SECTION I Aim and Learning Outcomes

Degree : Bachelor of Arts and Sciences in Applied Artificial Intelligence

Aim : The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to recruit excellent students, equip them with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences.

Learning Outcomes of Applied AI Programme

By the end of this programme, students should be able to:

- apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (2) be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (4) communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (5) gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems
 (by means of coursework and tutorial classes and/or research-based project in the curriculum)

SECTION II Credit Unit Statement of the BASc(AppledAI) Degree Curriculum

1. General guideline for contact hour requirement in the BASc(AppliedAI) Degree Curriculum

- (a) A 6-credit course has around 120 total study hours, including contact hours, study time, assignment and assessment.
- (b) About 30% of the total study hours are actual contact hours in the form of a class, e.g. lecture and tutorial/discussion hours.
- (c) A 6-credit course has around 24-36 lecture hours.
- (d) For lecture-based courses, normally there will be tutorial/discussion sessions.
- (e) For courses employing a non-lecture or lab-based approach, e.g. IT-based or project-based courses, students are expected to devote about 120-180 hours for a 6-credit course, and 240-360 hours for a 12-credit course.
- (f) The total number of student learning hours is 4,800 hours.

2. Credit Unit Statement of the BASc(AppliedAl) Degree Curriculum

The BASc(AppliedAI) degree curriculum consists of three major types of courses based on the learning activities. The majority of courses in the programmes are 6 credits. Examples of the contact hour requirements for the three categories of courses are described as follows.

(a) Lecture-based courses (6 credits)

Contact hours: 24-36 hours of lectures and/or tutorials for 6 credits

These courses are taught predominantly by lectures and tutorials. Assessment is by a combination of examination (0-75%) and continuous assessment (25-100%). Continuous assessment tasks include written assignments (totaling no more than 8,000 words) such as essays and project reports, and oral presentations. The requirement for a 3-credit lecture-based course will be about one-half of that of a 6-credit lecture-based course. Details of the assessment tasks can be found in the description of individual courses.

(b) Lecture with laboratory component courses (6 credits)

Contact hours for 30-36 hours of lectures and/or tutorial

These courses are taught by a combination of lectures and laboratory/practical sessions. Assessment is by a combination of examination (0-50%) and continuous assessment (50-100%). Continuous assessment tasks include coursework (totalling no more than 8,000 words) such as assignments, essays, laboratory reports, and project reports, and oral presentations. Details of the assessment tasks can be found in the description of individual courses.

(c) Project-based courses (6 and 12 credits)

These courses aim at providing students with an opportunity to pursue their own research interest under the supervision of a teacher. The teacher normally meets with the student weekly to discuss project progress. Assessment task is normally through research reports or a dissertation (totalling no more than 10,000 words for a 6-credit course and 20,000 words for a 12-credit course). Oral presentation will form part of the assessment. Details of the assessment tasks can be found in the description of individual courses.

(d) Internship (6 credits)

Internships aim to offer students the opportunity to gain work experience related to their major of study. The teacher meets with the student regularly to discuss work progress. Students have to undertake at least 160 hours of internship work arranged formally. Assessment tasks (100%) normally include the following outputs: a written report of no more than 2000 words, feedback from the internship supervisor and an oral presentation on students' internship experience. Details of the assessment tasks can be found in the description of the individual course.

SECTION IV Equivalency of HKDSE and other qualifications

HUDGE	Card		Equivalent Q	ualification to	HKDSE	
HKDSE	Grade	IB	GCE	SATII	AP	Gao Kao (高考)
Biology	3 or above	Biology (SL/HL)	Biology (AL)	Biology	Biology	
Chemistry	3 or above	Chemistry (SL/HL)	Chemistry (AL)	Chemistry	Chemistry	
Physics	3 or above	Physics (SL/HL)	Physics (AL)	Physics	Physics B or C	Equivalent to fulfillment of all
Mathematics	2 or above	Mathematics (SL)/Mathematical Studies (SL)	Mathematics (AL)	Mathematics Level 1 or 2		HKDSE requirements
Mathematics + (M1 or M2)	2 or above	Mathematics (HL)/Mathematical Studies (HL)	Pure Mathematics (AL) Further Mathematics (AL)		Calculus AB or BC	

Table of Equivalence between HKDSE and Other Qualifications

Note:

HL: Higher Level

SL: Standard Level

AL: Advanced Level

Remarks:

For science students admitted through non-JUPAS scheme, the equivalent subject qualification(s) to HKDSE, if possessed, can be identified by the SIS for on-line course selection.

