This Minor in Ecology & Biodiversity is an ideal introduction to the natural world, the species and ecosystems it comprises and the biological rules it follows. It aims to allow students to learn about general ecological principles and the local flora and fauna of the region, and the conservation challenges that will need to be addressed in a rapidly-changing world. Students will be able to build upon this basic knowledge developed at the introductory level by selecting from among a wide range of courses that offer learning opportunities through practical and field work, as well as traditional and virtual teaching, in more specialized areas of ecology and biodiversity.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: appreciate and describe the importance of ecology and biodiversity, and the importance of the variety of life to humans (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: understand and describe the impacts of environmental change and the causes and consequences of biodiversity loss (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: appreciate and describe the ecological principles underlying different policies and plans for biodiversity conservation and sustainable development in Hong Kong and elsewhere (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity
Major in Ecology & Biodiversity (Intensive)

Required courses (36 credits)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Ecology & Biodiversity
Offered to students admitted to Year 1 in 2018

Objectives:
This Minor in Ecology & Biodiversity is an ideal introduction to the natural world, the species and ecosystems it comprises and the biological rules it follows. It aims to allow students to learn about general ecological principles and the local flora and fauna of the region, and the conservation challenges that will need to be addressed in a rapidly-changing world. Students will be able to build upon this basic knowledge developed at the introductory level by selecting from among a wide range of courses that offer learning opportunities through practical and field work, as well as traditional and virtual teaching, in more specialized areas of ecology and biodiversity.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: appreciate and describe the importance of ecology and biodiversity, and the importance of the variety of life to humans (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: understand and describe the impacts of environmental change and the causes and consequences of biodiversity loss (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: appreciate and describe the ecological principles underlying different policies and plans for biodiversity conservation and sustainable development in Hong Kong and elsewhere (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Ecology & Biodiversity
Major in Ecology & Biodiversity (Intensive)

Required courses (36 credits)

1. Introductory level courses (12 credits)
   - BIOL1309 Evolutionary diversity (6)
   - BIOL2306 Ecology and evolution (6)

2. Advanced level courses (24 credits)
   - BIOL3101 Animal behaviour (6)
   - BIOL3301 Marine biology (6)

Minor Title: Minor in Environmental Science  
Offered to students admitted to Year 1 in 2021

**Objectives:**  
The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help students understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1:** identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

- **PLO 2:** observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

- **PLO 3:** appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

- **PLO 4:** gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/laboratory/team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

**Impermissible Combinations:**  
Major in Environmental Science

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Objectives:
The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help students understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 2: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 3: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 4: gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/laboratory/team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:
Major in Environmental Science

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Environmental Science
Offered to students admitted to Year 1 in 2019

**Objectives:**
The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help students understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)
- **PLO 2:** observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)
- **PLO 3:** appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)
- **PLO 4:** gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/laboratory/team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

**Impermissible Combinations:**
Major in Environmental Science

**Minor Title**: Minor in Environmental Science  
**Offered to students admitted to Year 1 in**: 2013

**Objectives:**  
The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help students understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1**: identify and describe different components of the environmental systems and key issues in environmental science (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 2**: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 3**: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/ laboratory/ team-based learning in the curriculum)
- **PLO 4**: gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/ laboratory/ team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

**Impermissible Combinations:**  
Major in Environmental Science

**Required courses (42 credits)**

1. **Introductory level courses** (18 credits)
   - **Disciplinary Core Courses** (6 credits)
     - ENVS1401: Introduction to environmental science (6)
   - **Disciplinary Electives** (12 credits)
     - At least 12 credits selected from the following courses (Level 1 & 2):
       - CHEM 1042: General chemistry I (6)
       - CHEM 2041: Principles of chemistry (6)
       - CHEM 2241: Analytical chemistry I (6)
       - CHEM 2442: Fundamentals of organic chemistry (6)
       - EASC 1020: Introduction to climate science (6)
       - EASC 1401: Blue Planet (6)
       - EASC 2404: Introduction to atmosphere and hydrosphere (6)
       - ENVS 1301: Environmental life science (6)
       - ENVS 2001: Methods in environmental science (6)
       - ENVS 2002: Environmental data analysis (6)

2. **Advanced level courses** (24 credits)
   - **Disciplinary Core Courses** (6 credits)
     - ENVS 3004: Environment, society and economics (6)
   - **Disciplinary Electives** (18 credits)
     - At least 18 credits selected from the following courses:
       - BIOL 3110: Environmental toxicology (6)
       - BIOL 3303: Conservation biology (6)
       - BIOL 4302: Environmental impact assessment (6)
       - CHEM 3141: Environmental chemistry (6)
       - CHEM 3241: Analytical chemistry II: chemical instrumentation (6)
       - CHEM 3242: Food and water analysis (6)
       - EASC 3020: Global change: anthropogenic impacts (6)
       - EASC 3405: Environmental remote sensing (6)
       - ENV S 3006: Environmental radiation (6)
       - ENV S 3007: Natural hazards and mitigation (6)
       - ENV S 3010: Sustainable energy and environment (6)
       - ENV S 3019: Urban ecology (6)
       - ENV S 3020: Global change ecology (6)
       - ENV S 3042: Pollution (6)
       - ENV S 3313: Environmental oceanography (6)
       - ENV S 4110: Environmental remediation (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Environmental Science

Offered to students admitted to Year 1 in 2012

Objectives:
The Minor in Environmental Science aims to provide students with an introduction to some complex environmental issues. Students will gain ecological and physical knowledge of the environment, become literate in issues related to environmental sustainability, monitoring and management, and be able to explore interdisciplinary solutions to these problems. This training will help student understand certain aspects of the environment and possible ways to solving environmental problems which will be useful to students to enhance their career prospects.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe different components of the environmental systems and key issues in environmental science
(by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 2: observe, describe, measure and analyze physical, biological and chemical characteristics of natural and man-made environments (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 3: appropriately use and critically analyze a range of forms and sources of environmental data, and assess environmental problems (by means of lectures, coursework, tutorial classes and field/laboratory/team-based learning in the curriculum)

PLO 4: gain skills in scientific inquiry and effective communication of global environmental problems, issues of resource management, policies and management methods (by means of field/laboratory/team-based learning, research projects, presentation opportunities and capstone experiences in the curriculum)

Impermissible Combinations:
Major in Environmental Science

Required courses (42 credits)
1. Introductory level courses (18 credits)
   Disciplinary Core Courses (6 credits)
   ENVS1401 Introduction to environmental science (6)
   Disciplinary Electives (12 credits)
   At least 6 credits selected from the following courses (Level 1) in List A:
   List A
   CHEM1042 General chemistry I (6)
   EASC1401 Blue Planet (6)
   ENVS1301 Environmental life science (6)
   At least 6 credits selected from the following courses (Level 2) in List B:
   List B
   BIOL2102 Biostatistics (6)
   CHEM2041 Principles of chemistry (6)
   CHEM2241 Analytical chemistry I (6)
   CHEM2442 Fundamentals of organic chemistry (6)
   EASC2404 Introduction to atmosphere and hydrosphere (6)
   ENVS2001 Methods in environmental science (6)
   ENVS2002 Environmental data analysis (6)

2. Advanced level courses (24 credits)
   Disciplinary Core Courses (6 credits)
   ENVS3004 Environment, society and economics (6)
   Disciplinary Electives (18 credits)
   At least 18 credits selected from the following courses:
   BIOL3110 Environmental toxicology (6)
   BIOL3303 Conservation biology (6)
   BIOL3402 Environmental impact assessment (6)
   CHEM3141 Environmental chemistry (6)
   CHEM3241 Analytical chemistry II: chemical instrumentation (6)
   CHEM3242 Food and water analysis (6)
   EASC3200 Global change: anthropogenic impacts (6)
   EASC3405 Environmental remote sensing (6)
   ENV3006 Environmental radiation (6)
   ENV3007 Natural hazards and mitigation (6)
   ENV3010 Sustainable energy and environment (6)
   ENV3019 Urban ecology (6)
   ENV3020 Global change ecology (6)
   ENV3042 Pollution (6)
   ENV3313 Environmental oceanography (6)
   ENV4110 Environmental remediation (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

589
Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Food & Nutritional Science

Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Food & Nutritional Science

Required courses (36 credits)

1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- BIOL1110 From molecules to cells (6)
- BIOL1201 Introduction to food and nutrition (6)
- BIOL2101 Principles of food chemistry (6)
- BIOL2220 Principles of biochemistry (6)

- BIOL2220 or BIOL2600 (6)

- BIOL2220 and BIOL2600 are mutually exclusive.

- BIOL2600 Basic biochemistry (6)

2. Advanced level courses (24 credits)
Disciplinary Electives (24 credits)
At least 24 credits selected from the following courses:
- BIOL3202 Nutritional biochemistry (6)
- BIOL3203 Food microbiology (6)
- BIOL3204 Nutrition and the life cycle (6)
- BIOL3205 Human physiology (6)
- BIOL3207 Principles of toxicology (6)

- BIOL3209 Food and nutrient analysis (6)
- BIOL3211 Nutragenomics (6)
- BIOL3216 Food waste management (6)
- BIOL3217 Food, environment and health (6)
- BIOL3218 Food hygiene and quality control (6)
- BIOL3606 Diet and disease (6)
- BIOL3608 Food commodities (6)
- BIOL4201 Public health nutrition (6)
- BIOL4202 Nutrition and sports performance (6)
- BIOL4205 Food technology (6)

- BIOL4209 Functional foods (6)
- BIOL4411 Plant and food biotechnology (6)

- BIOL3606 [previous title: Food and nutritional toxicology (6)]

- BIOL4205 [previous title: Food processing and engineering (6)]

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Food & Nutritional Science

Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1:** demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 2:** recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 3:** understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)
- **PLO 4:** synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Food & Nutritional Science

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - BIOL1110 From molecules to cells (6)
       - BIOL1201 Introduction to food and nutrition (6)
       - BIOL2101 Principles of food chemistry (6)
       - BIOL2220 Principles of biochemistry (6)
       - BIOL2600 Basic biochemistry (6)

     - Take either BIOL2220 or BIOL2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOL2600 are mutually exclusive.

2. **Advanced level courses (24 credits)**
   - **Disciplinary Electives (24 credits)**
     - At least 24 credits selected from the following courses:
       - BIOL3202 Nutritional biochemistry (6)
       - BIOL3203 Food microbiology (6)
       - BIOL3204 Nutrition and the life cycle (6)
       - BIOL3205 Human physiology (6)
       - BIOL3207 Principles of toxicology (6)
       - BIOL3209 Food and nutrient analysis (6)
       - BIOL3211 Nutrigenomics (6)
       - BIOL3216 Food waste management (6)
       - BIOL3217 Food, environment and health (6)
       - BIOL3218 Food hygiene and quality control (6)
       - BIOL3606 Diet and disease (6)
       - BIOL3608 Food commodities (6)
       - BIOL4201 Public health nutrition (6)
       - BIOL4202 Nutrition and sports performance (6)
       - BIOL4205 Food technology (6)
       - BIOL4209 Functional foods (6)
       - BIOL4411 Plant and food biotechnology (6)

     - [previous title: Food and nutritional toxicology (6)]
     - [previous title: Food processing and engineering (6)]

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Food & Nutritional Science

Offered to students admitted to Year 1 in 2019

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Food & Nutritional Science

Required courses (36 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

At least 12 credits selected from the following courses:

- BIOL1110 From molecules to cells (6)
- BIOL1201 Introduction to food and nutrition (6)
- BIOL2101 Principles of food chemistry (6)
- BIOL2220 Principles of biochemistry (6)
- BIOL2220 Principles of food chemistry (6)
- BIOL2600 Basic biochemistry (6)

Take either BIOL2220 or BIOL2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOL2600 are mutually exclusive.

2. Advanced level courses (24 credits)

Disciplinary Electives (24 credits)

At least 24 credits selected from the following courses:

- BIOL3202 Nutritional biochemistry (6)
- BIOL3203 Food microbiology (6)
- BIOL3204 Nutrition and the life cycle (6)
- BIOL3205 Human physiology (6)
- BIOL3207 Principles of toxicology (6)
- BIOL3209 Food and nutrition analysis (6)
- BIOL3211 Nutrigenomics (6)
- BIOL3216 Food waste management (6)
- BIOL3217 Food, environment and health (6)
- BIOL3218 Food hygiene and quality control (6)
- BIOL3606 Diet and disease (6)
- BIOL3608 Food commodities (6)
- BIOL4201 Public health nutrition (6)
- BIOL4202 Nutrition and sports performance (6)
- BIOL4204 Diet, brain function and behavior (6)
- BIOL4205 Food technology (6)
- BIOL4209 Functional foods (6)
- BIOL4411 Plant and food biotechnology (6)

[previous title: Food and nutritional toxicology (6)]

[previous title: Food processing and engineering (6)]

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Food & Nutritional Science

Offered to students admitted to Year 1 in 2018

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title:  Minor in Food & Nutritional Science  
Offered to students admitted to Year 1 in 2017

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Food & Nutritional Science

Required courses (36 credits)

1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - BIOL1100 From molecules to cells (6)
   - BIOL1201 Introduction to food and nutrition (6)
   - BIOL2101 Principles of food chemistry (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOLC2600 Basic biochemistry (6)

   Take either BIOL2220 or BIOLC2600 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOLC2600 are mutually exclusive.

2. Advanced level courses (24 credits)
   Disciplinary Electives (24 credits)
   At least 24 credits selected from the following courses:
   - BIOL3202 Nutritional biochemistry (6)
   - BIOL3203 Food microbiology (6)
   - BIOL3204 Nutrition and the life cycle (6)
   - BIOL3205 Human physiology (6)
   - BIOL3206 Clinical nutrition (6)
   - BIOL3207 Principles of toxicology (6)
   - BIOL3209 Food and nutrient analysis (6)
   - BIOL3211 Nutrigenomics (6)
   - BIOL3216 Food waste management (6)
   - BIOL3217 Food, environment and health (6)
   - BIOL3218 Food hygiene and quality control (6)
   - BIOL3606 Diet and disease (6)
   - BIOL3608 Food commodities (6)
   - BIOL3609 Food commodities (6)
   - BIOL4201 Public health nutrition (6)
   - BIOL4202 Nutrition and sports performance (6)
   - BIOL4204 Diet, brain function and behavior (6)
   - BIOL4205 Food technology (6)
   - BIOL4208 Meat, dairy and grain sciences (6)
   - BIOL4209 Functional foods (6)
   - BIOL4411 Plant and food biotechnology (6)

   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.

   Take either BIOL3206 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL4208 are mutually exclusive.

   Take either BIOL3608 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3608 and BIOL4208 are mutually exclusive.

   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.

   Take either BIOL3206 or BIOL3606 to fulfill this 24 credits requirement, but not both. BIOL3206 and BIOL3606 are mutually exclusive.

   [previous title: Food processing and engineering (6)]

   Take either BIOL3608 or BIOL4208 to fulfill this 24 credits requirement, but not both. BIOL3608 and BIOL4208 are mutually exclusive.
Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

### Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Food & Nutritional Science
Offered to students admitted to Year 1 in 2015

Objectives:
The Minor in Food and Nutritional Science aims to provide a comprehensive education in food, nutrition and related sociological and technological topics, enabling graduates to develop their interest in food and nutrition and have a wide range of employment and progression options.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: demonstrate broad knowledge in the field of food and nutritional science (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 2: recognize and describe the health risks associated with food and specific nutrients, and discuss how to prevent these risks (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 3: understand and describe ethical perspectives and practice in food product development, food safety and public health nutrition (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

PLO 4: synthesize and summarize information from a wide range of sources and draw reasoned conclusions with particular reference to food and nutritional sciences and related global and commercial issues (by means of coursework, tutorial classes and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Food & Nutritional Science

Required courses (36 credits)

1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Marine Biology
Offered to students admitted to Year 1 in 2021

Objectives:
The field of marine biology has become increasingly popular as interest in and awareness of our marine environment grows. Hong Kong already has strong cultural and historical links with the sea as well as a strong economic and societal interest in natural marine resources. This Minor aims to introduce students to the field of marine biology from species, habitat and ecosystem levels, ranging from the deep ocean to intertidal environments, and from both theoretical and practical perspectives. Material will be global and include organisms and their physical, behavioral and physiological adaptations to the marine environment, as well as techniques for marine study. Major marine issues will be covered including benefits derived from the marine environment and possible implications of climate change for marine systems. Particularly relevant examples from Hong Kong and the Southeast Asia region will be highlighted. This minor will provide students from diverse backgrounds (e.g., business, engineering and social science) an excellent opportunity to enter into a career or research in marine environment-related fields such as coastal ecosystem management, fisheries, marine environmental protection, marine resource management, etc.

Learning Outcomes:
By the end of this programme, students should be able to:
1. PLO 1: appreciate the requirements and constraints to life in different marine environments (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
2. PLO 2: gain a comprehensive foundation for pursuing marine-orientated studies (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
3. PLO 3: have a general insight into an ecosystem that covers two-thirds of the planet and supports the only remaining natural resource harvested on a large scale (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
4. PLO 4: understand the major marine issues both locally and globally (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
5. PLO 5: appreciate the possible implications of climate change on marine systems (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:
NIL

Required courses (36 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - BIOL1309 Evolutionary diversity (6)
   - ENV51301 Environmental life science (6)
   - BIOL2306 Ecology and evolution (6)

2. Advanced level courses (24 credits)
   Disciplinary Core Courses (12 credits)
   - BIOL3301 Marine biology (6)
   - ENV53313 Environmental oceanography (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - BIOL3303 Conservation biology (6)
   - BIOL3305 Tropical and temperate marine ecology field course (6)
   - BIOL3318 Experimental intertidal ecology (6)
   - BIOL3322 Marine invertebrate zoology (6)
   - BIOL3328 Nearshore marine and estuarine ecology (6)
   - BIOL4301 Fish and fisheries (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. <th>Minor Title</th>
<th>Minor in Marine Biology</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offered to students admitted to Year 1 in</td>
<td>2013</td>
</tr>
</tbody>
</table>

**Objectives:**
The field of marine biology has become increasingly popular as interest in and awareness of our marine environment grows. Hong Kong already has strong cultural and historical links with the sea as well as a strong economic and societal interest in natural marine resources. This Minor aims to introduce students to the field of marine biology from species, habitat and ecosystem levels, ranging from the deep ocean to intertidal environments, and from both theoretical and practical perspectives. Material will be global and include organisms and their physical, behavioral and physiological adaptations to the marine environment, as well as techniques for marine study. Major marine issues will be covered including benefits derived from the marine environment and possible implications of climate change for marine systems. Particularly relevant examples from Hong Kong and the Southeast Asia region will be highlighted. This minor will provide students from diverse backgrounds (e.g. business, engineering and social science) an excellent opportunity to enter into a career or research in marine environment-related fields such as coastal ecosystem management, fisheries, marine environmental protection, marine resource management, etc.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1**: appreciate the requirements and constraints to life in different marine environments (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
- **PLO 2**: gain a comprehensive foundation for pursuing marine-orientated studies (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
- **PLO 3**: have a general insight into an ecosystem that covers two-thirds of the planet and supports the only remaining natural resource harvested on a large scale (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
- **PLO 4**: understand the major marine issues both locally and globally (by means of coursework, laboratory-based, and tutorial classes and project-based learning in the curriculum)
- **PLO 5**: appreciate the possible implications of climate change on marine systems (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

**Impermissible Combinations:**
NIL

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**
   - Disciplinary Electives (12 credits)
     - At least 12 credits selected from the following courses:
       - BIOL1309 Evolutionary diversity (6)
       - ENVS1301 Environmental life science (6)
       - BIOL2306 Ecology and evolution (6)

2. **Advanced level courses (24 credits)**
   - Disciplinary Core Courses (12 credits)
     - BIOL3301 Marine biology (6)
     - ENVS3313 Environmental oceanography (6)
   - Disciplinary Electives (12 credits)
     - At least 12 credits selected from the following courses:
       - BIOL3303 Conservation biology (6)
       - BIOL3305 Tropical and temperate marine ecology field course (6)
       - BIOL3318 Experimental intertidal ecology (6)
       - BIOL3320 The biology of marine mammals (6)
       - BIOL3322 Marine invertebrate zoology (6)
       - BIOL3328 Nearshore marine and estuarine ecology (6)
       - BIOL4301 Fish and fisheries (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled.
Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor in Marine Biology**

**Offered to students admitted to Year 1 in 2012**

**Objectives:**
The field of marine biology has become increasingly popular as interest in and awareness of our marine environment grows. Hong Kong already has strong cultural and historical links with the sea as well as a strong economic and societal interest in natural marine resources. This Minor aims to introduce students to the field of marine biology from species, habitat and ecosystem levels, ranging from the deep ocean to intertidal environments, and from both theoretical and practical perspectives. Material will be global and include organisms and their physical, behavioral and physiological adaptations to the marine environment, as well as techniques for marine study. Major marine issues will be covered including benefits derived from the marine environment and possible implications of climate change for marine systems. - **PLO 5:** appreciate the possible implications of climate change on marine systems (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

**Impermissible Combinations:**
NIL

### Required courses (36 credits)

1. **Introductory level courses (12 credits)**
2. **Disciplinary Electives (12 credits)**
   - At least 12 credits selected from the following courses:
     - BIOL1309 Evolutionary diversity (6)
     - ENV51301 Environmental life science (6)
     - BIOL2306 Ecology and evolution (6)
3. **Advanced level courses (24 credits)**
4. **Disciplinary Core Courses (12 credits)**
   - BIOL3301 Marine biology (6)
   - ENV53313 Environmental oceanography (6)
5. **Disciplinary Electives (12 credits)**
   - At least 12 credits selected from the following courses:
     - BIOL3303 Conservation biology (6)
     - BIOL3305 Tropical and temperate marine ecology field course (6)
     - BIOL3318 Experimental intertidal ecology (6)
     - BIOL3320 The biology of marine mammals (6)
     - BIOL3322 Marine invertebrate zoology (6)
     - BIOL3328 Nearshore marine and estuarine ecology (6)
     - BIOL4301 Fish and fisheries (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Mathematics
Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
PLO 3: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Minor in Computational & Financial Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (36 credits)

1. Introductory level courses (18 credits) (note 4)
Disciplinary Core Course (6 credits)
MATH1013 University mathematics II (6)

Disciplinary Electives (12 credits)
Select either List A or List B:
List A
MATH2101 Linear algebra I (6)
MATH2211 Multivariable calculus (6)
List B
MATH2012 Fundamental concepts of mathematics (6)
MATH2014 Multivariable calculus and linear algebra (6)

2. Advanced level courses (18 credits)
Disciplinary Electives (18 credits)
At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:
List A
MATH3001 Development of mathematical ideas (6)
MATH3002 Mathematics seminar (6)
MATH3301 Algebra I (6)
MATH3303 Matrix theory and its applications (6)
MATH3304 Introduction to number theory (6)
MATH3401 Analysis I (6)
MATH3403 Functions of a complex variable (6)
MATH3405 Differential equations (6)
MATH3408 Computational methods and differential equations with applications (6)
MATH3541 Introduction to topology (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)
MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)
MATH3943 Network models in operations research (6)
MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)
MATH4406 Introduction to partial differential equations (6)
MATH4501 Geometry (6)
MATH4511 Introduction to differentiable manifolds (6)
MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)
MATH4907 Numerical methods for financial calculus (6)
MATH4710 Intermediate complex analysis (6)
MATH4720 Topics in geometry (6)
MATH4722 Complex manifolds (6)
MATH4727 Topics in financial mathematics (6)
### Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.

4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

### Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Minor Title: Minor in Mathematics

Offered to students admitted to Year 1 in 2019

Objectives:
The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Minor in Computational & Financial Mathematics
Minor in Operations Research & Mathematical Programming

Required courses (36 credits)
1. Introductory level courses (18 credits) (note 4)
Disciplinary Core Course (6 credits)
MATH1013 University mathematics II (6)

Disciplinary Electives (12 credits)
Select either List A or List B:
List A
MATH2101 Linear algebra I (6)
MATH2211 Multivariable calculus (6)
List B
MATH2012 Fundamental concepts of mathematics (6)
MATH2014 Multivariable calculus and linear algebra (6)

2. Advanced level courses (18 credits)
Disciplinary Electives (18 credits)
At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:
List A
MATH3001 Development of mathematical ideas (6)
MATH3002 Mathematics seminar (6)
MATH3301 Algebra I (6)
MATH3303 Matrix theory and its applications (6)
MATH3304 Introduction to number theory (6)
MATH3401 Analysis I (6)
MATH3403 Functions of a complex variable (6)
MATH3405 Differential equations (6)
MATH3408 Computational methods and differential equations with applications (6)
MATH3541 Introduction to topology (6)
MATH3600 Discrete mathematics (6)
MATH3601 Numerical analysis (6)
MATH3603 Probability theory (6)
MATH3901 Operations research I (6)
MATH3904 Introduction to optimization (6)
MATH3905 Queueing theory and simulation (6)
MATH3906 Financial calculus (6)
MATH3911 Game theory and strategy (6)
MATH3943 Network models in operations research (6)
MATH4302 Algebra II (6)
MATH4402 Analysis II (6)
MATH4404 Functional analysis (6)
MATH4406 Introduction to partial differential equations (6)
MATH4501 Geometry (6)
MATH4511 Introduction to differentiable manifolds (6)
MATH4602 Scientific computing (6)
MATH4902 Operations research II (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.

4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at [https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements](https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements).

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Mathematics
Offered to students admitted to Year 1 in 2017

Objectives:
The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2**: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3**: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
- Major in Mathematics
- Major in Mathematics (Intensive)
- Major in Mathematics/Physics
- Minor in Computational & Financial Mathematics
- Minor in Operations Research & Mathematical Programming

Required courses (36 credits)

### 1. Introductory level courses (18 credits) (note 4)

**Disciplinary Core Course (6 credits)**  
MATH1013 University mathematics II (6)

**Disciplinary Electives (12 credits)**  
Select either List A or List B:

**List A**
- MATH2101 Linear algebra I (6)
- MATH2211 Multivariable calculus (6)

**List B**
- MATH2012 Fundamental concepts of mathematics (6)
- MATH2014 Multivariable calculus and linear algebra (6)

### 2. Advanced level courses (18 credits)

**Disciplinary Electives (18 credits)**

At least 18 credits of advanced level Mathematics courses (MATH3XXX or MATH4XXX or MATH7XXX level), subject to pre-requisite requirements. The current course list includes courses in List A:

**List A**
- MATH3001 Development of mathematical ideas (6)
- MATH3002 Mathematics seminar (6)
- MATH3003 Algebra I (6)
- MATH3004 Matrix theory and its applications (6)
- MATH3005 Introduction to number theory (6)
- MATH3006 Analysis I (6)
- MATH3007 Functions of a complex variable (6)
- MATH3008 Differential equations (6)
- MATH3009 Computational methods and differential equations with applications (6)
- MATH3011 Introduction to topology (6)
- MATH3012 Discrete mathematics (6)
- MATH3013 Numerical analysis (6)
- MATH3014 Probability theory (6)
- MATH3015 Operations research I (6)
- MATH3016 Introduction to optimization (6)
- MATH3017 Queueing theory and simulation (6)
- MATH3018 Financial calculus (6)
- MATH3019 Game theory and strategy (6)
- MATH3020 Network models in operations research (6)
- MATH3021 Algebra II (6)
- MATH3022 Analysis II (6)
- MATH3023 Functional analysis (6)
- MATH3024 Introduction to partial differential equations (6)
- MATH3025 Geometry (6)
- MATH3026 Introduction to differentiable manifolds (6)
- MATH3027 Scientific computing (6)
- MATH3028 Operations research II (6)
- MATH3029 Numerical methods for financial calculus (6)
- MATH3030 Intermediate complex analysis (6)
- MATH3031 Topics in geometry (6)
- MATH3032 Complex manifolds (6)
MATH7217  Topics in financial mathematics (6)
MATH7219  Topics in applied functional analysis (6)
MATH7224  Topics in advanced probability theory (6)
MATH7501  Topics in algebra (6)
MATH7502  Topics in applied discrete mathematics (6)
MATH7503  Topics in mathematical programming and optimization (6)
MATH7504  Geometric topology (6)
MATH7505  Real analysis (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.

4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Mathematics

Offered to students admitted to Year 1 in 2016

Objectives:
The Minor in Mathematics provides students with fundamental knowledge in the subject. It is specifically designed for students who are interested in the subject and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving, and capability to tackle novel situations and ill-defined problems.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: understand and describe fundamental concepts of mathematics (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics. (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Major in Mathematics/Physics
Minor in Computational & Financial Mathematics
Minor in Operations Research & Mathematical Programming

   MATH3408 Computational methods and differential equations with applications (6)
   MATH3541 Introduction to topology (6)
   MATH3600 Discrete mathematics (6)
   MATH3601 Numerical analysis (6)
   MATH3603 Probability theory (6)
   MATH3901 Operations research I (6)
   MATH3904 Introduction to optimization (6)
   MATH3905 Queueing theory and simulation (6)
   MATH3906 Financial calculus (6)
   MATH3911 Game theory and strategy (6)
   MATH3943 Network models in operations research (6)
   MATH4301 Algebra II (6)
   MATH4402 Analysis II (6)
   MATH4404 Functional analysis (6)
   MATH4406 Introduction to partial differential equations (6)
   MATH4501 Geometry (6)
   MATH4511 Introduction to differentiable manifolds (6)
   MATH4602 Scientific computing (6)
   MATH4902 Operations research II (6)
   MATH4907 Numerical methods for financial calculus (6)
   MATH4908 Intermediate complex analysis (6)
   MATH4909 Topics in geometry (6)
   MATH4910 Complex manifolds (6)
   MATH4911 Topics in financial mathematics (6)
   MATH4912 Topics in applied functional analysis (6)
   MATH4922 Topics in advanced probability theory (6)
   MATH4950 Topics in algebra (6)
   MATH4951 Topics in applied discrete mathematics (6)
   MATH4953 Topics in mathematical programming and optimization (6)
   MATH4954 Geometric topology (6)
   MATH4955 Real analysis (6)
Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this major. Students who do not fulfill this requirement are advised to take MATH1011 University mathematics I.

3. If students would like to take more courses in analysis such as MATH3401 (Analysis I), they are advised to take the introductory course MATH2241 Introduction to mathematical analysis first.

4. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Molecular Biology & Biotechnology

Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Molecular Biology & Biotechnology aims to provide students with a fundamental understanding of molecular biology and biotechnology which are relevant to many other disciplines of study and our daily life. Students will learn the principles underlying current molecular and cell biology advances, and biotechnological applications and will become literate in biotechnology business and advancements.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: develop and apply basic technical and knowledge-based skills in molecular and cell biology, and biotechnology (by means of coursework and laboratory-based learning in the curriculum)

PLO 2: develop and apply skills of critical inquiry, teamwork, and effective communication (by means of group projects, tutorial classes and presentation opportunities in the curriculum)

PLO 3: understand and describe the issues and concerns fundamental to the field (by means of coursework and laboratory-based learning in the curriculum)

Impermissible Combinations:
Major in Molecular Biology & Biotechnology
Major in Molecular Biology & Biotechnology (Intensive)

Required courses (36 credits)

1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   - BIOL1110 From molecules to cells (6)
   - BIOL1309 Evolutionary diversity (6)
   - BIOC2600 Basic biochemistry (6)
   - BIOL2102 Biostatistics (6)
   - BIOL2103 Biological sciences laboratory course (6)
   - BIOL2220 Principles of biochemistry (6)
   - BIOL2306 Ecology and evolution (6)
   - BIOL2306 May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both.
   - BIOL2220 and BIOC2600 are mutually exclusive.

2. Advanced level courses (24 credits)
   Disciplinary Core Courses (6 credits)
   - BIOL3401 Molecular biology (6)
   Disciplinary Electives (18 credits)
   At least 18 credits selected from the following courses:
   - BIOL3402 Cell biology and cell technology (6)
   - BIOL3403 Immunology (6)
   - BIOL3409 Business aspects of biotechnology (6)
   - BIOL3508 Microbial physiology and biotechnology (6)
   - BIOL4411 Plant and food biotechnology (6)
   - BIOL4415 Healthcare biotechnology (6)
   - BIOL4416 Stem cells and regenerative biology (6)
   - BIOL4417 'Omics' and systems biology (6)
   - ENVG4110 Environmental remediation (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Molecular Biology & Biotechnology

Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Molecular Biology & Biotechnology aims to provide students with a fundamental understanding of molecular biology and biotechnology which are relevant to many other disciplines of study and our daily life. Students will learn the principles underlying current molecular and cell biology advances, and biotechnological applications and will become literate in biotechnology business and advancements.

Learning Outcomes:
By the end of this programme, students should be able to:

May take either BIOL3508 or BIOL4402 to fulfill this 18 credits requirement, but not both. BIOL3508 and BIOL4402 are mutually exclusive.  

Notes:  
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.  
Remarks:  
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
### Objectives:
The Minor in Molecular Biology & Biotechnology aims to provide students with a fundamental understanding of molecular biology and biotechnology which are relevant to many other disciplines of study and our daily life. Students will learn the principles underlying current molecular and cell biology advances, and biotechnological applications and will become literate in biotechnology business and advancements.

### Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: develop and apply basic technical and knowledge-based skills in molecular and cell biology, and biotechnology (by means of coursework and laboratory-based learning in the curriculum)
- **PLO 2**: develop and apply skills of critical inquiry, teamwork, and effective communication (by means of group projects, tutorial classes and presentation opportunities in the curriculum)
- **PLO 3**: understand and describe the issues and concerns fundamental to the field (by means of coursework and laboratory-based learning in the curriculum)

### Impermissible Combinations:
- Major in Molecular Biology & Biotechnology
- Major in Molecular Biology & Biotechnology (Intensive)

### Required courses (36 credits)

#### 1. Introductory level courses (12 credits)

**Disciplinary Electives (12 credits)**

### Required courses (36 credits)

#### 1. Introductory level courses (12 credits)

**Disciplinary Electives (12 credits)**  
At least 12 credits selected from the following courses:  
- BIOL1110 From molecules to cells (6)  
- BIOL1309 Evolutionary diversity (6)  
- BIOC2600 Basic biochemistry (6)  
- BIOL2102 Biostatistics (6)  
- BIOL2103 Biological sciences laboratory course (6)  
- BIOL2220 Principles of biochemistry (6)  
- BIOL2306 Ecology and evolution (6)  

May take either BIOL1309 or BIOL2306 to fulfill this 12 credits requirement, but not both. BIOL2220 and BIOC2600 are mutually exclusive.  

#### 2. Advanced level courses (24 credits)

**Disciplinary Core Courses (6 credits)**  
- BIOL3401 Molecular biology (6)  

**Disciplinary Electives (18 credits)**  
At least 18 credits selected from the following courses:  
- BIOL3402 Cell biology and cell technology (6)  
- BIOL3403 Immunology (6)  
- BIOL3409 Business aspects of biotechnology (6)  
- BIOL3508 Microbial physiology and biotechnology (6)  
- BIOL4401 Medical microbiology and applied immunology (6)  
- BIOL4402 Microbial biotechnology (6)  
- BIOL4411 Plant and food biotechnology (6)  
- BIOL4415 Healthcare biotechnology (6)  
- BIOL4416 Stem cells and regenerative biology (6)  
- BIOL4417 'Omics' and systems biology (6)  
- ENV54110 Environmental remediation (6)  

May take either BIOL3508 or BIOL4402 to fulfill this 18 credits requirement, but not both. BIOL3508 and BIOL4402 are mutually exclusive.  

**Notes:**  
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. **Remarks:**  
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**
Minor in Operations Research & Mathematical Programming

**Offered to students**
admitted to Year 1 in 2021

**Objectives:**
The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

**Learning Outcomes:**
By the end of this programme, students should be able to:

1. **PLO 1:** describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)
2. **PLO 2:** apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
3. **PLO 3:** communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

**Impermissible Combinations:**
Major in Mathematics
Major in Mathematics (Intensive)
Minor in Mathematics
Minor in Computational & Financial Mathematics

**Required courses (42 credits)**

1. **Introductory level courses (18 credits)** (note 3)
   - **Disciplinary Core Course (6 credits)**
     - MATH1013 University mathematics II (6)
   - **Disciplinary Electives (12 credits)**
     - Select either List A or List B:
       - **List A**
         - MATH2101 Linear algebra I (6)
         - MATH2211 Multivariable calculus (6)
       - **List B**
         - MATH2012 Fundamental concepts of mathematics (6)
         - MATH2014 Multivariable calculus and linear algebra (6)

2. **Advanced level courses (24 credits)**
   - **Disciplinary Core Courses (12 credits)**
     - MATH3901 Operations research I (6)
     - MATH3904 Introduction to optimization (6)
   - **Disciplinary Electives (12 credits)**
     - At least 12 credits selected from the following courses:
       - MATH3405 Differential equations (6)
       - MATH3600 Discrete mathematics (6)
       - MATH3905 Queueing theory and simulation (6)
       - MATH3906 Financial calculus (6)
       - MATH3911 Game theory and strategy (6)
       - MATH3943 Network models in operations research (6)
       - MATH4902 Operations research II (6)
       - MATH4907 Numerical methods for financial calculus (6)
       - MATH7502 Topics in applied discrete mathematics (6)
       - MATH7503 Topics in mathematical programming and optimization (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this minor. Students who do not fulfill this requirement are required to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics
Major in Mathematics (Intensive)
Major in Mathematics/Physics
Minor in Mathematics
Minor in Computational & Financial Mathematics

Required courses (42 credits)
1. Introductory level courses (18 credits) (note 3)
   Disciplinary Core Course (6 credits)
   MATH1013: University mathematics II (6)
   Disciplinary Electives (12 credits)
   Select either List A or List B:
   List A
   MATH2101: Linear algebra I (6)
   MATH2211: Multivariable calculus (6)
   List B
   MATH2012: Fundamental concepts of mathematics (6)
   MATH2014: Multivariable calculus and linear algebra (6)

2. Advanced level courses (24 credits)
   Disciplinary Core Courses (12 credits)
   MATH3901: Operations research I (6)
   MATH3904: Introduction to optimization (6)
   Disciplinary Electives (12 credits)
   At least 12 credits selected from the following courses:
   MATH3405: Differential equations (6)
   MATH3600: Discrete mathematics (6)
   MATH3905: Queueing theory and simulation (6)
   MATH3906: Financial calculus (6)
   MATH3911: Game theory and strategy (6)
   MATH3943: Network models in operations research (6)
   MATH4902: Operations research II (6)
   MATH4907: Numerical methods for financial calculus (6)
   MATH7502: Topics in applied discrete mathematics (6)
   MATH7503: Topics in mathematical programming and optimization (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this minor. Students who do not fulfill this requirement are required to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
**Minor Title**  
Minor in Operations Research & Mathematical Programming

**Offered to students admitted to Year 1 in**  
2016

**Objectives:**  
The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

**Learning Outcomes:**  
By the end of this programme, students should be able to:

- **PLO 1:** describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2:** apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3:** communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

**Impermissible Combinations:**  
Major in Mathematics  
Major in Mathematics (Intensive)  
Major in Mathematics/Physics  
Minor in Mathematics  
Minor in Computational & Financial Mathematics

**Required courses (42 credits)**

1. **Introductory level courses (18 credits) (note 3)**
   
   **Disciplinary Core Course (6 credits)**  
   MATH1013 University mathematics II (6)

2. **Disciplinary Electives (12 credits)**
   
   Select either List A or List B:
   
   **List A**
   - MATH2101 Linear algebra I (6)
   - MATH2211 Multivariable calculus (6)

   **List B**
   - MATH2012 Fundamental concepts of mathematics (6)
   - MATH2014 Multivariable calculus and linear algebra (6)

2. **Advanced level courses (24 credits)**

   **Disciplinary Core Courses (12 credits)**
   - MATH3901 Operations research I (6)
   - MATH3904 Introduction to optimization (6)

   **Disciplinary Electives (12 credits)**
   At least 12 credits selected from the following courses:
   - MATH3405 Differential equations (6)
   - MATH3600 Discrete mathematics (6)
   - MATH3905 Queueing theory and simulation (6)
   - MATH3906 Financial calculus (6)
   - MATH3911 Game theory and strategy (6)
   - MATH3943 Network models in operations research (6)
   - MATH4902 Operations research II (6)
   - MATH4907 Numerical methods for financial calculus (6)
   - MATH7502 Topics in applied discrete mathematics (6)
   - MATH7503 Topics in mathematical programming and optimization (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 2 or above in HKDSE Extended Module 1 or 2 of Mathematics or equivalent to take this minor. Students who do not fulfill this requirement are required to take MATH1011 University mathematics I.

3. Students taking the Mathematics related major/minor should check the exemption and replacement arrangement for the introductory level Disciplinary Core Mathematics courses at https://www.scifac.hku.hk/current/ug/academic/overlapping-course-requirements.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Operations Research & Mathematical Programming  
Offered to students admitted to Year 1 in 2015

Objectives:
The Minor in Operations Research & Mathematical Programming provides students with fundamental knowledge in optimization, computational algorithm, mathematical modeling, and decision making. It is specifically designed for students who are interested in the above subjects and those whose majors require sophisticated mathematical skills. It aims to nurture quantitative reasoning, logical, analytical and critical thinking, innovative imagination, meticulous care to work, ability to conceptualize, skills for problem-solving and skills to tackle novel situations and ill-defined problems. It is particularly useful for solving mathematical problems arising from decision sciences and logistic industry.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: describe and demonstrate understanding of fundamental concepts in operations research & mathematical programming (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply mathematical methods and analysis to real life problems (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: communicate and discuss scientific issues related to mathematics (by means of coursework, tutorial classes and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics  
Major in Mathematics/Physics  
Minor in Mathematics  
Minor in Computational & Financial Mathematics

Required courses (42 credits)

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Physics
Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:
By the end of this programme, students should be able to:
PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Physics
Major in Physics (Intensive)

Required courses (42 credits)
1. Introductory level courses (24 credits)
Disciplinary Core Courses (6 credits)
PHYS1250 Fundamental physics (6)

Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
PHYS1150 Problem solving in physics (6)
PHYS2055 Introductory relativity (6)
PHYS2150 Methods in physics I (6)
PHYS2155 Methods in physics II (6)
PHYS2160 Introductory computational physics (6)
PHYS2250 Introductory mechanics (6)
PHYS2255 Introductory electricity and magnetism (6)
PHYS2261 Introductory heat and thermodynamics (6)
PHYS2265 Introductory quantum physics (6)

2. Advanced level courses (18 credits)
Disciplinary Electives (18 credits)
At least 18 credits selected from the following courses:
List A
PHYS3150 Theoretical physics (6)
PHYS3151 Machine learning in physics (6)
PHYS3351 Quantum mechanics (6)
PHYS3450 Electromagnetism (6)
PHYS3550 Statistical mechanics & thermodynamics (6)
PHYS3650 Observational astronomy (6)
PHYS3653 Astrophysics (6)
PHYS3660 Astronomy laboratory (6)
PHYS3750 Laser and spectroscopy (6)
PHYS3760 Physics laboratory (6)
PHYS3850 Physical Optics (6)
PHYS3851 Atomic and nuclear physics (6)
PHYS4150 Computational physics (6)
PHYS4151 Data analysis and modeling in physics (6)
PHYS4351 Advanced quantum mechanics (6)
PHYS4450 Advanced electromagnetism (6)
PHYS4550 Advanced statistical mechanics (6)
PHYS4551 Solid state physics (6)
PHYS4650 Stellar physics (6)
PHYS4652 Planetary science (6)
PHYS4653 Cosmology (6)
PHYS4654 General relativity (6)
PHYS4655 Interstellar medium (6)
PHYS4656 Advanced astrophysics (6)
PHYS4850 Particle physics (6)
PHYS7350 Graduate classical mechanics (6)
PHYS7351 Graduate quantum mechanics (6)
PHYS7450 Graduate electromagnetism (6)
PHYS7550 Graduate statistical mechanics (6)
PHYS7750 Nanophysics (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course
("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Physics
Offered to students admitted to Year 1 in 2020

Objectives:
The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. **Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course
("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title Minor in Physics
Offered to students admitted to Year 1 in 2017

Objectives:
The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)

PLO 2: analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)

PLO 3: communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

Impermissible Combinations:
Major in Mathematics/Physics
Major in Physics
Major in Physics (Intensive)

Required courses (42 credits)

1. Introductory level courses (18 credits)
   Disciplinary Core Courses (18 credits)
   PHYS1250 Fundamental physics (6)
   PHYS2250 Introductory mechanics (6)
   PHYS2265 Introductory quantum physics (6)  [previous title: Modern physics (6)]

2. Advanced level courses (24 credits)
   Disciplinary Electives (24 credits)
   At least 24 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List A:
   List A
   PHYS3150 Theoretical physics (6)
   PHYS3151 Machine learning in physics (6)
   PHYS3350 Classical mechanics (6)
   PHYS3351 Quantum mechanics (6)
   PHYS3450 Electromagnetism (6)
   PHYS3550 Statistical mechanics & thermodynamics (6)
   PHYS3551 Introductory solid state physics (6)
   PHYS3650 Observational astronomy (6)

**Notes:**  
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For
details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students must have level 3 or above in HKDSE Physics or equivalent to take this minor. Students who do not fulfill this requirement are advised to take PHYS1240 Physics by inquiry.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title | Minor in Physics  
Offered to students | 2013  
admitted to Year 1 in  

**Objectives:**
The Minor in Physics is intended to provide interested students with a fundamental outlook on the subject. Students would acquire a taste of the subject through a large selection of elective courses which provides them to pursue a wide range of topics from the very small scale of nanomaterials to the large scale of astrophysics.

