BSc

Syllabuses and Regulations

2021-2022

Faculty of Science
The University of Hong Kong
This booklet includes information on:

- **BSc Degree curriculum and graduation requirements**
- **List of courses and descriptions**
  A full list of Science courses and descriptions include information on course code, title, credit value, contents, semester offered, teaching and learning activities, assessment methods and grade descriptors.
- **Majors & Minors**
  Details of the Science Majors and Minors available for students.
- **Degree regulations**
  Rules that cover curriculum requirements and progression in curriculum, selection of courses, assessment, advanced standing, grading system and degree honours classification.
- **Teaching weeks**
  Teaching weeks show the dates of semesters, University holidays, revision and examination periods.

Further Information detailing instructions on the selection of courses, grading, graduation requirements, honours classification, application for advanced standing and exemption, etc, can be found in the *Handbook for BSc Students* available at http://www.scifac.hku.hk/ug/current

Updates on BSc Syllabuses and Regulations can be found at http://webapp.science.hku.hk/sr4/servlet/enquiry

BSc Degree Curriculum and Graduation Requirements

SCIENCE
1. A BSc Degree Curriculum

The Faculty of Science offers a number of Science majors leading to the award of a BSc degree.

All students admitted to the first year of the 6901 BSc programme in the academic year of 2021-2022 and thereafter are required to complete at least one Science major out of the 14 regular or 7 intensive Science majors as your primary major for the award of the BSc degree. In addition to the primary Science major, students may take a second major or a minor in a Science or non-Science discipline. Students should note that some non-Science majors and minors may require students to have achieved a minimum academic result before they are allowed to enroll in them.

(a) A typical BSc curriculum

To complete the BSc degree curriculum, you have to pass at least 240 credits, equivalent to 40 6-credit courses, normally spread over 4-years of full-time study. A BSc curriculum typically comprises:

(i) **UGS:**
- 2 English courses and 1 Chinese course for university language requirements (18 credits)
- 6 common core courses in 4 Areas of Inquiry (36 credits)

(ii) For regular Science major:
- 16 courses for the regular Science major including 2 Science Foundation courses, Disciplinary courses and capstone course (96 credits)
- A choice of 15 courses as elective courses, or to fulfill the requirements of a minor or a second major (90 credits)

OR

For intensive Science major (applicable to 2015-16 intake and thereafter):
- 24 - 25 courses for the intensive Science major including 2 Science Foundation courses, Disciplinary courses and capstone course(s) (144 - 150 credits)
- A choice of 6 - 7 courses as elective courses, or to fulfill the requirements of a minor (36 - 42 credits)

### Curriculum requirements (240 credits)

<table>

<td>Students taking one regular Science major</td>
<td>Students taking one regular Science major and one minor</td>
<td>Students taking double majors (one regular Science major and a 2nd major (a regular Science major or a non-Science major))</td>
<td>Students taking an intensive Science major</td>
<td>Students taking an intensive Science major and a minor</td>
</tr>
</tbody>
</table>

Primary regular Science Major: 96 credits
- 2 Science Foundation courses (SCNC1111 & SCNC1112, taken in Year 1), 13 Disciplinary courses and 1 Capstone course

Primary intensive Science Major*: 144 - 150 credits
- 2 Science Foundation courses (SCNC1111 & SCNC1112, taken in Year 1), 21 - 22 Disciplinary courses and 1 - 2 Capstone course(s)

**Common Core Courses:** 36 credits *
- 6 courses in 4 Areas of Inquiry (at least 1 and not more than 2 courses from each AoI)

**Language Courses:** 18 credits
- English: 12 credits [6 credits in Core University English (CAES1000), taken in Year 1] and 6 credits in English in the Discipline (CAES9820, taken in Year 2])
- Chinese: 6 credits (CSCI9001, taken in Year 3)

**Electives:** 90 credits
- To make up the 240 total credits

**Minor**: 36 – 48 credits

**Electives:** 42 – 54 credits
- To make up the 240 total credits

**2nd Major**: 72 – 96 credits
- To make up the 240 total credits

**Electives:** 36 - 42 credits
- To make up the 240 total credits

**Minor**: 36 – 48 credits
- To make up the 240 total credits

**Electives:** 0 – 6 credits
- To make up the 240 total credits

**Notes:**
- * Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111:
- Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1111. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112:

- Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
- Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
- Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1112. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

Student must select at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits. Common Core courses should be completed normally within the first three years of study.

Students who have been admitted to Year 1 in 2018-19 (and thereafter) and have achieved any one of the following qualifications are exempted from this requirement, and Core University English is optional. Those who do not take this course should take a 6-credit elective course in lieu:

- Level 5 or above in English Language in the HKDSE
- holder of a Bachelor’s degree from an English-medium university
- achieved Grade A or above in English Language GCE Advanced Level (AL) / Advanced Subsidiary Level (ASL)
- achieved an overall IELTS score of no less than 7 AND with all sub-scores no less than 6.5 on the Reading, Speaking, Listening and Writing Tests
- achieved an overall TOEFL Internet-based test score of no less than 94 AND no less than a 24 on the writing, a 20 on the speaking, a 20 on the listening, AND a 19 on the reading sections
- achieved in International Baccalaureate (IB) Grade 4 or above in English A1/ English Language A/ English A: Literature/ English A: Language and Literature (HL); or Grade 5 or above in English B/ English Language B (HL); or Grade 5 or above in English A1/ English Language A/ English A: Literature/ English A: Language and Literature (SL)
- achieved Grade 4 or above on the Advanced Placement (AP) English Language/ English Language and Composition/ English Literature and Composition Test
- achieved a NEW Scholastic Aptitude Test (SAT) score of 35 or above on both the Writing & Language Test and Reading Test (from 2016)
- achieved Grade B or above in H1 General Paper at the Singapore GCE A-level
- achieved Grade A or better in English language at Malaysia SPM examination
- achieved Grade A2 or better in Malaysia UEC-Senior English Language
- attained merit (3 points) or above in each set of credits in New Zealand NCEA Literacy (10 credits made up of 5 credits in reading and 5 credits in writing)
- achieved a score of 95% or better in English at All India Senior School Certificate Examination / Higher School Certificate
- achieved a final score of 90% or better in English at Grade 12 Canadian high school curriculum
- achieved Grade B or better in English Language at Sri Lanka Ordinary examination
- a score of 90 or better in English in the Russian Unified State Exam (Единый государственный экзамен, ЕГЭ, Yedinyi gosudarstvenniy ekzamen, EGE)
- Academic Speaking and Writing test conducted by CAES for students who have not taken any of the above tests
  - When applying to take the Academic Speaking and Writing Test, students should provide evidence to the home Faculty and the CAES1000 Course Coordinator that they were admitted to HKU using qualifications other than those included in the above list.
  - Applicants are required to show the evidence of those other qualifications to the assessor on the day of the Academic Speaking and Writing Test.
  - If any applicants failed to provide any evidence that they were admitted to HKU using qualifications other than those included in the above list provided by CAES, the CAES assessor has the rights not to allow the applicant to take the test.

To satisfy the Chinese language enhancement requirement, students are required to successfully complete the 6-credit Faculty-specific Chinese language enhancement course, except for:

(a) Putonghua-speaking students who should take CUND9002 (Practical Chinese and Hong Kong Society) or CUND9003 (Cantonese for Non-Cantonese Speaking Students). They may take the course in Year 1 or 2 if they so wish; and
(b) students who have not studied Chinese language during their secondary education or who have not attained the requisite level of competence in the Chinese language to take the Chinese language enhancement course should write to the Board of the Faculty to apply to be exempted from the Chinese language requirement, and

(i) take a 6-credit Cantonese or Putonghua language course offered by the School of Chinese especially for international and exchange students; OR

(ii) take an elective course in lieu.

^ Credit requirement for different majors or minors may vary.

* Students having a second major in Science are allowed to double-count the two Science Foundation Courses. The 12 credits can be made up by selecting any courses.

(b) Common Core Curriculum

The Common Core Curriculum is designed to provide key common learning experience for all HKU students and to broaden their horizons beyond their chosen disciplinary fields of study. It focuses on issues that have been, and continue to be, of deeply profound significance to mankind, the core intellectual skills that all HKU undergraduates should acquire and the core values that they should uphold. The Common Core Curriculum is divided into four Areas of Inquiry (AoIs): (1) Scientific and Technological and Big Data; (2) Arts and Humanities; (3) Global Issues; (4) China: Culture, State and Society. Students have to pass 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits. Common Core courses should be completed normally within the first three years of the BSc study and cannot be extra taken as free electives.

2. BSc Graduation Requirements and Honours Classification

(a) Award of a BSc degree

For students admitted to the first year in 2014-15 or before, and students admitted directly in the third year in 2016-17 or before:

To be eligible for the award of the degree of Bachelor of Science, students must fulfill the following requirements:

(i) Satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(ii) Passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.

* UG5 specifies that students have to successfully complete:

(a) 12 credits in English language enhancement, including 6 credits in Core University English (i.e. CAES1000) and 6 credits in an English in the Discipline course (i.e. CAES9820 Academic English for Science Students);

(b) 6 credits in Chinese language enhancement (i.e. CSC9001 Practical Chinese for Science Students);

(c) 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and

(d) a capstone experience as specified in the syllabuses of the degree curriculum.

For students admitted to the first year in 2015-16, 2016-17 and 2017-18, students admitted directly to the second year in 2017-18 and 2018-19, and students admitted directly to the third year in 2017-18, 2018-19 and 2019-2020:

To be eligible for the award of the degree of Bachelor of Science, students must fulfill the following requirements:

(i) Satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(ii) Passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the regular major programme, or 144 credits (or a higher credit requirement by the accredited bodies) of the prescribed course in the intensive major programme, of the BSc degree curriculum.
UG5 specifies that students have to successfully complete:

(a) 12 credits in English language enhancement, including 6 credits in Core University English¹ (i.e. CAES1000) and 6 credits in an English in the Discipline course² (i.e. CAES9820 Academic English for Science Students);

(b) 6 credits in Chinese language enhancement³ (i.e. CSCI9001 Practical Chinese for Science Students);

(c) 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁴ with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and

(d) a capstone experience as specified in the syllabuses of the degree curriculum.

For students admitted to the first year in 2018-19 and thereafter, and students admitted directly to the second year in 2019-20 and thereafter:

To be eligible for the award of the degree of Bachelor of Science, students must fulfill the following requirements:

(i) Satisfied the requirements in UG5 of the Regulations for First Degree Curricula⁵;

(ii) Passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the regular major programme, or 144 credits (or a higher credit requirement by the accredited bodies) of the prescribed course in the intensive major programme, of the BSc degree curriculum.

UG5 specifies that students have to successfully complete:

(a) 12 credits in English language enhancement, including 6 credits in Core University English¹ (i.e. CAES1000) and 6 credits in an English in the Discipline course² (i.e. CAES9820 Academic English for Science Students OR CAES9821 Professional and Technical Communication for Mathematical Sciences);

(b) 6 credits in Chinese language enhancement³ (i.e. CSCI9001 Practical Chinese for Science Students);

(c) 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁴ with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and

(d) a capstone experience as specified in the syllabuses of the degree curriculum.

(b) Honours Classification

For students admitted to the first year in 2016-17 or before, students admitted directly to the second year in 2017-18, and students admitted directly to the third year in 2018-19 or before:

Classification of honours are calculated using the cumulative grade point average CGPA as below:

<table>
<thead>
<tr>
<th>CGPA range</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours Division I</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Second Class Honours Division II</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

For students admitted to the first year in 2017-18 and thereafter, students admitted directly to the second year in 2018-19 and thereafter, and students admitted directly to the third year in 2019-2020 and thereafter:

Classification of honours are calculated using the graduation grade point average GGPA* as below:

<table>
<thead>
<tr>
<th>CGPA range</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours Division I</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Second Class Honours Division II</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>
For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

Credits granted for advanced standing in recognition of studies completed successfully before admission to the curriculum and credits transfer in recognition of studies completed on exchange during candidature at HKU are not included in the calculation of GPA.

1 Candidates who have been admitted to Year 1 in 2018-19 (and thereafter) and have achieved any one of the following qualifications are exempted from this requirement, and Core University English is optional. Those who do not take this course should take a 6-credit elective course in lieu, see Regulation UG6:

- Level 5 or above in English Language in the HKDSE
- holder of a Bachelor’s degree from an English-medium university
- achieved Grade A or above in English Language GCE Advanced Level (AL) / Advanced Subsidiary Level (ASL)
- achieved an overall IELTS score of no less than 7 AND with all sub-scores no less than 6.5 on the Reading, Speaking, Listening and Writing Tests
- achieved an overall TOEFL internet-based test score of no less than 94 AND no less than a 24 on the writing, a 20 on the speaking, a 20 on the listening, AND a 19 on the reading sections
- achieved in International Baccalaureate (IB) Grade 4 or above in English A1/ English Language A/ English A: Literature/ English A: Language and Literature (HL); or Grade 5 or above in English B/ English Language B (HL); or Grade 5 or above in English A1/ English Language A/ English A: Literature/ English A: Language and Literature (SL)
- achieved Grade 4 or above on the Advanced Placement (AP) English Language/ English Language and Composition/ English Literature and Composition Test
- achieved a NEW Scholastic Aptitude Test (SAT) score of 35 or above on both the Writing & Language Test and Reading Test (from 2016)
- achieved Grade B or above in H1 General Paper at the Singapore GCE A-level
- achieved Grade A or better in English language at Malaysia SPM examination
- achieved Grade A2 or better in Malaysia UEC-Senior English Language
- attained merit (3 points) or above in each set of credits in New Zealand NCEA Literacy (10 credits made up of 5 credits in reading and 5 credits in writing)
- achieved a score of 95% or better in English at All India Senior School Certificate Examination / Higher School Certificate
- achieved a final score of 90% or better in English at Grade 12 Canadian high school curriculum
- achieved Grade B or better in English Language at Sri Lanka Ordinary examination
- achieved a score of 90 or better in English in the Russian Unified State Exam (Единый государственный экзамен, ЕГЭ, Yedinyi gosudarstvennyi ekzamen, EGE)

- Academic Speaking and Writing test conducted by CAES for students who have not taken any of the above tests
  
  ➢ When applying to take the Academic Speaking and Writing Test, students should provide evidence to the home Faculty and the CAES1000 Course Coordinator that they were admitted to HKU using qualifications other than those included in the above list.
  
  ➢ Applicants are required to show the evidence of those other qualifications to the assessor on the day of the Academic Speaking and Writing Test.
  
  ➢ If any applicants failed to provide any evidence that they were admitted to HKU using qualifications other than those included in the above list provided by CAES, the CAES assessor has the rights not to allow the applicant to take the test.

2 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.

(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.

(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

3 Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take a 6-credit elective course in lieu, see Regulation UG6.
Capstone Requirement for Science Students

SCIENCE

SECTION II
Capstone experience is an integral part of the major programme which focuses on integration and application of knowledge and skills gained in the early years of study. The capstone course carries a minimum of 6 credits and students must complete this for fulfillment of the graduation requirements. Capstone course is normally taken in the senior years (year 3 or 4) of study. The earliest that a student is allowed to take a capstone course is their year 3 study. The capstone courses in each Science major may be different but a range of courses (e.g. research project, seminar, field work, internship and capstone project) is offered to suit individual student's needs and interests. The following courses are currently recognized as capstone courses in the different majors:

<table>
<thead>
<tr>
<th>BSc - Major</th>
<th>Recognized Capstone Courses</th>
</tr>
</thead>
</table>
| 1. Biochemistry | 1. BIOC3999 Directed studies in biochemistry (6)

Credit Unit Statement of
BSc Degree Curriculum

SECTION III

SCIENCE
1. General guideline for contact hours requirement in the BSc Degree Curriculum

(a) A 6-credit course has around 120-180 total study hours, including contact hours, study time, assignment and assessment.
(b) About 30% of the total study hours are actual contact hours in the form of a class, e.g. lecture hours.
(c) A 6-credit course has around 36 to 45 lecture hours.
(d) For lecture-based courses, normally there will be tutorial/discussion sessions.
(e) For courses employing a non-lecture or lab-based approach, e.g. field camp, IT-based or project-based courses, students are expected to devote about 120-180 hours for a 6-credit course and 240-360 hours for a 12-credit course.

2. Credit Unit Statement of the BSc Degree Curriculum

The BSc degree curriculum consists of six major types of courses based on the learning activities. The majority of courses in the programmes are 6 credits. Examples of the contact hours requirements for the six categories of courses are described as follows.

(a) Lecture-based courses (6 credits)
Contact hours for 6-credit course: 36 hours of lectures and 12 hours of tutorial/discussion
These courses are taught predominantly by lectures and tutorials. Assessment is by a combination of examination (0-80%) and continuous assessment (20-100%). Continuous assessment tasks include written assignments (totaling no more than 8,000 words) such as essays and project reports, and oral presentations. Details of the assessment tasks can be found in the description of individual courses.

(b) Lecture with laboratory component courses (6 credits)
Contact hours for 6-credit course: 24 hours of lectures, 24 hours of laboratory and 6 hours of tutorial
These courses are taught by a combination of lectures and laboratory/practical sessions. Assessment is by a combination of examination (0-70%) and continuous assessment (30-100%). Continuous assessment tasks include written assignments (totaling no more than 8,000 words) such as essays, laboratory reports, and project reports, and oral presentations. Details of the assessment tasks can be found in the description of individual courses.

(c) Laboratory and Workshop courses (6 credits)
Contact hours: 48 hours of laboratory or workshop and 12 hours of tutorial
These courses aim at enriching the student’s research skills and encourage group work through hands-on activities in which science research is introduced. Students are expected to spend an additional 100 hours on self-study, preparation work for the laboratory, and writing reports. Continuous assessment tasks (100%) include written assignments (totaling no more than 8,000 words) such as laboratory report for each experiment (normally no more than 10 experiments) and essays. Details of the assessment tasks can be found in the description of individual courses.

(d) Project-based courses (6 and 12 credits)
These courses aim at providing students with an opportunity to pursue their own research interest under the supervision of a teacher. The teacher normally meets with the student weekly to discuss project progress. Assessment task is normally through research reports or a dissertation (totaling no more than 10,000 words for a 6-credit course and 20,000 words for a 12-credit course). Oral presentation will form part of the assessment. Details of the assessment tasks can be found in the description of individual courses.

(e) Field camps (6 credits)
Contact hours: at least 72 hours in the field
These courses aim at giving practical experience in a variety of contexts. Fieldwork may be conducted locally or overseas during reading week or summer. Fieldwork courses have a small number of lecture hours but are predominately practical in nature. Assessment tasks (100%) normally include the following outputs (totaling no more than 8,000 words): field
assignments and reports (normally no more than 10 field assignments). Details of the assessment tasks can be found in the description of individual courses.

(f) Internship (6 credits)
Students have to undertake at least 160 hours of internship work. Internships aim to offer students the opportunity to gain work experience related to their major of study. The teacher meets with the student regularly to discuss work progress. Students have to undertake at least 160 hours of internship work arranged formally. Assessment tasks (100%) normally include the following outputs: a written report of no more than 2000 words and feedback from the internship supervisor and an oral presentation on students' internship experience. Details of the assessment tasks can be found in the description of individual courses.

3. The types of courses in the 14 Science Majors and 18 Science Minors are as follows:

<table>

This capstone course is only for students majoring in Decision Analytics/Risk Management/Statistics; and subject to the consent of course coordinator. This course is mutually exclusive with STAT4710. The earliest that a student is allowed to take this capstone course is their year 3 study.</td>

<td></td>
</tr>
</tbody>
</table>

**Note:**
- HL: Higher Level
- SL: Standard Level
- AL: Advanced Level

**Remarks:**

- For science students admitted through non-JUPAS scheme, the equivalent subject qualification(s) to HKDSE, if possessed, can be identified by the SIS for on-line course selection.

- For other non-science students admitted through non-JUPAS scheme, they are still required to obtain the approval (written/via email) from the Course Selection Adviser of the course offering department even they have possessed the equivalent HKDSE subject qualification(s) to meet the course prerequisite requirement. Once approval is given, they need to forward it to their home faculties to add the course on-line.
SECTION VI  Science Majors on offer in 2021/2022

Majors offered by Science Faculty

Majors

Astronomy (only for 2017 cohort or before)
Biochemistry
Biological Sciences
Biological Sciences (Intensive) (for BSc students (2017 cohort and thereafter) only)
Chemistry
Chemistry (Intensive) (for BSc students (2015 cohort and thereafter) only)
Decision Analytics (not for BASc(AppliedAI) students)
Earth System Science
Ecology & Biodiversity
Ecology & Biodiversity (Intensive) (for BSc students (2015 cohort and thereafter) only)
Environmental Science
Food & Nutritional Science
Geology
Geology (Intensive) (for BSc students (2015 cohort and thereafter) only)
Mathematics
Mathematics (Intensive) (for BSc students (2016 cohort and thereafter) only)
Mathematics/Physics (only for 2017 cohort or before)
Molecular Biology & Biotechnology
Molecular Biology & Biotechnology (Intensive) (for BSc students (2015 cohort and thereafter) only)
Physics
Physics (Intensive) (for BSc students (2016 cohort and thereafter) only)
Risk Management
Statistics
### Major Title
Major in Astronomy

### Offered to students
admitted to Year 1 in 2017

### Objectives:
The 21st century is the golden age for astronomy as space-based telescopes are being used to explore the Universe in all parts of the electromagnetic spectrum, including X-ray, ultraviolet, and infrared. The Major in Astronomy is intended for the students who would like to acquire a solid foundation on the subject. A large selection of elective courses is provided for students to pursue their interested specialization in the subject, including observational astronomy, planetary science, stellar physics, and interstellar medium. Students will attain professional knowledge in astronomy, research experience and the training of analytical thinking and quantitative reasoning during their studies. In addition to preparing students for postgraduate studies as professional astronomers, astronomy training can lead to local careers in museums, weather services, and the education sectors. Beyond Hong Kong, astronomy graduates have challenging careers in aerospace, communications, energy, and computer industries, as well as in astronomical observatories and space research centers.

### Learning Outcomes:
By the end of this programme, students should be able to:

| PLO 1 | identify and describe astrophysical phenomena with their professional knowledge (by means of coursework and tutorial classes in the curriculum) |
| PLO 2 | have developed their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and frequent opportunities in field activities in the curriculum) |
| PLO 3 | analyze astrophysical problems qualitatively and quantitatively, and recognize moral and ethical issues related to the discipline (by means of coursework, tutorial classes and research-based projects in the curriculum) |
| PLO 4 | communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum) |
| PLO 5 | apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies) |

### Impermissible Combinations:
Minor in Astronomy

### Required courses (96 credits)

#### 1. Introductory level courses (48 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**

<table>
<thead>
<tr>

<td>Introductory mechanics (6)</td>
<td></td>
</tr>
<tr>
<td>PHYS2265</td>
<td>Introductory quantum physics (6)</td>
<td></td>
</tr>
</tbody>
</table>

**Disciplinary Electives (6 Credits)**

At least 6 credits selected from the following courses:
- PHYS1111: Problem solving in physics (6)
- PHYS2055: Introductory relativity (6)
- PHYS2150: Methods in physics I (6)
- PHYS2155: Methods in physics II (6)
- PHYS2160: Introductory computational physics (6)
- PHYS2255: Introductory electricity and magnetism (6)

2. Advanced level courses (42 credits)

**Disciplinary Core Courses (18 credits)**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS3650</td>
<td>Observational astronomy (6)</td>
<td></td>

<tr>
<td>PHYS3651</td>
<td>The physical universe (6)</td>
<td></td>
</tr>
<tr>
<td>PHYS3652</td>
<td>Principles of astronomy (6)</td>
<td></td>
</tr>
</tbody>
</table>

**Disciplinary Electives (24 credits)**

At least 12 credits selected from courses in List A:

- List A
  - PHYS4650: Stellar physics (6)
  - PHYS4651: Selected topics in astrophysics (6)
  - PHYS4652: Planetary science (6)
  - PHYS4653: Cosmology (6)
  - PHYS4655: Interstellar medium (6)
  - PHYS7650: Stellar atmospheres (6)

Plus at least 12 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List B and those courses not selected to fulfill the requirements in List A and the capstone requirement.

**List B**

- PHYS3150: Theoretical physics (6)
- PHYS3151: Machine learning in physics (6)
- PHYS3350: Classical mechanics (6)
PHYS3351 Quantum mechanics (6)
PHYS3450 Electromagnetism (6)
PHYS3550 Statistical mechanics & thermodynamics (6)
PHYS3551 Introductory solid state physics (6)
PHYS3653 Astrophysics (6)
PHYS3660 Astronomy laboratory (6)
PHYS3750 Laser and spectroscopy (6)
PHYS3751 Physics of nanomaterials (6)
PHYS3760 Physics laboratory (6)
PHYS3850 Physical Optics (6) [previous title: Waves and optics (6)]
PHYS3851 Atomic and nuclear physics (6)
PHYS4150 Computational physics (6)
PHYS4151 Data analysis and modeling in physics (6)
PHYS4350 Advanced classical mechanics (6)
PHYS4351 Advanced quantum mechanics (6)
PHYS4450 Advanced electromagnetism (6)
PHYS4550 Advanced statistical mechanics (6)
PHYS4551 Solid state physics (6)
PHYS4654 General relativity (6)
PHYS4656 Advanced astrophysics (6)
PHYS4750 Experimental physics (6)
PHYS4850 Particle physics (6)
PHYS7350 Graduate classical mechanics (6)
PHYS7351 Graduate quantum mechanics (6)
PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7551 Graduate solid state physics (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   PHYS3999 Directed studies in physics (6)
   PHYS4966 Physics internship (6)
   PHYS4999 Physics project (12)

Notes:
1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.
5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.
6. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Astronomy
Offered to students admitted to Year 1 in 2016

Objectives:
The 21st century is the golden age for astronomy as space-based telescopes are being used to explore the Universe in all parts of the electromagnetic spectrum, including X-ray, ultraviolet, and infrared. The Major in Astronomy is intended for the students who would like to acquire a solid foundation on the subject. A large selection of elective courses is provided for students to pursue their interested specialization in the subject, including observational astronomy, planetary science, stellar physics, and interstellar medium. Students will attain professional knowledge in astronomy, research experience and the training of analytical thinking and quantitative reasoning during their studies. In addition to preparing students for postgraduate studies as professional astronomers, astronomy training can lead to local careers in museums, weather services, and the education sectors. Beyond Hong Kong, astronomy graduates have challenging careers in aerospace, communications, energy, and computer industries, as well as in astronomical observatories and space research centers.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe astrophysical phenomena with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

PLO 2: have developed their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and frequent opportunities in field activities in the curriculum)

PLO 3: analyze astrophysical problems qualitatively and quantitatively, and recognize moral and ethical issues related to the discipline (by means of coursework, tutorial classes and research-based projects in the curriculum)

The Major in Astronomy is intended for the students who would like to acquire a solid foundation on the subject. A large selection of elective courses is provided for students to pursue their interested specialization in the subject, including observational astronomy, planetary science, stellar physics, and interstellar medium. Students will attain professional knowledge in astronomy, research experience and the training of analytical thinking and quantitative reasoning during their studies. In addition to preparing students for postgraduate studies as professional astronomers, astronomy training can lead to local careers in museums, weather services, and the education sectors. Beyond Hong Kong, astronomy graduates have challenging careers in aerospace, communications, energy, and computer industries, as well as in astronomical observatories and space research centers.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1**: identify and describe astrophysical phenomena with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

**PLO 2**: have developed their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and frequent opportunities in field activities in the curriculum)

**PLO 3**: analyze astrophysical problems qualitatively and quantitatively, and recognize moral and ethical issues related to the discipline (by means of coursework, tutorial classes and research-based projects in the curriculum)

**PLO 4**: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

### Impermissible Combinations:
Minor in Astronomy

### Required courses (96 credits)

#### 1. Introductory level courses (48 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**
- **SCNC1111**: Scientific method and reasoning (6)
- **SCNC1112**: Fundamentals of modern science (6)

**Disciplinary Core Courses (30 credits)**
- **PHYS1250**: Fundamental physics (6)
- **PHYS1650**: Nature of the universe (6)
- **EASC2408**: Planetary geology (6)
- **PHYS2250**: Introductory mechanics (6)
- **PHYS2265**: Introductory quantum physics (6)

**Disciplinary Electives (6 credits)**

*At least 6 credits selected from the following courses:*
- **PHYS1150**: Problem solving in physics (6)
- **PHYS2055**: Introductory relativity (6)
- **PHYS2150**: Methods in physics I (6)
- **PHYS2155**: Methods in physics II (6)
- **PHYS2255**: Introductory electricity and magnetism (6)
- **PHYS2260**: Heat and waves (6)

#### 2. Advanced level courses (42 credits)

**Disciplinary Core Courses (18 credits)**
- **PHYS3650**: Observational astronomy (6)
- **PHYS3651**: The physical universe (6)
- **PHYS3652**: Principles of astronomy (6)

**Disciplinary Electives (24 credits)**

*At least 12 credits selected from courses in List A:*

**List A**
- **PHYS4650**: Stellar physics (6)
- **PHYS4651**: Selected topics in astrophysics (6)
- **PHYS4652**: Planetary science (6)
- **PHYS4653**: Cosmology (6)
- **PHYS4655**: Interstellar medium (6)
- **PHYS7650**: Stellar atmospheres (6)

*Plus at least 12 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List B and those courses not selected to fulfill the requirements in List A and the capstone requirement.*

**List B**
- **PHYS3150**: Theoretical physics (6)
- **PHYS3151**: Machine learning in physics (6)
- **PHYS3350**: Classical mechanics (6)
- **PHYS3351**: Quantum mechanics (6)

#### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- PHYS3999 Directed studies in physics (6)
- PHYS4966 Physics internship (6)
- PHYS4999 Physics project (12)

### Notes:

1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**: Major in Astronomy

**Offered to students admitted to Year 1 in**: 2014

**Objectives:**
The 21st century is the golden age for astronomy as space-based telescopes are being used to explore the Universe in all parts of the electromagnetic spectrum, including X-ray, ultraviolet, and infrared. The Major in Astronomy is intended for the students who would like to acquire a solid foundation on the subject. A large selection of elective courses is provided for students to pursue their interested specialization in the subject, including observational astronomy, planetary science, stellar physics, and interstellar medium. Students will attain professional knowledge in astronomy, research experience and the training of analytical thinking and quantitative reasoning during their studies. In addition to preparing students for postgraduate studies as professional astronomers, astronomy training can lead to local careers in museums, weather services, and the education sectors. Beyond Hong Kong, astronomy graduates have challenging careers in aerospace, communications, energy, and computer industries, as well as in astronomical observatories and space research centers.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe astrophysical phenomena with their professional knowledge (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: have developed their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and frequent opportunities in field activities in the curriculum)
- **PLO 3**: analyze astrophysical problems qualitatively and quantitatively, and recognize moral and ethical issues related to the discipline (by means of coursework, tutorial classes and research-based projects in the curriculum)
- **PLO 4**: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)
- **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

**Impermissible Combinations:**
Minor in Astronomy

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**

5. **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

### Impermissible Combinations:
Minor in Astronomy

### Required courses (96 credits)

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (36 credits)**
     - PHYS1250 Fundamental physics (6)
     - PHYS1650 Nature of the universe (6)
     - EASC2408 Planetary geology (6)
     - PHYS2250 Introductory mechanics (6)
     - PHYS2255 Introductory electricity and magnetism (6)
     - PHYS2265 Introductory quantum physics (6)

2. **Advanced level courses (42 credits)**
   - **Disciplinary Core Courses (18 credits)**
     - PHYS3650 Observational astronomy (6)
     - PHYS3651 The physical universe (6)
     - PHYS3652 Principles of astronomy (6)
   - **Disciplinary Electives (24 credits)**
     - At least 12 credits selected from courses in List A:
       - List A
         - PHYS4650 Stellar physics (6)
         - PHYS4651 Selected topics in astrophysics (6)
         - PHYS4652 Planetary science (6)
         - PHYS4653 Cosmology (6)
         - PHYS4655 Interstellar medium (6)
         - PHYS7650 Stellar atmospheres (6)
     - Plus at least 12 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List B and those courses not selected to fulfill the requirements in List A and the capstone requirement.

   - **List B**
     - PHYS3150 Theoretical physics (6)
     - PHYS3350 Classical mechanics (6)
     - PHYS3351 Quantum mechanics (6)
     - PHYS3450 Electromagnetism (6)
     - PHYS3550 Statistical mechanics & thermodynamics (6)
     - PHYS3551 Introductory solid state physics (6)
     - PHYS3750 Laser and spectroscopy (6)
     - PHYS3751 Physics of nanomaterials (6)
     - PHYS3850 Physical Optics (6)  
       - [previous title: Waves and optics (6)]
     - PHYS3851 Atomic and nuclear physics (6)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biochemistry
Offered to students admitted to Year 1 in 2021

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease. Elective courses extend this core knowledge to provide students with specialized insight into both basic and applied scientific endeavour in biochemistry, bioinformatics, molecular biology and molecular genetics. Throughout the curriculum there is an emphasis on experiential learning through laboratory practicals, problem-solving exercises, group-based learning, industrial experience, overseas exchange and research-based projects. These experiences are designed to develop students’ ability to read and interpret scientific data, to integrate knowledge with wider scientific theory, and to improve logical thinking and communication skills. The ultimate goal is to provide a comprehensive degree-level biochemistry education that equips students with the critical thinking, communication and analytical skills essential for them to play a leading role in society in the future.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the principles of biomolecular structure, metabolism, molecular interactions, molecular processes and their regulation, genetics and systems biology critical to contemporary biochemistry and molecular biology (by means of coursework and experiential learning)

PLO 2: apply biochemical, bioinformatics and molecular genetics technologies for new observations, measurements and analyses; and to design experiments that bring discovery and insight into the unknown (by means of laboratory-based and research project-based learning)

PLO 3: interpret and communicate scientific data and literature using appropriate scientific language (by means of literature-based coursework and debate)

PLO 4: work effectively as a team and synergize with their colleagues in a supportive manner (by means of group-based learning and by group-based problem solving)

PLO 5: recognize the interconnections of biochemistry with other disciplines in science, medicine and engineering, humanities and ethics, which are relevant for diverse working environment in the society (by means of multidisciplinary-based research projects, internship and debate)

Impermissible Combinations:
Minor in Biochemistry

Required courses (96 credits)
1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (24 credits)
   CHEM1042 General chemistry I (6)
   CHEM1043 General chemistry II (6)
   BIOC2600 Basic biochemistry (6)
   BIOL2220 Principles of biochemistry (6)
   CHEM2441 Organic chemistry I (6)
   Disciplinary Electives (6 credits)
   Take either BIOC2600 or BIOL2220 to fulfill this 24 credits requirement, but not both. BIOC2600 and BIOL2220 are mutually exclusive.
   BIOC1600 Perspectives in biochemistry (6)
   BIOL1110 From molecules to cells (6)

2. Advanced level courses (48 credits)
   Disciplinary Core Courses (30 credits)
   BIOC3601 Basic metabolism (6)
   BIOC3604 Essential techniques in biochemistry and molecular biology (6)
   BIOC3401 Molecular biology (6)
   BIOC4610 Advanced biochemistry (6)
   BIOC4613 Advanced techniques in biochemistry & molecular biology (6)
   Disciplinary Electives (18 credits)
   At least 18 credits selected from the following courses:
   BIOC3605 Sequence bioinformatics (6)
   BIOC3606 Molecular medicine (6)
   BIOC3402 Nutritional biochemistry (6)
   BIOC3406 Cell biology and cell technology (6)
   BIOC3403 Immunology (6)
   BIOC3404 Protein structure and function (6)
   BIOC3408 Genetics (6)
   CHEM3441 Organic chemistry II (6)
   BIOC4612 Molecular biology of the gene (6)
BIOL4417  'Omics' and systems biology (6)
CHEM4145  Medicinal chemistry (6)
CHEM4444  Chemical biology (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
- BIOL3999  Directed studies in biochemistry (6)
- BIOL4966  Biochemistry internship (6)
- BIOL4999  Biochemistry project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

5. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

6. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Major Title: Major in Biochemistry

Offered to students admitted to Year 1 in 2017

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease. Elective courses extend this core knowledge to provide students with specialized insight into both basic and applied scientific endeavour in biochemistry, bioinformatics, molecular biology and molecular genetics. Throughout the curriculum there is an emphasis on experiential learning through laboratory practicals, problem-solving exercises, group-based learning, industrial experience, overseas exchange and research-based projects. These experiences are designed to develop students’ ability to read and interpret scientific data, to integrate knowledge with wider scientific theory, and to improve logical thinking and communication skills. The ultimate goal is to provide a comprehensive degree-level biochemistry education that equips students with the critical thinking, communication and analytical skills essential for them to play a leading role in society in the future.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the principles of biomolecular structure, metabolism, molecular interactions, molecular processes and their regulation, genetics and systems biology critical to contemporary biochemistry and molecular biology (by means of coursework and experiential learning)

PLO 2: apply biochemical, bioinformatics and molecular genetics technologies for new observations, measurements and analyses; and to design experiments that bring discovery and insight into the unknown (by means of laboratory-based and research project-based learning)

PLO 3: interpret and communicate scientific data and literature using appropriate scientific language (by means of literature-based coursework and debate)

PLO 4: work effectively as a team and synergize with their colleagues in a supportive manner (by means of group-based learning and by group-based problem solving)

PLO 5: recognize the interconnections of biochemistry with other disciplines in science, medicine and engineering, humanities and ethics, which are relevant for diverse working environment in the society (by means of multidisciplinary-based research projects, internship and debate)

Impermissible Combinations:
Minor in Biochemistry

Required courses (96 credits)
1. Introductory level courses (42 credits)
   - SCNC1111: Scientific method and reasoning (6)
   - SCNC1112: Fundamentals of modern science (6)
   - CHEM1042: General chemistry I (6)
   - CHEM1043: General chemistry II (6)
   - BIOC2600: Basic biochemistry (6)
   - BIOL2220: Principles of biochemistry (6)
   - CHEM2441: Organic chemistry I (6)
   - BIOL1110: From molecules to cells (6)

2. Advanced level courses (48 credits)
   - BIOC3601: Basic metabolism (6)
   - BIOC3604: Essential techniques in biochemistry and molecular biology (6)
   - BIOL3401: Molecular biology (6)
   - BIOC4610: Advanced biochemistry (6)
   - BIOC4613: Advanced techniques in biochemistry & molecular biology (6)

Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
   - BIOC3605: Sequence bioinformatics (6)
   - BIOC3606: Molecular medicine (6)
   - BIOL3202: Nutritional biochemistry (6)
   - BIOL3402: Cell biology and cell technology (6)
   - BIOL3403: Immunology (6)
   - BIOL3404: Protein structure and function (6)
   - BIOL3408: Genetics (6)
   - CHEM3441: Organic chemistry II (6)
   - BIOC4612: Molecular biology of the gene (6)
BIOL4417  ‘Omics’ and systems biology (6)
CHEM4145  Medicinal chemistry (6)
CHEM4444  Chemical biology (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
BIOC3999  Directed studies in biochemistry (6)
BIOC4966  Biochemistry internship (6)
BIOC4999  Biochemistry project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (“disciplinary core”) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biochemistry
Offered to students admitted to Year 1 in 2016

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease. Elective courses extend this core knowledge to provide students with specialized insight into both basic and applied scientific endeavour in biochemistry, bioinformatics, molecular biology and molecular genetics. Throughout the curriculum there is an emphasis on experiential learning through laboratory practicals, problem-solving exercises, group-based learning, industrial experience, overseas exchange and research-based projects. These experiences are designed to develop students' ability to read and interpret scientific data, to integrate knowledge with wider scientific theory, and to improve logical thinking and communication skills. The ultimate goal is to provide a comprehensive degree-level biochemistry education that equips students with the critical thinking, communication and analytical skills essential for them to play a leading role in society in the future.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the principles of biomolecular structure, metabolism, molecular interactions, molecular processes and their regulation, genetics and systems biology critical to contemporary biochemistry and molecular biology (by means of coursework and experiential learning)

PLO 2: apply biochemical, bioinformatics and molecular genetics technologies for new observations, measurements and analyses; and to design experiments that bring discovery and insight into the unknown (by means of laboratory-based and research project-based learning)

PLO 3: interpret and communicate scientific data and literature using appropriate scientific language (by means of laboratory-based coursework and debate)

PLO 4: work effectively as a team and synergize with their colleagues in a supportive manner (by means of group-based learning and by group-based problem solving)

PLO 5: recognize the interconnections of biochemistry with other disciplines in science, medicine and engineering, humanities and ethics, which are relevant for diverse working environment in the society (by means of multidisciplinary-based research projects, internship and debate)

Impermissible Combinations:
Minor in Biochemistry

Required courses (96 credits)

1. Introductory level courses (42 credits)
   - Disciplinary Core Courses: Science Foundation Courses (12 credits)
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - Disciplinary Core Courses (24 credits)
     - CHEM1042 General chemistry I (6)
     - CHEM1043 General chemistry II (6)
     - BIOC2600 Basic biochemistry (6)
     - BIOL2220 Principles of biochemistry (6)
   - Disciplinary Electives (6 credits)
     - BIOC1600 Perspectives in biochemistry (6)
     - BIOL1110 From molecules to cells (6)

2. Advanced level courses (48 credits)
   - Disciplinary Core Courses (30 credits)
     - BIOC3601 Basic metabolism (6)
     - BIOC3604 Essential techniques in biochemistry and molecular biology (6)
     - BIOL3401 Molecular biology (6)
     - BIOC4610 Advanced biochemistry (6)
     - BIOC4613 Advanced techniques in biochemistry & molecular biology (6)
   - Disciplinary Electives (18 credits)
     - At least 18 credits selected from the following courses:
       - BIOC3605 Sequence bioinformatics (6)
       - BIOC3606 Molecular medicine (6)
       - BIOL3202 Nutritional biochemistry (6)
       - BIOL3402 Cell biology and cell technology (6)
       - BIOL3403 Immunology (6)
       - BIOL3404 Protein structure and function (6)
       - BIOL3408 Genetics (6)
       - CHEM3441 Organic chemistry II (6)
       - BIOC4612 Molecular biology of the gene (6)
3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
- BIOC3999 Directed studies in biochemistry (6)
- BIOC4966 Biochemistry internship (6)
- BIOC4999 Biochemistry project (12)

**Notes:**
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biochemistry
Offered to students admitted to Year 1 in 2015

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease.    BIOC4612 Molecular biology of the gene (6)
   CHEM4145 Medicinal chemistry (6)
   CHEM4444 Chemical biology (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biochemistry
Offered to students admitted to Year 1 in 2013

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease. Elective courses extend this core knowledge to provide students with specialized insight into both basic and applied scientific endeavour in biochemistry, bioinformatics, molecular biology and molecular genetics. Throughout the curriculum there is an emphasis on experiential learning through laboratory practicals, problem-solving exercises, group-based learning, industrial experience, overseas exchange and research-based projects. These experiences are designed to develop students’ ability to read and interpret scientific data, to integrate knowledge with wider scientific theory, and to improve logical thinking and communication skills. The ultimate goal is to provide a comprehensive degree-level biochemistry education that equips students with the critical thinking, communication and analytical skills essential for them to play a leading role in society in the future.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the principles of biomolecular structure, metabolism, molecular interactions, molecular processes and their regulation, genetics and systems biology critical to contemporary biochemistry and molecular biology (by means of coursework and experiential learning)

PLO 2: apply biochemical, bioinformatics and molecular genetics technologies for new observations, measurements and analyses; and to design experiments that bring discovery and insight into the unknown (by means of laboratory-based and research project-based learning)

PLO 3: interpret and communicate scientific data and literature using appropriate scientific language (by means of literature-based coursework and debate)

PLO 4: work effectively as a team and synergize with their colleagues in a supportive manner (by means of group-based learning and by group-based problem solving)

PLO 5: recognize the interconnections of biochemistry with other disciplines in science, medicine and engineering, humanities and ethics, which are relevant for diverse working environment in the society (by means of multidisciplinary-based research projects, internship and debate)

Impermissible Combinations:
Minor in Biochemistry

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (30 credits)
   BIOC1600 Perspectives in biochemistry (6)
   BIOL1110 From molecules to cells (6)
   CHEM1042 General chemistry I (6)
   BIOC2600 Basic biochemistry (6)
   CHEM2441 Organic chemistry I (6)
   Disciplinary Electives (6 credits)
   CHEM1043 General chemistry II (6)
   CHEM2541 Introductory physical chemistry (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (30 credits)
   BIOC3601 Basic metabolism (6)
   BIOC3604 Essential techniques in biochemistry and molecular biology (6)
   BIOL3401 Molecular biology (6)
   BIOC4610 Advanced biochemistry (6)
   BIOC4613 Advanced techniques in biochemistry & molecular biology (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   BIOC3605 Sequence bioinformatics (6)
   BIOC3606 Molecular medicine (6)
   BIOL3202 Nutritional biochemistry (6)
   BIOL3402 Cell biology and cell technology (6)
   BIOL3403 Immunology (6)
   BIOL3404 Protein structure and function (6)
   BIOL3408 Genetics (6)
   CHEM3441 Organic chemistry II (6)
   BIOC4612 Molecular biology of the gene (6)
   BIOC4617 'Omis' and systems biology (6)
   CHEM4145 Medicinal chemistry (6)
   CHEM4444 Chemical biology (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title Major in Biochemistry
Offered to students admitted to Year 1 in 2012