For any non-science students admitted through non-JUPAS scheme, they are still required to obtain the approval from the Course Selection Adviser (or designated Course Approver) of the course offering department/school via Science Online Application Submission System (OASS) https://webapp.science.hku.hk/intranet/OnlineFormUG.html even they have possessed the equivalent HKDSE subject qualification(s) to meet the course prerequisite requirement. Once approval is given, they need to forward it to their home faculties to add the course on-line.

Programme Title Bachelor of Arts and Sciences in Applied Artificial Intelligence Offered to students 2022 admitted to Year 1 in

Objectives:

The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to equip students with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences. Students will learn to develop the intellectual capacity essential for meeting new challenges and resolving new problems in the future.

Learning Outcomes:

By the end of this programme, students should be able to:

- PLO1: apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 2: be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 3 : acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 4 : communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 5: gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:

Major in Decision Analytics

1.

This Major will not be offered to non-BASc(AppliedAI) students as a second major.

Required courses of the Major in Applied Artificial Intelligence (96 credits)

•	<i>i</i>		•
Introductory Level	Disciplinary Core Courses (48 credits)		
APAI1001	Artificial intelligence: foundation, philosophy	and ethics	6)
COMP1117	Computer programming (6)		
COMP2119	Introduction to data structures and algorithms	s (6)	
COMP2120	Computer organization (6)		
MATH1013	University mathematics II (6)		
MATH2014	Multivariable calculus and linear algebra (6)		
STAT2601	Probability and statistics I (6)		
STAT2602	Probability and statistics II (6)		
Advanced Level Dis	ciplinary Core Courses (18 credits)		

2. COMP3340 Applied deep learning (6) **MATH3904** Introduction to optimization (6) STAT3612 Statistical machine learning (6)

3. Concentration (Disciplinary Electives) (24 credits) At least 24 credits selected from the following courses:

(For fulfilling the requirement of a concentration, students should choose at least 18 credits, with at least 6 credits of which should be at advanced-level, from the corresponding list)

n. Al Technold (a) Co

Concentration: Al	rechnology (at least 18 credits)
COMP3271	Computer graphics (6)
COMP3356	Robotics (6)
APAI3010	Image processing and computer vision (6)
APAI4011	Natural language processing (6)
A DA14040	High performance computing (6)

- APAI4012 High-performance computing (6)
- APAI4099 Special topics of applied AI (6)
- (b) Concentration: AI in Business and Finance (at least 18 credits) Electronic commerce technology (6)
 - COMP3320
 - Operations research I (6) MATH3901 MATH3906 Financial calculus (6)
 - STAT3613 Marketing analytics (6)
 - STAT4601 Time-series analysis (6)
 - APAI4099 Special topics of applied AI (6)

(c) Concentration: Al in Medicine (at least 18 credits)

- STAT3655 Survival analysis (6)
- Bayesian learning (6) STAT4610
- APAI3021 Modern biostatistics (6)
- APAI4022 Omics data analysis (6)
- Medical image analysis (6) APAI4023
- APAI4099 Special topics of applied AI (6)
- (d) Concentration: AI in Smart City (at least 18 credits) Theories and Global Trends in Urban Development (6) **URBS1003** Urban Problems, Interventions and Design Thinking (6) URBS1005 GEOG2090 Introduction to geographic information systems (6) GEOG3202 GIS in environmental studies (6)