**Learning Outcomes:**
By the end of this programme, students should be able to:

1. Identify and describe physical systems with fundamental knowledge in physics (by means of coursework and tutorial classes in the curriculum)
2. Analyze some physics problems qualitatively and quantitatively (by means of coursework, tutorial classes and laboratory works in the curriculum)
3. Communicate and collaborate with people effectively in scientific issues (by means of group projects, tutorial sessions and presentation opportunities in the curriculum)

**Impermissible Combinations:**
Major in Mathematics/Physics  
Major in Physics  

**Required courses (42 credits)**

1. **Introductory level courses (18 credits)**

   **Disciplinary Core Courses (18 credits)**
   - PHYS1250 Fundamental physics (6)
   - PHYS2250 Introductory mechanics (6)
   - PHYS2265 Introductory quantum physics (6) [previous title: Modern physics (6)]

2. **Advanced level courses (24 credits)**

   **Disciplinary Electives (24 credits)**
   - At least 24 credits of advanced level Physics courses (PHYS3XXX or PHYS4XXX or PHYS7XXX level), subject to prerequisite requirements. The current course list includes courses in List A:

   **List A**
   - PHYS3150 Theoretical physics (6)
   - PHYS3350 Classical mechanics (6)
   - PHYS3351 Quantum mechanics (6)
   - PHYS3450 Electromagnetism (6)
   - PHYS3550 Statistical mechanics & thermodynamics (6)
   - PHYS3551 Introductory solid state physics (6)
   - PHYS3650 Observational astronomy (6)
   - PHYS3651 The physical universe (6)
   - PHYS3652 Principles of astronomy (6)
   - PHYS3750 Laser and spectroscopy (6)
   - PHYS3751 Physics of nanomaterials (6)
   - PHYS3850 Physical Optics (6) [previous title: Waves and optics (6)]
   - PHYS3851 Atomic and nuclear physics (6)
   - PHYS3999 Directed studies in physics (6)
   - PHYS4150 Computational physics (6)
   - PHYS4151 Data analysis and modeling in physics (6)
   - PHYS4350 Advanced classical mechanics (6)
   - PHYS4351 Advanced quantum mechanics (6)
   - PHYS4450 Advanced electromagnetism (6)
   - PHYS4550 Advanced statistical mechanics (6)
   - PHYS4551 Solid state physics (6)
   - PHYS4650 Stellar physics (6)
   - PHYS4651 Selected topics in astrophysics (6)
   - PHYS4652 Planetary science (6)
   - PHYS4653 Cosmology (6)
   - PHYS4654 General relativity (6)
   - PHYS4655 Interstellar medium (6)
   - PHYS4750 Experimental physics (6)
   - PHYS4850 Particle physics (6)
   - PHYS4966 Physics internship (6)
   - PHYS4999 Physics project (12)
   - PHYS7350 Graduate classical mechanics (6)
   - PHYS7351 Graduate quantum mechanics (6)
   - PHYS7450 Graduate electromagnetism (6)
   - PHYS7550 Graduate statistical mechanics (6)
   - PHYS7551 Graduate solid state physics (6)
   - PHYS7650 Stellar atmospheres (6)
   - PHYS7750 Nanophysics (6)

### Minor in Plant Science

**Offered to students admitted to Year 1 in 2021**

**Objectives:**
The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

**Learning Outcomes:**
By the end of this programme, students should be able to:

- **PLO 1:** appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)
- **PLO 2:** understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)
- **PLO 3:** acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

**Impermissible Combinations:**
NIL

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**

   **Disciplinary Electives (12 credits)**
   - At least 12 credits selected from the following courses:
     - BIOL1110 From molecules to cells (6)
     - BIOL1309 Evolutionary diversity (6)
     - BIOL2103 Biological sciences laboratory course (6)
     - BIOL2220 Principles of biochemistry (6)

2. **Advanced level courses (24 credits)**

   **Disciplinary Electives (24 credits)**
   - At least 24 credits selected from the following courses:
     - BIOL3107 Plant physiology (6)
     - BIOL3210 Grain production and utilization (6)
     - BIOL3314 Plant structure and evolution (6)
     - BIOL3408 Genetics (6)
     - BIOL4209 Functional foods (6)
     - BIOL4411 Plant and food biotechnology (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
## Minor in Plant Science

**Offered to students admitted to Year 1 in 2020**

### Objectives:

The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

### Learning Outcomes:

By the end of this programme, students should be able to:

1. **PLO 1**: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)
2. **PLO 2**: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)
3. **PLO 3**: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

### Impermissible Combinations:

NIL

### Required courses (36 credits)

1. **Introductory level courses (12 credits)**

   **Disciplinary Electives (12 credits)**

   - At least 12 credits selected from the following courses:
     - BIOL1110 From molecules to cells (6)
     - BIOL1309 Evolutionary diversity (6)
     - BIOL2103 Biological sciences laboratory course (6)
     - BIOL2220 Principles of biochemistry (6)

2. **Advanced level courses (24 credits)**

   **Disciplinary Electives (24 credits)**

   - At least 24 credits selected from the following courses:
     - BIOL3107 Plant physiology (6)
     - BIOL3210 Grain production and utilization (6)
     - BIOL3314 Plant structure and evolution (6)
     - BIOL3408 Genetics (6)
     - BIOL4209 Functional foods (6)
     - BIOL4411 Plant and food biotechnology (6)

### Notes:

1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

### Remarks:

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

       - BIOL3314 Plant structure and evolution (6)
       - BIOL3408 Genetics (6)
       - BIOL4209 Functional foods (6)
       - BIOL4411 Plant and food biotechnology (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Plant Science

Offered to students admitted to Year 1 in 2014

Objectives:
The Minor in Plant Science is offered to students who are fascinated by the diversity and beauty of plants and the molecular mechanisms underlying their growth and development. Knowledge in plant science is essential for tackling daily-life issues such as the production of high-quality food, utilization of plant products as biofuels and extraction of beneficial phytochemicals. Recent advances in plant genetic engineering have also allowed scientists to manipulate plant growth and development for nutritional and environmental benefits. This minor aims to provide broad training in the biology of plants from the molecular to the organism level as well as the agricultural and nutritional applications of plants and plant-derived products.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: appreciate plants as an important part in our culture and their functions and roles in food, nutrition, and environment (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

PLO 2: understand and describe the fundamental concepts of plant evolution, anatomy, biochemistry, physiology and biotechnology (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

PLO 3: acquire necessary academic and practical skills for careers in government agencies, secondary school teaching and postgraduate research in different disciplines of plant science (by means of coursework, laboratory-based, and tutorial class and project-based learning in the curriculum)

Impermissible Combinations:
NIL

Required courses (36 credits)
1. Introductory level courses (12 credits)
Disciplinary Electives (12 credits)
At least 12 credits selected from the following courses:
- BIOL1110 From molecules to cells (6)
- BIOL1309 Evolutionary diversity (6)
- BIOL2103 Biological sciences laboratory course (6)
- BIOL2220 Principles of biochemistry (6)

2. Advanced level courses (24 credits)
Disciplinary Electives (24 credits)
At least 24 credits selected from the following courses:
- BIOL3107 Plant physiology (6)
- BIOL3210 Grain production and utilization (6)
- BIOL3314 Plant structure and evolution (6)
- BIOL3408 Genetics (6)
- BIOL4209 Functional foods (6)
- BIOL4411 Plant and food biotechnology (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course (“disciplinary core”) in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to “Students taking double Majors, Major-Minor or double Minors with overlapping course requirements” in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

**Remarks:**

Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Risk Management
Offered to students admitted to Year 1 in 2021

Objectives:
The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1:** acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2:** apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3:** acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Risk Management
Major in Statistics
Minor in Statistics

By the end of this programme, students should be able to:

PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
- Major in Computing and Data Analytics
- Major in Risk Management
- Major in Statistics
- Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)
At least 12 credits from List A and List B, with at least 6 credits from List B:

List A
- STAT1601 Elementary statistical methods (6)
- STAT1602 Business statistics (6)
- STAT1603 Introductory statistics (6)
- STAT2601 Probability and statistics I (6)

List B
- STAT2602 Probability and statistics II (6)
- STAT2603 Data management with SAS (6)
- STAT2604 Introduction to R programming and elementary data analysis (6)

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits)
At least 30 credits selected from the following courses:

- STAT3609 The statistics of investment risk (6)
- STAT3610 Risk management and insurance (6)
- STAT3611 Computer-aided data analysis (6)
- STAT3612 Statistical machine learning (6) [previous title: Data mining (6)]
- STAT3614 Business forecasting (6)
- STAT3615 Practical mathematics for investment (6)
- STAT3618 Derivatives and risk management (6)
- STAT3601 Time-series analysis (6)
- STAT4603 Current topics in risk management (6)
- STAT4606 Risk management and Basel Accords in banking and finance (6)
- STAT4607 Credit risk analysis (6)
- STAT4608 Market risk analysis (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Risk Management
Offered to students admitted to Year 1 in 2014

Objectives:
The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1:** acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2:** apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 3:** acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Risk Management
Major in Statistics
Minor in Statistics

Required courses (42 credits)

1. Introductory level courses (12 credits)

   **Disciplinary Electives (12 credits)**

   At least 12 credits from List A and List B, with at least 6 credits from List B:

   **List A**
   - STAT1601 Elementary statistical methods (6)
   - STAT1602 Business statistics (6)
   - STAT1603 Introductory statistics (6)
   - STAT2601 Probability and statistics I (6)

   **List B**
   - STAT2602 Probability and statistics II (6)
   - STAT2603 Data management with SAS (6)
   - STAT2604 Introduction to R programming and elementary data analysis (6)

2. Advanced level courses (30 credits)

   **Disciplinary Electives (30 credits)**

   At least 30 credits selected from the following courses:

   - STAT3609 The statistics of investment risk (6)
   - STAT3610 Risk management and insurance (6)
   - STAT3611 Computer-aided data analysis (6)
   - STAT3612 Statistical machine learning (6) [previous title: Data mining (6)]
   - STAT3614 Business forecasting (6)
   - STAT3615 Practical mathematics for investment (6)
   - STAT3618 Derivatives and risk management (6)
   - STAT4601 Time-series analysis (6)
   - STAT4603 Current topics in risk management (6)
   - STAT4606 Risk management and Basel Accords in banking and finance (6)
   - STAT4607 Credit risk analysis (6)
   - STAT4608 Market risk analysis (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Risk Management
Offered to students admitted to Year 1 in 2013

Objectives:
The Minor in Risk Management aims to provide interested students with basic concepts of risk management and fundamental skills of employing various statistical techniques for managing risk. The minor curriculum is particularly designed for students from different majors to enhance their interests in Risk Management or to complement their major of study.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: acquire basic understanding and identify the generic risk management issues and techniques (by means of coursework, tutorial classes and project-based learning in the curriculum)
PLO 2: apply elementary methods and models for risk assessment and management (by means of coursework, tutorial classes and project-based learning in the curriculum)
PLO 3: acquire and interpret relevant data and information for risk management (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
- Major in Risk Management
- Major in Statistics
- Minor in Statistics

Required courses (42 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits from List A and List B, with at least 6 credits from List B:

   **List A**

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Science Entrepreneurship

Offered to students admitted to Year 1 in 2021

Objectives:
This Minor aims at broadening the horizon of our undergraduate students with respect to entrepreneurship, so as to arouse their interest in this aspect and better equip them. It is also important for our students to visualize how their training in science (a) is relevant to the real world and (b) can bring about huge insights via critical analysis of the operation of existing enterprises. With the vivid commercial environment and a growing atmosphere for start-ups both locally and globally, this Minor also serves to offer more competitive edge to our students via connecting their academic knowledge with the real world, even though they may not initiate their own start-ups in the short run.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: apprehend the entrepreneurial process and the principles/models relevant to its different key stages (by means of coursework and tutorial classes in the curriculum)
- **PLO 2**: gain insights into how a broad range of disciplines contribute to the success of the entrepreneurial process (by means of coursework and tutorial classes in the curriculum)
- **PLO 3**: evaluate how scientific knowledge can cause impact to the society via entrepreneurship (by means of coursework and tutorial classes in the curriculum)
- **PLO 4**: develop appropriate action plans for transforming ideas into start-up companies (by means of coursework, tutorial classes and training in his/her internship in the curriculum)
- **PLO 5**: effectively collaborate with team members with different expertise and communicate their ideas to a range of audiences during the entrepreneurial process (by means of coursework, tutorial classes and training in his/her internship in the curriculum)

Impermissible Combinations:
NIL

NIL

**Required courses (36 credits)**

1. **Introductory level courses (12 credits)**
   **Disciplinary Core Courses (12 credits)**
   
   (Resource, Management and Basic Entrepreneurship)
   - ENTR2001 Professional and leadership development (6)
   - IIMT1611 Principles of Technology Entrepreneurship (6)

2. **Advanced level courses (24 credits)**
   **Disciplinary Core Courses (24 credits)**
   
   (Creativity and Innovation)
   - ENTR3001 Science-based innovation development (6)
   - ENTR3002 Customer analysis and strategic marketing (6)
   (Practical Experience)
   - ENTR4966 Entrepreneurship internship (6)
   - ENTR4999 Entrepreneurship project (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

2. Students may consider taking the following courses if they wish to pursue a more focused study in topics related to entrepreneurship: BUSI38011 Business Law, BUSI3803 Company Law, STRA3706 China Business Environment.

3. Courses with the prefix ENTR are subjected to minor changes.

4. Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Statistics
Offered to students admitted to Year 1 in 2021

Objectives:
The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)

PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Major in Statistics
Minor in Risk Management

Required courses (42 credits)

1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   \[
   \text{At least 12 credits from List A and List B, with at least 6 credits from List B:}
   \]
   \[
   \begin{align*}
   \text{List A} \\
   \text{STAT1601} & \text{ Elementary statistical methods (6)} \\
   \text{STAT1602} & \text{ Business statistics (6)} \\
   \text{STAT1603} & \text{ Introductory statistics (6)} \\
   \text{STAT2601} & \text{ Probability and statistics I (6)} \\
   \text{List B} \\
   \text{STAT2602} & \text{ Probability and statistics II (6)} \\
   \text{STAT2603} & \text{ Data management with SAS (6)} \\
   \text{STAT2604} & \text{ Introduction to R programming and elementary data analysis (6)} \\
   \text{STAT2605} & \text{ Demographic and socio-economic statistics (6)}
   \end{align*}
   \]

2. Advanced level courses (30 credits)
   Disciplinary Electives (30 credits)
   \[
   \text{At least 30 credits selected from the following courses:}
   \]
   \[
   \begin{align*}
   \text{STAT3600} & \text{ Linear statistical analysis (6)} \\
   \text{STAT3602} & \text{ Statistical inference (6)} \\
   \text{STAT3603} & \text{ Stochastic processes (6)} \\
   \text{STAT3604} & \text{ Design and analysis of experiments (6)} \\
   \text{STAT3605} & \text{ Quality control and management (6)} \\
   \text{STAT3606} & \text{ Business logistics (6)} \\
   \text{STAT3607} & \text{ Statistics in clinical medicine and bio-medical research (6)} \\
   \text{STAT3608} & \text{ Statistical genetics (6)} \\
   \text{STAT3611} & \text{ Computer-aided data analysis (6)} \\
   \text{STAT3612} & \text{ Statistical machine learning (6)} \\
   \text{STAT3613} & \text{ Marketing analytics (6)} \\
   \text{STAT3614} & \text{ Business forecasting (6)} \\
   \text{STAT3617} & \text{ Sample survey methods (6)} \\
   \text{STAT3620} & \text{ Modern nonparametric statistics (6)} \\
   \text{STAT3621} & \text{ Statistical data analysis (6)} \\
   \text{STAT3655} & \text{ Survival analysis (6)} \\
   \text{STAT4601} & \text{ Time-series analysis (6)} \\
   \text{STAT4602} & \text{ Multivariate data analysis (6)} \\
   \text{STAT4610} & \text{ Bayesian learning (6)}
   \end{align*}
   \]

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:

Minor Title: Minor in Statistics
Offered to students admitted to Year 1 in 2020

Objectives:
The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

- **PLO 1**: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
- **PLO 2**: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
- **PLO 3**: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Major in Statistics
Minor in Risk Management

### Required courses (42 credits)

#### 1. Introductory level courses (12 credits)

**Disciplinary Electives (12 credits)**

*At least 12 credits from List A and List B, with at least 6 credits from List B:*

**List A**
- STAT1601: Elementary statistical methods (6)
- STAT1602: Business statistics (6)
- STAT1603: Introductory statistics (6)
- STAT2601: Probability and statistics I (6)

**List B**
- STAT2602: Probability and statistics II (6)
- STAT2603: Data management with SAS (6)
- STAT2604: Introduction to R programming and elementary data analysis (6)
- STAT2605: Demographic and socio-economic statistics (6)

#### 2. Advanced level courses (30 credits)

**Disciplinary Electives (30 credits)**

*At least 30 credits selected from the following courses:*

- STAT3600: Linear statistical analysis (6)
- STAT3602: Statistical inference (6)
- STAT3603: Stochastic processes (6)
- STAT3604: Design and analysis of experiments (6)
- STAT3605: Quality control and management (6)
- STAT3606: Business logistics (6)
- STAT3607: Statistics in clinical medicine and bio-medical research (6)
- STAT3608: Statistical genetics (6)
- STAT3611: Computer-aided data analysis (6)
- STAT3612: Statistical machine learning (6)
- STAT3613: Marketing analytics (6)
- STAT3614: Business forecasting (6)
- STAT3617: Sample survey methods (6)
- STAT3620: Modern nonparametric statistics (6)
- STAT3625: Survival analysis (6)
- STAT4601: Time-series analysis (6)
- STAT4602: Multivariate data analysis (6)
- STAT4610: Bayesian learning (6)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

**Remarks:**
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title Minor in Statistics
Offered to students admitted to Year 1 in 2019

Objectives:
The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)

PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Major in Statistics
Minor in Risk Management

Required courses (42 credits)
1. Introductory level courses (12 credits)
   Disciplinary Electives (12 credits)
   At least 12 credits from List A and List B, with at least 6 credits from List B:
   List A
   STAT1601 Elementary statistical methods (6)
   STAT1602 Business statistics (6)
   STAT1603 Introductory statistics (6)
   STAT2601 Probability and statistics I (6)
   List B
   STAT2602 Probability and statistics II (6)
   STAT2603 Data management with SAS (6)
   STAT2604 Introduction to R programming and elementary data analysis (6)
   STAT2605 Demographic and socio-economic statistics (6)

2. Advanced level courses (30 credits)
   Disciplinary Electives (30 credits)
   At least 30 credits selected from the following courses:
   STAT3600 Linear statistical analysis (6)
   STAT3602 Statistical inference (6)
   STAT3603 Stochastic processes (6)
   STAT3604 Design and analysis of experiments (6)
   STAT3605 Quality control and management (6)
   STAT3606 Business logistics (6)
   STAT3607 Statistics in clinical medicine and bio-medical research (6)
   STAT3608 Statistical genetics (6)
   STAT3611 Computer-aided data analysis (6)
   STAT3612 Statistical machine learning (6)
   STAT3613 Marketing analytics (6)
   STAT3614 Business forecasting (6)
   STAT3617 Sample survey methods (6)
   STAT3620 Modern nonparametric statistics (6)
   STAT3621 Statistical data analysis (6)
   STAT3655 Survival analysis (6)
   STAT3955 Survival analysis (6)
   Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.
   STAT3665 Modern nonparametric statistics (6)
   Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.
   STAT3670 Statistical data analysis (6)
   STAT3680 Time-series analysis (6)
   STAT3690 Multivariate data analysis (6)
   STAT3610 Bayesian learning (6)

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Statistics
Offered to students admitted to Year 1 in 2018

Objectives:
The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)

PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)

PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Major in Statistics
Minor in Risk Management

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)

**Notes:**
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.
Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Minor Title: Minor in Statistics
Offered to students admitted to Year 1 in 2014

Objectives:
The curriculum of the Minor in Statistics is structured specifically to cater for the general need of non-statistical disciplines and provide basic training in statistical methodologies and their applications to practical problems. It aims to provide students with a strong and rigorous sense of quantitative reasoning that has become an indispensable skill in nearly all disciplines.

Learning Outcomes:
By the end of this programme, students should be able to:

PLO 1: acquire basic statistical knowledge alongside their major disciplines, with emphases on correct applications of statistical methods and insightful interpretations of statistical findings (by means of coursework, tutorial classes and project-based learning in the curriculum)
PLO 2: equip with computational skills essential to conducting complete data analyses (by means of coursework, tutorial classes, project-based learning and presentation opportunities in the curriculum)
PLO 3: participate proactively in large-scale, multi-disciplinary studies, determine objective findings, and provide guidance on all aspects of data collection and analyses (by means of coursework, tutorial classes and project-based learning in the curriculum)

Impermissible Combinations:
Major in Computing and Data Analytics
Major in Decision Analytics
Major in Risk Management
Major in Statistics
Minor in Risk Management

Required courses (42 credits)

1. Introductory level courses (12 credits)

Disciplinary Electives (12 credits)
At least 12 credits from List A and List B, with at least 6 credits from List B:

</tbody>
</table>

2. Advanced level courses (30 credits)

Disciplinary Electives (30 credits)
At least 30 credits selected from the following courses:

| STAT3600 | Linear statistical analysis                      | 6       |
| STAT3602 | Statistical inference                             | 6       |
| STAT3603 | Stochastic processes                              | 6       |
| STAT3604 | Design and analysis of experiments                | 6       |
| STAT3605 | Quality control and management                    | 6       |
| STAT3606 | Business logistics                                | 6       |
| STAT3607 | Statistics in clinical medicine and bio-medical research | 6 |
| STAT3608 | Statistical genetics                              | 6       |
| STAT3611 | Computer-aided data analysis                      | 6       |
| STAT3612 | Statistical machine learning                      | 6       |
| STAT3613 | Marketing analytics                               | 6       |
| STAT3614 | Business forecasting                              | 6       |
| STAT3616 | Advanced SAS programming                          | 6       |
| STAT3617 | Sample survey methods                             | 6       |
| STAT3620 | Modern nonparametric statistics                   | 6       |
| STAT3621 | Statistical data analysis                         | 6       |
| STAT3655 | Survival analysis                                 | 6       |

Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.

| STAT3955 | Survival analysis                                 | 6       |

Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.

| STAT4601 | Time-series analysis                              | 6       |
| STAT4602 | Multivariate data analysis                        | 6       |

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor.    - STAT3621: Statistical data analysis (6)
   - STAT3655: Survival analysis (6)
   - STAT3955: Survival analysis (6)
   - STAT3608: Statistical genetics (6)
   - STAT3611: Computer-aided data analysis (6)
   - STAT3612: Statistical machine learning (6)
   - STAT3613: Marketing analytics (6)
   - STAT3614: Business forecasting (6)
   - STAT3616: Advanced SAS programming (6)
   - STAT3617: Sample survey methods (6)
   - STAT3620: Modern nonparametric statistics (6)
   - STAT3621: Statistical data analysis (6)
   - STAT3655: Survival analysis (6)
   - STAT3955: Survival analysis (6)

   Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.

Notes:
1. Double counting of credits is not permissible for major-minor or double-minors combinations. For a course appears as a core course ("disciplinary core") in the major-minor or double-minors, students have to make up the credits by taking replacement course in the minor. For details, please refer to "Students taking double Majors, Major-Minor or double Minors with overlapping course requirements" in the BSc syllabuses.

Remarks:
Important! Ultimate responsibility rests with students to ensure that the required pre-requisites and co-requisite of selected courses are fulfilled. Students must take and pass all required courses in the selected primary science major in order to satisfy the degree graduation requirements.
Students taking double Majors, Major-Minor or double Minors with overlapping course requirements
1. Double-counting of courses up to a maximum of 24 credits is permissible with double majors. The double-counted courses in both Science majors must include SCNC1111 and SCNC1112. Additional credits to be double-counted must be for courses required (‘disciplinary core’) by both majors. For cases with 24 or less double-counted credits, the student must make up an equivalent number of credits by taking other courses offered by any Faculty.

2. The following list shows the major-major combinations that have more than 24 credits of the same ‘disciplinary core’ courses that appear in both majors and is subject to the rule of double counting:

<table>
<thead>
<tr>
<th>Major-Major combination</th>
<th>Admission Year (Year 1)</th>
<th>No. of common ‘disciplinary core’ courses (credits) appear in both majors including SCNC1111 and SCNC1112</th>
<th>No. of replacement courses (credits) to be taken in the 2nd major (‘Major 2’)</th>
</tr>
</thead>
<tbody>

<td>5 (30 credits)</td>
<td>1 (6 credits)</td>
</tr>
</tbody>
</table>

If more than 24 credits (including SCNC1111 & SCNC1112) are listed as ‘disciplinary core’ courses required in both the first (‘Major 1’) and second (‘Major 2’) majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major (‘Major 2’). The replacement course(s) must be the disciplinary elective course in the second major (‘Major 2’) and have the same prefix and at the same or higher level as the double-counted course(s). **The double counted credits should count the following courses in this order: (1) SCNC1111 and SCNC1112, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses.** For example, if a student takes a first major in Ecology & Biodiversity (‘Major 1’) and the 2nd major in Molecular Biology & Biotechnology (‘Major 2’), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common ‘disciplinary core’ courses that appear in both majors. The first 3 courses SCNC1111, SCNC1112, and BIOL1110 would first be counted plus either BIOL2102 or BIOL2103 for the major in Molecular Biology & Biotechnology. The student has to take a replacement ‘disciplinary elective’ course (with a prefix of BIOL at level 2 or above) in the 2nd major in Molecular Biology & Biotechnology to make up for BIOL2102 or BIOL2103.

3. Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111:
   - Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)
   - Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1111. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

Candidates who have been admitted to Year 1 in 2021-22 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1112:
- Level 4 or above in Biology, Chemistry, and Physics in the Hong Kong Diploma of Secondary Education (HKDSE)
- Level 5 or above in Biology, Chemistry, and Physics Higher Level in International Baccalaureate (IB)
- Grade B or above in Biology, Chemistry, and Physics in General Certificate of Education Advanced Level (GCEAL)
- Biology, Chemistry, and Physics qualification in Gao Kao will be considered on a case-by-case basis

It is optional for them to take the course SCNC1112. Those who do not take this course should take a 6-credit disciplinary elective course of the science major in lieu.

The eligible students will be informed by the Faculty, via email, of the granting of an exemption from taking SCNC1111 and/or SCNC1112 in late August (before the start of your first year of study). You (as an eligible student) can try out courses that suit your academic interest before you commit to a particular major and submit your application form for taking a replacement course(s) for SCNC1111 and/or SCNC1112 via the Science Online Application Submission System (OASS) during the courses add/drop periods in your second/third year of study. The replacement course must be the disciplinary elective in your declared Science major. If you wish to take double Science majors, you should take the disciplinary elective in each of your declared Science majors to replace the exempted SCNC course(s).

Under these circumstances, the following list shows the major-major combinations that have 24 credits (or more) of the same ‘disciplinary core’ courses that appear in both Science majors and is subject to the rule of double counting:

<table>
<thead>
<tr>
<th>Scenario #1</th>
<th>Admission Year (Year 1):</th>
<th>Exemption granted:</th>
<th>No. of replacement courses (credits) to be taken in the 1st major (‘Major 1’)</th>

<td>1 (6 credits)</td>
</tr>
</tbody>
</table>
If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course(s) in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and a second major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors.

(a) In light of the exempted course SCNC1111, the double counted credits should count the following courses in this order: (1) SCNC1112, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. The 4 courses (SCNC1112, BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course in the second major in Molecular Biology & Biotechnology to make up for SCNC1111.

(b) In light of the exempted course SCNC1112, the double counted credits should count the following courses in this order: (1) SCNC1111, (2) introductory level (levels 1 and 2) courses, and (3) advanced level (level 3 or above) courses. The 4 courses (SCNC1111, BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take a replacement 'disciplinary elective' course in the second major in Molecular Biology & Biotechnology to make up for SCNC1112.

</tr>
</tbody>
</table>
If more than 24 credits (including SCNC1111 & SCNC1112) are listed as required courses ('disciplinary core') in both the first ('Major 1') and second ('Major 2') majors undertaken by a student, the student must make up the number of credits above the 24 permissible by taking replacement course(s) in the second major ('Major 2'). The replacement course(s) must be the disciplinary elective course(s) in the second major ('Major 2') and have the same prefix and at the same or higher level as the double-counted course(s). In light of the exempted course SCNC1111 & SCNC1112, the double counted credits should count the following courses in this order: (1) introductory level (levels 1 and 2) courses, and (2) advanced level (level 3 or above) courses. For example, if a student takes a first major in Ecology & Biodiversity ('Major 1') and a second major in Molecular Biology & Biotechnology ('Major 2'), SCNC1111, SCNC1112, BIOL1110, BIOL2102 and BIOL2103 are the common 'disciplinary core' courses that appear in both majors. The 3 courses (BIOL1110, BIOL2102, and BIOL2103) would be counted for the major in Molecular Biology & Biotechnology. The student has to take 2 replacement 'disciplinary elective' courses in the second major in Molecular Biology & Biotechnology to make up for SCNC1111 & SCNC1112.

4. Double counting of credits is not permissible for major–minor or double-minors combinations. When a course is required ('disciplinary core') both by the major and minor or by both minors, the student must take a replacement course for the minor. The replacement course must be the disciplinary elective in the minor and have the same prefix and at the same or higher level as the course to be replaced.

5. For students taking the Mathematics related majors/minors should note the following exemption and replacement arrangement:

<table>

**Course Objectives:**
- Teach students a biochemical perspective on each of the Basic Sciences focusing on concepts fundamental to the learning of Biochemistry.
- Promote deep learning of course material through an integrated programme of practical and collaborative tasks.
- Inspire students with a view of the great discoveries and future challenges for Biochemistry.
- Help students make the transition from school to university by developing their teamwork, independent study skills and confidence to communicate within a Biochemistry learning environment.

**Course Contents & Topics**

A Biochemical Perspective on the Basic Sciences

A. Chemistry for Biochemistry  
The elements and bonding (from carbon to Coenzyme A); Resonance and orbital theory (a focus on the electron); Structure and conformation (thinking in 3 dimensions); Isomerism (from mirrors to thalidomide); Water (the universal biochemical solvent) & buffer; Quantitation in chemistry (who was Avogadro anyway?).

B. Biology for Biochemistry  
The basic building blocks of life (proteins, DNA, lipids, carbohydrate); The Central Dogma of Molecular Biology; Evolution (considering molecular evolution); Origins of life (the chicken-egg paradox of proteins and DNA)

C. Physics and Mathematics for Biochemistry  
Thermodynamics from a Biological Perspective; Introduction to molecular recognition and binding (DNA melting); Statistics for biochemistry (applied statistics for what you really need to know); Thinking numbers (exponentials, logs and the limits of life).

D. Inspiring Biochemistry  
The protein; The gene; Vitamins and disease; Synthetic biology; The challenges of modern-day genetics; Drugs-

Prof J Tanner, Biomedical Sciences

| Quota | 300 |

- Credit approval by the School of Biomedical Sciences
Course Objectives

This course is designed to present an overview of biochemistry of fundamental importance to the life process. We aim to develop appreciation of the basics in biochemistry as a common ground for science and non-science students to progress into their areas of specialization. Students intending to pursue further studies in Biochemistry and Molecular Biology will find this course particularly helpful.

Course Contents & Topics

Structure and functions of carbohydrates, lipids, nucleic acids, amino acids and proteins; enzymes and coenzymes; basic bioenergetics; key metabolic processes in a living cell; signaling across cell membranes; flow of genetic information

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 relate the structures to functions of major biomolecules including carbohydrates, amino acids and lipids
CLO 2 explain the fundamentals and significance of bioenergetics, metabolism and intracellular signaling
CLO 3 explain the fundamentals and importance of the flow of genetic information
CLO 4 explain the molecular mechanisms of disorders related to metabolism of carbohydrates, amino acids and/or lipids
CLO 5 demonstrate skills in working and collaborating together with colleagues in group assignments

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC1600 or BIOL1110 or ENGG1207 or BMED1207; and Not for students who have passed in BIOL2220 or MEDE2301 or BMED2301, or have already enrolled in these courses.

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

Grade Descriptors (A+ to F)

A Demonstrates thorough and complete mastery of the entire range of knowledge and analytical skills as required for maximal attainment in all the course learning outcomes; excellence in critical thinking towards application of the knowledge in a range of contexts.
B Demonstrates substantial command of a broad range of knowledge and analytical skills as required for attainment of the majority of course learning outcomes; good evidence of critical thinking towards application of the knowledge in a range of contexts.
C Demonstrates general but incomplete command of knowledge and analytical skills as required for attainment of adequate course learning outcomes; some evidence critical thinking towards application of the knowledge in a range of contexts.
D Demonstrates partial but limited command of knowledge and analytical skills as required for attainment of some of the course learning outcomes; limited evidence of critical thinking towards application of the knowledge in a range of contexts.
Fail Demonstrates little or no evidence of command of knowledge and analytical skills as required for attainment of the course learning outcomes; lacking in critical thinking towards application of the knowledge in a range of contexts.

Additional Course Information

Also offered as BMED2301 "Life Sciences I (Biochemistry)" to students of the Faculty of Engineering. Students who have passed BMED2301 (previously known as MEDE2301) is considered to have passed BIOC2600.

BIOC3601

Offering Department Biomedical Sciences
Quota 80

Course Co-ordinator Dr N S Wong, Biomedical Sciences (nswong@hku.hk)

Course Objectives

This course aims to provide foundation concepts of metabolism. It will enable students of this course to see how some of the basic concepts in biochemistry (specifically those learned in BIOC1600 and BIOC2600) could be applied to explain one of the most important and cardinal issues of biological life: the acquisition of metabolic energy. The course will lay the foundation for the more advanced courses offered in the Biochemistry Major and will also serve as a useful complement to courses on nutrition and dietetics.

Course Contents & Topics

This course focuses on the central metabolic pathways involved in the provision of energy needed by living organisms. Major metabolic pathways covered in this course include those that are involved in the synthesis and breakdown of glucose, glycogen, triacylglycerol, and amino acids. The metabolism of purines and pyrimidines will also be considered. Emphasis is on the understanding of the metabolic reactions involved and how they are regulated in relation to environmental cues. Metabolic derangements as a basis of diseases will also be discussed.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 achieve a vigorous intellectual appreciation of basic principles of functional organization of metabolic networks
CLO 2 identify one's own gaps of basic knowledge in metabolism and to fill up those gaps from literature resources through effective means or approaches
CLO 3 develop the communication and social skills essential for the acquisition and dissemination of knowledge

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC2600 or BIOL2220 or MEDE2301 or BMED2301

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

Grade Descriptors (A+ to F)

A Demonstrates thorough and extensive knowledge and skills required for attaining all the course learning outcomes. Displays a strong analytical ability and logical thinking and is able to apply knowledge to a wide range of complex situations. Consistently able to communicate sophisticated ideas confidently and clearly.
Course Objectives

To give students a general overview of different experimental approaches and model systems, and to provide students with hands-on experience in basic biochemical and molecular techniques.

Course Contents & Topics

Basic concepts in experimental science; writing of lab notebooks; experimental approaches - genetic, biochemical, molecular, genomic and others; methods for isolation and analysis of carbohydrates, proteins, lipids and nucleic acids; subcellular fractionation; enzyme assays and spectrophotometry; basic nucleic acid manipulation - PCR, site-directed mutagenesis, blotting and hybridization, cloning strategies, restriction mapping.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe and explain the principles underlying various biochemical and molecular techniques
CLO 2 apply different techniques to isolate and characterize carbohydrates, lipids, proteins and nucleic acids in hands-on laboratory sessions
CLO 3 interpret and discuss scientific data using appropriate scientific language
CLO 4 collaborate effectively with team members in laboratory sessions

Assessment Methods and Weighting

Assignments 50 CLO 1,2,3,4
Examination 2.5 hrs examination 60 CLO 1,2,3
Assignments 40 CLO 1,2,3

Required/recommended reading and online materials

**Course Objectives & Topics**

This course will cover existing bioinformatics tools for DNA and protein sequence analysis. The underlying principles of these analysis programs and services will be presented. Students will learn how to retrieve, analyze, and compare protein and DNA sequences using bioinformatics tools available on the internet. A basic introduction to the principles and tools for the analysis of next generation sequencing data will also be presented.

**Course Contents & Topics**

DNA and protein sequence database, protein family databases; information searching and retrieval; Simple sequence analysis; sequence alignment; pair-wise alignment, multiple sequence alignment, substitution matrices; sequence database searching; algorithm and parameters; sequence patterns and motifs, and profiles; phylogenetic analysis; gene prediction; analysis of next generation sequencing data.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 search and retrieve sequence data from biological databases
- CLO 2 describe the algorithms of commonly used methods for pairwise and multiple alignments, BLAST database search, phylogenetic trees construction, and gene prediction
- CLO 3 apply the techniques of sequence analysis in various biological context
- CLO 4 interpret results from sequence alignments, BLAST database searches, and phylogenetic trees construction

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in BIOC2600 or BIOL2220 or BBMS2003 or BBMS2007 or MEDE2301 or BMD2301

**Offer in 2021 - 2022**

Y 2nd sem Offer in 2022 - 2023 : Y

**Grade Descriptors (A+ to F)**

- A: Demonstrates thorough and complete mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes; strong critical thinking; excellent ability to apply bioinformatics skills in a range of context.
- B: Demonstrates substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes; evidence of critical thinking; good ability to apply bioinformatics skills in a range of context.
- C: Demonstrates general but incomplete command of knowledge and skills required for attaining most of the course learning outcome; some critical thinking; adequate ability to apply bioinformatics skills in a range of context.
- D: Demonstrates partial but limited command of knowledge and skills required for attaining some of the course learning outcomes; limited critical thinking; limited ability to apply bioinformatics skills in a range of context.
- Fail: Demonstrates little or no evidence of command of knowledge and skills required for attaining the course learning outcomes; lack of critical thinking; little or no ability to apply bioinformatics skills in a range of context.

Pass in BIOC2600 or BIOL2220 or MEDE2301 or BMED2301

Pre-requisites (and Co-requisites and Impermissible combinations)

Courses

- BIOC3999
- Biomedical Sciences
- Directed studies in biochemistry (6 credits)
- Academic Year 2021
- Quota 36

Offering Department

- Biomedical Sciences

Credit and Attendance

- Teachers Involved
  - (All academic staff in Biochemistry Major, Biomedical Sciences)
  - (Dr A C Koon, Biomedical Sciences)
  - (Dr B H B Yuen, Biomedical Sciences)

Course Objectives

To enhance students knowledge of a particular topic and the students self-directed learning and critical thinking skills.

Course Contents & Topics

The student undertakes a self-managed study on a topic in biochemistry under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject. A laboratory or field study may also be involved that would enhance the student’s understanding of the subject.

Course Learning Outcomes

- On successful completion of this course, students should be able to:
  - CLO 1 critically appraise research literature in a specific area of biochemistry and molecular biology
  - CLO 2 examine the theoretical or experimental basis for existing concepts
  - CLO 3 identify questions and evaluate issues for further research development
  - CLO 4 interpret scientific data in original research articles and communicate using appropriate scientific language

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Biochemistry Major including BIOC2600 or BIOL2220 and BIOL3401.

This capstone course is for Biochemistry Major students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Examination

- Examination No Exam

Grade Descriptors (A+ to F)

- A: Produces a sophisticated and detailed appraisal of the biochemical literature, displaying a comprehensive and deep understanding of the selected topic. Able to contextualize all the ideas within a personal framework of knowledge and evaluate relevant issues emerging from the study. Works proactively with a supervisor to enhance understanding and scientific writing skills. Communicates the findings to a broader audience in an effective way and responds knowledgeably to questions. Excellent time-management skills and able to reflect honestly on one's own learning.

- B: Produces a coherent appraisal of the biochemical literature, displaying a sound understanding of the selected topic. Able to contextualize many of the ideas within a personal framework of knowledge and identify some relevant issues emerging from the study. Works constructively with a supervisor to enhance understanding and scientific writing skills. Clearly communicates the findings to a broader audience and responds knowledgeably to most questions. Able to time-manage effectively and reflect on one's own learning.

- C: Produces a reasonable appraisal of the biochemical literature, displaying an adequate understanding of the selected topic. Able to contextualize a few of the ideas within a personal framework of knowledge and makes some attempt to identify some relevant issues emerging from the study. Works with a supervisor and other co-workers to improve understanding and scientific writing skills. Communicates the findings to a broader audience with reasonable clarity and responds to most questions. Acceptable time-management and self-reflection skills.

- D: Produces a superficial appraisal of the biochemical literature, displaying a limited understanding of the selected topic. Able to contextualize a few of the ideas within a personal framework of knowledge but unable to identify any relevant issues emerging from the study. The student undertakes a self-managed study on a topic in biochemistry under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject. A laboratory or field study may also be involved that would enhance the student’s understanding of the subject.
This course aims at providing students an in-depth understanding of molecular and cellular signaling in multicellular organisms. This course is particularly useful for students interested in research or intending to develop a career in biomedical sciences.

Course Contents & Topics

A. Inter and intracellular signal transduction mechanisms
   - Cell-surface receptors and signal transduction proteins; G-Protein-coupled receptors: structure and mechanism; signaling pathways that control gene expression: receptors that activate protein tyrosine kinases, the Ras/MAP kinase pathway, phosphoinositide signaling pathways and receptor serine kinases that activate Smads

B. Cytoskeleton as target of signal transduction
   - The microtubule cytoskeleton; kinesin and dynein motor; the actin cytoskeleton; myosin; the intermediate filament; cytoskeleton and cell behavior; cytoskeleton and intracellular transport in neuron

C. Protein trafficking and sorting pathways
   - Translocation of secretory proteins - insertion into the ER; major protein sorting pathways; protein modification, folding and quality control in the ER; molecular mechanism of vesicular traffic; protein sorting and processing

D. Cell-cell and cell-matrix adhesion
   - Cell-cell and cell-extracellular matrix (ECM) junctions and their adhesion molecules; cadherins and integrins; collagens and proteoglycans; when cell meets the matrix; regulation of signaling molecules by ECM

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe and explain the molecular and cellular signal transduction mechanisms that mediate cellular communication to achieve a plethora of cellular responses in multicellular organisms

CLO 2 apply knowledge in molecular cell biology to analyze new findings and to design further experiments

CLO 3 interpret data in research articles/problem-solving questions and communicate using appropriate scientific language

CLO 4 work effectively with classmates in tutorial classes

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC3601 or BIOL3401 or BIOL3402 or BIOL3404

BIOC4611 Advanced biochemistry II (6 credits) Academic Year: 2021
Offering Department: Biomedical Sciences
Course Co-ordinator: Prof D Chan, Biomedical Sciences (chand@hku.hk)
Teaching Involved: (Dr C M Qian, Biomedical Sciences) (Dr J Tanner, Biomedical Sciences) (Dr M Kotaka, Physiology) (Dr N S Wong, Biomedical Sciences) (Prof D Chan, Biomedical Sciences)

Course Objectives:
This course is aimed at providing students with an up-to-date knowledge of protein biochemistry from sequence to structure and disease; realizing the importance of kinetics in cellular function and an appreciation of the technological advances in the characterization of macromolecules.

Course Contents & Topics:
Topics including protein folding and misfolding in diseases; catalytic mechanisms of enzymes and enzyme kinetics; biomolecular interactions; characterization of macromolecules using X-ray crystallography, nuclear magnetic resonance and other spectroscopy methods; protein engineering and therapeutic approaches targeting protein function.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1 describe the mechanisms for regulation of transcription, RNA processing and translation in eukaryotes and post transcription will be gained.
- CLO 2 explain how cellular homeostasis can be maintained by a combination of controls of gene expression at transcription and post transcription.
- CLO 3 illustrate the hierarchy of gene expression regulation in stem cells and developmental processes.
- CLO 4 interpret experimental results in gene regulation studies.

Pre-requisites (and Co-requisites and Impermissible combinations):
- Pass in BIOC3601; and BIOL3404 or CHEM2441; and Pass in BIOC4610, or already enrolled in this course

Offer in 2021-2022:
- N Offer in 2022-2023: N

Grade Descriptors (A+ to F):
- A Clear and insightful description of how protein structure informs function; clear evidence of ability to recognize mechanisms of enzyme function and interpretation of data; effectual demonstration of applying knowledge to the design of scientific methodologies and cohesive, systematic and creative organization of information for presentation and communication.
- B Clear description of how protein structure informs function; evidence of ability to recognize mechanisms of enzyme function and interpretation of data; capable demonstration of applying knowledge to the design of scientific methodologies; and cohesive and systematic organization of information for presentation and communication.
- C Awareness of how protein structure informs function; some evidence of ability to recognize mechanisms of enzyme function and interpretation of data; some capable demonstration of applying knowledge to the design of scientific methodologies and systematic organization of information for presentation and communication.
- D Superficial awareness of how protein structure informs function; limited evidence of ability to recognize mechanisms of enzyme function and interpretation of data; superficial demonstration of applying knowledge to the design of scientific methodologies and limited organizational skill of information for presentation and communication.
- Fail Lack of awareness of how protein structure informs function; lack of ability to recognize mechanisms of enzyme function and interpretation of data; superficial demonstration of applying knowledge to the design of scientific methodologies; insufficient organizational skill of information for presentation and communication.

Assessment Methods:
- Assignments 40 CLO 1,2,3,4

Required/recommended reading and online materials:
- To be given.

BIOC4612 Molecular biology of the gene (6 credits) Academic Year: 2021
Offering Department: Biomedical Sciences
Course Co-ordinator: Prof K S E Cheah, Biomedical Sciences (hrmbdkc@hku.hk)
Teaching Involved: (Dr K M Yao, Biomedical Sciences) (Prof K S E Cheah, Biomedical Sciences) (Prof. PT Liu, Biomedical Sciences) (Prof. ZJ Zhou, Biomedical Sciences)

Course Objectives:
To provide an up-to-date knowledge of molecular biology, especially with respect to the regulation of eukaryotic gene expression.

Course Contents & Topics:
This is a comprehensive course covering many detailed molecular aspects of gene regulation and gene function. Through this course an understanding of how gene expression can be regulated at levels of transcription and post transcription will be gained.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1 describe the mechanisms for regulation of transcription, RNA processing and translation in eukaryotes
- CLO 2 explain how cellular homeostasis can be maintained by a combination of controls of gene expression at multiple levels
- CLO 3 illustrate the hierarchy of gene expression regulation in stem cells and developmental processes
- CLO 4 interpret experimental results in gene regulation studies

Assessment Details:
- Lectures 36
- Tutorials 12
- Reading / Self study

Assessment Methods and Weighting:
- Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
- Assignments 30 CLO 1.2,3,4

Required/recommended reading and online materials:

# Advanced techniques in biochemistry & molecular biology (6 credits)

**Offering Department**: Biomedical Sciences

**Quota**: 70

**Course Co-ordinator**: Prof D Chan, Biomedical Sciences (chand@hku.hk)

**Teachers Involved**:
- Dr B C W Wong, Biomedical Sciences
- Dr J A Tanner, Biomedical Sciences
- Dr J W H Wong, Biomedical Sciences
- Dr M C H Cheung, Biomedical Sciences
- Prof D Chan, Biomedical Sciences

**Course Objectives**: This is an advanced experimental-based course for students majoring in Biochemistry and related disciplines. The aim is to provide the necessary training for students to pursue postgraduate research education and potential employment in a scientific laboratory/industry environment.

**Course Contents & Topics**: Hands-on experiments using advanced techniques in biochemistry, molecular and cell biology, and bioinformatics. Students will also have the opportunity to familiarize themselves with modern instruments used in life sciences.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:

- **CLO 1**: Explain the basic principles of current advanced techniques commonly used in biochemistry and molecular biology
- **CLO 2**: Apply and perform these techniques in other novel experimental settings
- **CLO 3**: Critically evaluate experimental data and design alternative approaches to test or validate hypotheses
- **CLO 4**: Collaborate with team members to complete laboratory experiments
- **CLO 5**: Document laboratory work and data using a laboratory notebook following standard practices in research laboratories

**Pre-requisites (and Co-requisites and Impermissible combinations)**: Pass in BIOC3601 or BIOC3401 or BIOC3402 or BIOC3404 or BBMS2007

**Offer in 2021 - 2022**

### BIOC4966

#### Biochemistry internship (6 credits)

**Offering Department** Biomedical Sciences  
**Quota** 20  
**Course Co-ordinator** Dr A C Koon (Sem 1); Dr B H B Yuen (Sem 2 & Summer), Biomedical Sciences (alexkoon@hku.hk ; yuenbbh@hku.hk)  
**Teachers Involved** (All academic staff in Biochemistry Major,Biomedical Sciences)  
- Dr A C Koon, Biomedical Sciences  
- Dr B H B Yuen, Biomedical Sciences

**Course Objectives**

This course aims to offer students the opportunities to gain work experience in the industry related to their major of study. The workplace learning experience would be of great benefit to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the School/Departments.

**Course Contents & Topics**

1. Within the University: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor.

2. Outside the University: The student will work in an external agency related to the major of study. The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Department/School of the student (the Internal Supervisor).

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** recognize the strengths and limitations of their area of training or expertise  
- **CLO 2** acquire problem-solving skills to solve novel and ill-defined problems  
- **CLO 3** work effectively with colleagues in laboratories or other real world environments  
- **CLO 4** examine the role of science in our society

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses inBiochemistry Major including BIOC3604.  
This capstone course is for Biochemistry Major students only.  
The earliest that a student is allowed to take this capstone course is their year 3 study.

**Offer in 2021 - 2022** Y 1st sem 2nd sem Summer  
**Offer in 2022 - 2023** Y  
**Examination** No Exam

**Grade Descriptors**

- **Distinction** Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes a high level of effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and excellent evaluation by supervisor(s), etc.
- **Pass** Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes high level of effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc.  
- **Fail** Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.

**Assessment Methods and Weighting**

<table>
<thead>

</tr>
<tr>
<td>Examination</td>
<td>One 3-hour written examination</td>
<td>50</td>
<td>CLO 1.2,3,4</td>
</tr>
</tbody>
</table>

**Additional Course Information**

Satisfactory completion of this course can be counted towards the Capstone requirement. Details of internship will be recorded on the student's transcript. This course will be assessed on "Pass/Fail" basis. Students who are interested to enrol in this course should contact the Department to obtain the approval.

Enrolment of this course is not conducted via the online course selection system and should be made through the relevant Department/School office after approval has been obtained from the course coordinator.

### BIOC4999

#### Biochemistry project (12 credits)

**Offering Department** Biomedical Sciences  
**Quota** 25  
**Course Co-ordinator** Dr N S Wong, Biomedical Sciences (ns Wong@hku.hk)  
**Teachers Involved** (All academic staff in Biochemistry Major, Biomedical Sciences)  
- Dr N S Wong, Biomedical Sciences

**Course Objectives**

To enable students to acquire the basic skills in scientific research emphasizing on critical and analytical reasoning, free and creative thinking, scholarly communication (both orally and in writing), research integrity, teamwork and time management. The course is particularly useful for those students who intend to pursue a career in life science either in research or industry.
Course Contents & Topics

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 describe recent research development in a defined area of biochemistry and molecular biology.
CLO 2 formulate research questions and design experiments to address these questions.
CLO 3 apply appropriate experimental techniques to solve research problems.
CLO 4 manage and interpret experimental results.
CLO 5 develop scientific writing skills and logically report their research findings.

Pre-requisites
Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Biochemistry Major including 4 of the following 5 courses: BIOL3401, BIOC3601, BIOC3604, BIOC4610 and BIOC4613. BIOC4610 and BIOC4613 can be taken concurrently with this course. This capstone course is for Biochemistry Major students only. This capstone course is ONLY opened to students who are in year 3 or above in the Biochemistry Major program.

Offer in 2021 - 2022
Y Year long Offer in 2022 - 2023 : Y

Examinations
No Exam

Grade Descriptors (A+ to F)
A Plans and executes a sophisticated and creative experimental investigation, framing the research question within existing knowledge. Displays tenacity and commitment, generating a meaningful body of data that is analysed with insight and comprehensively evaluated in the context of the original research question. Works proactively with a supervisor and other co-workers to enhance practical and scientific writing skills. Communicates the findings to a broader audience in an effective and scholarly way and responds knowledgeably to questions. Excellent time-management skills.
B Plans and executes a detailed experimental investigation, framing the research question within existing knowledge. Works with commitment, generating a sufficient body of data that is analysed and evaluated in the context of the original research question with skill and understanding. Works constructively with a supervisor and other co-workers to enhance practical and scientific writing skills. Clearly communicates the findings to a broader audience and responds knowledgeably to most questions. Able to time-manage effectively.
C Plans and executes an experimental investigation, attempting to contextualize the research question. Works with adequate commitment in order to generate sufficient data for a reasonable analysis and evaluation in the context of the original research question. Works with a supervisor and other co-workers to improve practical and scientific writing skills. Communicates the findings to a broader audience with reasonable clarity and responds to most questions. Acceptable time-management skills.
D Plans and executes a rudimentary experimental investigation, showing a limited ability to contextualize the research question. Displays minimal commitment when collecting data and is only able to undertake a superficial analysis and evaluation. Works reluctantly with a supervisor and other co-workers to develop practical and scientific writing skills. Displays weak communication skills when presenting the findings to a broader audience. Displays weak communication skills when presenting the findings to a broader audience. Poor time-management skills.
Fail Plans and executes an experimental investigation that is flawed, ineffective or overly simplistic, that is lacking a valid scientific context. Shows no commitment when collecting data and produces an incoherent analysis and evaluation. Works in isolation, thus failing to improve practical and scientific writing skills. Displays weak communication skills when presenting the findings to a broader audience. No time-management skills.

