Offering Department	Statistics	s & Actuarial Science		Quota			
Course Co-ordinator	Prof K C	Prof K C Yuen, Statistics & Actuarial Science (kcyuen@hku.hk)					
Teachers Involved		(Prof K C Yuen, Statistics & Actuarial Science)					
Course Objectives		The main focus of this course is built on the concepts on financial mathematics. Practical applications of these concepts are also considered.					
Course Contents & Topics	schedule	This course covers: simple and compound interest; annuities certain; discounted cash flow analysis; amortization schedules and sinking funds; yield rates; bonds and related securities; practical applications such as real estate mortgage, short sales and term structure of interest rates.					
Course Learning	On succ	essful completion of this	course, students should be able to:				
Outcomes	CLO 1	solve practical problems	relating to annuities certain, simple and	d compound interest			
	CLO 2	carry out discounted cas	h flow analysis				
	CLO 3	apply amortization sched	dules and sinking funds to the practical	problems such as real esta	ate mortgage		
Pre-requisites (and Co-requisites and Impermissible combinations)	STAT26	Pass in (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or STAT2601 or (STAT1603 and any University level 2 course) or STAT2901; and Not for students who have passed in STAT2902, or have already enrolled in this course.

Course Co-ordinator	Statistics & Actuarial Science Dr D Lee, Statistics & Actuarial Science (leedav@hku.hk) (Dr D Lee, Statistics & Actuarial Science)							
Teachers Involved	(Dr D Lee, Statistics & Actuarial Science)							
Course Objectives	This course is designed for actuarial science students to receive finance component of VEE Accounting and Finance from the Society of Actuaries. The objective of this course is to introduce students to the fundamental principles of corporate finance. The course will provide students with a systematic framework within which to evaluate investment and financing decisions for corporations.							
Course Contents & Topics	The first part of the course will give an introduction to corporate finance and provide an overview of some topics covered in STAT2902 and STAT3615. These include financial markets and companies, time value of money, and measures and performance assessment of financial performance. The main part of the course will focus on some important topics of corporate finance including: portfolio theory, Markowitz mean-variance analysis, capital asser pricing model, weighted average cost of capital, market efficiency, capital structure and dividend policy, financial leverage and firm value, and option pricing models.							
Course Learning			of this course, students should be able to	:				
Outcomes			of a financial manager and the financial of		ation

STAT3905	Introduction to financial derivatives (6 credits)	Academic Year	2021			
Offering Department	Statistics & Actuarial Science	Quota				
Course Co-ordinator	Dr K C Cheung, Statistics & Actuarial Science (kccg@hku.hk)					
Teachers Involved	(Dr K C Cheung, Statistics & Actuarial Science)					
Course Objectives	This course aims at providing an understanding of the fundamental of are on basic trading and hedging strategies, and the no-arbitrage princi		itives. Emphases			
Course Contents & Topics	Derivatives; short-selling; forward contracts; call options; put option hedging; financial forwards and futures; commodity swaps; interest rate		ads and collars;			
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 define and recognize the definitions of terms commonly used in	derivatives markets				
	CLO 2 evaluate the payoff, profit, and properties of basic derivative contracts, including forwards, futures, options, and swaps					
	CLO 3 explain how derivative securities can be used as tools to manage	ge financial risk				

Pre-requisites	Pass in S	TAT2902; and							
(and Co-requisites	Not for students who have passed in STAT3618, or have already enrolled in this course; and								
and Impermissible	Not for students who have passed in FINA2322, or have already enrolled in this course; and								
combinations)	For BSc(Actuarial Science) students only.

Course Objectives	Natural language processing (NLP) is a subfield of artificial intelligence, focusing on understanding human language. In essence, NLP is interested in building a tool that can use language like humans. This course wi introduce the mathematical, statistical and computational challenges in natural language processing. It covers mai applications of NLP techniques and a range of models in structured prediction and deep learning. In this course students will gain a thorough introduction to cutting-edge machine learning and deep learning techniques for NLP.					
Course Contents & Topics	This course covers a broad range of topics in natural language processing (NLP), including text classification sentiment analysis, neural network, word embedding, sequence models, language models, neural encode decoder models, machine translation, question answering, and contextualized world representation. The underlyin techniques from probability, statistics, machine learning and deep learning will also be introduced.					
Course Learning			his course, students should be able to:	<u> </u>		
Outcomes	CLO 1	learn about the te	echniques behind modern NLP			
	CLO 2	implement basic	algorithms and methods on real-world	data		
	CLO 3	gain hands-on ex	xperience on building NLP models			
	CLO 4		ds to understand current research			
	CLO 5		nguistic concepts and tasks in NLP			
Pre-requisites (and Co-requisites and Impermissible combinations)			P2113 or COMP2119 or COMP2396). h deep learning or machine learning; str	rong programming skills (e	e.g., Python)