GEOG3420	Transport and society (6)
APAI4099	Special topics of applied AI (6)
(e) Concentration:	Al in Neurocognitive Science (at least 18 credits)
PSYC1001	Introduction to psychology (6)
PSYC2051	Perception (6)
PSYC2066	Foundations of cognitive science (6)
APAI4099	Special topics of applied AI (6)
List of Other Elect	ive Courses:
COMP3250	Design and analysis of algorithms (6)
COMP3278	Introduction to database management systems (6)
MATH3601	Numerical analysis (6)
MATH3911	Game theory and strategy (6)
MATH3943	Network models in operations research (6)
STAT3600	Linear statistical analysis (6)
STAT3622	Data visualization (6)
STAT4602	Multivariate data analysis (6)
4. Capstone Requi	rement (6 credits)
At least 6 credits	selected from the following courses:
(If students take	the 12-credit 'Applied AI project', they do not need to take a 6-credit elective from the 'List of Other
Elective' Courses a	bove. On the other hand, students who do not take the 12-credit 'Applied AI project' are allowed to take a
course in one of the	Concentrations as an elective.)
APAI3799	Directed studies in Applied AI (6)
APAI4766	Applied AI internship (6)
APAI4798	Applied AI project (12)

1. Students are expected to be in full-time status for eight academic semesters (in additional to their 6-month or longer full-time internships) in order to fulfill the degree requirements.

2. Students may optionally take Majors or Minors outside the BASc(Applied AI) programme, provided that they fully satisfy the requirements.

3. Students are reminded to take 3 BASc core courses: BASC9001, DESN9002 and STAT1005 to fulfill the BASc core course requirement.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the programme in order to satisfy the degree graduation requirements.

Programme Title Bachelor of Arts and Sciences in Applied Artificial Intelligence Offered to students 2021 admitted to Year 1 in

Objectives:

The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to equip students with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences. Students will learn to develop the intellectual capacity essential for meeting new challenges and resolving new problems in the future.

Learning Outcomes:

Course Objectives								
Course Contents & Topics	proficience Common written ac for and u the Mooc skills and students	The Core University English (CUE) course aims to enhance first-year students' academic English language proficiency in the university context. CUE focuses on developing students' academic English language skills for the Common Core Curriculum. These include the language skills needed to understand and produce spoken a written academic texts, express academic ideas and concepts clearly and in a well-structured manner and sear for and use academic sources of information in their writing and speaking. Four online-learning modules through the Moodle platform on academic speaking, academic grammar, academic vocabulary, citation and reference skills and avoiding plagiarism will be offered to students to support their English learning. This course will he students to participate more effectively in their first-year university studies in English, thereby enriching their first-year university studies in English, thereby enriching their first-year university studies in English.						
Course Learning	year expe		his course, students should l	he able to:				
Outcomes	CLO 1 id de CLO 2 fo CLO 3 ai si	 On successful completion of this course, students should be able to: CLO 1 identify and distinguish between main ideas and supporting details in lectures and written texts at demonstrate an understanding of the arguments / facts expressed CLO 2 form and express personal opinions through critical reading and listening CLO 3 argue for and defend a position in a clear and structured way using academic sources, through writing an speaking CLO 4 demonstrate control of grammatical accuracy and lexical appropriacy in academic communication 						
Pre-requisites	NIL		· · ·	·····				
(and Co-requisites and Impermissible combinations)								
Offer in 2022 - 2023	Y 1st		offer in 2023 - 2024 : Y	Examination	No Exam			
Grade Descriptors (A+ to F)	A B	Excellent to outstanding result. Students are able to produce spoken and written academic texts which are at all times appropriately structured. Students can clearly and concisely explain academic concepts and critically argue for a detailed position. Students always use appropriate academic sources to support their ideas in writing and speaking. They cite and reference correctly at all times. Students demonstrate an ability to fully comprehend and critically interpret spoken and written texts. Written language contains very few, if any, systematic errors in grammar and vocabulary. Spoken language is always comprehensible and fluent. Good to very good result. Students almost always clearly and concisely explain academic concepts and almost always critically argue for a detailed position. Students almost always use appropriate academic sources to support their ideas in writting and						
	C	speaking. They cite and reference correctly with only a few non-systematic errors. Students can comprehend and interpret texts with ease, although they may miss some implied meanings and opinions. Written language is mostly accurate but contains a few systematic errors in complex grammar and vocabulary. Spoken language is mostly comprehensible and fluent. Satisfactory to reasonably good result. Spoken and written academic texts produced by students are sometimes not-well structured but there is some evidence of this ability. Students are sometimes unable to clearly and concisely explain academic concepts. While they can argue for a position, it is not very detailed and tend to be simplistic rather than critical. Students sometimes use sources which are nonacademic and/or not appropriate to support their ideas in writing and speaking. There are some systematic errors in citation and referencing but also evidence of correct systematic use. Students have some difficulty comprehending and critically interpreting texts. They can always understand the main ideas but may miss some of the writer's views and attitudes. Written language is some evidence of corroct of simple grammatical structures. Spoken language is generally						
		comprehensible and fluent but at times places strain on the listener.						
	D	Barely satisfactory result. Spoken and written academic texts produced by students are often inappropriately structured but there may be some evidence of this ability. Students are often unable to clearly and concisely explain academic concepts and argue for a position. There is some evidence of an ability to explain academic concepts but not to critically argue for a position. Students are nonacademic and/or not appropriate to support their ideas in writing and speaking. There are many systematic errors in citation and referencing however there is evidence of an understanding of some of the conventions of citation and referencing. Students often have difficulty comprehending and interpreting texts, sometimes failing to understand the main ideas and writer's views and attitudes. Written language is often inaccurate containing errors in a range of simple and complex grammar and vocabulary. Spoken language is only sometimes comprehensible and fluent, and strain is frequently placed on the listener.						
	Fail Unsatisfactory result. Productive skills are too limited to be able to successfully carry out spoken and written assessments. Texts are unstructured and unclear. Students are unable to follow and interpret texts. There are language errors in almost every sentence. Spoken language is often incomprehensible. Assessments may not have been attempted or contain plagiarism.