Required/recommended reading and online materials
None prescribed
| Course Objectives | This course aims to provide basic conceptual understanding of the biology of molecules and cells to underpin later studies in applied biology, genetics, biochemistry, nutrition, biotechnology, microbiology, plant and animal physiology and developmental biology. |
| Course Contents & Topics | An issue-based approach will be adopted to enable students to integrate basic concepts in molecules and cells and to inspire further investigation through the exploration of contemporary biological issues. The course is divided into 4 parts and the following is a list of some of the questions to be asked and discussed: Genes and inheritance: How do children resemble their parents? What is the central dogma of biology? What are the rules of genetic inheritance? What determines gender and sexuality? Why is that children resemble, but not identical to, their parents? What happen if some genes are non-functional or mutated? Metabolism and Health: How are diets related to good health? Do all humans have the same dietary requirements? Why can't we live without plants? Cells and cell division: What are the common features in a cell? How do cells communicate and assemble themselves to form tissues and organs? What is a cell cycle and how is it regulated? What happens if cell-cycle control system goes wrong? How newly formed cells commit themselves for differentiation? Genetic engineering and modern biology: To what extent can genes be modified? Is gene therapy the future of medicines? Is genetically modified food safe for consumption? What are the Genome Projects and why have they been important? |
| Course Learning Outcomes | On successful completion of this course, students should be able to: CLO 1 understand the relationships between genes in a genome and the inherited phenotypes expressed in a living organism CLO 2 learn the underlying principle on how mutation of a gene can lead to the development of a genetic disease CLO 3 understand the importance of dietary intake of biomolecules in relationship to good health CLO 4 describe various stages in a cell division and that disturbance of this process may result in cancer development CLO 5 describe concepts used in genetic engineering CLO 6 know some applications of genetic engineering in gene therapy and production of genetically modified food |
| Pre-requisites (and Co-requisites and Impermissible combinations) | Not for students who have passed in BIOC1600, or have already enrolled in this course. Students who wish to take this course are expected to have taken HKDSE Biology and/or Chemistry or equivalent. For students without HKDSE Chemistry, they are encouraged to take CHEM1041 concurrently or before. Not for students having taken any level 2 (or above) Biomedical Sciences (BBMS) or Biochemistry (BIOC) or Bachelor of Medicine and Bachelor of Surgery (MBBS) course. Students having taken level 2 BBMS/BIOC/MBBS course should take the replacement course for BIOL1110 in any regular major offered by the School of Biological Sciences. |
| Offer in 2021 - 2022 | Y 1st sem 2nd sem Offer in 2022 - 2023 : Y |
| Grade Descriptors (A+ to F) | A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writings consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts. B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts. C Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts or theories but not always with sufficient depth, breadth or understanding. D Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level. Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concepts or theories. Writings are irrelevant or superficial. |

| Introductory microbiology (6 credits) | Academic Year 2021 |
| Offering Department | Biological Sciences |
| Course Co-ordinator | ---, Biological Sciences ( ) |
| Teachers Involved | (---, Biological Sciences) |
| Course Objectives | To introduce students to the diversity and function of microorganisms; and relate this to their importance in the |
Course Contents & Topics
Evolutionary diversity of bacteria, archaea, eukarya and viruses; Metabolic strategies, cell biology and genetics; Microbial ecology, marine microbiology, terrestrial microbiology; Microbial interactions with animals and plants; The human microbiome; Medical microbiology and immunology; Biotechnology applications; Food spoilage and food fermentations.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 describe the key features of the major microbial phyla and place them in an evolutionary context
CLO 2 explain the major physiological and genetic processes in prokaryotes and eukaryotic microorganisms and compare the similarities and differences between these two domains
CLO 3 identify the microorganisms involved and their role in ecological processes, human disease and medicine, food production and spoilage, and biotechnology

Pre-requisites (and Co-requisites and Impermissible combinations)
NIL

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)
A (85-100%) Meets the standard of excellence. All criteria are addressed. Organization of ideas and clarity are excellent. Additional reading or research is evident. Ideas show an exceptional understanding of concepts. Arguments are highly persuasive and show excellent judgment and prioritization of issues. Presentation is highly creative and appealing.
B (70-84%) Approaches the standard of excellence. All criteria are addressed. Organization of ideas and clarity are good. Ideas show a complete understanding of concepts. Arguments are persuasive and prioritize major issues. Presentation is creative and appealing.
C (55-69%) Meets an acceptable standard. All criteria are addressed. Organization of ideas and clarity are sufficient. Ideas show an effective understanding of concepts. Arguments identify major issues. Presentation is appealing but may lack clarity.
D (45-54%) Below acceptable standard. Most criteria are addressed. Organization of ideas and clarity are weak. Ideas show an incomplete understanding of concepts. Arguments are not persuasive. Presentation lacks creativity or is not appealing.
Fail (<45%) Unacceptable. Inability to identify major criteria. Very weak organization of ideas and clarity. Ideas show a lack of understanding of concepts. No coherent argument. Presentation lacks creativity or is unappealing.

BIOL1309
Evolutionary diversity (6 credits)

Offering Department
Biological Sciences

Quota
250

Course Co-ordinator
Dr M Yasuhara, Biological Sciences (yasuhara@hku.hk)

Teachers Involved
(Dr C Schunter, Biological Sciences)
(Dr M Yasuhara, Biological Sciences)
(Dr S Cannicci, Biological Sciences)
(Prof. R M K Saunders, Biological Sciences)

Course Objectives
To provide students with an introduction to the diversity of plant and animal life. Recent research has resulted in fundamental changes in our understanding of evolutionary history (phylogeny). Current evolutionary trees will be used as the basis for a survey of different groups in phylogenetic sequence, and for understanding how structures, processes and behaviours have changed through time.

Course Contents & Topics
Introduction to the methodology for reconstructing the sequence of past evolutionary events (cladistics); algae (Rhodophyta, Phaeophyta and Chlorophyta); non-vascular plants (Hepatophyta, Anthocerophyta and Bryophyta); seedless vascular plants (Lycophyta, Psilophyta and Pterophyta); seed plants (Cycadophyta, Ginkgophyta, Coniferophyta, Gnetophyta and Anthophyta); invertebrates (Cnidaria, Phylaethmimtes, Annelidia, Mollusca, Nemataoda, Arthropoda and Echinodermata); fish (Chondrichtytes and Actinopterygii); amphibians (Batrachomorpha); reptiles (Anapsida, Lepidosauromorpha and Archosauromorpha); and mammals (Monotremata, Metatheria and Eutheria).

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 interpret phylogenies in order to understand the relatedness of taxonomic groups and the pattern of evolutionary changes in structures, processes and behaviours
- CLO 2 describe the characteristics of different evolutionary lineages of plants and animals and recall the names of the main taxonomic groups
- CLO 3 explain the possible selective advantages of the highlighted structures, processes and behaviours

BIOL1501
Bioethics (6 credits)

Academic Year
2021
On successful completion of this course, students should be able to:

A. Understand the basis of one's own position, as well as the basis of another person's opinion
B. Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use communication skills and techniques ineffective, leading generally to inappropriate and usually erroneous conclusions to real-world problems.
C. Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems.
D. Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective individual as well as collaborative-based organizational and presentational skills.

This course will be offered subject to a minimum enrollment number and availability of teachers.
Outcomes

CLO 1 demonstrate understanding and to explain the principle of inheritance, recombinant DNA and cloning
CLO 2 gain deep understanding about the advancement of biotechnology
CLO 3 determine and explain the benefits and shortcomings of the application of biotechnology knowledge

Pre-requisites (and Co-requisites and Impermissible combinations)

NIL
Not for students with level 3 or above in HKDSE Biology or Combined Science with Biology component or equivalent.

Offer in 2021 - 2022

N Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)

A
Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use communication skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective individual as well as collaborative-based organizational and presentational skills.

B
Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective individual as well as collaborative-based organizational and presentational skills.

C
Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw moderately appropriate conclusions to real-world problems. Demonstrate moderately individual as well as collaborative-based organizational and presentational skills.

D
Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate individual as well as collaborative-based organizational and presentational skills of limited effectiveness.

Fail
Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use communication skills and techniques and analysis of data and results inappropriately, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness individual as well as collaborative-based organizational and presentational skills.

BIOL2101

Principles of food chemistry (6 credits)

Offering Department

Biological Sciences

Course Co-ordinator

Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)

Teachers Involved

Dr J C Y Lee, School of Biological Sciences

Course Objectives

To provide a basic understanding of chemistry in food systems, and to provide practical training in chemistry related to food science and nutrition.

Course Contents & Topics

The course will cover the components of food, including water, proteins, carbohydrates and lipids, and minor components such as enzymes, vitamins, minerals, colorants, flavorants and additives. The physical and chemical properties of these important constituents of foods are covered in detail, and form the basis for understanding the reactions which occur during the production, processing, storage and handling of foods, and in understanding the methods used in analyzing foods.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand the functions and properties of major and minor food components
CLO 2 understand the basic chemistry behind food processing
CLO 3 understand how major chemical and biochemical reactions influence food quality
CLO 4 have integrated their knowledge of biological and chemical principles into a food science and nutrition context

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL1201; and NOT for students who have passed in BIOL3201.

The course is only for students admitted in 2017-2018 or thereafter.

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)

A
Demonstrate thorough grasp of the subject matter covered. Show extensive knowledge and understanding of the topics covered and critically apply this knowledge. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions.

B
Demonstrate general but incomplete grasp of the subject matter covered. Show thorough knowledge and understanding of the content and a high level of competence in the topics covered and able to apply this knowledge and skills to most situations. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions.

C
Demonstrate general but incomplete grasp of the subject matter covered. The student has a sound knowledge and understanding of the main areas of content and has achieved an adequate level of competence in the topics covered. Use lab skills and techniques and analysis of data and results to draw moderately appropriate conclusions.

D
Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show a basic knowledge and understanding of the content and has achieved a limited level of competence in the topics covered. Use lab skills and techniques and analysis of data and results to draw appropriate conclusions occasionally.

Fail
Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show elementary...
### BIOL2102: Biostatistics (6 credits)

**Offering Department:** Biological Sciences  
**Quota:** 169  
**Course Co-ordinator:** Dr E Pickett, Faculty (epickett@hku.hk)  
**Teachers Involved:** (Dr E Pickett, Faculty of Science)  
(Prof. D Gaitan-Espitia, School of Biological Sciences)

#### Course Objectives

This course aims to introduce students to the core ideas and concepts of statistical analysis with special attention to the modeling approaches used in biological sciences. The course will give students the skills and knowledge to understand how to apply these concepts using the R statistical programming language for data analysis. Although the course covers some basic concepts (experimental design, distributions, hypothesis testing), the main emphasis of the course is on model building and selection, linear models (regression and analysis of variance), basic random-effects and mixed models, and multivariate statistics (PCA, MANOVA).

#### Course Contents & Topics

- Introduction to Statistics and Probability; Descriptive Statistics and Estimation; Statistical Inference; Statistical experiments and Design; Likelihood and Model Selection, Categorical predictors (ANCOVA and ANOVA); Factorial design, Multiple Comparisons and Block Design; Correlation and Regression Analyses; Multiple Regression Analysis; Introduction to Multivariate Analyses. Students will learn how to use R to conduct the statistical analyses, and correctly interpret the results.

#### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: formulate biological questions into statistical questions
- CLO 2: design experiments effectively
- CLO 3: appreciate and interpret statistics in scientific papers
- CLO 4: use R to carry out common statistical computations
- CLO 5: understand the assumptions of commonly used statistical methods
- CLO 6: critically evaluate the scientific literature
- CLO 7: apply different statistical modeling methods

#### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL1600 or BIOL1110 or BIOL2306 or ENVS1301 or ENVS2002 or SCNC1111

#### Offer in 2021 - 2022

- **Y** 1st sem  
- **Y** 2022 - 2023  
- **Y** Examination  
- **No Exam**

#### Grade Descriptors (A+ to F)

- **A:** Demonstrate thorough grasp of the subject and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking. Apply highly effective computational skills and techniques for basic statistical analyses. Be able to critically use data and statistical results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.

- **B:** Demonstrate substantial grasp of the subject and skills required for attaining at least most of the course learning outcomes. Present evidence of analytical and critical abilities and logical thinking. Apply effective computational skills and techniques for basic statistical analyses. Be able to correctly use data and statistical results to draw appropriate conclusions. Apply effective organizational and presentational skills.

- **C:** Demonstrate general but incomplete grasp of the subject and skills required for attaining some of the course learning outcomes. Present evidence of some analytical and critical abilities and logical thinking. Apply moderately effective computational skills and techniques for basic statistical analyses. Demonstrate mostly correct but some erroneous use of data and statistical results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

- **D:** Demonstrate partial and limited grasp of the subject and skills required for attaining some of the course learning outcomes. Present evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Apply limited or barely effective computational skills and techniques for basic statistical analyses. Demonstrate limited ability to use data and statistical results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

- **Fail:** Demonstrate evidence of little or no grasp of the subject and skills required for attaining any of the course learning outcomes. Present evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Apply minimally effective or ineffective computational skills and techniques for basic statistical analyses. Demonstrate misuse of data and statistical results and/or unable to draw appropriate conclusions. Apply minimally effective or ineffective organizational and presentational skills.

**BIOL2103 Biological sciences laboratory course (6 credits)**

**Offering Department** Biological Sciences

**Course Co-ordinator** Dr W Y Lui, Biological Sciences (wylui@hku.hk)

**Teachers Involved**
(Dr A Yan, Biological Sciences)
(Dr W Y Lui, Biological Sciences)
(Prof B K C Chow, Biological Sciences)

**Course Objectives**
The objective is to provide students a comprehensive training in basic laboratory techniques used in modern biological studies. The course will cover a number of techniques used by molecular biologists and microbiologists to conduct scientific research.

**Course Contents & Topics**
This course will be divided into three modules and each module will have 3 laboratory sessions.

Module one: Nucleic acid analysis
DNA & RNA isolation, spectrometry, gel electrophoresis, restriction enzyme analysis and DNA sequence analysis.

Module two: Protein analysis
Centrifugation, chromatography and SDS-PAGE electrophoresis.

Module three: Microbiology
Microscopy, observation of microorganisms and staining of bacteria, isolation of pure cultures by streaking and serial dilution, enumeration of microbial cells by Petroff-Hausser counting chamber, and turbidity. Identification and classification of microbes from natural source and statistical analysis.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge in proper use of simple research equipment
- CLO 2 demonstrate knowledge and understanding of how and why certain techniques are used in a research setting
- CLO 3 master some basic laboratory techniques for carrying out experiments
- CLO 4 understand the different ways that microorganisms were categorized according to their size, shape, colour and response to dye etc. and how they were counted

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in BIOL1110. Not for students having taken any level 3 (or above) Biochemistry (BIOC) course or BBMS2001.

**Offer in 2021 - 2022**

Course Objectives
The interaction between organisms and their environment is addressed using an issue-based approach in order to explain how the ecology of plants and animals has been shaped by evolution through interactions with their living and non-living environment. The course also demonstrates how we can understand and explain the significance of what we see in nature using scientific methods. A field course component provides the opportunity to investigate how the environment influences community composition, biodiversity and adaptive radiation in a variety of habitats.

Course Contents & Topics
The environment influences organisms profoundly. It affects their present-day ecology (determining where they live and how many can survive there) and, through natural selection acting over past generations, influences their form and adaptations. Present day human-induced changes to the environment are also responsible for endangering species and degrading their habitats. This introductory course introduces some basic scientific principles of ecology and evolution, showing how they are linked to the environment by physiological tolerances and evolutionary adaptation which, in turn, lead to specialization and generate biodiversity. Individuals and their interactions will be a major focus of the course together with discussion of population dynamics, community structuring, life histories, and niche dynamics. The principles of ecology and evolution resulting from interaction with the environment will also be demonstrated by describing the origins of modern humans, including our fossil record and relationship to other primates, and the main ecological transformations caused by humans and their environmental impacts. The course will conclude with an account of the importance of biodiversity, and the factors that threaten it globally.

Lectures are complemented by a 5-day field course during the Reading Week when students visit a variety of Hong Kong habitats to study their biodiversity, community composition and the relationship between organisms and their environment.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 understand how scientific methods (hypotheses, experiments, comparisons) are used to investigate...
ecological and evolutionary processes
CLO 2 understand the basic mechanism of natural selection, and how interactions with the environment lead to adaptation and generate biodiversity
CLO 3 understand that ecology and behaviour can be interpreted in the light of selective pressures from the environment upon individual organisms
CLO 4 understand the ecological factors influencing evolution, using the human evolutionary tree as an example
CLO 5 understand the community ecology and biodiversity of selected Hong Kong habitats, and typical adaptations of organisms found there

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL1110 or BIOL1300 or ENV1301 or ENV1401

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

Grade Descriptors (A+ to F)
A Evidence of complete or near-complete understanding and a thorough grasp of the subject as demonstrated by attainment of all learning outcomes, and excellent use of named (organism) examples, including local species and habitats. Show excellent organizational, presentional and/or analytical skills and fieldwork techniques. Excellent or outstanding (for A+) work relative to what is required at degree level.
B Evidence of substantial understanding and a good grasp of the subject as demonstrated by attainment of the majority of learning outcomes, and use of named (organism) examples, including local species and habitats. Show good organizational, presentional and/or analytical skills and fieldwork techniques. Work more than sufficient for what is required at degree level.
C Evidence of general understanding with an adequate (but incomplete) grasp of the subject, as demonstrated by general but incomplete attainment of most of the learning outcomes, with limited use of named (organism) examples. Show fair organizational, analytical, presentional and/or analytical skills and fieldwork techniques. Work sufficient for what is required for degree level.
D Evidence of retention of a minimum of relevant information and incomplete understanding of the subject (i.e. knowledge is very incomplete), as demonstrated by partial but limited attainment of learning outcomes. Insufficient familiarity with fieldwork techniques, habitats or organisms. Work merely (for D+) or barely (D) adequate for what is required at degree level.
Fail Evidence of poor or inadequate knowledge and understanding of the subject such that the majority of learning outcomes cannot be attained. Little or no evidence of familiarity with fieldwork techniques, habitats or organisms. Work fails to reach degree level.

Communication-intensive Course
N

Course Type
Lecture with laboratory component course

Course Teaching & Learning Activities

Activities Details No. of Hours
Lectures 24 hours lectures, plus 10 hours of lectures during residential field course 34
Laboratory at least 36 hours field and laboratory work, as groups and individuals 36
Reading / Self study during the semester in the form of internet tutorials, assigned reading and a laboratory workshop 80

Assessment Methods and Weighting

Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
Assignments Field course assessment 30 CLO 1,2,3,4
Examination 60 CLO 1,5
Test In-lecture quizzes 20 CLO 1,2,3,4

Required/recommended reading and online materials

Course Website
http://moodle.hku.hk

Additional Course Information
A compulsory 5-day field component during the reading week. Details of the location and cost of the field course, which will be held in the Reading week of semester 1, will be made available at the start of the semester. Priority will be given to students majoring in BS, BS intensive, E&B and E&B intensive.

BIOL2408
Green earth-plants and mankind (6 credits)

Offering Department
Biological Sciences

Academic Year
2021

Quota
30

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL1110 and BIOL2103

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N Examination ---

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentional skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course...
Learning outcomes. Demonstrate substantial grasp of the subject. Show evidence of analytical and critical abilities and logical thinking. Apply effective lab skills and techniques. Correct use of data and results to draw appropriate conclusions. Apply effective organizational and presentational skills.

**C**
Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

**D**
Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

**Fail**
Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

### Course Objectives
The course will give an overview of the innovative developments in biotech industry and provide the students with useful tools in learning how an exciting research idea can be turned into a viable business.

### Course Contents & Topics
The purpose of the course is to introduce you to the entrepreneurial process with a focus on the biotechnology industry. The course will provide a thoughtful, practical guide to the process of successfully launching an entrepreneurial venture. We place a special emphasis on the decision to become a biotech entrepreneur and how to develop successful business ideas, however we will also discuss the process of moving from an idea to a biotech firm. Topics on intellectual properties, patent laws, patent application process, licensing and fundraising will be covered as well. Throughout the course, guest entrepreneurs, managers and directors of the biotech industry will be presenting case studies and explain their involvement in various biotech and pharmaceutical companies.

**Topics:**
1. Introduction to Biotechnology Industry: 4 P in Biotechnology Business (3 hours)
2. IP rights: Patent application, Patent system, USPTO, SIPO, PCT (6 hours)
3. Licensing of IP rights (3 hours)
4. Technology Transfer Office and HKSTP (3 hours)
5. How to raise fund for startup companies (3 hours)?
6. Agrobiotechnology and Green Tech (Monsanto, Novozymes, etc) (4.5 hours)
7. Drug development and clinical trials (Gilead Sciences, Wuxi PharmaTech, etc). (6 hours)
8. Diagnostics business (BGI, Diagcor, etc) (4.5 hours)
9. Company analysis (3 hours)
10. Company Visit
11. Company analysis

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 understand and demonstrate knowledge of the development and management of biotechnology business
- CLO 2 understand and demonstrate how discoveries and inventions are commercialized
- CLO 3 navigate the various steps in the development of a biotechnology derived product: from bench, to scale-up, to market
- CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries
- CLO 5 participate and contribute to the business side of scientific enterprises

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in 1110
NOT for students who have passed in BIOL3409.

### Offer in 2021 - 2022

## Animal behaviour (6 credits)

### Course Objectives
The purpose of this course is to introduce students with the diversity in animal behaviour and the means of understanding animal behaviour. The course will teach students the underlying mechanism and function of behaviour, and how did a particular behaviour develop and evolve.

### Course Contents & Topics
Why do animal behaviours vary among individuals and species? How do environment and ecological interactions influence behaviours? What are the underlying genetic mechanism of a particular behaviour? In this course, students will learn to think within the ecological and evolutionary perspectives on animal behaviour. Topics include behavioral ecology; behavioral genetics; reproductive behaviour; mating system; parental care; communication; foraging; learning; migration and biological rhythms; evolutionary stable strategies; sexual selection; altruism; and sociality in vertebrates and invertebrates. We will discuss several classical studies that form the foundation of this field, as well as more recent research that have led to current understanding of animal behaviour. This course will give students a unique perspective on the natural world and our own species.

### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 learn and appreciate the mechanism, function, development, and evolution of animal behaviour
- CLO 2 understand the complexity of interactions between natural and sexual selection and animal behaviour
- CLO 3 appreciate current theories that form basis for modern understanding of animal behaviour
- CLO 4 learn the scientific reasoning and methodology in the field of Animal Behaviour
- CLO 5 think analytically, based upon ecological and evolutionary principles, to explain the behaviours observed in the natural world and our own species

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL2306

### Grade Descriptors (A+ to F)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Evidence of a thorough grasp of the subject in a broader comparative perspective as demonstrated by background reading and excellent use of named examples and case studies. Evidence of independent critical thought with excellent use of a broad range of fundamental concepts to draw insightful and logical conclusions. Show eagerness to learn, great abilities of independent work, effective presentation skills with good analytical argumentation. Excellent or outstanding work relative to what is required at degree level.</td>
</tr>
<tr>
<td>B</td>
<td>Evidence of a good grasp of the subject as demonstrated by some background reading and appropriate use of named examples and some case studies. Evidence of good critical thought, although not necessarily original. Good and very good (but not outstanding) abilities of independent work, effective presentation skills with good analytical and logical argumentation. Good general command of acquired knowledge to draw meaningful and logical conclusions. Work more than sufficient for what is required at degree level.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate an adequate, but not coherent and incomplete grasp of the subject, with limited background reading and limited use of named examples and case studies. Some abilities of logical critical thinking, but not insightful and/or independent; only partial abilities to use acquired knowledge and work independently to draw meaningful conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate some grasp of the subject, but partial and limited to the most basic concepts, examples, and limited (or none) case studies. Insufficient evidence of background reading, limited abilities of critical independent thinking, and not particularly effective presentation skills with generally weak logical argumentation and restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.</td>
</tr>
<tr>
<td>F</td>
<td>No evidence of basic minimum knowledge and understanding of the subject. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.</td>
</tr>

### Course Co-ordinator
Dr S W Y Sin, Biological Sciences (sinyw@hku.hk)

### Teachers Involved
Dr S W Y Sin, School of Biological Sciences
## BIOL3105

**Offering Department:** Biological Sciences  
**Course Co-ordinator:** Prof A O L Wong, Biological Sciences (awl Wong@hku.hk)  
**Teachers Involved:**  
- DR W Y Lu, Biological Sciences  
- DR Y L Zhai, Biological Sciences  
- Prof A O L Wong, Biological Sciences

### Course Objectives

The course covers the major aspects of animal physiology for environmental adaptation in terrestrial & aquatic habitats. Stress will be given to the functional interactions between animals and the environment, especially on the mechanisms by which animals obtain resources for survival from the environment, detect environmental changes via sensory structures, and respond to adversities in the environment by altering their body forms & functions.

### Course Contents & Topics

- Basic concepts of animal adaptation to environmental changes/extreme environment: Modification of energy metabolism according to oxygen availability; Different models of gaseous exchange for aquatic, inter-tidal, and terrestrial habitats; Cross-adaptation to different environment: air-breathing fish vs diving adaptations in mammals; Visual signals & differential levels of photoresponse from protozoa to mammals; Background adaptation: functions & mechanisms for color presentation; Sound wave as environmental signals: functions & mechanisms of detection in aquatic & terrestrial habitats; Echo sounding in bats for navigation without visual signals; Behavioral, morphological & physiological adaptations in hostile environment: extreme hot vs freezing cold; salinity changes in aquatic habitats & water availability in terrestrial habitats on osmoregulation, water balance & nitrogenous metabolism.

### Course Learning Outcomes

On successful completion of this course, students should be able to:
- CLO 1 have a broad understanding on functional interactions between animals and their environment  
- CLO 2 appreciate the role of the environment in shaping the evolution of animal structures & functions  
- CLO 3 comprehend a wide range of physiological adaptations (both structurally & functionally) in coping with environmental stress and environmental changes

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2103 or BIOL2220 or BIOC2600 or MEDE2301

### Offer in 2021 - 2023

- Y 2nd sem  
- Offer in 2022 - 2023 : Y

### BIOL3108 Microbial physiology (6 credits)

#### Offering Department
Biological Sciences

#### Quota
50

#### Course Co-ordinator
Dr A Yan, Biological Sciences (ayan8@hku.hk)

#### Teachers Involved
Dr A Yan, Biological Sciences

#### Course Objectives
Microbes are amazing and important entities on earth. Knowledge of microbes is widely applied in food, pharmaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology provides molecular basis for understanding of these important processes and applications, and to serve as essential foundations for sub-disciplines of Microbiology, such as environmental, industrial, and medicinal Microbiology. Upon completion, students will acquire fundamental knowledge and methodologies for microbial studies and be able to relate knowledge to various microbial applications.

#### Course Contents & Topics
Serving as a fundamental course for the understanding of the world of microorganisms, Microbial Physiology is organized and presented in three themes: 'Microbial Rules', 'Microbial Breath', and 'Microbial Adaptation'. Under these three themes, a broad range of highly educational and interesting topics are presented including: 'Microorganisms and their position in the living world', 'Fundamental methodologies for the study of microbes', 'Microbial structures, organization, and functions', 'Microbial growth and control', 'Energy Generation', 'Central metabolism', and 'Regulation and control of metabolic Activities'. Topics are taught in a coherent manner with a highly interactive tutorial session following each of the topics such that students will achieve a high quality, stimulating, and problem-based learning experiences.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:

1. **CLO 1** appreciate the diversity of microbial metabolisms and the strategies for their adaptive responses
2. **CLO 2** comprehend the principles underlying the dynamic nature of microbial physiology
3. **CLO 3** relate knowledge to practical application of microbes in industry and medicine
4. **CLO 4** develop abilities to read and assess scientific literature in microbiology area

#### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOC2600 or BIOL2103 or BIOC3604

#### Offer in 2021 - 2022

**BIOL3110 Environmental Toxicology (6 credits)**

**Offering Department** Biological Sciences

**Course Co-ordinator** TBC, Biological Sciences

**Teachers Involved** (TBC, Biological Sciences)

**Course Objectives**
To introduce students to the basic principles of environmental and ecological toxicology by analysis of the fate of pollutants in lithosphere, hydrosphere, atmosphere and biosphere. Mechanisms of toxicity as dose-response will be analyzed through adsorption, metabolism, toxicity and elimination. Major metabolic processes and enzymes involved will be highlighted. Specific cases of toxicity will be presented and discussed.

**Course Contents & Topics**
1. Environmental chemistry of pollutants and their toxicity and factors governing toxic effects, bioaccumulation and biomagnification
2. Partitioning and transformation of environmental pollutants
3. Quantitative toxicology using dose-response approaches
4. Emerging endocrine-disrupting chemicals and carcinogens at molecular levels
5. Elimination of pollutants from the environments
6. Laboratory testing of toxicity and review various adsorption isotherm models

**Pre-requisites (and Co-requisites and impermissible combinations)**
Pass in BIOL2103 or CHEM3141 or ENVS3042

**Course Teaching & Learning Activities**
- **Activities** Details No. of Hours
- Lectures
- Laboratory laboratory, assignment, and seminar 36
- Reading / Self study

**Assessment Methods and Weighting**
- **Methods** Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
- Examination 60 CLO 1,2,3,4,5
- Laboratory reports student-based assessment includes laboratory report, assignment, presentations or other forms 40 CLO 1,2,3,4,5

**Required/recommended reading and online materials**

**Course Website**
http://moodle.hku.hk/

**Additional Course**
This course will be offered subject to a minimum enrollment number and availability of teachers.
**BIOI3201 Food chemistry (6 credits)**

**Offering Department:** Biological Sciences  
**Academic Year:** 2021  
**Quota:** 60  
**Teachers Involved:**  
- Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)  
- Dr C B Chan, Biological Sciences  
- Dr T G S Lam, School of Biological Sciences  
**Course Objectives:**  
To provide a basic understanding of chemistry in food systems, and to provide practical training in chemistry related to food science and nutrition.

**Course Contents & Topics:**  
The course will cover the components of food, including water, proteins, carbohydrates and lipids, and minor components such as enzymes, vitamins, minerals, colorants, flavorants and additives. The physical and chemical properties of these important constituents of foods are covered in detail, and form the basis for understanding the reactions which occur during the production, processing, storage and handling of foods, and in understanding the methods used in analyzing foods.

A series of laboratory sessions will cover analysis of food components, protein chemistry, lipid oxidation, properties of sugars and starches, enzymatic and non-enzymatic browning reactions, and sensory analysis of foods.

**Course Learning Outcomes:**  
On successful completion of this course, students should be able to:

- CLO 1 understand the functions and properties of major and minor food components  
- CLO 2 understand the basic chemistry behind food processing  
- CLO 3 have integrated their knowledge of biological and chemical principles into a food science and nutrition context  
- CLO 4 understand the biochemical roles of micronutrient in human health

**Pre-requisites and Co-requisites:**  
Pass in BIOC2600 or BIOI2103 or BIOI2220 or MEDE2301; and NOT for students who have passed in BIOI2101. This course is only for students admitted in 2016-2017 or before.

**Offer in 2021 - 2022:**

Lab. A (Quota: 30): 14:30 pm - 18:50 pm (Monday)  
Lab. B (Quota 30) : 13:30 pm - 17:50 pm (Wednesday)

**Communication-intensive Course:**

**BIOI3202 Nutritional biochemistry (6 credits)**

**Offering Department:** Biological Sciences  
**Academic Year:** 2021  
**Quota:** 100  
**Teachers Involved:**  
- Dr C B Chan, Biological Sciences (chanchb@hku.hk)  
- (Dr C B Chan, Biological Sciences)  
**Course Objectives:**  
To introduce the fundamental concepts of nutrition through an integrated approach in discussing the interactions between diet and intermediary metabolism.

**Course Contents & Topics:**  
- Essential nutrients and their requirement;  
- Metabolic control of macronutrient utilization;  
- Metabolism of micronutrients  
- Nutritional impacts of hexoses, long chain polyunsaturated fatty acid, cholesterol, amino acids, vitamins and minerals

**Course Learning Outcomes:**  
On successful completion of this course, students should be able to:

- CLO 1 explain how different organs coordinate to achieve metabolic control of glucose  
- CLO 2 understand the metabolic pathways of cholesterol and polyunsaturated fatty acids  
- CLO 3 understand the theoretical constructs of nitrogen requirement and the importance of the urea cycle  
- CLO 4 understand the biochemical roles of micronutrient in human health

---

**Pre-requisites:**  
Pass in BIOC2600 or BIOI2103 or BIOI2220 or MEDE2301; and NOT for students who have passed in BIOI2101. This course is only for students admitted in 2016-2017 or before.

Lab. B (Quota 30): 13:30 pm - 17:50 pm (Wednesday)
### Course Content & Topics

This course provides the key concepts and principles of food microbiology with special emphasis on the interaction between microorganisms and food. Microbial food spoilage and foodborne diseases will be discussed in detail.

### Pre-requisites & Co-requisites

Pass in BIOL2600 or BIOL2220 or MED2230

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 describe methods for evaluating microorganisms and their products in foods
- CLO 2 demonstrate an understanding of the causes of food spoilage, and predict response of a microorganism that can spoil a given food
- CLO 3 develop and implement appropriate measures to control the spoilage and pathogenic microorganisms in a food
- CLO 4 demonstrate the ability to work in a team to investigate and solve problems in food microbiology

### Required/Recommended Reading & Online Materials

- K. N. Frayn ‘Metabolic Regulation

### Course Website

http://moodle.hku.hk/

### Additional Course Information

This course will be offered subject to a minimum enrollment number and availability of teachers.

### Course Objectives

Detection and enumeration of microbes in foods, Factors that influence microbes in foods, Spores and their significance, Physical methods of food preservation, Chemical preservation and natural antimicrobials, Foodborne pathogens.

### Course Contents

- K. N. Frayn ‘Metabolic Regulation

### Course Tentative Schedule

- **Offer in 2021 - 2022**
  - **Grade Descriptors (A+ to F)**
  - **Communication-intensive Course**

### Communication-intensive Course

N

---

### School of Biological Sciences

Pass in BIOL2600 or BIOL2220 or MED2230

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 explain the biochemical outcomes of nutrient deficiency/excess
- CLO 2 demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.
- CLO 3 demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.
- CLO 4 demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Might show misunderstanding of the materials. Show some ability on knowledge integration, problem identification and solving. Show some ability to analyze and interpret scientific data and draw proper conclusions. Demonstrate adequate organization / writing skills.
- CLO 5 demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Might show misunderstanding of the materials. Show limited ability on knowledge integration, problem identification and solving. Use elementary approaches to analyze and interpret scientific data and draw sometimes erroneous conclusions. Demonstrate basic organization / writing skills.
- CLO 6 demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in problem solving. Fail to integrate information and identify problems. Seriously deficient in ability to analyze and interpret scientific data and draw conclusions. Demonstrate poor organization / writing skills.

---

## BIOL3204

### Nutrition and the life cycle (6 credits)

### Academic Year
2021

### Offering Department
Biological Sciences

### Course Co-ordinator
Dr J C Y Louie, Biological Sciences (jimmy@hku.hk)

### Teachers Involved
(De J C Y Louie, Biological Sciences)

### Course Objectives
Nutritional needs vary throughout different stages of the life cycle. This course aims to cover the functional roles of essential macro- and micro-nutrients and highlight the nutritional concerns during specific times of growth, development, and aging.

### Course Contents & Topics
Teaching and learning will take place through an evidence-based approach and will be organized around key issues: needs of macro- and micronutrients, as well as the physiological and psychological determinants that influence nutrient requirements at different stages of the human life cycle. Socio-economic factors that influence dietary habit and nutritional status will also be covered.

### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: be able to critically assess and identify the specific needs at different stages of the life cycle
- CLO 2: relate the concept of requirement to physiological needs
- CLO 3: understand the impact of socio-cultural factors on nutritional status

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL2220 or BIOC2600 or BIOL3202

### Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023: Y

### Grade Descriptors (A+ to F)

- **A**
  - Demonstrate thorough grasp of the subject matter covered. Show exceptional ability on knowledge integration, problem identification and solving. Show outstanding ability to critically analyze and interpret scientific data and draw appropriate conclusions. Demonstrate highly effective team-based organization and presentation skills.

- **B**
  - Demonstrate substantial grasp of the subject matter covered. Show full ability on knowledge integration, problem identification and solving. Show reasonable ability to critically analyze and interpret scientific data and draw appropriate conclusions. Demonstrate effective team-based organization and presentation skills.

- **C**
  - Demonstrate general but incomplete grasp of the subject matter covered. Might show misunderstanding of the materials. Show some ability on knowledge integration, problem identification and solving. Demonstrate some ability to analyze and interpret scientific data and draw sometimes erroneous conclusions. Demonstrate team-based organization and presentation skills of limited effectiveness.

- **D**
  - Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show limited ability on knowledge integration, problem identification and solving. Use elementary approaches to analyze and interpret scientific data and draw sometimes erroneous conclusions. Demonstrate team-based organization and presentation skills of limited effectiveness.

- **F**
  - Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in problem solving. Fail to integrate information and identify problems. Seriously deficient in ability to analyze and interpret scientific data and draw conclusions. Demonstrate poor organization and presentation skills.

Gropper S.S., Smith J.L., & Groff J.L. Advanced Nutrition and Human Metabolism (Wadsworth, 2009)

### Course Website
http://moodle.hku.hk/

### Additional Course Information
This course will be offered subject to a minimum enrollment number and availability of teachers.
**BIOL3205**

**Human physiology (6 credits)**

**Offering Department** Biological Sciences

**Course Co-ordinator** Dr W Y Lui, Biological Sciences (wylui@hku.hk)

**Teachers Involved**
- Dr C B Chan, Biological Sciences
- (Dr W Y Lui, Biological Sciences)
- (Prof A O L Wong, Biological Sciences)

**Course Objectives**
The course covers major aspects of the physiology of the human body using an integrated approach. After completing this course, students will have acquired fundamental principles of how the body works. Students interested in nutrition and human biology will find this course most useful.

**Course Contents & Topics**
Overview of the physiological systems and homeostasis; Neural and hormonal communication; Nervous system physiology; The digestive system; Cardiac physiology, the blood vessels and blood pressure; The respiratory system; The urinary system; The skeletal & muscular system; Sensory mechanisms; Biological rhythms; Central-peripheral communication in energy homeostasis.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- **CLO 1** comprehend the essence of how the body meets changing conditions while maintaining a relatively constant internal environment
- **CLO 2** understand the functions of various body systems
- **CLO 3** explain normal body functions through integration of basic physiological concepts

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in BIOL2600 or BIOL2103 or BIOL2220 or MEDE2301

**Offer in 2021 - 2022**

**Grade Descriptors (A+ to F)**
- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills.
- **B** Demonstrate substantial command of a broad range of knowledge required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills.
- **C** Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills.
- **D** Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills.
- **Fail** Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective.

**BIOL3206**

**Clinical nutrition (6 credits)**

**Offering Department** Biological Sciences

**Course Co-ordinator** Dr J M F Wan, Biological Sciences (jmfwan@hku.hk)

**Teachers Involved**
- Dr J M F Wan, Biological Sciences

**Course Objectives**
This course aims to provide understanding and insight into diseases associated with diet and basic dietetics, specifically to:
1. Explain the relationships between diet and disease.
2. Describe the role of diet in the development and prevention of common chronic diseases such as diabetes, obesity and anorexia, cardiovascular disease, cancer, immune deficiency and renal failure.
3. Differentiate risk factors that influence dietary choice.
4. Describe the rationales for postoperative nutritional support for hospitalized patients.

**Course Contents & Topics**
The basics of nutrition for health and fitness and medical nutrition therapy. The role of diet in the development and prevention of chronic diseases such as cancer, diabetes, obesity and anorexia as well as bulimia nervosa, cardiovascular diseases, renal failure, etc. Malnutrition. Nutrition and immune function. Medical nutrition therapy for food allergy and food intolerance. Nutrition in pregnancy and lactation.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- **CLO 1** discuss the different relationships between diet and disease
- **CLO 2** describe the role of diet in the development and prevention of diabetes, obesity and anorexia, cardiovascular disease, cancer, immune deficiency, and renal failure
- **CLO 3** clearly differentiate and interpret risk factors that influence dietary choice
- **CLO 4** describe the rationales for postoperative nutritional support for hospitalized patients

**Pre-requisites**
Pass in BIOL3202 or BIOL3203 or BIOL3204 or BIOL3205
School of Biological Sciences

BIOL3207 Principles of toxicology (6 credits) Academic Year 2021

Offering Department Biological Sciences
Course Co-ordinator Dr H S El-Nezami, Biological Sciences (elnezami@hku.hk)

Teachers Involved (Dr H S El-Nezami,Biological Sciences) (Guest Lecturer,Biological Sciences)

Course Objectives
To introduce students to methods used in assessing the toxicity of food contaminants, and to develop their confidence in the handling and interpretation of toxicological data. Students will also be introduced to the basic concepts behind toxicological evaluation, and the criteria for setting guidance values for dietary and non-dietary exposure to chemicals. Students will understand the role of biochemical, metabolic and toxicokinetic studies in toxicological evaluation. This course aims to equip students with basic skills in conducting food toxicological studies.

Course Contents & Topics
Topics include a discussion on exposure and entry routes, fate of toxic substances in the body (toxicokinetics), concepts in experimental toxicology, the dose response relationship, actions of toxic substances, target organ concepts behind toxicological evaluation, and the criteria for setting guidance values for dietary and non-dietary exposure to chemicals. Students will understand the role of biochemical, metabolic and toxicokinetic studies in toxicological evaluation. This course aims to equip students with basic skills in conducting food toxicological studies.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 demonstrate an understanding of the processes involved in absorption, distribution, metabolism and excretion of toxicants, including an understanding of the toxicokinetic behavior of toxicants in mammals
CLO 2 demonstrate an understanding of the various effects induced after exposure to toxicants
CLO 3 demonstrate an understanding of the factors which underlie species differences in response to potential toxicants
CLO 4 demonstrate the ability to work in a team to investigate and solve toxicological problems of importance in human health

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOC2600 or BIOL2220 or BIOL3205 or MEDE2301

Offer in 2021 - 2022 Y 2nd sem Offer in 2022 - 2023 : Y Examination No Exam

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective laboratory/fieldwork skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Substantial grasp of the subject. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective laboratory/fieldwork skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. General but incomplete grasp of the subject. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective laboratory/fieldwork skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Partial but limited grasp of the subject, retention of some relevant information of the subject. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective laboratory/fieldwork skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Little or no grasp of the knowledge and understanding of the subject. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective laboratory/fieldwork skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

S. S. Deshpande. Handbook of Food Toxicology (Marcel Dekker Inc., NY, 2002)

Additional Course Information:

This course will be offered subject to a minimum enrollment number and availability of teachers.

BIOL3208 Food safety and quality management (6 credits) Academic Year 2021

Offering Department Biological Sciences

Course Co-ordinator Dr O Habimana, Biological Sciences (ohabim@hku.hk)

Course Learning Outcomes:

On successful completion of this course, students should be able to:

- CLO 1 understand the historical development of government regulation of food safety
- CLO 2 be familiar with a set of management techniques applicable in the food industry
- CLO 3 be able to analyze food production problems and make recommendations for action to improve quality and safety

Pre-requisites (and Co-requisites and Impermissible combinations):

Pass in BIOL3201 or BIOL3203

Grade Descriptors (A+ to F):

A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use quality management skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.

C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.

D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.

Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.
Food and nutrient analysis (6 credits)

Offering Department: Biological Sciences

Quota: 80

Course Co-ordinator: Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)

Teachers Involved: (Dr J C Y Lee, Biological Sciences)

Pre-requisites: Not for students who have passed in CHEM3242

Course Website: http://moodle.hku.hk/

Offer in 2021 - 2022

Y 1st sem

Offer in 2022 - 2023: Y

Examination

No Exam

Course Objectives

To introduce basic principles and provide practical training in food and nutrient analysis. To help students to understand the principles behind analytical instruments used in food analysis. To train students to analyze major and minor food components as well as some food adulterants.

Course Contents & Topics

The key concepts in professional food analysis in an industry context will be introduced. Basic analytical techniques for macronutrients (e.g. protein, carbohydrate and fats), micronutrients (vitamins and minerals) and adulterants in food will be covered. A variety of classical and instrumental techniques used in food analysis will be discussed: rheology and texture measurement, thermal analysis, color, spectroscopy, chromatography and electrophoresis.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 understand the basic principles of food and nutrient analysis
- CLO 2 be familiar with a variety of classical and instrumental analytical techniques
- CLO 3 understand the principles behind analytical instruments associated with food
- CLO 4 be able apply their knowledge and laboratory skills in novel situations to measure and analyze the macronutrient and micronutrient of food products
- CLO 5 be able to select and justify an appropriate analytical technique to solve practical food analysis problems

This course will be offered subject to a minimum enrollment number and availability of teachers.
BIOL3210

Offering Department: Biological Sciences
Course Co-ordinator: Prof H Corke, Biological Sciences (harold@hku.hk)

Course Objectives:
To provide a broad understanding of the utilization and significance of the major grains in the food industry and in human health and nutrition.

Course Contents & Topics:
- Global grain production and consumption
- The Green Revolution and its aftermath
- International grain trade
- Wheat: flour milling, dough rheology, the baking process, baking quality
- Wheat: quality of Asian products including steamed bread and noodles
- Wheat: small-scale tests for quality
- Rice: nutritional quality, consumer preferences, milling, quality, quality testing, products
- Maize: products of wet milling, animal feed development
- Biofuels focusing on bioethanol
- Illustrative business case studies on the grain processing industry will be discussed

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1 understand the major production, import, and export patterns that support the global utilization of grain
CLO 2 understand the technology behind the production of grain-based foods
CLO 3 understand the scope and nature of professional level quality testing for grain products
CLO 4 appreciate the constraints to global food sufficiency
CLO 5 appreciate the ethical issues behind the diversion of grain into meat and biofuel production

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in any level 2 BIOL course

Offer in 2021 - 2022
Grade Descriptors
(A+ to F)

A
Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

B
Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.

C
Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.

D
Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.

Fail
Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

Course Teaching & Learning Activities:
- Lecture-based course
- Activities: Details
  - Lectures: 36

http://moodle.hku.hk/

Additional Course Information:
This course will be offered subject to a minimum enrollment number and availability of teachers.

BIOL3211

Offering Department: Biological Sciences
Course Co-ordinator: Dr K C Tan-Un, Biological Sciences (kctanun@hku.hk)

Course Objectives:
Recent advances in the understanding of the human genome have resulted in the emergence of a new science called Nutrigenomics. This course aims to provide students with an understanding of the biochemical mechanisms underpinning the science of nutrition and the relation between genes and diet-related diseases. It explains the role of nutrition at the molecular level and the concepts of nutrigenomics and nutrigenetics.

Course Contents & Topics:
- Concepts of nutrigenomics, nutrigenetics, metabolomics and nutritional biochemistry.
- Regulation of gene expression: Single Nucleotide Polymorphisms and relation to diseases.
- Overview of lipid metabolism; cholesterol metabolic pathway; hyperlipidaemia, LDL receptor mutations.
- Relevance of folate, vitamin B12; hyperhomocysteinemia and gene polymorphisms in diseases.
- Epigenetics, Barker’s hypothesis, influence of maternal nutrition in fetal gene expression. Obesity, genetic predisposition, candidate genes like leptin, FTO and other hormones involved in the control of appetite.
- Polyunsaturated fatty acid and their roles in the control of gene expression example lipogenesis and lipid oxidation pathways.
- Inborn errors of metabolism in the context of genetic mutations and personalized diet therapy.

Academic Year: 2021
Quota: 40

School of Biological Sciences
### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: explain the principles of the control of gene expression.
- CLO 2: demonstrate understanding of the role of metabolic pathways in relationship to diet, gene expression and disease.
- CLO 3: discuss how genetic variations are used to study the role of genes in nutrient-related cellular processes.
- CLO 4: explain the relationship between genotype, epigenetics and diet-related diseases.
- CLO 5: critically evaluate current theories of personalized nutrition based on individual genetic variation.

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC2600 or BIOL2220 or MEDB2301

### Offer in 2021 - 2022

- **Grade Descriptors** (A+ to F)
  - A: Demonstrate thorough grasp of the subject matter covered. Show extensive ability of knowledge integration and problem solving skills. Show excellent ability to critically analyze and interpret complex scientific data and draw appropriate conclusions.
  - B: Demonstrate substantial grasp of the subject matter covered. Show substantial ability of knowledge integration and problem solving skills. Show substantial ability to critically analyze and interpret scientific data and draw appropriate conclusions. Demonstrate effective organization and writing skills.
  - C: Demonstrate general and acceptable grasp of the subject matter covered. Show acceptable ability of knowledge integration and problem solving skills. Show moderate ability to analyze and interpret scientific data and draw proper conclusions. Demonstrate moderate organization and writing skills.
  - D: Demonstrate marginal grasp of the subject matter covered. Show limited ability on knowledge integration and problem solving skills. Show limited ability to analyze and interpret scientific data. Demonstrate basic organization and writing skills.
  - Fail: Demonstrate little or no grasp, with little retention of information of the subject matter covered. Show lack of coherent and logical thinking, and minimal evidence in problem solving. Fail to integrate information and identify problems. Show little or minimal ability to analyze and interpret scientific data and draw conclusions. Demonstrate poor organization and writing skills.

- Journals in Nutrition, Molecular Biology and Genetics

### Course Website

http://moodle.hku.hk/

### Additional Course Information

This course will be offered subject to a minimum enrollment number and availability of teachers.

### Course Contents & Topics

Topics covered will include the validity and reliability of different methods, estimations of energy requirements, the use of food composition databases, nutrition screening tools and the planning and use of national surveys for monitoring and evaluation. Students will conduct project work and produce and present professional-level reports using dietary assessment tools.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: understand the principles of dietary assessment methods, and the strengths of limitations of these methods.
- CLO 2: evaluate the validity and reliability of dietary assessment tools.
- CLO 3: choose the most appropriate nutrition assessment methods for different purposes.
- CLO 4: explain the meaning and uses of Dietary Reference Intakes.
- CLO 5: competently use dietary assessment software with local and international nutrient databases to assess individual dietary intake.
- CLO 6: interpret foods and diets in terms of nutritional quality and nutrient adequacy, and make appropriate recommendations for improvement, in both product development and dietary review contexts.

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2102

### Offer in 2021 - 2022

- **Grade Descriptors** (A+ to F)
  - A: Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use practical skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.
  - B: Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use practical skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.
  - C: Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use practical skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems.

### Communication-intensive Course

N
Course Objectives

To allow students to develop an understanding of the propagation, treatment and disposal of food waste relevant within the farm to table chain. To allow students to critically evaluate food waste management and resource recovery potential in Hong Kong in comparison to other countries in Asia/Worldwide.

Course Contents & Topics

With our current global population estimated to reach 9.1 billion in 2050, food production will be expected to increase by 70% to meet food demand. However, our current world food supply is instead declining, with 1/4 to 1/3 of all food produced for human consumption lost or wasted. This amounts to a staggering 1 to 2 billion metric tons per year! Clearly we should be worried about food wastage. In this course, the social, economic, and environmental implications associated with food waste will be identified, by presenting relevant facts and figures and case studies embodying agricultural, industrial and consumer waste-types. Basic waste management concepts will also be covered, examining current waste management in Hong Kong compared to other countries in Asia, while providing the basis for examining our own personal waste footprint. This course will address current applications and limitations of food waste treatment technologies.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 understand and define the various types of waste as well as create an awareness of individual waste footprint.
- CLO 2 be able to define the 3 R's in waste management (reduce, reuse, recycle), and be familiarized with waste policies in Hong Kong compared to other countries in Asia/Worldwide.
- CLO 3 be able to describe current and novel technologies for treating waste, as well as transforming waste into value added resources.
- CLO 4 to develop written and oral presentation skills necessary to effectively convey technical, economic, and social information related to waste management.