Objectives:
The Major in Biochemistry aims to provide students with both basic and advanced knowledge in contemporary biochemistry and molecular biology. Core courses in the curriculum emphasize equipping students with a general understanding of the fundamental ideas, principles and theories of biochemistry with particular focus on the relevance of biochemistry, molecular biology and genomics to biology, human health and disease. Elective courses extend this core knowledge to provide students with specialized insight into both basic and applied scientific endeavour in biochemistry, bioinformatics, molecular biology and molecular genetics. Throughout the curriculum there is an emphasis on experiential learning through laboratory practicals, problem-solving exercises, group-based learning, industrial experience, overseas exchange and research-based projects. These experiences are designed to develop students’ ability to read and interpret scientific data, to integrate knowledge with wider scientific theory, and to improve logical thinking and communication skills. The ultimate goal is to provide a comprehensive degree-level biochemistry education that equips students with the critical thinking, communication and analytical skills essential for them to play a leading role in society in the future.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the principles of biomolecular structure, metabolism, molecular interactions, molecular processes and their regulation, genetics and systems biology critical to contemporary biochemistry and molecular biology (by means of coursework and experiential learning)

PLO 2: apply biochemical, bioinformatics and molecular genetics technologies for new observations, measurements and analyses; and to design experiments that bring discovery and insight into the unknown (by means of laboratory-based and research project-based learning)

PLO 3: interpret and communicate scientific data and literature using appropriate scientific language (by means of literature-based coursework and debate)

PLO 4: work effectively as a team and synergize with their colleagues in a supportive manner (by means of group-based learning and by group-based problem solving)

PLO 5: recognize the interconnections of biochemistry with other disciplines in science, medicine and engineering, humanities and ethics, which are relevant for diverse working environment in the society (by means of multidisciplinary-based research projects, internship and debate)

Impermissible Combinations:
Minor in Biochemistry

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (30 credits)
   BIOC1600 Perspectives in biochemistry (6)
   BIOL1110 From molecules to cells (6)
   CHEM1042 General chemistry I (6)
   BIOC2600 Basic biochemistry (6)
   CHEM2441 Organic chemistry I (6)

   Disciplinary Electives (6 credits)
   CHEM1043 General chemistry II (6)
   CHEM2541 Introductory physical chemistry (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (30 credits)
   BIOC3601 Basic metabolism (6)
   BIOC3604 Essential techniques in biochemistry and molecular biology (6)
   BIOL3401 Molecular biology (6)
   BIOC4610 Advanced biochemistry (6)
   BIOC4613 Advanced techniques in biochemistry & molecular biology (6)

   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   BIOC3605 Sequence bioinformatics (6)
   BIOC3606 Molecular medicine (6)
   BIOL3202 Nutritional biochemistry (6)
   BIOL3402 Cell biology and cell technology (6)
   BIOL3403 Immunology (6)
   BIOL3404 Protein structure and function (6)
   BIOL3408 Genetics (6)
   CHEM3441 Organic chemistry II (6)
   BIOC4612 Molecular biology of the gene (6)
   CHEM4145 Medicinal chemistry (6)
   CHEM4444 Chemical biology (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences
Offered to students admitted to Year 1 in 2021

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology) and will undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110 From molecules to cells (6)
   BIOL1309 Evolutionary diversity (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2220 Principles of biochemistry (6)
   BIOL2306 Ecology and evolution (6)
   BIOC2600 Basic biochemistry (6)
   Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

2. Advanced level courses (at least 42 credits)
   Disciplinary Electives (42 credits)
   (A) Genetics, molecular and cell biology (at least 12 credits selected from area A)
   BIOL3401 Molecular biology (6)
   BIOL3402 Cell biology and cell technology (6)
   BIOL3404 Protein structure and function (6)
   BIOL3408 Genetics (6)

   (B) Ecology, systematics and evolution (at least 12 credits selected from area B)
   BIOL3301 Marine biology (6)
   BIOL3302 Systematics and phylogenetics (6)
   BIOL3303 Conservation biology (6)
   BIOL3319 Tropical terrestrial ecology (6)
   BIOL3506 Evolutionary biology (6)
   BIOL3314 Plant structure and evolution (6)
   ENVS3202 Plant physiology and climate change (6)
   BIOL4411 Plant and food biotechnology (6)

   (C) Physiology and organismic biology (at least 18 credits with 6 credits from each of List I, II & III)
   List I
   BIOL3105 Animal physiology and environmental adaptation (6)
   BIOL3205 Human physiology (6)
   BIOL3403 Immunology (6)
   BIOL3406 Reproduction and reproductive biotechnology (6)
   BIOL3503 Endocrinology: human physiology II (6)
   List II
   BIOL3314 Plant structure and evolution (6)
   ENVS3202 Plant physiology and climate change (6)
   BIOL4411 Plant and food biotechnology (6)
### List III

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit advanced level course (disciplinary electives) in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit advanced level course (disciplinary electives) in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences  
Offered to students admitted to Year 1 in 2020  

Objectives:  
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology) and will undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:  
By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

Impermissible Combinations:  
Major in Biological Sciences (Intensive)  
Major in Ecology & Biodiversity (Intensive)  
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (96 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (36 credits)
- BIOL1110 From molecules to cells (6)

#### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

#### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences
Offered to students admitted to Year 1 in 2019

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology) and will undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand concepts underpinning advances in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: evaluate diverse threads of enquiry in science, and identify the value of datasets and written output (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: interpret scientific data from a range of sources and explain trends observed (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: demonstrate independent and critical thinking and appreciate moral and ethical issues related to biological sciences (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: communicate in a professional capacity with educators, business, media and the scientific community (by means of coursework, tutorial classes, project-based and presentation opportunities in the curriculum)

PLO 6: be prepared to enter employment as professional scientists, educators and managers (by means of coursework, tutorial classes, laboratory-based, project-based and capstone learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110 From molecules to cells (6)
   BIOL1309 Evolutionary diversity (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2220 Principles of biochemistry (6)
   BIOL2306 Ecology and evolution (6)
   BIOC2600 Basic biochemistry (6)

   Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

2. Advanced level courses (at least 42 credits)
   Disciplinary Electives (42 credits)
   (A) Genetics, molecular and cell biology (at least 12 credits selected from area A)
   BIOL3401 Molecular biology (6)
   BIOL3402 Cell biology and cell technology (6)
   BIOL3404 Protein structure and function (6)
   BIOL3405 Genetics (6)

   (B) Ecology, systematics and evolution (at least 12 credits selected from area B)
   BIOL3301 Marine biology (6)
   BIOL3302 Systematics and phylogenetics (6)
   BIOL3303 Conservation biology (6)
   BIOL3319 Tropical terrestrial ecology (6)
   BIOL3506 Evolutionary biology (6)

   (C) Physiology and organismic biology (at least 18 credits with 6 credits from each of List I, II & III)
   List I
   BIOL3105 Animal physiology and environmental adaptation (6)
   BIOL3205 Human physiology (6)
   BIOL3403 Immunology (6)
   BIOL3406 Reproduction and reproductive biotechnology (6)
   BIOL3503 Endocrinology: human physiology II (6)

   List II
   BIOL3301 Marine biology (6)
   BIOL3302 Systematics and phylogenetics (6)
   BIOL3303 Conservation biology (6)
   BIOL3319 Tropical terrestrial ecology (6)
   BIOL3506 Evolutionary biology (6)

   List III
   BIOL3105 Animal physiology and environmental adaptation (6)
   BIOL3205 Human physiology (6)
   BIOL3403 Immunology (6)
   BIOL3406 Reproduction and reproductive biotechnology (6)
   BIOL3503 Endocrinology: human physiology II (6)
List II

BIOL3107  Plant physiology (6)  Take either BIOL3107 or ENVS3202 to fulfill this 6 credits requirement in List II, but not both. BIOL3107 and ENVS3202 are mutually exclusive.

BIOL3314  Plant structure and evolution (6)

ENVS3202  Plant physiology and climate change (6)  Take either BIOL3107 or ENVS3202 to fulfill this 6 credits requirement in List II, but not both. BIOL3107 and ENVS3202 are mutually exclusive.

BIOL4411  Plant and food biotechnology (6)

List III

BIOL3109  Environmental microbiology (6)

BIOL3203  Food microbiology (6)

BIOL3508  Microbial physiology and biotechnology (6)

BIOL4401  Medical microbiology and applied immunology (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

BIOL3994  Directed studies in biological sciences (6)

BIOL4964  Biological sciences internship (6)

BIOL4994  Biological sciences project (12)

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**: Major in Biological Sciences  
**Offered to students admitted to Year 1 in**: 2018

### Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. </tbody>
</table>

Take either BIOL3501 or BIOL3506 to fulfill this 12 credits requirement, but not both. BIOL3501 and BIOL3506 are mutually exclusive.

**(C) Physiology and organismic biology (at least 18 credits with 6 credits from each of List I, II & III)**
### List I
- BIOL3105 Animal physiology and environmental adaptation (6)
- BIOL3205 Human physiology (6)
- BIOL3403 Immunology (6)
- BIOL3406 Reproduction and reproductive biotechnology (6)
- BIOL3503 Endocrinology: human physiology II (6)

### List II
- BIOL3107 Plant physiology (6)
  - Take either BIOL3107 or ENVS3202 to fulfill this 6 credits requirement in List II, but not both. BIOL3107 and ENVS3202 are mutually exclusive.
- BIOL3314 Plant structure and evolution (6)
- ENVS3202 Plant physiology and climate change (6)
  - Take either BIOL3107 or ENVS3202 to fulfill this 6 credits requirement in List II, but not both. BIOL3107 and ENVS3202 are mutually exclusive.
- BIOL4411 Plant and food biotechnolo (6)

### List III
- BIOL3109 Environmental microbiology (6)
- BIOL3203 Food microbiology (6)
- BIOL3508 Microbial physiology and biotechnology (6)
- BIOL4401 Medical microbiology and applied immunology (6)

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- BIOL3994 Directed studies in biological sciences (6)
- BIOL4964 Biological sciences internship (6)
- BIOL4994 Biological sciences project (12)

### Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences
Offered to students admitted to Year 1 in 2017

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology) and will undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- BIOL3994  Directed studies in biological sciences
- BIOL4964  Biological sciences internship
- BIOL4994  Biological sciences project

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title Major in Biological Sciences
Offered to students admitted to Year 1 in 2016

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology) and will undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand concepts underpinning advances in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: evaluate diverse threads of enquiry in science, and identify the value of datasets and written output (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: interpret scientific data from a range of sources and explain trends observed (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: demonstrate independent and critical thinking and appreciate moral and ethical issues related to biological sciences (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: communicate in a professional capacity with educators, business, media and the scientific community (by means of coursework, tutorial classes, project-based and presentation opportunities in the curriculum)

PLO 6: be prepared to enter employment as professional scientists, educators and managers (by means of coursework, tutorial classes, laboratory-based, project-based and capstone learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences
Offered to students admitted to Year 1 in 2015

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further allowed to specialize in areas such as microbiology, genetics & cytology, physiology & homeostasis, or diversity of life & environmental biology and undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand concepts underpinning advances in cell biology and genetics, physiology and systems biology, diversity of life and environmental biology, and applied biology (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: evaluate diverse threads of enquiry in science, and identify the value of datasets and written output (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: interpret scientific data from a range of sources and explain trends observed (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: demonstrate independent and critical thinking and appreciate moral and ethical issues related to biological sciences (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: communicate in a professional capacity with educators, business, media and the scientific community (by means of coursework, tutorial classes, project-based and presentation opportunities in the curriculum)

PLO 6: be prepared to enter employment as professional scientists, educators and managers (by means of coursework, tutorial classes, laboratory-based, project-based and capstone learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (96 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (36 credits)
BIOL1110 From molecules to cells (6)
BIOL1309 Evolutionary diversity (6)
BIOL2102 Biostatistics (6)
BIOL2103 Biological sciences laboratory course (6)
BIOL2220 Principles of biochemistry (6)
BIOL2220 and BIOC2600 are mutually exclusive.
BIOL2306 Ecology and evolution (6)
BIOL2600 Basic biochemistry (6)
BIOL2600 and BIOC2600 are mutually exclusive.

2. Advanced level courses (at least 42 credits)

Disciplinary Electives (42 credits)
Students must select at least 6 credits from each of the following area A, B, C & D:

(A) Genetics and cell biology
BIOL3401 Molecular biology (6)
BIOL3402 Cell biology and cell technology (6)
BIOL3403 Immunology (6)
BIOL3408 Genetics (6)

(B) Physiology and systems biology
BIOL3105 Animal physiology and environmental adaptation (6)
BIOL3107 Plant physiology (6)
BIOL3108 Microbial physiology (6)
BIOL3205 Human physiology (6)
BIOL3508 Microbial physiology and biotechnology (6)
BIOL3108 and BIOL3508 are mutually exclusive.

(C) Diversity of life and environmental biology
BIOL3109 Environmental microbiology (6)

Take either BIOL3108 or BIOL3508 to fulfill this 42 credits requirement, but not both. BIOL3108 and BIOL3508 are mutually exclusive.

Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

Take either BIOL2220 and BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further allowed to specialize in areas such as microbiology, genetics & cytology, physiology & homeostasis, or diversity of life & environmental biology and undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand concepts underpinning advances in cell biology and genetics, physiology and systems biology, diversity of life and environmental biology, and applied biology (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: evaluate diverse threads of enquiry in science, and identify the value of datasets and written output (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: interpret scientific data from a range of sources and explain trends observed (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: demonstrate independent and critical thinking and appreciate moral and ethical issues related to biological sciences (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: communicate in a professional capacity with educators, business, media and the scientific community (by means of coursework, tutorial classes, project-based and presentation opportunities in the curriculum)

PLO 6: be prepared to enter employment as professional scientists, educators and managers (by means of coursework, tutorial classes, laboratory-based, project-based and capstone learning in the curriculum)

Impermissible Combinations:
NIL

Required courses (96 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- **BIOL4401** Medical microbiology and applied immunology (6)
- **BIOL3994** Directed studies in biological sciences (6)
- **BIOL4964** Biological sciences internship (8)
- **BIOL4994** Biological sciences project (12)

### Notes:

1. **BIOL1111** Introductory Microbiology is not offered from 2015-16. Students should take either **BIOL2220** Principles of biochemistry or **BIOC2600** Basic biochemistry as a replacement, both **BIOL2220** and **BIOC2600** are mutually exclusive.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include **SCNC1111** Scientific method and reasoning (6 credits) and **SCNC1112** Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including **SCNC1111** & **SCNC1112**) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences
Offered to students admitted to Year 1 in 2013

Objectives:
This Major is designed for students seeking a broad-based training in modern biology. Students are guided in an inquiry-driven learning environment to appreciate the major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The programme is highly flexible as students can select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further allowed to specialize in areas such as microbiology, genetics & cytology, physiology & homeostasis, or diversity of life & environmental biology and undertake experiential learning activities. The diverse learning experience exposes students to problem-based learning, and an exciting array of laboratory and field techniques. Students will also be able to acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major applies modern scientific inquiry to prepare graduates for employment as professionals in a variety of careers or for postgraduate study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: Understand concepts underpinning advances in cell biology and genetics, physiology and systems biology, diversity of life and environmental biology, and applied biology (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: Evaluate diverse threads of enquiry in science, and identify the value of datasets and written output (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: Interpret scientific data from a range of sources and explain trends observed (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: Demonstrate independent and critical thinking and appreciate moral and ethical issues related to biological sciences (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: Communicate in a professional capacity with educators, business, media and the scientific community (by means of coursework, tutorial classes, project-based and presentation opportunities in the curriculum)

PLO 6: Be prepared to enter employment as professional scientists, educators and managers (by means of coursework, tutorial classes, laboratory-based, project-based and capstone learning in the curriculum)

Impermissible Combinations:
NIL

Required courses (96 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**
Major in Biological Sciences (Intensive)

**Offered to students**
admitted to Year 1 in 2021

**Objectives:**
This major is designed for students seeking a broad-based training in conventional and modern biology. Students are guided in a stimulating learning environment to explore major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The curriculum allows students to select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology). Students are engaged in scientific learning through a wide range of laboratory and field work. They will acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major prepares graduates for employment as professionals in a variety of careers or for postgraduate study. The intensive major includes additional coursework and a compulsory capstone research project. It is designed for students with a strong desire to acquire knowledge with sufficient depth and breadth in biological sciences.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

**Learning Outcomes:**
By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology, and to appraise the related ethical and moral issues (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: equip with sufficient knowledge in chemistry for application within a biological context (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 5: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

**Impermissible Combinations:**
Major in Biological Sciences
Major in Ecology & Biodiversity
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology
Major in Molecular Biology & Biotechnology (Intensive)

**Required courses (144 credits)**

1. **Introductory level courses (60 credits)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (48 credits)**
   - BIOL1110 From molecules to cells (6)
   - BIOL1309 Evolutionary diversity (6)
   - CHEM1042 General chemistry I (6)
   - CHEM1043 General chemistry II (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2103 Principles of biochemistry (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOL2306 Ecology and evolution (6)
   - BIOC2600 Basic biochemistry (6)

2. **Advanced level courses (72 credits)**

   **Disciplinary Electives (72 credits with at least 18 credits of Level 4XXX courses)**

   **(A) Genetics, molecular and cell biology (at least 12 credits selected from area A)**
   - BIOL3401 Molecular biology (6)
   - BIOL3402 Cell biology and cell technology (6)
   - BIOL3404 Protein structure and function (6)
   - BIOL3408 Genetics (6)
   - BIOL4416 Stem cells and regenerative biology (6)
   - BIOL4417 'Omic's and systems biology (6)

   **(B) Ecology, systematics and evolution (at least 12 credits selected from area B)**
   - BIOL3301 Marine biology (6)
   - BIOL3302 Systematics and phylogenetics (6)
   - BIOL3303 Conservation biology (6)
### BIOL3319 Tropical terrestrial ecology (6)
### BIOL3506 Evolutionary biology (6)
### BIOL4302 Environmental impact assessment (6)

**C) Physiology and organismic biology (at least 18 credits with 6 credits from each of List I, II & III)**

**List I**
- BIOL3101 Animal behaviour (6)
- BIOL3105 Animal physiology and environmental adaptation (6)
- BIOL3205 Human physiology (6)
- BIOL3403 Immunology (6)
- BIOL3406 Reproduction and reproductive biotechnology (6)
- BIOL3503 Endocrinology: human physiology II (6)

**List II**
- BIOL3314 Plant structure and evolution (6)
- ENVS3202 Plant physiology and climate change (6)
- BIOL4411 Plant and food biotechnology (6)

**List III**
- BIOL3109 Environmental microbiology (6)
- BIOL3203 Food microbiology (6)
- BIOL3508 Microbial physiology and biotechnology (6)

**3. Capstone requirement (12 credits)**
- BIOL4994 Biological sciences project (12)

**Notes:**
1. These are core courses in the regular Biological Sciences Major (96 credits) curriculum.

2. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

3. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

4. As this curriculum is accredited by the Royal Society of Biology (RSB), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences (Intensive)
Offered to students admitted to Year 1 in 2020

Objectives:
This major is designed for students seeking a broad-based training in conventional and modern biology. By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology, and to appraise the related ethical and moral issues (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: equip with sufficient knowledge in chemistry for application within a biological context (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 5: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Biological Sciences
Major in Ecology & Biodiversity
Major in Ecology & Biodiversity (Intensive)
Major in Molecular Biology & Biotechnology
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (144 credits)

1. Introductory level courses (60 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)

BIOL3508 Microbial physiology and biotechnology (6)
BIOL4401 Medical microbiology and applied immunology (6)

3. Capstone requirement (12 credits)
BIOL4994 Biological sciences project (12)

Notes:
1. These are core courses in the regular Biological Sciences Major (96 credits) curriculum.
2. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis
3. As this curriculum is accredited by the Royal Society of Biology (RSB), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Biological Sciences (Intensive)  
Offered to students admitted to Year 1 in 2019

Objectives:
This major is designed for students seeking a broad-based training in conventional and modern biology. Students are guided in a stimulating learning environment to explore major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The curriculum allows students to select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology). Students are engaged in scientific learning through a wide range of laboratory and field work. They will acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major prepares graduates for employment as professionals in a variety of careers or for postgraduate study. The intensive major includes additional coursework and a compulsory capstone research project. It is designed for students with a strong desire to acquire knowledge with sufficient depth and breadth in biological sciences.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology, and to appraise the related ethical and moral issues (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: equip with sufficient knowledge in chemistry for application within a biological context (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 5: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Biological Sciences  
Major in Ecology & Biodiversity  
Major in Ecology & Biodiversity (Intensive)

Major Title: Major in Biological Sciences (Intensive)

Offered to students admitted to Year 1 in 2017

Objectives:
This major is designed for students seeking a broad-based training in conventional and modern biology. Students are guided in a stimulating learning environment to explore major biological systems at different levels of biological organization. Teaching emphasizes both core concepts and applied aspects in biological sciences. The curriculum allows students to select courses according to their own interests from a wide spectrum of elective courses. At the advanced level, students are further exposed to three fundamental areas of biological sciences (genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology). Students are engaged in scientific learning through a wide range of laboratory and field work. They will acquire valuable transferable skills in analysis, organization and communication. The Biological Sciences Major prepares graduates for employment as professionals in a variety of careers or for postgraduate study. The intensive major includes additional coursework and a compulsory capstone research project. It is designed for students with a strong desire to acquire knowledge with sufficient depth and breadth in biological sciences.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and explain the key concepts in genetics, molecular & cell biology; ecology, systematics and evolution; physiology and organismic biology, and to appraise the related ethical and moral issues (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 2: equip with sufficient knowledge in chemistry for application within a biological context (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 3: analyze and interpret quantitative and qualitative biological data to provide scientifically based conclusions and/or judgements (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 4: tackle biological research problems by formulating hypothesis and designing experimental investigations (by means of coursework, laboratory- and/or research-based learning in the curriculum)

PLO 5: communicate effectively and professionally with scientists, educators, media, and general public in oral and written forms (by means of coursework, laboratory- and/or research-based learning, and presentation opportunities in the curriculum)

Notes:
1. These are core courses in the regular Biological Sciences Major (96 credits) curriculum.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Chemistry
Offered to students admitted to Year 1 in 2021

Objectives:
The Major in Chemistry aims to provide students with a solid training in major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. A wide selection of elective courses in chemical biology, chemical analysis, computational chemistry, environmental chemistry, industrial chemistry, interfacial science, material, and medicinal chemistry, is also available to provide students with knowledge and training to help them meet the dynamic and ever-changing challenges in science and technology. Graduates of the Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences that are crucial for their future careers in a knowledge-based economy. It is expected that our graduates will be able to meet local and regional requirements in the industrial, commercial, government or education sectors and will become future leaders of these sectors.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 2: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 3: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 4: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 100 hours of laboratory classes in the curriculum)

PLO 5: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

PLO 6: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for student internship opportunities, directed studies of no less than three weeks with chemistry-related companies or research laboratories, or any other relevant capstone experience in chemistry)

Impermissible Combinations:
Major in Chemistry (Intensive)
Minor in Chemistry

Required courses (96 credits)

1. Introductory level courses (48 credits)
   - SCNC1111: Scientific method and reasoning (6)
   - SCNC1112: Fundamentals of modern science (6)

2. Core Courses (36 credits)
   - CHEM1042: General chemistry I (6)
   - CHEM1043: General chemistry II (6)
   - CHEM2241: Analytical chemistry I (6)
   - CHEM2341: Inorganic chemistry I (6)
   - CHEM2441: Organic chemistry I (6)
   - CHEM2541: Introductory physical chemistry (6)

3. Elective courses (12 credits)
   - CHEM4142: Symmetry, group theory and applications (6)
   - CHEM4143: Interfacial science and technology (6)
   - CHEM4144: Advanced materials (6)
   - CHEM4145: Medicinal chemistry (6)
   - CHEM4147: Supramolecular chemistry (6)
   - CHEM4148: Frontiers in Modern Chemical Science (6)
   - CHEM4241: Modern chemical instrumentation and applications (6)
   - CHEM4242: Analytical chemistry (6)
   - CHEM4341: Advanced inorganic chemistry (6)
   - CHEM4342: Organometallic chemistry (6)
   - CHEM4441: Advanced organic chemistry (6)
CHEM4443 Integrated organic synthesis (6)
CHEM4444 Chemical biology (6)
CHEM4542 Computational chemistry (6)
CHEM4543 Advanced physical chemistry (6)
CHEM4544 Electrochemical science and technology (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
CHEM3999 Directed studies in chemistry (6)
CHEM4910 Chemistry literacy and research (6)
CHEM4911 Capstone experience for chemistry undergraduates: HKUtopia (6)
CHEM4966 Chemistry internship (6)
CHEM4999 Chemistry project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

5. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

6. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Graduates of the Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences that are crucial for their future careers in a knowledge-based economy. It is expected that our graduates will be able to meet local and regional requirements in the industrial, commercial, government or education sectors and will become future leaders of these sectors.

### Learning Outcomes:

By the end of this programme, students should be able to:

**PLO 1:** demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

**PLO 2:** demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

**PLO 3:** have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

**PLO 4:** have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 100 hours of laboratory classes in the curriculum)

**PLO 5:** demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

**PLO 6:** gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for student internship opportunities, directed studies of no less than three weeks with chemistry-related companies or research laboratories, or any other relevant capstone experience in chemistry)

### Impermissible Combinations:

- Major in Chemistry (Intensive)
- Minor in Chemistry

### Required courses (96 credits)

**1. Introductory level courses (48 credits)**

#### Disciplinary Core Courses: Science Foundation Courses (12 credits)

CHEM4544 Electrochemical science and technology (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
CHEM3999 Directed studies in chemistry (6)
CHEM4910 Chemistry literacy and research (6)
CHEM4911 Capstone experience for chemistry undergraduates: HKUtopia (6)
CHEM4966 Chemistry internship (6)
CHEM4999 Chemistry project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Chemistry  
Offered to students: admitted to Year 1 in 2016

Objectives:
The Major in Chemistry aims to provide students with a solid training in major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. A wide selection of elective courses in chemical biology, chemical analysis, computational chemistry, environmental chemistry, industrial chemistry, interfacial science, material, and medicinal chemistry, is also available to provide students with knowledge and training to help them meet the dynamic and ever-changing challenges in science and technology. Graduates of the Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences that are crucial for their future careers in a knowledge-based economy. It is expected that our graduates will be able to meet local and regional requirements in the industrial, commercial, government or education sectors and will become future leaders of these sectors.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 2: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 3: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 4: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 100 hours of laboratory classes in the curriculum)

PLO 5: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

PLO 6: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for student internship opportunities, directed studies of no less than three weeks with chemistry-related companies or research laboratories, or any other relevant capstone experience in chemistry)

Impermissible Combinations:
Major in Chemistry (Intensive)  
Minor in Chemistry

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- CHEM3999 Directed studies in chemistry (6)
- CHEM4910 Chemistry literacy and research (6)
- CHEM4911 Capstone experience for chemistry undergraduates: HKUtopia (6)
- CHEM4966 Chemistry internship (6)
- CHEM4999 Chemistry project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

6. CHEM3146 Principles and applications of spectroscopic and analytical techniques is not offered from 2016-17. Students should consult the course selection advisers for course replacement.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Chemistry

Offered to students: 2013
admitted to Year 1 in

Objectives:
The Major in Chemistry aims to provide students with a solid training in major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. A wide selection of elective courses in chemical biology, chemical analysis, computational chemistry, environmental chemistry, industrial chemistry, interfacial science, material, and medicinal chemistry, is also available to provide students with knowledge and training to help them meet the dynamic and ever-changing challenges in science and technology. Graduates of the Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences that are crucial for their future careers in a knowledge-based economy. It is expected that our graduates will be able to meet local and regional requirements in the industrial, commercial, government or education sectors and will become future leaders of these sectors.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 2: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 3: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 4: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 100 hours of laboratory classes in the curriculum)

PLO 5: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

PLO 6: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for student internship opportunities or directed studies of no less than three weeks with chemistry-related companies or research laboratories)

Impermissible Combinations:
Minor in Chemistry

Required courses (96 credits)
1. Introductory level courses (42 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (30 credits)
CHEM1042 General chemistry I (6) [ previous title: General chemistry (6) ]
CHEM2241 Analytical chemistry I (6)
CHEM2341 Inorganic chemistry I (6)
CHEM2441 Organic chemistry I (6)
CHEM2541 Introductory physical chemistry (6) [ previous title: Physical chemistry I (6) ]

2. Advanced level courses (48 credits)
Disciplinary Core Courses (30 credits)
CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)
CHEM3241 Analytical chemistry II: chemical instrumentation (6)
CHEM3341 Inorganic chemistry II (6)
CHEM3441 Organic chemistry II (6)
CHEM3541 Physical chemistry: Introduction to quantum chemistry (6) [ previous title: Physical chemistry II: Introduction to quantum chemistry (6) ]

Disciplinary Electives (12 credits)
At least 12 credits selected from the following 18 credits of courses in two different areas in List A:

List A
CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6) Take either CHEM3542 or CHEM4541 to fulfill this 12 credits requirement, but not both.
CHEM4341 Advanced inorganic chemistry (6)
CHEM4441 Advanced organic chemistry (6) Take either CHEM4443 or CHEM4441 to fulfill this 12 credits requirement, but not both.
CHEM4443 Integrated organic synthesis (6) Take either CHEM4443 or CHEM4441 to fulfill this 12 credits requirement, but not both.
CHEM4541 Physical chemistry III: statistical thermodynamics and kinetics theory (6) Take either CHEM3542 or CHEM4541 to fulfill this 12 credits requirement, but not both.

Disciplinary Electives (6 credits)
At least 6 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level, excluding CHEM3999 
Directed studies in chemistry, CHEM4910 Chemistry literacy and research, CHEM4911 Capstone experience for 
chemistry undergraduates: HKUtopia, CHEM4966 Chemistry internship and CHEM4999 Chemistry project), subject to 
pre-requisite requirements. The current list include courses in List B and those courses not selected to fulfill the 
requirements in List A.

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second 
major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 
Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both 
majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses 
offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second 
majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) 
(disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For 
details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc 
syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in 
the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level 
course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEdBSc degree students is different. Students are required to take an additional 6-credit advanced level course 
(disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for 
details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are 
advised to take CHEM1041 Foundations of chemistry.

6. CHEM3146 Principles and applications of spectroscopic and analytical techniques is not offered from 2016-17. Students should consult the 
course selection advisers for course replacement.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. 
Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Major Title
Major in Chemistry

## Offered to students
2012 admitted to Year 1 in

## Objectives:
The Major in Chemistry aims to provide students with a solid training in major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. A wide selection of elective courses in chemical biology, chemical analysis, computational chemistry, environmental chemistry, industrial chemistry, interfacial science, material, and medicinal chemistry, is also available to provide students with knowledge and training to help them meet the dynamic and ever-changing challenges in science and technology. Graduates of the Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences that are crucial for their future careers in a knowledge-based economy. It is expected that our graduates will be able to meet local and regional requirements in the industrial, commercial, government or education sectors and will become future leaders of these sectors.

## Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 2**: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 3**: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 4**: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 100 hours of laboratory classes in the curriculum)
- **PLO 5**: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)
- **PLO 6**: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for student internship opportunities or directed studies of no less than three weeks with chemistry-related companies or research laboratories)

## Impermissible Combinations:
Minor in Chemistry

### Required courses (96 credits)

1. **Introductory level courses (42 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (30 credits)**
     - CHEM1042 General chemistry I (6)  
     - CHEM2241 Analytical chemistry I (6)
     - CHEM2341 Inorganic chemistry I (6)
     - CHEM2441 Organic chemistry I (6)
     - CHEM2541 Introductory physical chemistry (6)
   - **Advanced level courses (48 credits)**
     - **Disciplinary Core Courses (30 credits)**
       - CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)
       - CHEM3241 Analytical chemistry II: chemical instrumentation (6)
       - CHEM3341 Inorganic chemistry II (6)
       - CHEM3441 Organic chemistry II (6)
       - CHEM3541 Physical chemistry: Introduction to quantum chemistry (6)  
       - **Disciplinary Electives (12 credits)**
         - CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)
         - CHEM3441 Advanced inorganic chemistry (6)
         - CHEM4441 Advanced organic chemistry (6)
         - CHEM4443 Integrated organic synthesis (6)
         - CHEM4541 Physical chemistry III: statistical thermodynamics and kinetics theory (6)

At least 12 credits selected from the following 18 credits of courses in two different areas in List A:

- **List A**
  - CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)
  - CHEM4441 Advanced organic chemistry (6)
  - CHEM4443 Integrated organic synthesis (6)
  - CHEM4541 Physical chemistry III: statistical thermodynamics and kinetics theory (6)

Take either CHEM3542 or CHEM4541 to fulfill this 12 credits requirement, but not both.

- **List B**
  - CHEM3441 Advanced inorganic chemistry (6)
  - CHEM4443 Integrated organic synthesis (6)
  - CHEM4541 Physical chemistry III: statistical thermodynamics and kinetics theory (6)

Take either CHEM4443 or CHEM4541 to fulfill this 12 credits requirement, but not both.
At least 6 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level, excluding CHEM3999
Directed studies in chemistry, CHEM4910 Chemistry literacy and research, CHEM4911 Capstone experience for
chemistry undergraduates: HKUtopia, CHEM4966 Chemistry internship and CHEM4999 Chemistry project), subject to
pre-requisite requirements. The current list include courses in List B and those courses not selected to fulfill the
requirements in List A.

List B
CHEM3141 Environmental chemistry (6)
CHEM3142 Chemical process industries and analysis (6)
CHEM3143 Introduction to materials chemistry (6)
CHEM3242 Food and water analysis (6)
CHEM3342 Bioinorganic chemistry (6)
CHEM3443 Organic chemistry laboratory (6)
CHEM3445 Integrated laboratory (6)
CHEM4142 Symmetry, group theory and applications (6)
CHEM4143 Interfacial science and technology (6)
CHEM4144 Advanced materials (6)
CHEM4145 Medicinal chemistry (6)
CHEM4147 Supramolecular chemistry (6)
CHEM4148 Frontiers in Modern Chemical Science (6)
CHEM4241 Modern chemical instrumentation and applications (6)
CHEM4242 Analytical chemistry (6)
CHEM4342 Organometallic chemistry (6)
CHEM4444 Chemical biology (6)
CHEM4542 Computational chemistry (6)
CHEM4543 Advanced physical chemistry (6)
CHEM4544 Electrochemical science and technology (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
CHEM3999 Directed studies in chemistry (6)
CHEM4910 Chemistry literacy and research (6)
CHEM4911 Capstone experience for chemistry undergraduates: HKUtopia (6)
CHEM4966 Chemistry internship (6)
CHEM4999 Chemistry project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

6. CHEM3146 Principles and applications of spectroscopic and analytical techniques is not offered from 2016-17. Students should consult the course selection advisers for course replacement.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**: Major in Chemistry (Intensive)

**Offered to students admitted to Year 1 in**: 2021

**Objectives:**
The Intensive Major in Chemistry aims to provide students with a strong foundation on major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. The curriculum emphasizes comprehensive coverage in theoretical knowledge, laboratory skills, and research experience. A wide selection of elective courses is also available for student preparation to pursue learning in specializations such as chemical biology, computation chemistry, and materials. Graduates of the Intensive Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences. Graduates are expected to be well-prepared for further studies in chemistry and related disciplines and to pursue professional careers in scientific and technical fields.

This intensive major has been accredited by the Royal Society of Chemistry (RSC), UK.

**Learning Outcomes:**
By the end of this programme, students should be able to:

PLO 1: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 2: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 3: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 4: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 300 hours of laboratory classes in the curriculum)

PLO 5: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

PLO 6: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for chemistry research project of no less than 24 weeks, or student internship opportunities plus directed studies of no less than three weeks with chemistry-related companies or research laboratories)

**Impermissible Combinations:**
Major in Chemistry
Minor in Chemistry

**Required courses (144 credits)**

**Notes:**

1. These are core courses in the regular Chemistry Major (96 credits) curriculum.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

3. As this curriculum is accredited by the Royal Society of Chemistry (RSC), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme. For students who have credit transfer from exchange studies, for example) a student took CHEM3A and CHEM3B in a host university during his/her exchange studies and these two courses have been approved by the Faculty of Science to be considered equivalent as CHEM3241 and CHEM3341, they will be considered taking those HKU-version courses and in the example shown here, the student is deemed to have taken CHEM3241 and CHEM3341 to fulfil the accredited curriculum.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Science Majors

Major Title: Major in Chemistry (Intensive)
Offered to students admitted to Year 1 in 2020

Objectives:
The Intensive Major in Chemistry aims to provide students with a strong foundation on major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. The curriculum emphasizes comprehensive coverage in theoretical knowledge, laboratory skills, and research experience. A wide selection of elective courses is also available for student preparation to pursue learning in specializations such as chemical biology, computation chemistry, and materials. Graduates of the Intensive Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences. Graduates are expected to be well-prepared for further studies in chemistry and related disciplines and to pursue professional careers in scientific and technical fields.

This intensive major has been accredited by the Royal Society of Chemistry (RSC), UK.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 2: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 3: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)

PLO 4: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 300 hours of laboratory classes in the curriculum)

PLO 5: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)

PLO 6: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for chemistry research project of no less than 24 weeks, or student internship opportunities plus directed studies of no less than three weeks with chemistry-related companies or research laboratories)

Impermissible Combinations:
Major in Chemistry
Minor in Chemistry

Required courses (144 credits)

1. Introductory level courses (54 credits)
   - Disciplinary Core Courses: Science Foundation Courses (12 credits)
     - SCNC1111 Scientific method and reasoning (6) (Note 1)
     - SCNC1112 Fundamentals of modern science (6) (Note 1)
   - Disciplinary Core Courses (36 credits)
     - CHEM1042 General chemistry I (6) (Note 1)
     - CHEM1043 General chemistry II (6) (Note 1)
     - CHEM2241 Analytical chemistry I (6) (Note 1)
     - CHEM2341 Inorganic chemistry I (6) (Note 1)
     - CHEM2441 Organic chemistry I (6) (Note 1)
     - CHEM2541 Introductory physical chemistry (6) (Note 1)
   - Disciplinary Electives (6 credits)
     - CHEM1044 Mathematics in chemistry (6)
     - COMP1117 Computer programming (6)
     - MATH1011 University mathematics I (6)
     - MATH1013 University mathematics II (6)
     - STAT1601 Elementary statistical methods (6)
     - STAT1603 Introductory statistics (6)

2. Advanced level courses (78 credits)
   - Disciplinary Core Course (66 credits)
     - CHEM3143 Introduction to materials chemistry (6)
     - CHEM3241 Analytical chemistry II: chemical instrumentation (6) (Note 1)
     - CHEM3341 Inorganic chemistry II (6) (Note 1)
     - CHEM3441 Organic chemistry II (6) (Note 1)
     - CHEM3443 Organic chemistry laboratory (6) (Note 1)
     - CHEM3444 Integrated laboratory (6)
     - CHEM3541 Physical chemistry: Introduction to quantum chemistry (6) (Note 1)
     - CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)

(Note 1)
CHEM4142    Symmetry, group theory and applications (6)
CHEM4144    Advanced materials (6)
CHEM4241    Modern chemical instrumentation and applications (6)

**Disciplinary Electives (12 credits)**

At least 12 credits selected from the following courses:

(Note that one of the two elective courses selected must contain a laboratory component. Courses marked with (lab) have a laboratory component. The list of electives given below may be subject to change.)

<td>Chemistry project</td>
<td>(12)</td>
</tr>
</tbody>
</table>

**Notes:**

1. These are core courses in the regular Chemistry Major (96 credits) curriculum.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

3. As this curriculum is accredited by the Royal Society of Chemistry (RSC), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme. For students who have credit transfer from exchange studies, for example) a student took CHEM3A and CHEM3B in a host university during his/her exchange studies and these two courses have been approved by the Faculty of Science to be considered equivalent as CHEM3241 and CHEM3341, they will be considered taking those HKU-version courses and in the example shown here, the student is deemed to have taken CHEM3241 and CHEM3341 to fulfil the accredited curriculum.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

</tbody>
</table>

**Notes:**

1. These are core courses in the regular Chemistry Major (96 credits) curriculum.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

3. As this curriculum is accredited by the Royal Society of Chemistry (RSC), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme. For students who have credit transfer from exchange studies, for example) a student took CHEM3A and CHEM3B in a host university during his/her exchange studies and these two courses have been approved by the Faculty of Science to be considered equivalent as CHEM3241 and CHEM3341, they will be considered taking those HKU-version courses and in the example shown here, the student is deemed to have taken CHEM3241 and CHEM3341 to fulfil the accredited curriculum.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Chemistry (Intensive)

Offered to students admitted to Year 1 in 2016

Objectives:
The Intensive Major in Chemistry aims to provide students with a strong foundation on major areas of chemistry. The curriculum includes core courses covering topics in physical, inorganic, organic, and analytical chemistry. The curriculum emphasizes comprehensive coverage in theoretical knowledge, laboratory skills, and research experience. A wide selection of elective courses is also available for student preparation to pursue learning in specializations such as chemical biology, computation chemistry, and materials. Graduates of the Intensive Chemistry Major programme will be proficient in the principles and experimental skills of chemistry. The programme will also equip students with transferable skills in both theoretical and experimental investigations in sciences. Graduates are expected to be well-prepared for further studies in chemistry and related disciplines and to pursue professional careers in scientific and technical fields.

This intensive major has been accredited by the Royal Society of Chemistry (RSC), UK.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: demonstrate an understanding across a wide range of topics in chemistry, from basic areas such as analytical, inorganic, organic & physical chemistry, to advanced topics related to current research in chemistry (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 2**: demonstrate an in-depth understanding of fundamental physicochemical principles with the ability to apply that knowledge to the solution of theoretical & practical problems (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 3**: have developed an awareness & understanding of scientific and ethical issues where chemistry relates to other disciplines, and an appreciation of the impact of chemistry in the modern world (by means of coursework, laboratory-based and/or research-based learning in the curriculum)
- **PLO 4**: have substantially developed advanced experimental skills including chemical synthesis, analysis & operation of modern instrumentation, and data analysis skills with the ability to interpret experimental information & infer appropriate conclusions (by requiring of no less than 300 hours of laboratory classes in the curriculum)
- **PLO 5**: demonstrate problem-solving skills, critical thinking, creativity & effective written & oral communication skills, and to co-operate with other people & participate as an effective team member (by means of coursework, laboratory-based learning, group project & presentation opportunities in the curriculum)
- **PLO 6**: gain experience in working in the real-life industrial or research environment, and enhance their initiative, interpersonal skills, time management skills & project organization skills (by arrangement for chemistry research project of no less than 24 weeks, or student internship opportunities plus directed studies of no less than three weeks with chemistry-related companies or research laboratories)

Impermissible Combinations:
Major in Chemistry
Minor in Chemistry

Major Title: Major in Decision Analytics
Offered to students admitted to Year 1 in 2021

Objectives:
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
BASc in Applied Artificial Intelligence
BEng in Computer Science
Major in Computing and Data Analytics
Major in Computer Science
Minor in Computer Science
Major in Risk Management
Major in Statistics
Minor in Statistics

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (36 credits)
   COMP1117 Computer programming (6)
   COMP2119 Introduction to data structures and algorithms (6)
   MATH1013 University mathematics II (6)
   MATH2014 Multivariable calculus and linear algebra (6)
   STAT2601 Probability and statistics I (6)
   STAT2602 Probability and statistics II (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (30 credits)
   COMP3278 Introduction to database management systems (6)
   MATH3904 Introduction to optimization (6)
   STAT3600 Linear statistical analysis (6)
   STAT3612 Statistical machine learning (6)
   STAT4609 Big data analytics (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   COMP3250 Design and analysis of algorithms (6)
   COMP3270 Artificial intelligence (6)
   COMP3323 Advanced database systems (6)
   COMP3407 Scientific computing (6)
   MATH3408 Computational methods and differential equations with applications (6)
   MATH3600 Discrete mathematics (6)
   MATH3601 Numerical analysis (6)
   MATH3901 Operations research I (6)
1. Students may consider taking the following courses if they wish to pursue a more focused study in the following areas:

   a. Biomedical Analytics
      BIOL4417 'Omics' and systems biology
      STAT3607 Statistics in clinical medicine and bio-medical research
      STAT3608 Statistical genetics
      STAT3620 Modern nonparametric statistics
      STAT3621 Statistical data analysis
      STAT4602 Multivariate data analysis

   b. Financial and Risk Analytics
      STAT3621 Statistical data analysis
      STAT4601 Time series analysis
      Plus advanced level courses listed for the Major in Risk Management

   c. Operational Analytics
      COMP3250 Design and analysis of algorithms
      MATH3600 Discrete mathematics
      MATH3901 Operations research I
      MATH3943 Network models in operations research
      MATH4902 Operations research II
      STAT3606 Business logistics

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/useful-resources/handbooks (Student Handbook).

7. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

8. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Decision Analytics
Offered to students admitted to Year 1 in 2020

Objectives:
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
BASc in Applied Artificial Intelligence
BEng in Computer Science
Major in Computing and Data Analytics
Major in Computer Science
Minor in Computer Science
Major in Risk Management
Major in Statistics
Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (36 credits)
COMP1117 Computer programming (6)
COMP2119 Introduction to data structures and algorithms (6)
MATH1013 University mathematics II (6)
MATH2014 Multivariable calculus and linear algebra (6)
STAT2601 Probability and statistics I (6)
STAT2602 Probability and statistics II (6)

2. Advanced level courses (42 credits)

Disciplinary Core Courses (30 credits)
COMP3278 Introduction to database management systems (6)
MATH3904 Introduction to optimization (6)
STAT3600 Linear statistical analysis (6)
STAT3612 Statistical machine learning (6)
STAT4609 Big data analytics (6)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:
COMP3250 Design and analysis of algorithms (6)
COMP3270 Artificial intelligence (6)
COMP3323 Advanced database systems (6)
COMP3407 Scientific computing (6)
MATH3408 Computational methods and differential equations with applications (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3901 Operations research I (6)

Notes:

1. Students may consider taking the following courses if they wish to pursue a more focused study in the following areas:

   a. Biomedical Analytics
      - BIOL4417 'Omics' and systems biology
      - STAT3607 Statistics in clinical medicine and bio-medical research
      - STAT3608 Statistical genetics
      - STAT3620 Modern nonparametric statistics
      - STAT3621 Statistical data analysis
      - STAT4602 Multivariate data analysis

   b. Financial and Risk Analytics
      - STAT3621 Statistical data analysis
      - STAT4601 Time series analysis
      - Plus advanced level courses listed for the Major in Risk Management

   c. Operational Analytics
      - COMP3250 Design and analysis of algorithms
      - MATH3600 Discrete mathematics
      - MATH3901 Operations research I
      - MATH3943 Network models in operations research
      - MATH4902 Operations research II
      - STAT3606 Business logistics

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/useful-resources/handbooks (Student Handbook).

7. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Decision Analytics
Offered to students admitted to Year 1 in 2019

Objectives:
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

Learning Outcomes:
By the end of this programme, students should be able to:

- PLO 1: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- PLO 2: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- PLO 3: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- PLO 4: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- PLO 5: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)
- PLO 6: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
- BASc in Applied Artificial Intelligence
- BEng in Computer Science
- Major in Computing and Data Analytics
- Major in Computer Science
- Minor in Computer Science
- Major in Risk Management
- Major in Statistics
- Minor in Statistics

Required courses (96 credits)

Major Title: Major in Decision Analytics
Offered to students admitted to Year 1 in 2016

Objectives:
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
BEng in Computer Science
Major in Computing and Data Analytics
Major in Computer Science
Minor in Computer Science
Major in Risk Management
Major in Statistics
Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (48 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)
Disciplinary Core Courses (36 credits)
- COMP1117 Computer programming (6)
- COMP2119 Introduction to data structures and algorithms (6)
- MATH1013 University mathematics II (6)
- MATH2014 Multivariable calculus and linear algebra (6)
- STAT2601 Probability and statistics I (6)
- STAT2602 Probability and statistics II (6)

2. Advanced level courses (42 credits)
Disciplinary Core Courses (30 credits)
- COMP3278 Introduction to database management systems (6)
- MATH3904 Introduction to optimization (6)
- STAT3600 Linear statistical analysis (6)
- STAT3612 Statistical machine learning (6)
- STAT4609 Big data analytics (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- COMP3250 Design and analysis of algorithms (6)
- COMP3270 Artificial intelligence (6)
- COMP3333 Advanced database systems (6)
- COMP3407 Scientific computing (6)
- MATH3408 Computational methods and differential equations with applications (6)
- MATH3600 Discrete mathematics (6)
- MATH3601 Numerical analysis I (6)
- MATH3901 Operations research II (6)
- STAT3616 Advanced SAS programming (6)
### STAT3620 Modern nonparametric statistics (6)
### STAT3621 Statistical data analysis (6)
### STAT3622 Data visualization (6)
### STAT3655 Survival analysis (6)
### STAT4601 Time-series analysis (6)
### STAT4602 Multivariate data analysis (6)
### STAT4610 Bayesian learning (6)

#### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- STAT3799 Directed studies in statistics (6)
- STAT4710 Capstone experience for statistics undergraduates (6)
- STAT4766 Statistics internship (6)
- STAT4799 Statistics project (12)

**Notes:**
1. Students may consider taking the following courses if they wish to pursue a more focused study in the following areas:
   - **a. Biomedical Analytics**
     - BIOL4417 ‘Omics’ and systems biology
     - STAT3607 Statistics in clinical medicine and bio-medical research
     - STAT3608 Statistical genetics
     - STAT3620 Modern nonparametric statistics
     - STAT3621 Statistical data analysis
     - STAT4602 Multivariate data analysis
   - **b. Financial and Risk Analytics**
     - STAT3616 Advanced SAS programming
     - STAT3621 Statistical data analysis
     - STAT4601 Time series analysis
     - Plus advanced level courses listed for the Major in Risk Management
   - **c. Operational Analytics**
     - COMP3250 Design and analysis of algorithms
     - MATH3600 Discrete mathematics
     - MATH3901 Operations research I
     - MATH3943 Network models in operations research
     - MATH4902 Operations research II
     - STAT3606 Business logistics

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/useful-resources/handbooks (Student Handbook).

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**: Major in Decision Analytics  
**Offered to students admitted to Year 1 in**: 2015

**Objectives:**  
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

1. **PLO 1**: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
2. **PLO 2**: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
3. **PLO 3**: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
4. **PLO 4**: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
5. **PLO 5**: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
6. **PLO 6**: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

**Impermissible Combinations:**  
- BEng in Computer Science  
- Major in Computing and Data Analytics  
- Major in Computer Science  
- Minor in Computer Science  
- Major in Risk Management  
- Major in Statistics  
- Minor in Statistics

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (36 credits)**

Science Majors
Major Title: Major in Decision Analytics
Offered to students admitted to Year 1 in 2012

Objectives:
Amidst an upsurge of digital data produced worldwide nowadays, the Major in Decision Analytics aims to equip students with the skills and expertise in leveraging and managing big data in real time, and provide them with solid training in making digitized information a strategic part of critical decision-making and resource allocation with greater clarity and accuracy. Core courses in the curriculum emphasize the fundamental concepts and methodologies of decision analytics which include but not limited to statistical analysis, data mining and data visualization, programming, data structuring, mathematical and statistical modelling and implementation of database systems. Elective courses focus on diverse and applied techniques of decision analytics in multidisciplinary fields.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: apprehend the concepts of decision analytics and its underlying theory in relation to a broad range of related disciplinary academic or professional areas (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: identify and adopt appropriate analytical techniques and tools to extract and classify critical information from structured or unstructured data (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: be proficient with the design and implementation of advanced modelling techniques and database management, and offer effective recommendations for analytic initiatives and solutions (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: evaluate the quality of information from different sources in support of critical decision making, process streamlining and the optimization of resources, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate to people effectively and efficiently with professionalism and accuracy using interactive and dynamic tools to translate technical information and present collaborative and strategic ideas (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in decision analytics and confidence to solve real-life problems through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
BEng in Computer Science
Major in Computing and Data Analytics
Major in Computer Science
Minor in Computer Science
Major in Risk Management
Major in Statistics
Minor in Statistics

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (36 credits)
   COMP1117 Computer programming (6)
   COMP2119 Introduction to data structures and algorithms (6)
   MATH1013 University mathematics II (6)
   MATH2014 Multivariable calculus and linear algebra (6)
   STAT2601 Probability and statistics I (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (30 credits)
   COMP3278 Introduction to database management systems (6)
   MATH3904 Introduction to optimization (6)
   STAT3600 Linear statistical analysis (6)
   STAT3612 Statistical machine learning (6)
   STAT4609 Big data analytics (6)

   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   COMP3250 Design and analysis of algorithms (6)
   COMP3270 Artificial intelligence (6)
   COMP3323 Advanced database systems (6)
   COMP3407 Scientific computing (6)
   MATH3408 Computational methods and differential equations with applications (6)
   MATH3600 Discrete mathematics (6)
   MATH3601 Numerical analysis (6)
   MATH3901 Operations research I (6)
   STAT3616 Advanced SAS programming (6)

#### Notes:

1. Students may consider taking the following courses if they wish to pursue a more focused study in the following areas:

   a. Biomedical Analytics
   - BIOL4417 'Omics' and systems biology
   - STAT3607 Statistics in clinical medicine and bio-medical research
   - STAT3608 Statistical genetics
   - STAT3620 Modern nonparametric statistics
   - STAT3621 Statistical data analysis
   - STAT4602 Multivariate data analysis

   b. Financial and Risk Analytics
   - STAT3616 Advanced SAS programming
   - STAT3621 Statistical data analysis
   - STAT4601 Time series analysis
   - Plus advanced level courses listed for the Major in Risk Management

   c. Operational Analytics
   - COMP3250 Design and analysis of algorithms
   - MATH3600 Discrete mathematics
   - MATH3901 Operations research I
   - MATH3943 Network models in operations research
   - MATH4902 Operations research II
   - STAT3606 Business logistics

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Earth System Science
Offered to students admitted to Year 1 in 2021

Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth's interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, the biosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students' ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, environment and life conservation and teaching.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: identify real life problems pertaining to the physical environment and find solutions to those problems (by means of capstone learning experience in the form of internship, field learning, and project-based learning in the curriculum)

PLO 6: work with other students and possess an adequate level of communication skills (by means of group project learning and presentation opportunities in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)
1. Introductory level courses (48 credits)

   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   EASC1401 Blue Planet (6)
   EASC2401 Fluid/solid interactions in earth processes (6)
   EASC2402 Field and laboratory methods (6)
   EASC2404 Introduction to atmosphere and hydrosphere (6)
   EASC2410 Data analysis and modeling in earth sciences (6)
   EASC2411 Introduction to the Earth-Life system (6)

2. Advanced level courses (42 credits)

   Disciplinary Core Courses (6 credits)
   EASC4403 Biogeochemical cycles (6)

   Disciplinary Electives (36 credits)
   At least 36 credits selected from Lists A and B, among which at least 18 credits from List A:

   List A
   EASC3410 Hydrogeology (6)
   EASC3415 Meteorology (6)
   EASC3418 Coasts and coastal change (6)
   ENVS3313 Environmental oceanography (6)

   List B
   EASC3020 Global change: anthropogenic impacts (6)
   EASC3030 Sedimentary environments (6)
   EASC3050 Environmental remote sensing (6)
   EASC3060 Reconstruction of past climate (6)
   EASC3112 Earth resources (6)
   EASC3157 Earth through time (6)
   EASC3199 Earth System Science Field Studies (6)
   EASC3999 Directed studies in earth sciences (6)
   ENVS3007 Natural hazards and mitigation (6)
   EASC4406 Special topics in earth sciences (6)
   EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   EASC4911 Earth system: contemporary issues (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students are recommended to take additional chemistry and/or physics courses above the introductory level if they are interested in postgraduate research in Earth System Science.

5. Students are recommended to take PHYS1240 Physics by Inquiry and CHEM1041 Foundations of Chemistry if they do not have level 3 or above in HKDSE Physics and Chemistry, respectively, or equivalent.

6. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

7. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students are recommended to take additional chemistry and/or physics courses above the introductory level if they are interested in postgraduate research in Earth System Science.

6. Students are recommended to take PHYS1240 Physics by Inquiry and CHEM1041 Foundations of Chemistry if they do not have level 3 or above in HKDSE Physics and Chemistry, respectively, or equivalent.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Earth System Science
Offered to students: 2017

Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth’s interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, the biosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students’ ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, environment and life conservation and teaching.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: identify real life problems pertaining to the physical environment and find solutions to those problems (by means of capstone learning experience in the form of internship, field learning, and project-based learning in the curriculum)

PLO 6: work with other students and possess an adequate level of communication skills (by means of group project learning and presentation opportunities in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   EASC1401 Blue Planet (6)
   EASC1406 Introduction to the earth-life system (6)
   Take either EASC1406 or EASC2411 to fulfill this 36 credits requirement, but not both. EASC1406 and EASC2411 are mutually exclusive.
   EASC2401 Fluid/solid interactions in earth processes (6)
   EASC2402 Field and laboratory methods (6)
   EASC2404 Introduction to atmosphere and hydrosphere (6)
   EASC2410 Data analysis and modeling in earth sciences (6)
   EASC2411 Introduction to the Earth-Life system (6)
   Take either EASC1406 or EASC2411 to fulfill this 36 credits requirement, but not both. EASC1406 and EASC2411 are mutually exclusive.

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (6 credits)
   EASC4403 Biogeochemical cycles (6)

   Disciplinary Electives (36 credits)
   At least 36 credits selected from Lists A and B, among which at least 18 credits from List A:
   List A
   EASC3410 Hydrogeology (6)
   EASC3415 Meteorology (6)
   EASC3418 Coasts and coastal change (6)
   ENV3313 Environmental oceanography (6)

   List B
   EASC3020 Global change: anthropogenic impacts (6)
   EASC3403 Sedimentary environments (6)
   EASC3405 Environmental remote sensing (6)
   EASC3406 Reconstruction of past climate (6)
   EASC3412 Earth resources (6)
   EASC3417 Earth through time (6)
   EASC3419 Earth System Science Field Studies (6)
   EASC3999 Directed studies in earth sciences (6)
   ENV3007 Natural hazards and mitigation (6)
3. Capstone requirement (6 credits)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. 6. Students are recommended to take PHYS1240 Physics by Inquiry and CHEM1041 Foundations of Chemistry if they do not have level 3 or above in HKDSE Physics and Chemistry, respectively, or equivalent.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Earth System Science

Offered to students admitted to Year 1 in 2016

Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth’s interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, the biosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students’ ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, environment and life conservation and teaching.

Learning Outcomes:
By the end of this programme, students should be able to:
- PLO 1: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 2: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 3: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 4: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 5: identify real life problems pertaining to the physical environment and find solutions to those problems (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- PLO 6: work with other students and possess an adequate level of communication skills (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (48 credits)
   - Disciplinary Core Courses: Science Foundation Courses (12 credits)
     - SCNC1111: Scientific method and reasoning (6)
     - SCNC1112: Fundamentals of modern science (6)
   - Disciplinary Core Courses (30 credits)
     - EASC1401: Blue Planet (6)
     - EASC1402: Principles of geology (6)
     - EASC2401: Fluid/solid interactions in earth processes (6)
     - EASC2402: Field and laboratory methods (6)
     - EASC2404: Introduction to atmosphere and hydrosphere (6)
   - Disciplinary Electives (6 credits)
     - BIOL1309: Evolutionary diversity (6)
     - EASC1406: Introduction to the earth-life system (6)
     - EASC2411: Introduction to the Earth-Life system (6)

2. Advanced level courses (42 credits)
   - Disciplinary Core Courses (6 credits)
     - EASC4403: Biogeochemical cycles (6)
   - Disciplinary Electives (36 credits)
     - At least 36 credits selected from Lists A and B, among which at least 12 credits from List A:
       - List A
         - EASC3410: Hydrogeology (6)
         - EASC3415: Meteorology (6)
         - ENVS3313: Environmental oceanography (6)
       - List B
         - EASC3403: Sedimentary environments (6)
         - EASC3405: Environmental remote sensing (6)
         - EASC3406: Reconstruction of past climate (6)
         - EASC3408: Geophysics (6)
         - EASC3412: Earth resources (6)
         - EASC3416: Advanced geochemistry and geochronology (6)
         - EASC3417: Earth through time (6)
         - EASC3999: Directed studies in earth sciences (6)

Take either EASC1406 or EASC2411 to fulfill this 6 credits requirement, but not both. EASC1406 and EASC2411 are mutually exclusive.
Take either EASC1406 or EASC2411 to fulfill this 6 credits requirement, but not both. EASC1406 and EASC2411 are mutually exclusive.
3. Capstone requirement (6 credits)

## Major Title
Major in Earth System Science

## Offered to students
admitted to Year 1 in
2014

### Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth's interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students' ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, soil and water conservation and teaching.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1**: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

**PLO 2**: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

**PLO 3**: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

**PLO 4**: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

**PLO 5**: identify real life problems pertaining to the physical environment and find solutions to those problems (by means capstone learning experience in the form of internship, field learning, and project-based learning in the curriculum)

**PLO 6**: work with other students and possess an adequate level of communication skills (by means of group project learning and presentation opportunities in the curriculum)

### Impermissible Combinations:
Minor in Earth Sciences

#### Required courses (96 credits)

##### 1. Introductory level courses (48 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**

- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

**Disciplinary Core Courses (36 credits)**

- BIOL1309 Evolutionary diversity (6)
- EASC1401 Blue Planet (6)
- EASC1402 Principles of geology (6)
- EASC2401 Fluid/solid interactions in earth processes (6)
- EASC2402 Field and laboratory methods (6)
- EASC2404 Introduction to atmosphere and hydrosphere (6)

##### 2. Advanced level courses (42 credits)

**Disciplinary Core Courses (6 credits)**

- EASC4403 Biogeochemical cycles (6)

**Disciplinary Electives (36 credits)**

At least 36 credits from Lists A and B, among which at least 12 credits from List A:

**List A**

- EASC3410 Hydrogeology (6)
- EASC3415 Meteorology (6)
- ENV3313 Environmental oceanography (6)

**List B**

- EASC3403 Sedimentary environments (6)
- EASC3405 Environmental remote sensing (6)
- EASC3406 Reconstruction of past climate (6)
- EASC3408 Geophysics (6)
- EASC3412 Earth resources (6)
- EASC3416 Advanced geochemistry and geochronology (6)
- EASC3417 Earth through time (6)
- EASC3999 Directed studies in earth sciences (6)
- ENV3307 Natural hazards and mitigation (6)
- EASC4408 Special topics in earth sciences (6)
- EASC4999 Earth sciences project (12)

##### 3. Capstone requirement (6 credits)

- EASC4911 Earth system: contemporary issues (6)

### Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112
Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students are recommended to take additional chemistry and/or physics courses above the introductory level if they are interested in postgraduate research in Earth System Science.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Earth System Science
Offered to students admitted to Year 1 in 2013

Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth’s interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students’ ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, soil and water conservation and teaching.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: identify real life problems pertaining to the physical environment and find solutions to those problems (by means of capstone learning experience in the form of internship, field learning, and project-based learning in the curriculum)

PLO 6: work with other students and possess an adequate level of communication skills (by means of group project learning and presentation opportunities in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1309 Evolutionary diversity (6)
   EASC1401 Blue Planet (6)
   EASC1402 Principles of geology (6)
   EASC2401 Fluid/solid interactions in earth processes (6)
   EASC2402 Field and laboratory methods (6)
   EASC2404 Introduction to atmosphere and hydrosphere (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (6 credits)
   EASC4403 Biogeochemical cycles (6)

   Disciplinary Electives (36 credits)
   At least 36 credits from Lists A and B, among which at least 12 credits from List A:
   List A
   EASC3410 Hydrogeology (6)
   EASC3415 Meteorology (6)
   ENV53313 Environmental oceanography (6)
   List B
   EASC3403 Sedimentary environments (6)
   EASC3405 Environmental remote sensing (6)
   EASC3406 Reconstruction of past climate (6)
   EASC3408 Geophysics (6)
   EASC3412 Earth resources (6)
   EASC3416 Advanced geochemistry and geochronology (6)
   EASC3417 Earth through time (6)
   EASC3999 Directed studies in earth sciences (6)
   ENV3307 Natural hazards and mitigation (6)
   EASC4406 Special topics in earth sciences (6)
   EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   EASC4911 Earth system: contemporary issues (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112
Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students are recommended to take additional chemistry and/or physics courses above the introductory level if they are interested in postgraduate research in Earth System Science.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Earth System Science
Offered to students admitted to Year 1 in 2012

Objectives:
Earth System Science seeks to understand the Earth as an integrated system, including its past, present and future behaviour, from the environments where life evolves on the surface to the interactions between the crust and its fluid envelopes (atmosphere and hydrosphere), with interests extending to the Earth's interior. Core courses in the major focus on understanding the composition, structure and processes of the solid earth, the hydrosphere and the atmosphere, and their interactions. Students will be equipped with knowledge to help manage geological resources and natural hazards. Throughout the curriculum there is consistent emphasis on transferable skills, learning through fieldwork, laboratory studies and research based classes, designed to enhance students' ability to think critically, to communicate effectively and to develop solutions to complex problems. Graduates from the major can pursue further studies in the Earth Sciences and careers in a wide variety of geoscience-related areas including resource management, hazard mitigation, soil and water conservation and teaching.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe the key concepts of the Earth System components and processes (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 2: have acquired the ability to observe, describe, measure and analyze principal phenomena of earth processes and the interactions between different earth components (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 3: provide expertise to maintain geological environments and prevent severe perturbations due to resource exploitation and water disposal (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 4: equip with the knowledge and skills to better predict and deal with geological and related hazards such as earthquakes, landslides, tsunamis, floods and volcanic eruptions, and recognize and appraise the related ethical issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 5: identify real life problems pertaining to the physical environment and find solutions to those problems (by means of capstone learning experience in the form of internship, field learning, and project-based learning in the curriculum)
PLO 6: work with other students and possess an adequate level of communication skills (by means of group project learning and presentation opportunities in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1309 Evolutionary diversity (6)
   EASC1401 Blue Planet (6)
   EASC1402 Principles of geology (6)
   EASC2401 Fluid/solid interactions in earth processes (6)
   EASC2402 Field and laboratory methods (6)
   EASC2404 Introduction to atmosphere and hydrosphere (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (6 credits)
   EASC4403 Biogeochemical cycles (6)

   Disciplinary Electives (36 credits)
   At least 36 credits from Lists A and B, among which at least 12 credits from List A:
   List A:
   EASC3410 Hydrogeology (6)
   EASC3415 Meteorology (6)
   ENV3313 Environmental oceanography (6)
   List B:
   EASC3403 Sedimentary environments (6)
   EASC3405 Environmental remote sensing (6)
   EASC3406 Reconstruction of past climate (6)
   EASC3408 Geophysics (6)
   EASC3412 Earth resources (6)
   EASC3416 Advanced geochemistry and geochronology (6)
   EASC3417 Earth through time (6)
   EASC3999 Directed studies in earth sciences (6)
   ENV3307 Natural hazards and mitigation (6)
   EASC4408 Special topics in earth sciences (6)
   EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   EASC4911 Earth system: contemporary issues (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112
Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students are recommended to take additional chemistry and/or physics courses above the introductory level if they are interested in postgraduate research in Earth System Science.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**  
Major in Ecology & Biodiversity

**Offered to students**  
2021

**Objectives:**
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based tutorial classes and/or project-based learning in the curriculum)

- **PLO 2:** understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 3:** have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 4:** use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 5:** demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

- **PLO 6:** have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

- **PLO 7:** be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

**Impermissible Combinations:**
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity (Intensive)
- Minor in Ecology & Biodiversity

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**

   **Disciplinary Core Courses:** Science Foundation Courses (12 credits)
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (36 credits)**
   - BIOL1110 From molecules to cells (6)
   - BIOL1309 Evolutionary diversity (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2103 Biological sciences laboratory course (6)
   - BIOL2306 Ecology and evolution (6)
   - ENV52002 Environmental data analysis (6)

2. **Advanced level courses (36 credits)**

   **Disciplinary Core Courses (18 credits)**
   - BIOL3301 Marine biology (6)
   - BIOL3302 Systematics and phylogenetics (6)
   - BIOL3319 Tropical terrestrial ecology (6)

   **Disciplinary Electives (18 credits)**
   - At least 18 credits selected from the following courses:
     - BIOL3101 Animal behaviour (6)
     - BIOL3303 Conservation biology (6)
     - BIOL3305 Tropical and temperate marine ecology field course (6)
     - BIOL3313 Freshwater ecology (6)
     - BIOL3314 Plant structure and evolution (6)
     - BIOL3318 Experimental intertidal ecology (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (“disciplinary core”) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, two 6-credit or a 12-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Major Title
Major in Ecology & Biodiversity

### Offered to students
2020

### Objectives:
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1:** understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based tutorial classes and/or project-based learning in the curriculum)

**PLO 2:** understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

**PLO 3:** have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

**PLO 4:** use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

**PLO 5:** demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

**PLO 6:** have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

**PLO 7:** be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

### Impermissible Combinations:
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity (Intensive)
- Minor in Ecology & Biodiversity

### Required courses (96 credits)

#### 1. Introductory level courses (48 credits)
**Disciplinary Core Courses: Science Foundation Courses (12 credits)**
- **SCNC1111** Scientific method and reasoning (6)
- **SCNC1112** Fundamentals of modern science (6)

**Disciplinary Core Courses (36 credits)**

   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Ecology & Biodiversity

Offered to students admitted to Year 1 in 2019

Objectives:
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biology and includes a compulsory week-long residential field trip. Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based tutorial classes and/or project-based learning in the curriculum)

PLO 2: understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Ecology & Biodiversity (Intensive)
Minor in Ecology & Biodiversity

Required courses (96 credits)

1. Introductory level courses (48 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, two 6-credit or a 12-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional two 6-credit or a 12-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**  |  Major in Ecology & Biodiversity  
---|---
**Offered to students** | 2018  
**admitted to Year 1 in**  

**Objectives:**
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biology and includes a compulsory week-long residential field trip. Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based tutorial classes and/or project-based learning in the curriculum)
- **PLO 2:** understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
- **PLO 3:** have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
- **PLO 4:** use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
- **PLO 5:** demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)
- **PLO 6:** have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)
- **PLO 7:** be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

**Impermissible Combinations:**
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity (Intensive)
- Minor in Ecology & Biodiversity

**Required courses (96 credits)**

3. **Capstone requirement (6 credits)**

At least 6 credits selected from the following courses:

- BIOL3991 Directed studies in ecology & biodiversity (6)
- BIOL4911 Conservation science in practice (6)
- BIOL4991 Ecology & biodiversity project (12)

**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Ecology & Biodiversity
Offered to students admitted to Year 1 in 2017

Objectives:
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biology and includes a compulsory week-long residential field trip. Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

Learning Outcomes:
By the end of this programme, students should be able to:

1. Understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
2. Understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
3. Have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
4. Use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
5. Demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)
6. Have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)
7. Be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Ecology & Biodiversity (Intensive)
Minor in Ecology & Biodiversity

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biology and includes a compulsory week-long residential field trip. Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity (Intensive)
Minor in Ecology & Biodiversity

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111  Scientific method and reasoning (6)
   SCNC1112  Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110  From molecules to cells (6)
   BIOL1309  Evolutionary diversity (6)
   BIOL2102  Biostatistics (6)
   BIOL2103  Biological sciences laboratory course (6)
   BIOL2306  Ecology and evolution (6)
   ENV52002  Environmental data analysis (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (12 credits)
   BIOL3302  Systematics and phylogenetics (6)
   BIOL3303  Conservation biology (6)
   [previous title: Conservation ecology (6)]

   Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   BIOL3101  Animal behaviour (6)
   BIOL3109  Environmental microbiology (6)
   BIOL3301  Marine biology (6)
   BIOL3305  Tropical and temperate marine ecology field course (6)
   BIOL3313  Freshwater ecology (6)

   Take either BIOL3101 or BIOL4303 to fulfill this 30 credits requirement, but not both. BIOL3101 and BIOL4303 are mutually exclusive.

3. **Capstone requirement (6 credits)**

At least 6 credits selected from the following courses:

- BIOL3951 Ecology & biodiversity field course (6)
- BIOL3991 Directed studies in ecology & biodiversity (6)
- BIOL4921 Animal behaviour and behavioural ecology: field course (6)
- BIOL4991 Ecology & biodiversity project (12)

**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Science Majors

**Major Title**: Major in Ecology & Biodiversity  
**Offered to students**: 2014  
**Admitted to Year 1 in**:  

#### Objectives:
This major is directed at teaching students: (1) how organisms interact with each other and their environments, (2) how species are distributed throughout the world, and (3) key threats and approaches to conserving biodiversity. Special reference is made to Hong Kong and Asia; the ways in which humans have impacted upon natural environments; and, the approaches used to manage or ameliorate those impacts. This major is based around an introductory core, which emphasizes plant and animal biology and includes a compulsory week-long residential field trip. Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

#### Learning Outcomes:
By the end of this programme, students should be able to:

1. **PLO 1**: understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
2. **PLO 2**: understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
3. **PLO 3**: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
4. **PLO 4**: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)
5. **PLO 5**: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)
6. **PLO 6**: have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)
7. **PLO 7**: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

#### Impermissible Combinations:

**Minor in Ecology & Biodiversity**

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111: Scientific method and reasoning (6)
     - SCNC1112: Fundamentals of modern science (6)
   - **Disciplinary Core Courses (36 credits)**
     - BIOL1110: From molecules to cells (6)
     - BIOL1309: Evolutionary diversity (6)
     - BIOL2102: Biostatistics (6)
     - BIOL2103: Biological sciences laboratory course (6)
     - BIOL2306: Ecology and evolution (6)
     - ENVS2002: Environmental data analysis (6)
     - BIOL3109: Environmental microbiology (6)
     - BIOL3301: Marine biology (6)
     - BIOL3305: Tropical and temperate marine ecology field course (6)
     - BIOL3313: Freshwater ecology (6)
     - BIOL3314: Plant structure and evolution (6)

2. **Advanced level courses (42 credits)**
   - **Disciplinary Core Courses (12 credits)**
     - BIOL3302: Systematics and phylogenetics (6)
     - BIOL3303: Conservation biology (6)
   - **Disciplinary Electives (30 credits)**
     - At least 30 credits selected from the following courses:
       - BIOL3101: Animal behaviour (6)

[previous title: Conservation ecology (6)]

**Take either BIOL3101 or BIOL4303 to fulfill this 30 credits requirement, but not both. BIOL3101 and BIOL4303 are mutually exclusive.**

Advanced courses in the major teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial and freshwater environments) with an emphasis on field work, introduces the use of statistical and molecular techniques in ecology, and focuses on certain applied topics such as environmental impact assessment, ecotoxicology, fisheries and mariculture, and biodiversity conservation. Students have an opportunity to conduct independent research in ecology and biodiversity as a final year project or a dissertation under the close supervision of an individual staff member. Apart from the fundamental knowledge and skills in understanding and managing biodiversity offered in the core courses of this major, strong emphasis is placed upon experiential learning such as overseas field expedition and work placement in the environmental sector. Biodiversity conservation requires scientific input as well as passion. Through the range of formal field-based courses as well as extra-curricular activities offered, students taking this major will have opportunities to participate in research, field conservation and education projects both locally and internationally. Assistance will be provided so that students can develop expertise in one or a few groups of plants or animals, as familiarity with species identification is an essential prerequisite for biodiversity scientists or conservation biologists.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the regional and global environment, and how they interact; identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to understand, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Minor in Ecology & Biodiversity

Required courses (96 credits)
1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (30 credits)
   BIOL1110 From molecules to cells (6)
   BIOL1309 Evolutionary diversity (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2306 Ecology and evolution (6)

2. Advanced level courses (48 credits)
   Disciplinary Core Courses (12 credits)
   BIOL3302 Systematics and phylogenetics (6)
   BIOL3303 Conservation biology (6)  
   [previous title: Conservation ecology (6) ]

   Disciplinary Electives (36 credits)
   At least 36 credits selected from the following courses:
   BIOL3101 Animal behaviour (6)
   BIOL3109 Environmental microbiology (6)
   BIOL3301 Marine biology (6)
   BIOL3305 Tropical and temperate marine ecology field course (6)
   BIOL3313 Freshwater ecology (6)
   BIOL3314 Plant structure and evolution (6)
   BIOL3318 Experimental intertidal ecology (6)

   Take either BIOL3101 or BIOL4303 to fulfill this 36 credits requirement, but not both. BIOL3101 and BIOL4303 are mutually exclusive.

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
This intensive major is directed at teaching students the ‘rules of existence’ for organisms in natural and human-modified environments, including major threats to biodiversity and the approaches adopted to conserve species and habitats. Special reference is made to the plants, animals and habitats of Hong Kong and Asia, the ways in which humans have altered the region’s ecosystems, and the management or mitigation of those impacts. The range and scope of courses offered will provide students with a firm foundation in ecology, biodiversity and related disciplines, and equip them with the skills required for postgraduate research or employment with government and non-government organizations concerned with biodiversity conservation, nature preservation or habitat assessment and management.

The intensive major is based around an introductory core that emphasizes biology, ecology and evolution of plants and animals; it includes a compulsory residential field trip (as part of the Ecology and Evolution course), as well as instruction in data analysis and biostatistics. Many of the advanced courses in the major have a strong emphasis on field-work and on small projects performed by students. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

**Learning Outcomes:**

By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: assess, understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

**Impermissible Combinations:**

- Major in Biological Sciences
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity
- Minor in Ecology & Biodiversity

**Required courses (144 credits)**

1. Introductory level courses (60 credits)

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6) *(Note 1)*
   - SCNC1112 Fundamentals of modern science (6) *(Note 1)*

   **Disciplinary Core Courses (42 credits)**
   - BIOL1100 From molecules to cells (6) *(Note 1)*
   - BIOL1309 Evolutionary diversity (6) *(Note 1)*
   - BIOL2102 Biostatistics (6) *(Note 1)*
   - BIOL2103 Biological sciences laboratory course (6) *(Note 1)*
BIOL2306  Ecology and evolution (6)  (Note 1)
EASC1401  Blue Planet (6)
ENVS2002  Environmental data analysis (6)  (Note 1)

**Disciplinary Electives (6 credits)**

*Plus at least 6 credits selected from the following courses:*

- CHEM1041  Foundations of chemistry (6)  Take either CHEM1041 or CHEM1042 to fulfill this 6 credits requirement, but not both.
- CHEM1042  General chemistry I (6)  Take either CHEM1041 or CHEM1042 to fulfill this 6 credits requirement, but not both.

**2. Advanced level courses (66 to 72 credits) (Note 2)**

**Disciplinary Core Courses (30 credits)**

- BIOL3101  Animal behaviour (6)
- BIOL3301  Marine biology (6)  (Note 1)
- BIOL3302  Systematics and phylogenetics (6)  (Note 1)
- BIOL3303  Conservation biology (6)
- BIOL3319  Tropical terrestrial ecology (6)  (Note 1)

**Disciplinary Electives (36 to 42 credits) (Note 2)**

*Plus at least 36 or 42 credits selected from the following courses:*

- BIOL3305  Tropical and temperate marine ecology field course (6)
- BIOL3313  Freshwater ecology (6)
- BIOL3314  Plant structure and evolution (6)
- BIOL3318  Experimental intertidal ecology (6)
- BIOL3322  Marine invertebrate zoology (6)
- BIOL3328  Nearshore marine and estuarine ecology (6)
- BIOL3408  Genetics (6)
- BIOL3419  Insect ecology: the little things that run the world (6)
- BIOL3506  Evolutionary biology (6)
- BIOL4301  Fish and fisheries (6)
- BIOL4302  Environmental impact assessment (6)
- BIOL4304  Ecosystem functioning and services (6)
- BIOL4505  Oyster aquaculture: business and technology (6)
- ENVS3019  Urban ecology (6)
- ENVS3020  Global change ecology (6)

**3. Capstone requirement (12 to 18 credits) (Note 2)**

**Disciplinary Core Courses (12 credits)**

- BIOL4991  Ecology & biodiversity project (12)

**Disciplinary Electives (6 credits)**

- BIOL3991  Directed studies in ecology & biodiversity (6)
- BIOL4911  Conservation science in practice (6)

**Notes:**

1. These are core courses in the regular Ecology & Biodiversity Major (96 credits) curriculum.

2. Within the E&B accredited curriculum, students have to pass a total of 60 credits within the Introductory Level Courses spread across two Science Foundation Courses (Level 1; 12 credits), seven Disciplinary Core Courses (Levels 1 & 2; 42 credits) and one chemistry (Level 1; 6 credits). For the chemistry course, students will have the choice between CHEM1041 and CHEM1042 in function of their prior chemistry background acquired during their upper secondary education. Students with no chemistry background should follow CHEM1041, while students with previous chemistry background should take CHEM1042.

Advanced Level Courses cover a total of 66 to 72 credits. Those are divided between five Disciplinary Core Courses (Level 3; 30 credits) and 6 to 7 Disciplinary Elective Courses (Level 3 & 4; 36 to 42 credits) among a choice of fourteen different courses. As eight of the Disciplinary Elective courses are being taught every other year, students must pay attention to the year during which these courses are taught and ensure that they have fulfilled the necessary requirements. There is a student mentorship programme in place that can assist them in this.

During their final year, students should complete a minimum of 12 credits as Capstone Courses (maximum of 18). The Ecology & Biodiversity Project (12 credits) is mandatory and students can choose to complete one of the other two Elective Capstone Courses (6 credits). If students choose to complete 18 credits of Capstone Courses, then they are required to complete only 36 credits of Disciplinary Elective Courses within the Advanced Level Courses (instead of 42 credits).

Finally, students who participate in student exchange programme are expected to enquire, prior to their departure from HKU, about potential equivalences with the courses taken during exchange programmes to ensure that they match requirements for obtaining the RSB accredited programme.

3. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

4. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

5. As this curriculum is accredited by the Royal Society of Biology (RSB), students must follow the curriculum in full (i.e. no replacement courses
are possible) in order to graduate with this accredited programme.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Science Majors

Major Title: Major in Ecology & Biodiversity (Intensive)

Offered to students: 2020
Admitted to Year 1 in

Objectives:
This intensive major is directed at teaching students the ‘rules of existence’ for organisms in natural and human-modified environments, including major threats to biodiversity and the approaches adopted to conserve species and habitats. Special reference is made to the plants, animals and habitats of Hong Kong and Asia, the ways in which humans have altered the region’s ecosystems, and the management or mitigation of those impacts. The range and scope of courses offered will provide students with a firm foundation in ecology, biodiversity and related disciplines, and equip them with the skills required for postgraduate research or employment with government and non-government organizations concerned with biodiversity conservation, nature preservation or habitat assessment and management.

The intensive major is based around an introductory core that emphasizes biology, ecology and evolution of plants and animals; it includes a compulsory residential field trip (as part of the Ecology and Evolution course), as well as instruction in data analysis and biostatistics. Many of the advanced courses in the major have a strong emphasis on field-work and on small projects performed by students. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: assess, understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol). Learning Outcomes:

By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: assess, understand and appreciate the variety of life in Hong Kong’s and Southeast Asia’s natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:

- Major in Biological Sciences
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity
- Minor in Ecology & Biodiversity

Required courses (144 credits)

1. Introductory level courses (60 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)

**Disciplinary Electives (6 credits)**

Plus at least 6 credits selected from the following courses:

- CHEM1041 Foundations of chemistry (6)  
- CHEM1042 General chemistry I (6)  

Take either CHEM1041 or CHEM1042 to fulfill this 6 credits requirement, but not both.

2. **Advanced level courses (66 to 72 credits)** (Note 2)

**Disciplinary Core Courses (30 credits)**

- BIOL3101 Animal behaviour (6)
- BIOL3301 Marine biology (6)  
- BIOL3302 Systematics and phylogenetics (6)  
- BIOL3303 Conservation biology (6)  
- BIOL3319 Tropical terrestrial ecology (6)  

**Disciplinary Electives (36 to 42 credits)** (Note 2)

Plus at least 36 or 42 credits selected from the following courses:

- BIOL3305 Tropical and temperate marine ecology field course (6)  
- BIOL3313 Freshwater ecology (6)  
- BIOL3314 Plant structure and evolution (6)  
- BIOL3318 Experimental intertidal ecology (6)  
- BIOL3322 Marine invertebrate zoology (6)  
- BIOL3328 Nearshore marine and estuarine ecology (6)  
- BIOL3408 Genetics (6)  
- BIOL3419 Insect ecology: the little things that run the world (6)  
- BIOL3506 Evolutionary biology (6)  
- BIOL4301 Fish and fisheries (6)  
- BIOL4302 Environmental impact assessment (6)  
- BIOL4304 Ecosystem functioning and services (6)  
- BIOL4505 Oyster aquaculture: business and technology (6)  
- ENV3019 Urban ecology (6)  
- ENV3020 Global change ecology (6)  

**Disciplinary Core Courses (12 credits)**

- BIOL4991 Ecology & biodiversity project (12)  

**Disciplinary Electives (6 credits)**

- BIOL3991 Directed studies in ecology & biodiversity (6)  
- BIOL4911 Conservation science in practice (6)  

**3. Capstone requirement (12 to 18 credits)** (Note 2)

**Disciplinary Core Courses (12 credits)**

- BIOL4991 Ecology & biodiversity project (12)

**Disciplinary Electives (6 credits)**

Students may choose to complete one of the other two Elective Capstone Courses (6 credits). If students choose to complete 18 credits of Capstone Courses, then they are required to complete only 36 credits of Disciplinary Elective Courses within the Advanced Level Courses (instead of 42 credits).

**Notes:**

1. These are core courses in the regular Ecology & Biodiversity Major (96 credits) curriculum.

2. Within the E&B accredited curriculum, students have to pass a total of 60 credits within the Introductory Level Courses spread across two Science Foundation Courses (Level 1; 12 credits), seven Disciplinary Core Courses (Levels 1 & 2; 42 credits) and one chemistry (Level 1; 6 credits). For the chemistry course, students will have the choice between CHEM1041 and CHEM1042 in function of their prior chemistry background acquired during their upper secondary education. Students with no chemistry background should follow CHEM1041, while students with previous chemistry background should take CHEM1042.

Advanced Level Courses cover a total of 66 to 72 credits. Those are divided between five Disciplinary Core Courses (Level 3; 30 credits) and 6 to 7 Disciplinary Elective Courses (Level 3 & 4; 36 to 42 credits) among a choice of fourteen different courses. As eight of the Disciplinary Elective courses are being taught every other year, students must pay attention to the year during which these courses are taught and ensure that they have fulfilled the necessary requirements. There is a student mentorship programme in place that can assist them in this.

During their final year, students should complete a minimum of 12 credits as Capstone Courses (maximum of 18). The Ecology & Biodiversity Project (12 credits) is mandatory and students can choose to complete one of the other two Elective Capstone Courses (6 credits). If students choose to complete 18 credits of Capstone Courses, then they are required to complete only 36 credits of Disciplinary Elective Courses within the Advanced Level Courses (instead of 42 credits).

Finally, students who participate in student exchange programme are expected to ensure, prior to their departure from HKU, about potential equivalences with the courses taken during exchange programmes to ensure that they match requirements for obtaining the RSB accredited programme.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Science Majors

Major Title
Major in Ecology & Biodiversity (Intensive)

Offered to students
admitted to Year 1 in 2018

Objectives:
This intensive major is directed at teaching students the ‘rules of existence’ for organisms in natural and human-modified environments, including major threats to biodiversity and the approaches adopted to conserve species and habitats. Special reference is made to the plants, animals and habitats of Hong Kong and Asia, the ways in which humans have altered the region's ecosystems, and the management or mitigation of those impacts. The range and scope of courses offered will provide students with a firm foundation in ecology, biodiversity and related disciplines, and equip them with the skills required for postgraduate research or employment with government and non-government organizations concerned with biodiversity conservation, nature preservation or habitat assessment and management.

The intensive major is based around an introductory core that emphasizes biology, ecology and evolution of plants and animals; it includes a compulsory residential field trip (as part of the Ecology and Evolution course), as well as instruction in data analysis and biostatistics. Many of the advanced courses in the major have a strong emphasis on field-work and on small projects performed by students. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBIol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: assess, understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences
Major in Biological Sciences (Intensive)
Major in Ecology & Biodiversity
Minor in Ecology & Biodiversity

Required courses (144 credits)
1. Introductory level courses (60 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6) (Note 1)
SCNC1112 Fundamentals of modern science (6) (Note 1)

Disciplinary Core Courses (42 credits)
BIOL1110 From molecules to cells (6) (Note 1)

**Major Title**  
Major in Ecology & Biodiversity (Intensive)

**Offered to students admitted to Year 1 in**  
2017

**Objectives:**
This intensive major is directed at teaching students the ‘rules of existence’ for organisms in natural and human-modified environments, including major threats to biodiversity and the approaches adopted to conserve species and habitats. Special reference is made to the plants, animals and habitats of Hong Kong and Asia, the ways in which humans have altered the region’s ecosystems, and the management or mitigation of those impacts. The range and scope of courses offered will provide students with a firm foundation in ecology, biodiversity and related disciplines, and equip them with the skills required for postgraduate research or employment with government and non-government organizations concerned with biodiversity conservation, nature preservation or habitat assessment and management.