Professional and technical communication for mathematical Academic Year 2022						
	Quota					
n@hku.hk)						
d English Studies)						
This 6-credit English-in-the-Discipline course aims to develop students' professional and technical communication skills for disciplinary studies in mathematical sciences. There are two main components in the course: 1). Cas study report writing, 2). professional oral presentation. Students will learn rhetorical skills for presenting an explaining mathematical and statistical data and trends, and justifying analyses and recommendations convincing in both written and spoken communication. This will be achieved through analysing samples of case study report and presentations using a genre-based approach. Students of the BSc(Actuarial Science) and BASc(Applied A are required to take this course. Students who intend to major in decision analytics, mathematics, ris management, and statistics are strongly encouraged to take this course. Students from other science discipline						
the course:						
2. Professional oral presentation Students will learn rhetorical skills for presenting and explaining mathematical and statistical data and trends, and justifying analyses and recommendations convincingly in both written and spoken communication. This will be achieved through analysing samples of case study reports and presentations using a genre-based approach.						
ourse, students should be able to:						
matical and statistical data and trend	s using appropriate rhete	orical skills				
herent ideas with appropriate langua mendations convincingly in a case st ge learning needs, develop indepen	udy report and an oral p dent learning strategies	resentation				
own independent language learning	experience					
n 2023 - 2024 : Y	Examination	No Exam				
/e skills displaying a complete awareness of a						
critically analyse a case scenario, convincingl nt. Students are able to successfully evaluate language learning plans. Spoken language ge of grammar and vocabulary, with very few s ive skills displaying good awareness of au Students are able to analyse a case scenario nt. Students are able to evaluate their langua ans. Spoken language is comprehensible an	their language performance it is fully comprehensible and it ystematic errors. dience, purpose and structu , justify analyses and recomr age performance in most area d fluent. Written language co	n all areas and propos fluent. Written languag ure, although there ar nendations, and discus as and propose relevar intains a good range of				
grammar and vocabulary, making some systematic errors of language which generally do not impede understanding. Productive skills are generally appropriate for the intended audience. There is an overall sense that the work is communicatin successfully. Purposes are generally clear and tone is generally suitable. Students are generally able to analyse a case scenar and make recommendations, but the analysis and recommendations need more justification. Students are able to evaluate the language performance in a limited number of areas and proposed future language learning plans are rather vague. Spoke language is generally comprehensible and fluent. Written language contains inaccuracies when complex grammar ar vocabulary are used. Productive skills display weaknesses in awareness of purpose and audience. Tone is at times unsuitable. Students superficial analyse a case scenario, and the analyses and recommendations are vague. The structure is generally appropriate althoug links between sections may be lacking. Students are able to evaluate their language performance only in few areas and the proposed future language learning plans may not be relevant. Written language contains frequent errors in complex grammar ar vocabulary, but the written work can still be followed by a patient and sympathetic audience. Spoken language is comprehensib and quite fluent, but stain is at times placed on the listener.						
					Fail Productive skills show little or no awareness of audience or are too limited to be able to successfully carry out tasks. Students are unable to analyse a case scenario and make reasonable recommendations. Ideas are incoherent, vague and unstructured. Students are not able to evaluate their language performance and propose future language learning plans. There are frequent language errors in both simple and complex grammar in written work, which impede successful comprehension of ideas and points. Spoken language places considerable strain on the listener throughout. Assessments may not have been attempted or contain plaqiarism.