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2101

Offer in 2021 - 2022

Y 2nd sem  Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)

A  Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use quality management skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

B  Demonstrate substantial grasp of the subject matter covered. School of Biological Sciences

Food, environment and health (6 credits)

**Offering Department**
- Biological Sciences

**Course Co-ordinator**
- Dr T C S Lam, Biological Sciences (thomas.lam@hku.hk)

**Teachers Involved**
- (Dr K S Leung, School of Biological Sciences)
- (Dr T C S Lam, School of Biological Sciences)

**Course Objectives**
A cross-disciplinary exploration of the environmental, socio-economic, public health and personal nutrition contexts of food systems. To focus on how our food choices influence the environment and how the environment impacts our diet. To examine the interactions among environment (e.g. pollution, soil and water quality, climate change), food resources (growth, production, consumption, processing, distribution and disposal) and health.

**Course Contents & Topics**
The environment, human well-being and the functioning of society are highly influenced by food production and consumption. Are we destroying the environment as we struggle to feed growing populations? Is the environment becoming increasingly toxic for our health? The course will consist of three blocks: 1) The influence of food consumption on the environment; 2) The impact of environment on food and human health, and 3) What actions can improve these interactions, through evidence-based case examples. A Problem Based Learning (PBL) approach will be used with emphasis on 'real-life' cases connecting human nutrition, well-being and environmental health. Topics will include impacts of certain dietary habits and demands on food systems (e.g. demand for cheap sources of calories, rise of meat consumption, demand for year-round luxury foods) and the depletion of soil and increased fertilizers' use. We will consider how toxins, known as xenobiotics, affect human health and how sensory decisions are influenced by the environment. The holistic approach used will help the students to navigate complex environmental and food-related decisions and expressions, both public and private. Students will learn to critically evaluate the sociocultural, ethical and economic aspects of food and environment and understand the importance of biologically sustainable food production and high quality food being a just model for a healthy individual, environment and overall society.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

- CLO 1 To understand multifactorial and interdisciplinary relations in sustainable environment and nutrition
- CLO 2 To address today's national and global challenges in the environmental and food sectors
- CLO 3 To understand historical and current aspects (agricultural production, policy initiatives) locally, in Asia and worldwide
- CLO 4 To address and analyze food/environment issues including food production, consumption, and the fulfillment of the right to adequate food; strengths and weaknesses of political, social, and economic policies and other interventions
- CLO 5 To demonstrate skills to become effective environmental educators to communicate the issues of food and environment to a variety of audiences and to apply theoretical knowledge while designing an applicable intervention in public setting

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in BIOL 2101 or ENVS2001 or ENVS2002

**Teachers Involved**
(Dr O Habimana, School of Biological Sciences)

**Course Objectives**
To provide exposure to some key management, microbiology and food processing concepts used to produce safe high-quality food products. To introduce students to analysis and problem-solving of realistic business situations in food safety management.

**Course Contents & Topics**
- The regulatory, social and business imperative for food safety.
- Basic concepts in TQM
- Statistical Process Control
- Quality Function Deployment
- Quality management standards (ISO 9000)
- Development and implementation of a Hazard Analysis Critical Control Point (HACCP) plan (within an ISO 22000 food safety management system/ supply chain approach)
- Role of environmental management systems (ISO 14000) in the food industry
- A review of microbiology in a food safety context
- Religious, ethical, and cultural food choices
- Illustrative business case studies on food safety management will be discussed

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 understand the basic microbiological and food processing concepts in food safety
- CLO 2 be familiar with a set of management techniques applicable in the food industry for promoting food safety
- CLO 3 be able to analyze food production problems and make recommendations for action to improve quality and safety

Teachers Involved (Dr B Russell, Biological Sciences)
(Dr M Yasuhara, Biological Sciences)
(Dr Shelby E Mcilroy, Biological Sciences)
(Guest Lecturer, Biological Sciences)

Course Objectives To develop a basic understanding and appreciation of the field of marine biology, including the fascinating diversity of marine life, their function, ecology and inter-relationships. Contemporary issues including the benefits we derive from marine biological resources and threats to their long-term sustainability will also be discussed with case studies highlighting key issues.

Course Contents & Topics The topics cover:
1. The physical and chemical environments (e.g., light, current, atmospheric-oceanic interactions, salinity, temperature, pH, dissolved oxygen, nutrients) and how these may affect the marine biota.
2. Important groups of marine organisms (e.g., phytoplankton, zooplankton, benthos, nektom, marine mammals) and marine food web.
3. Major marine habitats and ecosystems (e.g., intertidal, benthic, pelagic, deep sea, coral reefs, mangroves).
4. Exploitation of marine biological resources (e.g., fisheries and bioactive compounds).
5. Contemporary issues (e.g., climate change, marine pollution, sustainable use of marine living resources, invasive species).

Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 demonstrate a basic understanding of the diversity and function of marine biota.
CLO 2 recognize the interactions of marine biota and their environments.
CLO 3 appreciate the importance of marine ecosystems and the threats of human activities on their long-term sustainability as well as possible solutions.

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in BIOL2306 or ENV52002

Offer in 2021 - 2022 Y 1st sem Offer in 2022 - 2023 : Y

Grade Descriptors (A to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

BIOL3302  Systematics and phylogenetics (6 credits)  Academic Year 2021

Offering Department Biological Sciences

Course Co-ordinator Prof R M K Saunders, Biological Sciences (saunders@hku.hk)

Teachers Involved (Prof R M K Saunders, Biological Sciences)

Course Objectives To give students an understanding of the principles of systematics and phylogenetics and an appreciation of current trends and controversies. Systematics forms an invaluable grounding for many fields of biology (including anatomy, ecology, population biology and evolutionary biology), and enables the integration of a wide range of techniques (including anatomy, biochemistry, chemistry, molecular biology, cytology, paleontology and ethology). Causes of taxonomic complexity: environmental factors; hybridization; breeding systems. Principles of nomenclature. Laboratory sessions will be aimed at illustrating taxonomic procedures and problems; students will not be expected to memorize large numbers.

Course Contents & Topics Current classificatory theories: phenetic systematics (classifications based on overall resemblances) and cladistics (evolutionary reconstruction). The species concept. Sources of taxonomic data: morphology & anatomy, biochemistry, chemistry, molecular biology, cytology, paleontology and ethology. Causes of taxonomies complexity: environmental factors; hybridization; breeding systems. Principles of nomenclature. Laboratory sessions will be aimed at illustrating taxonomic procedures and problems; students will not be expected to memorize large numbers.

School of Biological Sciences

762
Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 explain taxon concepts (with particular reference to species) and show how multivariate statistical methods can be applied below the species level

CLO 2 describe the principles behind maximum parsimony methods of phylogenetic reconstruction (including sister-group relationships, out-group comparison, homoplasy and the assessment of clade stability)

CLO 3 evaluate the diversity of sources of taxonomic data, and explain the importance of specific data sources

CLO 4 recognise the main causes of taxonomic complexity, and identify appropriate solutions

CLO 5 understand the principles of nomenclature in order to interpret the previous application of scientific names are validly published names

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL309; and Any level 2 BIOL course

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining most or all of the course learning outcomes, with evidence of extensive background reading and use of named examples. Show evidence of significant critical abilities and logical thinking. Apply highly effective presentation skills. Demonstrate effective use of data and results to draw appropriate and insightful conclusions. Show evidence of general integration of appropriate theories, principles, evidence and techniques.

B Demonstrate substantial command of knowledge required for attaining most of the course learning outcomes, with evidence of some background reading and use of named examples. Show evidence of critical abilities and logical thinking. Apply moderately effective presentation skills. Demonstrate use of data and results to draw appropriate and insightful conclusions. Show evidence of general integration of appropriate theories, principles, evidence and techniques.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes, with evidence of limited background reading and use of named examples. Show evidence of some critical abilities and logical thinking. Apply moderately effective presentation skills. Demonstrate mostly correct use of data and results to draw appropriate and insightful conclusions. Show evidence of partial integration of appropriate theories, principles, evidence and techniques.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes, with insufficient evidence of background reading and use of named examples. Show evidence of limited critical abilities and logical thinking. Apply limited presentation skills. Demonstrate limited ability to use data and results to draw appropriate and insightful conclusions. Show evidence of partial integration of appropriate theories, principles, evidence and techniques.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes, with no evidence of background reading or use of named examples. Show little or no evidence of critical abilities and logical thinking. Presentational skills are minimally effective or ineffective. Misuse of data and results to draw appropriate conclusions. Little or no evidence of integration of appropriate theories, principles, evidence and techniques.

BIOL3303 Conservation biology (6 credits)

Academic Year 2021

Quota 100

Offering Department Biological Sciences

Course Co-ordinator Dr T C Bonebrake, Biological Sciences (tbone@hku.hk)

Teachers Involved (Dr H Mummbly,Biological Sciences)
(Dr L A Ashton,Biological Sciences)
(Guest Lecturers,Biological Sciences)

Course Objectives

To introduce students to the theory and practice of conservation and to provide students with a thorough understanding of practical, economic and management skills required for proficiency in conservation biology. Our ultimate aim is to promote an understanding of the natural biodiversity, the threats to it, and the best ways to manage them. We hope these will be your aims too, and that you will be able to use the skills and knowledge you learn from the course to reduce the local, regional and global loss of biodiversity.

Course Contents & Topics

Among the many environmental issues, the most serious is the increasingly rapid loss of biodiversity. This loss is irreversible on a human timescale and will reduce the options available to all future human generations. Conservation Biology/Ecology is the science of preserving biological diversity. This course also provides insights to the many benefits and services that nature offers and explores strategies for management options to sustain ecological integrity and production. It is an applied, mission-oriented, multidisciplinary science which, like medicine, has built-in values: to a conservation biologist, as to a doctor, it matters whether the patient lives or dies. It is also a very new science, bringing together elements from ecology, environmental science, forestry, resource management and many other fields.

The course is designed to provide the knowledge, theories, and research related to biodiversity conservation. Our teaching focuses on biodiversity conservation, conservation issues associated with climate change, the key theoretical underpinning of biodiversity conservation and an introduction to conservation legislation and economics. We emphasis on the integration of knowledge, skills and abilities that are required to practice conservation. Our problem based learning approach will require students to actively participate in their group project/class room debate by researching.

Course Learning

On successful completion of this course, students should be able to:
Tropical and temperate marine ecology field course (6 credits)

On successful completion of this course, students should be able to:

CLO 1 demonstrate an understanding of the complexity and function of marine ecosystems.
CLO 2 explain the role of physical and biological processes in shaping the similarities and differences among marine ecosystems tropical and temperate regions.
CLO 3 demonstrate skills for field sampling in marine and estuarine habitats.
CLO 4 demonstrate knowledge in hypothesis testing and experimental design.
CLO 5 identify a range of marine species and their role in ecosystems.

Pre-requisites
Pass in "C" or above in BIOL2306 or BIOL3301 or BIOL3303 or ENVS2001
Offer in 2021 - 2022 N Offer in 2022 - 2023 : Y

Grade Descriptors

(A+ to F)

A Evidence of a thorough grasp of the subject and relevant research techniques. Eagerness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation of skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.

B Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader or comparative perspective in drawing logical conclusions. Work more than sufficient for what is required at degree level.

C Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.

D Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.

Fail No evidence of basic minimum grasp of the subject and the minimum relevant research techniques. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought, ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

Additional Course Information

This course involves a two-week field course to Australia, one week in the Sydney (temperate region) and one week on Orpheus Island (tropical region). Students will be exposed to some harsh environmental conditions including working in contact with seawater, potentially cold and rainy weather. Orpheus Island can have an abundance of biting insects (mosquitos and sand flies).

There will be extra costs involved in the course, including but not limited to airfares, accommodation and meal costs.

Enrollment Procedure:
Enrollment for this course will close at the end of the add/drop period of the second semester because airfares and accommodation for the trip need to be booked in advance.

Required/recommended reading and online materials

Students will be directed to relevant scientific literature and websites

BIOL3313

Freshwater ecology (6 credits)

Offering Department Biological Sciences

Course Co-ordinator TBC, Biological Sciences

Teachers Involved (TBC, School of Biological Sciences)

Course Objectives

This course introduces freshwater science by integrating the physical and biological components of rivers and their drainage basins in the context of sustaining human livelihoods and biodiversity. Conservation and management of lakes and maintenance of water quality are considered also. Case studies are used to illustrate the principles of river science and human use of drainage basins. Emphasis will be placed upon conservation of freshwater biodiversity in Asia in the context of increasing human modification of ecosystems, habitat degradation and water scarcity.

Course Contents & Topics

The amount of water on Earth is fixed. Less than 0.01% of the world's water is in lakes and rivers, yet this water hosts 10% of the Earth's species. Global water use has increased 300% since 1950 and is growing faster than the Earth's population; many people in Asia already face water stress. This course introduces the physicochemical processes involved in the hydrological cycle and flow of water in drainage basins, as well as their seasonal fluctuations, and describes the main longitudinal changes that occur along rivers and their floodplains. Energy flows in freshwater ecosystems are described with particular reference to the transfer of materials between water and land and the relative importance of aquatic primary production versus energy derived from detrital inputs from the land. The range of organisms associated with Asian fresh waters is introduced and their functional roles explained, and students will become familiar with some common Hong Kong species in field trips and laboratory sessions. The dependence of humans on freshwater ecosystems and the role they play in sustaining livelihoods is explained, together with the causes and consequences of human modification of fresh waters, and the implications for conservation of aquatic biodiversity. Finally the range of management strategies used to reduce or mitigate human impacts on freshwater ecosystems and maintain water quality is introduced.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe the global water cycle, the main sources and pathways of energy in freshwaters, and the influence of land-water interactions on aquatic productivity.

CLO 2 describe the composition of the freshwater biota (major groups) and their functional roles in aquatic
ecosystems, and identify some of the common animals that occur in Hong Kong fresh waters

CLO 3 describe the results of modification of freshwater ecosystems by humans, list the main threats to freshwater biodiversity in Asia, explain why freshwater biota are vulnerable to human impacts, and indicate the management strategies used to reduce or mitigate them

Pre-requisites
(And Co-requisites and Impermissible combinations)
Pass in BIOL2102 and BIOL2306

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors
(A+ to F)

A Evidence of original logical (or coherent) thought, strong analytical (or critical) abilities and a thorough grasp of the subject as demonstrated by background reading and excellent use of named (organism) examples. Show excellent presentational, analytical skills and/or lab/field skills, and substantial knowledge of general freshwater biodiversity or selected taxa. Excellent or outstanding (for A+) work relative to what is required at degree level.

B Evidence of analytical (or critical) abilities and logical (or coherent) - but not necessarily original - thinking, a good grasp of the subject as demonstrated by background reading and use of named (organism) examples. Show good presentational, analytical and/or lab/field skills, and knowledge of general freshwater biodiversity or selected taxa. Work more than sufficient for what is required at degree level.

C Evidence of some analytical (or critical) abilities and logical (or coherent) thinking with an adequate (but incomplete) grasp of the subject, but little or no evidence of original thinking, with limited background reading and use of named (organism) examples. Show fair presentational, analytical and/or lab/field skills, and some knowledge of general freshwater biodiversity or selected taxa. Work sufficient for what is required at degree level.

D Evidence of retention of a minimum of relevant information of the subject (i.e. knowledge is very incomplete), with limited organizational, analytical or presentational skills. Shows insufficient evidence of background reading, or familiarity with lab/field techniques or freshwater biodiversity. Work merely (for D+) or barely (D) adequate for what is required at degree level.

Fail Evidence of poor or inadequate knowledge and understanding of the subject, and a lack of coherence, poor organization and/or excessive irrelevancy. Little or no evidence of familiarity with relevant reading material and lab/field techniques, or any knowledge of freshwater biodiversity. Work fails to reach degree level.

BIOL3314 Plant structure and evolution (6 credits)

Offering Department Biological Sciences

Academic Year 2021

Quota 30

Offering Course Department Biological Sciences

Offering Co-ordinator Prof R M K Saunders, Biological Sciences (saunders@hku.hk)

Course Objectives

(Prof R M K Saunders, Biological Sciences)

To survey the form and function of the vascular plant body, with particular emphasis on the evolutionary significance of structures. This course forms a basis for understanding plant physiology, ecology, systematics and phylogenetics.

Course Contents & Topics

The course will investigate various cell, tissue and organ types in the vascular plant body, with functional explanations for their diversity and discussions of the value of such knowledge in understanding plant phylogeny. Information on plant structure will be integrated with our current understanding of developmental genetics and taxonomic relationships derived from molecular phylogenetic research. Topics such as food storage, strength, water conduction, growth and development, pollination, fertilization, fruit and seed dispersal, germination, etc., will be discussed.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 recognise the main plant cell types and explain how cells are integrated to form specific primary tissues (such as the xylem and phloem)

CLO 2 describe the developmental changes that occur in primary tissues with the onset of secondary growth

CLO 3 describe the structure, function and development of secondary vegetative structures (wood and bark)

CLO 4 integrate knowledge of the genetic control of floral development with the evolution of organ diversity

CLO 5 describe the structure of fruits from a functional perspective, and recognise how these structures are derived from the flower

CLO 6 explain how seeds develop after fertilization of the ovule, and how differences in seed structure influences germination patterns

### BIOL3318 Experimental intertidal ecology (6 credits)

**Offering Department** Biological Sciences

**Course Co-ordinator** Prof G A Williams, Biological Sciences (hrsbwga@hku.hk)

**Teachers Involved** (Prof G A Williams, School of Biological Sciences)

**Course Objectives**

To examine the communities of coastal systems: their distribution, composition and the factors which regulate them. This course will examine, using an experimental approach, patterns exhibited by a range of shores and the deterministic and stochastic processes that create and sustain them. Hong Kong shores will be used as examples but comparisons will be drawn from the coastlines of the world.

**Course Contents & Topics**

The first part of this course describes shores of the marine to brackish water continuum and the communities found on them. Lectures will cover the physical environment of the intertidal (e.g. tides; waves; geological and hydrological processes) the resultant variations in exposure and shore types and consequent distribution of animals and algae on these shores (vertical and horizontal zonation patterns) with specific Hong Kong examples. The second part of the course uses an experimental approach (e.g. sampling methodology; manipulative techniques; experimental design and data analysis) to investigate the factors (e.g. predation; herbivory; competition; disturbance; succession; patchiness and recruitment; supply side ecology) that structure these shores, with particular focus on rocky intertidal shores.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** describe the physical environmental factors (e.g., waves, tides) shaping the intertidal environment and how they interact with geographic features to produce different kinds of shores (e.g., sandy shores, mangroves)
- **CLO 2** understand the factors limiting species distribution patterns on the vertical intertidal gradient and appreciate methods to measure and investigate these patterns
- **CLO 3** identify and quantify the distribution of a variety of local species on different Hong Kong shores
- **CLO 4** review, critique and design experimental studies to investigate patterns (e.g., zonation) and processes (e.g., herbivory, competition) in intertidal areas
- **CLO 5** explain the role of biological processes (e.g., predation, succession) and their interaction with the physical environment in shaping intertidal communities
- **CLO 6** plan, design, execute, analyse and present a simple experimental study on intertidal ecology

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in BIOL2102 or BIOL3301

BIOL3319

Tropical terrestrial ecology (6 credits)

Offering Department
Biological Sciences

Course Objectives
To enable motivated students to acquire the knowledge and skills needed to solve real problems in terrestrial ecology.

Course Contents & Topics
This course focuses on the ecology of terrestrial habitats providing an overview of patterns and processes at global and regional scale. Students will learn about the evolution of climate and topography over geological times and their roles in shaping current biodiversity and ecosystem function. The course also focuses on the taxonomic, functional and ecological composition of organisms within terrestrial ecosystems of Tropical East Asia with emphasis on the major processes regulating communities. An introduction to several global major threats on terrestrial ecosystems and their mechanisms is provided. Finally, the study of habitats recovery through ecological succession using particular examples in Hong Kong is provided.

The practical component of the course will introduce students to basic field techniques used in ecology. Students will participate to a group project, collecting and analysing their own data involving both field and laboratory work, and write a short scientific paper. Particular emphasis will be given on how to efficiently read and write scientific literature and present data efficiently. Attendance and participation in class are encouraged through series of discussions to stimulate critical thinking on chosen topics in terrestrial ecology. Assessment includes problem-based learning exercise, group presentation, a final term paper and a final examination covering the content of the course.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 understand evolution of biodiversity patterns and shaping processes within terrestrial ecosystems at different geographic and time scales
- CLO 2 understand the current patterns that sustain biodiversity in their pristine form and disturbed state
- CLO 3 understand the various threats to terrestrial ecosystems and some of the methods to evaluate and reduce the impacts of those threats
- CLO 4 plan and conduct baseline study of terrestrial biodiversity
- CLO 5 develop the skill to be an active learner through the problem-based learning exercises

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL1309 and BIOL2306

Offer in 2021 - 2022

School of Biological Sciences
The biology of marine mammals (6 credits)

Offering Department: Biological Sciences
Course Co-ordinator: Biological Sciences

Course Objectives:
Fewer groups of animals have captured the public's imagination the way marine mammals, especially whales and dolphins have. This course covers the evolutionary biology, ecology, behaviour, and conservation of marine mammals: whales, dolphins and porpoises (cetaceans), seals and walruses (pinnipeds), manatees and dugongs (sirensians) and sea otters. Students will learn to understand the ecology of mammalian life in the aquatic environment, their role in the marine ecosystem, their behavioural complexity and socio-ecology, and the current threats to these animals in the human-dominated world.

Course Contents & Topics:
The course begins with an overview of marine mammal species and their global distribution, followed by a review of the various adaptations that have evolved to meet the challenges of the marine environment. Next, the course discusses the life history, reproductive strategies, ecology and population dynamics of marine mammals, highlighting the similarities and differences between species in this taxonomically diverse group of animals. This is followed by sessions on animal movement, diving and ranging behaviour, foraging strategies, ecology of group living and social behaviour, behavioural complexity, cognition, and social strategies that guide the daily lives of these animals. The course concludes with a discussion of human influences on the fate of marine mammals, examples of critically endangered species and populations, and a review of conservation and management strategies; our emphasis is on the importance of applying the knowledge of population ecology, behaviour and behavioural ecology in ensuring long-term effective conservation of marine mammal populations. This course is designed for 3rd and 4th year students; it includes field trips, discussions of current scientific research, innovative research techniques and recent discoveries. Students will undertake independent literature-searches and will discuss their projects during classroom debates, training their skills in conceptual and analytical approaches to science.

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1 appreciate marine mammal diversity and biogeography
CLO 2 understand how mammals adapt and function in an aquatic environment and their role in the marine ecosystem
CLO 3 understand and appreciate the complexity of interactions between environmental selective pressures and marine mammal behaviour, population structure and demography
CLO 4 appreciate the socio-ecological diversity and behavioural complexity of marine mammals
CLO 5 think analytically in terms of marine mammal ecology and anthropogenic impacts in the rapidly changing world

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in BIOL3206

Offer in 2021 - 2022: N  Offer in 2022 - 2023 : N

Marine invertebrate zoology (6 credits)

Offering Department
Biological Sciences

Quota
30

Offer in 2021 - 2022
N

Offer in 2022 - 2023 : N

Course Contents & Topics
Invertebrates make up 95% of all animal species. While insects dominate the terrestrial landscapes, marine environments have a much broader phylectic diversity, with taxa such as Porifera (sponges), Polychaetes (marine worms), Coelenterata (corals and sea anemones) and Echinoderms (sea urchins and starfish) entirely confined to the seas. Together with marine molluscs and crustaceans, these groups play fundamental roles in the functioning of all marine ecosystems, and are a fundamental focus of evolutionary studies of extant taxa and their fossil relatives.

This course will lead the students through the discovery of the amazing variety of body plans, adaptations, structure and function of marine invertebrates. In the first part of the course, the study of the phylogenetic relationships and the body plans of marine invertebrate groups, together with the associated evolutionary pathways, will be described to provide students with an evolutionary grand tour of life on Earth. In the second part, students will learn the mechanisms underpinning the ecological functions of marine ecosystems, through the study of the functional biology and ecology of the dominant groups. The diversity of invertebrates present in South East Asian seas will be introduced, and students will become familiar the commonest Hong Kong taxa and species in field trips and laboratory sessions.

Course Objectives
- Introduce the students to the diversity, biology and ecology of marine invertebrates.
- Enable students to develop skills in identifying and describing the composition of invertebrates communities and their roles in marine ecosystems.
- Foster an understanding of the evolutionary history of different taxa and their relationships.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 identify major taxa of marine invertebrates

CLO 2 describe the evolutionary history of the different taxa, understanding their relationships

CLO 3 describe the composition of the invertebrates communities and their roles in marine ecosystems, and learn to identify common species and taxa typical of Hong Kong coastal waters.

CLO 4 understand the functional biology of marine invertebrates and their contribution to ecological functioning of marine ecosystems

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL2306

Grading Scale
A: 90%-100%
B: 80%-89%
C: 70%-79%
D: 60%-69%
F: 0%-59%

School of Biological Sciences
**Course Objectives**

Students will learn the abiotic and biotic factors that structure intertidal communities in Hong Kong and, during a residential fieldcamp, different South African intertidal communities. In South Africa, specific topics will focus on:

1. Intertidal biodiversity and species interactions
2. Species distribution patterns on intertidal shores
3. Species interactions and behaviour
4. Trophic interactions and connectivity between local terrestrial and marine communities.
5. Larger-scale connectivity from freshwaters to marine systems

**Course Contents & Topics**

Students will work in groups with students from the University of Johannesburg and North West University, South Africa to collect data; design and carry out experiments; present their findings; and write up formal scientific reports on the different topics.

Note individual topics may change in different years and are weather dependent.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 compare the contrast the shallow water coastal environments of Hong Kong and the Eastern Cape Province of South Africa
- CLO 2 identify a range of species and their roles and relationships in the intertidal zone
- CLO 3 understand the abiotic conditions defining the intertidal environment and quantify and interpret the distribution of species over relevant environmental gradients
- CLO 4 design, execute and analyse experiments to investigate species interactions
- CLO 5 integrate abiotic and biotic interactions to determine patterns of connectivity between intertidal habitats
- CLO 6 analyse, interpret and present data using a variety of media to demonstrate scientific understanding of topics

**Additional Course Information**

Students who have taken BIOL3318 will be at an advantage. Students will join undergraduate students from the University of Johannesburg and North Western University, South Africa on a residential field camp at Tsitsikamma (Storms River Camp, Eastern Province, South Africa) in the
School of Biological Sciences

**BIOL3401**  
**Molecular biology (6 credits)**  
**Offering Department** Biological Sciences  
**Course Co-ordinator** Dr Y L Zhai, Biological Sciences (zhai@hku.hk)  
**Teachers Involved** (Dr Y L Zhai, Biological Sciences)  

**Course Objectives**  
To provide students with recent knowledge in molecular biology with special emphasis on the study of gene structure and function at the molecular level.

**Course Contents & Topics**  
The course includes a detailed account of the molecular processes in eukaryotic and prokaryotic cells, from DNA replication, RNA transcription, protein translation, to post-translational modifications with special emphasis on the regulation of prokaryotic and eukaryotic gene expression. Recently developed biochemical techniques including oligonucleotide synthesis, DNA sequencing, complementary screening and DNA cloning, site-directed mutagenesis, polymerase chain reaction and transgenic technology will also be discussed.

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:

- CLO 1 know the basic structures of DNA, RNA and protein, and how DNA is package in the nucleus of eukaryotic cells
- CLO 2 understand the biochemical processes involved in DNA replication, transcription, translation and post-translational modifications in prokaryotes and eukaryotes
- CLO 3 explain and describe the regulation of gene transcription in prokaryotes and eukaryotes
- CLO 4 demonstrate knowledge and understanding of the underlying concepts associated with recently developed techniques including PCR, site-directed mutagenesis, DNA sequencing

**Pre-requisites (and Co-requisites and Impermissible combinations)**  
Pass in BIOL2600 or BIOL2103 or BIOL2220 or MED2301 or BMED2301

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 acquire fundamental knowledge on cell biology and cell technology
CLO 2 demonstrate basic laboratory techniques on cell culture
CLO 3 gain insight into real-life applications in cell biology and cell technology

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC2600 or BIOC2103 or BIOC2220 or MEDE2301

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023: Y Examination Dec

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills. Writings consistently demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.

B Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills. Writings mostly demonstrate informed, thoughtful intellectual engagement with broad range of relevant concepts.

C Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills. Writings mostly indicate informed, intellectual engagement with concepts or theories but not always with sufficient depth, breadth or understanding.

D Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills. Writings indicate some intellectual engagement with concepts or theories but mostly at a superficial level.

Fail Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective. Writings reveal an absence of intellectual engagement with concepts or theories. Writings are irrelevant or superficial.

Quota 100

Course Co-ordinator

Dr Chaogu Zheng, Biological Sciences (cgzheng@hku.hk)

Teachers Involved

(Dr Chaogu Zheng, Biological Sciences)

(Dr W B L Lim, Biological Sciences)

Course Objectives

To provide a broad understanding of the animal immune system with a focus on the cells and molecules involved in immune reactions against pathogens. Topics will also include the application of a variety of immunological methods to research and disease diagnosis.

Course Contents & Topics

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe the structure and function of the immune molecules which are involved in the body defense mechanisms, including antibody, T-cell receptor, cytokines, MHC and complement proteins
CLO 2 describe the organization of the mammalian immune system in terms of genes, cells and tissues
CLO 3 explain the underlying mechanisms associated with transplant rejection, transfusion reaction and vaccination
CLO 4 explain how the immune system responds to infections by bacteria, viruses and parasites
Pre-requisites  
Pass in BIOL2600 or BIOL2103 or BIOL2220 or MEDE2301 or BMED2301

|  
| Course Objectives  
| To provide students with a good understanding of protein structure, how structure subserves function, and the methods for study of both. This course provides a strong foundation for advanced courses in biochemistry and biotechnology.  
|  
| Course Contents & Topics  
| Elements of macromolecular structure: sequencing, prediction and determination of secondary, tertiary and quaternary structures;  
| The relationship of protein structure and function: molecular motifs, binding and recognition, enzyme catalysis and specificity;  
| Methods for protein structure determination: X-ray crystallography, nuclear magnetic resonance and cryo electron microscopy;  
| How protein works: protein flexibility and dynamics, protein interaction, protein complex, and control of protein function;  
| Protein purification and characterization: various liquid chromatographical methods and their uses in combination, separation techniques, methods of determination of molecular mass, activity and purity, optical methods in protein determination, ultracentrifugation, protein polishing, stability and storage, methods and devices for protein delivery.  
|  
| Course Learning Outcomes  
| On successful completion of this course, students should be able to:  
| CLO 1  fundamental understanding of principles of protein structure  
| CLO 2  demonstrate a basic understanding of the relationship between protein structure and function  
| CLO 3  have a basic understanding of major methods for macromolecular structure determination  
| CLO 4  understand the principles regulating protein function in vivo  
| CLO 5  learn about the ways to purify protein and the many industrial uses of proteins  
|

This course is intended for biology, biotechnology and biochemistry students who would like to understand the modern fundamentals of microbiology. At the end of the course the students are expected to know the physiological, biochemical and molecular aspects of microbiology.

The basic biochemistry of microorganisms will be described. The intrinsic factors that affect the growth of microbes in the environment will be examined. The adaptation of the microbes to the environment by means of physiological changes and genetical alterations will be illustrated. The molecular biology of bacteria and viruses will be considered. The molecular biology of plasmids and transposable elements and their association with medical aspect will be discussed. The use of modern technology in studying microorganisms will be explored.

On successful completion of this course, students should be able to:

- CLO 1 understand the intrinsic reorganization of microbes in response to the changing environments
- CLO 2 comprehend the major modes of regulation in the microbe
- CLO 3 explain the biology of bacteriophages and plasmids
- CLO 4 realize the importance of transposable elements in the survival of the microbes
- CLO 5 appreciate the development of modern techniques in studying microorganisms

Grade Descriptors (A+ to F)

A  Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.

B  Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Demonstrate substantial grasp of the subject. Show evidence of analytical and critical abilities and logical thinking. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.

C  Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D  Demonstrate general but limited command of knowledge and skills required for attaining most of the course learning outcomes. Demonstrate limited command of knowledge and skills required for attaining some of the course learning outcomes. Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherence and logical thinking, but with limited analytical and critical abilities. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Additional Course Information

This course will be offered subject to a minimum enrollment number and availability of teachers.
### Course Objectives

To provide a comprehensive overview on modern concepts and recent advances in reproductive biology & reproductive biotechnology in human and animal models.

### Course Contents & Topics

- Basic concepts of reproduction, evolution of sex, human & animal reproductive strategies and sexual behavior.
- Molecular mechanisms for sex determination, developmental aspects of gametogenesis and reproductive systems.
- Neuroendocrinology of reproductive system and recent advances in kisspeptin & GnRH system and steroid feedback via KNDy neuronal circuit.
- Environmental endocrine disruptors and recent advances in biotechnology for fertility control & assisted reproduction in human.
- Recent advances in embryonic stem cells & induced pluripotent stem cells and their applications in regenerative medicine/therapeutic cloning.
- New technology for genome editing by TALENT & CRISPR/Cas9 systems and gene therapy, animal cloning and primordial germ cell transplantation in animal models.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 Have a broad understanding of reproductive biology ranging from evolution of sex, different reproductive strategies & sexual behaviors in animals to the regulatory mechanisms for sex determination & development of reproductive systems.

CLO 2 Have an appreciation of the recent advances on neuroendocrine control of reproductive functions & reproductive cycle, sexual behavior, parental care, and pregnancy & parturition in human & mammalian models.

CLO 3 Have a basic understanding on the adverse effects of environmental endocrine disruptors on reproduction, possible causes of human infertility & treatment with assisted reproduction.

CLO 4 Comprehend a wide range of modern technologies for genome editing, animal cloning & primordial germ cell transplantation and the applications of embryonic stem cells/induced pluripotent stem cells in regenerative medicine/therapeutic cloning.

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2103 or BIOL2220 or BIOC2600 or MEDE2301

**Course Objectives**

This course aims to provide students with fundamental knowledge of classical, molecular and population genetics. Topics will include cellular reproduction, principles and chromosomal basis of Mendelian genetics, linkage analysis and mapping, concept and definition of the gene, molecular mechanisms of mutation, DNA repair and...
### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** appreciate the beauty of genetic organizations in nature
- **CLO 2** use different genetic principles to explain hereditary traits observed in nature and laboratories
- **CLO 3** apply qualitative and quantitative experimental methodologies for genetic analysis at individual and population levels

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL1110 or BIOC1600; and BIOL2102 or BIOL2103.

### Course Objectives

On successful completion of this course, students should be able to:

- CLO 1 understand and demonstrate knowledge of the development and management of biotechnology business
- CLO 2 understand and demonstrate how discoveries and inventions are commercialized
- CLO 3 navigate the various steps in the development of a biotechnology derived product: from bench, to scale-up, to market
- CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries
- CLO 5 participate and contribute to the business side of scientific enterprises

**BIOL3409 Business aspects of biotechnology (6 credits)**

**Offering Department** Biological Sciences

**Course Co-ordinator** Dr W L Lim, Biological Sciences (blim@hku.hk)

**Teachers Involved** (Dr K W Y Yuen, School of Biological Sciences)  
(Dr Ng, Guest Lecture)  
(Dr W B L Lim, Biological Science)

**Course Objectives** The course will give an overview of the innovative developments in biotech industry and provide the students with useful tools in learning how an exciting research idea can be turned into a viable business.

**Course Contents & Topics** The purpose of the course is to introduce you to the entrepreneurial process with a focus on the biotechnology industry. The course will provide a thoughtful, practical guide to the process of successfully launching an entrepreneurial venture. We place a special emphasis on the decision to become a biotech entrepreneur and how to develop successful business ideas, however we will also discuss the process of moving from an idea to a biotech firm. Topics on intellectual properties, patent laws, patent application process, licensing and fundraising will be covered as well. Throughout the course, guest entrepreneurs, managers and directors of the biotech industry will be presenting case studies and explain their involvement in various biotech and pharmaceutical companies. Topics:

1. Introduction to Biotechnology Industry: 4 P in Biotechnology Business (3 hours)
2. IP rights: Patent application, Patent system, USPTO, SIPO, PCT (6 hours)
3. Licensing of IP rights (3 hours)
4. Technology Transfer Office and HKSTP (3 hours)
5. How to raise fund for startup companies (3 hours) ?
6. Agrobiotechnology and Green Tech (Monsanto, Novozymes, etc) (4.5 hours)
7. Drug development and clinical trials (Gilead Sciences, Wuxi PharmaTech, etc). (6 hours)
8. Diagnostics business (BGI, Diagcor, etc) (4.5 hours)
9. Company analysis (3 hours)
10. Company Visit
11. Company analysis

**Course Learning Outcomes** On successful completion of this course, students should be able to:

- CLO 1 understand and demonstrate knowledge of the development and management of biotechnology business
- CLO 2 understand and demonstrate how discoveries and inventions are commercialized
- CLO 3 navigate the various steps in the development of a biotechnology derived product: from bench, to scale-up, to market
- CLO 4 gain technical and business knowledge of the biotechnology and bioprocessing industries
- CLO 5 participate and contribute to the business side of scientific enterprises

**Pre-requisites (and Co-requisites and Impermissible combinations)** Pass in any level 3 BIOL or BIOC or BBMS course; NOT for students who have passed in BIOL2409. This course is only for students admitted in 2017-2018 or before.
Insect ecology: the little things that run the world (6 credits)

**Course Objectives**
This course introduces the students with the biology of terrestrial arthropods. With a main focus on insects and arachnids, students will be introduced to various aspects of their anatomy and physiology, systematics, and ecology to understand the fundamental roles that arthropods play in natural and human-shaped ecosystems. The course will focus particularly on the diversity and importance of insects in South East Asia.

**Course Contents & Topics**
With about 1.1 million and 110,000 species described respectively, insects and arachnids represent nearly 80% of all species known on the planet. A diversity also reflected in the diversity of behaviours, evolutionary adaptations or ecological interactions played at all trophic levels within ecosystems. As herbivores, pollinators, seed-dispersal agents, predators, parasitoids, disease vectors or decomposers, arthropods are major components in the stability and functioning of most ecosystems. Yet their importance is often underestimated by many fields of biology to the profit of larger “charismatic” vertebrates. However, arthropods offer incredible opportunities for scientific discoveries, revealing sometimes attributes in morphology, reproduction or behaviour beyond the most prolific diversity, distribution and ecological functions within ecosystems. Finally the last part of the course will present the main criteria to recognize major insects and arachnids groups. The second part will focus on their impacts of human activities on arthropods, how they have been used historically and nowadays, and what kind of solutions or strategy they represent for human societies?

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 identify major groups of insects and arthropods
- CLO 2 understand and use the main collecting methods to sample arthropod diversity
- CLO 3 understand the ecological diversity of arthropod groups and their importance in ecosystems
- CLO 4 understand the biotic and abiotic factors that drive terrestrial arthropod species richness and abundance
- CLO 5 understand how human activities modify insect diversity
- CLO 6 describe the multiple roles played by insects on human activities

**Pre-requisites**
Pass in BIOL1309 and BIOL2306

**Offering Department**
Biological Sciences

**Course Website**
http://moodle.hku.hk/

**Additional Course Information**
This course will be offered subject to a minimum enrollment number and availability of teachers. Priority will be given to students majoring or minoring in MBB.

BIOL3501  Evolution (6 credits)  Academic Year  2021  
Offering Department  Biological Sciences  Quota  50  
Course Co-ordinator  Dr M Sun, Biological Sciences (meisun@hku.hk)  
Teachers Involved  
Course Objectives  Evolution is the cornerstone of modern biology. The course aims to introduce students to the major themes of contemporary evolutionary biology, including the history of evolutionary biology, evolutionary processes, adaptation, speciation, and evolution as an explanatory framework at all levels of biological organization. The course emphasizes the interplay between theory and empirical tests of hypotheses, thus acquainting students with the process of science.  
Course Learning Outcomes  On successful completion of this course, students should be able to:  CLO 1 familiar with the facts and theory of evolution  CLO 2 describe Darwin's theory of evolution by natural selection and how the process of natural selection can lead to speciation  CLO 3 have an advanced understanding of the modern evolutionary theory  CLO 4 apply evolutionary thinking to real world problems in agriculture, medicine, and biodiversity conservation  
Pre-requisites (and Co-requisites and Impermissible combinations)  Pass in BIOL2306  
Offer in 2021 - 2022  N  Offer in 2022 - 2023  N  Examination  ---  
Grade Descriptors (A+ to F)  A  Exceptionally good performance demonstrating excellent understanding of the subject matter, extensive knowledge over a wide range of topics covered by the course, and skilful applications of concepts/theories in solving new or unfamiliar problems, showing strong abilities in critical thinking and logical reasoning, with evidence of significant insight and original thought in dealing with the critical issues in the field.  B  Good performance demonstrating capacity to use the appropriate concepts, a good understanding of the subject matter, and an ability to handle the problems and materials encountered in the subject, showing evidence of attaining most of the course learning outcomes.  C  Adequate performance demonstrating some understanding of the subject matter, an ability to handle relatively simple problems, but showing incomplete command of knowledge required for attaining most of the expected course learning outcomes.  D  Minimally acceptable performance demonstrating at least partial familiarity with the subject matter and some capacity to deal with relatively simple problems, but also demonstrating serious deficiencies in knowledge required for attaining most of the expected course learning outcomes.  Fail  Poor performance in all aspects of the course, showing little evidence of learning, lacking real understanding of the subject matter, demonstrating deficiencies serious enough to make it inadvisable to proceed further without additional course work.

describe the effects of habitat fragmentation and population size reduction on genetic diversity and the

Part I. Evolutionary Genetics of Natural Populations:
- genetic diversity
- characterizing genetic diversity: single loci and quantitative variation;
- evolutionary impacts of natural selection, mutation, migration and their interactions in large populations;
- genetic consequences of small population sizes;
- maintenance of genetic diversity;
- population genomics.

Part II. Effects of Population Size Reduction:
- loss of genetic diversity in small populations;
- inbreeding;
- inbreeding depression;
- population fragmentation;
- genetically viable populations.

Part III. From Theory to Practice:
- resolving taxonomic uncertainties and defining management units;
- genetic management of wild populations;
- genetic issues in introduced and invasive species;
- genetic management of captive populations;
- genetic management for reintroduction;
- use of molecular genetics in forensics and understanding species biology.

This course will be offered subject to a minimum enrollment number and availability of teachers.

Pass in BIOL2306 or BIOL3303 or BIOL3408

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2306 or BIOL3303 or BIOL3408

Offer in 2021 - 2023 : N

Grade Descriptors (A+ to F)

A Exceptionally good performance demonstrating excellent understanding of the subject matter, extensive knowledge over a wide range of topics covered by the course, and skilful applications of concepts/theories in solving new or unfamiliar problems, showing strong abilities in critical thinking and logical reasoning, with evidence of significant insight and original thought in dealing with the critical issues in the field.

B Good performance demonstrating capacity to use the appropriate concepts, a good understanding of the subject matter, and an ability to handle the problems and material encountered in the subject, showing evidence of attaining most of the course learning outcomes.

C Adequate performance demonstrating some understanding of the subject matter, an ability to handle relatively simple problems, but showing incomplete command of knowledge required for attaining most of the expected course learning outcomes.

D Minimally acceptable performance demonstrating at least partial familiarity with the subject matter and some capacity to deal with relatively simple problems, but also demonstrating serious deficiencies in knowledge required for attaining most of the expected course learning outcomes.

Fail Poor performance in all aspects of the course, showing little evidence of learning, lacking real understanding of the subject
## BIOL3503
### Endocrinology: human physiology II (6 credits)

**Offering Department** Biological Sciences  
**Quota** 60

**Course Co-ordinator** Dr C B Chan, Biological Sciences (chancb@hku.hk)

**Teachers Involved**  
- (Dr C B Chan, Biological Sciences)  
- (Dr Y L Zhai, Biological Sciences)  
- (Prof. B K C Chow, Biological Sciences)

### Course Objectives

To provide an advanced course on hormones and how they regulate metabolism/growth, reproduction and water/salt homeostasis in our body.

### Course Contents & Topics

- The hypothalamic pituitary axis  
- The gastrointestinal system  
- The enteric nervous system. The cephalic phase, stomach phase and intestinal phase of food digestion. Regulation of acid secretion. Regulation of pancreatic exocrine and endocrine secretion. Gut hormones: gastrin, GIP, CCK, secretin, GLP-1, GLP-2 and motilin. Regulation of feeding, energy balance and food intake. Insulin and glucagon. Reproduction  
- Posterior pituitary hormone, ADH, Aldosterone and sodium balance. Angiotsensin's effect on blood pressure. Atrial natriuretic peptide and its function in water and sodium balance.

### Course Learning Outcomes

On successful completion of this course, students should be able to:  
- CLO 1 understand the definition and natures of hormones  
- CLO 2 explain and describe secondary messenger pathways for hormones  
- CLO 3 describe the connection between pituitary the master gland with higher brain centers and peripheral organs  
- CLO 4 explain and describe hormones involved in the regulation of 3 most important body functions including metabolism/growth, reproduction and water/salt homeostasis

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL2103

**Offer in 2021 - 2022** Y  
**Grade Descriptors (A+ to F)**  
- A: Demonstrate thorough mastery at an advanced level of extensive knowledge required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational skills.  
- B: Demonstrate substantial command of a broad range of knowledge required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational skills.  
- C: Demonstrate general but incomplete command of knowledge required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational skills.  
- D: Demonstrate partial but limited command of knowledge required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational skills.  
- Fail: Demonstrate little or no evidence of command of knowledge required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational skills are minimally effective or ineffective.

### BIOL3505
Oyster aquaculture and restoration (6 credits)

#### Offering Department
Biological Sciences

#### Course Co-ordinator
Dr T Vengatesan, Biological Sciences (rajan@hku.hk)

#### Teachers Involved
- Dr T Vengatesan

#### Course Objectives
- Introduce larval biology and hatchery technology;
- Provide scientific basis for coastal aquaculture through field demonstrations and laboratory exercises;
- Enable students to design, construct and maintain larval hatchery for production of seeds for aquaculture and restoration of wild oysters;
- Understand the reasons for restoration of marine, estuarine and coastal ecosystems;
- Facilitate transfer of academic knowledge to aquaculture for sustainable food production.

#### Course Contents & Topics
This experiential learning course is to enhance students' knowledge in applied larval biology techniques and advanced coastal aquaculture production systems that will enable them to design, construct, operate and maintain oyster aquaculture facilities for food production and restoration of wild population. This is an interdisciplinary endeavor encompassing larval hatchery technology and aquaculture. After reading about basic oyster biology and coastal aquaculture, we will focus on hatchery technology and aquaculture. Environmental issues, legislation pertaining to coastal aquaculture will also be covered using oyster farming in Hong Kong as an example. Students will learn why oyster habitat is declining in HK and would also explore scientific and management ways to restore oyster habitat. Students will be exposed to few aquaculture facilities in Hong Kong & will be taken to Penang (Malaysia) to learn practical skills of oyster farming. This course is designed to meet the needs of an expanding sustainable aquaculture in Hong Kong. Students will be exposed to a unique learning environment involving not only HKU but also teachers from Universiti Sains Malaysia (USM), bringing with them diverse range of expertise, culture, and learning opportunities. Career and small scale business opportunities in aquaculture industry will be discussed. Thus, students will be provided adequate knowledge & analytical capabilities for a successful career in larval biology research and aquaculture.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: Examine the influence of environmental variables on larval development and recruitment, and consider the potential effects of these variables on hatchery and farming
- CLO 2: Acquire skills and experiential learning opportunities (e.g. hands-on experiences at laboratories and farms) in oyster hatchery and farming
- CLO 3: Explain the importance of oyster farming in coastal habitat restoration
- CLO 4: Plan and execute a commercially important research project in larval biology and aquaculture

#### Pre-requisites and Impermissible combinations
- Pass in BIOL2103 or BIOL2306 or BIOL3301 or BIOL3303

#### Offer in 2021 - 2022

- Shellfish Aquaculture and the Environment (S.E. Shumway, John Wiley & Sons)
- Molluscan Shellfish Farming (Brian Spencer, John Wiley & Sons)

## Course Website

http://www.biosch.hku.hk/ecology/lsc/

## Additional Course Information

- Taught and trained by several teachers, guest lecturers from government and aquaculture business sector;
- This course is offered in close collaboration with USM (Penang, Malaysia);
- Tentative duration: 1-15 June, 2016; In Part 1 - First 5 days at HKU for lectures, practicals and field visits - then flight to Penang to visit various oyster aquaculture facilities;
- Few USM (Malaysia) students may join the course;
- Fund for the Penang visit will be collected from students (about 6000 HKD including airfare, accommodation and selective meals for 7 days).
- This course will be offered subject to a minimum enrollment number and availability of teachers.
- This course will be offered in alternative year.

### BIOL3508 Microbial physiology and biotechnology (6 credits)

**Offering Department:** Biological Sciences  
**Course Co-ordinator:** Dr A Yan, Biological Sciences (ayan8@hku.hk)  
**Teachers Involved:** (Dr A Yan, Biological Sciences)  
**Course Objectives:** Microbes are amazing and important entities on earth. Knowledge of microbes is widely applied in food, pharmaceutics, biotechnologies, diseases control, and biogeochemical processes. Microbial Physiology and Biotechnology provides both molecular basis for understanding of these important processes and up-to-date applications in modern Biotechnology, and to serve as essential foundations for sub-disciplines of Microbiology, such as environmental, food, and medicinal Microbiology. Upon completion, students will acquire fundamental knowledge about microorganisms, gain laboratory skills on methodologies for microbial studies, and be able to apply the knowledge in Microbial Biotechnologies.

**Course Contents & Topics:** Serving as a course which blends fundamental knowledge about the world of microorganisms with applied Microbial Biotechnology, This course is organized and presented in three themes: 'Microbial Rules', 'Microbial Breath', and 'Microbial Biotechnology'. Under these three themes, a broad range of highly educational and interesting topics are presented including: 'Microorganisms and their position in the living world', 'Fundamental methodologies for the study of microbes', 'Microbial structures and functions', 'Microbial growth and control', 'Energy Generation', 'Central metabolism', and 'Microbial biotechnological applications in biodegradation, biofuels and synthetic biology'. Topics are taught in a coherent manner with a highly interactive tutorial session following each of the topics such that students will achieve a high quality, stimulating, and problem-based learning experiences.