STAT4022	Omics data analysis (6 credits)	Academic Year	2021
Offering Department	Statistics & Actuarial Science	Quota	15

Course Co-ordinator	Dr D Y Zhang, Statistics & Actuarial Science (doraz@hku.hk)					
Teachers Involved	(Dr D Y Zhang, Statistics & Actuarial Science) (Dr Y Huang, Statistics & Actuarial Science)					
Course Objectives	This course introduces omics data acquisition techniques and emphasizes advanced statistical tools to analyze the high-throughput omics data. This course is designed for learners with basic background knowledge in molecular biology who are interested in different aspects of omics and bioinformatics. This course aims to introduce the tools and techniques needed to obtain, analyze, and interpret a variety of modern genome-scale data types.					
Course Contents & Topics	Introduction to molecular biology, omics, and high throughput technologies, analysis of microarray data, analysis of high-throughput data, experimental design commonly encountered in genomic data analysis, functional genomics, enrichment analysis.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes			current computational systems biology a	• •		
	C	latasets	les behind data pre-processing, quality	,	arge-scale biological	
			onal and statistical tools to analyze multip

Course Co-ordinator	Prof G Li, Statistics & Actuarial Science (gdli @hku.hk)						
Teachers Involved	(Prof G Li, Statistics & Actuarial Science)						
Course Objectives	climatolog series are different ty	A time series consists of a set of observations on a random variable taken over time. Time series arise naturally in climatology, economics, environment studies, finance and many other disciplines. The observations in a time series are usually correlated; the course establishes a framework to discuss this. This course distinguishes different type of time series, investigates various representations for the processes and studies the relative merits of different forecasting procedures. Students will analyse real time-series data on the computer.					
Course Contents & Topics				ctions; linear stationecking; seasonal m			
Course Learning	On succes	essful completion	on of this course, s	students should be	able to:		
Outcomes	CLO 1 recognize a stationary vs non-stationary time series						
	CLO 2 understand some basic properties of commonly used time series models such as AR (autoregressive), MA (moving average) and ARMA models						
	CLO 3 transform non-stationary time series into stationary ones						
	CLO 4 identify different time series models based on autocorrelation functions						
	CLO 5 fit a suitable AR, MA or ARMA model to real data using SAS (after transforming to stationarity if necessary)						
	CLO 6 perform goodness of fit tests for such models						
	CLO 7 do forecasting with these fitted time series models

STAT4607	Credit risk analysis (6 credits)	Academic Year	2021				
Offering Department	Statistics & Actuarial Science	Quota					
Course Co-ordinator	Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)						
Teachers Involved	(Dr K P Wat, Statistics & Actuarial Science)						
Course Objectives	Credit risk has always been a significant financial risk in the banking industry. It is related to the possibility of loss arising from defaults on debts, swaps, or other counterparty instruments. Credit risk may also result from a change in the value of an asset resulting from a change in the counterparty's creditworthiness. This course will introduce students to quantitative models for measuring and managing credit risk. It also aims to provide students with an understanding of the credit risk methodology used in the financial industry and the regulatory framework in which the credit risk models operate.						
Course Contents & Topics	Probabilities of default, recovery rates and loss given default; Default and c internal rating models; Credit portfolio models such as CreditMetrics, Credit approach; Credit derivatives.						
Course Learning	On successful completion of this course, students should be able to:						
Outcomes	CLO 1 understand the Basel requirements for credit risk						
	CLO 2 estimate credit scores using the logit model						
	CLO 3 understand and estimate default probabilities using various approaches such as Moody's KMV and the mortality method						
	CLO 4 understand the concept of credit Value-at-Risk and the CreditMetrics approach						
	CLO 5 estimate default correlations						
	CLO 6 assess credit rating systems						
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in STAT3618 or STAT3905 or STAT3910 or (FINA2322 and any University	/ level 3 course)