APAI4011	Natural	language processir	ng (6 credits)	Academic Yea	r 2022		
Offering Department	Statistics	& Actuarial Science		Quota	30		
Course Co-ordinator	Dr A S M	Lau, Statistics & Actuari	al Science (adelalau@hku.hk)				
Teachers Involved		Lau, Statistics & Actuari					
Course Objectives	Natural language processing (NLP) is a subfield of artificial intelligence, focusing on understanding hum language. In essence, NLP is interested in building a tool that can use language like humans. This course with introduce the mathematical, statistical and computational challenges in natural language processing. It covers may applications of NLP techniques and a range of models in structured prediction and deep learning. In this course students will gain a thorough introduction to cutting-edge machine learning and deep learning techniques for NLP						
Course Contents			ge of topics in natural language pro				
& Topics	models,	sentiment analysis, neural network, word embedding, sequence models, language models, neural encoder-decoder models, machine translation, question answering, and contextualized world representation. The underlying techniques from probability, statistics, machine learning and deep learning will also be introduced.					
Course Learning	On succe	ssful completion of this of	course, students should be able to:				
Outcomes	CLO 1		niques behind modern NLP				
	CLO 2		orithms and methods on real-world da	ita			
	CLO 3		rience on building NLP models				
	CLO 4	0	o understand current research				
	CLO 5		istic concepts and tasks in NLP				
Pre-requisites (and Co-requisites and Impermissible combinations)	Recomme	(13 or COMP2119 or COMP2396). eep learning or machine learning; stro ly.	ng programming skills (e.g., Python)		
Offer in 2022 - 2023	Y 2nd	sem Offer in 2023 - 2	2024 : Y	Examination	No Exam		
Grade Descriptors (A+ to F)	A						
	В	Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learnin outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to mos familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to appl knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Teachers Involved							
Course Objectives	body at o those in r is to prov processin informatio	Medical imaging has been a critical part in modern healthcare procedures. Its primary use is to visualize the huma body at different levels (e.g., at organ, tissue, cell, and molecular levels) using different imaging modalities (e.g. those in radiology, pathology, dermatology, ophthalmology, microscopy, and genetics). The objective of this cours is to provide students with an overview of the machine learning and deep learning methods in medical image processing and analytics. We will study many of the current methods used to enhance and extract usef information from medical images. A variety of medical image diagnostic scenarios will be used as examples the methods.					
Course Contents & Topics	methods) - An over - An over - Traditior - Basics o - Machine	 This course covers the basic concepts and computational methods (especially machine learning and deep learning methods) in medical image analysis. Topics covered in this course include but are not limited to: An overview of medical image analysis applications and their challenges, An overview of medical image analysis applications and their challenges, Traditional image processing techniques for medical image analysis, Basics of machine learning/deep learning techniques, Machine learning/deep learning for medical image analysis, and Case studies. 					
Course Learning		essful completion of this course, students should be able to:					
Outcomes		understand the basic concepts and motivation of medical im	o ,				
		earn about the various applications and challenges of medi					
		earn about the computational techniques behind modern m	0 /				
		gain hands-on experience on building practical computation	ai models for medical imaç	ge analysis			
Pre-requisites		pet expose to current research topics in medical imaging TAT2602 and (COMP2113 or COMP2119 or COMP2396).