**Course Learning Outcomes:** On successful completion of this course, students should be able to:

- CLO 1: appreciate the diversity of microbial metabolisms and applications in biotechnology
- CLO 2: comprehend the principles underlying the dynamic nature of microbial physiology
- CLO 3: gain laboratory skills on methodologies for microbial studies
- CLO 4: relate knowledge to practical application of microbes in industry and medicine

**Pre-requisites (and Co-requisites and Impermissible combinations):** Pass in BIOL2103 or BIOL2220 or BIOC2600 or BIOC3604; Not for students who have passed in BIOL3108; and Not for students who have passed in BIOL402.

**Offer in 2021 - 2022:** Y  
**Academic Year:** 2021  
**Quota:** 60  
**Communication-intensive Course:** N

This course will be offered subject to a minimum enrollment number and availability of teachers.

Offering Department: Biological Sciences
Course Co-ordinator: Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)

Course Objectives:
1. Explain the relationships between diet and disease.
2. Describe the role of diet in the development and prevention of common chronic diseases such as diabetes, obesity and anorexia, cardiovascular disease, cancer, immune deficiency and renal failure.
3. Differentiate risk factors that influence dietary choice.
4. Describe the rationales for postoperative nutritional support for hospitalized patients.

Course Contents & Topics:
The basics of nutrition for health and fitness and medical nutrition therapy. The role of diet in the development and prevention of chronic diseases such as cancer, diabetes, obesity and anorexia as well as bulimia nervosa, cardiovascular diseases, renal failure, etc. Malnutrition. Nutrition and immune function. Medical nutrition therapy for food allergy and food intolerance. Nutrition in pregnancy and lactation.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
CLO 1: Discuss the different relationships between diet and disease.
CLO 2: Describe the role of diet in the development and prevention of diabetes, obesity and anorexia, cardiovascular disease, cancer, immune deficiency, and renal failure.
CLO 3: Clearly differentiate and interpret risk factors that influence dietary choice.
CLO 4: Describe the rationales for postoperative nutritional support for hospitalized patients.

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in BIOL2220 or BIOC2600 or BIOL3202 or BIOL3203 or BIOL3204 or BIOL3205
Not for students who have passed in BIOL3206

Offer in 2021 - 2022:
Y 2nd sem Off in 2022 - 2023 : Y

Grade Descriptors (A+ to F)
A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.

B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Substantial grasp of the subject. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective laboratory/fieldwork skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.

C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. General but incomplete grasp of the subject. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective laboratory/fieldwork skills and techniques. Correct use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Partial but limited grasp of the subject, retention of some relevant information of the subject. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab/fieldwork skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Little or no grasp of the knowledge and understanding of the subject. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Limited ability to use data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Laboratory reports 30 CLO 1,3
Presentation Group work 20 CLO 1,2,3,4

Required/recommended reading and online materials
Selected readings will also be available on the class website.

Course Website: http://moodle.hku.hk/

Additional Course Information
This course will be offered subject to a minimum enrollment number and availability of teachers.
Course Contents & Topics
Principles of animal nutrition and feed formulation; genetic selection and breeding of farm animals; slaughter and carcass inspection; meat preservation and safety; sensory quality of meat. Dairy processing emphasizing fermented products such as cheese and yogurt; probiotics and health effects. Grain production related to milling; dough rheology; the baking process and quality. Meat, dairy and grain product marketing.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand modern practices in meat, dairy and grain production
CLO 2 demonstrate a knowledge and understanding of meat and dairy sensory quality, and the technologies used in processing, preservation or improvement of meat and dairy products
CLO 3 demonstrate knowledge of selected issues related to meat and dairy safety
CLO 4 understand the technology behind the production of grain-based foods

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL2101
Not for students who have passed in BIOL3210;
Not for students who have passed in BIOL4207; and
Not for students who have passed in BIOL4208.

Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023 : Y Examination May

Grade Descriptors (A to F)
A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentation skills.

B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentation skills.

C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentation skills.

D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentation skills of limited effectiveness.

Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentation skills.

BIOL3951 Ecology & biodiversity field course (6 credits) Academic Year

Offering Department Biological Sciences Quota 20
Course Co-ordinator Dr L Karczmarski, Biological Sciences (leszek@hku.hk)
Teachers Involved Dr L Karczmarski,Biological Sciences

Course Objectives
This course is offered as a capstone experience and will require intense study of a topic relevant to the Ecology & Biodiversity Major during a field course, inside or outside Hong Kong.

Course Contents & Topics
Every year a number of different potential courses may be offered. The precise contents will be tailored to best suit the topic and locality involved and will therefore vary according to the specific course being held. The basic contents will involve lectures, seminars and extensive field and follow-up laboratory work. It is essential that students contact the course coordinator for further information on the courses available.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand the biodiversity and primary habitats in the ecosystem studied
CLO 2 establish the basic skills needed to identify target species associated with the field course
CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the particular ecosystems studied
CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communities

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Ecology & Biodiversity Major.

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N Examination ---

Grade Descriptors (A to F)
A Evidence of a thorough grasp of the subject and relevant research techniques. Eagerness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.

B Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity
with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.

C

Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.

D

Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.

Fail

No evidence of basic a minimum grasp of the subject and the minimum relevant research techniques. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

### Additional Course Information

Course Website: http://www.biosch.hku.hk/ecology/lsc/

Subclass A: Marine Mammal Field Course
Subclass B: Animal Behaviour Field Course

#### Course Contents & Topics

Students can choose either one of the following courses:

- **Subclass A: Marine Mammal Field Course**
  - **Course Objectives**
    - Students will undertake a dissertation on a topic related to the field of ecology and biodiversity. The dissertation will not involve any practical research in terms of laboratory or fieldwork, but will take the form of a desk-top study. Conducting a dissertation is an independent learning experience and will enable students to develop skills including the use of library and Web-based resources; the logical development of scientific arguments; written presentation skills; and personal time management.

- **Subclass B: Animal Behaviour Field Course**
  - **Course Objectives**
    - Students, who have been approved, can undertake a dissertation on a topic related to the field of ecology and biodiversity. The dissertation will incorporate relevant background reading and case studies, but limited evidence of learning beyond the adequate average level. Evidence of thorough level of study; credible analytical skills. Demonstrate a comprehensive, critical, assessment of findings and professional presentation of research work.

#### Offer in 2021 - 2022

**Grade Descriptors (A+ to F)**

- **Pass in at least 24 credits of advanced level**
  - *Major / Intensive Major* in *Ecology & Biodiversity*
  - *Major* in *Biological Sciences*

- **Evidence of complete or near-complete understanding and a thorough grasp of the subject matter as demonstrated by attaining of all learning outcomes. Excellent critique and knowledge of relevant literature and identification of research hypothesis.**
  - Well-designed scientific approach to test research hypothesis. Show excellent organizational and/or analytical skills. Demonstrate comprehensive, critical, assessment of findings and professional presentation of research work.

- **Evidence of near-complete understanding and a good grasp of the subject matter as demonstrated by attainment of the majority of learning outcomes. Good critique and knowledge of relevant literature and identification of research hypothesis.**
  - Appropriately designed scientific approach to test research hypothesis. Show good organizational and/or analytical skills. Demonstrate effective, critical, assessment of findings and good presentation of research work.

- **Evidence of adequate understanding and grasp of the subject matter as demonstrated by general but incomplete attainment of most of the learning outcomes. Acceptable critique and knowledge of relevant literature and identification of research hypothesis.**

---

**BIOL3991 Directed studies in ecology & biodiversity (6 credits)**

**Offering Department**: Biological Sciences

**Academic Year**: 2021

**Course Co-ordinator**: Dr S W Y Sin, Biological Sciences (sinyyw@hku.hk)

**Teachers Involved**

- (All academic staff in E&B Major / E&B Major (Intensive) Major, Biological Sciences)
- (All academic staff in E&B Major / E&B Major (Intensive) Major, Biological Sciences)

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 identify a relevant scientific question or knowledge gap
- CLO 2 establish a desk-top literature approach to test the question posed / address the knowledge gap
- CLO 3 undertake the appropriate research to test the question / address the knowledge gap using sound scientific principles; including statistical analyses where appropriate
- CLO 4 draw appropriate scientific conclusions from their research
- CLO 5 present their research as a scientific paper

**Pre-requisites and Co-requisites and Impermissible combinations**

**Offer in 2021 - 2022**

BIOL3992

Directed studies in food & nutritional science (6 credits)

Offering Department

Biological Sciences

Academic Year

2021

Quota

---

Course Co-ordinator

Dr J C Y Louie, Biological Sciences (jimmyl@hku.hk)

Teaching Involved

(All academic staff in Food & Nutritional Science Major, Biological Sciences)

Course Objectives

This course aims to provide a stimulating capstone experience for all Food & Nutritional Science Major undergraduates to integrate and apply their knowledge and skills obtained from the Major.

Course Contents & Topics

The directed study can be a review of literature on a specific topic, or a lab or field study that enhances the student's understanding of the topic in the field of food & nutritional science. The student should obtain the commitment of a supervisor in the area of the dissertation topic before submitting the registration form for the course (available from the General Office of School of Biological Sciences). Supervisor will introduce various methodologies/techniques and guide students to completion of the dissertation. Teaching will be informal and students will gain knowledge through discussion and feedback from their supervisors.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1: acquaint with the process of scientific enquiry
CLO 2: have a better understanding of the nature of food & nutritional science
CLO 3: apply scientific methods to address important issues in various biological disciplines
CLO 4: develop the key intellectual skills that will be valuable for all scientific studies

Pre-requisites

Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Food & Nutritional Science Major.

This capstone course is for Food & Nutritional Science Major students only.

Offer in 2021 - 2022

Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors (A to F)

A Work displaying a high level of scholarship and originality; virtually flawlessness presentation with excellent introduction to dissertation topic; showing a thorough grasp of the topic from background reading and analysis; clear statement of the objectives of the research; comprehensive exploration of the topic, personal synthesis of the issues with detailed support from the literature; comprehensive and up-to-date references integrated into argument or logical reasoning; critical evaluations of the main points or problems and their solutions and implications; thought-provoking discussions; accurate summary. All chapters/paragraphs are well-connected and presented logically with clarity of goals, demonstrating excellent organizational, rhetorical and presentational skills. The length of the dissertation meet the specified requirements. All other aspects of the dissertation conform to a high academic standard.

B Work showing some evidence of originality and insight in identifying, generating and communicating competing arguments, perspectives, or problem solving approach; demonstrating substantial understanding of fundamental concepts of the field of study; adequate grasp of the topic from background reading and analysis; a systematic exploration of the topic which may include an attempt at critical comment or appraisal; regular support provided from the literature; comprehensive and up-to-date references included; main points fully elaborated; summary given in the final chapter/paragraphs; communicating information and ideas clearly and fluently, demonstrating good organizational, rhetorical and presentational skills. The length of the dissertation meet the specified requirements. Most aspects conform to a high academic standard.

C Work showing no evidence of originality and insight, but the presentation demonstrated adequate understanding and comprehension of most aspects of the dissertation topic; essential topic materials have been read and acknowledged; the main points presented in logically sequential paragraphs; reasonably balanced discussion of the major issues; acceptable interpretation of the topic, some explanation, illustration and support provided from the literature; summary given in the final chapter/paragraphs; most presentation details met (front page, margin, legibility, citations correctly reported and tabulated, etc.); few typos or grammatical errors; Most aspects conform to an acceptable academic standard.

D Demonstrating superficial or partial or faulty understanding of the fundamental concepts of the field of study; showing the bare minimum of information, poorly digested and not very well organized in presentation; irrelevant material; showing no evidence of critical thinking; arguments undeveloped or inappropriate or unsupported; lack of clarity or structure in communicating information or ideas; dissertation topic not fully covered; discussion too brief or just repeating the data or findings; overuse quotations with little explanation; insufficient support from literature; reading not well incorporated into the text; limited acknowledgments and light bibliography; some major points missed. Minimum conform to an acceptable academic standard.

Fail The dissertation topic was not covered acceptably; demonstrating evidence of poor knowledge, clear deficiencies in understanding fundamental concepts; materials largely irrelevant; incomplete or confusing communication of information or ideas; unoriginal; incoherent argument; complete misinterpretation of the topic or data; no evidence of reading (no acknowledgements or bibliography); structure confused or not discernible; Fail to meet most or all of the basic requirements of the course. The written work is not of an academic standard.

School of Biological Sciences
BIOL3993
Directed studies in Molecular biology & biotechnology (6 credits)

Academic Year: 2021

Offering Department: Biological Sciences
Course Co-ordinator: Dr A Yan, Biological Sciences (ayanb@hku.hk)
Teachers Involved: (All academic staff in Molecular Biology & Biotechnology Major, Biological Sciences)

Course Objectives:
This course aims to provide a stimulating capstone experience for all Molecular Biology & Biotechnology Major undergraduates to integrate and apply their knowledge and skills obtained from the Major.

Course Contents & Topics:
The directed study can be a review of literature on a specific topic, or a lab or field study that enhances the student's understanding of the topic in the field of molecular biology & biotechnology. The student should obtain the commitment of a supervisor in the area of the dissertation topic before submitting the registration form for the course (available from the General Office of School of Biological Sciences). Supervisor will introduce various methodologies/techniques and guide students to completion of the dissertation. Teaching will be informal and students will gain knowledge through discussion and feedback from their supervisors.

Course Learning Outcomes:
On successful completion of this course, students should be able to:

- CLO 1: acquaint with the process of science
- CLO 2: have a better understanding of the nature of molecular biology & biotechnology
- CLO 3: apply scientific methods to address important issues in various biological disciplines
- CLO 4: develop the key intellectual skills that will be valuable for all scientific studies.

Pre-requisites and Co-requisites:
Passes in at least 24 credits of advanced level disciplinary core/elective courses in the Molecular Biology & Biotechnology Major.

This capstone course is for Molecular Biology & Biotechnology Major students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Grade Descriptors (A+ to F):

A: Work displaying a high level of scholarship and originality; virtually flawless presentation with excellent introduction to dissertation topic; showing a thorough grasp of the topic from background reading and analysis; clear statement of the objectives of the research; comprehensive exploration of the topic; personal synthesis of the issues with detailed support from the literature; comprehensive and up-to-date references integrated into argument or logical reasoning; critical evaluations of the main points or problems and their solutions and implications; thought-provoking discussions; accurate summary. All chapters/paragraphs are well-connected and presented logically with clarity of goals, demonstrating excellent organizational, rhetorical and presentational skills. The length of the dissertation meet the specified requirements. All other aspects of the dissertation conform to a high academic standard.

B: Work showing some evidence of originality and insight in identifying, generating and communicating competing arguments, perspectives or problem solving approaches; demonstrating substantial understanding of fundamental concepts of the field of study; adequate grasp of the topic from background reading and analysis; a systematic exploration of the topic which may include an attempt at critical comment or appraisal; regular support provided from the literature; comprehensive and up-to-date references included; main points fully elaborated; summary given in the final chapter/paragraphs; communicating information and ideas clearly and fluently, demonstrating good organizational, rhetorical and presentational skills. The length of the dissertation meet the specified requirements. All other aspects of the dissertation conform to a high academic standard.

C: Work showing some evidence of originality and insight, but the presentation demonstrated adequate understanding and comprehension of most aspects of the dissertation topic; essential topic materials have been read and acknowledged; the main points presented in logically sequential paragraphs; reasonably balanced discussion of the major issues; acceptable interpretation of the topic, some explanation, illustration and support provided from the literature; summary given in the final chapter/paragraphs; most presentation details met (front page, margin, legibility, citations correctly reported and tabulated, etc.); few typos or grammatical errors. Most aspects conform to an acceptable academic standard.

D: Demonstrating superficial or partial or faulty understanding of the fundamental concepts of the field of study; showing the bare minimum of information, poorly digested and not very well organized in presentation; irrelevant material; showing no evidence of critical thinking; arguments undeveloped or inappropriate or unsupported; lack of clarity or structure in communicating information or ideas; dissertation topic not fully covered; discussion too brief or just repeating the data or findings; overuse quotations with little explanation; insufficient support from literature; reading not well incorporated into the text; limited acknowledgements and light bibliography; some major points missed. Minimum conformity to an acceptable academic standard.

Fail: The dissertation topic was not covered adequately; demonstrating evidence of poor knowledge, clear deficiencies in understanding fundamental concepts, materials largely irrelevant; incomplete or confusing communication of information or ideas; ineffective, incoherent arguments; complete misinterpretation of the topic or data; no evidence of reading (no acknowledgements or bibliography); structure confused or not discernible; Fail to meet most or all of the basic requirements of the course. The written work is not of an academic standard.

Course Website: http://moodle.hku.hk/

Additional Course Information:
Regular meetings between the supervisor and student. Guidance from the supervisor on the scientific methods, and on how to think and write scientifically. Students should spend at least 120 hours on the dissertation or project. Recommended reading may be assigned.

BIOL3994
Directed studies in biological sciences (6 credits)

Academic Year: 2021

Offering Department: Biological Sciences
Course Co-ordinator: Dr. J Wu, Biological Sciences (jinwu@hku.hk)

Additional Course Information:
Regular meetings between the supervisor and student. Guidance from the supervisor on the scientific methods, and on how to think and write scientifically. Students should spend at least 120 hours on the dissertation or project. Recommended reading may be assigned.
School of Biological Sciences

Teachers Involved
(All academic staff in Biological Sciences Major, Biological Sciences)

Course Objectives
This course aims to provide a stimulating capstone experience for all Biological Sciences Major undergraduates to integrate and apply their knowledge and skills obtained from the Major.

Course Contents & Topics
The directed study can be a review of literature on a specific topic, or a lab or field study that enhances the student's understanding of the topic in the field of biological sciences. The student should obtain the commitment of a supervisor in the area of the dissertation topic before submitting the registration form for the course (available from the General Office of School of Biological Sciences). Supervisor will introduce various methodologies/techniques and guide students to completion of the dissertation. Teaching will be informal and students will gain knowledge through discussion and feedback from their supervisors.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: acquaint with the process of science
- CLO 2: have a better understanding of the nature of biological sciences
- CLO 3: apply scientific methods to address important issues in various biological disciplines
- CLO 4: develop the key intellectual skills that will be valuable for all scientific studies

Pre-requisites
This capstone course is for Biological Sciences Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study. This capstone course is for Biological Sciences Major undergraduates to integrate and apply their knowledge and skills obtained from the Major.

Offer in 2021 - 2022

BIOL4201
Public health nutrition (6 credits)
Academic Year 2021

Offering Department
Biological Sciences

Course Co-ordinator
Dr J C Y Louie, Biological Sciences (jimmyl@hku.hk)

Teachers Involved
Dr J C Y Louie, Biological Science

Course Objectives
Public health nutrition unites social sciences and biomedical sciences in preventing disease and improving human health through programs aimed at enhancing good nutritional practices. This course presents a broad overview of the professional practice and essential skills required of a public health nutritionist.

Course Contents & Topics

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: have a broad knowledge of the scope and methodologies of public health nutrition

790
School of Biological Sciences

To demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. General but incomplete grasp of the subject. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective laboratory / fieldwork skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Pass but limited grasp of the subject, retention of some relevant information of the subject. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab / fieldwork skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Little or no grasp of the knowledge and understanding of the subject. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective laboratory / fieldwork skills and techniques. Mixture of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

BIOL4202 Nutrition and sports performance (6 credits)

Academic Year 2021

Quota 20

Offering Department Biological Sciences

Course Co-ordinator TBC, Biological Sciences (/)

Teachers Involved (TBC, School of Biological Sciences)

Course Objectives

To demonstrate evidence-based links between nutrition, exercise and sport performance. More specifically, to gain in-depth understanding about how the metabolic demands of exercise influence physiological and cognitive functions and exercise performance. To focus on the role of macronutrients, minerals, vitamins, antioxidants, supplements and hydration in sustaining and enhancing sports performance during short-duration, intermittent and endurance exercise.

Course Contents & Topics

Nutrition aims and requirements differ during habitual exercise and competitive sports: from endogenous adaptations to developing metabolic efficiency to competition nutrition. Professional athletes enhance their performance following the recommendations of the International Olympic Committee: "The amount, composition and timing of food intake can profoundly affect sports performance" (Maughan et al, 2004). The course will firstly examine the physiological needs pre-, during and post-competition and/or habitual exercise to perform at its best. Secondly, it will investigate how and why nutrient and energy intakes vary between different athlete groups, the difference between energy metabolism and requirements during aerobic and anaerobic exercise. Putting exercise and sports performance in focus, the topics will include: energy balance; macronutrients; selected micronutrients; fluid balance and hydration strategies; weight loss and weight gain in athletes, sport foods and supplements; position stands and new perspectives on sports nutrition, nutrient/energy requirements in exercise and sports, ergogenic aids and myths of sport nutrition

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 critically examine and describe the need of energy, nutrients and fluid before, during and after the physical exercise in relation to different sports, individual athletes and performance situations

CLO 2 describe the impact of dietary macronutrients, vitamins and minerals on physical performance

CLO 3 provide an overview of the position stands on major misconceptions in sports nutrition. Being able to evaluate, explain and communicate current, evidence based epidemiological knowledge behind these position stands.

Pre-requisites (and Co-requisites and Impermissible combinations)

PASS in BIOL3202

BIOL4202 Nutrition and sports performance (6 credits)

Academic Year 2021

Quota 20

Offering Department Biological Sciences

Course Co-ordinator TBC, Biological Sciences (/)

Teachers Involved (TBC, School of Biological Sciences)

Course Objectives

To demonstrate evidence-based links between nutrition, exercise and sport performance. More specifically, to gain in-depth understanding about how the metabolic demands of exercise influence physiological and cognitive functions and exercise performance. To focus on the role of macronutrients, minerals, vitamins, antioxidants, supplements and hydration in sustaining and enhancing sports performance during short-duration, intermittent and endurance exercise.

Course Contents & Topics

Nutrition aims and requirements differ during habitual exercise and competitive sports: from endogenous adaptations to developing metabolic efficiency to competition nutrition. Professional athletes enhance their performance following the recommendations of the International Olympic Committee: "The amount, composition and timing of food intake can profoundly affect sports performance" (Maughan et al, 2004). The course will firstly examine the physiological needs pre-, during and post-competition and/or habitual exercise to perform at its best. Secondly, it will investigate how and why nutrient and energy intakes vary between different athlete groups, the difference between energy metabolism and requirements during aerobic and anaerobic exercise. Putting exercise and sports performance in focus, the topics will include: energy balance; macronutrients; selected micronutrients; fluid balance and hydration strategies; weight loss and weight gain in athletes, sport foods and supplements; position stands and new perspectives on sports nutrition, nutrient/energy requirements in exercise and sports, ergogenic aids and myths of sport nutrition

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 critically examine and describe the need of energy, nutrients and fluid before, during and after the physical exercise in relation to different sports, individual athletes and performance situations

CLO 2 describe the impact of dietary macronutrients, vitamins and minerals on physical performance

CLO 3 provide an overview of the position stands on major misconceptions in sports nutrition. Being able to evaluate, explain and communicate current, evidence based epidemiological knowledge behind these position stands.
To highlight the impact of nutrient provision on brain structure and function, and to discuss various effects of nutrition and diet on mental function and behaviour.

On successful completion of this course, students should be able to:

CLO 1 understand the basic structure and functions of the brain and how nutrition influences its development

CLO 2 be able to explain the consequences of malnutrition on cognition

CLO 3 appreciate appetite control as a function of food-gut-brain interaction

CLO 4 understand the differences between bioactive food ingredients and drugs

CLO 5 critically evaluate and interpret the internal and external cues that determine dietary behaviour

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL3202

Offer in 2021 - 2022

N

Offer in 2022 - 2023 : Y

Examination

Grade Descriptors

A

Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critical use quality management skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

B

Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.

C

Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.

D

Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.

Fail

Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use quality management skills and techniques and analysis of data and results ineffectively, leading generally to inappropriately and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

BIOL4205 Food technology (6 credits)  Academic Year 2021
Offering Department Biological Sciences  Quota 30
Course Co-ordinator Dr J C Y Lee, Biological Sciences (jettylee@hku.hk)
Teachers Involved (Dr J C Y Lee, Biological Sciences) (Dr L Zhang, Biological Sciences)

Course Objectives

To provide students with basic principles and methodologies of food processing and preservation technology. To cover key engineering principles relevant to the food industry. Students will gain hands-on experience with selected food processing and preservation techniques.

Course Contents & Topics

Food processing is a multidisciplinary field combining applied physical sciences with knowledge of product properties and requirements. This course introduces the technical knowledge required to implement cost-effective production and commercialization of food products and services. The design and development of processes, equipment and machinery used to convert raw agricultural materials and ingredients into safe, convenient, and nutritious consumer food products are covered. We discuss the basic engineering principles and applications of methods in food processing and preservation. Techniques discussed will include those for high and low temperature processing, concentration, dehydration, baking and extrusion.

Course Learning Outcomes

On successful completion of this course, students should be able to:
CLO 1 understand basic principles of food processing methods and preservation technology
CLO 2 be able to apply their knowledge and practical skills to process and develop food products
CLO 3 demonstrate in-depth understanding of selected methods and problems in food processing and preservation

Pre-requisites

Pass in BIOL3209

Offer in 2021 - 2022

Y 2nd sem Offer in 2022 - 2023: Y

Examination

No Exam

Grade Descriptors (A+ to F)

A  Demonstrate thorough grasp of the subject matter covered. Show strong evidence of analytical and critical abilities of the changes that take place in variety of food during preparation, processing and storage. Identifies and uses advanced techniques and equipment for a variety of food-specific purposes. Demonstrates advanced skill in designing, producing and evaluating solutions of excellent quality for specific food purposes. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions.

B  Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities of the changes that take place in variety of food during preparation, processing and storage. Identifies and uses techniques and equipment for a variety of food-specific purposes. Demonstrates advanced skill in designing, producing and evaluating solutions of excellent quality for specific food purposes. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions.

C  Demonstrate general but incomplete grasp of the subject matter covered. Show adequate evidence of analytical and critical abilities and logical thinking of the changes that take place in variety of food during preparation, processing and storage. Identifies and uses appropriate techniques and equipment for a variety of food-specific purposes. Demonstrates basic skill in designing, producing and evaluating solutions of quality for specific food purposes. Use lab skills and techniques and analysis of data and results to draw moderately appropriate conclusions.

D  Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking of the changes that take place in variety of food during preparation, processing and storage. Identifies and uses techniques and equipment for a limited range of food-specific purposes. Demonstrates basic skill in designing, producing and evaluating solutions of quality for specific food purposes. Use lab skills and techniques and analysis of data and results to draw appropriately conclusions occasionally.

Fail  Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking of the changes that take place in variety of food during preparation, processing and storage. Identifies and uses techniques and equipment for a limited range of food-specific purposes. With guidance, demonstrates limited skills in designing, producing and evaluating solutions for specific food purposes. Use lab skills and techniques and analysis of data and results inappropriately, leading generally to inappropriate and usually erroneous conclusions.

Course Objectives
To give students a broad understanding of modern practice and technologies used in agriculture products including meat, dairy and grain production, processing and marketing.

Course Contents & Topics
Principles of animal nutrition and feed formulation; genetic selection and breeding of farm animals; slaughter and carcass inspection; meat preservation and safety; sensory quality of meat. Dairy processing emphasizing fermented products such as cheese and yogurt; probiotics and health effects. Grain production related to milling; dough rheology; the baking process and quality. Meat, dairy and grain product marketing.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand modern practices in meat, dairy and grain production
- CLO 2 demonstrate a knowledge and understanding of meat and dairy sensory quality, and the technologies used in processing, preservation or improvement of meat and dairy products
- CLO 3 demonstrate knowledge of selected issues related to meat and dairy safety
- CLO 4 understand the technology behind the production of grain-based foods

Pre-requisites (and Co-requisites and Impermissible combinations)
Passes in BIOL3201 or (BIOL2101 and any level 3 BIOL course); and Not for students who have passed in BIOL3210; and Not for students who have passed in BIOL4207

Grade Descriptors (A+ to F)
- A: Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.
- B: Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.
- C: Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.
- D: Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.
- Fail: Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

BIOL4209 Functional foods (6 credits)
Offering Department Biological Sciences
Academic Year 2021
Quota 40

Course Co-ordinator Dr L Zhang. Biological Sciences (lzhang@hku.hk)
Teachers Involved (Dr L Zhang, Biological Sciences)

Course Objectives
To provide a fundamental understanding of the rapidly emerging functional food/nutraceutical industry with an emphasis on the history, regulation, chemical basis and quality control of healthy ingredients/products and their effects on human health.

Course Contents & Topics
Concept, history and global regulation of functional foods and nutraceuticals; classification of functional foods and nutraceuticals based on their chemical structures; unsaturated fatty acids, proteins, food pigments and dietary fibers as healthy food ingredients; health benefits of dietary phenolics, terpenes, phytosterols and sulphur-containing compounds; probiotics and prebiotics; small berries, spices, teas and herbs for health; quality control and assurance of functional foods and nutraceuticals.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand the definition and global regulation of functional foods and nutraceuticals
- CLO 2 have substantial chemical knowledge of functional food and nutraceutical products
- CLO 3 be able to describe examples of functional foods and interpret critically their claimed health benefits
- CLO 4 demonstrate understanding of the current functional food and nutraceutical industry
- CLO 5 understand major techniques and technologies for quality control and manufacturing of healthy products

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL3202

Offer in 2021 - 2022 Y 1st sem Offer in 2022 - 2023 Y

Grade Descriptors (A+ to F)
- A: Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use knowledge to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

</tbody>
</table>

**Course Objectives**

To introduce the key concepts and techniques used in food product development. To provide small group experience in the design, development and production of a new food product.

**Course Contents & Topics**

History and future of the food industry; industrial product development process; idea generation and prototype development for new food products; quality management and legal protection; marketing strategies; food labeling; food packaging design; new product development for different food industries.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 understand the food product development cycle
- CLO 2 demonstrate knowledge of current and future trends in the food industry
- CLO 3 demonstrate enhanced insight and understanding of current and future trends in the food industry
- CLO 4 have professional level practical experience in new product development
- CLO 5 know the main characteristics of different sectors of the food industry

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in BIOL3203 or BIOL4205

**Offer in 2021 - 2022**

### Course Contents & Topics

- Introduction to course: phylogenetic, biological and ecological concepts and adaptation. Multispecies interactions in marine and freshwater fish assemblages. Fishery theory; how do fisheries work? Status of the world’s capture fisheries; fish stock assessment and fishery management practices using local, regional and global examples. The roles of mariculture and capture fisheries for seafood supply and relationship to capture fisheries. Fishery management and fish conservation. Conclusion: fish biodiversity and fishery production; ethics of fish research and roles of mariculture and fish conservation.

### Course Objectives

- To provide an understanding of how species diversity and selected aspects of their life history are relevant to fishery management challenges, sustainable supply of seafood, and the conservation of threatened species.

### Course Learning Outcomes

- On successful completion of this course, students should be able to:
  - CLO 1 understand the basis of fish species diversity in relation to phylogenetic, ecological and biological factors.
  - CLO 2 appreciate the direct and indirect impacts and consequences of human activities on fish species and species assemblages and implications for seafood security.
  - CLO 3 understand the functioning of fisheries and standards of fisheries assessment, development and management.
  - CLO 4 appreciate the mutual dependency of humans with fished populations in relation to their long-term sustainability.
  - CLO 5 enhance the ability for critical and synthetic thinking and to consider innovative approaches to research and management.

### Required/recommended reading and online materials

- G. Helfman, B. Collette and D. Facey: The Diversity of Fishes (Blackwell Science, 1997)

### Pre-requisites (and Co-requisites and Impermissible combinations)

- Pass in BIOL3301 or BIOL3303

### Additional Course Information

- This course will be offered subject to a minimum enrollment number and availability of teachers.

### Communication-intensive Course

**Course Type:** Lecture-based course
BIOL4302 | Environmental impact assessment (6 credits) | Academic Year 2021 | Quota 30
Offering Department | Biological Sciences | Course Co-ordinator | Dr. B Russell, Biological Sciences (jimwu@hku.hk)
Teachers Involved | (Dr C H Hau, Biological Sciences) | (Dr J Wu, Biological Sciences)
Course Objectives | To introduce the general principles, processes, techniques, current practices and problems of environmental impact assessment (EIA).
Course Learning Outcomes | On successful completion of this course, students should be able to:
- CLO 1 understand the operation of EIA systems in Hong Kong and overseas
- CLO 2 apply a variety of techniques in assessing environmental impact
- CLO 3 evaluate different options and determine acceptability in environmental impact assessment
- CLO 4 plan ecological surveys in EIA projects
Pre-requisites | Pass in (BIOL2103 or BIOL2306); and (ENVS3004 or any BIOL3XXX course)
Offer in 2021 - 2022 | Y 2nd sem | Offer in 2022 - 2023: Y | Examination | No Exam
Grade Descriptors (A to F) | A | Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, ability to integrate and synthesize information, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective presentational skills. Strong evidence of clear attention to thoughtful and reflective thinking.
B | Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, integration of material and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate effective presentational skills. Evidence of clear attention to thoughtful and reflective thinking.
C | Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective presentational skills. Little evidence of clear attention to thoughtful and reflective thinking.
D | Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities and little attempt at integration. Show limited ability to apply knowledge to solve problems. Apply limited effectiveness in presentational skills. Lack of attention to thoughtful and reflective thinking.
Fail | Fail | Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
Communication-intensive Course | N

BIOL4303 | Animal behaviour (6 credits) | Academic Year 2021 | Quota 30
Offering Department | Biological Sciences | Course Co-ordinator | Dr. L Karczmarski, Biological Sciences (leszek@hku.hk)
Teachers Involved
Course Objectives | This course teaches students the ways and means of exploring and understanding animal behaviour; it provides insights into a field of science that investigates everything animals do, including the underlying mechanisms and functions of specific behaviours; the ways in which animals interact with each other, with their physical environment and other organisms; how animals find and defend resources, avoid predators, choose mates, reproduce, and care for their young; how complex animal societies are formed and how behaviour of an individual affects the structure of a population.
Course Contents & Topics | This course will introduce students to scientific reasoning and conceptual basis of an understanding of animal behaviour and behavioural ecology. What causes specific behaviour and what are the underlying mechanisms? How does behaviour develop within the individual's lifetime and what functions does it serve? For example: why are some species monogamous while others are polygamous? What makes one organism the hunter and another the hunted? Several animal species, including humans, tend to live in groups; social life is among the most complex and effective survival strategy. However, how could, for instance, the birth of sterile castes, like in bees, be explained through an evolving mechanism which emphasizes the reproductive success of as many individuals as possible? Why, among animals living in small groups like squirrels, would an individual risk its own life to save the rest of the group? In this course, based upon ecological and evolutionary principles, students will learn to think

798
within the paradigm of behavioural ecology and understand the causes, functions, development, and evolution of behaviour. We will discuss several classical studies that form the foundation of this field, as well as more recent research that represents the current concepts which have led to modern understanding of animal behaviour. We will also illustrate the links between the recent extraordinary advances in behavioural ecology and socio-ecology with their application in animal conservation.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 appreciate the scientific reasoning and methodology in the field of Animal Behaviour
- CLO 2 appreciate the complexity of interactions between environmental selective pressures and animal behaviour
- CLO 3 appreciate current theories that form basis for modern understanding of animal behaviour
- CLO 4 learn the scientific reasoning and methodology in the field of Animal Behaviour
- CLO 5 think analytically in terms of behavioural ecology, animal socio-behavioural complexity, and how the understanding of species' behaviour contributes to its conservation

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in BIOL2306; and Pass in one of the following courses: BIOL3301, BIOL3313, BIOL3319, BIOL3320 or BIOL3419

Not for students who have passed in BIOL3101

**Grade Descriptors (A+ to F)**

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Evidence of a thorough grasp of the subject in a broader comparative perspective as demonstrated by background reading and excellent use of named examples and case studies. Evidence of independent critical thought with excellent use of a broad range of fundamental concepts to draw insightful and logical conclusions. Show eagerness to learn, great abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.</td>
</tr>
<tr>
<td>B</td>
<td>Evidence of a good grasp of the subject as demonstrated by some background reading and appropriate use of named examples and some case studies. Evidence of good critical thought, although not necessarily original. Good and very good (but not outstanding) abilities of independent work, effective presentation skills with good analytical and logical argumentation. Good general command of acquired knowledge to draw meaningful and logical conclusions. Work more than sufficient for what is required at degree level.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate an adequate, but not coherent and incomplete grasp of the subject, with limited background reading and limited use of named examples and case studies. Some abilities of logical critical thinking, but not insightful and/or independent; only partial abilities to use acquired knowledge and work independently to draw meaningful conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required at degree level.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate some grasp of the subject, but partial and limited to the most basic concepts, examples, and limited (or none) case studies. Insufficient evidence of background reading, limited abilities of critical thinking, and not particularly effective presentation skills with generally weak logical argumentation and restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.</td>
</tr>
<tr>
<td>Fail</td>
<td>No evidence of basic minimum knowledge and understanding of the subject. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.</td>
</tr>

**Additional Course Information**

This course is offered in alternate year. This course will be offered subject to a minimum enrollment number and availability of teachers.

**BIOL4304**

**Ecosystem functioning and services (6 credits)**

**Offering Department**

Biological Sciences

**Quota**

30

**Course Co-ordinator**

Dr B Russell, Biological Sciences (brussell@hku.hk)

**Teachers Involved**

(Dr B Guenard, Biological Sciences)

(Dr B Russell, Biological Sciences)

(Dr C Dingle, Biological Sciences)

(Dr S Cannicci, Biological Sciences)

(Guester Lecturer, Biological Sciences)

**Course Objectives**

This course will introduce the functioning of terrestrial, fresh water and marine ecosystems and the services which they provide human populations. The concept of ecosystem services will be further expanded into “value”, including financial, cultural, social and, importantly, the intrinsic value that may be priceless. We will also explore how human activities degrade these ecosystem services and how protecting ecosystems and biodiversity can increase the ecosystem services supplied to humans.

**Course Contents & Topics**

Natural ecosystems provide trillions of dollars’ worth of ecosystem services to humans every year. Many of these services go unrecognized and undervalued. In fact, because humans rely on ecosystems many of these services may be priceless. This course will first cover the function of different ecosystems from terrestrial, fresh water and marine environments. Students will then be introduced to the concept of ecosystem services and what they provide to human populations. Finally, human activities which degrade ecosystems and reduce the extent that ecosystems can provide these services, and what that means for human populations, will be covered. Students will develop independent and creative thinking when proposing solutions to the question of how to value ecosystems for their...
**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** Demonstrate an understanding of the complexity and function of ecosystems
- **CLO 2** Explain how ecosystems provide services which humans use
- **CLO 3** Demonstrate knowledge on methods used to calculate the value of ecosystem services
- **CLO 4** Demonstrate knowledge on the limits to the methods used to calculate the value of ecosystems and the dangers of placing a value on nature
- **CLO 5** Demonstrate an understanding of how human activities reduce the function of ecosystems and reduces ecosystem services

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in one of the following courses: BIOL3301 or BIOL3303 or BIOL3313 or BIOL3319 or ENVLS3019 or ENVS3004 or ENVS3020

**Grade Descriptors (A+ to F)**

<table>
<thead>
<tr>

**Communication-intensive Course**

N

**Course Website**

http://moodle.hku.hk

**Additional Course Information**

Offer in alternate year from 2016-2017

This course will be offered subject to a minimum enrollment number and availability of teachers.

**BIOL4401**

**Medical microbiology and applied immunology (6 credits)**

**Academic Year** 2021

**Offering Department** Biological Sciences

**Quota** 40

**Course Co-ordinator**

Dr W Y Lui, Biological Sciences (wylui@hku.hk)

**Teachers Involved**

Dr A Yan, Biological Sciences (dyanyan@hku.hk)

Dr C G Zheng, Biological Sciences (czheng@hku.hk)

Dr W Y Lui, Biological Sciences (wylui@hku.hk)

**Course Objectives**

The objective is to provide students the knowledge on the practical applications of immunology and microbiology in biological research, clinical analysis and disease diagnosis.

**Course Contents & Topics**

- Application of antigen-antibody interaction in advanced research such as chromatin. Immunoprecipitation assay, co-immunoprecipitation and dual immunofluorescence analysis. Principles of flow cytometry and its application.
- Tumor immunology and immunotherapy such as FDA-approved checkpoint inhibitor immunotherapy and chimeric antigen receptor (CAR) T-cell therapy.
- Microbial pathogens and associated diseases, host immune response, antimicrobial agents and multidrug resistance, epidemiology and prevention of microbial infections.
- Clinical laboratory analysis in haematology, chemical pathology, and clinical microbiology. The application of these testing methods in the diagnosis of disease associated with major systems of the human body and the diagnosis of infectious diseases.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** apply the principles of antigen-antibody interaction in various advanced research techniques
- **CLO 2** demonstrate knowledge on microbial pathogens, mechanisms for their disease-causing, and principles of antibiotic development
- **CLO 3** understand the scientific principles of various clinical laboratory analyses
- **CLO 4** promote public attention on control of microbial infection and the spread of antibiotic resistance

**Pre-requisites (and Co-requisites)**

Pass in BIOL3401
### BIOL4402 Microbial biotechnology (6 credits)

<tr>
<td>Course Objectives</td>
<td>This course is intended for students who would like to understand the application of modern microbiology in biotechnology. The microbial systems being used include different types of viruses, bacteria, fungi and algae. At the end of the course the students are expected to know the parameters and conditions that affect the yield of production and the systems available for the expression of various types of biotechnology products.</td>
</tr>
<tr>
<td>Course Contents &amp; Topics</td>
<td>Upstream and downstream processing will be briefly described to equip the students with the background for microbial biotechnology. The latest advances in microbial expression systems using viruses, bacteria, yeasts and algae will be reviewed. Specific examples on the use of these systems will be provided. These include but not limited to production of recombinant vaccines, secondary metabolites, food and food additives, industrial enzymes and bioprocesses as well as bioremediation and medical diagnostics.</td>
</tr>
<tr>
<td>Course Learning Outcomes</td>
<td>On successful completion of this course, students should be able to: CLO 1 explain the fundamental biochemical concepts underlying the industrial production of selected microbial biotechnology products. CLO 2 understand the importance of the current recombinant technology for large-scale manufacturing of various protein products. CLO 3 describe the major expression systems, understand their purposes, advantages, and disadvantages. CLO 4 deliver a professional group presentation on a self-decided topic related to microbial biotechnology.</td>

**BIOL4409**  
**General virology (6 credits)**  
**Academic Year** 2021  
**Offering Department** Biological Sciences  
**Course Co-ordinator** Dr W B L Lim, Biological Sciences (bilim@hku.hk)  
**Teachers Involved** (Dr W B Lim, School of Biological Sciences)  
**Course Objectives**  
This Course provides the fundamental principles of virology so that students can understand the pathogenesis of major viral diseases that affect animal health. The course will prepare students for profession or graduate work in virology, medicine and biotechnology.

**Course Contents & Topics**  
**Fundamental Virology**  
1. Classification and Nomenclature of Viruses  
2. Virus structure: Capsid symmetry, icosahedral symmetry  
3. Virus structure: Genetic Materials, Nucleocapsid, Envelope  
4. Virus entry: Receptors, uncoating and fusion  
5. Virus-Cell interaction  
6. RNA viruses: Genome replication and mRNA production  
7. Baltimore Class IV (+) s.s. RNA viruses: Picornaviruses  
8. Baltimore Class V (-) s.s. RNA viruses: Myxoviruses  
9. Ambisense RNA viruses: Bunyaviruses and Arenaviruses  
10. 11, Baltimore Class VI (+) s.s. RNA viruses: Retroviruses  
12. Baltimore Class III d.s. RNA viruses: Reoviruses  
13. 14, Baltimore Class I d.s. DNA viruses: Adenoviruses, HEPERVIRUSES  
15. Baltimore Class II s.s. (+) DNA viruses: Paroviruses  
16. Mechanisms of Viral Oncogenesis  
17. Anti-viral treatments  
18. Viruses as Tools in Medicine and Biotechnology  
**Practical Virology**  
19. Specimen Collection, Transportation and Processing, Quality Assurance & Laboratory Safety  
20. Virus isolation, propagation and titration  
21, 22. Virus Identification: Immunocytochemical assays, ELISA, Complement Fixation Assay, Hemagglutination and HI assays  
23, 24. Neutralization assay and Antiviral assay

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:  
CLO 1 be familiar with virus classification and the modes of replication and transmission of various viral families  
CLO 2 gain hand-on experiences on common virological techniques  
CLO 3 carry out researches on virology after taking this course

**Pre-requisites (and Co-requisites and Impermissible combinations)**  
Pass in BIOL3401 or BIOL3403

**Offer in 2021 - 2022** N  
**Grade Descriptors (A+ to F)**  
A Demonstrate thorough mastery at an advanced level of knowledge required for attaining all the course learning outcomes. Show strong analytical skills and competent ability to acquire knowledge on new development of the subject. Apply highly effective lab skills and techniques. Apply highly effective organizational and presentational skills.  
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical skills and adequate ability to acquire knowledge on new development of the subject. Apply effective lab skills and techniques. Apply effective organizational and presentational skills.  
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical skills and certain ability to acquire knowledge on new development of the subject. Apply moderately effective lab skills and techniques. Apply moderately effective organizational and presentational skills.  
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of limited analytical skills and ability to acquire knowledge on new development of the subject. Apply partially effective lab skills and techniques. Apply limited or barely effective organizational and presentational skills.  
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical skills and ability to acquire knowledge on new development of the subject. Apply minimally effective or ineffective lab skills and techniques. Organization and presentational skills are minimally effective or ineffective.

**Communication-intensive Course** N

This course covers the principles and key concepts of plant and food biotechnology and its applications in increasing global food supply. The significances of biotechnology in agriculture and food production, and the emerging importance of plant biotechnology in molecular farming for the production of biopharmaceuticals and other high-value proteins will be discussed. The course will also provide an insight on the real-life applications of plant and food biotechnology.

- Genetic improvements in agriculture.
- Transgenic crops in global food production.
- Tools in plant genetic engineering: promoters and marker genes.
- Techniques in plant gene transfer: Agrobacterium-mediated transformation, biolistics and microinjection.
- Nuclear and plastid transformation.
- Gene silencing in plants. Genetic manipulation of commercially useful biosynthetic pathways in crops.
- Genetically-engineered biofortified foods: provitamin A-enriched rice, omega-3-enriched soy and high-amylopectin tomatoes.
- Biotechnology in plant pest and disease management:
  - Producing crops resistant to phytopathogens and pests. Genome editing.
  - Short-interfering RNAs in gene silencing to defend against plant viruses.
  - Protecting crops in the field using the Bt toxin.
  - Pest-resistant genetically-transformed seeds using the alpha-amylase inhibitor
  - Herbicide-resistant crops.
  - Plants as bioreactors for molecular farming: transgenic and transplastomic plants for producing recombinant biopharmaceutical proteins.
  - Genetically-modified crops and food products: regulation, testing and labelling.
- Status of GM food in North America, Europe and Hong Kong.

This course will be offered subject to a minimum enrollment number and availability of teachers.

## BIOL4415

**Healthcare biotechnology (6 credits)**

**Offering Department**
Biological Sciences

**Course Co-ordinator**
Dr G Y W Chan, Biological Sciences (gywchan@hku.hk)

**Teachers Involved**
(Dr G Y W Chan,Biological Sciences)

**Course Objectives**
This course discusses the key concepts and principles involved in healthcare biotechnology, and their applications in molecular medicine.

**Course Contents & Topics**
- Genetic biotechnology in animals (transgenics, knockouts and other related technologies): Transgenic animals as models in the study of human diseases, as bioreactors for the production of hormones, antibiotics and vaccines and organs for xenotransplantation.
- Advanced molecular biology techniques related to human and animal science basic research, disease diagnosis and development of new therapies. These include but not limited to: applications of DNA technologies in diagnostic medicine and forensic science; tissue engineering.
- An overview of the drug development process, with a focus on the early-stage, preclinical drug discovery, drug target identification, high-throughput assay development, and screening of chemical libraries (synthetic and natural products). The concept of individualized medicine will also be discussed.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 describe key concepts in genetic biotechnology and human health
- CLO 2 acquire and apply advanced laboratory techniques essential to biotechnology
- CLO 3 develop scientific inquiry and critical thinking skills to understand, analyze, and evaluate problems in order to develop solutions
- CLO 4 gain insight into real-world applications in healthcare biotechnology

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in BIOL3401

## BIOL4416

**Stem cells and regenerative biology (6 credits)**

**Offering Department**
Biological Sciences

**Course Co-ordinator**
Dr K W Y Yuen, Biological Sciences (kwyyuen@hku.hk)

**Teachers Involved**
(Chao gu Zheng,Biological Sciences)
Course Objectives: To introduce the current understanding in regenerative biology, aging and longevity at the cellular and molecular level, and to present the interconnection between these biological events.

Course Contents & Topics:
The course will discuss cutting-edge research in
(i) regenerative and stem cell biology:
- the basic characteristics of stem cells
- the molecular and genetic control of cell fate specification and differentiation
- embryonic and adult stem cells
- experimental inducible pluripotent stem cells and tissue engineering
- therapeutics potentials for stem cell technology
- ethical issues in stem cell research
(ii) aging and longevity:
- model systems used for aging and life-span studies
- cellular and molecular biology of aging
- telomeres and cellular senescence
- genomic stability, DNA mutations and repair
- mitochondrial defects and oxidative stress
- genetic aging diseases
- genetic, biochemical and metabolic pathways involved in longevity

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1 appreciate the complex regulations of cell potency, cell age and organism longevity
CLO 2 describe the characteristics of stem cells and the different types of stem cells
CLO 3 describe applications of stem cell research, and understand ethical concerns involved
CLO 4 describe the cellular mechanisms of aging, and the pathways involved in longevity

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in BIOC3601 or BIOC3604 or BIOL3211 or BIOL3401 or BIOL3402 or BIOL3403 or BIOL3404 or BIOL3408

Offer in 2021 - 2022: N

Course Website: http://moodle.hku.hk/
Additional Course Information:
- This course will be offered subject to a minimum enrollment number and availability of teachers.
- "Omics" and systems biology (6 credits)
- "Omics" and systems biology (6 credits)

Offering Department: Biological Sciences
Course Co-ordinator: Dr J W Zhang, Biological Sciences (jzhang1@hku.hk)
Teachers Involved: Dr J W Zhang, Biological Sciences
Course Objectives: Recent progress in high-throughput omics technology has revolutionized the biological research. Genome-wide profiling of various biomolecules simultaneously by omics technology generates huge amounts of data, providing the potential to obtain a global and holistic view of the system. This course aims to introduce the technologies of Omics and Systems Biology, and overview of various applications of omics technology. Synthetic biology is set to be the heart of future economy, promising to create new drugs, industrial materials and
energy sources similar to chemical synthesis. The significance of this field has been promoted by the worldwide synthetic biology competition organized by MIT, i.e., iGEM competition. In this course, we will introduce some innovative ideas in synthetic biology and practice the skills needed for iGEM competition.