The intensive major is based around an introductory core that emphasizes biology, ecology and evolution of plants and animals; it includes a compulsory residential field trip (as part of the Ecology and Evolution course), as well as instruction in data analysis and biostatistics. Many of the advanced courses in the major have a strong emphasis on field-work and on small projects performed by students. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential pre requisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (C Biol).

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 2:** assess, understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 3:** have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 4:** use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 5:** demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

- **PLO 6:** have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

- **PLO 7:** be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

**Impermissible Combinations:**
- Major in Biological Sciences
- Major in Biological Sciences (Intensive)
- Major in Ecology & Biodiversity
- Minor in Ecology & Biodiversity

**Required courses (144 credits)**

1. **Introductory level courses (60 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 - Scientific method and reasoning (6)
     - SCNC1112 - Fundamentals of modern science (6) (Note 1)
   - **Disciplinary Core Courses (42 credits)**
     - BIOL1110 - From molecules to cells (6) (Note 1)
     - BIOL1309 - Evolutionary diversity (6) (Note 1)
     - BIOL2102 - Biostatistics (6) (Note 1)
     - BIOL2103 - Biological sciences laboratory course (6) (Note 1)
Disciplinary Electives (6 credits)

Plus at least 6 credits selected from the following courses:

- CHEM1041 Foundations of chemistry (6)
- CHEM1042 General chemistry I (6)

Take either CHEM1041 or CHEM1042 to fulfill this 6 credits requirement, but not both.

2. Advanced level courses (66 to 72 credits) (Note 2)

Disciplinary Core Courses (30 credits)

- BIOL3101 Animal behaviour (6)
- BIOL3301 Marine biology (6)
- BIOL3302 Systematics and phylogenetics (6)
- BIOL3303 Conservation biology (6)
- BIOL3319 Tropical terrestrial ecology (6)

Disciplinary Electives (36 to 42 credits) (Note 2)

Plus at least 36 or 42 credits selected from the following courses:

- BIOL3305 Tropical and temperate marine ecology field course (6)
- BIOL3313 Freshwater ecology (6)
- BIOL3314 Plant structure and evolution (6)
- BIOL3318 Experimental intertidal ecology (6)
- BIOL3322 Marine invertebrate zoology (6)
- BIOL3328 Nearshore marine and estuarine ecology (6)
- BIOL3408 Genetics (6)
- BIOL3419 Insect ecology: the little things that run the world (6)
- BIOL3506 Evolutionary biology (6)
- BIOL4301 Fish and fisheries (6)
- BIOL4302 Environmental impact assessment (6)
- BIOL4304 Ecosystem functioning and services (6)
- BIOL4505 Oyster aquaculture: business and technology (6) [previous title: Oyster aquaculture (6)]
- ENVS3019 Urban ecology (6)
- ENVS3020 Global change ecology (6)

3. Capstone requirement (12 to 18 credits) (Note 2)

Disciplinary Core Courses (12 credits)

- BIOL4991 Ecology & biodiversity project (12)

Disciplinary Electives (6 credits)

- BIOL3991 Directed studies in ecology & biodiversity (6)
- BIOL4911 Conservation science in practice (6)

Notes:

1. These are core courses in the regular Ecology & Biodiversity Major (96 credits) curriculum.

2. Within the E&B accredited curriculum, students have to pass a total of 60 credits within the Introductory Level Courses spread across two Science Foundation Courses (Level 1; 12 credits), seven Disciplinary Core Courses (Levels 1 & 2; 42 credits) and one chemistry (Level 1; 6 credits). For the chemistry course, students will have the choice between CHEM1041 and CHEM1042 in function of their prior chemistry background acquired during their upper secondary education. Students with no chemistry background should follow CHEM1041, while students with previous chemistry background should take CHEM1042.

Advanced Level Courses cover a total of 66 to 72 credits. Those are divided between five Disciplinary Core Courses (Level 3; 30 credits) and 6 to 7 Disciplinary Elective Courses (Level 3 & 4; 36 to 42 credits) among a choice of fourteen different courses. As eight of the Disciplinary Elective courses are being taught every other year, students must pay attention to the year during which these courses are taught and ensure that they have fulfilled the necessary requirements. There is a student mentorship programme in place that can assist them in this.

During their final year, students should complete a minimum of 12 credits as Capstone Courses (maximum of 18). The Ecology & Biodiversity Project (12 credits) is mandatory and students can choose to complete one of the other two Elective Capstone Courses (6 credits). If students choose to complete 18 credits of Capstone Courses, then they are required to complete only 36 credits of Disciplinary Elective Courses within the Advanced Level Courses (instead of 42 credits).

Finally, students who participate in student exchange programme are expected to enquire, prior to their departure from HKU, about potential equivalences with the courses taken during exchange programmes to ensure that they match requirements for obtaining the RSB accredited programme.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity special topics ranging from systematics to animal behaviour. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

**Learning Outcomes:**

By the end of this programme, students should be able to:

- **PLO 1:** understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 2:** assess, understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 3:** have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 4:** use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

- **PLO 5:** demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

- **PLO 6:** have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

- **PLO 7:** be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

**Impermissible Combinations:**

Major in Biological Sciences
Major in Ecology & Biodiversity
Minor in Ecology & Biodiversity

**Required courses (144 credits)**

1. **Introductory level courses (60 credits)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**

### Notes:

1. These are core courses in the regular Ecology & Biodiversity Major (96 credits) curriculum.

2. Within the E&B accredited curriculum, students have to pass a total of 60 credits within the Introductory Level Courses spread across two Science Foundation Courses (Level 1; 12 credits), seven Disciplinary Core Courses (Levels 1 & 2; 42 credits) and one chemistry (Level 1; 6 credits). For the chemistry course, students will have the choice between CHEM1041 and CHEM1042 in function of their prior chemistry background acquired during their upper secondary education. Students with no chemistry background should follow CHEM1041, while students with previous chemistry background should take CHEM1042.

Advanced Level Courses cover a total of 66 to 72 credits. Those are divided between five Disciplinary Core Courses (Level 3; 30 credits) and 6 to 7 Disciplinary Elective Courses (Level 3 & 4; 36 to 42 credits) among a choice of fourteen different courses. As eight of the Disciplinary Elective courses are being taught every other year, students must pay attention to the year during which these courses are taught and ensure that they have fulfilled the necessary requirements. There is a student mentorship programme in place that can assist them in this.

During their final year, students should complete a minimum of 12 credits as Capstone Courses (maximum of 18). The Ecology & Biodiversity Project (12 credits) is mandatory and students can choose to complete one of the other two Elective Capstone Courses (6 credits). If students choose to complete 18 credits of Capstone Courses, then they are required to complete only 36 credits of Disciplinary Elective Courses within the Advanced Level Courses (instead of 42 credits).

Finally, students who participate in student exchange programme are expected to enquire, prior to their departure from HKU, about potential equivalences with the courses taken during exchange programmes to ensure that they match requirements for obtaining the RSB accredited programme.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity specialising in topics ranging from systematics to animal behaviour. They teach students about the ecology and biodiversity of different ecosystems (e.g. marine, terrestrial, freshwater and urban) and taxa (e.g. flowering plants, insects, fishes, marine mammals). Other courses focus on more applied topics, such as environmental impact assessment, conservation, and provide an opportunity for students to become familiar with specialised topics ranging from systematics to animal behaviour.

During their final year, students have an opportunity to conduct independent research in the form of an ecology and biodiversity research project or a directed-studies dissertation under the close supervision of an individual staff member. Students are able to make use of the facilities of the Swire Institute of Marine Science for such work. Strong emphasis is also placed upon experiential learning during overseas field trips that can be taken as part of the capstone requirement of this intensive major.

Ecology and biodiversity research requires extensive scientific knowledge as well as passion, and students are encouraged to take more than the requisite 12-credit minimum of capstone courses. Through these courses, and the range of formal field-based options as well as various extra-curricular activities offered, students will be expected to develop expertise in one or a few groups of plants or animals; this is an important skill since an ability to identify species and major taxa is an essential prerequisite for biodiversity scientists or conservation biologists.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and appreciate the major living and non-living components of the local, regional and global environment, and how they interact; evaluate their role in ecosystem functioning and identify threats to them; and know how these threats can be mitigated (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 2: assess, understand and appreciate the variety of life in Hong Kong's and Southeast Asia's natural habitats, become equipped to assess, study, manage and protect that diversity, and appraise the related moral and ethical issues (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 3: have sufficient experience of the basic techniques of modern ecological science and prepare to learn new ones for specific tasks (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 4: use IT tools appropriately, and access and evaluate materials from libraries, archives and the Internet (by means of coursework, laboratory-based, tutorial classes and/or project-based learning in the curriculum)

PLO 5: demonstrate original, independent and critical thinking, with mastery of a range of communication skills (by means of coursework, project-based and presentation opportunities in the curriculum)

PLO 6: have the skill and knowledge to pursue postgraduate ecological research in top-level Universities around the world or to develop a career in nature conservation and environmental education, especially in Hong Kong and southern China (by means of coursework, tutorial classes, project-based and research-based learning in the curriculum)

PLO 7: be motivated and sufficiently equipped to apply the knowledge solve local, regional and global environmental problems in a changing world. (by means of coursework, laboratory-based, tutorial classes, capstone learning and/or project-based learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences
Major in Ecology & Biodiversity
Minor in Ecology & Biodiversity

Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Environmental Science  
Offered to students admitted to Year 1 in 2021

Objectives:
The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. This includes a flexible teaching and learning programme so that students can explore environmental issues from a range of aspects. Core courses in the curriculum emphasize fundamental knowledge in life and environment, physical and sustainable environment, pollution, monitoring and management. Throughout the curriculum, students are encouraged to undertake their own independent study from primary and secondary sources to incorporate critical thinking, field and laboratory work, documentary and archive scholarship, as integrated elements of relevant courses. By completing the curriculum, students are expected to have enhanced their knowledge in environmental science and have improved their problem-solving ability, communication and social skills. Students will be prepared to work in industries and government agencies, where they will help manage wisely the resources for which they are responsible.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 2: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 3: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 4: gain an advanced level of skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods and appreciation of the related ethical issues (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:
Minor in Environmental Science

Required courses (96 credits)
1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (24 credits)
- CHEM1041 General chemistry I (6)
- ENVS1401 Introduction to environmental science (6)
- ENVS2001 Methods in environmental science (6)
- ENVS2002 Environmental data analysis (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses (Level 1 & 2):
- EASC1020 Introduction to climate science (6)
- EASC1401 Blue Planet (6)
- ENVS1301 Environmental life science (6)
- BIOL2102 Biostatistics (6)
- BIOL2306 Ecology and evolution (6)
- CHEM2241 Analytical chemistry I (6)

2. Advanced level courses (42 credits)

Disciplinary Core Courses (6 credits)
- ENVS3004 Environment, society and economics (6)

Disciplinary Electives (36 credits)
At least 36 credits selected from the following courses:
- BIOL3109 Environmental microbiology (6)
- BIOL3110 Environmental toxicology (6)
- BIOL3216 Food waste management (6)
- BIOL3217 Food, environment and health (6)
- BIOL3303 Conservation biology (6)
- CHEM3141 Environmental chemistry (6)
- CHEM3241 Analytical chemistry II: chemical instrumentation (6)
- EASC3020 Global change: anthropogenic impacts (6)
- EASC3405 Environmental remote sensing (6)
- EASC3419 Earth System Science Field Studies (6)
- ENV2202 Coastal Sustainability (6)
ENVS3042 Pollution (6)
ENVS3202 Plant physiology and climate change (6)
ENVS3313 Environmental oceanography (6)
ENVS3401 Understanding tropical ecosystems in a changing world (6)
ENVS3402 Qualitative data, social science methods and decision-making in environmental science (6)
BIOL4302 Environmental impact assessment (6)
ENVS4110 Environmental remediation (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
- ENVS3999 Directed studies in environmental science (6)
- ENVS4966 Environmental science internship (6)
- ENVS4999 Environmental science project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title:** Major in Environmental Science  
**Offered to students admitted to Year 1 in:** 2020

**Objectives:**  
The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. This includes a flexible teaching and learning programme so that students can explore environmental issues from a range of aspects. Core courses in the curriculum emphasize fundamental knowledge in life and environment, physical and sustainable environment, pollution, monitoring and management. Throughout the curriculum, students are encouraged to undertake their own independent study from primary and secondary sources to incorporate critical thinking, field and laboratory work, documentary and archive scholarship, as integrated elements of relevant courses. By completing the curriculum, students are expected to have enhanced their knowledge in environmental science and have improved their problem-solving ability, communication and social skills. Students will be prepared to work in industries and government agencies, where they will help manage wisely the resources for which they are responsible.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

1. **PLO 1:** identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
2. **PLO 2:** observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
3. **PLO 3:** appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
4. **PLO 4:** gain an advanced level of skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods and appreciation of the related ethical issues (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

**Impermissible Combinations:**
Minor in Environmental Science

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111: Scientific method and reasoning (6)
     - SCNC1112: Fundamentals of modern science (6)
   - **Disciplinary Core Courses (24 credits)**
     - CHEM1042: General chemistry I (6)
     - ENVS1401: Introduction to environmental science (6)
     - ENVS2001: Methods in environmental science (6)
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses (Level 1 & 2):
       - EASC1020: Introduction to climate science (6)
       - EASC1401: Blue Planet (6)
       - ENVS1301: Environmental life science (6)
       - BIOL2102: Biostatistics (6)
       - BIOL2306: Ecology and evolution (6)
       - CHEM2241: Analytical chemistry I (6)
     - May take either ENVS1301 or BIOL2306 to fulfill this 12 credits requirement, but not both.

2. **Advanced level courses (42 credits)**
   - **Disciplinary Core Courses (6 credits)**
     - ENVS3004: Environment, society and economics (6)
   - **Disciplinary Electives (36 credits)**
     - At least 36 credits selected from the following courses:
       - BIOL3109: Environmental microbiology (6)
       - BIOL3110: Environmental toxicology (6)
       - BIOL3216: Food waste management (6)
       - BIOL3217: Food, environment and health (6)
       - BIOL3303: Conservation biology (6)
       - CHEM3141: Environmental chemistry (6)
       - CHEM3241: Analytical chemistry II: chemical instrumentation (6)
       - EASC3020: Global change: anthropogenic impacts (6)
       - EASC3405: Environmental remote sensing (6)
       - EASC3419: Earth System Science Field Studies (6)
       - ENV53007: Natural hazards and mitigation (6)
       - ENV53010: Sustainable energy and environment (6)
       - ENV53019: Urban ecology (6)
       - ENV53020: Global change ecology (6)
       - ENV53022: Environmental science field course (6)
       - ENV53028: Coastal Sustainability (6)

   - May take either ENVS1301 or BIOL2306 to fulfill this 12 credits requirement, but not both.
ENVS3042 Pollution (6)
ENVS3202 Plant physiology and climate change (6)
ENVS3313 Environmental oceanography (6)
ENVS3401 Understanding tropical ecosystems in a changing world (6)
ENVS3402 Qualitative data, social science methods and decision-making in environmental science (6)
BIOL4302 Environmental impact assessment (6)
ENVS4110 Environmental remediation (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
ENVS3999 Directed studies in environmental science (6)
ENVS4966 Environmental science internship (6)
ENVS4999 Environmental science project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
- Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**

Major in Environmental Science  

**Offered to students**

admitted to Year 1 in 2019  

**Objectives:**

The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. This includes a flexible teaching and learning programme so that students can explore environmental issues from a range of aspects. Core courses in the curriculum emphasize fundamental knowledge in life and environment, physical and sustainable environment, pollution, monitoring and management. Throughout the curriculum, students are encouraged to undertake their own independent study from primary and secondary sources to incorporate critical thinking, field and laboratory work, documentary and archive scholarship, as integrated elements of relevant courses. By completing the curriculum, students are expected to have enhanced their knowledge in environmental science and have improved their problem-solving ability, communication and social skills. Students will be prepared to work in industries and government agencies, where they will help manage wisely the resources for which they are responsible.

**Learning Outcomes:**

By the end of this programme, students should be able to:

- **PLO 1**: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 2**: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 3**: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 4**: gain an advanced level of skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods and appreciation of the related ethical issues (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

**Impermissible Combinations:**

Minor in Environmental Science

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**

   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (24 credits)**

   - CHEM104 General chemistry I (6)
   - ENVS1401 Introduction to environmental science (6)
   - ENVS2001 Methods in environmental science (6)
   - ENVS2002 Environmental data analysis (6)

   **Disciplinary Electives (12 credits)**

   At least 12 credits selected from the following courses (Level 1 & 2):

   - EASC1020 Introduction to climate science (6)
   - EASC1401 Blue Planet (6)
   - ENV1301 Environmental life science (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2306 Ecology and evolution (6)
   - CHEM2241 Analytical chemistry I (6)

2. **Advanced level courses (42 credits)**

   **Disciplinary Core Courses (6 credits)**

   - ENVS3004 Environment, society and economics (6)

   **Disciplinary Electives (36 credits)**

   At least 36 credits selected from the following courses:

   - BIOL3109 Environmental microbiology (6)
   - BIOL3110 Environmental toxicology (6)
   - BIOL3216 Food waste management (6)
   - BIOL3217 Food, environment and health (6)
   - BIOL3303 Conservation biology (6)
   - CHEM3141 Environmental chemistry (6)
   - CHEM3241 Analytical chemistry II: chemical instrumentation (6)
   - EASC3020 Global change: anthropogenic impacts (6)
   - EASC3405 Environmental remote sensing (6)
   - EASC3419 Earth System Science Field Studies (6)
   - ENV33007 Natural hazards and mitigation (6)
   - ENV33010 Sustainable energy and environment (6)
   - ENV33019 Urban ecology (6)
   - ENV33020 Global change ecology (6)
   - ENV33022 Environmental science field course (6)
   - ENV33028 Coastal Sustainability (6)

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- ENVS3999 Directed studies in environmental science (6)
- ENVS4966 Environmental science internship (6)
- ENVS4999 Environmental science project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Environmental Science
Offered to students admitted to Year 1 in 2018

Objectives:
The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. ### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Environmental Science
Offered to students admitted to Year 1 in 2015

Objectives:
The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. This includes a flexible teaching and learning programme so that students can explore environmental issues from a range of aspects. Core courses in the curriculum emphasize fundamental knowledge in life and environment, physical and sustainable environment, pollution, monitoring and management. Throughout the curriculum, students are encouraged to undertake their own independent study from primary and secondary sources to incorporate critical thinking, field and laboratory work, documentary and archive scholarship, as integrated elements of relevant courses. By completing the curriculum, students are expected to have enhanced their knowledge in environmental science and have improved their problem-solving ability, communication and social skills. Students will be prepared to work in industries and government agencies, where they will help manage wisely the resources for which they are responsible.

Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1:** identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

**PLO 2:** observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

**PLO 3:** appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

**PLO 4:** gain an advanced level of skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods and appreciation of the related ethical issues (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:
Minor in Environmental Science

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- ENV3999 Directed studies in environmental science (6)
- ENV4966 Environmental science internship (6)
- ENV4999 Environmental science project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Environmental Science
Offered to students admitted to Year 1 in 2014

Objectives:
The Major in Environmental Science aims to provide students with a strong scientific and technological background for understanding and addressing the environmental issues faced by humankind. This includes a flexible teaching and learning programme so that students can explore environmental issues from a range of aspects. Core courses in the curriculum emphasize fundamental knowledge in life and environment, physical and sustainable environment, pollution, monitoring and management. Throughout the curriculum, students are encouraged to undertake their own independent study from primary and secondary sources to incorporate critical thinking, field and laboratory work, documentary and archive scholarship, as integrated elements of relevant courses. By completing the curriculum, students are expected to have enhanced their knowledge in environmental science and have improved their problem-solving ability, communication and social skills. Students will be prepared to work in industries and government agencies, where they will help manage wisely the resources for which they are responsible.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 2: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 3: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)

PLO 4: gain an advanced level of skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods and appreciation of the related ethical issues (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:

Science Majors

Major Title Major in Food & Nutritional Science
Offered to students 2021 admitted to Year 1 in

Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with: (a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma related to health sciences. The curriculum is designed for students to select studies in Nutrition and Public Health in preparation for postgraduate diploma in dietetics or human nutrition. Study in Food Security is an innovative programme that entails scientific and social approach in food, nutrition and environment, allowing students to relate global challenges in industry, society and government levels.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical and health sectors, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food sustainability (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences in nutrition, health and disease of a community using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food-and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)

PLO 6: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

Impermissible Combinations:
Minor in Food & Nutritional Science

Required courses (96 credits)

1. Introductory level courses (60 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110 From molecules to cells (6)
   BIOL1201 Introduction to food and nutrition (6)
   BIOL2101 Principles of food chemistry (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2220 Principles of biochemistry (6)

   -----------------------------------------------------------------
   Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.
   Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

   BIOC2600 Basic biochemistry (6)

   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   CHEM1042 General chemistry I (6)
   CHEM2442 Fundamentals of organic chemistry (6)
   GEOG2013 Sustainable development (6)
   GEOG2030 Global development (6)
   GEOG2152 Health and medical geography (6)
   GEOG2154 Healthy food, place, and sustainability (6)

2. Advanced level courses (30 credits)
   Disciplinary Core Courses (12 credits)
### Science Majors

- **BIOL3202** Nutritional biochemistry (6)
- **BIOL3203** Food microbiology (6)

### Disciplinary Electives (18 credits)

At least 12 credits of advanced level BIOL3XXX and/or BIOL4XXX course from the list below:
- BIOL3204 Nutrition and the life cycle (6)
- BIOL3205 Human physiology (6)
- BIOL3207 Principles of toxicology (6)
- BIOL3209 Food and nutrient analysis (6)
- BIOL3211 Nutrigenomics (6)
- BIOL3216 Food waste management (6)
- BIOL3217 Food, environment and health (6)
- BIOL3218 Food hygiene and quality control (6)
- BIOL3606 Diet and disease (6)
- BIOL3608 Food commodities (6)
- BIOL4201 Public health nutrition (6)
- BIOL4202 Nutrition and sports performance (6)
- BIOL4205 Food technology (6)
- BIOL4209 Functional foods (6)
- BIOL4411 Plant and food biotechnology (6)
- BIOC3606 Molecular medicine (6)
- STAT3617 Sample survey methods (6)
- GEOG3202 GIS in environmental studies (6)
- POLI3121 Environmental policy (6)
- BBMS4004 Public health genetics (6)

### Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- BIOL3992 Directed studies in food & nutritional science (6)
- BIOL4922 Food product development and evaluation (6)
- BIOL4962 Food & nutritional science internship (6)
- BIOL4992 Food & nutritional science project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Those who want to specialize in the Nutrition and Public Health Studies should pass the following course:

   Introduction level courses - 2 Disciplinary Core Courses: Science Foundation: SCNC1111 and SCNC1112; 6 Disciplinary Core Courses: BIOL1110, BIOL1201, BIOL2101; BIOL2102, BIOL2103, BIOL2220 or BIOC2600; 2 Disciplinary Electives: CHEM1042 and CHEM2442.

   Advanced level courses - 2 Disciplinary Core Courses: BIOL3202 and BIOL3203; any 3 Disciplinary Electives with at least 2 must be at BIOL3XXX and/or BIOL4XXX in the list: BIOL3204, BIOL3205, BIOL3207, BIOL3209, BIOL3211, BIOL3217, BIOL3606, BIOL4201, BIOL4202, BIOL4209, BIOL43606, STAT3617, and BBMS4004.

   Capstone requirement: any 1 Capstone Course: BIOL3992, BIOL4922, BIOL4962, and BIOL4992.

5. Those who want to specialize in the Food Security Studies should pass the following course:

   Introduction level courses - 2 Disciplinary Core Courses: Science Foundation: SCNC1111 and SCNC1112; 6 Disciplinary Core Courses: BIOL1110, BIOL1201, BIOL2101; BIOL2102, BIOL2103, BIOL2220 or BIOC2600; 2 Disciplinary Electives: GEOG2013, GEOG2030, GEOG2152 and GEOG2154.

   Advanced level courses - 2 Disciplinary Core Courses: BIOL3202 and BIOL3203; any 3 Disciplinary Electives with at least 2 must be at BIOL3XXX and/or BIOL4XXX in the list: BIOL3207, BIOL3216, BIOL3217, BIOL3218, BIOL3606, BIOL3608, BIOL4201, BIOL4205, BIOL4209, BIOL4411, GEOG3202, POLI3121, STAT3617, and BBMS4004.

   Capstone requirement: any 1 Capstone Course: BIOL3992, BIOL4922, BIOL4962, and BIOL4992.

6. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisor. Students are recommended to take BIOL1110, BIOL1203, CHEM1042 and CHEM2442 in Year 1/2 of the study. Students should also take BIOL3204, BIOL3503 and one Level 3/4 courses related to molecular biology.

7. Specialisation recognition will be allowed for 2014-2018 student intake. Students who already took any two of these CHEM1041, CHEM1042, CHEM1043, CHEM2441, CHEM2442 can be counted as two disciplinary electives for specialization in Nutrition and Public Health.

8. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

9. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are
exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit
disciplinary elective course of the science major in lieu.
- Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
- Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
- Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled.
Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with: (a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma related to health sciences. The curriculum is designed for students to select studies in Nutrition and Public Health in preparation for postgraduate diploma in dietetics or human nutrition. Study in Food Security is an innovative programme that entails scientific and social approach in food, nutrition and environment, allowing students to relate global challenges in industry, society and government levels.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical and health sectors, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food sustainability (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences in nutrition, health and disease of a community using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food- and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)

PLO 6: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

Impermissible Combinations:

At least 6 credits selected from the following courses:

- BIOL3992 Directed studies in food & nutritional science (6)
- BIOL4922 Food product development and evaluation (6)
- BIOL4962 Food & nutritional science internship (6)
- BIOL4992 Food & nutritional science project (12)

**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Those who want to specialize in the Nutrition and Public Health Studies should pass the following course:

   Introduction level courses - 2 Disciplinary Core Courses: Science Foundation: SCNC1111 and SCNC1112; 6 Disciplinary Core Courses: BIOL1110, BIOL1201, BIOL2101; BIOL2102, BIOL2103, BIOL2220 or BIOL2600; 2 Disciplinary Electives: CHEM1042 and CHEM2442.

   Advanced level courses - 2 Disciplinary Core Courses: BIOL3202 and BIOL3203; any 3 Disciplinary Electives with at least 2 must be at BIOL3XXX and/or BIOL4XXX in the list: BIOL3204, BIOL3205, BIOL3207, BIOL3209, BIOL3211, BIOL3217, BIOL3606, BIOL4201, BIOL4202, BIOL4209, BIOL3506, STAT3617, and BBMS4004.

   Capstone requirement: any 1 Capstone Course: BIOL3992, BIOL4922, BIOL4962, and BIOL4992.

6. Those who want to specialize in the Food Security Studies should pass the following course:

   Introduction level courses - 2 Disciplinary Core Courses: Science Foundation: SCNC1111 and SCNC1112; 6 Disciplinary Core Courses: BIOL1110, BIOL1201, BIOL2101; BIOL2102, BIOL2103, BIOL2220 or BIOL2600; 2 Disciplinary Electives: GEOG2013, GEOG2030, GEOG2152 and GEOG2154.

   Advanced level courses - 2 Disciplinary Core Courses: BIOL3202 and BIOL3203; any 3 Disciplinary Electives with at least 2 must be at BIOL3XXX and/or BIOL4XXX in the list: BIOL3207, BIOL3216, BIOL3217, BIOL3218, BIOL3606, BIOL4201, BIOL4205, BIOL4209, BIOL4411, GEOG3202, POLI3121; STAT3617, and BBMS4004.

   Capstone requirement: any 1 Capstone Course: BIOL3992, BIOL4922, BIOL4962, and BIOL4992.

7. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisor. Students are recommended to take BIOL1110, BIOL2103, CHEM1042 and CHEM2442 in Year 1/2 of the study. Students should also take BIOL3204, BIOL3503 and one Level 3/4 courses related to molecular biology.

8. Specialisation recognition will be allowed for 2014-2018 student intake. Students who already took any two of these CHEM1041, CHEM1042, CHEM1043, CHEM2441, CHEM2442 can be counted as two disciplinary electives for specialization in Nutrition and Public Health.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Food & Nutritional Science

Offered to students admitted to Year 1 in 2018

Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with:
(a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health;
(b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors;
(c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to commercial food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food security (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences of nutrition in health and disease, using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food-and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)

PLO 6: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

Impermissible Combinations:
Minor in Food & Nutritional Science

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111  Scientific method and reasoning (6)
   SCNC1112  Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110  From molecules to cells (6)
   BIOL1201  Introduction to food and nutrition (6)
   BIOL2101  Principles of food chemistry (6)
   BIOL2102  Biostatistics (6)
   BIOL2103  Biological sciences laboratory course (6)
   BIOL2220  Principles of biochemistry (6)
   BIOL2600  Basic biochemistry (6)

   Take either BIOL2220 or BIOL2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOL2600 are mutually exclusive.

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (18 credits)
   BIOL3202  Nutritional biochemistry (6)
   BIOL3203  Food microbiology (6)
   BIOL3209  Food and nutrient analysis (6)

   Disciplinary Electives (24 credits)
   At least 24 credits selected from the following courses:
   BIOL3204  Nutrition and the life cycle (6)
   BIOL3205  Human physiology (6)
   BIOL3206  Clinical nutrition (6)

   Principles of toxicology (6)

   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.
BIOL3207 Nutrigenomics (6)
BIOL3211 Principles of dietary assessment (6)
BIOL3215 Food waste management (6)
BIOL3216 Food, environment and health (6)
BIOL3218 Food hygiene and quality control (6)
BIOL3606 Diet and disease (6)

BIOL3608 Food commodities (6)

BIOL4201 Public health nutrition (6)
BIOL4202 Nutrition and sports performance (6)
BIOL4205 Food technology (6)
BIOL4208 Meat, dairy and grain sciences (6)
BIOL4209 Functional foods (6)
BIOL4411 Plant and food biotechnology (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:
- BIOL3992 Directed studies in food & nutritional science (6)
- BIOL4913 Advanced practicum on food and nutrient analysis (6)
- BIOL4922 Food product development and evaluation (6)
- BIOL4962 Food & nutritional science internship (6)
- BIOL4992 Food & nutritional science project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:
   (a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3209; BIOL3216; BIOL3218; BIOL4205; BIOL4208; BIOL4209; BIOL4411; BIOL4915; BIOL4922.
   (b) Nutrition and Health Science: BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3211; BIOL3215; BIOL3217; BIOL3218; BIOL3606; BIOL4201; BIOL4202.

6. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisors regarding additional courses in Physiology and Biochemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Food & Nutritional Science
Offered to students: admitted to Year 1 in 2017

Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with: (a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to commercial food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food security (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences of nutrition in health and disease, using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food- and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)

PLO 6: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

Impermissible Combinations:
Minor in Food & Nutritional Science

Required courses (96 credits)

1. Introductory level courses (48 credits)
   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (36 credits)**
   - BIOL1110 From molecules to cells (6)
   - BIOL1201 Introduction to food and nutrition (6)
   - BIOL2101 Principles of food chemistry (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2103 Biological sciences laboratory course (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOL2220 Basic biochemistry (6)

   Take either BIOL2220 or BIOC2600 to fulfill this 36 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

2. Advanced level courses (42 credits)
   **Disciplinary Core Courses (18 credits)**
   - BIOL3202 Nutritional biochemistry (6)
   - BIOL3203 Food microbiology (6)
   - BIOL3209 Food and nutrient analysis (6)

   **Disciplinary Electives (24 credits)**
   - BIOL3606 Clinical nutrition (6)
   - BIOL3606 Principles of toxicology (6)

   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- BIOL3992  Directed studies in food & nutritional science (6)
- BIOL4913  Advanced practicum on food and nutrient analysis (6)
- BIOL4922  Food product development and evaluation (6)
- BIOL4962  Food & nutritional science internship (6)
- BIOL4992  Food & nutritional science project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:
   - (a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3209; BIOL3216; BIOL3218; BIOL4205; BIOL4208; BIOL4209; BIOL4411; BIOL4913; BIOL4922.
   - (b) Nutrition and Health Science: BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3211; BIOL3215; BIOL3217; BIOL3218; BIOL3606; BIOL4201; BIOL4202.

6. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisors regarding additional courses in Physiology and Biochemistry.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with: (a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to commercial food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food security (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

**Notes:**

1. BIOL4210 and BIOL4922 are mutually exclusive.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:
   (a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3208 or BIOL3218; BIOL3209; BIOL3210 or BIOL4208; BIOL3216; BIOL4205; BIOL4207 or BIOL4208; BIOL4209; BIOL4210 or BIOL4922; BIOL4411; BIOL4913.
   (b) Nutrition and Health Science: BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3208 or BIOL3218; BIOL3211; BIOL3215; BIOL3217; BIOL3608; BIOL4201; BIOL4202.
7. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisors regarding additional courses in Physiology and Biochemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Major Title
Major in Food & Nutritional Science

## Offered to students
admitted to Year 1 in 2014

## Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with:

(a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health;
(b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors;
(c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students' critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

## Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand the science underpinning food and nutrition as applied to diet and health, and to commercial food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 2**: analyze controversial food related issues such as GM foods, nutritional labeling and food security (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 3**: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 4**: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences of nutrition in health and disease, using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 5**: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food-and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)
- **PLO 6**: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

## Impermissible Combinations:
Minor in Food & Nutritional Science

### Required courses (96 credits)

#### 1. Introductory level courses (48 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**

**BIOL3206**  
Principles of toxicology (6)

Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.
BIOL3207 Food safety and quality management (6)

BIOL3208 Food and nutritional toxicology (6)

BIOL3209 Food and nutrient analysis (6)

BIOL3210 Grain production and utilization (6)

BIOL3211 Nutrigenomics (6)

BIOL3215 Principles of dietary assessment (6)

BIOL3216 Food waste management (6)

BIOL3217 Food, environment and health (6)

BIOL3218 Food hygiene and quality control (6)

BIOL3606 Diet and disease (6)

BIOL3608 Food commodities (6)

BIOL4201 Public health nutrition (6)

BIOL4202 Nutrition and sports performance (6)

BIOL4204 Diet, brain function and behavior (6)

BIOL4205 Food technology (6)

BIOL4207 Meat and dairy sciences (6)

BIOL4208 Meat, dairy and grain sciences (6)

BIOL4209 Functional foods (6)

BIOL4210 Food product development (6)

BIOL4411 Plant and food biotechnology (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

BIOL3992 Directed studies in food & nutritional science (6)

BIOL4911 Sensory evaluation of food (6)

BIOL4913 Advanced practicum on food and nutrient analysis (6)

BIOL4922 Food product development and evaluation (6)

BIOL4962 Food & nutritional science internship (6)

BIOL4992 Food & nutritional science project (12)

Notes:
1. BIOL4210 and BIOL4922 are mutually exclusive.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:

   (a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3208 or BIOL3218; BIOL3209; BIOL3210 or BIOL4208; BIOL3216; BIOL4205; BIOL4207 or BIOL4208; BIOL4210 or BIOL4922; BIOL4411; BIOL4913.

   (b) Nutrition and Health Science: BIOL3607; BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3208 or BIOL3218; BIOL3211; BIOL3215; BIOL3217; BIOL3608; BIOL4201; BIOL4202.

7. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection...
advisors regarding additional courses in Physiology and Biochemistry.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**  
Major in Food & Nutritional Science

**Offered to students** admittance to Year 1 in **2013**

**Objectives:**
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with: (a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students’ critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

**Learning Outcomes:**

Notes:

1. BIOL4210 and BIOL4922 are mutually exclusive.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:

(a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3208 or BIOL3218; BIOL3209; BIOL3210 or BIOL4208; BIOL3216; BIOL4205;
BIOL4207 or BIOL4208; BIOL4209; BIOL4210 or BIOL4922; BIOL4411; BIOL4913.
(b) Nutrition and Health Science: BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3208 or BIOL3218; BIOL3211; BIOL3215; BIOL3217; BIOL3606; BIOL4211; BIOL4202.

7. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisors regarding additional courses in Physiology and Biochemistry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Food & Nutritional Science

Offered to students admitted to Year 1 in 2012

Objectives:
The Major in Food and Nutritional Science aims to offer an exciting, dynamic, and challenging environment to prepare the students for career opportunities in food and nutritional science. The goals of the programme are to provide the students with:
(a) critical knowledge and understanding of the theoretical and practical aspects of food science and technology, and nutrition and their relationship to human health; (b) critical knowledge and understanding on the relationship between food and a wide range of social, legal, technological and environmental factors; (c) a curriculum meeting the requirements for higher degree in MPhil and PhD and or the taught Master of Science degrees in the field of Food industry: Management and Marketing, Food Safety and Toxicology and the postgraduate diploma in dietetics.

The mission is to provide a progressive and effective programme that integrates theoretical and experiential learning to better prepare students for the challenges of the workplace. Throughout the curriculum, there is consistent emphasis on experiential learning through laboratory studies, internship training, research-based learning, debate and presentations, which are designed to enhance students’ critical thinking, communication and collaboration, tackling of ill-defined problems, development of individual learning objectives and self-evaluation of performance. Internship experiences can be gained in medical centers, schools, industries, government and community setting. Students graduated from this programme are prepared for diverse careers in the food industry, government or private-sector food and nutrition agencies, and scientific research laboratories, health-care and fitness facilities, hospitals, nutrition edition and communication enterprises.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand the science underpinning food and nutrition as applied to diet and health, and to commercial food production (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: analyze controversial food related issues such as GM foods, nutritional labeling and food security (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand ethical perspectives and practice in all areas of food product development, food safety and public health nutrition, and appreciate and identify the need for ethical standards and professional codes of conduct (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: apply and disseminate scientific knowledge obtained from food, nutrition and related biosciences for the understanding of the influences of nutrition in health and disease, using a range of formats and approaches (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 5: apply independent thinking and the principles of scientific enquiry to conduct a small research project to test a food-and/or nutrition-related hypothesis (by means of coursework, tutorial classes, laboratory-based and project-based learning in the curriculum)

PLO 6: demonstrate communication and teamwork skills necessary to working in a multi-disciplinary environment (by means of coursework and group-project learning in the curriculum)

Impermissible Combinations:

Minor in Food & Nutritional Science

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   BIOL1110 From molecules to cells (6)
   BIOL1201 Introduction to food and nutrition (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2220 Principles of biochemistry (6)
   BIOL2306 Ecology and evolution (6)
   BIOL2600 Basic biochemistry (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (18 credits)
   BIOL3201 Food chemistry (6)
   BIOL3202 Nutritional biochemistry (6)
   BIOL3203 Food microbiology (6)

   Disciplinary Electives (24 credits)
   Take either BIOL2220 or BIOL2600 to fulfill this 36 credits, but not both. BIOL2220 and BIOL2600 are mutually exclusive.
   BIOL3206 Food safety and quality management (6)
   BIOL3207 Principles of toxicology (6)
   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.

BIOL3208  Take either BIOL3208 or BIOL3218 to fulfill this 24 credits requirement, but not both. BIOL3208 and BIOL3218 are mutually exclusive.

BIOL3209  Food and nutrient analysis (6)

BIOL3210  Grain production and utilization (6)  Take either BIOL3210 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3210 and BIOL4208 are mutually exclusive.

BIOL3211  Nutrigenomics (6)

BIOL3215  Principles of dietary assessment (6)

BIOL3216  Food waste management (6)

BIOL3217  Food, environment and health (6)

BIOL3218  Food hygiene and quality control (6)  Take either BIOL3208 or BIOL3218 to fulfill this 24 credits requirement, but not both. BIOL3208 and BIOL3218 are mutually exclusive.

BIOL3606  Diet and disease (6)

BIOL3608  Food commodities (6)  Take either BIOL3608 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3608 and BIOL4208 are mutually exclusive.

BIOL4201  Public health nutrition (6)

BIOL4202  Nutrition and sports performance (6)

BIOL4204  Diet, brain function and behavior (6)

BIOL4205  Food technology (6)  [previous title: Food processing and engineering (6)]

BIOL4207  Meat and dairy sciences (6)  Take either BIOL4207 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL4207 and BIOL4208 are mutually exclusive.

BIOL4208  Meat, dairy and grain sciences (6)  Take either BIOL3210 or BIOL4208; BIOL4207 or BIOL4208; BIOL3608 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3608 and BIOL4208 are mutually exclusive.

BIOL4209  Functional foods (6)

BIOL4210  Food product development (6)

BIOL4411  Plant and food biotechnology (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:

   BIOL3992  Directed studies in food & nutritional science (6)
   BIOL4912  Sensory evaluation of food (6)
   BIOL4913  Advanced practicum on food and nutrition analysis (6)
   BIOL4922  Food product development and evaluation (6)
   BIOL4962  Food & nutritional science internship (6)
   BIOL4992  Food & nutritional science project (12)

Notes:
1. BIOL4210 and BIOL4922 are mutually exclusive.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students who wish to specialize in a certain area may choose to emphasize selection of courses from the following lists:
   (a) Food Science and Technology: BIOL3608; BIOL3207; BIOL3208 or BIOL3218; BIOL3209; BIOL3210 or BIOL4208; BIOL3216; BIOL4205; BIOL4207 or BIOL4208; BIOL4209; BIOL4210 or BIOL4922; BIOL4411; BIOL4913.
   (b) Nutrition and Health Science: BIOL3204; BIOL3205; BIOL3206; BIOL3207; BIOL3208 or BIOL3218; BIOL3211; BIOL3215; BIOL3217; BIOL3606; BIOL4201; BIOL4202.

7. Students who may wish to pursue postgraduate study in dietetics are strongly advised to consult their academic and course selection advisors regarding additional courses in Physiology and Biochemistry.
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology
Offered to students admitted to Year 1 in 2021

Objectives:
Geology concerns with the scientific study of the Earth's structure, processes, material and history. Geologists apply knowledge of chemistry, biology, physics and mathematics to solve Earth problems. The Geology Major aims to give students a sound foundation of the geological sciences and enable them to pursue postgraduate studies or careers in the geosciences. The curriculum emphasizes the development of knowledge and skills, and practical experience in the field. The core courses are designed to give students a well-rounded understanding of the geological disciplines including petrology, paleontology, geophysics, geochemistry, geochronology and the applications of geological knowledge to resource development, natural hazard management, and geotechnical and environmental engineering. Students who wish to become a professional geologist may take additional designated courses designed to meet the pathway for accreditation as a chartered geologist.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Major in Geology (Intensive)
Minor in Earth Sciences

Required courses (96 credits)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second
major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology
Offered to students admitted to Year 1 in 2020

Objectives:
Geology concerns with the scientific study of the Earth's structure, processes, material and history. Geologists apply knowledge of chemistry, biology, physics and mathematics to solve Earth problems. The Geology Major aims to give students a sound foundation of the geological sciences and enable them to pursue postgraduate studies or careers in the geosciences. The curriculum emphasizes the development of knowledge and skills, and practical experience in the field. The core courses are designed to give students a well-rounded understanding of the geological disciplines including petrology, paleontology, geophysics, geochemistry, geochronology and the applications of geological knowledge to resource development, natural hazard management, and geotechnical and environmental engineering. Students who wish to become a professional geologist may take additional designated courses designed to meet the pathway for accreditation as a chartered geologist.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Major in Geology (Intensive)
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   EASC3406 Reconstruction of past climate (6)
   EASC3410 Hydrogeology (6)
   EASC3412 Earth resources (6)
   EASC3413 Engineering geology (6)
   EASC3414 Soil and rock mechanics (6)
   EASC3416 Advanced geochemistry and geochronology (6)
   EASC3417 Earth through time (6)
   EASC3999 Directed studies in earth sciences (6)
   ENVSC3007 Natural hazards and mitigation (6)
   EASC4403 Biogeochemical cycles (6)
   EASC4407 Regional geology (6)
   EASC4408 Special topics in earth sciences (6)
   EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   EASC4955 Integrated field studies (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second
major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Major Title
Major in Geology

## Offered to students
admitted to Year 1 in 2018

## Objectives:
Geology concerns with the scientific study of the Earth's structure, processes, material and history. Geologists apply knowledge of chemistry, biology, physics and mathematics to solve Earth problems. The Geology Major aims to give students a sound foundation of the geological sciences and enable them to pursue postgraduate studies or careers in the geosciences. The curriculum emphasizes the development of knowledge and skills, and practical experience in the field. The core courses are designed to give students a well-rounded understanding of the geological disciplines including petrology, paleontology, geophysics, geochemistry, geochronology and the applications of geological knowledge to resource development, natural hazard management, and geotechnical and environmental engineering. Students who wish to become a professional geologist may take additional designated courses designed to meet the pathway for accreditation as a chartered geologist.