STAT4608	Market r	isk analysis (6 credits)	Academic Year	2021		
Offering Department	Statistics	& Actuarial Science	Quota			
Course Co-ordinator	Dr K Zhu,	Statistics & Actuarial Science (mazhuke@hku.hk)				
Teachers Involved	(Dr K Zhu	Statistics & Actuarial Science)				
Course Objectives	methods f	Financial risk management has experienced a revolution in the last decade thanks to the introduction of new methods for measuring risk, particularly Value-at-Risk (VaR). This course introduces modern risk management techniques covering the measurement of market risk using VaR models and financial time series models, and stress testing.				
Course Contents & Topics	factor map	Risk Measures; Value-at-Risk (VaR) models (parametric, Monte Carlo simulation and Historical simulation); Risk factor mapping; Advanced VaR models (GARCH-type models, extreme-value theory and normal-mixture); Principal Component Analysis and VaR; Backtesting and stress testing.				
Course Learning	On succes	ssful completion of this course, students should be able to:				
Outcomes	CLO 1	understand VaR and expected shortfall as risk measures				
	CLO 2	compute VaR and expected shortfall				
	CLO 3	model volatility using GARCH-type models				
	CLO 4	understand extreme-value theory				
	CLO 5	understand backtesting and stress testing				
(and Co-requisites and Impermissible combinations)	Pass in S	TAT4601 and (FINA2320 or STAT3609)				
Offer in 2021 - 2022	Y 2nd	I sem Offer in 2022 - 2023 : Y	Examination	May

STAT4610	Bayesian learning (6 credits)	Academic Year	2021
Offering Department	Statistics & Actuarial Science	Quota	
Course Co-ordinator	Prof G Yin, Statistics & Actuarial Science (gyin@hku.hk)		

		(Prof G Yin, Statistics & Actuarial Science) This course aims to introduce Bayesian methodologies and computational techniques of Markov Chain Monte				
Course Objectives		rse aims to introduce Bathods, and applications in		tational techniques of Ma	arkov Chain Monte	
Course Contents & Topics	This course covers the fundamental Bayesian formulation, prior elicitation, posterior inference. For Markov Chain Monte Carlo methods, the contents include the Gibbs sampler, the Metropolis-Hastings algorithm, approximate Bayesian computation, the Hamiltonian Monte Carlo algorithm. For more advanced Bayesian modeling, hierarchical models and nonparametric Bayes are covered.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1	generate samples	from any distribution			
	CLO 2	5 ,				
	CLO 3	apply MCMC meth	ods to real problems			
	CLO 4	develop nonparam	etric Bayesian models			
	CLO 5	apply Bayesian me	thods in machine learning tasks			
Pre-requisites (and Co-requisites and Impermissible combinations)			or STAT3603 or STAT3902			
Offer in 2021 - 2022		fer in 2022 - 2023 : Y		Examination		
Grade Descriptors (A+ to F)	A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.					
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.					
	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT4710	Capstone experience for statistics undergraduates (6 credits)	Academic Year	2021			
Offering Department	Statistics & Actuarial Science Quota 50					
Course Co-ordinator	Prof G Yin, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)					
Teachers Involved	(Various teachers as the assessors of oral presentations and written reports, Statistics & Actuarial Science)					
Course Objectives	This project-based course aims to provide students with capstone experience to formulate and investigate real life problems in the area of statistics, risk management, finance, climate, social science, medicine and scientific research by integrating and applying the statistical theories and quantitative techniques learnt in their junior university years.					
Course Contents & Topics	No formal teaching. Students are expected to devote 120-140 hours working or groups of three to five under the supervision of a teacher. Students are requivered two to three weeks before the end of the semester, and submit their final rule it aims to help the students to establish a good and solid foundation of life-	ired to give a preseport at the end of	sentation on their the semester.			
	students to equip with hands-on experience in solving real life problems stavariable(s) of interest, literature search, model formulation, data analysis or sin presentation of the results. Students will need to find an interesting topic of regarding the most recent research related to the problem, make suggestions even solve the problem identified in their project.	arting from identific nulation, technical their own, conduct	cation of the key report writing and literature search			
Course Learning	On successful completion of this course, students should be able to:					
Outcomes	CLO 1 formulate a problem using statistical or risk management ideas for a particular issue we are facing with and determine ways in which statistics/risk management can be used to solve the problems or to make predictions					
	CLO 2 integrate theory and practice, and to understand limitations of their curre	ent knowledge				
	CLO 3 work in a team and to collaborate with people with different background					
	CLO 4 express ideas effectively in both written and oral forms					
	CLO 5 develop further logical, critical thinking, creativity, technical report writin skills	g, communication	and consultation			
	CLO 6 advocate to others the appreciation of statistics/risk management as to its relevance to our daily life					
Pre-requisites (and Co-requisites and Impermissible	Students are expected to have satisfactorily completed at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics Majors. Students who are interested in taking the course should submit their applications to the Department.					
combinations)	This capstone course is only for students majoring in Decision Analytics/R mutually exclusive with STAT3799, STAT4766 and STAT4799. The earliest that a student is allowed to take this capstone course is their year 3		Statistics, and is