Offering Department		Actuarial Science		Quota			
Course Co-ordinator	Dr E A L Li,	Statistics & Actuarial S	Science (ericli11@hku.hk)				
Teachers Involved	Mathematics	s, Computer Science)		• ·			
Course Objectives	internship v	This course is offered to BASc(AppliedAI) students who take on a minimum of 160 hours of project-dri internship work related to his/her major disciplines. It provides students with first-hand experience in applications of academic knowledge in a real-life work environment.					
Course Contents & Topics	his/her inte encountered	Upon completion of the internship, each student is required to submit a written report and to give a presentation of his/her internship experience. The report should emphasize important working/educational experience encountered by the student during his/her internship. In many situations, this would mean a report of the project(sthat the student has been involved in during his/her internship.

Course Objectives	This course builds on STAT2601, introducing further the concepts and methods of statistics. Emphasis is on the tw major areas of statistical analysis: estimation and hypothesis testing. Through the disciplines of statistic modelling, inference and decision making, students will be equipped with both quantitative skills and qualitative perceptions essential for making rigorous statistical analysis of real-life data.						
Course Contents					arge-sample theor		
& Topics	laws of lar 2. Estimat Lower Bou 3. Hypoth Pearson L	 Overview: random sample; sampling distributions of statistics; moment generating function; large-sample theory aws of large numbers and Central Limit Theorem; likelihood; sufficiency; factorisation criterion; Estimation: estimator; bias; mean squared error; standard error; consistency; Fisher information; Cramer-Ra Lower Bound; efficiency; method of moments; maximum likelihood estimator; Hypothesis testing: types of hypotheses; test statistics; p-value; size; power; likelihood ratio test; Neymar Pearson Lemma; generalized likelihood ratio test; Pearson chi-squared test; Wald tests; Confidence interval: confidence level; confidence limits; equal-tailed interval; construction based on hypothesis 					
Course Learning	On succes	sful completion of this of	course, students should be able to:				
Outcomes	CLO 1 a	oprehend the objectives	s of statistics and its relation to proba	bility theory			
			to a formal framework for statistical in				
			etric statistical inference by means of		is testing		
			ability of statistics in a broad range o	f subject areas			
Pre-requisites (and Co-requisites and Impermissible combinations)		AT2601; and dents who have passed	l in STAT3902, or already enrolled in	this course.

STAT3955	Survival	analysis (6 credit	s)	Academic Year	2022		
Offering Department	Statistics &	Actuarial Science		Quota			
Course Co-ordinator	TBC, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)						
Teachers Involved							
Course Objectives	This course is concerned with how models which predict the survival pattern of humans or other entities are established. This exercise is sometimes referred to as survival-model construction.						
Course Contents	The nature and properties of parametric and nonparametric survival models will be studied. Topics to be covered						
& Topics	include: the introduction of some important basic quantities like the hazard function and survival function; some commonly used parametric survival models; concepts of censoring and/or truncation; parametric estimation of the survival distribution by maximum likelihood estimation method; nonparametric estimation of the survival functions from possibly censored samples by means of the Kaplan-Meier estimator, the Nelson-Aalen estimator; and the kernel density estimator or the Ramlau-Hansen estimator and comparisons of k independent survival functions by means of the generalized log-rank test; parametric regression models; Cox's semiparametric proportional hazards regression model; and multivariate survival analysis.						
Course Learning		•	course, students should be able to:				
Outcomes	 CLO 1 acquire a clear understanding of the nature of failure time data or survival data, a generalization of the concept of death and life CLO 2 perform estimation for some commonly used survival models under different types of censoring mechanisms CLO 3 analyze survival data using the Cox's semiparametric proportional hazards model CLO 4 extend the Cox's model to a multivariate setup to accommodate multivariate survival data 						
Pre-requisites			•		•		
(and Co-requisites and Impermissible combinations)	Pass in STAT3902, or already enrolled in this course; or Pass in STAT3600 or STAT3901; Not for students who have passed in STAT3955, or already enrolled in this course.