## Learning Outcomes:
By the end of this programme, students should be able to:

1. **PLO 1**: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

2. **PLO 2**: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

3. **PLO 3**: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

4. **PLO 4**: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

5. **PLO 5**: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

## Impermissible Combinations:
Major in Geology (Intensive)
Minor in Earth Sciences

## Required courses (96 credits)

- **PLO 2**: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)
- **PLO 3**: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)
- **PLO 4**: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)
- **PLO 5**: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (42 credits)
   - **Disciplinary Core Courses**: Science Foundation Courses (12 credits)
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (30 credits)**
     - EASC1402 Principles of geology (6)
     - EASC2401 Fluid/solid interactions in earth processes (6)
     - EASC2402 Field and laboratory methods (6)
     - EASC2406 Geochemistry (6)
     - EASC2407 Mineralogy (6)

2. Advanced level courses (48 credits)
   - **Disciplinary Core Courses (36 credits)**
     - EASC3402 Petrology (6)
     - EASC3403 Sedimentary environments (6)
     - EASC3404 Structural geology (6)
     - EASC3408 Geophysics (6)
     - EASC3409 Igneous and metamorphic petrogenesis (6)
     - EASC4406 Earth dynamics & global tectonics (6)
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - EASC3406 Reconstruction of past climate (6)
       - EASC3410 Hydrogeology (6)
       - EASC3412 Earth resources (6)
       - EASC3413 Engineering geology (6)
       - EASC3414 Soil and rock mechanics (6)
       - EASC3416 Advanced geochemistry and geochronology (6)
       - EASC3417 Earth through time (6)
       - EASC3999 Directed studies in earth sciences (6)
       - ENV3007 Natural hazards and mitigation (6)
       - EASC4403 Biogeochemical cycles (6)
       - EASC4407 Regional geology (6)
       - EASC4408 Special topics in earth sciences (6)
       - EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   - EASC4955 Integrated field studies (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112
Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology
Offered to students admitted to Year 1 in 2013

Objectives:
Geology concerns with the scientific study of the Earth's structure, processes, material and history. Geologists apply knowledge of chemistry, biology, physics and mathematics to solve Earth problems. The Geology Major aims to give students a sound foundation of the geological sciences and enable them to pursue postgraduate studies or careers in the geosciences. The curriculum emphasizes the development of knowledge and skills, and practical experience in the field. The core courses are designed to give students a well-rounded understanding of the geological disciplines including petrology, paleontology, geophysics, geochemistry, geochronology and the applications of geological knowledge to resource development, natural hazard management, and geotechnical and environmental engineering. Students who wish to become a professional geologist may take additional designated courses designed to meet the pathway for accreditation as a chartered geologist.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1 : describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2 : have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3 : communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4 : have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5 : work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)
1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (30 credits)
   EASC1402 Principles of geology (6)
   EASC2401 Fluid/solid interactions in earth processes (6)
   EASC2402 Field and laboratory methods (6)
   EASC2406 Geochemistry (6)
   EASC2407 Mineralogy (6)

2. Advanced level courses (48 credits)
   Disciplinary Core Courses (36 credits)
   EASC3402 Petrology (6)
   EASC3403 Sedimentary environments (6)
   EASC3404 Structural geology (6)
   EASC3408 Geophysics (6)
   EASC3409 Igneous and metamorphic petrogenesis (6)
   EASC4406 Earth dynamics & global tectonics (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   EASC3406 Reconstruction of past climate (6)
   EASC3410 Hydrogeology (6)
   EASC3412 Earth resources (6)
   EASC3413 Engineering geology (6)
   EASC3414 Soil and rock mechanics (6)
   EASC3416 Advanced geochemistry and geochronology (6)
   EASC3417 Earth through time (6)
   EASC3999 Directed studies in earth sciences (6)
   ENV3007 Natural hazards and mitigation (6)
   EASC4403 Biogeochemical cycles (6)
   EASC4407 Regional geology (6)
   EASC4408 Special topics in earth sciences (6)
   EASC4999 Earth sciences project (12)

3. Capstone requirement (6 credits)
   EASC4955 Integrated field studies (6)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112
### Fundamentals of modern science (6 credits).
Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology
Offered to students: admitted to Year 1 in 2012

Objectives:
Geology concerns with the scientific study of the Earth's structure, processes, material and history. Geologists apply knowledge of chemistry, biology, physics and mathematics to solve Earth problems. The Geology Major aims to give students a sound foundation of the geological sciences and enable them to pursue postgraduate studies or careers in the geosciences. The curriculum emphasizes the development of knowledge and skills, and practical experience in the field. The core courses are designed to give students a well-rounded understanding of the geological disciplines including petrology, paleontology, geophysics, geochemistry, geochronology and the applications of geological knowledge to resource development, natural hazard management, and geotechnical and environmental engineering. Students who wish to become a professional geologist may take additional designated courses designed to meet the pathway for accreditation as a chartered geologist.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Minor in Earth Sciences

Required courses (96 credits)

1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)

If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology (Intensive)

Offered to students admitted to Year 1 in 2021

Objectives:
To provide an education in Geology which meets the current minimum requirements of the Geological Society of London for accreditation.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Major in Geology
Minor in Earth Sciences

Required courses (150 credits)

1. Introductory level courses (54 to 66 credits) (Note 1)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (42 credits)
- EASC1401 Blue Planet (6)
- EASC1402 Principles of geology (6)
- EASC2401 Fluid/solid interactions in earth processes (6)
- EASC2402 Field and laboratory methods (6)
- EASC2406 Geochemistry (6)
- EASC2407 Mineralogy (6)
- EASC2409 Regional field studies (6)

2. Advanced level courses (78 to 90 credits) (Note 1)

Disciplinary Core Courses (60 credits)
- EASC3402 Petrology (6)
- EASC3403 Sedimentary environments (6)
- EASC3404 Structural geology (6)
- EASC3408 Geophysics (6)
- EASC3409 Igneous and metamorphic petrogenesis (6)
- EASC3417 Earth through time (6)
- EASC4406 Earth dynamics & global tectonics (6)
- EASC4407 Regional geology (6)
- EASC4999 Earth sciences project (12)

Disciplinary Electives (30 credits)
At least 30 credits selected from the following introductory and advanced level courses in List A and List B, among which at least 6 credits from List A:

List A
- EASC3405 Environmental remote sensing (6)
- EASC3413 Engineering geology (6)

List B
- EASC2404 Introduction to atmosphere and hydrosphere (6)
- EASC2408 Planetary geology (6)
- EASC3020 Global change: anthropogenic impacts (6)
- EASC3406 Reconstruction of past climate (6)
- EASC3410 Hydrogeology (6)
- EASC3412 Earth resources (6)
- EASC3414 Soil and rock mechanics (6)
- EASC3416 Advanced geochemistry and geochronology (6)
- EASC3999 Directed studies in earth sciences (6)
- ENVS3007 Natural hazards and mitigation (6)
- ENVS3313 Environmental oceanography (6)
- EASC4403 Biogeochemical cycles (6)
- EASC4408 Special topics in earth sciences (6)
- EASC4911 Earth system: contemporary issues (6)

**Notes:**

1. These are core courses in the regular Geology Major (96 credits) curriculum.

2. Requires approval to qualify for accredited pathway. EASC4999 Earth sciences project must have a significant 3D geological evolutionary component to meet Accredited Pathway requirements, as specified during our 2016 re-accreditation. Therefore, each EASC4999 project intended to qualify for the Accredited Pathway must be approved by the Geology major coordinator as satisfying this requirement. This policy is effective for all projects starting in 2017 and after.

3. In the list of disciplinary elective courses, two of them are introductory level courses while the others are advanced level courses. If students take all advanced level courses in the list, the total number of introductory level courses is 54 credits while that of advanced level courses is 90 credits. If students take 2 introductory level courses in the list and 3 advanced level courses, the total number of introductory level courses is 66 credits and that of advanced level courses is 78 credits.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

(Note 1)

Notes:
1. These are core courses in the regular Geology Major (96 credits) curriculum.

2. Requires approval to qualify for accredited pathway. EASC4999 Earth sciences project must have a significant 3D geological evolutionary component to meet Accredited Pathway requirements, as specified during our 2016 re-accreditation. Therefore, each EASC4999 project intended to qualify for the Accredited Pathway must be approved by the Geology major coordinator as satisfying this requirement. This policy is effective for all projects starting in 2017 and after.

3. In the list of disciplinary elective courses, two of them are introductory level courses while the others are advanced level courses. If students take all advanced level courses in the list, the total number of introductory level courses is 54 credits while that of advanced level courses is 90 credits. If students take 2 introductory level courses in the list and 3 advanced level courses, the total number of introductory level courses is 66 credits and that of advanced level courses is 78 credits.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title** Major in Geology (Intensive)

**Offered to students** admitted to Year 1 in 2018

**Objectives:**
To provide an education in Geology which meets the current minimum requirements of the Geological Society of London for accreditation.

**Learning Outcomes:**
By the end of this programme, students should be able to:

**PLO 1:** describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

**PLO 2:** have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

**PLO 3:** communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

**PLO 4:** have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

**PLO 5:** work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

**Impermissible Combinations:**
Major in Geology
Minor in Earth Sciences

**Required courses (150 credits)**

1. **Introductory level courses (54 to 66 credits) (Note 1)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6) (Note 1)
   - SCNC1112 Fundamentals of modern science (6) (Note 1)

   **Disciplinary Core Courses (42 credits)**
   - EASC1401 Blue Planet (6)
   - EASC1402 Principles of geology (6) (Note 1)
   - EASC2401 Fluid/solid interactions in earth processes (6) (Note 1)
   - EASC2402 Field and laboratory methods (6) (Note 1)
   - EASC2406 Geochemistry (6) (Note 1)
   - EASC2407 Mineralogy (6) (Note 1)
   - EASC2409 Regional field studies (6)

2. **Advanced level courses (78 to 90 credits) (Note 1)**

   **Disciplinary Core Courses (60 credits)**
   - EASC3402 Petrology (6) (Note 1)
   - EASC3403 Sedimentary environments (6) (Note 1)
   - EASC3404 Structural geology (6) (Note 1)
   - EASC3408 Geophysics (6) (Note 1)
   - EASC3409 Igneous and metamorphic petrogenesis (6) (Note 1)
   - EASC3417 Earth through time (6)
   - EASC4406 Earth dynamics & global tectonics (6) (Note 1)
   - EASC4407 Regional geology (6)
   - EASC4999 Earth sciences project (12) (Note 2)

   **Disciplinary Electives (30 credits)**
   At least 30 credits selected from the following introductory and advanced level courses in List A and List B, among which at least 6 credits from List A:

   **List A**
   - EASC3405 Environmental remote sensing (6)
   - EASC3413 Engineering geology (6)

   **List B**
   - EASC2404 Introduction to atmosphere and hydroosphere (6)
   - EASC2408 Planetary geology (6)
   - EASC3020 Global change: anthropogenic impacts (6)
   - EASC3406 Reconstruction of past climate (6)
   - EASC3410 Hydrogeology (6)
   - EASC3412 Earth resources (6)
   - EASC3414 Soil and rock mechanics (6)
   - EASC3416 Advanced geochemistry and geochronology (6)
   - EASC3999 Directed studies in earth sciences (6)
   - ENVS3007 Natural hazards and mitigation (6)
   - ENVS3313 Environmental oceanography (6)
   - EASC4403 Biogeochemical cycles (6)
   - EASC4408 Special topics in earth sciences (6)
   - EASC4911 Earth system: contemporary issues (6)
### Notes:

1. These are core courses in the regular Geology Major (96 credits) curriculum.

2. Requires approval to qualify for accredited pathway. EASC4999 Earth sciences project must have a significant 3D geological evolutionary component to meet Accredited Pathway requirements, as specified during our 2016 re-accreditation. Therefore, each EASC4999 project intended to qualify for the Accredited Pathway must be approved by the Geology major coordinator as satisfying this requirement. This policy is effective for all projects starting in 2017 and after.

3. In the list of disciplinary elective courses, two of them are introductory level courses while the others are advanced level courses. If students take all advanced level courses in the list, the total number of introductory level courses is 54 credits while that of advanced level courses is 90 credits. If students take 2 introductory level courses in the list and 3 advanced level courses, the total number of introductory level courses is 66 credits and that of advanced level courses is 78 credits.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Geology (Intensive)
Offered to students admitted to Year 1 in 2017

Objectives:
To provide an education in Geology which meets the current minimum requirements of the Geological Society of London for accreditation.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and apply key concepts in the conventional areas of the geosciences, covering the areas of physical geology, historical geology, mineralogy, petrology, geochemistry, geophysics, structural geology, tectonics and petrogenesis, and earth resources (by means of coursework, laboratory-based, tutorial classes and project-based learning in the curriculum)

PLO 2: have acquired the ability to make observation, description, measurement and analysis of common geological features in the field, conduct geological mapping as well as undertake independent geological study, and appraise the related ethical issues (by means of both local and overseas residential field learning experience)

PLO 3: communicate scientific concepts and critically discuss aspects of contemporary issues pertaining to earth sciences, environments and resources (by means of capstone, project-based learning and presentation opportunities in the curriculum)

PLO 4: have gained some insight to the real-life industrial environment and developed connections within the geosciences profession (by means of internship opportunities in the curriculum)

PLO 5: work with others in an effective manner and have learned to accept and appreciate different cultures (by means of group project learning, field learning experience in the curriculum)

Impermissible Combinations:
Major in Geology
Minor in Earth Sciences

Required courses (150 credits)
1. Introductory level courses (54 to 66 credits) (Note 1)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6) (Note 1)

     - EASC4408 Special topics in earth sciences (6)  
     - EASC4911 Earth system: contemporary issues (6)
### Notes:

1. These are core courses in the regular Geology Major (96 credits) curriculum.

2. Requires approval to qualify for accredited pathway. EASC4999 Earth sciences project must have a significant 3D geological evolutionary component to meet Accredited Pathway requirements, as specified during our 2016 re-accreditation. Therefore, each EASC4999 project intended to qualify for the Accredited Pathway must be approved by the Geology major coordinator as satisfying this requirement. This policy is effective for all projects starting in 2017 and after.

3. In the list of disciplinary elective courses, two of them are introductory level courses while the others are advanced level courses. If students take all advanced level courses in the list, the total number of introductory level courses is 54 credits while that of advanced level courses is 90 credits. If students take 2 introductory level courses in the list and 3 advanced level courses, the total number of introductory level courses is 66 credits and that of advanced level courses is 78 credits.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Objectives:
The Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize fundamental knowledge and concepts in Mathematics and elective courses provide training in both pure and applied aspects of Mathematics. Throughout the curriculum there is also emphasis on experiential learning through guided studies, projects, seminars and summer internships. With the diversity of courses offered in the major, various specializations are available. These will lead to careers in a wide range of sectors including education, economics and finance, analytics and data science, logistics, management, research and further studies.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1:** describe and present fundamental concepts in mathematics (by means of coursework and learning activities in the major or minor curriculum)

**PLO 2:** apply mathematical theory and techniques to different areas of Sciences, and appraise the related ethical issues (by means of coursework and learning activities in the major or minor curriculum)

**PLO 3:** communicate in mathematical language and present scientific arguments (by means of coursework, seminars, guided studies and projects)

**PLO 4:** collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)

**PLO 5:** appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

### Impermissible Combinations:
Major in Mathematics (Intensive)
Minor in Computational & Financial Mathematics
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

### Required courses (96 credits)

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses:** Science Foundation Courses (12 credits)
     - SCNC1111: Scientific method and reasoning (6)
     - SCNC1112: Fundamentals of modern science (6)
   - **Disciplinary Core Courses (36 credits)**
     - MATH1013: University mathematics II (6)
     - MATH2012: Fundamental concepts of mathematics (6)
     - MATH2101: Linear algebra I (6)
     - MATH2102: Linear algebra II (6)
     - MATH2211: Multivariable calculus (6)
     - MATH2241: Introduction to mathematical analysis (6)

2. **Advanced level courses (42 credits)**
   - **Disciplinary Core Course (6 credits)**
     - MATH3401: Analysis I (6)
   - **Disciplinary Electives (36 credits)**
     - At least 36 credits advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), of which at least 12 credits are selected from List A and at least 12 credits should be from MATH4XXX or MATH7XXX level, subject to pre-requisite requirements. The current list includes courses in List A, List B and those courses not selected to fulfill the capstone requirements, but excluding MATH4966 Mathematics Internship.

   **List A**
   - MATH3301: Algebra I (6)
   - MATH3403: Functions of a complex variable (6)
   - MATH3601: Numerical analysis (6)
   - MATH3603: Probability theory (6)
   - MATH3904: Introduction to optimization (6)

   **List B**
   - MATH3001: Development of mathematical ideas (6)
   - MATH3002: Mathematics seminar (6)
   - MATH3303: Matrix theory and its applications (6)
   - MATH3304: Introduction to number theory (6)
   - MATH3405: Differential equations (6)
   - MATH3408: Computational methods and differential equations with applications (6)
   - MATH3451: Introduction to topology (6)
   - MATH3600: Discrete mathematics (6)
   - MATH3901: Operations research I (6)
   - MATH3905: Queueing theory and simulation (6)
   - MATH3906: Financial calculus (6)
   - MATH3911: Game theory and strategy (6)
   - MATH3943: Network models in operations research (6)
   - MATH4302: Algebra II (6)
   - MATH4402: Analysis II (6)
   - MATH4404: Functional analysis (6)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

6. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

7. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics
Offered to students: admitted to Year 1 in 2020

Objectives:
The Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize fundamental knowledge and concepts in Mathematics and elective courses provide training in both pure and applied aspects of Mathematics. Throughout the curriculum there is also emphasis on experiential learning through guided studies, projects, seminars and summer internships. With the diversity of courses offered in the major, various specializations are available. These will lead to careers in a wide range of sectors including education, economics and finance, analytics and data science, logistics, management, research and further studies.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: describe and present fundamental concepts in mathematics (by means of coursework and learning activities in the major or minor curriculum)
PLO 2: apply mathematical theory and techniques to different areas of Sciences, and appraise the related ethical issues (by means of coursework and learning activities in the major or minor curriculum)
PLO 3: communicate in mathematical language and present scientific arguments (by means of coursework, seminars, guided studies and projects)
PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)
PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:
- Major in Mathematics (Intensive)
- Minor in Computational & Financial Mathematics
- Minor in Mathematics
- Minor in Operations Research & Mathematical Programming

Required courses (96 credits)

1. Introductory level courses (48 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- MATH3999 Directed studies in mathematics (6)
- MATH4910 Senior mathematics seminar (6)
- MATH4911 Mathematics capstone project (6)
- MATH4966 Mathematics internship (6)
- MATH4999 Mathematics project (12)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics  
Offered to students admitted to Year 1 in 2017

Objectives:
The Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize fundamental knowledge and concepts in Mathematics and elective courses provide training in both pure and applied aspects of Mathematics. Throughout the curriculum there is also emphasis on experiential learning through guided studies, projects, seminars and summer internships. With the diversity of courses offered in the major, various specializations are available. These will lead to careers in a wide range of sectors including education, economics and finance, analytics and data science, logistics, management, research and further studies.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: describe and present fundamental concepts in mathematics (by means of coursework and learning activities in the major or minor curriculum)
PLO 2: apply mathematical theory and techniques to different areas of Sciences, and appraise the related ethical issues (by means of coursework and learning activities in the major or minor curriculum)
PLO 3: communicate in mathematical language and present scientific arguments (by means of coursework, seminars, guided studies and projects)
PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)
PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:
Major in Mathematics (Intensive)  
Major in Mathematics/Physics  
Minor in Computational & Financial Mathematics  
Minor in Mathematics  
Minor in Operations Research & Mathematical Programming

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (36 credits)
   MATH1013 University mathematics II (6)
   MATH2012 Fundamental concepts of mathematics (6)
   MATH2101 Linear algebra I (6)
   MATH2102 Linear algebra II (6)
   MATH2211 Multivariable calculus (6)
   MATH2241 Introduction to mathematical analysis (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Course (6 credits)
   MATH3401 Analysis I (6)
   Disciplinary Electives (36 credits)
   At least 36 credits advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), of which at least 12 credits are selected from List A and at least 12 credits should be from MATH4XXX or MATH7XXX level, subject to pre-requisite requirements. The current list includes courses in List A, List B and those courses not selected to fulfill the capstone requirements, but excluding MATH4966 Mathematics Internship.
   List A
   MATH3301 Algebra I (6)
   MATH3403 Functions of a complex variable (6)
   MATH3601 Numerical analysis (6)
   MATH3603 Probability theory (6)
   MATH3904 Introduction to optimization (6)
   List B
   MATH3001 Development of mathematical ideas (6)
   MATH3002 Mathematics seminar (6)
   MATH3303 Matrix theory and its applications (6)
   MATH3304 Introduction to number theory (6)
   MATH3405 Differential equations (6)
   MATH3408 Computational methods and differential equations with applications (6)
   MATH3541 Introduction to topology (6)
   MATH3600 Discrete mathematics (6)
   MATH3901 Operations research I (6)
   MATH3905 Queueing theory and simulation (6)
   MATH3906 Financial calculus (6)
   MATH3911 Game theory and strategy (6)
   MATH3943 Network models in operations research (6)
   MATH4301 Algebra II (6)
   MATH4402 Analysis II (6)

### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics  
Offered to students admitted to Year 1 in 2016

Objectives:
The Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize fundamental knowledge and concepts in Mathematics and elective courses provide training in both pure and applied aspects of Mathematics. Throughout the curriculum there is also emphasis on experiential learning through guided studies, projects, seminars and summer internships. With the diversity of courses offered in the major, various specializations are available. These will lead to careers in a wide range of sectors including education, economics and finance, analytics and data science, logistics, management, research and further studies.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and present fundamental concepts in mathematics (by means of coursework and learning activities in the major or minor curriculum)
PLO 2: apply mathematical theory and techniques to different areas of Sciences, and appraise the related ethical issues (by means of coursework and learning activities in the major or minor curriculum)
PLO 3: communicate in mathematical language and present scientific arguments (by means of coursework, seminars, guided studies and projects)
PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)
PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:

Minor in Computational & Financial Mathematics  
Minor in Mathematics  
Minor in Operations Research & Mathematical Programming

### Required courses (96 credits)

1. **Introductory level courses (48 credits)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111: Scientific method and reasoning (6)
   - SCNC1112: Fundamentals of modern science (6)

   **Disciplinary Core Courses (36 credits)**
   - MATH1101: University mathematics I (6)
   - MATH2101: Fundamental concepts of mathematics (6)
   - MATH2102: Linear algebra I (6)
   - MATH2211: Multivariable calculus (6)
   - MATH2241: Introduction to mathematical analysis (6)

2. **Advanced level courses (42 credits)**

   **Disciplinary Core Courses (18 credits)**
   - MATH3301: Algebra I (6)
   - MATH3401: Analysis I (6)
   - MATH3403: Functions of a complex variable (6)

   **Disciplinary Electives (24 credits)**
   - At least 24 credits advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), of which at least 12 credits should be from MATH4XXX or MATH7XXX level, subject to pre-requisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements, but excluding MATH4966 Mathematics Internship.

#### List A

- MATH3001: Development of mathematical ideas (6)
- MATH3002: Mathematics seminar (6)
- MATH3303: Matrix theory and its applications (6)
- MATH3304: Introduction to number theory (6)
- MATH3405: Differential equations (6)
- MATH3408: Computational methods and differential equations with applications (6)
- MATH3541: Introduction to topology (6)
- MATH3600: Discrete mathematics (6)
- MATH3601: Numerical analysis (6)
- MATH3603: Probability theory (6)
- MATH3901: Operations research I (6)
- MATH3904: Introduction to optimization (6)
- MATH3905: Queueing theory and simulation (6)
- MATH3906: Financial calculus (6)
- MATH3911: Game theory and strategy (6)
- MATH3943: Network models in operations research (6)
- MATH4302: Algebra II (6)
- MATH4402: Analysis II (6)
- MATH4404: Functional analysis (6)
- MATH4406: Introduction to partial differential equations (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   - MATH3999: Directed studies in mathematics (6)
   - MATH4910: Senior mathematics seminar (6)
   - MATH4911: Mathematics capstone project (6)
   - MATH4966: Mathematics internship (6)
   - MATH4999: Mathematics project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
- Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics
Offered to students admitted to Year 1 in 2013

Objectives:
The Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize fundamental knowledge and concepts in Mathematics and elective courses provide training in both pure and applied aspects of Mathematics. Throughout the curriculum there is also emphasis on experiential learning through guided studies, projects, seminars and summer internships. With the diversity of courses offered in the major, various specializations are available. These will lead to careers in a wide range of sectors including education, economics and finance, analytics and data science, logistics, management, research and further studies.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and present fundamental concepts in mathematics (by means of coursework and learning activities in the major or minor curriculum)

PLO 2: apply mathematical theory and techniques to different areas of Sciences, and appraise the related ethical issues (by means of coursework and learning activities in the major or minor curriculum)

PLO 3: communicate in mathematical language and present scientific arguments (by means of coursework, seminars, guided studies and projects)

PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)

PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:
Major in Mathematics/Physics
Minor in Computational & Financial Mathematics
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (96 credits)

1. Introductory level courses (48 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (36 credits)
MATH1013 University mathematics II (6)
MATH2012 Fundamental concepts of mathematics (6)
MATH2101 Linear algebra I (6)
MATH2102 Linear algebra II (6)
MATH2211 Multivariable calculus (6)
MATH2241 Introduction to mathematical analysis (6)

2. Advanced level courses (42 credits)
Disciplinary Core Courses (18 credits)
MATH3301 Algebra I (6)
MATH3303 Matrix theory and its applications (6)
MATH3304 Introduction to number theory (6)
MATH3405 Differential equations (6)
MATH3408 Computational methods and differential equations with applications (6)
MATH3541 Introduction to topology (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH4966 Mathematics Internship.

Disciplinary Electives (24 credits)
At least 24 credits advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), of which at least 12 credits should be from MATH4XXX or MATH7XXX level, subject to pre-requisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements, but excluding MATH4966 Mathematics Internship.

List A
MATH3001 Development of mathematical ideas (6)
MATH3002 Mathematics seminar (6)
MATH3303 Matrix theory and its applications (6)
MATH3304 Introduction to number theory (6)
MATH3405 Differential equations (6)
MATH3408 Computational methods and differential equations with applications (6)
MATH3541 Introduction to topology (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)
MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)
MATH3943 Network models in operations research (6)
MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)
MATH4406 Introduction to partial differential equations (6)
MATH4501 Geometry (6)
MATH4511 Introduction to differentiable manifolds (6)
MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)
MATH4907 Numerical methods for financial calculus (6)
MATH7101 Intermediate complex analysis (6)
MATH7201 Topics in geometry (6)
MATH7202 Complex manifolds (6)
MATH7217 Topics in financial mathematics (6)
MATH7219 Topics in applied functional analysis (6)
MATH7224 Topics in advanced probability theory (6)
MATH7501 Topics in algebra (6)
MATH7502 Topics in applied discrete mathematics (6)
MATH7503 Topics in mathematical programming and optimization (6)
MATH7504 Geometric topology (6)
MATH7505 Real analysis (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   - MATH3999 Directed studies in mathematics (6)
   - MATH4910 Senior mathematics seminar (6)
   - MATH4911 Mathematics capstone project (6)
   - MATH4966 Mathematics internship (6)
   - MATH4999 Mathematics project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Major Title: Major in Mathematics (Intensive)
Offered to students: 2021

Objectives:
The Intensive Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize a firm foundation in Mathematics. The strong emphasis on experiential learning in guided studies, projects, seminars or summer internships provides more opportunities for students to carry out research based studies and to develop their expertise. Graduates are expected to have strong academic ability to pursue graduate studies or professional careers that require in-depth mathematical training.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: describe and present a variety of concepts and theories in mathematics (by means of coursework and learning activities in the curriculum)
PLO 2: apply mathematical theory and techniques to handle research-style questions, scrutinize problems, and appraise the related ethical issues (by means of coursework, seminars, guided studies and projects)
PLO 3: communicate in mathematical language, and present mathematical ideas and scientific arguments (by means of coursework, seminars, guided studies and projects)
PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)
PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:
Major in Mathematics
Minor in Computational & Financial Mathematics
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (144 credits)

Notes:

1. These are core courses in the regular Mathematics Major (96 credits) curriculum.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics (Intensive)
Offered to students admitted to Year 1 in 2020

Objectives:
The Intensive Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.    - MATH3405: Differential equations (6)
   - MATH3600: Discrete mathematics (6)
   - MATH3603: Probability theory (6)
   - MATH3904: Introduction to optimization (6)
   - MATH4404: Functional analysis (6)
   - MATH4406: Introduction to partial differential equations (6)

   Disciplinary Electives (24 credits)
   Select Stream (A) or Stream (B):
   (A) Pure Mathematics (at least 24 credits with 12 credits from MATH7XXX level, subject to pre-requisite requirement)
   - MATH3541: Introduction to topology (6)
   - MATH4302: Algebra II (6)
   - MATH4402: Analysis II (6)
   - MATH4501: Geometry (6)
   - MATH4511: Introduction to differentiable manifolds (6)
   - MATH47101: Intermediate complex analysis (6)
   - MATH7201: Topics in geometry (6)
   - MATH7202: Complex manifolds (6)
   - MATH7501: Topics in algebra (6)
   - MATH7505: Real analysis (6)

   (B) Applied Mathematics (at least 24 credits with 12 credits from MATH4XXX or MATH7XXX level, subject to pre-requisite requirement)
   - MATH3601: Numerical analysis (6)
   - MATH3901: Operations research I (6)
   - MATH3906: Financial calculus (6)
   - MATH3911: Game theory and strategy (6)
   - MATH3943: Network models in operations research (6)
### 3. Capstone requirement (12 credits)

At least 12 credits selected from the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH3999</td>
<td>Directed studies in mathematics</td>
<td>6</td>
</tr>
<tr>
<td>MATH4910</td>
<td>Senior mathematics seminar</td>
<td>6</td>
</tr>
<tr>
<td>MATH4911</td>
<td>Mathematics capstone project</td>
<td>6</td>
</tr>
<tr>
<td>MATH4966</td>
<td>Mathematics internship</td>
<td>6</td>
</tr>
<tr>
<td>MATH4999</td>
<td>Mathematics project</td>
<td>12</td>
</tr>
</tbody>
</table>

**Notes:**

1. These are core courses in the regular Mathematics Major (96 credits) curriculum.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at [https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements](https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements).

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics (Intensive)
Offered to students admitted to Year 1 in 2019

Objectives:
The Intensive Major in Mathematics provides students with a solid and comprehensive undergraduate education in the subject. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems. Core courses in the curriculum emphasize a firm foundation in Mathematics. The strong emphasis on experiential learning in guided studies, projects, seminars or summer internships provides more opportunities for students to carry out research based studies and to develop their expertise. Graduates are expected to have strong academic ability to pursue graduate studies or professional careers that require in-depth mathematical training.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and present a variety of concepts and theories in mathematics (by means of coursework and learning activities in the curriculum)

PLO 2: apply mathematical theory and techniques to handle research-style questions, scrutinize problems, and appraise the related ethical issues (by means of coursework, seminars, guided studies and projects)

PLO 3: communicate in mathematical language, and present mathematical ideas and scientific arguments (by means of coursework, seminars, guided studies and projects)

PLO 4: collaborate and work with other students in an effective manner (by means of guided studies, projects and seminars)

PLO 5: appreciate the beauty and power of mathematics (by means of guided studies, projects and seminars)

Impermissible Combinations:
Major in Mathematics
Minor in Computational & Financial Mathematics
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (144 credits)

1. Introductory level courses (48 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (36 credits)
- MATH1013 University mathematics II (6)
- MATH2012 Fundamental concepts of mathematics (6)
- MATH2101 Linear algebra I (6)
- MATH2102 Linear algebra II (6)
- MATH2211 Multivariable calculus (6)
- MATH2241 Introduction to mathematical analysis (6)

2. Advanced level courses (84 credits)

Disciplinary Core Course (60 credits)
- MATH3002 Mathematics seminar (6)
- MATH3301 Algebra I (6)
- MATH3401 Analysis I (6)
- MATH3403 Functions of a complex variable (6)
- MATH3405 Differential equations (6)
- MATH3600 Discrete mathematics (6)
- MATH3603 Probability theory (6)
- MATH3904 Introduction to optimization (6)
- MATH4404 Functional analysis (6)
- MATH4406 Introduction to partial differential equations (6)

Disciplinary Electives (24 credits)

Select Stream (A) or Stream (B):
- (A) Pure Mathematics (at least 24 credits with 12 credits from MATH7XXX level, subject to pre-requisite requirement)
  - MATH3541 Introduction to topology (6)

### Notes:

1. These are core courses in the regular Mathematics Major (96 credits) curriculum.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at [https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements](https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements).

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**: Major in Mathematics/Physics  
**Offered to students**: admitted to Year 1 in 2017

**Objectives:**
The Major in Mathematics/Physics aims to provide students with a solid foundation in both physics and mathematics. This major is catered especially for students interested in the more theoretical aspects of physics. It covers a wide range of core areas in both disciplines which form the blocks of fundamental knowledge for further specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics, electrodynamics, linear algebra, mathematical analysis, abstract algebra, complex variables, differential equations, modern differential geometry, etc. A large selection of elective courses is provided for students to pursue a broad spectrum of professional knowledge in mathematical and theoretical physics. Analytical thinking, quantitative reasoning and innovative ideas are fostered through the effective design of courses and research projects. The curriculum emphasizes experiential learning through internships, field studies and research projects supervised by experts. With the comprehensive training received, graduates are expected to be well-prepared for further studies and to pursue careers in many fields of science and engineering.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe physical systems with a rigorous representation using their professional knowledge (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: have developed their scientific intuition, abilities and techniques to tackle physical problems with intellectual rigor theoretically (by means of coursework, tutorial classes and assessments in the curriculum)
- **PLO 3**: apply mathematical theory and techniques to analyze physical problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)
- **PLO 4**: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)
- **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

**Impermissible Combinations:**
- Major in Mathematics
- Major in Physics
- Minor in Computational & Financial Mathematics
- Minor in Mathematics
- Minor in Operations Research & Mathematical Programming
- Minor in Physics

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (30 credits)**
     - MATH1013 University mathematics II (6)
     - MATH2101 Linear algebra I (6)
     - MATH2211 Multivariable calculus (6)
     - PHYS1250 Fundamental physics (6)
     - PHYS2250 Introductory mechanics (6)

2. **Advanced level courses (42 credits)**
   - **Disciplinary Core Courses (36 credits)**
     - MATH3301 Algebra I (6)
     - MATH3401 Analysis I (6)
     - MATH4501 Geometry (6)
     - PHYS3350 Classical mechanics (6)
     - PHYS3351 Quantum mechanics (6)
     - PHYS4351 Advanced quantum mechanics (6)

**Disciplinary Electives (6 credits)**
At least 6 credits selected from the following courses:
- PHYS1150 Problem solving in physics (6)
- PHYS2055 Introductory relativity (6)
- PHYS2150 Methods in physics I (6)
- PHYS2255 Introductory electricity and magnetism (6)
- PHYS2260 Heat and waves (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:

- MATH3999 Directed studies in mathematics (6)
- MATH4910 Senior mathematics seminar (6)
- MATH4911 Mathematics capstone project (6)
- MATH4966 Mathematics internship (6)
- MATH4999 Mathematics project (12)
- PHYS3999 Directed studies in physics (6)
- PHYS4966 Physics internship (6)
- PHYS4999 Physics project (12)

Notes:
1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.
5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.
6. (a) Students must have level 3 or above in HKDSE Physics or HKDSE Combined Science with Physics component or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry; and
(b) Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.
7. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at http://www.scifac.hku.hk/ug/current/bsc/curriculum/overlapping-course-req.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Major Title: Major in Mathematics/Physics  
Offered to students admitted to Year 1 in 2015

Objectives:
The Major in Mathematics/Physics aims to provide students with a solid foundation in both physics and mathematics. This major is catered especially for students interested in the more theoretical aspects of physics. It covers a wide range of core areas in both disciplines which form the blocks of fundamental knowledge for further specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics, electrodynamics, linear algebra, mathematical analysis, abstract algebra, complex variables, differential equations, modern differential geometry, etc. A large selection of elective courses is provided for students to pursue a broad spectrum of professional knowledge in mathematical and theoretical physics. Analytical thinking, quantitative reasoning and innovative ideas are fostered through the effective design of courses and research projects. The curriculum emphasizes experiential learning through internships, field studies and research projects supervised by experts. With the comprehensive training received, graduates are expected to be well-prepared for further studies and to pursue careers in many fields of science and engineering.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe physical systems with a rigorous representation using their professional knowledge (by means of coursework and tutorial classes in the curriculum)

PLO 2: have developed their scientific intuition, abilities and techniques to tackle physical problems with intellectual rigor theoretically (by means of coursework, tutorial classes and assessments in the curriculum)

PLO 3: apply mathematical theory and techniques to analyze physical problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

PLO 4: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

PLO 5: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
Major in Mathematics  
Major in Physics  
Minor in Mathematics  
Minor in Operations Research & Mathematical Programming  
Minor in Physics

Required courses (96 credits)
1. Introductory level courses (48 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (30 credits)
- MATH1013 University mathematics II (6)
- MATH2101 Linear algebra I (6)
- MATH2211 Multivariable calculus (6)
- PHYS1250 Fundamental physics (6)
- PHYS2265 Introductory quantum physics (6)

Disciplinary Electives (6 credits)
At least 6 credits selected from the following courses:
- PHYS1150 Problem solving in physics (6)
- PHYS2055 Introductory relativity (6)
- PHYS2150 Methods in physics I (6)
- PHYS2155 Methods in physics II (6)
- PHYS2250 Introductory mechanics (6)
- PHYS2255 Introductory electricity and magnetism (6)
- PHYS2260 Heat and waves (6)

2. Advanced level courses (42 credits)
Disciplinary Core Courses (36 credits)
- MATH3301 Algebra I (6)
- MATH3401 Analysis I (6)
- MATH4501 Geometry (6)
- PHYS3350 Classical mechanics (6)
- PHYS3351 Quantum mechanics (6)
- PHYS4351 Advanced quantum mechanics (6)

Disciplinary Electives (6 credits)
At least 6 credits of advanced level Mathematics or Physics courses (MATH3XXX or MATH4XXX or MATH7XXX or PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list of courses include courses in List A and those courses not selected to fulfill the capstone requirement, but excluding MATH4966 Mathematics Internship.

List A
- MATH3001 Development of mathematical ideas (6)
- MATH3002 Mathematics seminar (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

MATH3999 Directed studies in mathematics (6)
NOTES:

1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. (a) Students must have level 3 or above in HKDSE Physics or HKDSE Combined Science with Physics component or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry; and
   (b) Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

7. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at http://www.scifac.hku.hk/ug/current/bsc/curriculum/overlapping-course-req.

REMARKS:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Objectives:
The Major in Mathematics/Physics aims to provide students with a solid foundation in both physics and mathematics. This major is catered especially for students interested in the more theoretical aspects of physics. It covers a wide range of core areas in both disciplines which form the blocks of fundamental knowledge for further specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics, electrodynamics, linear algebra, mathematical analysis, abstract algebra, complex variables, differential equations, modern differential geometry, etc. A large selection of elective courses is provided for students to pursue a broad spectrum of professional knowledge in mathematical and theoretical physics. Analytical thinking, quantitative reasoning and innovative ideas are fostered through the effective design of courses and research projects. The curriculum emphasizes experiential learning through internships, field studies and research projects supervised by experts. With the comprehensive training received, graduates are expected to be well-prepared for further studies and to pursue careers in many fields of science and engineering.

## Learning Outcomes:
By the end of this programme, students should be able to:

| PLO 1 | identify and describe physical systems with a rigorous representation using their professional knowledge (by means of coursework and tutorial classes in the curriculum) |
| PLO 2 | have developed their scientific intuition, abilities and techniques to tackle physical problems with intellectual rigor theoretically (by means of coursework, tutorial classes and assessments in the curriculum) |
| PLO 3 | apply mathematical theory and techniques to analyze physical problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum) |
| PLO 4 | communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum) |
| PLO 5 | apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies) |

PHYS5551 Graduate solid state physics (6)
PHYS5750 Stellar atmospheres (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:

MATH3999 Directed studies in mathematics (6)
MATH4910 Senior mathematics seminar (6)
MATH4911 Mathematics capstone project (6)
MATH4966 Mathematics internship (6)
MATH4999 Mathematics project (12)
PHYS3999 Directed studies in physics (6)
PHYS4966 Physics internship (6)
PHYS4999 Physics project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second
majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s)
("disciplinary electives") in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For
details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc
syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in
the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level
course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course
("disciplinary electives") in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for
details.

5. (a) Students must have level 3 or above in HKDSE Physics or HKDSE Combined Science with Physics component or equivalent to take this
major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry; and
(b) Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do
not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level

Remarks:
Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students
must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Mathematics/Physics  
Offered to students admitted to Year 1 in 2013

Objectives:
The Major in Mathematics/Physics aims to provide students with a solid foundation in both physics and mathematics. This major is catered especially for students interested in the more theoretical aspects of physics. It covers a wide range of core areas in both disciplines which form the blocks of fundamental knowledge for further specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics, electrodynamics, linear algebra, mathematical analysis, abstract algebra, complex variables, differential equations, modern differential geometry, etc. A large selection of elective courses is provided for students to pursue a broad spectrum of professional knowledge in mathematical and theoretical physics. Analytical thinking, quantitative reasoning and innovative ideas are fostered through the effective design of courses and research projects. The curriculum emphasizes experiential learning through internships, field studies and research projects supervised by experts. With the comprehensive training received, graduates are expected to be well-prepared for further studies and to pursue careers in many fields of science and engineering.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe physical systems with a rigorous representation using their professional knowledge (by means of coursework and tutorial classes in the curriculum)

PLO 2: have developed their scientific intuition, abilities and techniques to tackle physical problems with intellectual rigor theoretically (by means of coursework, tutorial classes and assessments in the curriculum)

PLO 3: apply mathematical theory and techniques to analyze physical problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

PLO 4: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- MATH3999  Directed studies in mathematics (6)
- MATH4910  Senior mathematics seminar (6)
- MATH4911  Mathematics capstone project (6)
- MATH4966  Mathematics internship (6)
- MATH4999  Mathematics project (12)
- PHYS3999  Directed studies in physics (6)
- PHYS4966  Physics internship (6)
- PHYS4999  Physics project (12)

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. (a) Students must have level 3 or above in HKDSE Physics or HKDSE Combined Science with Physics component or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry; and
(b) Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Objectives:**
The Major in Mathematics/Physics aims to provide students with a solid foundation in both physics and mathematics. This major is catered especially for students interested in the more theoretical aspects of physics. It covers a wide range of core areas in both disciplines which form the blocks of fundamental knowledge for further specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics, electrodynamics, linear algebra, mathematical analysis, abstract algebra, complex variables, differential equations, modern differential geometry, etc. A large selection of elective courses is provided for students to pursue a broad spectrum of professional knowledge in mathematical and theoretical physics. Analytical thinking, quantitative reasoning and innovative ideas are fostered through the effective design of courses and research projects. The curriculum emphasizes experiential learning through internships, field studies and research projects supervised by experts. With the comprehensive training received, graduates are expected to be well-prepared for further studies and to pursue careers in many fields of science and engineering.

**Learning Outcomes:**
By the end of this programme, students should be able to:

**PLO 1:** identify and describe physical systems with a rigorous representation using their professional knowledge (by means of coursework and tutorial classes in the curriculum)

**PLO 2:** have developed their scientific intuition, abilities and techniques to tackle physical problems with intellectual rigor theoretically (by means of coursework, tutorial classes and assessments in the curriculum)

**PLO 3:** apply mathematical theory and techniques to analyze physical problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

**PLO 4:** communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**PLO 5:** apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

**Impermissible Combinations:**
Major in Mathematics
Major in Physics
Minor in Mathematics
Minor in Physics

**Required courses (96 credits)**

1. **Introductory level courses (48 credits)**

   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (36 credits)**
   - MATH1013 University mathematics II (6)
   - MATH2101 Linear algebra I (6)
   - MATH2211 Multivariable calculus (6)
   - PHYS1250 Fundamental physics (6)
   - PHYS2250 Introductory mechanics (6)
   - PHYS2265 Introductory quantum physics (6)

2. **Advanced level courses (42 credits)**

   **Disciplinary Core Courses (36 credits)**
   - MATH3301 Algebra I (6)
   - MATH3401 Analysis I (6)
   - MATH4501 Geometry (6)
   - PHYS3350 Classical mechanics (6)
   - PHYS3351 Quantum mechanics (6)
   - PHYS4351 Advanced quantum mechanics (6)

   **Disciplinary Electives (6 credits)**

   At least 6 credits of advanced level Mathematics or Physics courses (MATH3XXX or MATH4XXX or MATH7XXX or PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list of courses include courses in List A and those courses not selected to fulfill the capstone requirement, but excluding MATH4966 Mathematics Internship.