Course Contents & Topics

The course covers various OMICS techniques with special focus on sequence alignment, next generation sequencing, computational modeling, and statistic programming. This course will also provide students hands-on experience in large scale data analysis, and experiment methodologies involved in: Systems biology and functional genomics - the study of the interactome/network between components of a biological system, and modeling to discover the integrated function and emergent properties of that system; Synthetic biology- the design and building of synthetic protocols using basic biochemical building blocks from scratch.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 explain the conceptual differences between ‘Omics’/Systems Biology studies and traditional one-gene approach, and discuss the pros and cons of both approaches
- CLO 2 describe common methodologies used in iGEM and Synthetic biology
- CLO 3 describe basic analytical methods, and access database resources generated in major ‘Omics’ studies
- CLO 4 describe how ‘Omics’ data are used in Systems Biology to understand the integrated functions of the system
- CLO 5 identify questions that can be addressed by ‘Omics’ and Synthetic Biology studies

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOC3601 or BIOC3604 or BIOL3211 or BIOL3401 or BIOL3402 or BIOL3403 or BIOL3404 or BIOL3408

Cetacean behaviour, ecology and conservation: field research experience (6 credits)

Academic Year

2021

Offering Department

Biological Sciences

Course Co-ordinator

Biological Sciences

Teachers Involved

<table>
<thead>
<tr>
<th>Course Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>This course offers an exciting experiential learning opportunity through hands-on experience in field research into behavioural ecology and conservation of free-ranging cetaceans (whales, dolphins and porpoises). It provides students with a fundamental knowledge, skills, and the appreciation of what it takes to design, implement, and effectively run field studies in cetacean ecology, behaviour and conservation, and similar studies of other large and mobile marine vertebrates.</td>
</tr>
</tbody>
</table>

Course Content & Topics

Field-based studies of cetaceans have been rapidly evolving in recent years. There are many exciting new developments that allow researchers to tackle previously unexplored avenues of research. However, the primary component of cetacean studies, the direct contact with free-ranging animals out at sea, in their natural environment and on their terms remains unchanged; both challenging and fascinating. This course, conducted in a field research site outside Hong Kong, will expose students to various aspects of cetacean field studies, from the definition of a research question to project design, and to various stages of data collection and analyses. Students will learn a suite of research techniques, and will exercise their skills in data processing and interpretation. The emphasis will be on delphinid behavioural ecology and conservation applications; students will be guided through the scientific reasoning and methodology, and will develop an understanding how individual projects can contribute to advancing science and benefiting broader conservation management efforts. The course includes lectures, informal discussions of current research and recent discoveries, review of innovative research techniques, and extensive field component with sea-based research surveys performed daily (weather permitting). Following the field-based activities, students are required to write an independent report describing the learning outcome of the course. |

Course Learning

On successful completion of this course, students should be able to:
Outcomes

CLO 1 understand of the biodiversity and primary habitats in the ecosystem studied
CLO 2 establish the basic skills needed to identify target species associated with the field course
CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the particular ecosystems studied
CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communities

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least one of the following courses: BIOL3101, BIOL3301, BIOL3313 or BIOL3320. This experiential field course is primarily for Ecology & Biodiversity Major students. The earliest that a student is allowed to take this experiential course is their year 3 study; and because it is conducted in early June, this course is best suited for year 3 students.

Offer in 2021 - 2022

N Offer in 2022 - 2023 : N

Grade Descriptors (A to F)

A Evidence of a thorough grasp of the subject and relevant research techniques. Eagerness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.

B Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.

C Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the adequate average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.

D Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of showing appropriate conclusions. Work barely meets what is required at degree level.

Fail No evidence of basic a minimum grasp of the subject and the minimum relevant research techniques. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought, ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.

Additional Course Information

Enrollment Procedure: The course is open to students only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following:

1. Personal and academic details
2. ID photograph
3. Brief description of academic interests
4. GPA
5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver)

All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester.

BIOL4501 Molecular phylogenetics and evolution (6 credits)

Offering Department Biological Sciences

Course Co-ordinator TBC, Biological Sciences ()

Teachers Involved (TBC,Biological Sciences)

Course Objectives

The purpose of this course is to provide a comprehensive overview of state-of-the-art molecular systematics and phylogenetic research, focusing on in depth coverage of the latest techniques. The treatment of theoretical issues in formal lectures is coupled with practical workshops.

- acquisition of the sequences from the databases
- DNA and protein sequence assembly and alignment
- phylogeny reconstruction using parsimony, distance based, and maximum likelihood approaches
- introduction to relevant software for phylogenetics
- methods for the evaluation of phylogenetic trees

Course Contents & Topics

**Course Learning Outcomes**

- On successful completion of this course, students should be able to:
  - CLO 1 understand the fundamental principles of molecular phylogenetics
  - CLO 2 understand the purposes each method is used for and be able to choose the most appropriate method(s) for the analysis of given data
  - CLO 3 understand the advantages and disadvantages of the methods
  - CLO 4 acquire practical skills for the analysis of molecular data

**Pre-requisites (and Co-requisites and Impermissible combinations)**

- Pass in BIOL3401 or BIOL3408

**Offer in 2021 - 2022**

- N Offer in 2022 - 2023 : N

**Assessment Methods**

- Examination: 60%
- Grade Descriptors (A+ to F)
  - A: Demonstrate comprehensive knowledge and an advanced level of skills sufficient for achieving all the goals and expected learning outcomes of the course. Show deep understanding of the course subject. Excellent ability to efficiently combine and apply the relevant theories, principles, and methods taught in the course. Advanced skills in possession and application of the methods and software for evolutionary analysis of real data. Excellent ability to collect, systematize, analyze and critically evaluate data from various sources and to quote them appropriately. Excellent presentational skills.
  - B: Demonstrate good knowledge and good level of skills sufficient for accomplishing most of the goals and expected learning outcomes of the course. Demonstrate good understanding of the course subject. Show good ability to combine and to apply theories, principles, and methods taught in the course. Substantial skills in possession and application of the methods and software for molecular evolutionary analysis of real data. Show good ability to collect, systematize, analyze and critically evaluate data from various sources and to quote them appropriately. Good presentational skills.
  - C: Demonstrate basic knowledge and basic level of skills sufficient for accomplishing most of the goals and expected learning outcomes of the course. Demonstrate general understanding of the subject. Show some ability to combine and to apply theories, principles and methods taught in the course. Basic skills in possession and application of the methods and software for molecular evolutionary analysis of real data. Show general ability to collect data from various sources and to quote them appropriately. Basic presentational skills.
  - D: Demonstrate incomplete knowledge and weak skills sufficient for accomplishing only some of the goals and expected learning outcomes of the course. Demonstrate poor understanding of the subject. Show poor ability to combine and to apply theories, principles, and methods taught in the course. Limited skills in possession and application of the methods and software for molecular evolutionary analysis of real data. Show poor ability to collect data from various sources, to systematize, analyze and evaluate them appropriately. Poor presentational skills.
  - Fail: Demonstrate poor or no knowledge and skills required for accomplishing the goals and expected learning outcomes of the course. Demonstrate very poor or no understanding of the subject. Show no ability to combine and/or to apply theories, principles, and methods taught in the course. Poor or no skills in possession and application of the methods and software for molecular evolutionary analysis of real data. Show very poor or no ability to collect data from other sources and to systematize, analyze and evaluate them appropriately. Very poor or no presentational skills.

CLO 3 explain the importance of oyster farming in coastal habitat restoration

CLO 4 plan and execute a commercially important research project in marine science and coastal aquaculture

CLO 5 develop novel ideas, and think creatively, about hatchery production in relation to the aquaculture industry

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in BIOL3109 or BIOL3203 or BIOL3301 or BIOL3303 or ENVS3004 or ENVS3313; and Pass in at least 24 credits of advanced level disciplinary core/elective courses in the Ecology and Biodiversity Major or Environmental Science Major or Biological Science Major.

Offer in 2021 - 2022

Grade Descriptors (A+ to F)

A Evidence of original thought during the analysis of larval biology issues. Show evidence of analytical, critical and multidimensional thinking about the study subject. Extensive knowledge and skills required for attaining all the course learning outcomes. Demonstrate excellent ability to apply what you have learned in the class room to critically analyze the larval biology project data. Show highly effective organizational, presentional and field trip skills.

B Show substantial knowledge and thought during the analysis of marine life science issues. Show some evidence of some analytical, critical and multidimensional thinking about the study subject. Good knowledge and skills required for attaining all the course learning outcomes. Demonstrate good ability to apply what you have learned in the class room to critically analyze the real marine life science issues. Show effective organizational, presentational and field trip skills.

C Show general but incomplete knowledge and original thought during the analysis of marine life science issues. Fair knowledge and skills required for attaining all the course learning outcomes. Demonstrate fair ability to apply what you have learned in the class room to critically analyze the real marine life science issues. Show considerable organizational, presentational and field trip skills.

D Evidence to show a minimum knowledge (i.e. knowledge is very incomplete) and thought during the analysis of marine life science issues. Show insufficient knowledge and skills required for attaining all the course learning outcomes. Demonstrate poor ability to apply what you have learned in the class room to critically analyze the real marine life science issues. Show very little organizational, presentational and field trip skills.

Fail Evidence of meager or inadequate knowledge and understanding of marine life science issues. Show no knowledge of knowledge and skills required for attaining all the course learning outcomes. Demonstrate no ability to apply what you have learned in the class room to critically analyze the real marine life science issues. Show no evidence of familiarity with relevant reading material and field trip demonstrations, or any knowledge of organizational and presentational skills.

Additional Course Information

Offer in alternate year from 2017–2018

Offered in after 2nd Sem. during May 24th to June 12th, 2021. The course date may be slightly change depending on the situation and there will Not be any overseas or mainland field trips, the field course will be conducted in HK.

The course results of BIOL4505 will be released as usually longer than the other 2nd Semester courses by the Faculty of Science.

For more course details, please email to Dr Rajan rajan@hku.hk or Ms. Jessie Lai hlyala@hku.hk

BIOL4861 Ecology & biodiversity internship (6 credits) Academic Year 2021

Offering Department Biological Sciences Quota ---

Course Co-ordinator Dr T Vengatesen, Biological Sciences (rajan@hku.hk)

Teachers Involved (All academic staff in Ecology & Biodiversity Major,Biological Sciences)

Course Objectives To provide a stimulating experience for all Ecology & Biodiversity Major undergraduates to integrate and apply their knowledge and skills obtained from the Ecology & Biodiversity Major through gaining work experience in the field of Ecology & Biodiversity that are related to the major of study.

Course Contents & Topics Students taking this course will work as an intern for at least 160 hours within the University or outside the University in a company, government department or NGO. The internship may be arranged by the School or obtained by students themselves. In the latter case, the internship must be in a relevant field to the Ecology & Biodiversity Major that the students are taking and prior approval by the course coordinator is required.

Course Learning Outcomes On successful completion of this course, students should be able to:

CLO 1 gain first hand work experience in a job placement related to their Ecology & Biodiversity Major
CLO 2 apply the knowledge in their Ecology & Biodiversity Major in solving practical problems in the work place
CLO 3 acquire an understanding and appreciation of the real work environment
CLO 4 extend their network in their field of study

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level disciplinary core / elective courses in the Ecology and Biodiversity Major.

Offer in 2021 - 2022

Year 1st sem 2nd sem Summer Offer in 2022 - 2023 Y Examination No Exam

Grade Descriptors Distinction/Pass/Fail

Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfils the
### Course Information

#### Course Type
- Internship

#### Course Teaching & Learning Activities
- **Activities:** Internship work at least 160 hours
- **No. of Hours:** 160

#### Assessment Methods and Weighting
- **Outcomes:**
  - Written report: feedback and oral presentation 100
  - CLO 1, 2, 3, 4

#### Course Website
- [http://moodle.hku.hk](http://moodle.hku.hk)

#### Additional Course Information
- Students taking this course have to submit a written report of not less than 1,000 words and an oral presentation about their internships, which will be assessed by internal supervisors. Student's supervisor at work i.e. the institution offering the internship will also submit an assessment report to the University.

#### BIOL4911
- **Conservation science in practice (6 credits)**
- **Offering Department:** Biological Sciences
- **Course Co-ordinator:** TBC, Biological Sciences (/)
- **Teachers Involved:**
- To build on the foundation acquired by students in the Biological Sciences in the fields of ecology, biodiversity and environmental science by using case studies that stimulate them to integrate the principles and concepts learned to produce and successfully debate a topic in conservation science. Case studies will specifically address the use of science in achieving meaningful conservation outcomes taking into account the need for considering social, economic, and political contexts. Students will be expected to present their cases orally using sound practical and scientific reasoning. This course is a capstone course for Ecology & Biodiversity major / Ecology & Biodiversity (Intensive) Major students.

#### Course Contents & Topics
- This course will use directed case studies to give students the opportunity to consider and synthesize solutions to specific problems in conservation and the application of conservation science in the modern world, and within the wider context of economic development, political considerations and scientific uncertainty. Projects will be conducted through collaborations with local organizations, such as WWF-Hong Kong and Ocean Park, and address real-life questions and issues. Possible case studies range from ecosystem services, biological footprints, wildlife trade, to assessment of conservation risk, effectiveness of international conservation and biodiversity instruments, and the relationship between biodiversity and human livelihoods. Tutorials by the course coordinator will introduce practical conservation concepts, develop critical thinking and address specific issues of relevance across case studies.

#### Course Learning Outcomes
- **On successful completion of this course, students should be able to:**
  - CLO 1 have an in-depth understanding of the topic studied, the major issues involved and the needs and prospects for further work in the area
  - CLO 2 have developed investigative skills associated with the case study selected which include synthesis, organization and presentation of information and innovative and creative thinking around problem solving
  - CLO 3 understand the importance and complexities of conserving biodiversity
  - CLO 4 be able to identify practical and scientifically defensible initiatives and measures for successful conservation intervention
  - CLO 5 be able to competently present the case study and convincingly argue their case

#### Pre-requisites (and Co-requisites and Impermissible combinations)
- **Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Ecology & Biodiversity Major / Ecology & Biodiversity (Intensive) Major including BIOL3303.**
- This capstone course is for Ecology & Biodiversity Major / Ecology & Biodiversity (Intensive) Major students only.
- The earliest that a student is allowed to take this capstone course is their year 3 study.

#### Grade Descriptors (A+ to F)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Show strong analytical and critical abilities and logical thinking, with strong evidence of ability to integrate and synthesize information across subject areas, including from practical work undertaken, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations and showing consideration of practical and political dimensions for addressing conservation challenges. Apply highly effective presentational skills.</td>
</tr>
<tr>
<td>B</td>
<td>Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, with some integration of materials and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate effective presentational skills.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, ability to apply knowledge to most familiar situations and of relevance of biodiversity conservation for Society. Apply moderately effective presentational skills and understanding of the practical challenges of effective conservation initiatives. Little evidence of clear attention to thoughtful and reflective thinking.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities and little attempt at integration. Have basic understanding of importance of biodiversity for Society. Show limited ability to apply knowledge to solve problems or consider the practical challenges of biodiversity conservation. Apply limited effectiveness in presentational skills.</td>
</tr>
<tr>
<td>Fail</td>
<td>Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking or attention to detail. Show very little or no ability to apply knowledge or practical thinking to solve problems. Organization and presentational skills are minimally effective or ineffective.</td>
</tr>
</tbody>
</table>

#### Internship
- **Activities:** Internship work at least 160 hours
- **No. of Hours:** 160

#### Assesment Methods
- **Methods:**
  - Written report: feedback and oral presentation 100
  - CLO 1, 2, 3, 4

#### Enrolment
- Enrolment of this course is not conducted via the online course selection system and should be made through the relevant Department/School office after approval has been obtained from the course coordinator.

#### BIOL4861 E&B internship is not a Capstone Course.
This course will be offered subject to a minimum enrollment number and availability of teachers.

BIOL4912 Sensory evaluation of food (6 credits)  Academic Year 2021
Offering Department Biological Sciences
Course Co-ordinator Dr J C Y Lee, Biological Sciences (jetylee@hku.hk)

Teachers Involved

Course Objectives
To provide a broad understanding of the physiological and psychological basis of human sensory perception of food. To develop expertise in the choice and application of sensory techniques, and analysis of sensory data, in food science and consumer research.

Course Contents & Topics
This course will be offered in July in a 2-week intensive workshop format at a collaborating facility in mainland China, to enable close study of food products in the Chinese marketplace. Preliminary lectures will take place at the University of Hong Kong. Physiology and psychology of sensory perception. Objectives, planning and conduct of sensory testing. Discrimination testing, thresholds, descriptive analysis, affective testing. Instrument-sensory relationships, texture and aroma profiles, food oral processing, shelf-life studies, expert panels. Case studies of sensory applications in product development, quality management, and consumer research.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand the psychophysiological basis for human sensory perception of food
- CLO 2 understand the major techniques used in sensory testing
- CLO 3 interpret sensory evaluation reports, and to design and conduct sensory evaluation projects using appropriately chosen methods

Pre-requisites
Pass in BIOL3201; and Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Food & Nutritional Science Major.

This capstone course is for Food & Nutritional Science Major students only.
The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)

A Demonstrate thorough grasp of the subject matter covered. Show strong analytical and critical abilities and logical thinking, with evidence of creative ability and competence in professional-level problem solving. Critically use lab skills and techniques and analysis of data and results to draw appropriate and insightful conclusions to real-world problems. Demonstrate highly effective team-based organizational and presentational skills.

B Demonstrate substantial grasp of the subject matter covered. Show evidence of analytical and critical abilities and logical thinking with some evidence of competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw generally appropriate conclusions to real-world problems. Demonstrate effective team-based organizational and presentational skills.

C Demonstrate general but incomplete grasp of the subject matter covered. Show some evidence of analytical and critical abilities and logical thinking with limited competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw moderately appropriate but sometimes erroneous conclusions to real-world problems. Demonstrate moderately effective team-based organizational and presentational skills.

D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject matter covered. Show some evidence of coherent and logical thinking, but lacking competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results to draw sometimes appropriate but often erroneous conclusions to real-world problems. Demonstrate team-based organizational and presentational skills of limited effectiveness.

Fail Demonstrate little or no grasp, with retention of little relevant information, of the subject matter covered. Show lack of coherent and logical thinking, and minimal competence in professional-level problem solving. Use lab skills and techniques and analysis of data and results ineffectively, leading generally to inappropriate and usually erroneous conclusions to real-world problems. Demonstrate ineffectiveness team-based organizational and presentational skills.

<tr>
<td>Course Objectives</td>
<td>This course is offered as a capstone experience and unique experiential learning opportunity. It introduces students to scientific reasoning and conceptual basis of studying animal behaviour and behavioural ecology. It exposes students to 'research-in-making' and 'day-to-day logistics' of a field research, with all the excitement it generates and all demanding challenges it brings along, with hands-on experience in designing, conducting, analysing, and successfully completing field studies of animal behaviour and behavioural ecology.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Course Contents &amp; Topics</td>
<td>Conducted in a field research site outside Hong Kong, this course teaches students how to think analytically about animal behaviour, how to design a field research protocol, construct a conceptual framework of a research project and how to put this framework into a practice of collecting and analysing data. The course includes lectures, informal discussions, review of research techniques, and extensive field component with daily research activities. It</td>

School of Biological Sciences

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 understand the biodiversity and primary habitats in the ecosystem studied
- CLO 2 establish the basic skills needed to identify target species associated with the field course
- CLO 3 be knowledgeable about and able to implement sampling techniques for organisms in the particular ecosystems studied
- CLO 4 understand the basic ecology of target species and how biotic and abiotic factors shape focal communities

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL3101; and Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) in the Ecology & Biodiversity Major.

This capstone course is for Ecology & Biodiversity Major students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022 N Offer in 2022 - 2023 : N Examination ---

Grade Descriptors (A+ to F)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Evidence of a thorough grasp of the subject and relevant research techniques. Easiness and enthusiasm to learn and excellent familiarity with relevant background reading and case studies. Exemplary handling of field data collection and excellent analytical skills. Ample evidence of independent critical thought with excellent use of a broad range of fundamental concepts and broader comparative perspective to draw insightful and logical conclusions. Show outstanding abilities of independent work, effective presentation skills with excellent analytical argumentation. Excellent or outstanding work relative to what is required at degree level.</td>
</tr>
<tr>
<td>B</td>
<td>Evidence of a good grasp of the subject and relevant research techniques. Interest in learning and good-to-moderate familiarity with relevant background reading and case studies. Good handling of field data collection and commendable analytical skills. Good evidence of critical thought (although not always independent), with an appreciable use of fundamental concepts and consideration of broader comparative perspective in drawing logical conclusions. Good abilities of independent work, effective presentation skills with logical and analytical argumentation. Work more than sufficient for what is required at degree level.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate an adequate, but incomplete grasp of the subject and relevant research techniques. Moderate familiarity with relevant background reading and case studies, but no interest in learning beyond the average level. Evidence of logical critical thinking (although not always independent), with mostly good use of fundamental concepts to draw logical conclusions. Fair presentation skills, with mostly correct argumentation, but limited (or no) abilities to integrate broader concepts. Work sufficient for what is required for degree level.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate some grasp of the subject, but only partial and with limited understanding of relevant research concepts and research techniques. Some familiarity with relevant case studies, but insufficient evidence of background reading and limited abilities of critical independent thinking. Ineffective presentation skills with generally weak logical argumentation with restricted ability of drawing appropriate conclusions. Work barely meets what is required at degree level.</td>
</tr>
<tr>
<td>Fail</td>
<td>No evidence of basic a minimum grasp of the subject and the minimum relevant research techniques. No evidence of background reading and no familiarity with any relevant examples and case studies. Inadequate evidence of coherent logical thought; ineffective presentation skills with poor argumentation and no abilities to draw meaningful conclusions. Work fails to reach degree level.</td>

Additional Course Information

Enrollment Procedure:
The course is open to enrollment only during the add/drop period of the 2nd semester. Students are required to submit a brief (maximum 1-page) application letter (PDF file) via e-mail to the Course Coordinator (leszek@hku.hk) not later than 10th January. The application shall include the following:
1. Personal and academic details
2. ID photograph
3. Brief description of academic interests
4. GPA
5. Pre-requisite courses taken and grades received (if pre-requisites are not met, a reasoned request for waiver). All applications will be reviewed prior to the commencement of the 2nd semester and results will be announced within the 1st week of the add/drop period of the 2nd semester.

BIOL4922 Food product development and evaluation (6 credits)

Academic Year 2021
Quota 20

Offering Department Biological Sciences
Course Coordinator TBC. Biological Sciences
Teachers Involved (TBC. Biological Sciences)
School of Biological Sciences

| Course Objectives | To introduce the key concepts and techniques used in food product development. To provide small group experience in the design, development and production of a new food product. |
| Course Contents & Topics | History and future of the food industry; industrial product development process; idea generation and prototype development for new food products; quality management and legal protection; marketing strategies; food labeling; food package design; new product development for different food industries. |
| Course Learning Outcomes | On successful completion of this course, students should be able to: |
| | CLO 1 understand the food product development cycle |
| | CLO 2 know the key steps in new product development |
| | CLO 3 demonstrate enhanced insight and understanding of current and future trends in the food industry |
| | CLO 4 have professional level practical experience in new product development |
| | CLO 5 know the main characteristics of different sectors of the food industry |
| Pre-requisites (and Co-requisites and Impermissible combinations) | Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIOL3XXX or BIOL4XXX) included BIOL3203 and / or BIOL4205 in the Food & Nutritional Science Major. |
| | This capstone course is for Food & Nutritional Science Major students only. |
| | The earliest that a student is allowed to take this capstone course is their year 3 study. |
| Offer in 2021 - 2022 | Offer in 2022 - 2023 : Y |

#### Course Website
- [http://moodle.hku.hk](http://moodle.hku.hk)

#### Additional Information
- **Course Description**
  - Students taking this course have to submit a written report of not less than 1,000 words and oral presentation about their internships, which will be assessed by internal supervisors. Student's supervisor at work i.e. the institution offering the internship will also submit an assessment report to the University.
  - Satisfactory completion of this course can be counted towards the Capstone requirement. Details of internship will be recorded on the student's transcript. This course will be assessed on “Pass/Fail” basis. Students who are interested to enrol in this course should contact the Department to obtain the approval.
  - Enrolment of this course is not conducted via the online course selection system and should be made through the relevant Department/School office after approval has been obtained from the course coordinator.

#### Pre-requisites
- **Pass in at least 24 credits of advanced level disciplinary core / elective courses in the Molecular Biology & Biotechnology Major**
- This capstone course is for Molecular Biology & Biotechnology Major students only.
- The earliest that a student is allowed to take this capstone course is their year 3 study.

#### Grade Descriptors
- **Distinction/Pass/Fail**
  - **Distinction**: Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
  - **Pass**: Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of “Distinction”.
  - **Fail**: Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.

### BIOL4991

**Offering Department**: Biological Sciences

**Course Co-ordinator**: Dr S W Y Sin, Biological Sciences (sinyw@hku.hk)

**Teachers Involved**: (All academic staff in E&B Major & E&B Intensive Major, Biological Sciences)

**Course Objectives**: To provide a stimulating capstone experience for Ecology & Biodiversity Major / Ecology & Biodiversity Major (Intensive) undergraduates to integrate and apply their knowledge and skills obtained from the Ecology & Biodiversity Major / Ecology & Biodiversity (Intensive) through planning and carrying out a research project under the supervision of a member of staff.

**Course Contents & Topics**: Students should seek approval from a prospective supervisor prior to selecting this course. After admission to the course is approved by the course coordinator, students will complete their project work under the guidance of their supervisor.

**Course Learning**: On successful completion of this course, students should be able to:

- **CLO 1**: Demonstrate an understanding of the fundamental concepts of Ecology & Biodiversity
- **CLO 2**: Apply the knowledge in their Biological Sciences Major in solving practical problems in the workplace
- **CLO 3**: Acquire an understanding and appreciation of the real work environment
- **CLO 4**: Extend their network in their field of study

**Assessment**: 80% Oral presentation, 20% Written report
### Outcomes
- CLO 1: Critique and review appropriate scientific literature
- CLO 2: Use this information to generate a scientifically relevant research question
- CLO 3: Develop and formulate innovative scientific hypotheses to test this question
- CLO 4: Design and undertake practical research work to formally test the hypotheses proposed
- CLO 5: Analyse and evaluate the data collected to test the hypotheses, present data in a professional manner to illustrate the outcomes
- CLO 6: Draw an objective series of conclusions based on the experimental work
- CLO 7: Highlight and critically discuss their research findings and place them into a holistic scientific context
- CLO 8: Submit their work following a specified journal format, present their work as a scientific conference talk

### Pre-requirements (and Co-requirements and Impermissible combinations)
- Pass in at least 24 credits of advanced level disciplinary core/elective courses in the Ecology & Biodiversity Major / Ecology & Biodiversity Major (Intensive); and

### Course Learning & Teaching Activities
- Offer in 2021 - 2022
- Grade Descriptors (A+ to F)

### Course Contents & Topics

- Offer in 2021 - 2022
- Grade Descriptors (A+ to F)
C
Evidence of adequate understanding and grasp of the subject matter as demonstrated by attainment of all learning outcomes. Excellent critique and knowledge of relevant literature and identification of research hypothesis. Appropriately designed experimental approach to test research hypothesis. Show good organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate comprehensive, critical, assessment of results and professional presentation of research work.

D
Evidence of limited understanding and grasp of the subject matter as demonstrated by incomplete attainment of most of the learning outcomes. Acceptable critique and knowledge of relevant literature and identification of research hypothesis. Adequately designed experimental approach to test research hypothesis. Show fair organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate adequate but not necessarily critical, assessment of results and presentation of research work.

Fail
Evidence of poor or inadequate understanding and grasp of the subject matter such that most of the learning outcomes are not attained. Poor critique and knowledge of relevant literature and identification of research hypothesis. Badly designed experimental approach to test research hypothesis. Show little evidence of appropriate organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate incorrect interpretation and assessment of results and poor presentation of research work.

Y
Examination
No Exam

Grade Descriptors (A+ to F)
A Evidence of complete or near-complete understanding and a thorough grasp of the subject matter as demonstrated by attainment of all learning outcomes. Excellent critique and knowledge of relevant literature and identification of research hypothesis. Well designed experimental approach to test research hypothesis. Show excellent organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate comprehensive, critical, assessment of results and professional presentation of research work.

B Evidence of near-complete understanding and a good grasp of the subject matter as demonstrated by attainment of the majority of learning outcomes. Good critique and knowledge of relevant literature and identification of research hypothesis. Appropriately designed experimental approach to test research hypothesis. Show good organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate effective, critical, assessment of results and good presentation of research work.

C Evidence of adequate understanding and grasp of the subject matter as demonstrated by general but incomplete attainment of most of the learning outcomes. Acceptable critique and knowledge of relevant literature and identification of research hypothesis. Adequately designed experimental approach to test research hypothesis. Show fair organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate adequate but not necessarily critical, assessment of results and presentation of research work.

D Evidence of limited understanding and grasp of the subject matter as demonstrated by incomplete attainment of many of the learning outcomes. Limited critique and knowledge of relevant literature and identification of research hypothesis. Poorly designed experimental approach to test research hypothesis. Show poor organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate confused and poorly organized assessment of results and limited presentation of research work.

Fail Evidence of poor or inadequate understanding and grasp of the subject matter such that most of the learning outcomes are not attained. Poor critique and knowledge of relevant literature and identification of research hypothesis. Badly designed experimental approach to test research hypothesis. Show little evidence of appropriate organizational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate incorrect interpretation and assessment of results and poor presentation of research work.
BIO4994 Biological sciences project (12 credits)  
**Offering Department**: Biological Sciences  
**Course Co-ordinator**: Dr C Schunter, Biological Sciences (schunter@hku.hk)  
**Teachers Involved**: (All academic staff in Biological Sciences Major, Biological Sciences)  

**Course Objectives**: To provide a stimulating capstone experience for all Biological Sciences Majors as well as for Biological Sciences undergraduates to integrate and apply their knowledge and skills obtained from the Biological Science Major through planning and carrying out a research project under the supervision of a member of staff.

**Course Contents & Topics**: Students should seek approval from a prospective supervisor prior to selecting this course. After admission to the course is approved by the course coordinator, students will complete their project work under the guidance of their supervisor.

**Pre-requisites (and Co-requisites and Impermissible combinations)**: Pass in at least 24 credits of advanced level disciplinary core/elective biological sciences courses (BIO4XXX or BIOL4XXX) in the Biological Sciences Major; and Cumulative GPA of 3.0 or above.  

This capstone course is for Biological Sciences Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.

**Offer in 2021 - 2022**: Y  
**Examination**: No Exam  

**Grade Descriptors (A+ to F)**:  
- A: Evidence of complete or near-complete understanding and a thorough grasp of the subject matter as demonstrated by attainment of all learning outcomes. Excellent critique and knowledge of relevant literature and identification of research hypothesis. Well designed experimental approach to test research hypothesis. Show excellent organisational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate comprehensive, critical, assessment of results and professional presentation of research work.
- B: Evidence of near-complete understanding and a good grasp of the subject matter as demonstrated by attainment of the majority of learning outcomes. Good critique and knowledge of relevant literature and identification of research hypothesis. Appropriately designed experimental approach to test research hypothesis. Show good organisational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate effective, critical, assessment of results and professional presentation of research work.
- C: Evidence of adequate understanding and grasp of the subject matter as demonstrated by general but incomplete attainment of most of the learning outcomes. Acceptable critique and knowledge of relevant literature and identification of research hypothesis. Adequately designed experimental approach to test research hypothesis. Show fair organisational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate adequate but not necessarily critical assessment of results and professional presentation of research work.
- D: Evidence of limited understanding and grasp of the subject matter as demonstrated by incomplete attainment of many of the learning outcomes. Limited critique and knowledge of relevant literature and identification of research hypothesis. Poorly designed experimental approach to test research hypothesis. Show fair organisational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate confused and poorly organised assessment of results and limited presentation of research work.
- Fail: Evidence of poor or inadequate understanding and grasp of the subject matter such that most of the learning outcomes are not attained. Poor critique and knowledge of relevant literature and identification of research hypothesis. Badly designed experimental approach to test research hypothesis. Show little evidence of appropriate organisational and/or analytical skills and laboratory/fieldwork techniques. Demonstrate incorrect interpretation and assessment of results and poor presentation of research work.

**Communication-intensive Course Type**: Project-based course  

**Assessment Methods and Weighting**:  
- Examination: No Exam  
- **Methods**  
  - **Dissertation**: 80% (CLO 1-8)  
  - **Oral presentation**: 20% (CLO 1-8)

**Course Website**: http://moodle.hku.hk/  
**Additional Course Information**: A dissertation of about 9,000 - 12,000 words (80% weighting) and a research seminar (20% weighting).
**Course Contents & Topics**

This course is a combination of lectures, group discussion/debate and field trips cum tutorials. We first explore the fundamental interactions between organisms and their environment. We then explore environmental constraints on life at various ecosystems (like marine, freshwater, and terrestrial). Students will also learn how factors such as urbanization, climate change, and anthropogenic impacts affect life at population and ecosystem levels. Similarly, students will be exposed to the incredible interrelationships that are basic to ecological principles and the impact that human development has upon these interrelationships. After learning basics of environmental life science, students will be stimulated to think about current life science issues such as biodiversity loss, organisms adaptation to climate change, tragedy of commons (human ecology) and applied life science topics such as biomaterial science.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 understand life, environment and their interactions
- CLO 2 appreciate species and ecosystem responses to human-induced environmental change
- CLO 3 attain ability to critically think and discuss about current environ-life science issues
- CLO 4 be motivated and equipped to tackle biological environmental science questions and to choose advanced environmental science courses

**Course Co-ordinator**

Dr M Yasuhara, Biological Sciences (yasuhara@hku.hk)

**Teachers Involved**

(Dr M Yasuhara, Biological Sciences)

**Course Objectives**

To introduce students to a broad spectrum of field and laboratory methods for data collection in environmental science. Through exposure to environmental data collection, experimental design, data analysis, interpretation and reporting, students will gain a deeper appreciation of the process that underlies environmental science research and its relevancy to critical thinking and future careers in the sciences.

**Course Contents & Topics**

This course will involve environmental data collection in both field and laboratory settings. In-class lectures will cover basic principles of specific methodologies and relevant applications in preparation for laboratory and field-based experiential learning. Having an interdisciplinary focus, the course will cover topics relevant to the study of the biosphere, encompassing terrestrial, aquatic, and atmospheric systems. Students will gain hands-on experience with the operation of standard and advanced sampling and analytical equipment, quality control, basic data analysis and reporting.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 understand how scientific data is used to address environmental problems
- CLO 2 have a basic understanding of the techniques and methodologies necessary for collecting environmental data
Course Content:
The course will feature lectures on aspects of sampling, distributions, uncertainty, probability, and hypothesis testing in addition to lectures on advanced analysis topics. Special emphasis will be placed on qualities inherent to environmental science contexts (e.g. chemistry, ecology, geology and oceanography) using a variety of datasets in a computer laboratory setting using the 'R Project for Statistical Computing' software and QGIS.

Assessment Methods and Weighting:
- Assignments: 10% weighting in final course grade (%)
- Laboratory reports: 20%
- Presentation: 20
- Project reports: 50

Assessment in a computer laboratory setting using the 'R Project for Statistical Computing' software and QGIS.

Credit and Contact Hours:
- Activities: 60
- Reading / Self study: 12
- Project work: 20

Communication-Intensive Course:
- Laboratory and workshop course

### ENVS3004

**Environment, society and economics (6 credits)**

**Offering Department**
Biological Sciences

**Course Co-ordinator**
Dr C Dingle, Biological Sciences (cdingle@hku.hk)

**Course Objectives**
This course follows up issues highlighted in the introductory course and provides in-depth studies about rural and urban environments for students to examine the problems of resource scarcity and pollutant accumulation in the natural environment, which are the problems human society is currently confronted. The course will focus on major environmental problems and explore how Environmental Economics can be applied for resource management and environmental restoration/protection. Students will analyze the nature of key natural resources such as land, air, water and biomass, and explore ways to improve resource management, protect the environment and develop sustainable economies.

**Course Contents & Topics**
- Valuing the environment
- Basic concepts of Environmental Economics
- Identification of and engagement with relevant stakeholders
- Resource management for land, air, water and biomass
- Management of waste
- Energy policies and economics
- Planning and regulations for a sustainable future

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge and critical understanding of the complexity and interconnectedness between human society and the natural environment
- CLO 2 recognise appropriate use and misuse of natural resources
- CLO 3 assess economic solutions and policies for solving environmental problems

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in one of the following courses: CHEM2041, EASC2404, ENVS2001 or ENVS2002

**Offer in 2021 - 2022**
Y 1st sem Offer in 2022 - 2023: Y

**Grade Descriptors (A+ to F)**

- A: Demonstrate thorough mastery of the course material. Show strong ability for analytical, critical and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate highly effective organizational and presentational skills.
- B: Demonstrate substantial command of the course material and an ability to apply knowledge to familiar and some unfamiliar situations. Show evidence of analytical, critical thought to some complex issues. Apply effective organizational and presentational skills.
- C: Demonstrate general but incomplete command of the course material and an ability to apply knowledge to most familiar situations. Show evidence of some critical and logical thinking abilities. Apply moderately effective organizational and presentational skills.
- D: Demonstrate partial but limited command of the course material and a limited ability to apply knowledge to solve problems. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Apply limited or barely effective organizational and presentational skills.
- Fail: Demonstrate little or no evidence of command of course material with very little or no ability to apply knowledge to solve problems. Lack of critical thinking abilities and incoherent thinking. Organization and presentational skills are minimally effective or ineffective.

**Communication-intensive Course**

**Course Type**
Lecture-based course

(Dr T C Bonebrake, School of Biological Sciences)

**Course Objectives**  
This course will provide students with an understanding and knowledge of the ecology of urban ecosystems. The course will highlight the role of cities in a world under environmental change and rapid development.

**Course Contents & Topics**  
Ecological systems within cities and cities as ecological systems will both be covered in this course. Ecological concepts unique to or specialized within cities will be covered including sustainability, conservation, health, development, globalization, and restoration. Specific topics will include climate change (e.g. urban heat island effects), invasive species, infectious diseases and pollution. Examples will be taken globally but special emphasis will be placed on Hong Kong.

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:
- **CLO 1** describe and evaluate the processes and patterns that characterize urban ecological systems
- **CLO 2** understand biodiversity and ecosystem responses to urbanization
- **CLO 3** recognize energy flows within urban ecosystems and how energy use and waste improve or deteriorate environmental quality
- **CLO 4** critically evaluate management and policy solutions to urban ecological problems

**Pre-requisites**  
Pass in BIOL2306 or ENVS2001 or ENVS2002

**Offer in 2021 - 2022 Grade Descriptors** (A+ to F)

**ENVS3020**  
**Global change ecology (6 credits)**

**Offering Department**  
Biological Sciences

**Course Co-ordinator**  
Dr C Dingle, Biological Sciences (cdingle@hku.hk)

**Teachers Involved**  
(Dr C Dingle, School of Biological Sciences)

**Course Objectives**  
The main goal of this course is to introduce students to the ways in which global environmental change affects biodiversity from organisms to ecosystems. This course will explore the contributions that human population growth and globalization have made to increases in greenhouse gases and associated climate change, biological invasions, land degradation, disease, and, ultimately, impacts on biological systems.
Course Contents & Topics

Environmental change is a natural phenomenon, with ecosystems continually shifting, rearranging, emerging, and disappearing through geologic time with changes in climatic conditions. The activities of humans have added to this natural variation, increasing the magnitude and speed with which environmental change occurs. This course will focus principally on the effects of climate change on organisms and ecosystems but will also investigate other topics registering on a global scale including land use change, biological invasions, and pollution, as well as synergistic interactions between all of the environmental stressors. We will explore (1) what climate change is and how it is manifested including climate warming, sea level rise, and ocean acidification; (2) types and extents of land use change; (3) how globalization has contributed to the spread of alien species and disease. The course will investigate how these human-caused stressors affect the morphology, phenology, distribution, and evolution of organisms and their impacts on ecosystem functioning and biodiversity in freshwater, marine, and terrestrial ecosystems.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 develop a basic understanding of climate change and other human-associated impacts, such as land use change, and how they are manifested on a global scale
- CLO 2 explain the ways that global change affects organisms’ traits and distributions, and biodiversity at the ecosystem level
- CLO 3 understand the differences between climate change on a geologic time scale and recent climate change
- CLO 4 be aware of the relationships between humans and global change

Course Type

Grade Descriptors

(A+ to F)

A

Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, ability to integrate and synthesize information, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective presentational skills. Strong evidence of clear attention to thoughtful and reflective thinking.

B

Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, integration of materials and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate effective presentational skills. Evidence of clear attention to thoughtful and reflective thinking.

C

Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective presentational skills. Little evidence of clear attention to thoughtful and reflective thinking.

D

Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities and little attempt at integration. Show limited ability to apply knowledge to solve problems. Apply limited effectiveness in presentational skills. Lack of attention to thoughtful and reflective thinking.

Fail

Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

This course will be offered subject to a minimum enrollment number and availability of teachers.
Offer in alternate year from 2016-2017

ENVS3022

Environmental science field course (6 credits)

Academic Year 2021

Offering Department Biological Sciences

Course Co-ordinator Dr M Yasuhara, Biological Sciences (yasuhara@hku.hk)

Teachers Involved (Dr C Dingle,Biological Sciences)
(Dr M Yasuhara,Biological Sciences)

Course Objectives

To provide students experiential learning experience in the field of environmental science. The course is primarily based on an array of experiential studies covering essential areas of environmental science during a residential fieldtrip

Course Contents & Topics

Students to attend a residential field trip outside Hong Kong to learn about environmental science in practice. The residential field trip may include marine environmental survey, sediment core sampling, practical learning of ecological, palaeoecology and environmental problems, environmental geology/paleontology excursion, and other activities. Students are required to write an independent report on the learning outcome of the field trip.
On successful completion of this course, students should be able to:

CLO 1 Recognize ways of environmental science in practice
CLO 2 Gain knowledge of current environmental problems and solutions
CLO 3 Present and communicate their field observations and findings

Pass in ENVS2001 or Either pass in ENVS2002 or concurrently enrolled in ENVS2002

N Offer in 2021 - 2022 : Y Examination ---

Offer in 2022 - 2023 : Y Examination ---

Course Objectives
- Understand the primary drivers of biodiversity and ecosystem function in rocky intertidal, mangrove and coral reef ecosystems in USA and SE Asia.
- Gain an appreciation for how urban ecosystems in this region are being affected by climate change, development and stress from pollution.
- Better understand how history and governance structures of Hong Kong, Malaysia and New England constrain and/or facilitate coastal adaptation strategies.
- Appreciate how cultural practices such as seafood preferences and traditional medicine affect harvesting of marine species, and how this impacts coastal biodiversity.

Course Contents & Topics
The majority of the Earth's population now lives in coastal cities, where people not only depend on ocean resources, but are also experiencing ever increasing threats from the ocean environment. This program will explore the mechanisms by which coastal communities in the US and SE Asia are facing these expanding challenges, including their impacts on coastal ecosystems. Using a comparative approach, students will explore the diverse challenges facing coastal societies, and will gain an in-depth understanding of coupled human-natural systems on the coasts of New England and Southeast Asia (Hong Kong and Malaysia).

By comparing and contrasting both ecosystems and societies, students will develop an appreciation for both the commonalities of challenges facing the world's coasts, as well as differences that occur due to local ecology. A major emphasis of the program will be on solutions, and how by taking a global perspective we can accelerate the development of climate change adaptation that span traditional cultural barriers. We will blend studies of threats facing both human and natural systems in Hong Kong, Malaysia and the Gulf of Maine with an in-depth exploration of how those societies have (or have not) enacted solutions to those challenges.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 Articulating similarities and differences between how coupled human-natural systems operate in SE Asia and in comparable habitats in the U.S.A.
## Course Objectives

- **Objective 1**: Reading and synthesizing review articles in the primary literature in marine science and social science literature, and explain the connections among these diverse approaches.

- **Objective 2**: Articulating arguments about how traditional Chinese, Malaysian and American culture affect human impacts on the environment, and to develop potential solutions to these issues based on conversations with peers.

- **Objective 3**: Becoming comfortable collaborating with peers from U.S.A, and gain a greater understanding of the culture of the region.

## Pre-requisites and Additional Course

- Pass in BIOL2306 or BIOL3301 or BIOL3305 or BIOL3318 or ENVS2001 or ENVS2002 or EASC3020

## Course Contents & Topics

1. Overview of plant physiology, with particular focus on the interactions between plants and climate.
2. Fundamental biophysical principles that regulate the strengths of ecosystem metabolism (i.e. photosynthesis, transpiration and etc).
3. Introduction to various remote sensing and modelling approaches to quantify the impacts of climate variability on plant metabolism (e.g. proximate and satellite remote sensing, ecosystem modelling, biological scaling processes, etc).
4. Case studies introducing practical applications of cutting edge technology to current ecological and environmental issues.

## Course Learning Outcomes

1. CLO 1: Understand the fundamental principles that regulate terrestrial ecosystem metabolism.
2. CLO 2: Understand the basic of remote sensing data and how to analyze remote sensing data for plant ecophysiology.

## Grade Descriptors

- **A**
  - Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with ability to apply knowledge to a complex issue of sustainable coastal management in economically and socially developed and developing places.

- **B**
  - Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to a complex issue of sustainable coastal management in economically and socially developed and developing places.

- **C**
  - Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to a complex issue of sustainable coastal management in economically and socially developed and developing places.

- **D**
  - Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems.

- **Fail**
  - Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve coastal problems.

## Course Website

- **Website**: [http://moodle.hku.hk/](http://moodle.hku.hk/)  
  - Duration: around July 9, 2021 to August 10, 2021
  - All field trips, including the overseas trip to Malaysia and USA, are compulsory
  - Course fee - please contact the course coordinator

1st week: Lectures, practicals and field trips in the University of Hong Kong, Hong Kong  
2nd week: Lectures and field trips in University Sains Malaysia, Penang (Malaysia)  
3rd and 4th weeks: Lectures and field trips in Northeastern University, New England (Boston, USA)

This is an introductory overseas experiential learning course designed for all science students as free elective. It is especially suitable for students aiming to major in environmental science, ecology & biodiversity or biological sciences.

*Note: Field trips in New England (Boston, USA) will NOT be considered for assessment and, therefore, those field trips in USA are only exploratory in nature and are NOT part of any HKU's credit bearing course*.
Understanding tropical ecosystems in a changing world (6 credits)

Offering Department
Biological Sciences

Course Co-ordinator
Dr A L Ashton, Biological Sciences (lathamson@hku.hk)

Teachers Involved
(Dr A L Ashton, Biological Sciences)
(Dr C Dingle, Biological Sciences)
(Dr T Bonebrake, Biological Sciences)

Course Objectives
In this field course, students will learn how to use natural history and ecology to answer important environmental questions relevant to tropical ecosystems. Through field studies in both degraded and pristine habitats, students will gain an understanding of the major drivers of ecosystem change and biodiversity loss in a tropical landscape in Sabah, Borneo and learn about measures to mitigate the impacts of human activities in these vital ecosystems. Students will work in groups to develop and carry out a research project to address ecological or environmental questions. After the field portion of the course, students will write up the results of their projects in the style of a scientific paper.

Course Contents & Topics
Tropical rainforests are the most biologically rich terrestrial ecosystems, providing important environmental services such as nutrient cycling, carbon storage and new medicines. Rainforests are under increasing anthropogenic pressure due to logging, burning and conversion to agriculture, as well as climate change. Effective conservation efforts over the next few decades are essential if we are to slow down our impacts on these vital ecosystems. In this course, through a series of lectures, tutorials and fieldwork, students will learn about tropical rainforest ecosystems, investigate the environmental impacts of land use change, and discuss conservation measures which can help mitigate these impacts. Students will also learn techniques for designing and carrying out field research projects, and about the importance of data generated from research to inform efforts to minimize the impact of human activities in such important ecosystems. The bulk of the course will be carried out in Danum Valley, a primary tropical rainforest located in Sabah, Malaysia. We will visit some sites impacted by human activities, including palm oil plantations, to observe how land-use changes impact biodiversity and observe in situ conservation efforts. Students will work in groups to conduct research projects which will tie together the concepts learned through the lectures and field trips.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 demonstrate an understanding of the importance of ecological and natural history knowledge for conservation
CLO 2 understand the major impacts of human activity on tropical rainforest ecosystems
CLO 3 work collaboratively to design and carry out a research project (collect and analyze data and present results) on an ecological or environmental topic
CLO 4 carry out a range of field sampling and observational techniques for collecting data in the field

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in ENVS2001 or ENVS2002 or BIOL2306

Communication-intensive Course
Lecture with laboratory component course

Additional Course Information
The major course objectives will be assessed by examining the biophysical processes that affect the transfer of momentum, energy and material (water, CO2, and atmospheric trace gases) between terrestrial biosphere and the atmosphere. Key instrumentation and associated multi-scale measurements of this course are also discussed. This course complements the content covered in EASC3405 Environmental Remote Sensing, but students may take this course before or after having taken EASC3405.