Offering Department	Statistics &	Quota						
Course Co-ordinator	Prof G Li, Statistics & Actuarial Science (gdli@hku.hk)							
Teachers Involved	(Prof G Li,Statistics & Actuarial Science)							
Course Objectives	A time series consists of a set of observations on a random variable taken over time. Time series arise naturally in climatology, economics, environment studies, finance and many other disciplines. The observations in a time series are usually correlated; the course establishes a framework to discuss this. This course distinguishe different type of time series, investigates various representations for the processes and studies the relative merit of different forecasting procedures. Students will analyse real time-series data on the computer.							
Course Contents & Topics	Stationarity and the autocorrelation functions; linear stationary models; linear non-stationary modes; mode identification; estimation and diagnostic checking; seasonal models and forecasting methods for time series.							
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	 CLO 1 recognize a stationary vs non-stationary time series CLO 2 understand some basic properties of commonly used time series models such as AR (autoregressiv (moving average) and ARMA models CLO 3 transform non-stationary time series into stationary ones 							
			series models based o

STAT4602	Multivariate data analysis (6 credits) Academic Year 2022							
Offering Department	Statistics &	50						
Course Co-ordinator	Dr C Zhang, Statistics & Actuarial Science (zhangcys@hku.hk)							
eachers Involved	(Dr C Zhang, Statistics & Actuarial Science)							
Course Objectives	In many designed experiments or observational studies, the researchers are dealing with multivariate data, where each observation is a set of measurements taken on the same individual. These measurements are ofter correlated. The correlation prevents the use of univariate statistics to draw inferences. This course develops the statistical methods for analysing multivariate data through examples in various fields of application and hands-or experience with the statistical software SAS.							
Course Contents & Topics	Problems with multivariate data. Multivariate normality and transforms. Mean structure for one sample. Tests of covariance matrix. Correlations: Simple, partial, multiple and canonical. Multivariate regression. Principa components analysis. Factor analysis. Problems for means of several samples. Multivariate analysis of variance. Discriminant analysis. Classification. Multivariate linear model.							
Course Learning	On succes	sful completion of this c	ourse, students should be able to:					
Dutcomes	PF	ROC CANCORR, PROC	with main SAS procedures, such a PRINCOMP, PROC FACTOR, PRO	C DISCRIM, PROC CAN	NDISC and etc

SECTION VII Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF ARTS AND SCIENCES IN APPLIED ARTIFICIAL INTELLIGENCE [BASc(AppliedAI)]

For students admitted in 2019-2020 and thereafter

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

AAI 1 In these Regulations, and in the Syllabuses for the degree of BASc(AppliedAI), unless the context otherwise requires

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabus.

'Credits' means the value assigned to each course to indicate its study load relative to the total load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classrooms, and includes contact hours and time spent on assessment tasks and examinations.

'Pre-requisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

This regulation should be read in conjunction with UG 1 of the Regulations for First Degree Curricula.

Admission to the degree

AAI 2 To be eligible for admission to the degree of BASc(AppliedAI), candidates shall

- (a) comply with the General Regulations;
- (b) comply with the Regulations for First Degree Curricula; and
- (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

AAI 3 The curriculum shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years, unless otherwise permitted or required by the Board of the Faculty.

Curriculum requirements and progression in curriculum

- AAI 4 (a) Candidates shall satisfy the requirements prescribed in UG 5 of the Regulations for First Degree Curricula¹, except that in the case of the Common Core Curriculum, 24 credits shall be required, comprising one course from each Area of Inquiry. Specific requirements are spelt out in the syllabuses.
 - (b) Candidates shall complete not fewer than 240 credits of courses.

¹ Candidates who have achieved Level 5 or above in English Language in the Hong Kong Diploma of Secondary Education Examination (HKDSE), or equivalent, are exempted from taking "CAES1000 Core University English". In exceptional circumstances, strong candidates who have achieved Level 4 may be considered for admission to the curriculum but they will be required to take "CAES1000 Core University English" as supplementary credits and complete 246 credits for graduation from the University.

- (c) Candidates shall successfully complete not fewer than 96 credits of courses for the major, including 66 credits of core courses, 18-24 credits of disciplinary electives, 6-12 credits of capstone experience requirement.
- (d) Candidates shall successfully complete 18 credits of BASc core courses.
- (e) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the final semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (f) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in AAI 3, save as provided for under AAI 4(g).
- (g) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in AAI 3.