**List A**
- MATH3001 Development of mathematical ideas (6)
- MATH3002 Mathematics seminar (6)
- MATH3303 Matrix theory and its applications (6)
- MATH3304 Introduction to number theory (6)
- MATH3403 Functions of a complex variable (6)
- MATH3405 Differential equations (6)
- MATH3408 Computational methods and differential equations with applications (6)
- MATH3541 Introduction to topology (6)
- MATH3600 Discrete mathematics (6)
- MATH3601 Numerical analysis (6)
- MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)
MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)
MATH3943 Network models in operations research (6)
MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)
MATH4406 Introduction to partial differential equations (6)
MATH4511 Introduction to differentiable manifolds (6)
MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)
MATH4907 Numerical methods for financial calculus (6)
MATH7101 Intermediate complex analysis (6)
MATH7201 Topics in geometry (6)
MATH7202 Complex manifolds (6)
MATH7217 Topics in financial mathematics (6)
MATH7219 Topics in advanced probability theory (6)
MATH7501 Topics in algebra (6)
MATH7502 Topics in applied discrete mathematics (6)
MATH7503 Topics in mathematical programming and optimization (6)
MATH7504 Geometric topology (6)
MATH7505 Real analysis (6)
PHYS3150 Theoretical physics (6)
PHYS3450 Computational physics (6)
PHYS3451 Data analysis and modeling in physics (6)
PHYS3452 Advanced classical mechanics (6)
PHYS3453 Advanced electromagnetism (6)
PHYS3454 Advanced statistical mechanics (6)
PHYS3455 Solid state physics (6)
PHYS3456 Stellar physics (6)
PHYS3457 Selected topics in astrophysics (6)
PHYS3458 Planetary science (6)
PHYS3459 Cosmology (6)
PHYS3460 General relativity (6)
PHYS3461 Interstellar medium (6)
PHYS3462 Experimental physics (6)
PHYS3463 Particle physics (6)
PHYS3464 Graduate classical mechanics (6)
PHYS3465 Graduate quantum mechanics (6)
PHYS3466 Graduate electromagnetism (6)
PHYS3467 Graduate statistical mechanics (6)
PHYS3468 Graduate solid state physics (6)
PHYS3475 Nanophysics (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
MATH3999 Directed studies in mathematics (6)
MATH4910 Senior mathematics seminar (6)
MATH4911 Mathematics capstone project (6)
MATH4966 Mathematics internship (6)
MATH4999 Mathematics project (12)
PHYS3999 Directed studies in physics (6)
PHYS4966 Physics internship (6)
PHYS4999 Physics project (12)

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. (a) Students must have level 3 or above in HKDSE Physics or HKDSE Combined Science with Physics component or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry; and
(b) Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Molecular Biology & Biotechnology
Offered to students admitted to Year 1 in 2021

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)

PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)
Minor in Molecular Biology & Biotechnology

Required courses (96 credits)

1. Introductory level courses (42 credits)

   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (24 credits)
   BIOL1110 From molecules to cells (6)
   BIOL2102 Biostatistics (6)
   BIOL2103 Biological sciences laboratory course (6)
   BIOL2220 Principles of biochemistry (6)
   Take either BIOL2220 or BIOC2600 to fulfil this 24 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.
   BIOC2600 Basic biochemistry (6)

   BIOL2222 Optional course (6)

   Disciplinary Electives (6 credits)
   At least 6 credits selected from the following courses:
   BIOL1309 Evolutionary diversity (6)
   BIOL2409 Biotechnology industry and entrepreneurship (6)

2. Advanced level courses (48 credits)

   Disciplinary Core Courses (24 credits)
   BIOL3401 Molecular biology (6)
   BIOL3402 Cell biology and cell technology (6)
   BIOL4411 Plant and food biotechnology (6)
   BIOL4415 Healthcare biotechnology (6)

   Disciplinary Electives (24 credits)
   At least 24 credits selected from the following courses:
   BIOL3403 Immunology (6)
   BIOL3404 Protein structure and function (6)
   BIOL3406 Reproduction and reproductive biotechnology (6)
   BIOL3408 Genetics (6)
   BIOL3508 Microbial physiology and biotechnology (6)
   BIOL4409 General virology (6)
   BIOL4416 Stem cells and regenerative biology (6)
   BIOL4417 'Omics' and systems biology (6)
   ENVS4110 Environmental remediation (6)

   Take either BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.
3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- BIOL3993 Directed studies in Molecular biology & biotechnology (6)
- BIOL4963 Molecular biology & biotechnology internship (6)
- BIOL4993 Molecular biology & biotechnology project (12)

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

5. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title:** Major in Molecular Biology & Biotechnology

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)
Minor in Molecular Biology & Biotechnology

Required courses (96 credits)

1. Introductory level courses (42 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (24 credits)
BIOL1110 From molecules to cells (6)
BIOL2102 Biostatistics (6)
BIOL2103 Biological sciences laboratory course (6)
BIOL2220 Principles of biochemistry (6)
BIOL2220 and BIOC2600 are mutually exclusive.
BIOC2600 Basic biochemistry (6)

BIOL2306 Ecology and evolution (6)
BIOL1309 Evolutionary diversity (6)
Take either BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both.
BIOL2220 and BIOC2600 are mutually exclusive.

Disciplinary Electives (6 credits)

2. Advanced level courses (48 credits)

Disciplinary Core Courses (24 credits)
BIOL3401 Molecular biology (6)
BIOL3402 Cell biology and cell technology (6)
BIOL4411 Plant and food biotechnology (6)
BIOL4415 Healthcare biotechnology (6)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:
BIOL3403 Immunology (6)
BIOL3404 Protein structure and function (6)
BIOL3406 Reproduction and reproductive biotechnology (6)
BIOL3408 Genetics (6)
BIOL3508 Microbial physiology and biotechnology (6)
BIOL4401 Medical microbiology and applied immunology (6)
BIOL4409 General virology (6)
BIOL4416 Stem cells and regenerative biology (6)
BIOL4417 ‘Omics’ and systems biology (6)
### 3. Capstone requirement (6 credits)

**At least 6 credits selected from the following courses:**

<table>
<thead>
<tr>
<th>Course Code</th>

</tr>
</thead>
<tbody>
<tr>
<td>BIOL3993</td>
<td>Directed studies in Molecular biology &amp; biotechnology</td>
<td>6</td>
</tr>
<tr>
<td>BIOL4963</td>
<td>Molecular biology &amp; biotechnology internship</td>
<td>6</td>
</tr>
<tr>
<td>BIOL4993</td>
<td>Molecular biology &amp; biotechnology project</td>
<td>12</td>
</tr>
</tbody>
</table>

**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**
Major in Molecular Biology & Biotechnology

**Offered to students admitted to Year 1 in**
2018

**Objectives:**
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 2:** apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 3:** communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)
- **PLO 4:** acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 5:** gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

**Impermissible Combinations:**
- Major in Biological Sciences (Intensive)
- Major in Molecular Biology & Biotechnology (Intensive)
- Minor in Molecular Biology & Biotechnology

### Required courses (96 credits)

#### 1. Introductory level courses (42 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**
- SCNC1111: Scientific method and reasoning (6)
- SCNC1112: Fundamentals of modern science (6)

**Disciplinary Core Courses (24 credits)**
- BIOL1110: From molecules to cells (6)
- BIOL2102: Biostatistics (6)
- BIOL2103: Biological sciences laboratory course (6)
- BIOL2220: Principles of biochemistry (6)
- BIOL2220 and BIOC2600 are mutually exclusive.
- BIOC2600: Basic biochemistry (6)
- Take either BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both.

#### Disciplinary Electives (6 credits)
- BIOL1309: Evolutionary diversity (6)
- BIOL2306: Ecology and evolution (6)
- Take either BIOL1309 or BIOL2306 to fulfill this 6 credits requirement, but not both.

#### 2. Advanced level courses (48 credits)

**Disciplinary Core Courses (24 credits)**
- BIOL3401: Molecular biology (6)
- BIOL3402: Cell biology and cell technology (6)
- BIOL4411: Plant and food biotechnology (6)
- BIOL4415: Healthcare biotechnology (6)

**Disciplinary Electives (24 credits)**
- At least 24 credits selected from the following courses:
  - BIOL3403: Immunology (6)
  - BIOL3404: Protein structure and function (6)
  - BIOL3406: Reproduction and reproductive biotechnology (6)
  - BIOL3408: Genetics (6)
  - BIOL3508: Microbial physiology and biotechnology (6)
  - BIOL4401: Medical microbiology and applied immunology (6)
  - BIOL4409: General virology (6)
  - BIOL4416: Stem cells and regenerative biology (6)
  - BIOL4417: ‘Omics’ and systems biology (6)
### Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

Major Title: Major in Molecular Biology & Biotechnology
Offered to students admitted to Year 1 in 2017

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)

PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

Impermissible Combinations:
Major in Biological Sciences (Intensive)
Major in Molecular Biology & Biotechnology (Intensive)
Minor in Molecular Biology & Biotechnology

Required courses (96 credits)
1. Introductory level courses (42 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (24 credits)
BIOL1110 From molecules to cells (6)
BIOL2102 Biostatistics (6)
BIOL2103 Biological sciences laboratory course (6)
BIOL2220 Principles of biochemistry (6)
BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

BIOL2220 and BIOC2600 are mutually exclusive.

BIOC2600 Basic biochemistry (6)

Disciplinary Electives (6 credits)
BIOL1309 Evolutionary diversity (6)
BIOL2306 Ecology and evolution (6)

Take either BIOL1309 or BIOL2306 to fulfill this 6 credits requirement, but not both.

2. Advanced level courses (48 credits)
Disciplinary Core Courses (30 credits)
BIOL3401 Molecular biology (6)
BIOL3402 Cell biology and cell technology (6)
BIOL3508 Microbial physiology and biotechnology (6)
BIOL4411 Plant and food biotechnology (6)
BIOL4415 Healthcare biotechnology (6)

Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
BIOL3403 Immunology (6)
BIOL3404 Protein structure and function (6)
BIOL3406 Reproduction and reproductive biotechnology (6)
BIOL3408 Genetics (6)
BIOL3409 Business aspects of biotechnology (6)
BIOL4401 Medical microbiology and applied immunology (6)
BIOL4409 General virology (6)
BIOL4416 Stem cells and regenerative biology (6)

Take either BIOL3403 or BIOL3404 or BIOL3406 or BIOL3408 or BIOL3409 or BIOL4401 or BIOL4409 or BIOL4416 to fulfill these 18 credits requirement, but not both.
### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

Major Title: Major in Molecular Biology & Biotechnology
Offered to students admitted to Year 1 in 2015

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)
PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

Impermissible Combinations:
Major in Molecular Biology & Biotechnology (Intensive)
Minor in Molecular Biology & Biotechnology

Required courses (96 credits)
1. Introductory level courses (42 credits)
Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6)
SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (24 credits)
BIOL1110 From molecules to cells (6)
BIOL2102 Biostatistics (6)
BIOL2103 Biological sciences laboratory course (6)
BIOL2220 Principles of biochemistry (6)
BIOL2220 and BIOC2600 are mutually exclusive.
BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both.

BIOC2600 Basic biochemistry (6)

Disciplinary Electives (6 credits)
BIOL1309 Evolutionary diversity (6)
BIOL2306 Ecology and evolution (6)

2. Advanced level courses (48 credits)
Disciplinary Core Courses (30 credits)
BIOL3401 Molecular biology (6)
BIOL3402 Cell biology and cell technology (6)
BIOL3508 Microbial physiology and biotechnology (6)
BIOL3508 and BIOL4402 are mutually exclusive.
BIOL3508 or BIOL4402 to fulfill this 30 credits requirement, but not both.

BIOL4402 Microbial biotechnology (6)

BIOL4411 Plant and food biotechnology (6)
BIOL4415 Healthcare biotechnology (6)

Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
BIOL3403 Immunology (6)
BIOL3404 Protein structure and function (6)
BIOL3405 Molecular microbiology (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- BIOL3993  | Directed studies in Molecular biology & biotechnology (6) |
- BIOL4963  | Molecular biology & biotechnology internship (6)         |
- BIOL4993  | Molecular biology & biotechnology project (12)           |

Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Molecular Biology & Biotechnology

Offered to students admitted to Year 1 in 2014

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)

PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

Impermissible Combinations:

Minor in Molecular Biology & Biotechnology

Required courses (96 credits)

1. Introductory level courses (42 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (24 credit)
- BIOL1110 From molecules to cells (6)
- BIOL2102 Biostatistics (6)
- BIOL2103 Biological sciences laboratory course (6)
- BIOL2220 Principles of biochemistry (6)

- BIOL2600 Basic biochemistry (6)

Take either BIOL2220 or BIOC2600 to fulfill this 24 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.

Disciplinary Electives (6 credits)
- BIOL1309 Evolutionary diversity (6)
- BIOL2306 Ecology and evolution (6)

Take either BIOL1309 or BIOL2306 to fulfill this 6 credits requirement, but not both.

2. Advanced level courses (48 credits)

Disciplinary Core Courses (30 credits)
- BIOL3401 Molecular biology (6)
- BIOL3402 Cell biology and cell technology (6)
- BIOL3508 Microbial physiology and biotechnology (6)

- BIOL4402 Microbial biotechnology (6)

Take either BIOL3508 or BIOL4402 to fulfill this 30 credits requirement, but not both. BIOL3508 and BIOL4402 are mutually exclusive.

- BIOL4411 Plant and food biotechnology (6)
- BIOL4415 Healthcare biotechnology (6)

Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
- BIOL3403 Immunology (6)
- BIOL3404 Protein structure and function (6)
- BIOL3405 Molecular microbiology (6)
- BIOL3406 Reproduction and reproductive biotechnology (6)

3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- BIOL3993 Directed studies in Molecular biology & biotechnology (6)
- BIOL4963 Molecular biology & biotechnology internship (6)
- BIOL4993 Molecular biology & biotechnology project (12)

Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title:** Major in Molecular Biology & Biotechnology  
**Offered to students admitted to Year 1 in:** 2013

**Objectives:** Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society, and environment. This Major offers specialized training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

**Learning Outcomes:**
By the end of this programme, students should be able to:

Science Majors

Major Title: Major in Molecular Biology & Biotechnology (Intensive)

Offered to students admitted to Year 1 in 2021

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major aims to provide comprehensive training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

The intensive major involves additional coursework and research/capstone experience. It is designed for students with interest on a fuller scope of the discipline or planning to pursue research studies for a higher degree in any area of life science.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)

PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

PLO 6: equip with knowledges in chemistry, mathematics, statistics, or computer programming, with sufficient depth and breadth to apply these knowledges within a biological context (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 7: solve a scientific question empirically by designing and implementing experiments, learning new experimental skills and tackling experimental errors, reporting results unbiasedly and systematically (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

Impermissible Combinations:
Major in Biological Sciences
Major in Biological Sciences (Intensive)
Major in Molecular Biology & Biotechnology
Minor in Molecular Biology & Biotechnology

Required courses (144 credits)

1. Introductory level courses (66 credits)
   - SCNC1111 Scientific method and reasoning (6) (Note 1)
   - SCNC1112 Fundamentals of modern science (6) (Note 1)

Disciplinary Core Courses (42 credits)

   - BIOL1110 From molecules to cells (6) (Note 1)
   - CHEM1043 General chemistry I (6)
   - CHEM1044 General chemistry II (6)
   - BIOL2102 Biostatistics (6) (Note 1)
   - BIOL2103 Biological sciences laboratory course (6) (Note 1)
   - BIOL2220 Principles of biochemistry (6) (Note 1)
   - BIOL2409 Biotechnology industry and entrepreneurship (6)
   - BIOC2600 Basic biochemistry (6)

   - BIOL1309 Evolutionary diversity (6)
   - BIOL2306 Ecology and evolution (6)

   - Plus at least 12 credits selected from the following courses:

   - Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive. (Note 1)
   - Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive. (Note 1)

   - May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.
May take either BIOL2306 to fulfill this 12 credits requirement, but not both.

2. Advanced level courses (66 credits)

Notes:

1. These are core courses in the regular Molecular Biology and Biotechnology Major (96 credits) curriculum.

2. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

3. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

4. As this curriculum is accredited by the Royal Society of Biology (RSB), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title | Major in Molecular Biology & Biotechnology (Intensive)
Offered to students admitted to Year 1 in 2020

Objectives:
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major aims to provide comprehensive training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

The intensive major involves additional coursework and research/capstone experience. It is designed for students with interest on a fuller scope of the discipline or planning to pursue research studies for a higher degree in any area of life science.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 2: apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 3: communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)

PLO 4: acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 5: gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)

PLO 6: equip with knowledges in chemistry, mathematics, statistics, or computer programming, with sufficient depth and breadth to apply these knowledges within a biological context (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

PLO 7: solve a scientific question empirically by designing and implementing experiments, learning new experimental skills and tackling experimental errors, reporting results unbiasedly and systematically (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

Impermissible Combinations:
Major in Biological Sciences
Major in Biological Sciences (Intensive)
Major in Molecular Biology & Biotechnology
Minor in Molecular Biology & Biotechnology

Required courses (144 credits)

1. Introductory level courses (66 credits)
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   - BIOL1110 From molecules to cells (6)
   - CHEM1042 General chemistry I (6)
   - CHEM1043 General chemistry II (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2103 Biological sciences laboratory course (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOL2409 Biotechnology industry and entrepreneurship (6)
   - BIOC2600 Basic biochemistry (6)

   Disciplinary Core Courses (42 credits)
   - BIOL1309 Evolutionary diversity (6)
   - BIOL2306 Ecology and evolution (6)

   Plus at least 12 credits selected from the following courses:
   - BIOL2220 Principles of biochemistry (6)
   - BIOL2409 Biotechnology industry and entrepreneurship (6)
   - BIOC2600 Basic biochemistry (6)

   Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both.
   BIOL2220 and BIOC2600 are mutually exclusive. (Note 1)

   Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both.
   BIOL2220 and BIOC2600 are mutually exclusive. (Note 1)

   May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.
May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.

Notes:
1. These are core courses in the regular Molecular Biology and Biotechnology Major (96 credits) curriculum.

2. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

3. As this curriculum is accredited by the Royal Society of Biology (RSB), students must follow the curriculum in full (i.e. no replacement courses are possible) in order to graduate with this accredited programme.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title**

Major in Molecular Biology & Biotechnology (Intensive)

**Offered to students admitted to Year 1 in**

2019

**Objectives:**

Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major aims to provide comprehensive training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

The intensive major involves additional coursework and research/capstone experience. It is designed for students with interest on a fuller scope of the discipline or planning to pursue research studies for a higher degree in any area of life science.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

**Learning Outcomes:**

By the end of this programme, students should be able to:

- **PLO 1:** describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 2:** apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 3:** communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)
- **PLO 4:** acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 5:** gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)
- **PLO 6:** equip with knowledges in chemistry, mathematics, statistics, or computer programming, with sufficient depth and breadth to apply these knowledges within a biological context (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 7:** solve a scientific question empirically by designing and implementing experiments, learning new experimental skills and tackling experimental errors, reporting results unbiasedly and systematically (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

**Notes:**

1. These are core courses in the regular Molecular Biology and Biotechnology Major (96 credits) curriculum.

**Remarks:**

*Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled.*

*Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.*
Major Title | Major in Molecular Biology & Biotechnology (Intensive)
Offered to students admitted to Year 1 in | 2016

**Objectives:**
Recent advancements in Molecular Biology & Biotechnology have not only cracked important and fundamental problems in life sciences, but also emerged as a mainstay of science and technologies of the 21st century. Innovations from advances in these fields have substantially transformed our daily lives, society and environment. This Major aims to provide comprehensive training in state-of-the-art molecular and cell biology, and in the translation of basic knowledge into modern industrial and medical applications. Students will be able to gain an understanding of cutting edge molecular biology and biotechnological applications, ranging from exploitation of bioactive substances, genetic engineering for agricultural production, fisheries and aquaculture, biomedical researches for pharmaceutical and clinical purposes, biofuels as alternative energy sources, bioremediation for cleaning up contaminated environments, and wastewater treatment. Built upon a sound theoretical foundation, students will further develop various essential skills in molecular biology and biotechnology through hands-on laboratory trainings and experimental biology-based projects. A feature of this major is to provide key transferable skills by engaging students in inquiry, critical thinking, and problem solving in their learning.

The intensive major involves additional coursework and research/capstone experience. It is designed for students with interest on a fuller scope of the discipline or planning to pursue research studies for a higher degree in any area of life science.

This intensive major has been accredited by the Royal Society of Biology (RSB), UK, for the purpose of meeting in part the academic and experience requirement for the Membership and Chartered Biologist (CBiol).

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** describe key concepts in molecular biology and modern biotechnology using knowledge from cell biology, microbiology, biochemistry, immunology, omics and systems biology (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 2:** apply laboratory techniques essential to modern molecular science (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 3:** communicate in written and oral communication skills and collaborate with other students effectively (by means of coursework, research-based learning and presentation opportunities in the curriculum)
- **PLO 4:** acquire scientific inquiry and critical thinking skills, including the ability to understand, analyze, and evaluate debated problems in the field and develop solutions, and appraise the related ethical issues (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 5:** gain insights into real-life experience in the applications of biotechnology for human health, agriculture, and the environment (by means of coursework, laboratory-based and experiential learning in the curriculum)
- **PLO 6:** equip with knowledges in chemistry, mathematics, statistics, or computer programming, with sufficient depth and breadth to apply these knowledges within a biological context (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)
- **PLO 7:** solve a scientific question empirically by designing and implementing experiments, learning new experimental skills and tackling experimental errors, reporting results unbiasedly and systematically (by means of coursework and laboratory-based and/or research-based opportunities in the curriculum)

**Impermissible Combinations:**
Major in Biological Sciences
Major in Molecular Biology & Biotechnology
Minor in Molecular Biology & Biotechnology

**Required courses (144 credits)**

| 1. Introductory level courses (66 credits) |  |
| Disciplinary Core Courses: Science Foundation Courses (12 credits) |  |
| SCNC1111 | Scientific method and reasoning (6) | (Note 1) |
| SCNC1112 | Fundamentals of modern science (6) | (Note 1) |

| Disciplinary Core Courses (42 credits) |  |
| BIOL1110 | From molecules to cells (6) | (Note 1) |
| CHEM1042 | General chemistry I (6) |  |
| CHEM1043 | General chemistry II (6) |  |
| BIOL2102 | Biostatistics (6) | (Note 1) |
| BIOL2103 | Biological sciences laboratory course (6) | (Note 1) |
| BIOL2220 | Principles of biochemistry (6) | Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive. (Note 1) |
| BIOL2409 | Biotechnology industry and entrepreneurship (6) | Take either BIOL2220 or BIOC2600 to fulfill this 42 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive. (Note 1) |
| BIOC2600 | Basic biochemistry (6) |  |

<p>| Disciplinary Electives (12 credits) |  |
| Plus at least 12 credits selected from the following courses: |  |
| BIOL1309 | Evolutionary diversity (6) | May take either BIOL1309 or BIOC2600 to fulfill this 12 credits requirement, but not both. |
| BIOL2306 | Ecology and evolution (6) | May take either BIOL1309 or BIOC2600 to fulfill this 12 credits requirement, but not both. |</p>

**Notes:**

1. These are core courses in the regular Molecular Biology and Biotechnology Major (96 credits) curriculum.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics  
Offered to students admitted to Year 1 in 2021

Objectives:
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)
- **PLO 3**: analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)
- **PLO 4**: communicate and collaborate effectively with people of different background, culture, gender and nationality in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)
- **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
Major in Physics (Intensive)  
Minor in Physics

Required courses (96 credits)

1. **Introductory level courses (48 credits)**  
   **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
   - SCNC1111 Scientific method and reasoning (6)
   - SCNC1112 Fundamentals of modern science (6)

   **Disciplinary Core Courses (24 credits)**
   - PHYS2250 Introductory mechanics (6)
   - PHYS2255 Introductory electricity and magnetism (6)
   - PHYS2261 Introductory heat and thermodynamics (6)
   - PHYS2265 Introductory quantum physics (6)

   **Disciplinary Electives (12 credits)**
   At least 12 credits selected from the following courses:
   - PHYS1150 Problem solving in physics (6)
   - PHYS2055 Introductory relativity (6)
   - PHYS2150 Methods in physics I (6)
   - PHYS2155 Methods in physics II (6)
   - PHYS2160 Introductory computational physics (6)

2. **Advanced level courses (42 credits)**  
   **Disciplinary Electives (42 credits)**
   At least 24 credits selected from courses in List A:
   - **List A**
     - PHYS3150 Theoretical physics (6)
     - PHYS3350 Classical mechanics (6)
     - PHYS3351 Quantum mechanics (6)
     - PHYS3450 Electromagnetism (6)
     - PHYS3550 Statistical mechanics & thermodynamics (6)
     - PHYS3760 Physics laboratory (6)

   Plus at least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYSTXXX level), subject to prerequisite requirements. The current list includes courses in Lists A and B and those courses not selected to fulfill the capstone requirements.
   - **List B**
     - PHYS3151 Machine learning in physics (6)
     - PHYS3360 Observational astronomy (6)
     - PHYS3363 Astrophysics (6)
     - PHYS3366 Astronomy laboratory (6)
     - PHYS3750 Laser and spectroscopy (6)
     - PHYS3850 Physical Optics (6)
     - PHYS3851 Atomic and nuclear physics (6)
     - PHYS4150 Computational physics (6)
     - PHYS4151 Data analysis and modeling in physics (6)
     - PHYS4351 Advanced quantum mechanics (6)
     - PHYS4450 Advanced electromagnetism (6)
     - PHYS4550 Advanced statistical mechanics (6)

### 3. Capstone Requirement (6 Credits)

At least 6 credits selected from the following courses:

- PHYS3999 Directed studies in physics (6)
- PHYS4966 Physics internship (6)
- PHYS4999 Physics project (12)

### Notes:

1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

6. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3653 Astrophysics, PHYS3660 Astronomy laboratory, PHYS4852 Planetary science, PHYS4853 Cosmology, PHYS4854 General relativity, PHYS4855 Interstellar medium, and PHYS4856 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.

7. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.

8. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3660 Astronomy laboratory, PHYS3750 Laser and spectroscopy, PHYS3850 Physical optics, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4155 Solid state physics, and PHYS4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.

9. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics & thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4850 Particle physics, PHYS7351 Graduate quantum mechanics, PHYS7450 Graduate electromagnetism, PHYS7550 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.

10. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.

11. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

12. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

- Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

13. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit
disciplinary elective course of the science major in lieu.
- Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
- Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
- Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics
Offered to students: admitted to Year 1 in 2020

Objectives:
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

Learning Outcomes:
By the end of this programme, students should be able to:
- **PLO 1**: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)
- **PLO 3**: analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)
- **PLO 4**: communicate and collaborate effectively with people of different background, culture, gender and nationality in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)
- **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
- Major in Physics (Intensive)
- Minor in Physics

Required courses (96 credits)

1. Introductory level courses (48 credits)
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (24 credits)**
     - PHYS2250 Introductory mechanics (6)
     - PHYS2255 Introductory electricity and magnetism (6)
     - PHYS2261 Introductory heat and thermodynamics (6)
     - PHYS2265 Introductory quantum physics (6)
     - **Disciplinary Electives (12 credits)**
       - At least 12 credits selected from the following courses:
       - PHYS1150 Problem solving in physics (6)
       - PHYS2055 Introductory relativity (6)
       - PHYS2150 Methods in physics I (6)
       - PHYS2155 Methods in physics II (6)
       - PHYS2160 Introductory computational physics (6)

2. Advanced level courses (42 credits)
   - **Disciplinary Electives (42 credits)**
     - At least 24 credits selected from courses in List A:
       - **List A**
         - PHYS3150 Theoretical physics (6)
         - PHYS3350 Classical mechanics (6)
         - PHYS3351 Quantum mechanics (6)
         - PHYS3450 Electromagnetism (6)
         - PHYS3550 Statistical mechanics & thermodynamics (6)
         - PHYS3760 Physics laboratory (6)
     - Plus at least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYSTXXX level), subject to prerequisite requirements. The current list includes courses in Lists A and B and those courses not selected to fulfill the capstone requirements.

   **List B**
     - PHYS3151 Machine learning in physics (6)
     - PHYS3350 Observational astronomy (6)
     - PHYS3353 Astrophysics (6)
     - PHYS3360 Astronomy laboratory (6)
     - PHYS3750 Laser and spectroscopy (6)
     - PHYS3850 Physical Optics (6)
     - PHYS3851 Atomic and nuclear physics (6)
     - PHYS4150 Computational physics (6)
     - PHYS4151 Data analysis and modeling in physics (6)
     - PHYS4351 Advanced quantum mechanics (6)
     - PHYS4450 Advanced electromagnetism (6)
     - PHYS4550 Advanced statistical mechanics (6)
Science Majors

Phys4551 Solid state physics (6)
Phys4650 Stellar physics (6)
Phys4652 Planetary science (6)
Phys4653 Cosmology (6)
Phys4654 General relativity (6)
Phys4655 Interstellar medium (6)
Phys4656 Advanced astrophysics (6)
Phys4850 Particle physics (6)
Phys7350 Graduate classical mechanics (6)
Phys7351 Graduate quantum mechanics (6)
Phys7450 Graduate electromagnetism (6)
Phys7550 Graduate statistical mechanics (6)
Phys7750 Nanophysics (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   - Phys3999 Directed studies in physics (6)
   - Phys4966 Physics internship (6)
   - Phys4999 Physics project (12)

Notes:
Notes:
1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.
3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.
5. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take Phys1240 Physics by inquiry.
6. Those who want to specialize in the astrophysics theme should pass any three of the following courses: Phys3650 Observational astronomy, Phys3653 Astrophysics, Phys3660 Astronomy laboratory, Phys4652 Planetary science, Phys4653 Cosmology, Phys4654 General relativity, Phys4655 Interstellar medium, and Phys4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either Phys3999 Directed studies in physics or Phys4999 Physics project with topics of study in astrophysics.
7. Those who want to specialize in the computational physics theme should pass any three of the following courses: Phys3150 Theoretical physics, Phys3151 Machine learning in physics, Phys4150 Computational physics, and Phys4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either Phys3999 Directed studies in physics or Phys4999 Physics project with topics of study in computational physics.
8. Those who want to specialize in the experimental physics theme should pass Phys3760 Physics laboratory, plus any two of the following courses: Phys3660 Astronomy laboratory, Phys3750 Laser and spectroscopy, Phys3850 Physical optics, Phys3851 Atomic and nuclear physics, Phys4151 Data analysis and modeling in physics, Phys4551 Solid state physics, and Phys4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either Phys3999 Directed studies in physics or Phys4999 Physics project with topics of study in experimental physics.
9. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: Phys3150 Theoretical physics, Phys3350 Classical mechanics, Phys3351 Quantum mechanics, Phys3450 Electromagnetism, Phys3550 Statistical mechanics & thermodynamics, Phys4351 Advanced quantum mechanics, Phys4450 Advanced electromagnetism, Phys4551 Solid state physics, Phys4654 General relativity, Phys4850 Particle physics, Phys7351 Graduate quantum mechanics, Phys7450 Graduate electromagnetism, Phys7550 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either Phys3999 Directed studies in physics or Phys4999 Physics project with topics of study in theoretical physics.
10. Upon prior approval, one may use Phys4966 Physics internship to replace Phys3999 Directed studies or Phys4999 Physics project to fulfill the specialization in a theme.
11. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the Phys3999 Directed studies in physics or Phys4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.
12. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled.
Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics
Offered to students admitted to Year 1 in 2019

Objectives:
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)
PLO 2: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)
PLO 3: analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)
PLO 4: communicate and collaborate effectively with people of different background, culture, gender and nationality in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)
PLO 5: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
Major in Physics (Intensive)
Minor in Physics

Required courses (96 credits)
1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (24 credits)
   PHYS2250 Introductory mechanics (6)
   PHYS2255 Introductory electricity and magnetism (6)
   PHYS2261 Introductory heat and thermodynamics (6)
   PHYS2265 Introductory quantum physics (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   PHYS1150 Problem solving in physics (6)
   PHYS2055 Introductory relativity (6)
   PHYS2150 Methods in physics I (6)
   PHYS2155 Methods in physics II (6)
   PHYS2160 Introductory computational physics (6)
2. Advanced level courses (42 credits)
   Disciplinary Electives (42 credits)
   At least 24 credits selected from courses in List A:
   List A
   PHYS3150 Theoretical physics (6)
   PHYS3350 Classical mechanics (6)
   PHYS3351 Quantum mechanics (6)
   PHYS3450 Electromagnetism (6)
   PHYS3550 Statistical mechanics & thermodynamics (6)
   PHYS3760 Physics laboratory (6)
   Plus at least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in Lists A and B and those courses not selected to fulfill the capstone requirements.
   List B
   PHYS3151 Machine learning in physics (6)
   PHYS3650 Observational astronomy (6)
   PHYS3653 Astrophysics (6)
   PHYS3660 Astronomy laboratory (6)
   PHYS3750 Laser and spectroscopy (6)
   PHYS3850 Physical Optics (6)
   PHYS3851 Atomic and nuclear physics (6)
   PHYS4150 Computational physics (6)
   PHYS4151 Data analysis and modeling in physics (6)
   PHYS4351 Advanced quantum mechanics (6)
   PHYS4450 Advanced electromagnetism (6)
   PHYS4550 Advanced statistical mechanics (6)

[previous title: Waves and optics (6) ]
Science Majors

PHYS4551 Solid state physics (6)
PHYS4650 Stellar physics (6)
PHYS4652 Planetary science (6)
PHYS4653 Cosmology (6)
PHYS4654 General relativity (6)
PHYS4655 Interstellar medium (6)
PHYS4656 Advanced astrophysics (6)
PHYS4850 Particle physics (6)
PHYS7350 Graduate classical mechanics (6)
PHYS7351 Graduate quantum mechanics (6)
PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
PHYS3999 Directed studies in physics (6)
PHYS4966 Physics internship (6)
PHYS4999 Physics project (12)

Notes:

1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

7. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3653 Astrophysics, PHYS3660 Astronomy laboratory, PHYS4652 Planetary science, PHYS4653 Cosmology, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.

8. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.

9. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3650 Astronomy laboratory, PHYS3760 Laser and spectroscopy, PHYS3850 Physical optics, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4850 Solid state physics, and PHYS4855 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.

10. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics & thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4850 Particle physics, PHYS4855 Solid state physics, PHYS4850 Graduate quantum mechanics, PHYS4855 Graduate electromagnetism, PHYS4855 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.

11. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.

12. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

### Impermissible Combinations:

Major in Physics (Intensive)

Minor in Physics

#### Required courses (96 credits)

1. **Introductory level courses (48 credits)**
   - **Disciplinary Core Courses: Science Foundation Courses (12 credits)**
     - SCNC1111 Scientific method and reasoning (6)
     - SCNC1112 Fundamentals of modern science (6)
   - **Disciplinary Core Courses (24 credits)**
     - PHYS1150 Problem solving in physics (6)
     - PHYS2055 Introductory relativity (6) [previous title: Introduction to relativity (6)]
     - PHYS2150 Methods in physics I (6)
     - PHYS2155 Methods in physics II (6)
     - PHYS2160 Introductory computational physics (6)
     - PHYS2250 Introductory mechanics (6)
     - PHYS2255 Introductory electricity and magnetism (6)
     - PHYS2261 Introductory heat and thermodynamics (6)
     - PHYS2265 Introductory quantum physics (6) [previous title: Modern physics (6)]

2. **Advanced level courses (42 credits)**
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - PHYS1150 Problem solving in physics (6)
       - PHYS2055 Introductory relativity (6) [previous title: Introduction to relativity (6)]
       - PHYS2150 Methods in physics I (6)
       - PHYS2155 Methods in physics II (6)
       - PHYS2160 Introductory computational physics (6)
   - **Disciplinary Electives (4 credits)**
     - At least 24 credits selected from courses in List A:
       - List A
         - PHYS3150 Theoretical physics (6)
         - PHYS3350 Classical mechanics (6)
         - PHYS3351 Quantum mechanics (6)
         - PHYS3450 Electromagnetism (6)
         - PHYS3550 Statistical mechanics & thermodynamics (6)
         - PHYS3760 Physics laboratory (6)
       - Plus at least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in Lists A and B and those courses not selected to fulfill the capstone requirements.
         - List B
           - PHYS3151 Machine learning in physics (6)
           - PHYS3650 Observational astronomy (6)
           - PHYS3653 Astrophysics (6)
           - PHYS3660 Astronomy laboratory (6)
           - PHYS3750 Laser and spectroscopy (6)
           - PHYS3850 Physical Optics (6) [previous title: Waves and optics (6)]
           - PHYS3851 Atomic and nuclear physics (6)
           - PHYS4150 Computational physics (6)
           - PHYS4151 Data analysis and modeling in physics (6)
           - PHYS4351 Advanced quantum mechanics (6)
           - PHYS4450 Advanced electromagnetism (6)
           - PHYS4550 Advanced statistical mechanics (6)
Science Majors

PHY4551 Solid state physics (6)
PHY4650 Stellar physics (6)
PHY4652 Planetary science (6)
PHY4653 Cosmology (6)
PHY4654 General relativity (6)
PHY4655 Interstellar medium (6)
PHY4656 Advanced astrophysics (6)
PHY4850 Particle physics (6)
PHY7350 Graduate classical mechanics (6)
PHY7351 Graduate quantum mechanics (6)
PHY7450 Graduate electromagnetism (6)
PHY7550 Graduate statistical mechanics (6)
PHY7750 Nanophysics (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   - PHYS3999 Directed studies in physics (6)
   - PHYS4966 Physics internship (6)
   - PHYS4999 Physics project (12)

Notes:

1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (“disciplinary core”) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BE&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

7. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3660 Astronomy laboratory, PHYS4652 Planetary science, PHYS4653 Cosmology, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.

8. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.

9. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3650 Observational astronomy laboratory, PHYS3750 Laser and spectroscopy, PHYS3850 Physical optics, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4551 Solid state physics, and PHYS4650 Particle physics out of which at least one must be a 4000+ level course, as well as passing any other PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.

10. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3151 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3350 Electromagnetism, PHYS3350 Statistical mechanics & thermodynamics, PHYS3451 Advanced quantum mechanics, PHYS4100 Advanced electromagnetism, PHYS4450 Particle physics, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4650 Particle physics, PHYS4651 Graduate quantum mechanics, PHYS4650 Graduate electromagnetism, PHYS4650 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing any other PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.

11. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.

12. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics
Offered to students admitted to Year 1 in 2017

Impermissible Combinations:
Major in Mathematics/Physics
Major in Physics (Intensive)
Minor in Physics

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111: Scientific method and reasoning (6)
   SCNC1112: Fundamentals of modern science (6)
   Disciplinary Core Courses (30 credits)
   PHYS1250: Fundamental physics (6)
   PHYS2250: Introductory mechanics (6)
   PHYS2255: Introductory electricity and magnetism (6)
   PHYS2260: Heat and waves (6)
   PHYS2265: Introductory quantum physics (6) [previous title: Modern physics (6)]

   Disciplinary Electives (6 credits)
   At least 6 credits selected from the following courses:
   PHYS1150: Problem solving in physics (6)
   PHYS2055: Introductory relativity (6) [previous title: Introduction to relativity (6)]
   PHYS2150: Methods in physics I (6)
   PHYS2155: Methods in physics II (6)
   PHYS2160: Introductory computational physics (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (24 credits)
   PHYS3350: Classical mechanics (6)
   PHYS3351: Quantum mechanics (6)
   PHYS3450: Electromagnetism (6)
   PHYS3550: Statistical mechanics & thermodynamics (6)

   Disciplinary Electives (18 credits)
   At least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.
   List A
   PHYS3150: Theoretical physics (6)
   PHYS3151: Machine learning in physics (6)
   PHYS3551: Introductory solid state physics (6)
   PHYS3650: Observational astronomy (6)
   PHYS3651: The physical universe (6)
   PHYS3652: Principles of astronomy (6)
   PHYS3653: Astrophysics (6)
   PHYS3660: Astronomy laboratory (6)
   PHYS3750: Laser and spectroscopy (6)
   PHYS3751: Physics of nanomaterials (6)
   PHYS3760: Physics laboratory (6)
   PHYS3850: Physical Optics (6) [previous title: Waves and optics (6)]
   PHYS3851: Atomic and nuclear physics (6)
PHYS4150 Computational physics (6)
PHYS4151 Data analysis and modeling in physics (6)
PHYS4350 Advanced classical mechanics (6)
PHYS4351 Advanced quantum mechanics (6)
PHYS4450 Advanced electromagnetism (6)
PHYS4550 Advanced statistical mechanics (6)
PHYS4551 Solid state physics (6)
PHYS4650 Stellar physics (6)
PHYS4651 Selected topics in astrophysics (6)
PHYS4652 Planetary science (6)
PHYS4653 Cosmology (6)
PHYS4654 General relativity (6)
PHYS4655 Interstellar medium (6)
PHYS4656 Advanced astrophysics (6)
PHYS4750 Experimental physics (6)
PHYS4850 Particle physics (6)
PHYS7350 Graduate classical mechanics (6)
PHYS7351 Graduate quantum mechanics (6)
PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7551 Graduate solid state physics (6)
PHYS7650 Stellar atmospheres (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
PHYS3999 Directed studies in physics (6)
PHYS4966 Physics internship (6)
PHYS4999 Physics project (12)

Notes:
1. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCINC1112) are listed as required courses (‘disciplinary core’) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Capstone requirement for BED&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (disciplinary electives) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

6. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title:** Major in Physics  
**Offered to students:** admitted to Year 1 in 2016

**Objectives:**
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g., quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

**Learning Outcomes:**
By the end of this programme, students should be able to:

**PLO 1:** identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

**PLO 2:** have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)

**PLO 3:** analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

**PLO 4:** communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**PLO 5:** apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

**Impermissible Combinations:**
Major in Mathematics/Physics  
Major in Physics (Intensive)  
Minor in Physics

## Major Title
Major in Physics

## Offered to students
admitted to Year 1 in 2015

### Objectives:
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1:** identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

**PLO 2:** have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)

**PLO 3:** analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

**PLO 4:** communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**PLO 5:** apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

### Impermissible Combinations:
- Major in Mathematics/Physics
- Minor in Physics

### Required courses (96 credits)

#### 1. Introductory level courses (48 credits)

**Disciplinary Core Courses:** Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

**Disciplinary Core Courses (30 credits)**
- PHYS1250 Fundamental physics (6)
- PHYS2250 Introductory mechanics (6)
- PHYS2255 Introductory electricity and magnetism (6)
- PHYS2260 Heat and waves (6)
- PHYS2265 Introductory quantum physics (6)  
  [previous title: Modern physics (6)]

**Disciplinary Electives (6 credits)**
- PHYS1150 Problem solving in physics (6)
- PHYS2050 Introductory relativity (6)  
  [previous title: Introduction to relativity (6)]
- PHYS2150 Methods in physics I (6)
- PHYS2155 Methods in physics II (6)

#### 2. Advanced level courses (42 credits)

**Disciplinary Core Courses (24 credits)**
- PHYS3350 Classical mechanics (6)
- PHYS3351 Quantum mechanics (6)
- PHYS3450 Electromagnetism (6)
- PHYS3550 Statistical mechanics & thermodynamics (6)

**Disciplinary Electives (18 credits)**

At least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.

**List A**
- PHYS3150 Theoretical physics (6)
- PHYS3151 Machine learning in physics (6)
- PHYS3551 Introductory solid state physics (6)
- PHYS3650 Observational astronomy (6)
- PHYS3651 The physical universe (6)
- PHYS3652 Principles of astronomy (6)
- PHYS3653 Astrophysics (6)
- PHYS3660 Astronomy laboratory (6)

**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (`disciplinary core`) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (`disciplinary core`) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (`disciplinary electives`) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (`disciplinary electives`) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Capstone requirement for BEd&BSc degree students is different. Students are required to take an additional 6-credit advanced level course (`disciplinary electives`) in the major to replace the capstone requirement of this Major. Students should consult the Faculty of Education for details.

5. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics
Offered to students admitted to Year 1 in 2012

Objectives:
The Major in Physics aims to provide students with a solid foundation on the subject. Core courses form the blocks of fundamental knowledge to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge in physics, research experience and the training of analytical thinking and quantitative reasoning during their studies. Graduates are expected to have acquired the broad training which can equip them well for further studies in multiple science and technology disciplines and to work in their specialized area.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

PLO 2: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)

PLO 3: analyze problems qualitatively and quantitatively, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

PLO 4: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

PLO 5: apply scientific and quantitative methods in tackling problems in research or real-world setting (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
Major in Mathematics/Physics
Minor in Physics

Required courses (96 credits)

1. Introductory level courses (48 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (36 credits)
   PHYS1150 Problem solving in physics (6)
   PHYS1250 Fundamental physics (6)
   PHYS2250 Introductory mechanics (6)
   PHYS2255 Introductory electricity and magnetism (6)
   PHYS2260 Heat and waves (6)
   PHYS2265 Introductory quantum physics (6)

2. Advanced level courses (42 credits)
   Disciplinary Core Courses (24 credits)
   PHYS3350 Classical mechanics (6)
   PHYS3351 Quantum mechanics (6)
   PHYS3450 Electromagnetism (6)
   PHYS3550 Statistical mechanics & thermodynamics (6)

   Disciplinary Electives (18 credits)
   At least 18 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.