ENVS3401
Understanding tropical ecosystems in a changing world (6 credits)

Academic Year
2021

Quota
20
School of Biological Sciences

Offer in 2021 - 2022

Grade Descriptors (A+ to F)

A Demonstrate an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Ability to apply knowledge of the natural history of a tropical rainforest and ecological studies to conservation ecology. Produce a scientific paper that is written at high enough quality for publication.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show very good analytical and critical abilities and logical thinking, with evidence of original thought. Ability to apply knowledge of the natural history of a tropical rainforest and ecological studies to conservation ecology. Produce a well written scientific paper.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show some analytical and critical abilities and logical thinking, with evidence of original thought. Able to apply some knowledge of the natural history of a tropical rainforest and ecological studies to conservation ecology. Produce a scientific paper that communicates your results.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show some analytical and critical abilities and logical thinking, but not original thought. Limited ability to use knowledge of natural history of a tropical rainforest and ecological studies to conservation ecology. Produce a scientific paper that communicates your results.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. No demonstration of analytical and critical abilities and logical thinking, with evidence of original thought. Not able to apply knowledge of the natural history of a tropical rainforest, ecological studies to conservation ecology. Fail to produce a standard scientific paper.

Communication-intensive Course

Course Type
Field camps

Course Teaching & Learning Activities

Activities Details No. of Hours
Lectures Briefing at HKU on field course activities 2
Field work 10 days field work experience 40
Laboratory work Lab work during the field trip 30
Tutorials Lectures/workshops during field trip 10
Presentation Presentation during the field camp, based on the research project 5
Reading / Self study Preparation of report after the field trip 40

Assessment Methods and Weighting

Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
Assignments Field journal: Students will create a natural history field journal, with scientific drawings and observations 20 CLO 2
Report Journal-style paper based on the research carried out on the field course 50 CLO 1,2,3,4
Test Oral presentation: Pretation during the field camp, based on the research project 30 CLO 1,2,3

Course Website http://moodle.hku.hk

Additional Course Information
This is an overseas experiential learning course designed for ENVS/E&B/ESS Major/Minor students as free elective. It is especially suitable for students aiming to major in environmental science, ecology & biodiversity or biological sciences.

ENVS3402 Qualitative data, social science methods and decision-making in environmental science (6 credits)

Offering Department Biological Sciences

Course Co-ordinator Dr Hannah Mumby, Biological Sciences (hsmumby@hku.hk)

Teachers Involved (Dr Hannah Mumby,Biological Sciences)

Course Objectives
This course will introduce social science and qualitative approaches in environmental science. We will introduce the historical context and philosophical background to different approaches to environmental sciences. The course will then take a case study-based approach, using the case studies to introduce methodologies and methods. These include the ethical process, collection and analysis of qualitative and quantitative data from focus groups, surveys, interviews and questionnaires. We will also discuss wider methodologies including ethnographic approaches. Attention will be paid to suitability of methods to research questions, how studies are conducted and what analyses are used. We will also investigate how these data are or can be integrated into decision-making processes, including different tools that can be used for decision-making.

Course Contents & Topics
- Research philosophy - how researchers approach questions in environmental science
- Research methodology - the rationale and framework for research
- Ethical considerations, concepts of ‘bias’, objectivity, truths and the role of the researcher
- Methodologies including biographical techniques, ethnography and case studies.
- Methods, sampling data and analyses, including questionnaires and surveys, interviews, focus groups, and decision-making tools.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 Determine and distinguish a range of social science approaches and qualitative data analysis techniques
CLO 2 Design a study appropriate for the research question using those approaches and techniques
CLO 3 Discuss the philosophical and epistemological background of different approaches to environmental science questions
CLO 4 Critically evaluate studies using social science and/or qualitative approaches.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in ENVS2002

Offer in 2021 - 2022
Y 2nd sem

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery of the course material. Show strong ability for analytical, critical and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate highly effective organizational and presentational skills.

B Demonstrate substantial command of the course material and an ability to apply knowledge to familiar and some unfamiliar
ENVS4110 Environmental remediation (6 credits) Academic Year 2021

Offering Department Biological Sciences

Course Co-ordinator (TBC, Biological Sciences)

Teachers Involved (TBC, Biological Sciences)

Course Objectives
To introduce students with the environmental fate information of different pollutants/contaminants in the environment
To understand the technologies available for environmental remediation of pollutants in soils and water, and the characteristics of each technique relevant to the pollutants of concern
To learn the fundamental physical, chemical, and biochemical reactions involved in the remediation process
To obtain skills for critical analysis of the recent technological development and the proposed applications

Course Contents & Topics
Understanding the types of different pollutants and their fate in the environments including both terrestrial and aquatic; and relevant strategy of pollution control and treatment; advanced oxidation, microbiological treatment and phytoremediation; mechanisms of biochemical transformation of polyaromatic hydrocarbon, polychlorinated biphenols, agrichemicals and phthalate esters as well as both metals and metalloids; biochemical pathways and the specific genes involved in detoxification; chemotaxis and engineering the degradation pathways in bacteria; transport of microorganisms and monitoring in subsurface environment; survival of introduced organisms; evolution of the degradative genes in bacteria; in situ and ex situ remediation techniques; green technologies.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 explain the remediation technologies available to the type of pollutants of concern in remediation practice
- CLO 2 propose remediation strategies for polluted sites with the best technologies available considering the type of pollutants and the cost involved
- CLO 3 differentiate the technologies available for the specific pollutants and the fundamental process involved in terms of the catalysts and the effectiveness
- CLO 4 describe several key chemical and biochemical processes used in environmental remediation with adequate background information on their history and development

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL3108 or BIOL3110 or BIOL3401 or ENVS3042

Offer in 2021 - 2022

**Assessment Methods and Weighting**

**Required/recommended reading and online materials**

**Course Website**
http://moodle.hku.hk/

**Additional Course Information**
The course will be offered subject to a minimum enrollment number and availability of teachers.
Offer in alternative year from 2011-2012
The Core University English (CUE) course aims to enhance first-year students' academic English language proficiency in the university context. CUE focuses on developing students' academic English language skills for the Common Core Curriculum. These include the language skills needed to understand and produce spoken and written academic texts, express academic ideas and concepts clearly and in a well-structured manner and search for and use academic sources of information in their writing and speaking. Four online-learning modules through the Moodle platform on academic writing, academic grammar, academic sources, and referencing will be offered to students to support their understanding of English learning. This course will help students to participate more effectively in their first-year university studies in English, thereby enriching their first-year experience.

On successful completion of this course, students should be able to:

- CLO 1 identify and distinguish between main ideas and supporting details in lectures and written texts and demonstrate an understanding of the arguments/facts expressed.
- CLO 2 form and express personal opinions through critical reading and listening.
- CLO 3 argue for and defend a position in a clear and structured way using academic sources, through writing and speaking.
- CLO 4 demonstrate control of grammatical accuracy and lexical appropriacy in academic communication.

Communication-intensive Course

Lecture-based course

Examinations

No Exam

Course Grade (%)

A: Excellent to outstanding result. Students are able to produce spoken and written academic texts which are at all times appropriately structured. Students can clearly and concisely explain academic concepts and critically argue for a detailed position. Students always use appropriate academic sources to support their ideas in writing and speaking. They cite and reference correctly at all times. Students demonstrate an ability to fully comprehend and critically interpret spoken and written texts. Written language contains very few, if any, systematic errors in grammar and vocabulary. Spoken language is always comprehensible and fluent.

B: Good to very good result. Students are able to produce spoken and written academic texts which are appropriately structured with only minor errors. Students can almost always clearly and concisely explain academic concepts and almost always critically argue for a detailed position. Students almost always use appropriate academic sources to support their ideas in writing and speaking. They cite and reference correctly with only a few non-systematic errors. Students can comprehend and interpret texts with ease, although they may miss some implied meanings and opinions. Written language is mostly accurate but contains a few systematic errors in complex grammar and vocabulary. Spoken language is mostly comprehensible and fluent.

C: Satisfactory to reasonably good result. Spoken and written academic texts produced by students are sometimes not well-structured but there is some evidence of this ability. Students are sometimes unable to clearly and concisely explain academic concepts. While they can argue for a position, it is not very detailed and tend to be simplistic rather than critical. Students sometimes use sources which are nonacademic and/or not appropriate to support their ideas in writing and speaking. There are some systematic errors in citation and referencing but also evidence of correct systematic use. Students have some difficulty comprehending and critically interpreting texts. They can always understand the main ideas but may miss some of the writer’s views and attitudes. Written language is sometimes inaccurate, although errors, when they occur, are more often in complex grammar and vocabulary and there is some evidence of control of simple grammatical structures. Spoken language is generally comprehensible and fluent but at times places strain on the listener.

D: Barely satisfactory result. Spoken and written academic texts produced by students are often inappropriate but structured but there may be some evidence of this ability. Students are often unable to clearly and concisely explain academic concepts and argue for a position. There is some evidence of an ability to explain academic concepts but not to critically argue for a position. Students often use sources which are nonacademic and/or not appropriate to support their ideas in writing and speaking. There are many systematic errors in citation and referencing however there is evidence of an understanding of some of the conventions of citation and referencing. Students often have difficulty comprehending and interpreting texts, sometimes failing to understand the main ideas and writer’s views and attitudes. Written language is often inaccurate containing errors in a range of simple and complex grammar and vocabulary. Spoken language is only sometimes comprehensible and fluent, and strain is frequently placed on the listener.

Fail: Unsatisfactory result. Productive skills are too limited to be able to successfully carry out spoken and written assessments. Texts are unstructured and unclear. Students are unable to follow and interpret texts. There are language errors in almost every sentence. Spoken language is often incomprehensible. Assessments may not have been attempted or contain plagiarism.

**Course Objectives**

This 6-credit English-in-the-Discipline course aims to develop students' professional and technical communication skills for disciplinary studies in the sciences. There are three main components in the course: 1) Writing a popular science article 2) An oral presentation and 3) Independent language learning. Students will learn rhetorical skills for presenting and explaining scientific concepts to a cross-disciplinary and non-specialist audience in both written and spoken communication. Students will also be given an opportunity to design a personalised language learning plan, carry out the plan and reflect on their own independent language learning experience.

**Course Contents & Topics**

Topics covered in the course will be:

- Finding, evaluating and using appropriate academic source materials;
- Compiling an academic bibliography;
- Contrasting academic and popular genres of Science;
- Writing for a specific audience, including stance, shared knowledge, levels of formality; and
- Organizing and articulating ideas in an academically suitable format including appropriate vocabulary and grammar; and
- Critically examine their own language proficiency and analyze how that relates to their ability to perform successfully within their discipline. Developing self-directed learning strategies.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- Writing for a specific audience, including stance, shared knowledge, levels of formality;
- Contrasting academic and popular genres of Science;
- Compiling an academic bibliography;
- Finding, evaluating and using appropriate academic source materials;
- Organizing and articulating ideas in an academically suitable format including appropriate vocabulary and grammar; and
- Critically examine their own language proficiency and analyze how that relates to their ability to perform successfully within their discipline. Developing self-directed learning strategies.

<tbody>
<tr>
<td>A</td>
<td>Excellent result. Consistently demonstrates ability to summarize salient points accurately from appropriate and reliable sources using original language. Text uses sources appropriately and demonstrates accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are clearly identified and aligned with evidence of planning, self-study and reflection.</td>
</tr>
<tr>
<td>B</td>
<td>Good to very good result. Usually demonstrates ability to summarize salient points accurately using mostly original language. Text mostly uses sources appropriately and demonstrates mostly accurate and appropriate grammatical, lexical and organizational characteristics. Language learning needs are stated with some reference to evidence of planning and reflection although there is some misalignment between goals and self-study completed.</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory to reasonably good result. Demonstrates some ability to summarize salient points using mostly original language although some inaccuracies are present. Text uses some sources appropriately and demonstrates appropriate but simple grammatical and lexical characteristics with some organizational flaws. Language learning needs are stated with some limited evidence of planning and reflection but goals and self-study are misaligned.</td>
</tr>
<tr>
<td>D</td>
<td>Barely satisfactory result. Demonstrates a limited ability to summarize salient points from sources with inaccuracies and little original language. Text uses sources inappropriately and demonstrates grammatical inaccuracy, inappropriate lexical choices and organizational flaws. There is a minimal statement of language learning needs, planning and reflection with little or no apparent alignment between goals and self-study.</td>
</tr>
<tr>
<td>Fail</td>
<td>Unsatisfactory result. Does not demonstrate ability to summarize salient points identify, interpret or appropriately paraphrase reliable sources. Text uses no sources and demonstrates serious grammatical, lexical and/or organizational errors. Does not demonstrate any meaningful attempt to identify language learning needs or implement a plan.</td>

### Course Objectives

This 6-credit English-in-the-Discipline course aims to develop students' professional and technical communication skills for disciplinary studies in mathematical sciences. There are two main components in the course: 1) Case study report writing, 2) Professional oral presentation. Students will learn rhetorical skills for presenting and explaining mathematical and statistical data and trends, and justifying analyses and recommendations convincingly in both written and spoken communication. This will be achieved through analysing samples of case study reports and presentations using a genre-based approach.

### Course Contents & Topics

There are two main components in the course:
1. Case study report writing
2. Professional oral presentation

Students will learn rhetorical skills for presenting and explaining mathematical and statistical data and trends, and justifying analyses and recommendations convincingly in both written and spoken communication. This will be achieved through analysing samples of case study reports and presentations using a genre-based approach.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** present and explain mathematical and statistical data and trends using appropriate rhetorical skills
- **CLO 2** organize and articulate coherent ideas with appropriate language devices in a case study report and an oral presentation
- **CLO 3** justify analyses and recommendations convincingly in a case study report and an oral presentation
- **CLO 4** identify their own language learning needs, develop independent learning strategies to address those needs, and reflect on their own independent language learning experience

<tr>
<td>Topic 1: Gases: Their Properties and Behaviour (6 hours)</td>
<td>Gas pressure; the gas laws; the ideal gas law and reaction stoichiometry; the kinetic-molecular theory of gases.</td>
</tr>
<tr>
<td>Topic 2: Chemical Bonding and Structures (7 hours)</td>
<td>Covalent, ionic and metallic bonds; bond energy and chemical change; electronegativity and bond polarity; Lewis structures of molecules and ions; VSEPR Theory and molecular shape.</td>
</tr>
<tr>
<td>Topic 3: Intermolecular Forces: Liquids, Solids, and Phase Changes (8 hours)</td>
<td>Physical states and phase changes; types of intermolecular forces; properties of liquid state; the solid state: structure, properties, and bonding.</td>
</tr>
<tr>
<td>Topic 4: Chemical Equilibrium (5 hours)</td>
<td>The equilibrium state and the equilibrium constant; the equilibrium law: calculation of equilibrium constants and reaction quotient; Le Chatelier's Principle.</td>
</tr>
<tr>
<td>Topic 5: Structures of Organic Compounds (10 hours)</td>
<td>An overview of organic compounds and structures; organic nomenclature; stereoisomerism in organic compounds.</td>
</tr>
</tbody>
</table>

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 demonstrate knowledge and understanding in relation to some chemical vocabulary, terminology and conventions.
- CLO 2 demonstrate knowledge and understanding of chemical stoichiometry, the properties of liquids and solids, the nature of gases, phase changes, chemical bonding and structures, and the nature of chemical equilibria.
- CLO 3 demonstrate a basic knowledge of organic compounds and structures, nomenclature, and isomerism in organic compounds.
- CLO 4 apply the theories and concepts introduced in the course to solve problems, perform calculations, make predictions and rationalize trends.
- CLO 5 organize and present chemical ideas in a clear, logical and coherent way.
- CLO 6 demonstrate awareness and appreciation of the relevant applications of chemistry in society and in everyday life.

### Pre-requisites (and Co-requisites and Impermissible combinations)
Level 3 or above in HKDSE Combined Science with Chemistry component or Integrated Science, or equivalent.

Not for students with Level 3 or above in HKDSE Chemistry or having taken any level 1 Chemistry course or above or any equivalent Chemistry course.

### Offer in 2021 - 2022

### Course Objectives

The course aims to provide students with a solid foundation of the basic principles and concepts of chemistry. It also provides students with hands-on training of basic laboratory skills and techniques including volumetric analysis, preparation, purification and characterization of chemical substances and some basic instrumental methods. Students will be equipped with a good foundation of theoretical and practical knowledge and skills for further studies in Chemistry.

### Course Contents & Topics

1. Chemistry; its nature and method
   - Physical properties; chemical changes and chemical properties; elements and compounds; measuring mass, length, volume and temperature; atomic structure and subatomic particles; the mole concept and stoichiometry; solutions and concentrations; uncertainty in measurement and significant figures.
2. Atoms; the quantum world
   - Electromagnetic radiation and matter; Planck's quantum theory; the Bohr model of the hydrogen atom; the quantum mechanical model of the atom; quantum numbers, energy levels, and atomic orbitals; shapes of atomic orbitals; electron configurations; periodic trends: atomic radii, ionic radii, ionization energies, and electron affinities.
3. Chemical bonding and structures
4. Energetics and kinetics of reactions
   - Heat and work; the first law of thermodynamics; heat of reactions; spontaneity of changes. Reaction rate; factors that influence reaction rate; rate laws: differential and integrated rate laws; temperature and reaction rate; reaction mechanisms.
5. Acid-Base equilibria
   - Acid-base concepts; equilibria in solutions of weak acids and in weak bases; ionization constants; molecular properties and acid strength; acid-base properties of salt solutions; buffer solutions; acid-base titrations.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1**: demonstrate a basic knowledge and understanding of the microscopic nature of atomic structure and concepts of chemical bonding and their relationships with the bulk properties of matter
- **CLO 2**: demonstrate knowledge and understanding in relation to thermodynamics and kinetics of reactions as well as aqueous equilibria including acid-base equilibria
- **CLO 3**: apply the theories and concepts introduced in the course to solve problems, perform calculations, make predictions and rationalize trends
- **CLO 4**: carry out chemical experiments with proper procedures, record experimental observations accurately, and interpret and evaluate the experimental data
- **CLO 5**: organize and present chemical ideas in a clear, logical and coherent way
- **CLO 6**: demonstrate awareness and appreciation of the relevant applications of chemistry in society and in everyday life

### Pre-requisites (and Co-requisites and Impermissible combinations)

- Level 3 or above in HKDSE Chemistry or equivalent or a pass in CHEM1041.
- Not for students having taken any level 1 Chemistry course (except for CHEM1041) or above or any equivalent Chemistry course.

### Grade Descriptors (A+ to F)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show thorough grasp of the subject. Demonstrate strong analytical and critical abilities and logical thinking, with ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Show highly effective lab skills and techniques. Apply highly effective organizational and presentational skills.</td>
</tr>
<tr>
<td>B</td>
<td>Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show substantial grasp of the subject. Demonstrate evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Show effective lab skills and techniques. Apply effective organizational and presentational skills.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show general but incomplete grasp of the subject. Demonstrate evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Show moderately effective lab skills and techniques. Apply moderately effective organizational and presentational skills.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show partial but limited grasp, with retention of some relevant information, of the subject. Demonstrate evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Demonstrate partially effective lab skills and techniques. Apply limited or barely effective organizational and presentational skills.</td>
</tr>
<tr>
<td>F</td>
<td>Fail to demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Show evidence of little or no grasp of the knowledge and understanding of the subject. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Demonstrate minimally effective or ineffective lab skills and techniques. Organization and presentational skills are minimally effective or ineffective.</td>

**CHEM1043** General chemistry II (6 credits)  
**Academic Year** 2021  
**Offering Department** Chemistry  
**Quota** 280  
**Course Co-ordinator** Dr A P L Tong, Chemistry (apltong@hku.hk)
Teachers Involved
(Dr A P L Tong, Chemistry)  
(Prof D L Phillips, Chemistry)

Course Objectives
This course is a continuation of CHEM1042 General Chemistry I. It aims to further consolidate some of the important fundamentals of chemistry that underlie many topics and principles across the physical sciences. The course prepares students to pursue a major in chemistry or in other aspects that require a good foundation in chemistry.

Course Contents & Topics
1. Gases
   Simple gas laws; ideal gas equation; gases in chemical reactions; mixture of gases; kinetic-molecular theory of gases; diffusion and effusion; non-ideal gases.
2. Structure and Bonding: The Delocalized Approach: Molecular Orbital Theory
   Bonding in homonuclear and heteronuclear diatomic molecules of first and second period of elements; bond in some simple polyatomic molecules; bonding in metals (band theory).
3. Solutions and Their Properties
   Types of solutions; intermolecular forces and the solution process; solution formation and equilibrium; solubilities of gases; vapor pressures of solutions; osmotic pressure; freezing-point depression and boiling-point elevation of nonelectrolyte solutions; solutions of electrolytes; colloidal mixtures.
4. Solubility and Complex-Ion Equilibria
   Solubility product constant; relationship between solubility and Ksp; common-ion effect in solubility equilibria; limitations of the Ksp concept; precipitation; solubility and pH; equilibria involving complex ions; qualitative cation analysis.
5. Entropy & Gibbs Energy
   A quick review on entropy and the second & third laws of thermodynamics. Standard Gibbs energy change; Gibbs energy change and equilibrium; coupled reactions.
6. Electrochemistry
   Electrode potentials and their measurement; standard electrode potentials; Ecell, delta G, and K; Ecell as a functions of concentrations; batteries; corrosion; electrolysis; industrial electrolysis processes.

Course Outcomes
On successful completion of this course, students should be able to:

- CLO 1 demonstrate a knowledge and understanding of the properties and behavior of gases and apply gas laws and kinetic-molecular theory to processes involving gases
- CLO 2 demonstrate a knowledge and understanding in relation to solutions and their properties, solubility and complex-ion equilibria, and also electrochemistry
- CLO 3 apply molecular orbital theory to explain the formation and properties of diatomic molecules of first and second period of elements and of some simple polyatomic molecules
- CLO 4 demonstrate a knowledge and understanding of the relationship between free energy and spontaneity of reaction
- CLO 5 apply the theories and concepts introduced in the course to solve problems, perform calculations, make predictions and rationalize trends
- CLO 6 organize and present chemical ideas in a clear, logical and coherent way
- CLO 7 demonstrate awareness of the relevant applications of chemistry in society and in everyday life

Course Contents
- Zumdahl; Decoste: Chemical Principles, latest edition, Cengage. Brown; LeMay; Bursten; Murphy; Woodward; Petrucci; Herring; Madura; Bissonnette: General Chemistry: Principles and Modern Applications, latest edition, Pearson.

Academic Year 2021

Quota 80
Course Co-ordinator: Dr A M Y Yuen, Chemistry (maiyan@hku.hk)
Teachers Involved: (Dr A M Y Yuen, Chemistry) (Dr J Yang, Chemistry) (Dr. J Z Liu, Chemistry)

Course Objectives: Mathematical calculations are necessary to explore important concepts in chemistry. This course aims to equip students with a basic knowledge of some of the mathematics that will be used in courses covered in the Chemistry major curriculum to enable them to apply the mathematical skills to problems in chemistry. Students taking this course are expected to already have achieved level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or a pass in MATH1011 University Mathematics I. As far as possible, the mathematical concepts covered in this course will be put in the context of chemical problems.

Course Contents & Topics: Applying mathematical tools, such as Algebra, Trigonometry, Calculus, Complex number, Vector, Matrix, Linear equation, Differential equation, in solving chemistry problems.

Course Learning Outcomes: On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge and understanding of the essential mathematics used in chemistry
- CLO 2 apply mathematical skills to solve basic problems in chemistry
- CLO 3 be more capable of coping with a higher level of mathematics required in relevant courses for chemistry major, in particular, in physical chemistry courses

Pre-requisites (and Co-requisites and Impermissible combinations): Pass in CHEM1042 or already enrolled in this course; and Level 2 or above in Module 1 or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011 or SCNC1111

Offer in 2021 - 2022: Y 2nd sem Offer in 2022 - 2023: Y

Grade Descriptors (A+ to F)
- A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- Fail: Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

Communication-intensive Course: N

Course Type: Lecture-based course
Course Teaching & Learning Activities:
- Activities: Details
  - Lectures: 36
  - Tutorials: 12
  - Reading / Self study: 100

Assessment Methods and Weighting:
- Methods: Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
  - Assignments: 20 CLO 1, 2, 3
  - Examination: 50 CLO 1, 2, 3
  - Test: 30 CLO 1, 2, 3

Required/recommended reading and online materials:
- Graham Doggett, Martin Cocklett: Maths for Chemists, 2nd Edition, RSC

CHEM2041 Principles of chemistry (6 credits)
Offering Department: Chemistry
Teachers Involved: Dr I K Chu, Chemistry (ivankchu@hku.hk)

Course Objectives: This course is designed for non-chemistry major students covering basic principles of chemistry.

Course Contents & Topics:
- Gas Laws and the Kinetic Theory of Gases
- Thermodynamics: work, heat, the zeroth and first law of thermodynamics, internal energy, enthalpy, heat capacities, thermochemistry, Hess's Law, Kirchhoff's Law, the second and third laws of thermodynamics, entropy, Gibbs free energy, spontaneity, equilibrium, coupled reaction;
- Transport Phenomena: diffusion, viscosity of gases, diffusion in liquids and viscosity of liquids, ionic conduction;
- Chemical Kinetics: rate of reactions, orders of reactions, rate laws, reaction mechanism, experimental measurement of reaction rates, enzyme kinetics, enzyme inhibition, temperature effect on rates;
- Chemical Equilibrium;
- Equilibria in single-, and two component systems: phase transitions, phase diagrams and the phase rule, chemical potential; liquid/liquid systems;
- Introduction to acids and bases: calculation on concentration of different chemical species in a solution, diprotic and polyprotic acids, activity;

Course Learning Outcomes:
- On successful completion of this course, students should be able to:
  - CLO 1 explain the principles of the thermochemistry, chemical kinetics, chemical equilibrium, physical properties of solutions and gases
  - CLO 2 explain the principles of the spectroscopy, and spectrometry

Pre-requisites (and Co-requisites and Impermissible combinations):
- Pass in CHEM1042; and
- Not for students who have passed in CHEM2341, or have already enrolled in this course; and
- Not for students who have passed in CHEM2441, or have already enrolled in this course; and
- Not for students who have passed in CHEM2541, or have already enrolled in this course; and
- Not for Chemistry major students.

### Required/recommended reading and online materials

### Course Objectives

- The course aims to introduce the basic principles of chemical analysis. The principles of chemical measurement, including error analysis, quality assurance and calibration, data acquisition and processing, will be discussed with reference to methods of chemical analysis that are based on chemical equilibrium and stoichiometric reactions.
- The laboratory classes will include experiments demonstrating modern approaches of data acquisition and processing as well as chemical analysis based on chemical equilibrium.

### Course Contents & Topics

- Measurement: analog and digital measurement, accuracy and precision, comparing means and deviations, calibration curves and least square method for linear plots
- Quality assurance: validation of analytical procedures
- Chemical equilibrium and chemical analysis: aqueous solution and chemical equilibrium; analysis by acid-base reactivity, complexation reactivity, precipitation reactivity

### Course Learning Outcomes

- On successful completion of this course, students should be able to:
  - CLO 1: explain the basic principles of chemical measurements
  - CLO 2: explain the principles of classical methods of chemical analysis such as acid-base neutralization
  - CLO 3: use laboratory apparatus for chemical analysis

### Pre-requisites

- Pass in CHEM1042 (for students admitted in 2014-15 or before);
- Pass in CHEM1042; and Pass in CHEM1043, or already enrolled in this course (for students admitted in 2015-16 or thereafter)
### Laboratory (24 credits)
- **Tutorials:** 6
- **Reading / Self study:** 100

**Academic Year:** 2021

**Quota:** 120
### Course Objectives
To provide students with the basic principles to understand the structure and reactivity of organic molecules, with examples illustrating the role of organic chemistry in daily life and industry. This course serves as the first part of the complete program on fundamental organic chemistry, to be followed up by CHEM3441 Organic Chemistry II.

### Course Contents & Topics

### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand basic concepts and employ the vocabulary of organic chemistry
- CLO 2 visualize and draw three-dimensional, stereochemically correct representations of organic molecules
- CLO 3 recognize, discriminate and name chiral stereoisomers and diastereomers
- CLO 4 understand the reactivity of the functional groups
- CLO 5 understand reaction mechanisms and apply mechanistic knowledge to solve chemistry problems
- CLO 6 apply reactions to the synthesis of target molecules
- CLO 7 appreciate the relevance of organic chemistry in biological processes and daily life

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in CHEM1042; and NOT for students who have passed in CHEM2041, or already enrolled in this course (for students admitted in 2015-16 or thereafter).

### Offer in 2021 - 2022
Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

### Grade Descriptors (A+ to F)
- **A** Demonstrate a thorough mastery at an advanced level of knowledge and understanding of facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show strong ability to integrate knowledge and theory, and a strong ability to analyze and solve novel organic chemistry problems. Demonstrate high level of organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.
- **B** Demonstrate substantial command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of ability to integrate knowledge and theory, and evidence of ability to analyze and solve novel organic chemistry problems. Demonstrate effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.
- **C** Demonstrate a general but incomplete command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Demonstrate ability to organize, understand, and execute lab skills and techniques in organic chemistry experiments. Demonstrate a partial command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of limited ability to integrate knowledge and theory, and a limited ability to analyze novel problems. Show some correct but also erroneous use of knowledge to solve most familiar problems. Demonstrate partially effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.
- **D** Demonstrate a partial but limited command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show evidence of limited ability to integrate knowledge and theory, and a limited ability to analyze novel problems. Show some correct but also erroneous use of knowledge to solve most familiar problems. Demonstrate partially effective organization, understanding, and execution of lab skills and techniques in organic chemistry experiments.
- **Fail** Demonstrate little or no evidence of command of knowledge and understanding of essential facts and concepts pertaining to the chemical properties, reactions and mechanisms of organic chemistry. Show little or no evidence of ability to apply and integrate knowledge and theory, and little or no ability to analyze novel problems. Show little or no evidence of ability to solve most familiar problems. Demonstrate minimal or no organization, understanding and application of lab skills and techniques in organic chemistry experiments.

The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones, carboxylic acids and their derivatives, and amines will be discussed, as will the general concepts of molecular structure, conformation and stereochemistry.

On successful completion of this course, students should be able to:
- CLO 1: demonstrate basic understanding of the structure of organic molecules
- CLO 2: demonstrate basic understanding of the reactivity of organic molecules
- CLO 3: appreciate how organic chemistry plays an important role in everyday life

Pass in CHEM1042; and
Not for students who have passed CHEM2441, or have already enrolled in this course.

**Offering Department**
Chemistry

**Course Co-ordinator**
Dr P H Toy, Chemistry (phtoy@hku.hk)

**Teachers Involved**
Dr P H Toy, Chemistry

**Course Objectives**
The major objective of this course is to give pharmacy students a basic understanding of organic chemistry, especially in the context of daily life. This will be achieved through the introduction of the chemistry of organic functional groups that form the basis of organic molecules. The concepts presented in the lectures will be reinforced by a series of laboratory experiments.

The chemistry of organic functional groups such as alkenes, alkynes, alkyl halides, alcohols, aldehydes, ketones, carboxylic acids and their derivatives, and amines will be discussed, as will the general concepts of molecular structure, conformation and stereochemistry.

On successful completion of this course, students should be able to:
- CLO 1: demonstrate basic understanding of the structure of organic molecules
- CLO 2: demonstrate basic understanding of the reactivity of organic molecules
- CLO 3: appreciate how organic chemistry plays an important role in everyday life

Pass in CHEM1042; and
Not for students who have passed CHEM2442, or already enrolled in this course.

(This course is for BPharm students only)

**Offer in 2021 - 2022**
N  Offer in 2022 - 2023 : N

**Examination**
---
The course aims to provide a rigorous understanding of equilibrium thermodynamics and chemical kinetics. Students are required to apply mathematical skills (derivations and integrations) and basic physics to understand properties of mixtures, solutions, chemical equilibrium, electrochemistry, rates of chemical reactions and reaction dynamics. Students will gain a good foundation of knowledge and skills for further study in Physical Chemistry.

On successful completion of this course, students should be able to:

- Demonstrate thorough mastery at an advanced level of extensive organic chemistry knowledge, and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar problems.
- Demonstrate substantial command of organic chemistry with a broad range of knowledge, and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar problems.
- Demonstrate general but incomplete command of organic chemistry knowledge, and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar problems.
- Demonstrate partial but limited command of organic chemistry knowledge, and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems.
- Demonstrate little or no evidence of command of organic chemistry knowledge, and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems.

Chemical Reactions

- Empirical chemical kinetics including experimental methods, rates of reactions, integrated rate laws and temperature dependence of reactions and Reaction mechanism

Pre-requisites

- Pass in CHEM1042; and NOT for students who have passed CHEM2041, or already enrolled in this course (for

Course Contents & Topics

- Properties of Gases
  - States of gases and the gas laws with applications.
  - The First Law of Thermodynamics
  - Basic concepts of work, heat, energy, expansion work, heat transactions, enthalpy and adiabatic changes and examples in relation to biochemistry and materials science.
  - The Second and Third Laws of Thermodynamics
  - Direction of spontaneous change, entropy and the Third Law of Thermodynamics.

- Simple Mixtures
  - Thermodynamic description of mixtures, partial molar quantities, and chemical potentials of liquids. Activities of solvent, solute, regular solutions and ions in solution.

- Chemical Equilibrium
  - Spontaneous chemical reactions, the Gibbs energy minimum and equilibrium. Response of equilibria to pressure, temperature.

- Electrochemistry
  - Electrochemical cell, relationship of electrochemical potential to thermodynamic functions. Applications of electrochemistry in energy, material science, sensing.

- Molecules in Motion
  - Molecular motion in gases and liquids, kinetic model, collisions with surfaces, the rate of diffusion and transport properties, conductivities of electrolyte solutions.

- Rates of Chemical Reactions
  - Empirical chemical kinetics including experimental methods, rates of reactions, integrated rate laws and temperature dependence of reactions and Reaction mechanism

Course Learning Outcomes

| CLO 1 demonstrate knowledge and understanding of the properties of gases, molecules in motion and the rates of chemical reactions
| CLO 2 understand and demonstrate knowledge of the three laws of thermodynamics
| CLO 3 understand and apply the concepts of chemical equilibrium and the response of chemical equilibria to temperature and pressure
| CLO 4 understand and demonstrate knowledge of electrochemistry and its relationship to thermodynamics, can build electrochemical cell and calculate thermodynamic functions from electrochemical reactions
| CLO 5 demonstrate knowledge and understanding of basic reaction dynamics including reaction mechanism and how mechanism determines reaction rate law

Chemistry

- CHEM2541 Introductory physical chemistry (6 credits)

Environmental chemistry (6 credits)  

Offering Department: Chemistry  
Course Co-ordinator: Dr Y X Li, Chemistry (yxpli@bku.hk)  
Teachers Involved: Dr Y X Li, Chemistry( Academic Year: 2021

**Course Objectives**

This course introduces students to Environmental Chemistry and enables them to understand the chemical principles involved in various environmental phenomena and processes.

**Course Contents & Topics**

- Atmosphere chemistry: atmospheric composition and behavior, ozone, air pollution, carbon cycle and climate change
- Water Chemistry: water resources and cycle, ocean, chemical quality of natural water, water pollution, water purification and desalination
- Pollutants: persistent organic pollutants, pesticides, toxic heavy metals, toxicology
- Waste treatment: domestic and hazardous waste treatment (landfill, incineration)
- Energy: energy resources, fossil fuels, solar energy, nuclear energy

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 demonstrate knowledge on chemical principles of the various environmental phenomena and processes
- CLO 2 describe the practical processes of chemistry in atmosphere, water purification, waste treatment, and energy production
- CLO 3 critically discuss local and global environmental issues based on scientific principles and data
- CLO 4 apply knowledge to analyze chemical processes involved in various environmental problems

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Introduction to materials chemistry (6 credits)

Course Objectives
To familiarize with typical chemical industries important in local and global economy. To understand the technology of chemicals manufacturing and chemical processes in general industry.

Course Contents & Topics
Process flow charts, units and conversions, materials and energy balances, unit operations. Selection of chemical processes to include variation in products, scale, and types of operation, e.g. for petrochemical industries, industrial gases, beverage processes, chloroalkaline manufacturing.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 solve basic problems of energy and mass balances in chemical and environmental processes
- CLO 2 be familiarized with a few common chemical industries and chemical processes
- CLO 3 understand some general principles of industrial practice through plant visits

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in CHEM2241 or CHEM2341 or CHEM2441 or CHEM2442 or CHEM2541

Grade Descriptors (A+ to F)

- A: Demonstrate thorough knowledge of industrial chemical processes and mastery of mass and energy balance skills required for attaining all of the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to solve problems in a wide range of complex, familiar and unfamiliar situations. Critical use of data and sourcing of references. Apply highly effective organizational and presentational skills.
- B: Demonstrate substantial knowledge of industrial chemical processes and command of mass and energy balance skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems in familiar and some unfamiliar situations. Correct use of data and sourcing of references. Apply effective organizational and presentational skills.
- C: Demonstrate general but incomplete knowledge of industrial chemical processes and command of mass and energy balance skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems in familiar and most unfamiliar situations. Mostly correct but some erroneous use of data and references. Apply moderately effective organizational and presentational skills.
- D: Demonstrate partial but limited knowledge of industrial chemical processes and command of mass and energy balance skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Limited ability to use data and source references. Apply limited or barely effective organizational and presentational skills.
- F: Demonstrate little or no evidence of knowledge of industrial chemical processes and command of mass and energy balance skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Misuse of data and references. Organization and presentational skills are minimally effective or ineffective.

CHEM3143
Introduction to materials chemistry (6 credits)

Course Objectives
This course provides an introduction to materials chemistry. The goal is to present the fundamental knowledge of various types of materials including their structure, synthesis, and properties. This course is essential for students who wish to take advanced materials course.

Course Contents & Topics
Classification of materials; structure of crystalline solids; phases and phase transformation; defects and mechanical properties; alloys and ceramics; introduction to soft matter; structure, synthesis, and properties of polymers; colloids; liquid crystals; viscoelasticity; applications of materials; characterization techniques.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 describe different materials classification and their composition, structures, and properties, and to apprehend the concept of structure/property relationship
- CLO 2 explain different structures and phases, phase transformation in solid materials
**Course Objectives**

To cover the principles and applications of modern practical spectroscopic and analytical techniques. This course is a pre-requisite for the advanced chemistry courses.

**Course Contents & Topics**

- UV-Visible Absorption Spectroscopy
- Nuclear Magnetic Resonance Spectroscopy
- Mass Spectrometry
- Infra-red Spectroscopy
- Elemental Analysis
- Molecular Formulas and analysis of data.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 understand the basic principles and applications of IR, UV/Vis, MS and NMR spectroscopic techniques
- CLO 2 describe and explain the terminology of IR, UV/Vis, MS and NMR spectroscopies
- CLO 3 perform chemical structure elucidation and analysis based on UV/Vis, MS and NMR spectroscopic data

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in any CHEM2XXX level course

CHEM3241

Analytical chemistry II: chemical instrumentation (6 credits)

Academic Year: 2021

Offering Department: Chemistry

Quota: 104

Course Co-ordinator: Dr Y Li, Chemistry (yingli0e@hku.hk)

Teachers Involved:
- Dr I K Chu, Chemistry
- Dr Y L Li, Chemistry

Course Objectives:
To cover the basic principles and applications of chemical instrumentation. This course aims to provide working knowledge, in addition to the principles, of instruments that are commonly used in chemical laboratories.

Course Contents & Topics:
- Optical methods: Beer’s Law; UV-visible, infrared, and atomic spectrometry; fluorescence; atomic mass spectrometry; grating spectrometer; photon detectors and thermal detectors.
- Separation methods: partition; chromatography theories; high performance liquid chromatography (HPLC) and gas chromatography (GC); instrumental set up of HPLC and GC.
- Mass spectrometry: fundamental concept of mass spectrometry; electrospray ionization (ESI) and matrix-assisted laser desorption ionization (MALDI); time-of-flight (TOF) and quadrupole (Q) mass analyzers.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1 explain the principles of the optical methods, separation methods, and mass spectrometry
- CLO 2 describe the basic experimental set up and the properties of the basic components of the instruments used in the laboratory classes
- CLO 3 apply experimental skills in chemical analysis including sample preparation, standard solution preparation, instrument calibration, and matrix effects correction (standard additions)

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in CHEM2241

Offer in 2021 - 2022:
Y 1st sem Offer in 2022 - 2023: Y

Examination: Dec

Grade Descriptors (A to F):
A
- Demonstrate thorough grasp of the subject. - Show evidence of strong analytical abilities, logical and independent thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. - Demonstrate highly proficient lab skills and techniques and critical use of data and results to draw appropriate and insightful conclusions. - Demonstrate highly effective organization and presentation skills

B
- Demonstrate substantial grasp of the subject. - Show evidence of analytical abilities and logical thinking, some evidence of independent thinking, and ability to apply knowledge to familiar and some unfamiliar situations. - Demonstrate proficient lab skills and techniques and correct use of data and results to draw appropriate conclusions. - Demonstrate effective organization and presentation skills.

C
- Demonstrate general but incomplete grasp of the subject. - Show evidence of some analytical abilities and logical thinking, little evidence of independent thinking, and ability to apply knowledge to most familiar situations. - Demonstrate adequate lab skills and techniques and mostly correct but some erroneous use of data and results to draw appropriate conclusions. - Demonstrate moderately effective organization and presentation skills.

D
- Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. - Show evidence of limited analytical abilities, little or no evidence of independent thinking, and limited ability to apply knowledge to solve problems. - Demonstrate limited or barely effective organization and presentation skills.

Fail
- Demonstrate little or no grasp of the knowledge and understanding of the subject. - Show little or no evidence of analytical abilities, logical and independent thinking, and very little or no ability to apply knowledge to solve problems. - Demonstrate minimally effective or ineffective lab skills and techniques and misuse of data and results and/or unable to draw appropriate conclusions. - Demonstrate incoherent organization and poor presentation skills.

**Course Objectives**
To cover areas in the application and new methodology development in analytical chemistry with focus on food and water analysis.

**Course Contents & Topics**
- Chemical Analysis in Practicing Laboratories: Use of standard methods, guidelines and standards for food and water analysis; good laboratory practice; reliability and quality issues in chemical analysis.
- Food Analysis: Requirement of nutritional labeling; determination of food nutritional value (e.g. total protein content, sodium content); detection of food adulteration and contamination (e.g. presence of banned additives, toxins, undeclared components); recent issues and case studies in food analysis.
- Water Analysis: Water quality standards; sampling, pretreatment, storage of water samples; theory and technologies for field, laboratory and automated analysis of selected types of water (e.g. drinking water, recreational water, waste water).
- Analytical Method Development: Selection, application and combination of analytical (e.g. sample digestion, solid phase extraction) and instrumental (e.g. GC, LC, MS) techniques for food and water analysis; method validation (e.g. recovery analysis, analysis of certified reference materials).
- Water Analysis: Requirement of nutritional labeling; determination of food nutritional value (e.g. total protein content, sodium content); detection of food adulteration and contamination (e.g. presence of banned additives, toxins, undeclared components); recent issues and case studies in food analysis.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

1. Identify and determine errors and uncertainty of analytical results (CLO 1)
2. Apply measures taken to control quality and ensure reliability of analytical results (CLO 2)
3. Demonstrate a general knowledge in food and water analysis (CLO 3)
4. Understand issues in public health protection related to chemical analysis (CLO 4)
5. Carry out analytical techniques used in practicing food and water laboratories (CLO 5)

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in CHEM2041 or CHEM2241 or CHEM2341 or CHEM2441 or CHEM2541.

**Offer in 2021 - 2022**
Y 2nd sem Offer in 2022 - 2023 : Y

**Grade Descriptors (A to F)**

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Demonstrate through a thorough grasp of the knowledge and skills required in theory and laboratory work in food and water analysis to acquire accurate results with full interpretation for analytical application as described in all the course learning outcomes. Show strong analytical and critical abilities, logical thinking and capability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply highly effective organization and presentation skills as shown in class work.</td>
</tr>
<tr>
<td>B</td>
<td>Demonstrate a substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and capability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply highly effective organization and presentation skills as shown in class work.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate a general command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities, logical thinking, and ability to apply knowledge learnt to solve a wide range of complex issues and problems related to the analysis of food and water. Apply effective organization and presentation skills as shown in class work.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate a partial but limited command of knowledge and skills required for attaining some of the course learning outcomes in Food and Water Analysis. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems related to the analysis of food and water. Apply limited or barely effective organization and presentation skill as shown in class work.</td>
</tr>
<tr>
<td>Fail</td>
<td>Demonstrate little or no evidence for the command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems related to the analysis of food and water. Organization and presentation skills are minimally effective or ineffective as shown in class work.</td>

**Required/recommended reading and online materials**

**Additional Course Information**
Laboratory classes are mandatory. Students must complete ALL experiments and laboratory reports to pass this course.
### Course Objectives

This course is designed for non-chemistry major students covering basic principles of separation and spectroscopy for chemical analysis. This course provides a general foundation for further studies in pharmacology, life and environmental sciences.

### Course Contents & Topics

Optical methods: Beer’s Law; UV-visible, infrared, and atomic spectrometry; fluorescence; atomic mass spectrometry; grating spectrometer; photon detectors and thermal detectors.

Separation methods: partition; chromatography theories; high performance liquid chromatography (HPLC) and gas chromatography (GC); instrumental set up of HPLC and GC.

Mass spectrometry: fundamental concept of mass spectrometry; electrospray ionization (ESI) and matrix-assisted laser desorption ionization (MALDI); time-of-flight (TOF) and quadrupole (Q) mass analyzers.

NMR: basic principle of nuclear magnetic resonance.

Analysis and quality assurance: statistical analysis of small sets of data, control chart.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 explain the principles of the optical methods, separation methods, mass spectrometry, and NMR

CLO 2 describe the basic experimental setup and the properties of the basic components of the instruments used in the laboratory classes.

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in CHEM2041 or CHEM2241; and

Not for students who have passed CHEM3241, or have already enrolled in this course.

### Grade Descriptors (A+ to F)

- **A**
  - Demonstrate thorough grasp of the subject. - Show evidence of strong analytical abilities, logical and independent thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. - Demonstrate highly proficient lab skills and techniques and critical use of data and results to draw appropriate and insightful conclusions. - Demonstrate highly effective organization and presentation skills.

- **B**
  - Demonstrate substantial grasp of the subject. - Show evidence of analytical abilities and logical thinking, some evidence of independent thinking, and ability to apply knowledge to familiar and some unfamiliar situations. - Demonstrate proficient lab skills and techniques and correct use of data and results to draw appropriate conclusions. - Demonstrate effective organization and presentation skills.

- **C**
  - Demonstrate general but incomplete grasp of the subject. - Show evidence of some analytical abilities and logical thinking, little evidence of independent thinking, and ability to apply knowledge to most familiar situations. - Demonstrate adequate lab skills and techniques and mostly correct but some erroneous use of data and results to draw appropriate conclusions. - Demonstrate moderately effective organization and presentation skills.

- **D**
  - Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. - Show evidence of limited analytical abilities, little or no evidence of independent thinking, and limited ability to apply knowledge to solve problems. - Demonstrate partially effective lab skills and techniques and limited ability to use data and results to draw appropriate conclusions. - Demonstrate limited or barely effective organization and presentation skills.

- **Fail**
  - Demonstrate little or no grasp of the knowledge and understanding of the subject. - Show little or no evidence of analytical abilities, logical and independent thinking, and very little or no ability to apply knowledge to solve problems. - Demonstrate minimally effective or ineffective lab skills and techniques and misuse of data and results and/or unable to draw appropriate conclusions. - Demonstrate incoherent organization and poor presentation skills.

### CHEM3244

**Offering Department** Chemistry

**Quota** 35

**Course Co-ordinator** Dr X Li, Chemistry (xiangli@hku.hk)

**Teachers Involved** Dr K C J Wong, Pharmacology and Pharmacy

**Course Objectives**

The course covers theories and practices on various analytical techniques used in pharmaceutical industry. Sampling and data analysis, method validation with respect to regulatory guidelines, ultraviolet/visible, infrared, fluorescence, atomic spectrophotometry, separation techniques such as gas chromatography and liquid chromatography, and modern mass spectrometry with its applications in protein sequencing will be covered in this course.

**Course Contents & Topics**

Principles and applications of different analytical and measurement techniques in pharmaceutical sciences. Analysis and quality assurance: method validation, sampling, statistics, hypothesis tests

- Optical spectroscopy: Beer’s law, UV/Vis, infrared, fluorescence, and atomic spectroscopy
- Separation and purification: gas chromatography and liquid chromatography
- Modern mass spectrometry: ionization techniques (ESI, MALDI), mass analysis techniques (TOF, quadrupole), protein sequencing.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 demonstrate knowledge and understanding of principles of data analysis, optical spectrosopic methods, separation techniques, and modern mass spectrometry

- CLO 2 describe the basic experimental setup and the properties of the basic components of the instruments used in the laboratory classes

- CLO 3 apply experimental skills in experiments including sample preparation, standard solution preparation, instrument calibration, and matrix effect correction
## Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BPHM2136

CHEM3342 Bioinorganic chemistry (6 credits)

Offering Department Chemistry
Course Co-ordinator Prof H Z Sun, Chemistry
Teachers Involved Prof H Z Sun, Chemistry

Course Objectives
This course is a continuation from Basic Inorganic Chemistry and Basic Organic Chemistry, giving further and more details of inorganic chemistry in biological system, with examples relevance to biological processes and medical science, suited to the needs of those intending to extend their studies in (bio)chemistry and biomedical science.

Course Contents & Topics
Bioinorganic Chemistry of selected topics of interest. Examples include the inorganic chemistry (and biochemistry) behind the requirement of biological cobalt for metals such as zinc, iron and copper, and metals in medicine such as mechanisms by which organisms obtain required metal ions from their environment, and use of metal-containing compounds in treating diseases such as cancer.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand the principles and concepts of inorganic/organic chemistry in biological system
- CLO 2 understand structure, bonding, and spectral properties of selected metals in proteins and nucleic acids
- CLO 3 understand chemical mechanisms of selected metal homeoostasis (i.e. uptake, transport and storage)
- CLO 4 understand the role of metal complexes medicine

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in CHEM2341

Offer in 2021 - 2022
Y 2nd sem

Grade Descriptors (A to F)

A Demonstrate thorough knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard and soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show strong ability to analyze novel problems and critical use of data and experimental results to draw appropriate and insightful conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate highly effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.