Selection of courses

AAI 5 Candidates who wish to change their selection of courses at the beginning of each semester may do so up to 2 weeks after the commencement of the semester. Requests for changes beyond the 2-week deadline will not be permitted, except for medical or other reasons accepted by the Board of the Faculty, and candidates' withdrawal from any course without permission will result in a fail grade.

Assessment

AAI 6 Candidates shall be assessed in each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits. Grades shall be awarded in accordance with UG 8 of the Regulations for First Degree Curricula.

AAI 7 Candidates are required to make up for failed courses in the following manner

- (a) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
- (b) re-submitting failed coursework, without having to repeat the same course of instruction; or
- (c) repeating the failed course by undergoing instruction and satisfying the assessments; or
- (d) for elective courses, taking another course in lieu and satisfying the assessment requirements.

AAI 8 Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

AAI 9 There shall be no appeal against the results of examinations and all other forms of assessment.

Discontinuation of studies

AAI 10 Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

- (a) failed to complete 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters; or
- (b) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester); or
- (c) exceeded the maximum period of registration specified in AAI 3.

Absence from examination

AAI 11 Candidates who are unable, because of illness, to be present at the written examinations of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the first semester of the following academic year. Any such application shall normally be made on the form prescribed within seven calendar days of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

Advanced standing

AAI 12 Advanced standing may be granted to candidates in recognition of studies successfully completed before admission to the University in accordance with UG 2 of the Regulations for First Degree Curricula. Advanced credits shall not normally be included in the calculation of the GPA unless otherwise permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

Credit transfer

AAI 13 Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

Award of the degree

AAI 14 To be eligible for award of the degree of BASc(AppliedAI), candidates shall have

- (a) achieved a Graduation GPA of 1.00 or above;
- (b) passed a minimum of 240 credits, comprising 96 credits of the required courses of the Applied Artificial Intelligence major as prescribed in the degree of BASc(Applied AI) curriculum, and 18 credits of BASc core courses; and
- (c) satisfied the requirements in UG 5 of the Regulations for First Degree Curricula, and specified in AAI 4(a).

Honours classification

AAI 15 (a) Honours classification shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduation GPA (GGPA) scores, with all courses taken (including failed courses) carrying weightings which are proportionate to their credit values:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in AAI 15(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all the degree requirements shall be posted on Faculty noticeboards.

REGULATIONS FOR FIRST DEGREE CURRICULA

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined — $\ensuremath{\mathsf{-\!\!\!\!\!\!\!\!\!\!}}$

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of

¹ These regulations are applicable to candidates admitted from 2022-23 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

 $GPA = \frac{\sum_{i} Course \ Grade \ Point \times Course \ Credit \ Value}{\sum_{i} Course \ Credit \ Value}$ (where 'i' stands for all passed and failed courses taken by the

student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the

Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total

credits normally required under the degree curricula of the candidates during their candidature at the University.

- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
 - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
 - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
 - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
 (b) successful completion of 6 and its in Chinese language enhancement⁴.
- (b) successful completion of 6 credits in Chinese language enhancement⁴;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits;
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum; and
- (e) successful completion of any other non-credit bearing courses as required.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

- (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.
- ⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

 $^{^2}$ Candidates who have achieved Level 5 or above in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, are exempted from this requirement, and Core University English is optional. Those who do not take this course should take an elective course in lieu, see *Regulation UG6*.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

UG 7 Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
 - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
 - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
 - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
 - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows⁵:

Grade		Standard	Grade Point
A+	ו		4.3
А	}	Excellent	4.0
A-	J		3.7
B+	ſ		3.3
В	}	Good	3.0
B-	J		2.7
C+	ו		2.3
С	}	Satisfactory	2.0
C-	J		1.7
D+	l	Pass	1.3
D	ſ	1 888	1.0
F		Fail	0

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

⁵ UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions⁶: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores (GGPA), with all courses taken (including failed courses) carrying weightings which are proportionate to their credit values⁷:

<u>Class of honours</u>	<u>GGPA range</u>
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

⁶ UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

⁷ For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.