STAT7615	Advanced quantitative risk management and finance (6 Academic Year credits)				2021	
Offering Department	Statistics & Actuarial Science Quota					
Course Co-ordinator	Dr Z Zha					
Teachers Involved	(Dr Z Zhang, Statistics & Actuarial Science)					
Course Objectives	This course covers statistical methods and models of importance to risk management and finance and links finance theory to market practice via statistical modeling and decision making. Emphases will be put on empirical analyses to address the discrepancy between finance theory and market data.					
Course Contents & Topics	Contents include: Elementary Stochastic Calculus; Basic Monte Carlo and Quasi-Monte Carlo Methods; Variance Reduction Techniques; Simulating the value of options and the value-at-risk for risk management; Review of univariate volatility models; multivariate volatility models; Value-at-risk and expected shortfall; estimation, bactesting and stress testing; Extreme value theory for risk management.					
Course Learning	On successful completion of this course, students should be able to:					
Outcomes			ethods to determine the value of options	and other derivative secu	ırities	
			set of securities using appropriate models			
	CLO 3	estimate the value-a	t-risk under extreme value theory			
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in S	STAT4608

Degree Regulations

SCIENCE

SECTION X Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic year 2017-18 and thereafter, students admitted directly to the second year in the academic year 2018-19 and thereafter, and students admitted directly to the third year in the academic year 2019-20 and thereafter.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

"Syllabus" means courses taught by departments, centres, and schools, offered under a degree curriculum.

"Credits" or "credit-units" means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

¹ This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.

Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- Sc8 To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying weightings which are proportionate to their credit values²:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic year 2015-16 and 2016-17, students admitted directly to the second year in the academic year 2017-18, and students admitted directly to the third year in the academic years 2017-18 and 2018-19.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1¹ For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

"Science course" means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

"Advanced Science course" means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

"Course" means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

Curriculum requirements and progression in curriculum

Sc5

- (a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.
- (b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.
- (c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.
- (d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).
- (f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.
- (g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (h) Candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.

Advanced standing

Sc6 Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

- Sc8 To be eligible for the award of the BSc degree, candidates shall have:
- (a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;
- (b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as 'Pass', 'Fail' or 'Distinction') carrying equal weighting:

Class of honours	<u>CGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

REGULATIONS FOR FIRST DEGREE CURRICULA 1

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2019-20 and thereafter, and students admitted directly to the second year in the academic year 2020-21 and thereafter, and students admitted directly to the third year in the academic year 2021-22)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be

¹ These regulations are applicable to candidates admitted from 2019-20 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+)		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA 1

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2018-19, students admitted directly to the second year in the academic year 2019-20, and students admitted directly to the third year in the academic year 2020-21)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another

¹ These regulations are applicable to candidates admitted from 2018-19 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum\limits_{i}^{\Sigma} Course \ Credit \ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of

interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+)		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	T 488	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

<u>Class of honours</u>	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA 1

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2017-18, students admitted directed to the second year in the academic year 2018-19 and students admitted directly to the third year in the academic year 2019-20)

(See also General Regulations)

UG1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

¹ These regulations are applicable to candidates admitted from 2017-18 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of

assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁽b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.

⁽c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	r ass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values⁸:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁸ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

REGULATIONS FOR FIRST DEGREE CURRICULA¹

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic years in 2014-15, 2015-16 and 2016-17, students admitted directed to the second year in the academic year 2017-18, and students admitted directed to the third year in the academic years 2016-17, 2017-18 and 2018-19)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

¹ These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

(The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,

reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

- 3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.
 - (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
В-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

Class of honours	CGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2013-14, and students admitted directly to the third year in 2015-16)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units

٠

¹ These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year '2012 curriculum', the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

⁽The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year '2012 curriculum' can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)

as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include

and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The

number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

- (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

^{3 (}a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

⁵ Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG 7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (d) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (e) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁶:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	1		3.3
В	}	Good	3.0
B-	J		2.7
C+	1		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	1	D	1.3
D	ſ	Pass	1.0
F		Fail	0

(b) Special permission may be given by Senate for courses in individual curricula to be

⁶ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁷: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

<u>Class of honours</u>	<u>CGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁷ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.