   List A
   PHYS3150 Theoretical physics (6)
   PHYS3551 Introductory solid state physics (6)
   PHYS3650 Observational astronomy (6)
   PHYS3651 The physical universe (6)
   PHYS3652 Principles of astronomy (6)
   PHYS3750 Laser and spectroscopy (6)
   PHYS3751 Physics of nanomaterials (6)
   PHYS3850 Physical Optics (6)
   PHYS3851 Atomic and nuclear physics (6)
   PHYS4150 Computational physics (6)
   PHYS4151 Data analysis and modeling in physics (6)
   PHYS4350 Advanced classical mechanics (6)
   PHYS4351 Advanced quantum mechanics (6)
   PHYS4450 Advanced electromagnetism (6)
   PHYS4550 Advanced statistical mechanics (6)
   PHYS4551 Solid state physics (6)
   PHYS4650 Stellar physics (6)
   PHYS4651 Selected topics in astrophysics (6)
   PHYS4652 Planetary science (6)
   PHYS4653 Cosmology (6)

### Major Title
Major in Physics (Intensive)

### Offered to students
Admitted to Year 1 in 2021

### Objectives:
The Major in Physics (Intensive) aims to provide students with a solid foundation on the subject in breadth and depth. It covers a wide range of core areas which provides the intensive preparation to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge and competencies in physics and research experience plus the training of analytical thinking, quantitative reasoning, and problem solving methods during their studies. Graduates are expected to be well-prepared for further studies in physics and related disciplines and to pursue careers in scientific or technical fields.

### Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)
- **PLO 3**: analyze problems qualitatively and quantitatively based on a broad foundation of theoretical and experimental knowledge in physics, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)
- **PLO 4**: communicate and collaborate with people of different background, culture, gender and nationality effectively in scientific issues (by means of group project, tutorial session, presentation, exchange, internship and capstone opportunities in the curriculum)
- **PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting in an advanced level which can position them to pursue postgraduate studies in scientific and technical fields (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

### Impermissible Combinations:
- Major in Physics
- Minor in Physics

### 3. Capstone requirement (12 credits)
At least 12 credits selected from the following courses:

- PHYS3999 Directed studies in physics (6)
- PHYS4999 Physics project (12)

### Notes:
1. These are core courses in the regular Physics-Major (96 credits) curriculum.
2. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
3. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfil this requirement are advised to take PHYS1240 Physics by inquiry.
4. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3653 Astrophysics, PHYS3660 Astronomy laboratory, PHYS4652 Planetary science, PHYS4653 Cosmology, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.
5. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.
6. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3850 Physical optics, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4151 Solid-state physics, and PHYS4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.
7. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics and thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4850 Particle physics, PHYS7351 Graduate quantum mechanics, PHYS7450 Graduate electromagnetism, PHYS7550 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.
8. Upon prior approval, one may use PHYS4999 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.
9. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.
10. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
11. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics (Intensive)
Offered to students admitted to Year 1 in 2020

Objectives:
The Major in Physics (Intensive) aims to provide students with a solid foundation on the subject in breadth and depth. It covers a wide range of core areas which provides the intensive preparation to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology).

Students will attain professional knowledge and competencies in physics and research experience plus the training of analytical thinking, quantitative reasoning, and problem solving methods during their studies. Graduates are expected to be well-prepared for further studies in physics and related disciplines and to pursue careers in scientific or technical fields.

Learning Outcomes:
By the end of this programme, students should be able to:

| PLO 1 | identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum) |
| PLO 2 | have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum) |
| PLO 3 | analyze problems qualitatively and quantitatively based on a broad foundation of theoretical and experimental knowledge in physics, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum) |
| PLO 4 | communicate and collaborate with people of different background, culture, gender and nationality effectively in scientific issues (by means of group project, tutorial session, presentation, exchange, internship and capstone opportunities in the curriculum) |
| PLO 5 | apply scientific and quantitative methods in tackling problems in research or real-world setting in an advanced level which can position them to pursue postgraduate studies in scientific and technical fields (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies) |

Impermissible Combinations:
- Major in Physics
- Minor in Physics

Required courses (144 credits)

1. Introductory level courses (72 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

Disciplinary Core Courses (48 credits)
- PHYS1150 Problem solving in physics (6)
- PHYS2055 Introductory relativity (6)
- PHYS2150 Methods in physics I (6)
- PHYS2155 Methods in physics II (6)
- PHYS2250 Introductory mechanics (6)
- PHYS2255 Introductory electricity and magnetism (6)
- PHYS2261 Introductory heat and thermodynamics (6)
- PHYS2265 Introductory quantum physics (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- COMP1117 Computer programming (6)
- MATH1013 University mathematics II (6)
- PHYS1650 Nature of the universe (6)
- PHYS2160 Introductory computational physics (6)
- PHYS2650 Modern astronomy (6)
- STAT1603 Introductory statistics (6)

2. Advanced level courses (60 credits)

Disciplinary Core Courses (36 credits)
- PHYS3150 Theoretical physics (6)
- PHYS3350 Classical mechanics (6)
- PHYS3351 Quantum mechanics (6)
- PHYS3450 Electromagnetism (6)
- PHYS3550 Statistical mechanics & thermodynamics (6)
- PHYS3760 Physics laboratory (6)

Disciplinary Electives (24 credits)
All 24 credits should be advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.

List A
- PHYS3151 Machine learning in physics (6)
- PHYS3650 Observational astronomy (6)
- PHYS3653 Astrophysics (6)
- PHYS3660 Astronomy laboratory (6)
- PHYS3750 Laser and spectroscopy (6)
PHYS3850 Physical Optics (6)
PHYS3851 Atomic and nuclear physics (6)

PHYS4550 Advanced statistical mechanics (6)
PHYS4551 Solid state physics (6)
PHYS4650 Stellar physics (6)
PHYS4652 Planetary science (6)
PHYS4653 Cosmology (6)
PHYS4654 General relativity (6)
PHYS4655 Interstellar medium (6)
PHYS4656 Advanced astrophysics (6)
PHYS4850 Particle physics (6)
PHYS5360 Observational astronomy, PHYSYS660 Astronomy laboratory, PHYSYS4652 Planetary science, PHYSYS4653 Cosmology, PHYSYS4654 General relativity, PHYSYS4655 Interstellar medium, and PHYSYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project with topics of study in astrophysics.
PHYS57450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (12 credits)
At least 12 credits selected from the following courses:
PHYSYS3999 Directed studies in physics (6)
PHYSYS4966 Physics internship (6)
PHYSYS4999 Physics project (12)

Notes:
1. These are core courses in the regular Physics-Major (96 credits) curriculum.
2. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
3. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYSYS1240 Physics by inquiry.
4. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYSYS3650 Observational astronomy, PHYSYS3653 Astrophysics, PHYSYS3660 Astronomy laboratory, PHYSYS4652 Planetary science, PHYSYS4653 Cosmology, PHYSYS4654 General relativity, PHYSYS4655 Interstellar medium, and PHYSYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project with topics of study in astrophysics.
5. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYSYS3150 Theoretical physics, PHYSYS3151 Machine learning in physics, PHYSYS4150 Computational physics, and PHYSYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project with topics of study in computational physics.
6. Those who want to specialize in the experimental physics theme should pass PHYSYS3760 Physics laboratory, plus any two of the following courses: PHYSYS3650 Astronomy laboratory, PHYSYS3650 Laser and spectroscopy, PHYSYS3850 Physical optics, PHYSYS3851 Atomic and nuclear physics, PHYSYS4151 Data analysis and modeling in physics, PHYSYS4451 Solid state physics, and PHYSYS4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project with topics of study in experimental physics.
7. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYSYS3150 Theoretical physics, PHYSYS3350 Classical mechanics, PHYSYS3351 Quantum mechanics, PHYSYS3450 Electromagnetism, PHYSYS3550 Statistical mechanics & thermodynamics, PHYSYS4351 Advanced quantum mechanics, PHYSYS4450 Advanced electromagnetism, PHYSYS4551 Solid state physics, PHYSYS4654 General relativity, PHYSYS4850 Particle physics, PHYSYS7351 Graduate quantum mechanics, PHYSYS7450 Graduate electromagnetism, PHYSYS7550 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project with topics of study in theoretical physics.
8. Upon prior approval, one may use PHYSYS4966 Physics internship to replace PHYSYS3999 Directed studies or PHYSYS4999 Physics project to fulfill the specialization in a theme.
9. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYSYS999 Directed studies in physics or PHYSYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.
10. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis
Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Major Title
Major in Physics (Intensive)

### Offered to students
admitted to Year 1 in 2019

#### Objectives:
The Major in Physics (Intensive) aims to provide students with a solid foundation on the subject in breadth and depth. It covers a wide range of core areas which provides the intensive preparation to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge and competencies in physics and research experience plus the training of analytical thinking, quantitative reasoning, and problem solving methods during their studies. Graduates are expected to be well-prepared for further studies in physics and related disciplines and to pursue careers in scientific or technical fields.

#### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1**: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

**PLO 2**: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)

**PLO 3**: analyze problems qualitatively and quantitatively based on a broad foundation of theoretical and experimental knowledge in physics, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

**PLO 4**: communicate and collaborate with people of different background, culture, gender and nationality effectively in scientific issues (by means of group project, tutorial session, presentation, exchange, internship and capstone opportunities in the curriculum)

**PLO 5**: apply scientific and quantitative methods in tackling problems in research or real-world setting in an advanced level which can position them to pursue postgraduate studies in scientific and technical fields (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

#### Impermissible Combinations:
- Major in Physics
- Minor in Physics

### Required courses (144 credits)

#### 1. Introductory level courses (72 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**
- SCNC1111: Scientific method and reasoning (6) (Note 1)
- SCNC1112: Fundamentals of modern science (6) (Note 1)

**Disciplinary Core Courses (48 credits)**
- PHYS1150: Problem solving in physics (6)
- PHYS2055: Introductory relativity (6)
- PHYS2150: Methods in physics I (6)
- PHYS2155: Methods in physics II (6)
- PHYS2250: Introductory mechanics (6) (Note 1)
- PHYS2255: Introductory electricity and magnetism (6) (Note 1)
- PHYS2261: Introductory heat and thermodynamics (6) (Note 1)
- PHYS2265: Introductory quantum physics (6) (Note 1)

**Disciplinary Electives (12 credits)**
At least 12 credits selected from the following courses:
- COMP1117: Computer programming (6)
- MATH1013: University mathematics II (6)
- PHYS1650: Nature of the universe (6)
- PHYS2160: Introductory computational physics (6)
- PHYS2650: Modern astronomy (6)
- STAT1603: Introductory statistics (6)

#### 2. Advanced level courses (60 credits)

**Disciplinary Core Courses (36 credits)**
- PHYS3150: Theoretical physics (6)
- PHYS3350: Classical mechanics (6)
- PHYS3351: Quantum mechanics (6)
- PHYS3450: Electromagnetism (6)
- PHYS3550: Statistical mechanics & thermodynamics (6)
- PHYS3760: Physics laboratory (6)

**Disciplinary Electives (24 credits)**
All 24 credits should be advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS5XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.

*List A*
- PHYS3151: Machine learning in physics (6)
- PHYS3650: Observational astronomy (6)
- PHYS3653: Astrophysics (6)
- PHYS3660: Astronomy laboratory (6)
- PHYS3750: Laser and spectroscopy (6)
3. Capstone requirement (12 credits)

At least 12 credits selected from the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS3999</td>
<td>Directed studies in physics (6)</td>

<td>PHYS4999</td>
<td>Physics project (12)</td>
</tr>
</tbody>
</table>

Notes:
1. These are core courses in the regular Physics-Major (96 credits) curriculum.
2. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
3. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.
4. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3653 Astrophysics, PHYS3660 Astronomy laboratory, PHYS4650 Advanced astrophysics, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.
5. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.
6. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3660 Astronomy laboratory, PHYS3750 Laser and spectroscopy, PHYS3850 Physical optics, PHYS4150 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4551 Solid state physics, and PHYS4550 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.
7. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics & thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4655 Interstellar medium, PHYS4656 Advanced astrophysics, PHYS4750 Graduate electromagnetic, PHYS47550 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.
8. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.
9. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics (Intensive)
Offered to students admitted to Year 1 in 2018

Objectives:
The Major in Physics (Intensive) aims to provide students with a solid foundation on the subject in breadth and depth. It covers a wide range of core areas which provides the intensive preparation to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. 3. Capstone requirement (12 credits)

At least 12 credits selected from the following courses:

- PHYS3999 Directed studies in physics (6)
- PHYS4966 Physics internship (6)
- PHYS4999 Physics project (12)

Notes:
1. These are core courses in the regular Physics-Major (96 credits) curriculum.
2. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
3. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.
4. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3653 Astrophysics, PHYS3660 Astronomy laboratory, PHYS4852 Planetary science, PHYS4653 Cosmology, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics in astrophysics.
5. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS4150 Theoretical physics, PHYS4151 Machine learning in physics, PHYS4150 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics in computational physics.
6. Those who want to specialize in the experimental physics theme should pass PHYS3760 Physics laboratory, plus any two of the following courses: PHYS3660 Astronomy laboratory, PHYS3750 Laser and spectroscopy, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4551 Solid state physics, and PHYS4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics in experimental physics.
7. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3351 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics & thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4650 Particle physics, PHYS4751 Graduate quantum mechanics, PHYS4752 Graduate electromagnetism, PHYS4755 Graduate statistical mechanics out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics in theoretical physics.
8. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.
9. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Physics (Intensive)
Offered to students admitted to Year 1 in 2016

Objectives:
The Major in Physics (Intensive) aims to provide students with a solid foundation on the subject in breadth and depth. It covers a wide range of core areas which provides the intensive preparation to pursue learning in specializations, e.g. quantum mechanics, statistical mechanics, classical mechanics and electrodynamics. A large selection of elective courses is provided for students to pursue a wide range of topics from the very small scale (i.e. subatomic particles) to the large scale (i.e. cosmology). Students will attain professional knowledge and competencies in physics and research experience plus the training of analytical thinking, quantitative reasoning, and problem solving methods during their studies. Graduates are expected to be well-prepared for further studies in physics and related disciplines and to pursue careers in scientific or technical fields.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe physical systems with their professional knowledge (by means of coursework and tutorial classes in the curriculum)

PLO 2: have developed their scientific intuition, abilities and techniques to tackle problems either theoretical or experimental in nature (by means of coursework, tutorial classes and laboratory works in the curriculum)

PLO 3: analyze problems qualitatively and quantitatively based on a broad foundation of theoretical and experimental knowledge in physics, and appraise the related ethical issues (by means of coursework, tutorial classes and research-based projects in the curriculum)

PLO 4: communicate and collaborate with people of different background, culture, gender and nationality effectively in scientific issues (by means of group project, tutorial session, presentation, exchange, internship and capstone opportunities in the curriculum)

PLO 5: apply scientific and quantitative methods in tackling problems in research or real-world setting in an advanced level which can position them to pursue postgraduate studies in scientific and technical fields (by means of projects, directed studies, local and foreign internships attached to universities, research centers, government bodies, NGOs and influential companies)

Impermissible Combinations:
Major in Physics
Minor in Physics

Required courses (144 credits)

1. Introductory level courses (72 credits)

Disciplinary Core Courses: Science Foundation Courses (12 credits)
SCNC1111 Scientific method and reasoning (6) (Note 1)
SCNC1112 Fundamentals of modern science (6) (Note 1)

Disciplinary Core Courses (48 credits)
PHYS1150 Problem solving in physics (6)
PHYS2055 Introductory relativity (6)
PHYS2150 Methods in physics I (6)
PHYS2155 Methods in physics II (6)
PHYS2250 Introductory mechanics (6) (Note 1)
PHYS2255 Introductory electricity and magnetism (6) (Note 1)
PHYS2260 Introductory quantum physics (6) (Note 1)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
COMP1117 Computer programming (6)
MATH1013 University mathematics II (6)
PHYS1650 Nature of the universe (6)
PHYS2160 Introductory computational physics (6)
PHYS2650 Modern astronomy (6)
STAT1603 Introductory statistics (6)

2. Advanced level courses (60 credits)

Disciplinary Core Courses (36 credits)
PHYS3150 Theoretical physics (6)
PHYS3350 Classical mechanics (6) (Note 1)
PHYS3351 Quantum mechanics (6) (Note 1)
PHYS3450 Electromagnetism (6) (Note 1)
PHYS3550 Statistical mechanics & thermodynamics (6) (Note 1)
PHYS3760 Physics laboratory (6)

Disciplinary Electives (24 credits)
All 24 credits should be advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current list includes courses in List A and those courses not selected to fulfill the capstone requirements.
List A
PHYS3151 Machine learning in physics (6)
PHYS3650 Observational astronomy (6)
PHYS3653 Astrophysics (6)
PHYS3660 Astronomy laboratory (6)
PHYS3750 Laser and spectroscopy (6)
PHYS3850 Physical Optics (6) [previous title: Waves and optics (6)]
PHYS3851 Atomic and nuclear physics (6)
PHYS4150 Computational physics (6)
PHYS4151 Data analysis and modeling in physics (6)
PHYS4351 Advanced quantum mechanics (6)
PHYS4450 Advanced electromagnetism (6)
PHYS4550 Advanced statistical mechanics (6)
PHYS4551 Solid state physics (6)
PHYS4650 Stellar physics (6)
PHYS4652 Planetary science (6)
PHYS4653 Cosmology (6)
PHYS4654 General relativity (6)
PHYS4655 Interstellar medium (6)
PHYS4850 Particle physics (6)
PHYS7350 Graduate classical mechanics (6)
PHYS7351 Graduate quantum mechanics (6)
PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7750 Nanophysics (6)

3. Capstone requirement (12 credits)
At least 12 credits selected from the following courses:
  - PHYS3999 Directed studies in physics (6)
  - PHYS4966 Physics internship (6)
  - PHYS4999 Physics project (12)

Notes:
1. These are core courses in the regular Physics-Major (96 credits) curriculum.
2. Students are strongly advised to consult departmental course selection advisors for course and career planning before selecting the courses.
3. Students must have level 3 or above in HKDSE Physics or equivalent to take this major. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.
4. Those who want to specialize in the astrophysics theme should pass any three of the following courses: PHYS3650 Observational astronomy, PHYS3660 Astronomy laboratory, PHYS4852 Planetary science, PHYS4653 Cosmology, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in astrophysics.
5. Those who want to specialize in the computational physics theme should pass any three of the following courses: PHYS3150 Theoretical physics, PHYS3151 Machine learning in physics, PHYS3152 Computational physics, and PHYS4151 Data analysis and modeling in physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in computational physics.
6. Those who want to specialize in the experimental physics theme should pass PHYS3650 Physics laboratory, plus any two of the following courses: PHYS3660 Astronomy laboratory, PHYS3750 Laser and spectroscopy, PHYS3850 Physical optics, PHYS3851 Atomic and nuclear physics, PHYS4151 Data analysis and modeling in physics, PHYS4551 Solid state physics, and PHYS4850 Particle physics out of which at least one must be a 4000+ level course, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in experimental physics.
7. Those who want to specialize in the theoretical physics theme should pass any four of the following courses: PHYS3150 Theoretical physics, PHYS3350 Classical mechanics, PHYS3451 Quantum mechanics, PHYS3450 Electromagnetism, PHYS3550 Statistical mechanics & thermodynamics, PHYS4351 Advanced quantum mechanics, PHYS4450 Advanced electromagnetism, PHYS4551 Solid state physics, PHYS4654 General relativity, PHYS4655 Interstellar medium, and PHYS4656 Advanced astrophysics, out of which at least two must be 4000+ level courses, as well as passing either PHYS3999 Directed studies in physics or PHYS4999 Physics project with topics of study in theoretical physics.
8. Upon prior approval, one may use PHYS4966 Physics internship to replace PHYS3999 Directed studies or PHYS4999 Physics project to fulfill the specialization in a theme.
9. No double counting is allowed if one wants to specialize in more than one theme. In this case, one is allowed to replace the PHYS3999 Directed studies in physics or PHYS4999 Physics project requirement in one of the theme specializations by a regular course in the same theme of specialization.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Major Title:** Major in Risk Management  
**Offered to students admitted to Year 1 in:** 2021

**Objectives:**  
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasize fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific Risk Management disciplines or an extension of knowledge aiming to give students more modeling, technical and analytical skills in risk management, including data mining, stochastic calculus, and financial time series modeling.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1:** identify and categorize the various risks faced by an organization and be able to demonstrate a critical understanding of generic risk management issues and techniques (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- **PLO 2:** analyze and assess risk management situations, and be able to deal with qualitative as well as quantitative aspects appropriate to the situation (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- **PLO 3:** critically evaluate and make effective use of models and techniques for risk assessment and management, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- **PLO 4:** make informed risk management decisions, employ any techniques necessary to acquire and interpret relevant data and information from different sources and the factors that influence their perceptions of risk identification, risk reduction, risk mitigation and risk transfer (by means of coursework, tutorial classes and/or project-based learning in the curriculum)
- **PLO 5:** communicate and collaborate with people effectively on risk management issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)
- **PLO 6:** gain insights into current advances in risk management through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

**Impermissible Combinations:**  
Major in Computing and Data Analytics  
Major in Decision Analytics  
Major in Statistics  
Minor in Risk Management  
Minor in Statistics

**Required courses (96 credits)**

1. **Introductory level courses (42 credits)**
   **Disciplinary Core Courses:** Science Foundation Courses (12 credits)
   - SCNC1111: Scientific method and reasoning (6)
   - SCNC1112: Fundamentals of modern science (6)

   **Disciplinary Core Courses (30 credits)**
   - MATH1013: University mathematics II (6)
   - STAT1600: Statistics: ideas and concepts (6)
   - MATH2014: Multivariable calculus and linear algebra (6)
   - STAT2601: Probability and statistics I (6)
   - STAT2602: Probability and statistics II (6)

2. **Advanced level courses (48 credits)**
   **Disciplinary Core Courses (18 credits)**
   - STAT3600: Linear statistical analysis (6)
   - STAT3609: The statistics of investment risk (6)
   - STAT3615: Practical mathematics for investment (6)

   **Disciplinary Electives (30 credits)**
   At least 30 credits selected from the following courses:
   - STAT3603: Stochastic processes (6)  
   - STAT3610: Risk management and insurance (6)  
   - STAT3612: Statistical machine learning (6)  
   - STAT3618: Derivatives and risk management (6)  
   - STAT3655: Survival analysis (6)  
   - STAT3911: Financial economics II (6)  
   - STAT4601: Time-series analysis (6)  
   - STAT4603: Current topics in risk management (6)  
   - STAT4606: Risk management and Basel Accords in banking and finance (6)  
   - STAT4607: Credit risk analysis (6)  
   - STAT4608: Market risk analysis (6)

3. **Capstone requirement (6 credits)**
   At least 6 credits selected from the following courses:
   - STAT3799: Directed studies in statistics (6)
   - STAT4710: Capstone experience for statistics undergraduates (6)
   - STAT4766: Statistics internship (6)
**Notes:**

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at [https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements](https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements).

6. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu:
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

7. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu:
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Risk Management

Offered to students admitted to Year 1 in 2020

Objectives:
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice.    Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   STAT3603 Stochastic processes (6)
   STAT3610 Risk management and insurance (6)
   STAT3612 Statistical machine learning (6)
   STAT3618 Derivatives and risk management (6)
   STAT3655 Survival analysis (6)
   STAT3911 Financial economics II (6)
   STAT4601 Time-series analysis (6)
   STAT4603 Current topics in risk management (6)
   STAT4606 Risk management and Basel Accords in banking and finance (6)
   STAT4607 Credit risk analysis (6)
   STAT4608 Market risk analysis (6)

3. Capstone requirement (6 credits)
   At least 6 credits selected from the following courses:
   STAT3799 Directed studies in statistics (6)
   STAT4710 Capstone experience for statistics undergraduates (6)
   STAT4766 Statistics internship (6)
Notes:
1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasize fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific Risk Management disciplines or an extension of knowledge aiming to give students more modeling, technical and analytical skills in risk management, including data mining, stochastic calculus, and financial time series modeling.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and categorize the various risks faced by an organization and be able to demonstrate a critical understanding of generic risk management issues and techniques (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: analyze and assess risk management situations, and be able to deal with qualitative as well as quantitative aspects appropriate to the situation (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: critically evaluate and make effective use of models and techniques for risk assessment and management, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: make informed risk management decisions, employ any techniques necessary to acquire and interpret relevant data and information from different sources and the factors that influence their perceptions of risk identification, risk reduction, risk mitigation and risk transfer (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate and collaborate with people effectively on risk management issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in risk management through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Statistics
Minor in Risk Management
Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)

   Disciplinary Core Courses (30 credits)
   MATH1013 University mathematics II (6)
   STAT1600 Statistics: ideas and concepts (6)
   MATH2014 Multivariable calculus and linear algebra (6)

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Major Title
Major in Risk Management

## Offered to students
admitted to Year 1 in 2014

### Objectives:
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasize fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific Risk Management disciplines or an extension of knowledge aiming to give students more modeling, technical and analytical skills in risk management, including data mining, stochastic calculus, and financial time series modeling.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1:** identify and categorize the various risks faced by an organization and be able to demonstrate a critical understanding of generic risk management issues and techniques (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 2:** analyze and assess risk management situations, and be able to deal with qualitative as well as quantitative aspects appropriate to the situation (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 3:** critically evaluate and make effective use of models and techniques for risk assessment and management, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 4:** make informed risk management decisions, employ any techniques necessary to acquire and interpret relevant data and information from different sources and the factors that influence their perceptions of risk identification, risk reduction, risk mitigation and risk transfer (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 5:** communicate and collaborate with people effectively on risk management issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

**PLO 6:** gain insights into current advances in risk management through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

### Impermissible Combinations:
- Major in Computing and Data Analytics
- Major in Decision Analytics
- Major in Statistics
- Minor in Risk Management
- Minor in Statistics

### Required courses (96 credits)

#### 1. Introductory level courses (42 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**
- SCNC1111 Scientific method and reasoning (6)
- SCNC1112 Fundamentals of modern science (6)

**Disciplinary Core Courses (30 credits)**
- MATH1013 University mathematics II (6)
- STAT1600 Statistics: ideas and concepts (6)
- MATH2014 Multivariable calculus and linear algebra (6)
- STAT2601 Probability and statistics I (6)
- STAT2602 Probability and statistics II (6)

#### 2. Advanced level courses (48 credits)

**Disciplinary Core Courses (24 credits)**
- STAT3600 Linear statistical analysis (6)
- STAT3609 The statistics of investment risk (6)
- STAT3615 Practical mathematics for investment (6)
- STAT4601 Time-series analysis (6)

**Disciplinary Electives (24 credits)**
At least 24 credits selected from the following courses:

- STAT3603 Stochastic processes (6) [previous title: Probability modelling (6)]
- STAT3610 Risk management and insurance (6)
- STAT3612 Statistical machine learning (6) [previous title: Data mining (6)]
- STAT3618 Derivatives and risk management (6)
- STAT3911 Financial economics II (6)
- STAT4603 Current topics in risk management (6)
- STAT4606 Risk management and Basel Accords in banking and finance (6)
- STAT4607 Credit risk analysis (6)
- STAT4608 Market risk analysis (6)

#### 3. Capstone requirement (6 credits)
At least 6 credits selected from the following courses:
- STAT3799 Directed studies in statistics (6)
- STAT4710 Capstone experience for statistics undergraduates (6)
- STAT4766 Statistics internship (6)
- STAT4799 Statistics project (12)
Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Risk Management
Offered to students admitted to Year 1 in 2013

Objectives:
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasize fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific Risk Management disciplines or an extension of knowledge aiming to give students more modeling, technical and analytical skills in risk management, including data mining, stochastic calculus, and financial time series modeling.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1 : identify and categorize the various risks faced by an organization and be able to demonstrate a critical understanding of generic risk management issues and techniques (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2 : analyze and assess risk management situations, and be able to deal with qualitative as well as quantitative aspects appropriate to the situation (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3 : critically evaluate and make effective use of models and techniques for risk assessment and management, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4 : make informed risk management decisions, employ any techniques necessary to acquire and interpret relevant data and information from different sources and the factors that influence their perceptions of risk identification, risk reduction, risk mitigation and risk transfer (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5 : communicate and collaborate with people effectively on risk management issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6 : gain insights into current advances in risk management through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
Major in Decision Analytics
Major in Statistics
Minor in Risk Management
Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (30 credits)
   MATH1013 University mathematics II (6)
   STAT1600 Statistics: ideas and concepts (6)
   STAT2601 Probability and statistics I (6)
   STAT2602 Probability and statistics II (6)
   STAT2603 Data management with SAS (6)

2. Advanced level courses (48 credits)
   Disciplinary Core Courses (24 credits)
   STAT3600 Linear statistical analysis (6)
   STAT3609 The statistics of investment risk (6)
   STAT3615 Practical mathematics for investment (6)
   STAT4601 Time-series analysis (6)
   Disciplinary Electives (24 credits)
   At least 24 credits selected from the following courses:
   STAT3603 Stochastic processes (6) [previous title: Probability modelling (6)]
   STAT3610 Risk management and insurance (6)

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
The Major in Risk Management aims to provide students with the skills and expertise in the theory and methodology behind the scientific process of risk management, with application to actuarial science, finance and other related areas of interest. It is designed to provide solid training in the concepts of the risk management process, statistical models and methods of risk management, and good risk management practice. Core courses in the curriculum emphasize fundamental concepts and nature of risk assessment, risk management and governance from different standpoints while elective courses provide either training in specific Risk Management disciplines or an extension of knowledge aiming to give students more modeling, technical and analytical skills in risk management, including data mining, stochastic calculus, and financial time series modeling.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and categorize the various risks faced by an organization and be able to demonstrate a critical understanding of generic risk management issues and techniques (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: analyze and assess risk management situations, and be able to deal with qualitative as well as quantitative aspects appropriate to the situation (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: critically evaluate and make effective use of models and techniques for risk assessment and management, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: make informed risk management decisions, employ any techniques necessary to acquire and interpret relevant data and information from different sources and the factors that influence their perceptions of risk identification, risk reduction, risk mitigation and risk transfer (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate and collaborate with people effectively on risk management issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: gain insights into current advances in risk management through either project or industrial training (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
Major in Decision Analytics
Major in Statistics
Minor in Risk Management
Minor in Statistics

Required courses (96 credits)
1. Introductory level courses (42 credits)
   - Disciplinary Core Courses: Science Foundation Courses (12 credits)
     SCNC1111 Scientific method and reasoning (6)
     SCNC1112 Fundamentals of modern science (6)
   - Disciplinary Core Courses (30 credits)
     MATH1013 University mathematics II (6)
     STAT1600 Statistics: ideas and concepts (6)
     STAT2601 Probability and statistics I (6)
     STAT2602 Probability and statistics II (6)
     STAT2603 Data management with SAS (6)

2. Advanced level courses (48 credits)
   - Disciplinary Core Courses (24 credits)
     STAT3600 Linear statistical analysis (6)
     STAT3609 The statistics of investment risk (6)
     STAT3615 Practical mathematics for investment (6)
     STAT4601 Time-series analysis (6)
   - Disciplinary Electives (24 credits)
     At least 24 credits selected from the following courses:
     STAT3603 Stochastic processes (6) [previous title: Probability modelling (6)]
     STAT3610 Risk management and insurance (6)
     STAT3612 Statistical machine learning (6) [previous title: Data mining (6)]
     STAT3618 Derivatives and risk management (6)
     STAT3911 Financial economics II (6)
     STAT4603 Current topics in risk management (6)
     STAT4606 Risk management and Basel Accords in banking and finance (6)
     STAT4607 Credit risk analysis (6)
     STAT4608 Market risk analysis (6)

3. Capstone requirement (6 credits)
   - At least 6 credits selected from the following courses:
     STAT3799 Directed studies in statistics (6)
     STAT4710 Capstone experience for statistics undergraduates (6)
     STAT4766 Statistics internship (6)
     STAT4799 Statistics project (12)
### Notes:

1. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ('disciplinary core') by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

3. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

4. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

5. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Statistics
Offered to students admitted to Year 1 in 2021

Objectives:
The Major in Statistics focuses on the study of statistics, a scientific discipline characterized by the development and applications of analytical and quantitative tools which involve logical thinking, problem formulation, probability reasoning and intensive data analyses. The programme aims to equip students with powerful mathematical, analytical and computational skills, which are in great demand in practical areas where data are obtained for the purpose of extracting information in support of decision making. It gives students a strong background in statistical concepts, and provides broad and solid training in applied statistical methodologies. The curriculum is constantly revised to meet a steadily rising demand for specialist statisticians or quantitative analysts in government, business, finance, industry, as well as in research and teaching in local and overseas institutions.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: receive solid training in probability and statistics, gain insight into their underlying theory and be acquainted with their state-of-the-art applications in the modern world (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: conduct meticulous data analyses, supported by rigorous statistical reasoning, to make informed decisions in the face of uncertainty that arises in all sorts of institutions and companies, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: equip with hands-on experience in data analysis using statistical software, and be competent for data-analytic jobs which require advanced computational skills (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: be highly motivated to explore cross-disciplinary applications of statistics in a broad variety of academic or professional areas including, in particular, mathematics, natural sciences, economics, finance, business, risk management, actuarial work, social sciences and engineering (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate and collaborate with people effectively on probability and statistical issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: through the understanding and application of statistical concepts and techniques, gain confidence to meet challenges posed by increasingly complicated real-life problems encountered in the modern era in a creative and rational manner (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Minor in Risk Management
Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (42 credits)
   Disciplinary Core Courses: Science Foundation Courses (12 credits)
   SCNC1111 Scientific method and reasoning (6)
   SCNC1112 Fundamentals of modern science (6)
   Disciplinary Core Courses (30 credits)
   MATH1013 University mathematics II (6)
   STAT1600 Statistics: ideas and concepts (6)
   MATH2014 Multivariable calculus and linear algebra (6)
   STAT2601 Probability and statistics I (6)
   STAT2602 Probability and statistics II (6)

2. Advanced level courses (48 credits)
   Disciplinary Core Courses (12 credits)
   STAT3600 Linear statistical analysis (6)
   STAT4602 Multivariate data analysis (6)
   Disciplinary Electives (36 credits)
   At least 36 credits from Lists A and B, among which at least 12 credits from List A:
   List A
   STAT3602 Statistical inference (6)
   STAT3603 Stochastic processes (6)
   STAT3620 Modern nonparametric statistics (6)
   STAT3621 Statistical data analysis (6)
   STAT3655 Survival analysis (6)
   STAT4601 Time-series analysis (6)
   List B
   STAT3604 Design and analysis of experiments (6)
   STAT3605 Quality control and management (6)
   STAT3606 Business logistics (6)
   STAT3607 Statistics in clinical medicine and bio-medical research (6)
   STAT3608 Statistical genetics (6)
   STAT3612 Statistical machine learning (6)
   STAT3613 Marketing analytics (6)
3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- STAT3617 Sample survey methods (6)
- STAT4610 Bayesian learning (6)
- STAT3799 Directed studies in statistics (6)
- STAT4710 Capstone experience for statistics undergraduates (6)
- STAT4766 Statistics internship (6)
- STAT4799 Statistics project (12)

Notes:

1. Students who wish to specialize in the theme of data science are recommended to choose the combination of courses STAT3612, STAT3613 and STAT3621. Note that students who wish to take STAT3621 are strongly recommended to take STAT2603 or STAT2604 first.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

7. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
   - Mathematics qualification in Gao Kao will be considered on a case-by-case basis

8. Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112. It is optional for them to take this course. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.
   - Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
   - Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
   - Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

### 3. Capstone requirement (6 credits)

At least 6 credits selected from the following courses:

- **STAT3799**: Directed studies in statistics (6)
- **STAT4710**: Capstone experience for statistics undergraduates (6)
- **STAT4766**: Statistics internship (6)
- **STAT4799**: Statistics project (12)

### Notes:

1. Students who wish to specialize in the theme of data science are recommended to choose the combination of courses STAT3612, STAT3613 and STAT3621. Note that students who wish to take STAT3621 are strongly recommended to take STAT2603 or STAT2604 first.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required (disciplinary core) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses (disciplinary core) in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary elective) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary elective) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Major Title
Major in Statistics

Offered to students admitted to Year 1 in 2018

### Objectives:
The Major in Statistics focuses on the study of statistics, a scientific discipline characterized by the development and applications of analytical and quantitative tools which involve logical thinking, problem formulation, probability reasoning and intensive data analyses. The programme aims to equip students with powerful mathematical, analytical and computational skills, which are in great demand in practical areas where data are obtained for the purpose of extracting information in support of decision making. It gives students a strong background in statistical concepts, and provides broad and solid training in applied statistical methodologies. The curriculum is constantly revised to meet a steadily rising demand for specialist statisticians or quantitative analysts in government, business, finance, industry, as well as in research and teaching in local and overseas institutions.

### Learning Outcomes:
By the end of this programme, students should be able to:

**PLO 1**: receive solid training in probability and statistics, gain insight into their underlying theory and be acquainted with their state-of-the-art applications in the modern world (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 2**: conduct meticulous data analyses, supported by rigorous statistical reasoning, to make informed decisions in the face of uncertainty that arises in all sorts of institutions and companies, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 3**: equip with hands-on experience in data analysis using statistical software, and be competent for data-analytic jobs which require advanced computational skills (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 4**: be highly motivated to explore cross-disciplinary applications of statistics in a broad variety of academic or professional areas including, in particular, mathematics, natural sciences, economics, finance, business, risk management, actuarial work, social sciences and engineering (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

**PLO 5**: communicate and collaborate with people effectively on probability and statistical issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

**PLO 6**: through the understanding and application of statistical concepts and techniques, gain confidence to meet challenges posed by increasingly complicated real-life problems encountered in the modern era in a creative and rational manner (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

### Impermissible Combinations:
- Major in Computing and Data Analytics
- Major in Decision Analytics
- Major in Risk Management
- Minor in Risk Management
- Minor in Statistics

### Required courses (96 credits)

#### 1. Introductory level courses (42 credits)

**Disciplinary Core Courses: Science Foundation Courses (12 credits)**

<table>

</table>

Notes:
1. Students who wish to specialize in the theme of data science are recommended to choose the combination of courses STAT3612, STAT3613, STAT3616 and STAT3621. Note that students who wish to take STAT3616 and STAT3621 are strongly recommended to take STAT2603 first.

2. Double-counting of courses up to a maximum of 24 credits is permissible when a student with a science major opts to undertake a second major in science. The double-counted courses must include SCNC1111 Scientific method and reasoning (6 credits) and SCNC1112 Fundamentals of modern science (6 credits). Additional credits to be double-counted must be for courses required ("disciplinary core") by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

3. If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ("disciplinary core") in both the first and second majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) (disciplinary electives) in the second major. Double counting of credits is not permissible for major-minor or double-minors combinations. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

4. Students are not required to take Capstone if this Science major is taken as a second major on the condition that the capstone experience in the first major requires the integration or application of knowledge from both major disciplines. If this is approved, a 6-credit advanced level course (disciplinary electives) in the second major must be taken to fulfill the credit requirement of the capstone experience.

5. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

6. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Major Title: Major in Statistics
Offered to students: admitted to Year 1 in 2014

Objectives:
The Major in Statistics focuses on the study of statistics, a scientific discipline characterized by the development and applications of analytical and quantitative tools which involve logical thinking, problem formulation, probability reasoning and intensive data analyses. The programme aims to equip students with powerful mathematical, analytical and computational skills, which are in great demand in practical areas where data are obtained for the purpose of extracting information in support of decision making. It gives students a strong background in statistical concepts, and provides broad and solid training in applied statistical methodologies. The curriculum is constantly revised to meet a steadily rising demand for specialist statisticians or quantitative analysts in government, business, finance, industry, as well as in research and teaching in local and overseas institutions.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: receive solid training in probability and statistics, gain insight into their underlying theory and be acquainted with their state-of-the-art applications in the modern world (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 2: conduct meticulous data analyses, supported by rigorous statistical reasoning, to make informed decisions in the face of uncertainty that arises in all sorts of institutions and companies, and appraise the related ethical issues (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 3: equip with hands-on experience in data analysis using commercial statistical software, and be competent for data-analytic jobs which require advanced computational skills (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 4: be highly motivated to explore cross-disciplinary applications of statistics in a broad variety of academic or professional areas including, in particular, mathematics, natural sciences, economics, finance, business, risk management, actuarial work, social sciences and engineering (by means of coursework, tutorial classes and/or project-based learning in the curriculum)

PLO 5: communicate and collaborate with people effectively on probability and statistical issues (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

PLO 6: through the understanding and application of statistical concepts and techniques, gain confidence to meet challenges posed by increasingly complicated real-life problems encountered in the modern era in a creative and rational manner (by means of coursework, tutorial classes, project-based and/or capstone learning in the curriculum)

Impermissible Combinations:
- Major in Computing and Data Analytics
- Major in Decision Analytics
- Major in Risk Management
- Minor in Risk Management
- Minor in Statistics

Required courses (96 credits)

1. Introductory level courses (42 credits)
   - Disciplinary Core Courses: Science Foundation Courses (12 credits)
     SCNC1111 Scientific method and reasoning (6)
     SCNC1112 Fundamentals of modern science (6)
   - Disciplinary Courses (30 credits)
     MATH1013 University mathematics II (6)
     STAT1600 Statistics: ideas and concepts (6)
     MATH2014 Multivariable calculus and linear algebra (6)
     STAT2601 Probability and statistics I (6)
     STAT2602 Probability and statistics II (6)

2. Advanced level courses (48 credits)
   - Disciplinary Core Courses (24 credits)
     STAT3600 Linear statistical analysis (6)
     STAT3603 Stochastic processes (6)
     STAT4601 Time-series analysis (6)
     STAT4602 Multivariate data analysis (6)
   - Disciplinary Electives (24 credit)
     At least 24 credits from Lists A and B, among which at least 6 credits from List A:
     List A
     STAT3602 Statistical inference (6)
     STAT3604 Design and analysis of experiments (6)
     STAT3620 Modern nonparametric statistics (6)
     STAT3621 Statistical data analysis (6)
     List B
     STAT3605 Quality control and management (6)
     STAT3606 Business logistics (6)
     STAT3607 Statistics in clinical medicine and bio-medical research (6)
     STAT3608 Statistical genetics (6)
     STAT3612 Statistical machine learning (6)
     STAT3613 Marketing analytics (6)
     STAT3616 Advanced SAS programming (6)

SECTION VII    Science Minors on offer in 2021/2022

Minors offered by Science Faculty

Minors

Actuarial Studies (not for BSc(ActuarSc) students)
Astronomy
Biochemistry
Chemistry
Computational & Financial Mathematics
Earth Sciences
Ecology & Biodiversity
Environmental Science
Food & Nutritional Science
Marine Biology
Mathematics
Molecular Biology & Biotechnology
Operations Research & Mathematical Programming
Physics
Plant Science
Risk Management
Science Entrepreneurship (for 2016 cohort and thereafter)
Statistics
Minor Title: Minor in Actuarial Studies

Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

PLO 2: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:
Bachelor of Science in Actuarial Science

Required courses (42 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - FINA1310: Corporate finance (6)
   - MATH1013: University mathematics II (6)
   - STAT2601: Probability and statistics I (6)
   - STAT2602: Probability and statistics II (6)
   - STAT2605: Demographic and socio-economic statistics (6)

2. Advanced level courses (30 credits)
   Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   - STAT3615: Practical mathematics for investment (6)
   - STAT3901: Life contingencies I (6)
   - STAT3904: Corporate finance for actuarial science (6)
   - STAT3906: Risk theory I (6)
   - STAT3908: Credibility theory and loss distributions (6)
   - STAT3910: Financial economics I (6)
   - STAT3911: Financial economics II (6)
   - STAT3953: Fundamentals of actuarial practice (6)
   - STAT4903: Actuarial techniques for general insurance (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Actuarial Studies

Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

PLO 2: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:
Bachelor of Science in Actuarial Science

Required courses (42 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- FINA1310 Corporate finance (6)
- MATH1013 University mathematics II (6)
- STAT2601 Probability and statistics I (6)
- STAT2602 Probability and statistics II (6)
- STAT2605 Demographic and socio-economic statistics (6)
- STAT2901 Probability and statistics: foundations of actuarial science (6)

2. Advanced level courses (30 credits)
Disciplinary Electives (30 credits)
At least 30 credits selected from the following courses:
- STAT3615 Practical mathematics for investment (6)
- STAT3901 Life contingencies I (6)
- STAT3904 Corporate finance for actuarial science (6)
- STAT3906 Risk theory I (6)
- STAT3908 Credibility theory and loss distributions (6)
- STAT3910 Financial economics I (6)
- STAT3911 Financial economics II (6)
- STAT3953 Fundamentals of actuarial practice (6)
- STAT4903 Actuarial techniques for general insurance (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Minor Title
Minor in Actuarial Studies

### Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

### Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

- **PLO 2**: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

### Impermissible Combinations:
Bachelor of Science in Actuarial Science

### Required courses (42 credits)

#### 1. Introductory level courses (12 credits)

**At least 12 credits selected from the following courses:**

- FINA1310 Corporate finance (6)
- MATH1013 University mathematics II (6)
- STAT2601 Probability and statistics I (6)
- STAT2602 Probability and statistics II (6)
- STAT2605 Demographic and socio-economic statistics (6)
- STAT2901 Probability and statistics: foundations of actuarial science (6)

#### 2. Advanced level courses (30 credits)

**Disciplinary Electives (30 credits)**

**At least 30 credits selected from the following courses:**

- STAT3615 Practical mathematics for investment (6)
- STAT3901 Life contingencies I (6)
- STAT3904 Corporate finance for actuarial science (6)
- STAT3906 Risk theory I (6)
- STAT3908 Credibility theory and loss distributions (6)
- STAT3910 Financial economics I (6)
- STAT3911 Financial economics II (6)
- STAT3953 Fundamentals of actuarial practice (6)
- STAT4903 Actuarial techniques for general insurance (6)

### Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Actuarial Studies
Offered to students admitted to Year 1 in 2018

**Objectives:**
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

**Learning Outcomes:**
By the end of this programme, students should be able to:
- **PLO 1:** understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- **PLO 2:** develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

**Impermissible Combinations:**
Bachelor of Science in Actuarial Science

**Required courses (42 credits)**

1. Introductory level courses (12 credits)
   - At least 12 credits selected from the following courses:
     - FINA1310 Corporate finance (6)
     - MATH1013 University mathematics II (6)
     - STAT2601 Probability and statistics I (6)
     - STAT2602 Probability and statistics II (6)
     - STAT2605 Demographic and socio-economic statistics (6)
     - STAT2901 Probability and statistics: foundations of actuarial science (6)

2. Advanced level courses (30 credits)
   - At least 30 credits selected from the following courses:
     - STAT3615 Practical mathematics for investment (6)
     - STAT3901 Life contingencies I (6)
     - STAT3904 Corporate finance for actuarial science (6)
     - STAT3906 Risk theory I (6)
     - STAT3908 Credibility theory and loss distributions (6)
     - STAT3910 Financial economics I (6)
     - STAT3911 Financial economics II (6)
     - STAT3953 Fundamentals of actuarial practice (6)
     - STAT4903 Actuarial techniques for general insurance (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Actuarial Studies
Offered to students admitted to Year 1 in 2017

Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

PLO 2: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:
Bachelor of Science in Actuarial Science

Required courses (42 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - FINA1310 Corporate finance (6)
   - MATH1013 University mathematics II (6)
   - STAT2601 Probability and statistics I (6)
   - STAT2602 Probability and statistics II (6)
   - STAT2605 Demographic and socio-economic statistics (6)
   - STAT2901 Probability and statistics: foundations of actuarial science (6)

2. Advanced level courses (30 credits)
   Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   - STAT3615 Practical mathematics for investment (6)
   - STAT3901 Life contingencies I (6)
   - STAT3904 Corporate finance for actuarial science (6)
   - STAT3906 Risk theory I (6)
   - STAT3908 Credibility theory and loss distributions (6)
   - STAT3910 Financial economics I (6)
   - STAT3911 Financial economics II (6)
   - STAT3953 Fundamentals of actuarial practice (6)
   - STAT4903 Actuarial techniques for general insurance (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**  
Minor in Actuarial Studies

**Offered to students**  
admitted to Year 1 in 2016

**Objectives:**  
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1:** understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Minor Title: Minor in Actuarial Studies
Offered to students admitted to Year 1 in 2013

Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

PLO 2: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:
Bachelor of Science in Actuarial Science

Required courses (42 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - FINA1310 Corporate finance (6)
   - MATH1013 University mathematics II (6)
   - STAT2601 Probability and statistics I (6)
   - STAT2602 Probability and statistics II (6)
   - STAT2605 Demographic and socio-economic statistics (6)
   - STAT2901 Probability and statistics: foundations of actuarial science (6)

2. Advanced level courses (30 credits)
Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   - STAT3615 Practical mathematics for investment (6)
   - STAT3901 Life contingencies I (6)
   - STAT3904 Corporate finance for actuarial science (6)
   - STAT3906 Risk theory I (6)
   - STAT3908 Credibility theory and loss distributions (6)
   - STAT3910 Financial economics I (6)
   - STAT3911 Financial economics II (6)
   - STAT3953 Fundamentals of actuarial practice (6)
   - STAT4903 Actuarial techniques for general insurance (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Actuarial Studies
Offered to students: 2012
admitted to Year 1 in

Objectives:
The Minor in Actuarial Studies aims to provide interested students with an introduction to the basic concepts and methodologies in Actuarial Science. The minor curriculum is designed particularly for students from different majors to enhance their interests in Actuarial Science and to strengthen their confidence and potential in solving mathematical, financial, economical and investment-related problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the methods used by actuaries to solve problems of insurance, investment, pension, financial risk management and demography (by means of coursework and tutorial classes and/or research-based project in the curriculum)

PLO 2: develop and apply problem-solving skills appropriate to the level of the preliminary education component specified by international actuarial bodies such as the Society of Actuaries (by means of coursework and tutorial classes and/or research-based project in the curriculum)

Impermissible Combinations:
Bachelor of Science in Actuarial Science

Required courses (42 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- FINA1310 Corporate finance (6)
- MATH1013 University mathematics II (6)
- STAT2601 Probability and statistics I (6)
- STAT2602 Probability and statistics II (6)
- STAT2605 Demographic and socio-economic statistics (6)
- STAT2901 Probability and statistics: foundations of actuarial science (6)

2. Advanced level courses (30 credits)
Disciplinary Electives (30 credits)
At least 30 credits selected from the following courses:
- STAT3615 Practical mathematics for investment (6)
- STAT3901 Life contingencies I (6)
- STAT3904 Corporate finance for actuarial science (6)
- STAT3906 Risk theory I (6)
- STAT3908 Credibility theory and loss distributions (6)
- STAT3910 Financial economics I (6)
- STAT3911 Financial economics II (6)
- STAT3953 Fundamentals of actuarial practice (6)
- STAT4903 Actuarial techniques for general insurance (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Astronomy

Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Astronomy is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses to allow them to pursue their interests in the subject and to establish connections between the field of astronomy and other science disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe astrophysical phenomena with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)

PLO 2: develop their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and opportunities of field activities in the curriculum)

PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:
NIL

Required courses (36 credits)

1. Introductory level courses (18 credits)

Disciplinary Core Courses (12 credits)
- PHYS1650 Nature of the universe (6)
- PHYS2650 Modern astronomy (6)

Disciplinary Electives (6 credits)
At least 6 credits selected from the following courses:
- PHYS1250 Fundamental physics (6)
- PHYS2055 Introductory relativity (6)
- PHYS2160 Introductory computational physics (6)
- EASC2408 Planetary geology (6)

2. Advanced level courses (18 credits)

Disciplinary Core Courses (6 credits)
- PHYS3650 Observational astronomy (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- PHYS3653 Astrophysics (6)
- PHYS3660 Astronomy laboratory (6)
- PHYS4650 Stellar physics (6)
- PHYS4652 Planetary science (6)
- PHYS4653 Cosmology (6)
- PHYS4654 General relativity (6)
- PHYS4655 Interstellar medium (6)
- PHYS4656 Advanced astrophysics (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
The Minor in Astronomy is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses to allow them to pursue their interests in the subject and to establish connections between the field of astronomy and other science disciplines.

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**
Minor in Astronomy

**Offered to students**
admitted to Year 1 in 2018

**Objectives:**
The Minor in Astronomy is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses to allow them to pursue their interests in the subject and to establish connections between the field of astronomy and other science disciplines.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe astrophysical phenomena with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: develop their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and opportunities of field activities in the curriculum)
- **PLO 3**: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**Impermissible Combinations:**
NIL

### Required courses (36 credits)

1. **Introductory level courses (18 credits)**
   - **Disciplinary Core Courses (12 credits)**
     - PHYS1650: Nature of the universe (6)
     - PHYS2650: Modern astronomy (6)
   - **Disciplinary Electives (6 credits)**
     - At least 6 credits selected from the following courses:
       - PHYS1250: Fundamental physics (6)
       - PHYS2055: Introductory relativity (6)  
       - EASC2408: Planetary geology (6)

2. **Advanced level courses (18 credits)**
   - **Disciplinary Core Courses (6 credits)**
     - PHYS3650: Observational astronomy (6)
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - PHYS3653: Astrophysics (6)
       - PHYS3660: Astronomy laboratory (6)
       - PHYS4650: Stellar physics (6)
       - PHYS4652: Planetary science (6)
       - PHYS4653: Cosmology (6)
       - PHYS4654: General relativity (6)
       - PHYS4655: Interstellar medium (6)
       - PHYS4656: Advanced astrophysics (6)

### Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Minor Title

Minor in Astronomy

## Offered to students

admitted to Year 1 in 2017

## Objectives:

The Minor in Astronomy is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses to allow them to pursue their interests in the subject and to establish connections between the field of astronomy and other science disciplines.

## Learning Outcomes:

By the end of this programme, students should be able to:

- **PLO 1**: identify and describe astrophysical phenomena with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: develop their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and opportunities of field activities in the curriculum)
- **PLO 3**: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

## Impermissible Combinations:

- Major in Astronomy

## Required courses (42 credits)

1. **Introductory level courses (18 credits)**
   - PHYS1250 Fundamental physics (6)
   - PHYS1650 Nature of the universe (6)
   - PHYS2265 Introductory quantum physics (6)  
     
     [previous title: Modern physics (6)]

2. **Advanced level courses (24 credits)**
   - **Disciplinary Electives (24 credits)**
     - At least 24 credits selected from the following courses:
       - PHYS3650 Observational astronomy (6)
       - PHYS3651 The physical universe (6)
       - PHYS3652 Principles of astronomy (6)
       - PHYS3653 Astrophysics (6)
       - PHYS3660 Astronomy laboratory (6)
       - PHYS4650 Stellar physics (6)
       - PHYS4651 Selected topics in astrophysics (6)
       - PHYS4652 Planetary science (6)
       - PHYS4653 Cosmology (6)
       - PHYS4654 General relativity (6)
       - PHYS4655 Interstellar medium (6)
       - PHYS4656 Advanced astrophysics (6)
       - PHYS7650 Stellar atmospheres (6)

## Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

## Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Astronomy
Offered to students admitted to Year 1 in 2016

Objectives:
The Minor in Astronomy is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses to allow them to pursue their interests in the subject and to establish connections between the field of astronomy and other science disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe astrophysical phenomena with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)

PLO 2: develop their scientific intuition, abilities and techniques to tackle astrophysical problems either theoretical or observational in nature (by means of coursework, tutorial classes, and opportunities of field activities in the curriculum)

PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Astronomy

Required courses (42 credits)

1. Introductory level courses (18 credits)
   Disciplinary Core Courses (18 credits)

**Objectives:**
The Minor in Biochemistry is designed to provide students from all backgrounds with a multidisciplinary perspective on contemporary biochemistry and molecular biology. This minor curriculum incorporates significant flexibility to allow students to select courses that will complement the individual student’s Major.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** describe the fundamentals of biochemistry and molecular biology, and apply biochemical knowledge appropriately and effectively (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 2:** integrate knowledge regarding the structure and function of biological molecules and how they come together to form the systems that make up life (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 3:** develop a general interest in biochemistry and recognize the inter-relationship of biochemistry with other disciplines (by means of coursework and laboratory-based learning in the curriculum)

**Impermissible Combinations:**
Major in Biochemistry

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**
   **Disciplinary Electives (12 credits)**
   At least 12 credits selected from the following courses:
   - BIOL1110: From molecules to cells (6)
   - BIOL2220: Principles of biochemistry (6)
   - BIOC1600: Perspectives in biochemistry (6)
   - BIOC2600: Basic biochemistry (6)
   - Take either BIOC2600 or BIOL2220 to fulfill this 12 credits requirement, but not both. BIOC2600 and BIOL2220 are mutually exclusive.

2. **Advanced level courses (24 credits)**
   **Disciplinary Electives (24 credits)**
   At least 24 credits selected from the following courses:
   - BIOC3601: Basic metabolism (6)
   - BIOC3604: Essential techniques in biochemistry and molecular biology (6)
   - BIOC3605: Sequence bioinformatics (6)
   - BIOC3606: Molecular medicine (6)
   - BIOL3202: Nutritional biochemistry (6)
   - BIOL3401: Molecular biology (6)
   - BIOL3402: Cell biology and cell technology (6)
   - BIOL3403: Immunology (6)
   - BIOL3404: Protein structure and function (6)
   - BIOC4610: Advanced biochemistry (6)
   - BIOC4612: Molecular biology of the gene (6)
   - BIOC4613: Advanced techniques in biochemistry & molecular biology (6)
   - BIOL4417: 'Omics' and systems biology (6)
   - CHEM4444: Chemical biology (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title Minor in Biochemistry
Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Biochemistry is designed to provide students from all backgrounds with a multidisciplinary perspective on contemporary biochemistry and molecular biology. This minor curriculum incorporates significant flexibility to allow students to select courses that will complement the individual student’s Major.

Learning Outcomes:
By the end of this programme, students should be able to:

- PLO 1: describe the fundamentals of biochemistry and molecular biology, and apply biochemical knowledge appropriately and effectively (by means of coursework and laboratory-based learning in the curriculum)
- PLO 2: integrate knowledge regarding the structure and function of biological molecules and how they come together to form the systems that make up life (by means of coursework and laboratory-based learning in the curriculum)
- PLO 3: develop a general interest in biochemistry and recognize the inter-relationship of biochemistry with other disciplines (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Biochemistry

Required courses (36 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - BIOL1110 From molecules to cells (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOC2600 Basic biochemistry (6)
   - BIOC2600 and BIOL2220 are mutually exclusive.
   - Take either BIOC2600 or BIOL2220 to fulfill this 12 credits requirement, but not both.
   - BIOC2600 and BIOL2220 are mutually exclusive.

2. Advanced level courses (24 credits)
   Disciplinary Electives (24 credits)
   At least 24 credits selected from the following courses:
   - BIOC3601 Basic metabolism (6)
   - BIOC3604 Essential techniques in biochemistry and molecular biology (6)
   - BIOC3605 Sequence bioinformatics (6)
   - BIOC3606 Molecular medicine (6)
   - BIOL3202 Nutritional biochemistry (6)
   - BIOL3401 Molecular biology (6)
   - BIOL3402 Cell biology and cell technology (6)
   - BIOL3403 Immunology (6)
   - BIOL3404 Protein structure and function (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Objectives:**
The Minor in Biochemistry is designed to provide students from all backgrounds with a multidisciplinary perspective on contemporary biochemistry and molecular biology. This minor curriculum incorporates significant flexibility to allow students to select courses that will complement the individual student’s Major.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** describe the fundamentals of biochemistry and molecular biology, and apply biochemical knowledge appropriately and effectively (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 2:** integrate knowledge regarding the structure and function of biological molecules and how they come together to form the systems that make up life (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 3:** develop a general interest in biochemistry and recognize the inter-relationship of biochemistry with other disciplines (by means of coursework and laboratory-based learning in the curriculum)

**Impermissible Combinations:**
Major in Biochemistry

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**

   **Disciplinary Electives (12 credits)**
   
   At least 12 credits selected from the following courses:
   - BIOC1600 Perspectives in biochemistry (6)
   - BIOL1110 From molecules to cells (6)
   - BIOC2600 Basic biochemistry (6)
   - BIOL2220 Principles of biochemistry (6)

   Take either BIOC2600 or BIOL2220 to fulfill this 12 credits requirement, but not both. BIOC2600 and BIOL2220 are mutually exclusive.

2. **Advanced level courses (24 credits)**

   **Disciplinary Electives (24 credits)**
   
   At least 24 credits selected from the following courses:
   - BIOC3601 Basic metabolism (6)
   - BIOC3604 Essential techniques in biochemistry and molecular biology (6)
   - BIOC3605 Sequence bioinformatics (6)
   - BIOC3606 Molecular medicine (6)
   - BIOL3202 Nutritional biochemistry (6)
   - BIOL3401 Molecular biology (6)
   - BIOL3402 Cell biology and cell technology (6)
   - BIOL3403 Immunology (6)
   - BIOL3404 Protein structure and function (6)
   - BIOC4610 Advanced biochemistry (6)
   - BIOC4612 Molecular biology of the gene (6)
   - BIOC4613 Advanced techniques in biochemistry & molecular biology (6)
   - BIOL4417 ‘Omics’ and systems biology (6)
   - CHEM4444 Chemical biology (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. **Minor Title**: Minor in Chemistry  
**Offered to students**: admitted to Year 1 in 2021  

**Objectives:**  
The Minor in Chemistry aims to provide students with fundamental knowledge and skills of chemistry. The minor curriculum is flexible. Students of different majors in science and other disciplines will be able to select courses that complement their major areas of study as well as enhance their knowledge in chemistry.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1**: understand and apply the basic concepts of chemistry (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 2**: apply chemistry concepts in other subjects (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 3**: transfer the basic concepts to complement their major area of study (by means of coursework and laboratory-based learning in the curriculum)

**Impermissible Combinations:**  
Major in Chemistry  
Major in Chemistry (Intensive)

---

**Required courses (42 credits)**

1. **Introductory level courses (24 credits)**
   
   **Disciplinary Core Courses (12 credits)**
   - CHEM1042 General chemistry I (6)
   - CHEM1043 General chemistry II (6)
   
   **Disciplinary Electives (12 credits)**
   - At least 12 credits selected from the following courses:
     - CHEM2241 Analytical chemistry I (6)
     - CHEM2341 Inorganic chemistry I (6)
     - CHEM2441 Organic chemistry I (6)
     - CHEM2442 Fundamentals of organic chemistry (6)
     - CHEM2541 Introductory physical chemistry (6)
     
     *CHEM2441 and CHEM2442 are mutually exclusive. CHEM2441 and CHEM2442 are mutually exclusive.*

2. **Advanced level courses (18 credits)**
   
   **Disciplinary Electives (18 credits)**
   - At least 18 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:
   
   **List A**
   - CHEM3141 Environmental chemistry (6)
   - CHEM3142 Chemical process industries and analysis (6)
   - CHEM3143 Introduction to materials chemistry (6)
   - CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)
   - CHEM3241 Analytical chemistry II: chemical instrumentation (6)
   - CHEM3242 Food and water analysis (6)
   - CHEM3243 Introductory instrumental chemical analysis (6)
   - CHEM3341 Inorganic chemistry II (6)
   - CHEM3342 Bioinorganic chemistry (6)
   - CHEM3344 Organic chemistry II (6)
   - CHEM3347 Organic chemistry of biomolecules (6)
   - CHEM3348 Organic chemistry laboratory (6)
   - CHEM3349 Integrated laboratory (6)
   - CHEM3541 Physical chemistry: Introduction to quantum chemistry (6)
   - CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)
   - CHEM3999 Directed studies in chemistry (6)
   - CHEM4142 Symmetry, group theory and applications (6)
   - CHEM4143 Interfacial science and technology (6)
   - CHEM4144 Advanced materials (6)
   - CHEM4146 Medicinal chemistry (6)
   - CHEM4147 Supramolecular chemistry (6)
   - CHEM4148 Frontiers in Modern Chemical Science (6)
   - CHEM4241 Modern chemical instrumentation and applications (6)
   - CHEM4242 Analytical chemistry (6)
   - CHEM4243 Analytical chemistry (6)
   - CHEM4341 Advanced inorganic chemistry (6)
   - CHEM4342 Organometallic chemistry (6)
   - CHEM4441 Advanced organic chemistry (6)
   - CHEM4443 Integrated organic synthesis (6)
   - CHEM4444 Chemical biology (6)
   - CHEM4542 Computational chemistry (6)
   - CHEM4543 Advanced physical chemistry (6)
   - CHEM4544 Electrochemical science and technology (6)
   - CHEM4910 Chemistry literacy and research (6)
   - CHEM4911

**Notes:**

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Chemistry
Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Chemistry aims to provide students with fundamental knowledge and skills of chemistry. The minor curriculum is flexible. Students of different majors in science and other disciplines will be able to select courses that complement their major areas of study as well as enhance their knowledge in chemistry.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and apply the basic concepts of chemistry (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 2**: apply chemistry concepts in other subjects (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 3**: transfer the basic concepts to complement their major area of study (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Chemistry
Major in Chemistry (Intensive)

### Required courses (42 credits)

#### 1. Introductory level courses (24 credits)

**Disciplinary Core Courses (12 credits)**

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Chemistry
Offered to students admitted to Year 1 in 2019

Objectives:
The Minor in Chemistry aims to provide students with fundamental knowledge and skills of chemistry. The minor curriculum is flexible. Students of different majors in science and other disciplines will be able to select courses that complement their major areas of study as well as enhance their knowledge in chemistry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the basic concepts of chemistry (by means of coursework and laboratory-based learning in the curriculum)

PLO 2: apply chemistry concepts in other subjects (by means of coursework and laboratory-based learning in the curriculum)

PLO 3: transfer the basic concepts to complement their major area of study (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Chemistry
Major in Chemistry (Intensive)

Required courses (42 credits)
1. Introductory level courses (24 credits)
Disciplinary Core Courses (12 credits)
CHEM1042 General chemistry I (6)
CHEM1043 General chemistry II (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
CHEM2241 Analytical chemistry I (6)
CHEM2341 Inorganic chemistry I (6)
CHEM2441 Organic chemistry I (6)
CHEM2442 Fundamentals of organic chemistry (6)
CHEM2541 Introductory physical chemistry (6)

2. Advanced level courses (18 credits)
Disciplinary Electives (18 credits)
At least 18 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:
List A
CHEM3141 Environmental chemistry (6)
CHEM3142 Chemical process industries and analysis (6)
CHEM3143 Introduction to materials chemistry (6)
CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)
CHEM3241 Analytical chemistry II: chemical instrumentation (6)
CHEM3242 Food and water analysis (6)
CHEM3243 Introductory instrumental chemical analysis (6)
CHEM3244 Analytical techniques for pharmacy students (6)

- CHEM2241 Analytical chemistry I (6)  
- CHEM2341 Inorganic chemistry I (6)  
- CHEM2441 Organic chemistry I (6)  
- CHEM2442 Fundamentals of organic chemistry (6)  
- CHEM2541 Introductory physical chemistry (6)  

- CHEM2241 and CHEM2442 are mutually exclusive.  
- CHEM2441 and CHEM2442 are mutually exclusive.

#### 2. Advanced level courses (18 credits)

**Disciplinary Electives (18 credits)**  
At least 18 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

**List A**
- CHEM3141 Environmental chemistry (6)  
- CHEM3142 Chemical process industries and analysis (6)  
- CHEM3143 Introduction to materials chemistry (6)  
- CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)  
- CHEM3241 Analytical chemistry II: chemical instrumentation (6)  
- CHEM3242 Food and water analysis (6)  
- CHEM3243 Introductory instrumental chemical analysis (6)  
- CHEM3244 Analytical techniques for pharmacy students (6)  
- CHEM3341 Inorganic chemistry II (6)  
- CHEM3342 Bioinorganic chemistry (6)  
- CHEM3344 Organic chemistry II (6)  
- CHEM3345 Organic chemistry of biomolecules (6)  
- CHEM3346 Organic chemistry laboratory (6)  
- CHEM3347 Integrated laboratory (6)  
- CHEM3541 Physical chemistry: Introduction to quantum chemistry (6)  
- CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)  
- CHEM3999 Directed studies in chemistry (6)  
- CHEM4142 Symmetry, group theory and applications (6)  
- CHEM4143 Interfacial science and technology (6)  
- CHEM4144 Advanced materials (6)  
- CHEM4145 Medicinal chemistry (6)  
- CHEM4147 Supramolecular chemistry (6)  
- CHEM4148 Frontiers in Modern Chemical Science (6)  
- CHEM4241 Modern chemical instrumentation and applications (6)  
- CHEM4242 Analytical chemistry (6)  
- CHEM4341 Advanced inorganic chemistry (6)  
- CHEM4342 Organometallic chemistry (6)  
- CHEM4441 Advanced organic chemistry (6)  
- CHEM4443 Integrated organic synthesis (6)  
- CHEM4444 Chemical biology (6)  
- CHEM4542 Computational chemistry (6)  
- CHEM4543 Advanced physical chemistry (6)  
- CHEM4544 Electrochemical science and technology (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Chemistry or equivalent to take this major. Students who do not fulfill this requirement are advised to take CHEM1041 Foundations of chemistry.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Chemistry
Offered to students admitted to Year 1 in 2014

Objectives:
The Minor in Chemistry aims to provide students with fundamental knowledge and skills of chemistry. The minor curriculum is flexible. Students of different majors in science and other disciplines will be able to select courses that complement their major areas of study as well as enhance their knowledge in chemistry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the basic concepts of chemistry (by means of coursework and laboratory-based learning in the curriculum)

PLO 2: apply chemistry concepts in other subjects (by means of coursework and laboratory-based learning in the curriculum)

PLO 3: transfer the basic concepts to complement their major area of study (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Chemistry
Major in Chemistry (Intensive)

Required courses (42 credits)

1. Introductory level courses (18 credits)
Disciplinary Core Courses (6 credits)
CHEM104 General chemistry I (6)  
[ previous title: General chemistry (6) ]

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
CHEM2041 Principles of chemistry (6)
CHEM2241 Analytical chemistry I (6)
CHEM2341 Inorganic chemistry I (6)
CHEM2441 Organic chemistry I (6)  
CHEM2441 and CHEM2442 are mutually exclusive.
CHEM2442 Fundamentals of organic chemistry (6)  
CHEM2441 and CHEM2442 are mutually exclusive.
CHEM2541 Introductory physical chemistry (6)  
[ previous title: Physical chemistry I (6) ]

2. Advanced level courses (24 credits)
Disciplinary Electives (24 credits)
At least 24 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

List A
CHEM3141 Environmental chemistry (6)
CHEM3142 Chemical process industries and analysis (6)
CHEM3143 Introduction to materials chemistry (6)
CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)
CHEM3241 Analytical chemistry II: chemical instrumentation (6)
CHEM3242 Food and water analysis (6)
CHEM3243 Introductory instrumental chemical analysis (6)
CHEM3244 Analytical techniques for pharmacy students (6)
CHEM3341 Inorganic chemistry II (6)
CHEM3342 Bioinorganic chemistry (6)
CHEM3344 Organic chemistry II (6)
CHEM3345 Organic chemistry of biomolecules (6)
CHEM3346 Organic chemistry laboratory (6)
CHEM3348 Integrated laboratory (6)
CHEM3349 Physical chemistry: Introduction to quantum chemistry (6)  
[ previous title: Physical chemistry II: Introduction to quantum chemistry (6) ]
CHEM3542 Physical chemistry: statistical thermodynamics and kinetics theory (6)
CHEM3999 Directed studies in chemistry (6)
CHEM4142 Symmetry, group theory and applications (6)
CHEM4143 Interfacial science and technology (6)
CHEM4144 Advanced materials (6)
CHEM4145 Medicinal chemistry (6)
CHEM4147 Supramolecular chemistry (6)
CHEM4148 Frontiers in Modern Chemical Science (6)
CHEM4241 Modern chemical instrumentation and applications (6)
CHEM4242 Analytical chemistry (6)
CHEM4341 Advanced inorganic chemistry (6)
CHEM4342 Organometallic chemistry (6)
CHEM4441 Advanced organic chemistry (6)
CHEM4443 Integrated organic synthesis (6)
CHEM4444 Chemical biology (6)
CHEM4542 Computational chemistry (6)
CHEM4543 Advanced physical chemistry (6)
CHEM4544 Electrochemical science and technology (6)

Minor Title: Minor in Chemistry
Offered to students admitted to Year 1 in 2013

Objectives:
The Minor in Chemistry aims to provide students with fundamental knowledge and skills of chemistry. The minor curriculum is flexible. Students of different majors in science and other disciplines will be able to select courses that complement their major areas of study as well as enhance their knowledge in chemistry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and apply the basic concepts of chemistry (by means of coursework and laboratory-based learning in the curriculum)
PLO 2: apply chemistry concepts in other subjects (by means of coursework and laboratory-based learning in the curriculum)
PLO 3: transfer the basic concepts to complement their major area of study (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Chemistry
Major in Chemistry (Intensive)

Required courses (42 credits)

1. Introductory level courses (18 credits)
   Disciplinary Core Courses (6 credits)
   CHEM1042 General chemistry I (6)  *(previous title: General chemistry (6))*
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - CHEM2041 Principles of chemistry (6)
   - CHEM2241 Analytical chemistry I (6)
   - CHEM2341 Inorganic chemistry I (6)
   - CHEM2441 Organic chemistry I (6)
   - CHEM2442 Fundamentals of organic chemistry (6)  *(CHEM2441 and CHEM2442 are mutually exclusive.)*
   - CHEM2541 Introductory physical chemistry (6)  *(previous title: Physical chemistry I (6))*

2. Advanced level courses (24 credits)
   Disciplinary Electives (24 credits)
   At least 24 credits of advanced level Chemistry courses (CHEM3XXX or CHEM4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:
   List A
   - CHEM3141 Environmental chemistry (6)
   - CHEM3142 Chemical process industries and analysis (6)
   - CHEM3143 Introduction to materials chemistry (6)
   - CHEM3146 Principles and applications of spectroscopic and analytical techniques (6)

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor in Computational & Financial Mathematics

Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from computational sciences and financial industry.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and describe fundamental concepts in computational and financial mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2**: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3**: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
- Major in Mathematics
- Major in Mathematics (Intensive)
- Minor in Mathematics
- Minor in Operations Research & Mathematical Programming

Required courses (42 credits)

1. Introductory level courses (18 credits) (note 3)
   - **Disciplinary Core Course (6 credits)**
     - MATH1013 University mathematics II (6)
   - **Disciplinary Electives (12 credits)**
     - Select either List A or List B:
       - **List A**
         - MATH2101 Linear algebra I (6)
         - MATH2211 Multivariable calculus (6)
       - **List B**
         - MATH2012 Fundamental concepts of mathematics (6)
         - MATH2014 Multivariable calculus and linear algebra (6)

2. Advanced level courses (24 credits)
   - **Disciplinary Core Courses (12 credits)**
     - MATH3601 Numerical analysis (6)
     - MATH3906 Financial calculus (6)
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - MATH3408 Computational methods and differential equations with applications (6)
       - MATH3603 Probability theory (6)
       - MATH3904 Introduction to optimization (6)
       - MATH3911 Game theory and strategy (6)
       - MATH4602 Scientific computing (6)
       - MATH4907 Numerical methods for financial calculus (6)
       - MATH7217 Topics in financial mathematics (6)
       - MATH7224 Topics in advanced probability theory (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Computational & Financial Mathematics

Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from computational sciences and financial industry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe fundamental concepts in computational and financial mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (42 credits)
1. Introductory level courses (18 credits) (note 3)

Disciplinary Core Course (6 credits)
MATH1013 University mathematics II (6)

Disciplinary Electives (12 credits)
Select either List A or List B:

List A
MATH2101 Linear algebra I (6)
MATH2211 Multivariable calculus (6)

List B
MATH2012 Fundamental concepts of mathematics (6)
MATH2014 Multivariable calculus and linear algebra (6)

2. Advanced level courses (24 credits)

Disciplinary Core Courses (12 credits)
MATH3601 Numerical analysis (6)
MATH3906 Financial calculus (6)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
MATH3408 Computational methods and differential equations with applications (6)
MATH3603 Probability theory (6)
MATH3904 Introduction to optimization (6)
MATH3911 Game theory and strategy (6)
MATH4602 Scientific computing (6)
MATH4907 Numerical methods for financial calculus (6)
MATH7217 Topics in financial mathematics (6)
MATH7224 Topics in advanced probability theory (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**: Minor in Computational & Financial Mathematics  
**Offered to students admitted to Year 1 in**: 2019

**Objectives:**  
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. **Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**: Minor in Computational & Financial Mathematics  
**Offered to students admitted to Year 1 in**: 2018  

**Objectives:**  
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from computational sciences and financial industry.

**Learning Outcomes:**  
By the end of this programme, students should be able to:  
- **PLO 1**: understand and describe fundamental concepts in computational and financial mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)  
- **PLO 2**: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)  
- **PLO 3**: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

**Impermissible Combinations:**  
Major in Mathematics  
Major in Mathematics (Intensive)  
Minor in Mathematics  
Minor in Operations Research & Mathematical Programming

**Required courses (42 credits)**  
1. **Introductory level courses (18 credits) (note 3)**  
   - **Disciplinary Core Course (6 credits)**  
     - MATH1013 University mathematics II (6)  
   - **Disciplinary Electives (12 credits)**  
     - Select either List A or List B:  
       - **List A**  
         - MATH2101 Linear algebra I (6)  
         - MATH2211 Multivariable calculus (6)  
       - **List B**  
         - MATH2012 Fundamental concepts of mathematics (6)  
         - MATH2014 Multivariable calculus and linear algebra (6)  
2. **Advanced level courses (24 credits)**  
   - **Disciplinary Core Courses (12 credits)**  
     - MATH3601 Numerical analysis (6)  
     - MATH3906 Financial calculus (6)  
   - **Disciplinary Electives (12 credits)**  
     - At least 12 credits selected from the following courses:  
       - MATH3408 Computational methods and differential equations with applications (6)  
       - MATH3603 Probability theory (6)  
       - MATH3904 Introduction to optimization (6)  
       - MATH3911 Game theory and strategy (6)  
       - MATH4602 Scientific computing (6)  
       - MATH4907 Numerical methods for financial calculus (6)  
       - MATH7217 Topics in financial mathematics (6)  
       - MATH7224 Topics in advanced probability theory (6)

**Notes:**  
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

**Remarks:**  
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Minor Title
Minor in Computational & Financial Mathematics

### Offered to students
admitted to Year 1 in 2017

### Objectives:
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from computational sciences and financial industry.

### Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and describe fundamental concepts in computational and financial mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2**: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3**: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

### Impermissible Combinations:
- Major in Mathematics
- Major in Mathematics (Intensive)
- Major in Mathematics/Physics
- Minor in Mathematics
- Minor in Operations Research & Mathematical Programming

### Required courses (42 credits)

#### 1. Introductory level courses (18 credits) (note 3)
- **MATH1013**: University mathematics II (6)

#### Disciplinary Core Course (6 credits)
- **MATH1013**: University mathematics II (6)

#### Disciplinary Electives (12 credits)

<table>
<thead>
<tr>
<th>List A</th>
<th>List B</th>
</tr>

<tbody>
<tr>
<td>MATH2101: Linear algebra I (6)</td>
<td>MATH201: Fundamental concepts of mathematics (6)</td>
</tr>
<tr>
<td>MATH2211: Multivariable calculus (6)</td>
<td>MATH2014: Multivariable calculus and linear algebra (6)</td>
</tr>
</tbody>
</table>

#### 2. Advanced level courses (24 credits)

- **Disciplinary Core Courses (12 credits)**
  - MATH3601: Numerical analysis (6)
  - MATH3906: Financial calculus (6)

- **Disciplinary Electives (12 credits)**
  - At least 12 credits selected from the following courses:
    - MATH3408: Computational methods and differential equations with applications (6)
    - MATH3603: Probability theory (6)
    - MATH3904: Introduction to optimization (6)
    - MATH3911: Game theory and strategy (6)
    - MATH4602: Scientific computing (6)
    - MATH4907: Numerical methods for financial calculus (6)
    - MATH7217: Topics in financial mathematics (6)
    - MATH7224: Topics in advanced probability theory (6)

### Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Computational & Financial Mathematics

Offered to students admitted to Year 1 in 2016

Objectives:
The Minor in Computational & Financial Mathematics provides students with fundamental knowledge in both computational mathematics and financial mathematics. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from computational sciences and financial industry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe fundamental concepts in computational and financial mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Major in Mathematics/Physics
Minor in Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (42 credits)

1. Introductory level courses (18 credits) (note 3)
   Disciplinary Core Course (6 credits)
   MATH1013 University mathematics II (6)

   Disciplinary Electives (12 credits)

Minor Title: Minor in Earth Sciences
Offered to students: 2021
admitted to Year 1 in

Objectives:
The Minor in Earth Sciences aims to provide interested students with an introduction to the fundamental structure, process and history of the Earth. The minor curriculum is designed particularly to provide students from different majors the flexibility to select courses to enhance their interests in Earth Sciences or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe the methods used by the Earth scientists to study the Earth systems (by means to coursework, tutorial classes and field-based learning in the curriculum)

PLO 2: understand and describe the basic nomenclature used in Earth Sciences (by means to coursework, tutorial classes and field-based learning in the curriculum)

PLO 3: discuss and comment critically issues related to the Earth Sciences in media reports (by means to coursework, tutorial classes and field-based learning in the curriculum)

Impermissible Combinations:
Major in Earth System Science
Major in Geology
Major in Geology (Intensive)

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
EASC1401 Blue Planet (6)
EASC1402 Principles of geology (6)
EASC2401 Fluid/solid interactions in earth processes (6)

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)
At least 24 credits of advanced level Earth Sciences courses (EASC3XXX or EASC4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

List A
EASC3020 Global change: anthropogenic impacts (6)
EASC3402 Petrology (6)
EASC3403 Sedimentary environments (6)
EASC3404 Structural geology (6)
EASC3405 Environmental remote sensing (6)
EASC3406 Reconstruction of past climate (6)
EASC3408 Geophysics (6)
EASC3409 Igneous and metamorphic petrogenesis (6)
EASC3410 Hydrogeology (6)
EASC3412 Earth resources (6)
EASC3413 Engineering geology (6)
EASC3414 Soil and rock mechanics (6)
EASC3415 Meteorology (6)
EASC3416 Advanced geochemistry and geochronology (6)
EASC3417 Earth through time (6)
EASC3998 Directed studies in earth sciences (6)
EASC4403 Biogeochemical cycles (6)
EASC4406 Earth dynamics & global tectonics (6)
EASC4407 Regional geology (6)
EASC4408 Special topics in earth sciences (6)
EASC4911 Earth system: contemporary issues (6)
EASC4955 Integrated field studies (6)
EASC4966 Earth sciences internship (6)
EASC4999 Earth sciences project (12)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Earth Sciences
Offered to students: admitted to Year 1 in 2020

Objectives:
The Minor in Earth Sciences aims to provide interested students with an introduction to the fundamental structure, process and history of the Earth. The minor curriculum is designed particularly to provide students from different majors the flexibility to select courses to enhance their interests in Earth Sciences or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

   - EASC4407 Regional geology (6)
   - EASC4408 Special topics in earth sciences (6)
   - EASC4911 Earth system: contemporary issues (6)
   - EASC4955 Integrated field studies (6)
   - EASC4966 Earth sciences internship (6)
   - EASC4999 Earth sciences project (12)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Earth Sciences
Offered to students admitted to Year 1 in 2019

Objectives:
The Minor in Earth Sciences aims to provide interested students with an introduction to the fundamental structure, process and history of the Earth. The minor curriculum is designed particularly to provide students from different majors the flexibility to select courses to enhance their interests in Earth Sciences or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe the methods used by the Earth scientists to study the Earth systems (by means to coursework, tutorial classes and field-based learning in the curriculum)
PLO 2: understand and describe the basic nomenclature used in Earth Sciences (by means to coursework, tutorial classes and field-based learning in the curriculum)
PLO 3: discuss and comment critically issues related to the Earth Sciences in media reports (by means to coursework, tutorial classes and field-based learning in the curriculum)

Impermissible Combinations:
Major in Earth System Science
Major in Geology
Major in Geology (Intensive)

Required courses (36 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:

<table>

## Minor Title
Minor in Earth Sciences

## Offered to students
admitted to Year 1 in 2013

### Objectives:
The Minor in Earth Sciences aims to provide interested students with an introduction to the fundamental structure, process and history of the Earth. The minor curriculum is designed particularly to provide students from different majors the flexibility to select courses to enhance their interests in Earth Sciences or to complement their major of study.

### Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and describe the methods used by the Earth scientists to study the Earth systems (by means to coursework, tutorial classes and field-based learning in the curriculum)
- **PLO 2**: understand and describe the basic nomenclature used in Earth Sciences (by means to coursework, tutorial classes and field-based learning in the curriculum)
- **PLO 3**: discuss and comment critically issues related to the Earth Sciences in media reports (by means to coursework, tutorial classes and field-based learning in the curriculum)

### Impermissible Combinations:
- Major in Earth System Science
- Major in Geology
- Major in Geology (Intensive)

### Required courses (36 credits)

1. **Introductory level courses (12 credits)**
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - EASC1401 Blue Planet (6)
       - EASC1402 Principles of geology (6)
       - EASC2401 Fluid/solid interactions in earth processes (6)

2. **Advanced level courses (24 credits)**
   - **Disciplinary Electives (24 credits)**
     - At least 24 credits of advanced level Earth Sciences courses (EASC3XXX or EASC4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:
       - **List A**
         - EASC3020 Global change: anthropogenic impacts (6)
         - EASC3402 Petrology (6)
         - EASC3403 Sedimentary environments (6)
         - EASC3404 Structural geology (6)
         - EASC3405 Environmental remote sensing (6)
         - EASC3406 Reconstruction of past climate (6)
         - EASC3408 Geophysics (6)
         - EASC3409 Igneous and metamorphic petrogenesis (6)
         - EASC3410 Hydrogeology (6)

Offered to students admitted to Year 1 in 2012

Objectives:
The Minor in Earth Sciences aims to provide interested students with an introduction to the fundamental structure, process and history of the Earth. The minor curriculum is designed particularly to provide students from different majors the flexibility to select courses to enhance their interests in Earth Sciences or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe the methods used by the Earth scientists to study the Earth systems (by means to coursework, tutorial classes and field-based learning in the curriculum)

PLO 2: understand and describe the basic nomenclature used in Earth Sciences (by means to coursework, tutorial classes and field-based learning in the curriculum)

PLO 3: discuss and comment critically issues related to the Earth Sciences in media reports (by means to coursework, tutorial classes and field-based learning in the curriculum)

Impermissible Combinations:
Major in Earth System Science
Major in Geology
Major in Geology (Intensive)

Required courses (36 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EASC1401</td>
<td>Blue Planet</td>
<td>6</td>
</tr>
<tr>
<td>EASC1402</td>
<td>Principles of geology</td>
<td>6</td>
</tr>
<tr>
<td>EASC2401</td>
<td>Fluid/solid interactions in earth processes</td>
<td>6</td>
</tr>
</tbody>
</table>

2. Advanced level courses (24 credits)
Disciplinary Electives (24 credits)
At least 24 credits of advanced level Earth Sciences courses (EASC3XXX or EASC4XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

List A

<table>
<thead>
<tr>

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Ecology & Biodiversity

Offered to students admitted to Year 1 in 2021

Objectives:
This Minor in Ecology & Biodiversity is an ideal introduction to the natural world, the species and ecosystems it comprises and the biological rules it follows. It aims to allow students to learn about general ecological principles and the local flora and fauna of the region, and the conservation challenges that will need to be addressed in a rapidly-changing world. Students will be able to build upon this basic knowledge developed at the introductory level by selecting from among a wide range of courses that offer learning opportunities through practical and field work, as well as traditional and virtual teaching, in more specialized areas of ecology and biodiversity.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: appreciate and describe the importance of ecology and biodiversity, and the importance of the variety of life to humans (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: understand and describe the impacts of environmental change and the causes and consequences of biodiversity loss (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: appreciate and describe the ecological principles underlying different policies and plans for biodiversity conservation and sustainable development in Hong Kong and elsewhere (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity
Major in Ecology & Biodiversity (Intensive)

Required courses (36 credits)
1. Introductory level courses (12 credits)
   - BIOL1309 Evolutionary diversity (6)
   - BIOL2306 Ecology and evolution (6)

2. Advanced level courses (24 credits)
   - BIOL3101 Animal behaviour (6)
   - BIOL3301 Marine biology (6)
   - BIOL3302 Systematics and phylogenetics (6)
   - BIOL3303 Conservation biology (6)
   - BIOL3313 Freshwater ecology (6)
   - BIOL3314 Plant structure and evolution (6)
   - BIOL3318 Experimental intertidal ecology (6)
   - BIOL3319 Tropical terrestrial ecology (6)
   - BIOL3419 Insect ecology: the little things that run the world (6)
   - BIOL3506 Evolutionary biology (6)
   - BIOL4301 Fish and fisheries (6)
   - BIOL4302 Environmental impact assessment (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title
Minor in Ecology & Biodiversity

Offered to students
admitted to Year 1 in
2020

Objectives:
This Minor in Ecology & Biodiversity is an ideal introduction to the natural world, the species and ecosystems it comprises and the biological rules it follows. It aims to allow students to learn about general ecological principles and the local flora and fauna of the region, and the conservation challenges that will need to be addressed in a rapidly-changing world. Students will be able to build upon this basic knowledge developed at the introductory level by selecting from among a wide range of courses that offer learning opportunities through practical and field work, as well as traditional and virtual teaching, in more specialized areas of ecology and biodiversity.