B Demonstrate substantial command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard and soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show evidence to analyze novel problems and correct use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.

C Demonstrate general but incomplete command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard and soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show limited ability to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show limited ability to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Demonstrate partial but limited command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the more advanced foundation knowledge of inorganic chemistry, especially those related to structure and bonding of inorganic, coordination and organometallic compounds; mechanisms of reactions; and magnetic and spectral properties of inorganic systems including examples in bioinorganic systems.

Organic chemistry II (6 credits)

Dr Z X Huang (1st sem); Prof X Y Li (2nd sem), Chemistry

Department of Chemistry

Course Contents

- Theory: chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show evidence of some abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate moderately effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.

- Fail: Demonstrate little or no evidence of command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of bioinorganic chemistry, especially those related to hard-soft acid-base theory; chelation; structure and bonding of metals in biological systems; thermodynamic and kinetic aspects of metal ions in biological processes and their relevance to metal homeostasis; metal-based drugs. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of bioinorganic chemistry. Show little or no ability to analyze problems to most familiar situations and erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of bioinorganic chemistry. Demonstrate minimally effective basic techniques, especially in the characterization of inorganic active site and overall metallo-biomolecules.

Teachers Involved

(Prof X D Li,Chemistry)

(Prof X Y Li,Chemistry)

Course Objectives

As a continuation from CHEM2441 Organic Chemistry I, this course aims to provide a solid foundation of organic chemistry together with CHEM2441. It focuses primarily on the basic principles to understand the structure and reactivity of organic molecules, with examples illustrating the role of organic chemistry in daily life and industry.

Course Contents & Topics

Chemistry of common organic functional groups: ketones and aldehydes; carboxylic acids and their derivatives; amines; aromatic compounds. Principles of organic synthesis. Detailed considerations of reaction mechanisms. Spectroscopic tools (UV-Vis, IR, NMR, and MS) for characterization and identification of organic compounds.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 draw correct structural representations of organic molecules
- CLO 2 understand the basic principles of structure and reactivity of organic molecules
- CLO 3 determine structures of organic compounds based on spectroscopic data
- CLO 4 write reasonable mechanisms for transformations of common functional groups (alcohols, ethers, carboxyl compounds, aldehydes, ketones, carboxylic acids, acyl halides, anhydrides, esters, amides, nitriles, and amines)
- CLO 5 appreciate the importance of organic chemistry in daily life

CLO 6 devise synthetic pathways to organic compounds using functional group chemistry

Pre-requisites

Pass in CHEM2441

Remarks: CHEM3441 has been changed to lecture-based course from semester 2, 2015-16. For Chemistry students who admitted in 2014-15 or before, they must enroll also CHEM3443 for enrolling CHEM3441 (new version without lab component) to meet the Chemistry Major requirements.

### CHEM3442

**Organic chemistry of biomolecules (6 credits)**

**Offering Department** Chemistry  
**Course Co-ordinator** Dr P H Toy, Chemistry  
**Teachers Involved** Dr P H Toy, Chemistry  
**Course Objectives**  
The major objective of this course is to give the students an understanding and appreciation of the role of organic chemistry in biology and biochemistry.

**Course Contents & Topics**  
The chemistry of organic molecule groups such as carbohydrates, amino acids, peptides, coenzymes, nucleotides and lipids will be discussed. Enzyme catalysis, cofactors and inhibitors will also be presented.

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:  
- CLO 1: have a basic understanding of biologically important organic molecules  
- CLO 2: have a basic understanding of enzyme catalysis  
- CLO 3: appreciate how organic chemistry plays an important role in biology and biochemistry.

**Pre-requisites (and Co-requisites and Impermissible combinations)**  
Pass in CHEM2442 or CHEM3441

**Offer in 2021 - 2022**  
Y  
**Grade Descriptors** (A+ to F)  
- **A**: Demonstrate thorough mastery at an advanced level of extensive biomolecule organic chemistry knowledge, and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar problems. Apply highly effective organizational and presentational skills.
- **B**: Demonstrate substantial command of biomolecule organic chemistry with a broad range of knowledge, and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar problems. Apply effective organizational and presentational skills.
- **C**: Demonstrate general but incomplete command of biomolecule organic chemistry knowledge, and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar problems. Apply moderately effective organizational and presentational skills.
- **D**: Demonstrate partial but limited command of biomolecule organic chemistry knowledge, and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail**: Demonstrate little or no evidence of command of biomolecule organic chemistry knowledge, and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

 Demonstrate problem-solving skills, critical thinking and analytical reasoning

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in CHEM2441; and pass in CHEM3441, or already enrolled in this course; NOT for students who have passed CHEM441A in semester 1, 2015-16, or CHEM3441 in or before 2014-2015 (for students admitted in 2014-15 or before) Pass in CHEM2441 or CHEM2442 or CHEM2443; and Pass in CHEM3441 or CHEM3442, or already enrolled in any of these two courses (for students admitted in 2015-16 or thereafter)

Offer in 2021 - 2022 Y 1st sem 2nd sem Offer in 2022 - 2023 : Y Examination Dec May

Grade Descriptors

A  Demonstrate extensive knowledge and thorough command of concepts and principles which are required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Competently conduct experiment with efficient lab skills and techniques. Critically appraise data to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.

B  Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show substantial grasp and mastery of the subject knowledge. Demonstrate evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Show effective lab skills and techniques and critical analysis of experimental data. Apply effective organizational and presentational skills.

C  Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show general but incomplete grasp of the subject knowledge. Demonstrate evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Show moderately effective lab skills and techniques. Demonstrated some ability to analyze experimental data critically. Apply moderately effective organizational and presentational skills.

D  Demonstrate partial but limited command of knowledge and skills required for attaining course learning outcomes. Ability to recall some of factual information of the subject. Show a partial comprehension of basic concepts and principles and weak ability to apply them. Demonstrate evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate partially effective lab skills and techniques. Apply limited or barely effective organizational and presentational skills.

Fail  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Show evidence of little or no grasp of the knowledge and understanding of the subject. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Demonstrate minimally effective or ineffective lab skills and techniques. Organization and presentational skills are minimally effective or ineffective.

John W. Lehman: Operational Organic Chemistry - A Problem-Solving Approach to the Laboratory Course (Pearson, latest edition)

Additional Course Information

Laboratory classes are mandatory. Students must complete ALL experiments and laboratory reports to pass this course.

CHEM3445 Integrated laboratory (6 credits) Academic Year 2021 Quota 20

Offering Department Chemistry

Course Co-ordinator Dr A M Y Yuen, Chemistry (mayan@hku.hk)

Teachers Involved (Dr A M Y Yuen,Chemistry) (Dr J He,Chemistry)

Course Objectives

This course aims to provide students with experience using techniques employed in synthetic organic and organometallic chemistry. This advanced synthesis course covering a variety of synthetic methods, including vacuum and inert atmosphere techniques, to prepare organic and organometallic compounds; methods for separation of mixtures and isolation of products by use of column and thin-layer chromatography, sublimation and extraction techniques. Experiments on characterization and identification by chemical and spectroscopic methods form an important part of the course. The use of the chemical literature in molecular design and synthesis planning is also included.

Course Contents & Topics

The course will include the following laboratory skills and practices: laboratory safety practice; molecular design, synthesis planning, experimental set up, purification, and characterization of organic compounds using modern instrumentation techniques.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** Demonstrate a good practice of laboratory safety and exercise proper procedures for safe handling and usage of chemicals
- **CLO 2** Demonstrate proficiency in synthetic chemical laboratory techniques
- **CLO 3** Apply modern instrumentation techniques to characterize organic compounds and draw conclusions from the results
- **CLO 4** Analyze the influence of chemical structure on the physical and chemical properties of organic molecules
- **CLO 5** Demonstrate problem-solving skills, critical thinking and analytical reasoning

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in CHEM3443 or already enrolled in this course

Offer in 2021 - 2022 Y Summer Offer in 2022 - 2023 : Y Examination No Exam

Grade Descriptors

Test/Quiz 10 CLO 1,2,3

Dr. J Yang, Chemistry
2021

Ma

Department of Chemistry

Outcomes

Course Learning Objectives

- Chemical equilibrium and kinetics theory
- Calculation of free energies in gaseous reaction
- Ideal gas mixture: chemical equilibrium
- Molecular degrees of freedom: translation, rotation, vibration, and electronic
- Systems of independent molecules: ideal gas

The course presents fundamental principles and topics on statistical thermodynamics and kinetic theory in order to provide a solid foundation for students intending to further their studies in physical chemistry and related fields.

Course Contents & Topics

Principles of Statistical Thermodynamics
- Statistical model and state distribution for thermodynamics
- Statistical entropy
- Ensembles and partition functions: microcanonical and canonical
- Systems of independent molecules: ideal gas

Chemical equilibrium and kinetics theory
- Rate theory: collision theory, transition state theory and applications

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand and use the terminology and nomenclature in statistical thermodynamics and topics discussed in the course

CLO 2 demonstrate knowledge and understanding of basic concepts in statistical thermodynamics

CLO 3 understand correlation between macroscopic observables and microscopic statistical model systems

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in CHEM2541

Additional Course Information

There are three mandatory homework assignments. Laboratory classes are mandatory. Students must complete ALL experiments and laboratory reports to pass this course.

Students are strongly recommended to take CHEM3541 Physical Chemistry: Introduction to Quantum Chemistry
Directed studies in chemistry (6 credits)

Offering Department: Chemistry
Course Co-ordinator: Prof D L Phillips, Chemistry (philipples@hku.hk)
Teachers Involved: (Various teachers in the Department, Chemistry)
Course Objectives: This course is designed for third year students who would like to take an early experience on research. It offers students an opportunity to carry out small scale chemical projects by themselves.

Course Contents & Topics: Students interested in taking this course should contact their prospective supervisors in May to determine the contents and the nature of their project in the coming academic year. Prior approval from both the prospective supervisor and the course coordinator is required.

Course Learning Outcomes: On successful completion of this course, students should be able to:
- CLO 1 understand the terminology and nomenclature associated with the small scale chemical project they worked on in the course
- CLO 2 demonstrate knowledge and understanding of basic concepts involved in their chemical project
- CLO 3 understand the relationships of the their particular chemical project to the wider area of chemistry

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in at least 24 credits of advanced level disciplinary core/elective chemistry courses (CHEM3XXX or CHEM4XXX) in the Chemistry Major including a pass in CHEM2341 or CHEM2441 or CHEM2442 or CHEM2541 or CHEM2545 or CHEM3146.

This capstone course is for Chemistry Major/ Chemistry Major (Intensive) students only. This course is designed for third year students who would like to take an early experience on research. The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022: Y

Y 1st sem 2nd sem Offer in 2022 - 2023: Y

Grade Descriptors (A+ to F): A Show an extensive comprehension of the subject. Demonstrate very able analytical and critical thought with presence of some originality. Illuminating utilization and critical analysis / evaluation of information acquired from a wide range of high quality sources. Critical employment of data and results to synthesize appropriate and illuminating conclusions. Demonstrate integration of a wide range of appropriate theories, principles, data and methods. Employ very effective organizational and presentational skills. [Work of A+ should demonstrate substantial additional work beyond that is required in wider areas relevant to the topic.]

B Show a substantial comprehension of the subject. Demonstrate able analytical and critical thinking with use of relevant information from sources. Demonstrate ability to compose meaningful comparisons between different secondary interpretations. Correct utilization of data and results to form appropriate conclusions. Compose general integration of theories, principles, data and methods. Perform effective organizational and presentational skills.

C Show a general but incomplete comprehension of the subject. Presence of some analytical and critical thinking with use of relevant information from sources. Demonstrate ability to compose comparisons between different interpretations. Mainly correct but some incorrect utilization of data and results to form appropriate conclusions. Demonstrate some partial integration of theories, principles, data and methods. Perform moderately effective organizational and presentational skills.

D Show a partial but limited comprehension, with knowledge of some relevant information, of the subject. Presence of some coherent and logical thinking, but with limited analytical and critical abilities. Show utilization and reference of several sources, but mostly via summary instead of by analysis and comparison. Limited ability to employ data and results to form appropriate conclusions. Demonstrate limited integration of theories, principles, data and methods. Perform limited or marginally effective organizational and presentational skills.

Fail Show little or no comprehension of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited employment of secondary sources and no critical comparison of them. Incorrectly utilize data and results and/or unable to form appropriate conclusions. Demonstrate little or no integration of theories, principles, data and methods. Organization and presentational skills are of very limited use or ineffective.

Communication-intensive Course: N

Course Type: Project-based course
Course Teaching & Learning Activities: Activities Details No. of Hours
- Reading / Self study discussion & meetings to be arranged by the student and the supervisor 120

Assessment Methods and Weighting: Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
- Dissertation including a written report and an oral presentation 100 CLO 1,2,3

Required/recommended reading and examination materials: Recommended reading material will be assigned depending on the project.

Additional Course Information: Exceptional academic strength of the students is required for taking this course. The course may involve Laboratory component as Course Teaching & Learning Activities.

Symmetry, group theory and applications (6 credits)

Offering Department: Chemistry
Course Co-ordinator: Dr E C M Tse, Chemistry (ecmtse@hku.hk)
Teachers Involved: (Dr E C M Tse, Chemistry) (Dr K K H Ng, Chemistry)
Course Objectives: To introduce the concepts of symmetry and group theory and to apply them in solving chemical problems. This course also provides an introductory treatment of bonding theories, inorganic electronic and vibrational spectroscopy. This course is essential for students who wish to take advanced courses in inorganic chemistry and all types of spectroscopy.

Course Contents & Topics: Symmetry elements and symmetry operations; symmetry point groups; reducible and irreducible representations; characteristic tables; direct products; symmetry-adapted linear combinations; projection operators; hybrid orbitals; molecular orbital theory for organic, inorganic and organometallic systems; selected applications in electronic and vibrational spectroscopy.

Course Learning Outcomes: On successful completion of this course, students should be able to:
- CLO 1 understand the basic principles and concepts of symmetry and group theory and to apply them in solving chemical problems
- CLO 2 demonstrate knowledge and understanding in the use of character tables and projection operator techniques
- CLO 3 demonstrate knowledge and understanding of bonding theories involving hybrid orbitals and molecular orbitals for organic, inorganic and organometallic systems
- CLO 4 demonstrate knowledge and understanding in the application of symmetry and group theory in electronic

**Grade Descriptors (A+ to F)**

- **A** Demonstrate thorough knowledge of interfacial science and technology, and mastery of skills required for attaining all of the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to solve problems in a wide range of complex, familiar and unfamiliar situations. Critical use of data and sourcing of references. Apply highly effective organizational and presentational skills.

- **B** Demonstrate substantial knowledge of interfacial science and technology and command of skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems in familiar and some unfamiliar situations. Correct use of data and sourcing of references. Apply effective organizational and presentational skills.

- **C** Demonstrate general but incomplete knowledge of interfacial science and technology and command of skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems to most familiar situations. Mostly correct but some erroneous use of data and referencing. Apply moderately effective organizational and presentational skills.

- **D** Demonstrate partial but limited knowledge of interfacial science and technology and command of skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to use data and source references. Apply limited or barely effective organizational and presentational skills.

- **Fail** Demonstrate little or no evidence of knowledge of interfacial science and technology, and command of skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Misuse of data and references. Organization and presentational skills are minimally effective or ineffective.

**CHEM4144**

**Offering Department** Chemistry

**Course Co-ordinator** Dr E C M Tse, Chemistry (ecmtse@hku.hk)

**Teachers Involved**
- (Dr E C M Tse, Chemistry)
- (Dr K Okoro, Chemistry)

**Course Objectives** This course is a continuation from Introduction to Materials Chemistry. It provides a more comprehensive overview on materials chemistry and application of materials in advanced technology. The most recent development in materials chemistry will also be discussed.

**Course Contents & Topics** Advanced polymerization methods: copolymerization and copolymers, coordination polymerization, control of stereochemistry in polymers; ionic and radical living polymerization. Materials for specialty applications: high strength materials; high temperature polymers, polyolefins, conducting polymers, optical information storage, sensors, photonics, electronics, nanotechnology. Advanced materials characterization techniques.

**Course Learning Outcomes** On successful completion of this course, students should be able to:

- CLO 1 describe the mechanisms and kinetics of copolymerizations, coordination polymerizations, and living polymerizations
- CLO 2 identify examples of some engineering polymers for high temperature/high strength applications, and how are their properties affected by the molecular structures
- CLO 3 demonstrate knowledge in advanced materials characterization techniques
- CLO 4 understand the working principles of materials for information storage and opto-electronic applications

**Pre-requisites (and Co-requisites and Impermissible combinations)** Pass in CHEM3143

Offering Department: Chemistry
Course Co-ordinator: Dr. Y. Li, Chemistry (yingli@hku.hk)

Course Objectives:
This course covers the chemical principles of drug design and drug action and uses as an introduction to research areas in bioorganic chemistry, bioinorganic chemistry, medicinal chemistry, pharmaceutical chemistry, and biotechnology.

Course Contents & Topics:
- Drug discovery, design, and development: lead discovery, pharmacophore, structure-activity relationships (SAR), computer-aided drug design, combinatorial chemistry and high-throughput drug screening
- Drug-receptor interactions
- Proteins (and enzymes) and nucleic acids as drug targets
- Metals in medicine
- DNA-Drug interactions
- Drug metabolism and produgs and drug delivery

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1: 
- Demonstrate knowledge of drug discovery, design and development

CLO 2: 
- Understand drug-biomolecule interactions where appropriate

CLO 3: 
- Gain appropriate knowledge of drug metabolism and drug delivery

Pre-requisites:
Pass in CHEM3441 or CHEM3442; and Not for students who have passed in BPHM3133, or already enrolled in this course.

Assessment Methods and Weighting:
- Assignments: 30% CLO 1,2,3,4
- Examination: 50% CLO 1,2,3,4
- Test: 20% CLO 1,2,3,4

Course Learning and Teaching:
- Lecture-based course
- Reading / Self study: 100 hours
- Online materials: Specialist references will be given throughout the course.

Course Contents & Topics:
- Drug discovery, design, and development: lead discovery, pharmacophore, structure-activity relationships (SAR), computer-aided drug design, combinatorial chemistry and high-throughput drug screening
- Drug-receptor interactions
- Proteins (and enzymes) and nucleic acids as drug targets
- Metals in medicine
- DNA-Drug interactions
- Drug metabolism and produgs and drug delivery

Communication-intensive Course
Course Type: Lecture-based course

Assessment Methods and Weighting:
- Assignments: 30% CLO 1,2,3,4
- Examination: 50% CLO 1,2,3,4
- Test: 20% CLO 1,2,3,4

Grade Descriptors (A+ to F):
A: 
- Demonstrate thorough knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry, especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show strong ability to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show ability to analyze novel problems and critical use of data and experimental results to draw appropriate conclusions relating to the synthesis and applications of advanced materials. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show strong ability to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show little or no ability to analyze problems to most familiar situations and erroneous use of data and experimental results to draw appropriate conclusions relating to the synthesis and applications of advanced materials. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry.

B: 
- Demonstrate substantial command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show evidence of some abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of medicinal chemistry. Demonstrate moderate effective basic techniques for medicinal chemistry, especially in drug discovery and metabolism.

C: 
- Demonstrate general but incomplete command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show evidence of some abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of medicinal chemistry. Demonstrate partial but limited command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show evidence of limited abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of medicinal chemistry. Demonstrate partial but limited effective basic techniques for medicinal chemistry, especially in drug discovery and metabolism.

D: 
- Demonstrate partial but limited command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show evidence of limited abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of medicinal chemistry. Demonstrate partial but limited effective basic techniques for medicinal chemistry, especially in drug discovery and metabolism.

Fail: 
- Demonstrate little or no evidence of command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the basic foundation knowledge of medicinal chemistry; especially those related to drug discovery, design and development; drug targets; drug lead optimization; structure activity relationship; pharmacokinetics; drug delivery and its relevance to toxicity. Show little or no evidence of abilities to apply and integrate knowledge and theory relating to the basic foundation knowledge of medicinal chemistry. Show little or no ability to analyze problems to most familiar situations and erroneous use of data and experimental results to draw appropriate conclusions relating to the basic principles and knowledge of medicinal chemistry. Demonstrate minimal effective basic techniques for medicinal chemistry, especially in drug discovery and metabolism.
Supramolecular chemistry (6 credits)

Course Co-ordinator
Dr H Y Au-Yeung, Chemistry
 hoyuay@hku.hk
(Dr K Okuro, Chemistry)
(Dr Y F Wang, Chemistry)

Course Objectives
Supramolecular chemistry concerns the chemistry beyond that of molecules. This course aims at introducing students to concepts and techniques in supramolecular chemistry, demonstrating how molecular assembly and supramolecular structures leads to functions and properties, and their relevance to material and biological science.

Course Contents & Topics
Basic concepts in molecular recognition and self-assembly; non-covalent interactions and common supramolecular building blocks; methods in supramolecular chemistry. Selected topics in modern supramolecular chemistry, such as macrocycles and cages, molecular capsule and container molecules, synthetic receptors, interlocked structures, supramolecular polymers and supramolecular chemistry of biomolecules and biomaterials, will also be discussed.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in CHEM3341 and CHEM3441

Offering Department
Chemistry

Teachers Involved
Dr H Y Au-Yeung, Chemistry

Additional Course Information
This course is also offered to RPg students, and the course code for RPg students is CHEM6113.

Outcomes
On successful completion of this course, students should be able to:

CLO 1 Understand important principles and concepts in supramolecular chemistry
CLO 2 Demonstrate knowledge and understanding in the nature of non-covalent interactions and to apply these concepts in the design and explanation of the structures, properties and functions of different supramolecular systems
CLO 3 Interpret and analyse physical characterization data of supramolecular systems and extract relevant chemical information to explain the properties of the supramolecular systems

#### Course Objectives
Modern chemistry is thought to be the "central science" as it plays a critical role in related biological, physical, medical, and engineering disciplines. This course aims to introduce students to the newest concepts and technological breakthroughs in chemical sciences. Throughout the course, students will be introduced to how the interplay among molecules, materials, and interfaces leads to unprecedented functionalities that contribute to innovations in biology and medicine, smart materials, and sustainable energy schemes.

#### Course Contents & Topics
Current topics focus on the interdisciplinary area of chemistry with biology, and material sciences. Covered topics include chemical genetics, epigenetics and proteomics; chemical biology for drug discovery and development; stimuli-responsive nanomaterials; autonomous macromolecular motion; future power landscape; renewable energy conversion and utilization. Examples in protein posttranslational modifications, active colloidal, thermoelectric materials, molecular machines, advanced rechargeable batteries, and next-generation fuel cells and electrolyzers will be discussed.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- **CLO 1** understand important principles and topical trends in chemical sciences
- **CLO 2** demonstrate understanding of future directions in biomedical chemistry, nanomaterials, and energy sciences and applying this knowledge in comparing and contrasting various emergent technologies
- **CLO 3** interpret and analyse recent published research data in the field of chemistry and extract relevant chemical information to explain the observed properties and phenomena associated to the chemical systems

#### Pre-requisites (and Co-requisites and Impermissible combinations)

</tr>
</tbody>
</table>

#### Course Objectives
The aim of the course is to provide an understanding of modern instrumentation, covering both fundamental principles and practical aspects of instrument design. The course will be of particular benefit to those pursuing a higher research degree or a career in technical sales/service.

#### Course Contents & Topics
- Biological Mass spectrometry: Liquid Chromatography-Tandem Mass Spectrometry for Proteomics & Metabolomics.
- Laser Spectroscopy: Principle of laser; three-level and four-level lasers; laser instrumentation (Q-switching and frequency conversion); laser-induced fluorescence; laser atomic spectrometry; laser remote sensing; signal-to-
noise enhancement by boxcar integration and photon counting.
Laser-based Colloid Particle Analysis: Dynamic light scattering; zeta-potential measurement; laser trapping (optical tweezers).
Laser Microscopy: Confocal laser scanning microscopy; super-resolution microscopy; fluorescence correlation spectroscopy.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

- **CLO 1**: Explain the principles of the modern mass spectrometric methods for proteins and metabolites identification and quantification.
- **CLO 2**: Explain how proteins are identified and sequenced experimentally and how data is generated in proteomics experiments.
- **CLO 3**: Use the database searching techniques and software tools to analyze high-throughput proteomics data.
- **CLO 4**: Apply LC/MS/MS method for target quantitative analysis of small molecules.
- **CLO 5**: Explain the principles of the laser spectroscopy, atomic plasma spectrometry, and atomic x-ray spectrometry.
- **CLO 6**: Describe the basic experimental set up and the properties of the basic components of the instruments used in the laboratory classes.

**Pre-requisites and Co-requisites**
Pass in CHEM3241

**Required/recommended reading and online materials**
Chhabil Dass: Fundamentals of contemporary mass spectrometry (Wiley-Interscience)
Reference to published material will be made throughout the course.

**Additional Course Information**
Laboratory classes are mandatory. Students must complete ALL experiments and laboratory reports to pass this course.
This course is also offered to RPg students, and the course code for RPg students is CHEM6117.
Outcomes

CLO 1 apply statistical methods to assess analytical measurement data quality and interpret their significance, validate analytical methods and results

CLO 2 demonstrate understanding on the working principle of different analytical techniques and recognize their advantages and limitations

CLO 3 integrate different analytical techniques to solve analytical and bioanalytical problems

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in CHEM5241 or CHEM5242

Offer in 2021 - 2022

Grade Descriptors (A+ to F)

Offer in 2022 - 2023: Y

Examination May

Laboratory 6 x 4-hour of laboratory practical

Communication-intensive Course

Lecture with laboratory component course

Course Content & Topics

Selected advanced topics of current interest. Examples include metal-metal bonds and metal-ligand multiple bonds, inorganic and supramolecular photochemistry, lanthanide chemistry, bio-inorganic and medicinal chemistry, and activation of small molecules by metal complexes.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand the principles and concepts of inorganic and supramolecular photochemistry

CLO 2 understand the electronic structure and bondings of novel metal-metal and metal-ligand multiple bonded metal complexes

CLO 3 understand and realize the activation of small molecules by transition metal complexes and realize the importance of such activation in chemical catalysis of global interest, green chemistry and energy saving reactions

CLO 4 understand the role of metal complexes in bio-inorganic and medicinal chemistry

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in CHEM5341

Offer in 2021 - 2022

Grade Descriptors (A+ to F)

Offer in 2022 - 2023: Y

A

Demonstrate thorough knowledge and understanding of essential facts, concepts, principles and theories relating to the frontiers in inorganic chemistry. Show strong ability to apply and integrate knowledge and theory, and strong ability to analyze novel problems in inorganic chemistry. Apply highly effective organizational and presentational skills.

B

Demonstrate substantial command of knowledge and understanding of essential facts, concepts, principles and theories relating to the more advanced knowledge in inorganic chemistry. Show evidence to apply and integrate knowledge and theory, and ability to analyze novel problems of inorganic chemistry. Apply effective organizational and presentational skills.

C

Demonstrate general but incomplete command of knowledge and understanding of essential facts, concepts, principles and theories relating to the more advanced knowledge in inorganic chemistry. Show evidence of some abilities to apply and integrate knowledge and theory, and to analyze problems to most familiar situations in inorganic chemistry. Apply moderately effective

CHEM4341

Advanced inorganic chemistry (6 credits)

Offering Department Chemistry

Quota 50

Course Co-ordinator Prof C M Che, Chemistry (cmche@hku.hk)

Teachers Involved (Prof C M Che,Chemistry)

Chemistry

(Supervisor (Prof Y W W Yam,Chemistry)

Course Objectives

This course is a continuation from Intermediate Inorganic Chemistry, giving further and more detailed treatment to topics in Inorganic Chemistry and new areas of interest. Problem based learning on selected advance topics will be introduced in the later part of the course. This course also aims to prepare students for graduate work.

Course Contents & Topics

Selected advanced topics of current interest. Examples include metal-metal bonds and metal-ligand multiple bonds, inorganic and supramolecular photochemistry, lanthanide chemistry, bio-inorganic and medicinal chemistry, and activation of small molecules by metal complexes.

- Students are strongly recommended to take CHEM4142 Symmetry, group theory and applications if they wish to take this course.
- This course is also offered to RPg students, and the course code for RPg students is CHEM6115.

CHEM4342 Organometallic chemistry (6 credits) Academic Year 2021

Offering Department Chemistry Quota 40

Course Co-ordinator Dr. J Z Liu, Chemistry (juliu@hku.hk)

Teachers Involved (Dr J He,Chemistry) (Dr. J Z Liu,Chemistry)

Course Objectives
- To give further, more detailed, treatment to organometallic chemistry mentioned in CHEM3341 Inorganic Chemistry II. The course also aims to introduce and familiarize students with advanced laboratory techniques, and to prepare students for graduate work in inorganic and organometallic chemistry.
- On successful completion of this course, students should be able to:
  - Demonstrate thorough knowledge and understanding of essential facts, concepts, principles, and theories relating to the more advanced treatment of organometallic chemistry, especially those related to structure, bonding and reactivities of main group and transition metal organometallics; transition metal cluster chemistry; and application of organometallics in organic synthesis and catalysis. Show strong ability to apply and integrate knowledge and theory relating to the advanced principles and concepts of organometallic chemistry. Show strong ability to analyze novel problems and critical use of data and experimental results to draw appropriate and insightful conclusions relating to the advanced principles and applications of organometallic chemistry.
  - Demonstrate highly effective advanced laboratory skills and techniques, especially in the synthesis and manipulation of air- and moisture-sensitive compounds and their characterization by various spectroscopic methods.
  - Demonstrate partial but limited command of knowledge and understanding of essential facts, concepts, principles, and theories relating to the more detailed and advanced treatment of organometallic chemistry, especially those related to structure, bonding and reactivities of main group and transition metal organometallics; transition metal cluster chemistry; and application of organometallics in organic synthesis and catalysis. Show evidence of some abilities to apply and integrate knowledge and theory relating to the advanced principles and concepts of organometallic chemistry. Show ability to analyze problems to most familiar situations and mostly correct but erroneous use of data and experimental results to draw appropriate conclusions relating to the advanced principles and applications of organometallic chemistry.
  - Demonstrate minimal effective organizational and presentational skills.

Course Contents & Topics
- Laboratory: To introduce and familiarize students with advanced laboratory techniques which include the synthesis and manipulation of air- and moisture-sensitive compounds, and their characterization by various spectroscopic methods.

Course Learning Outcomes
- On successful completion of this course, students should be able to:
  - CLO 1 explain the bonding and reactivities of main group and transition metal organometallics; transition metal cluster chemistry; and application of organometallics in organic synthesis and catalysis. Demonstrate thorough knowledge and understanding of essential facts, concepts, principles, and theories relating to the more advanced treatment of organometallic chemistry, especially those related to structure, bonding and reactivities of main group and transition metal organometallics; transition metal cluster chemistry; and application of organometallics in organic synthesis and catalysis. Show strong ability to apply and integrate knowledge and theory relating to the advanced principles and concepts of organometallic chemistry. Show strong ability to analyze novel problems and critical use of data and experimental results to draw appropriate and insightful conclusions relating to the advanced principles and applications of organometallic chemistry.
  - CLO 2 demonstrate knowledge and understanding in the bonding, structure and reactivities of main group and transition metal organometallics, especially in transition metal clusters, metal alkyls, metal alkyldienes and metal alkylidylenes.
  - CLO 3 demonstrate knowledge and understanding in the application of organometallics in organic synthesis, polymerization and catalysis.
  - CLO 4 demonstrate ability in advanced laboratory techniques including the synthesis and manipulation of air- and moisture-sensitive compounds, and their characterization by various spectroscopic methods.

Pre-requisites (and Co-requisites and Impermissible combinations)

**CHEM4441 Advanced organic chemistry (6 credits)**

**Offering Department** Chemistry

**Academic Year** 2021

**Quota** 40

**Offer Co-ordinator** Dr J He, Chemistry (jianhe@hku.hk)

**Teachers Involved**
- Dr J He, Chemistry
- Z.X. Huang, Chemistry

**Course Objectives**
To provide students with knowledge in organic chemistry reaction mechanisms and organic compound structure determination.

**Course Contents & Topics**
The course covers chemical bonding, advanced stereochemistry, conformational analysis, techniques for investigating reaction mechanisms, reactive intermediates, rearrangement reactions, and pericyclic reactions.

**Course Learning Outcomes**
- On successful completion of this course, students should be able to:
  - CLO 1 describe, analyze and interpret the structure and reactivity relationship of organic molecules.
  - CLO 2 identify and predict the selectivities (chemoselectivity, regioselectivity and stereoselectivity) in organic reactions.
  - CLO 3 describe the general approaches to study organic mechanisms.
  - CLO 4 have a general understanding and working knowledge of pericyclic reactions, reactive intermediates (radicals, carbenes and nitrenes), and polar rearrangements.
  - CLO 5 suggest reasonable mechanistic pathways for some types of organic reactions.
  - CLO 6 apply the knowledge of reaction mechanisms in design of synthetic routes for organic compounds.

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in CHEM3441

**Required/recommended reading and**
Integrated organic synthesis (6 credits)

Offering Department: Chemistry
Course Co-ordinator: Prof P Chiu, Chemistry (pchiu@hku.hk)
Teachers Involved: (Dr Z X Huang, Chemistry)

Course Objectives:
To introduce aspects of modern organic reactions with relevance to and in the context of the synthesis of natural products, drugs and medicinal chemistry to provide an integrated approach to the subject, and to provide training in advanced organic laboratory skills, and further hands-on experience in synthesis and characterization, as preparation for graduate studies or research in organic chemistry.

Course Contents & Topics:
Building on the organic chemistry covered in the foundational courses CHEM1003 and CHEM2402, this course will present modern synthetic methods and synthetic planning. The course is organized into units based on target drug molecules. In each unit, the chemical biology of these compounds are briefly presented and the syntheses of these molecules are introduced, accompanied by in-depth discussions of the reactions involved with emphasis on their mechanisms, selectivity, stereochecmistry, scope and limitations. Concept of synthetic design including retrosynthetic analysis, stereoselectivity and enantioselective control elements will be emphasized. A laboratory section provides training in the practical skills of synthesis.

Course Learning Outcomes:
On successful completion of this course, students should be able to:

- CLO 1 understand the rationale, selectivities, and mechanisms of various reactions and reagents in organic chemistry.
- CLO 2 able to solve mechanistic and synthetic chemistry problems
- CLO 3 perform organic synthesis experiments at an increased level of technical difficulty, using additional skills in experimental design and execution, spectroscopic analysis, and reporting of results
- CLO 4 integrate lecture material and literature search, to learn chemistry independently

Pre-requisites (and Co-requisites and impermissible combinations):
- Pass in CHEM3441; or
- Pass in CHEM3441 (without lab component) and CHEM3443

Offer in 2021 - 2022
- Y 2nd sem
- Offer in 2022 - 2023: Y

Examination:
- May

Grade Descriptors (A+ to F)

- A: Demonstrate a thorough mastery at an advanced level of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show a strong ability to integrate knowledge and theory and a strong ability to analyze novel and complex synthetic chemistry situations and problems. Show a critical use of knowledge and data to apply to the solution of novel and complex synthetic problems. Demonstrate highly effective organization and application of lab skills and techniques in synthetic experiments.
- B: Demonstrate a substantial command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show evidence of ability to integrate knowledge and theory, and evidence of ability to analyze synthetic organic chemistry situations and problems. Show a correct use of knowledge and data to apply to the solution of some novel and most familiar synthetic problems. Demonstrate effective organization and application of lab skills and techniques in synthetic experiments.
- C: Demonstrate a general but incomplete command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show evidence of some ability to integrate knowledge and theory, and evidence of some ability to analyze synthetic organic chemistry situations and problems. Show a correct use of knowledge to apply to the solution of some novel and most familiar synthetic problems. Demonstrate moderately effective organization and application of lab skills and techniques in synthetic experiments.
- D: Demonstrate a partial but limited command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show evidence of a limited ability to integrate knowledge and theory, and a limited ability to analyze familiar synthetic chemistry situations and problems. Show some correct but erroneous use of knowledge to apply to the solution of most familiar problems. Demonstrate partially effective organization and application of lab skills and techniques in synthetic experiments.
- Fail: Demonstrate little or no evidence of command of knowledge and understanding of concepts, principles, reactions and mechanisms related to synthetic organic chemistry. Show little or no evidence of ability to integrate knowledge and theory, and evidence of some ability to analyze familiar situations and problems. Show mostly erroneous use of knowledge and data to apply to the solution of familiar problems. Demonstrate minimally effective organization and application of lab skills and techniques in synthetic experiments.

Communication-intensive Course Type:

  - Examination: (Practicals & lab test) 25 CLO 1,2,3,4
  - Laboratory reports: 25 CLO 1,2,3,4
  - Test: 15 CLO 1,2,4

Evaluation:
- Academic Year: 2021
- Quota: 50

Additional Course Information:
Laboratory classes are mandatory. Students must complete ALL experiments and laboratory reports to pass this course. This course is also offered to RPg students, and the course code for RPg students is CHEM6114.

CHEM4444
Chemical biology (6 credits)

Offering Department: Chemistry
Course Co-ordinator: Prof X C Li, Chemistry (xuechen@hku.hk)
Teachers Involved: (Prof X C Li, Chemistry)

Course Objectives:
To understand how to use chemical approaches to emulate biological systems to study natural molecules and...
Course Contents & Topics
Chemical biology of nucleic acids, protein chemistry, protein posttranslational modifications, carbohydrate chemistry, chemical glycochemistry and tools and techniques in chemical biology.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand chemical biology approaches in studying biology
- CLO 2 give examples of how to use chemical methods to produce natural biomolecules and new biomolecules with altered functions
- CLO 3 compare chemical biology and traditional biology approaches in drug discovery

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOC3601 or CHEM3441

Offer in 2021 - 2022

CHEM4541
Physical chemistry III: statistical thermodynamics and kinetics theory (6 credits)

Offering Department
Chemistry

Academic Year
2021

Course Co-ordinator
---, Chemistry (/)

Quota
40

Course Objectives
The course presents fundamental principles and topics on statistical thermodynamics and kinetic theory in order to provide a solid foundation for students intending to further their studies in physical chemistry and related fields.

Course Contents & Topics
Principles of Statistical Thermodynamics
- Thermodynamic laws
- Ensembles and partition functions: microcanonical, canonical and grand-canonical
- Systems of independent molecules: ideal gas
- Molecular degrees of freedom: translation, rotation, vibration, and electronic
- Ideal gas mixture: chemical equilibrium, binding, and titration
- Lattice statistics: Ising model and phase transition
- Quantum statistics
  Chemical equilibrium and kinetics theory
- Rate theory: collision theory, transition state theory

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand and use the terminology and nomenclature in statistical thermodynamics and topics discussed in the course
- CLO 2 demonstrate knowledge and understanding of basic concepts in statistical thermodynamics
- CLO 3 understand correlation between macroscopic observables and microscopic statistical model systems

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in CHEM3541

### CHEM4543

**Advanced physical chemistry (6 credits)**

**Offering Department** Chemistry  
**Course Co-ordinator** Prof G H Chen, Chemistry (ghc@yangtze.hku.hk)

**Course Objectives**
This course covers advanced topics in physical chemistry. It is offered for students majoring in physical chemistry and for students who are interested in postgraduate studies.

**Course Contents & Topics**
- Time-resolved spectroscopy methods, excited states and reactive intermediates, photophysics and photochemical processes, chemical reaction mechanisms, advanced quantum mechanical methods, reaction pathways and surface crossings.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 understand the basic concepts of quantum chemistry, statistical thermodynamics and molecular dynamics
- CLO 2 understand Hartree-Fock method, statistical ensembles, quantum statistics, H-theorem, and reaction dynamics
- CLO 3 understand the elementary numerical procedures in Hartree-Fock and molecular mechanics methods

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in CHEM3541

**Offer in 2021 - 2022**
- Y 2nd sem  
- Offer in 2022 - 2023 : Y

**Grade Descriptors (A+ to F)**

| A | Mastery of advanced knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Strong analytical and critical abilities and logical thinking, with strong ability to apply knowledge to practical problems in physical chemistry. |
| B | Substantial command of a broad range of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of analytical and critical abilities and logical thinking, with ability to apply knowledge to practical problems in physical chemistry. |
| C | Command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of some analytical and critical abilities and logical thinking, with ability to apply knowledge to familiar problems in physical chemistry. |
| D | Partial but limited command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Evidence of some coherent analytical and critical abilities and logical thinking, with limited ability to apply knowledge to practical problems in physical chemistry. |
| Fail | Little or no evidence of command of knowledge on following topics: variation method in quantum mechanics, Hartree-Fock method, perturbation theory, advanced statistical thermodynamics, reaction dynamics. Lack of analytical and critical abilities and logical thinking, with very little or no ability to apply knowledge to practical problems in physical chemistry. |

### CHEM4544

**Electrochemical science and technology (6 credits)**

**Offering Department** Chemistry  
**Course Co-ordinator** Prof G K Y Chan, Chemistry (hrscoky@hku.hk)

**Course Objectives**
To understand the science of electrochemistry, methods to characterise electrochemical cells, and factors affecting electrochemical applications and technologies.

**Course Contents & Topics**

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 Understand the thermodynamic and kinetics of a charge transfer process at the electrode-electrolyte interface and transport of relevant species in molecular and macroscopic scales.
- CLO 2 Apply voltammetry methods to characterize an electrochemical process.
- CLO 3 Correlate performance of electrochemical cells to materials, design, and operation parameters.

**Pre-requisites**
Pass in CHEM3241 or CHEM3541 or CHEM3542
## Department of Chemistry

**Course Co-ordinator**

Prof X D Li, Chemistry (xiangli@hku.hk)

**Course Objectives**

This course is designed for final year students who would like to gain experience on research methods and techniques by working on small projects on literature research and chemistry research.

**Course Contents & Topics**

The course provides training on chemistry literature research techniques. Students will work on a small project on literature research and a short laboratory-based research project. The laboratory-based projects are provided by the students' supervisors who are assigned by the department.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 demonstrate knowledge of academic databases and search engines of chemistry literature.
- CLO 2 understand the terminology and nomenclature associated with their own research project.
- CLO 3 demonstrate knowledge and understanding of the chemical techniques they used to do the research in their own research project.
- CLO 4 demonstrate knowledge and understanding of the results of their own research project and its context in the broader research area.

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass is at least 24 credits of advanced level disciplinary core/elective chemistry courses (CHEM3XXX or CHEM4XXX) in the Chemistry Major including CHEM3241, and CHEM3441, and CHEM3441, and CHEMS441.

This capstone course is for Chemistry Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.

**Offer in 2021 - 2022**

Department of Chemistry

CHEM4911 Capstone experience for chemistry undergraduates: HKUtopia (6 credits)

Offering Department Chemistry

Course Co-ordinator Dr A P L Tong, Chemistry (apltong@hku.hk)

Course Objectives This project-based course with the theme of Chemistry for a Better Living in a Foreseeable Future aims to provide students with a capstone experience. It aims to enable students to think what are the key issues the world is facing with that have to be solved by chemistry and related technology. Students will need to apply what they have learnt in classroom and conduct literature search regarding advanced chemistry research and related technology under development to solve the problems identified in their project using various channels.

Course Contents & Topics

On successful completion of this course, students should be able to:
- CLO 1 observe and evaluate the various issues we are facing with and determine ways in which chemistry can be used to solve the problems
- CLO 2 integrate theory and practice, and to understand limitations of their current knowledge
- CLO 3 work in a team and to collaborate with people with different background
- CLO 4 express scientific ideas effectively in both written and oral forms
- CLO 5 develop further logical, critical thinking and creativity
- CLO 6 advocate to others the appreciation for chemistry as to its relevance to our daily life

Pre-requisites (and Co-requisites and Impermissible combinations)

Students are expected to have satisfactorily completed all introductory chemistry disciplinary core courses and at least 24 credits of advanced level disciplinary core/elective chemistry courses in the Chemistry Major. Students who are interested in taking the course should contact the course coordinator for application in April - May. Late application may not be considered. This capstone course is for Chemistry Major students only. The earliest that a student is allowed to take this capstone course is their year 3 study.

Additional Course Information

Satisfactory completion of this course will be counted towards the Capstone requirement.
CHEM4966  Chemistry internship (6 credits)  Academic Year 2021
Offering Department Chemistry  Quota ---
Course Co-ordinator Dr H Y Au-Yeung, Chemistry (hoyauy@hku.hk)
Teachers involved (Dr H Y Au-Yeung, Chemistry)
Course Objectives This course aims to offer students the opportunities to gain work experience in the industry related to their major of study. The workplace learning experience would be of great benefits to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the School/Departments.
Course Contents & Topics - Within the University: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor.
- Outside the University: The student will work in an external agency related to the major of study. The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Department/School of the student (the Internal Supervisor). The work to be performed by the student will normally be instructed by the External Supervisor, with prior agreement of the Internal Supervisor.
Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 understand the terminology and nomenclature associated with their own research chemistry project
CLO 2 demonstrate knowledge and understanding of the chemical techniques they used to do the research in their own chemical project
CLO 3 demonstrate critical thinking skill in their own research project and understanding the motivation and target of the research
CLO 4 demonstrate knowledge and understanding of the results of their own chemistry project and its context in the broader research area
CLO 5 demonstrate ability to integrate the knowledge acquired from previous courses and develop fundamental knowledge of designing research plan
Pre-requisites (and Co-requisites and Impermissible combinations) Pass in at least 24 credits of advanced level disciplinary core/elective chemistry courses (CHEM3XXX or CHEM4XXX) in the Chemistry Major.
This capstone course is for Chemistry Major/ Chemistry Major (Intensive) students only.
The earliest that a student is allowed to take this capstone course is their year 3 study.
Offer in 2021 - 2022 Y 1st sem 2nd sem Summer Offer in 2022 - 2023 : Y
Grade Descriptors Distinction/Pass/Fail Distinction Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
Pass Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of 'Distinction'.
Fail Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.
Communication-intensive Course N

CHEM4999  Chemistry project (12 credits)  Academic Year 2021
Offering Department Chemistry  Quota ---
Course Co-ordinator Dr J Y Tang, Chemistry (jinyao@hku.hk)
Teachers involved (Various teachers in the Department, Chemistry)
Course Objectives To provide experience of research techniques by working on a short project under the direct supervision of a member of staff. This course would prepare students for graduate school work in chemistry.
Course Contents & Topics A short research project provided by a member of staff (e.g. the students supervisor).
Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 understand the terminology and nomenclature associated with their own research chemistry project
CLO 2 demonstrate knowledge and understanding of the chemical techniques they used to do the research in their own chemical project
CLO 3 demonstrate critical thinking skill in their own research project and understanding the motivation and target of the research
CLO 4 demonstrate knowledge and understanding of the results of their own chemistry project and its context in the broader research area
CLO 5 demonstrate ability to integrate the knowledge acquired from previous courses and develop fundamental knowledge of designing research plan
Pre-requisites (and Co-requisites and Impermissible) Pass in at least 24 credits of advanced level disciplinary core/elective chemistry courses (CHEM3XXX or CHEM4XXX) in the Chemistry Major including CHEM3241, and CHEM3341, and CHEM3441, and CHEM3541. This capstone course is for Chemistry Major/ Chemistry Major (Intensive) students only.

Third year students with exceptional academic achievement may also apply for this course.

The earliest that a student is allowed to take this capstone course is their year 3 study.

**Offer in 2021 - 2022**

Y Year long  Offer in 2022 - 2023 : Y
Practical Chinese for science students (6 credits)

Academic Year: 2021

Offering Department: Chinese

Teachers Involved:
- Mr K W Wong, Chinese (kwongb@hku.hk)
- Dr C M Chan, Chinese
- Dr K T Lam, Chinese
- Dr S F Lee, Chinese
- Mr K W Wong, Chinese

Course Objectives:
This course aims to enhance the students’ competence using Chinese for professional communication. It helps the students to master the techniques of writing different types of documents such as memos, emails, letters, announcements, notice, brochures, leaflets, and reports. In addition, topics addressing presentation and discussion techniques, the style and rhetoric of reader-based writings are included to heighten the students’ linguistic sensitivity.

Course Contents & Topics:
- Grammar & vocabulary of modern Chinese
- The Chinese writing system
- Techniques of writing short messages: good-news and goodwill messages, bad-news messages, and persuasive messages
- Techniques of writing electronic documents: emails; presentations

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1 develop a balanced competency in modern Chinese and write well-formed sentences
CLO 2 employ rhetorical devices and stylistics, as well as practical writing skills specific to their discipline
CLO 3 explore new tactics of communication, initiate discussions and debates and address new challenges
CLO 4 apply their disciplinary knowledge and their Chinese writing skills and professional presentation techniques analytically, critically and creatively in different social or professional discourses

Pre-requisites:
NIL

Offer in 2021 - 2022: Y

Examination:
Dec: May

Grade Descriptors:
(A+ to F)
A The student acquired a superb ability to achieve the intended learning outcomes of the course at all levels of learning: describe, apply, evaluate, and synthesize the language techniques for effective communication in all situations.
B The student acquired the ability to achieve the intended learning outcomes of the course at all levels of learning: describe, apply, evaluate, and synthesize the language techniques for effective communication in most situations.
C The student acquired adequate ability to achieve the intended learning outcomes of the course at low levels of learning (i.e. describe and apply the language techniques for effective communication) but not at high levels of learning (i.e. evaluate and synthesize the language techniques for effective communication).
D The student only has basic familiarity with the subject.
Fail The student has very limited familiarity with the subject.

Communication-intensive Course:
N

Course Type:
Lecture-based course

Course Teaching & Learning Activities:
- Lectures: 12
- Tutorials: Small group tutorials (12)

Course Objectives: This course provides an introduction to the study of global climate systems and climate change. We study the controls of temporal and spatial variations in earth’s climate and its histories of past climates preserved in the geological record. We look at modern research methods that are used in paleoclimatic and paleoenvironmental reconstructions.

Course Contents & Topics: Global climatic systems, climate classification, natural variability of climate, physical causes for changes through geologic time, external and internal forcing mechanisms, solar orbital variations, major climatic events of the past and their effects on how our planet has developed, glacial and interglacial oscillations, predicting future global change.

Course Learning Outcomes: On successful completion of this course, students should be able to:

- CLO 1: identify major aspects of climatology and approaches to climatological study
- CLO 2: explain the factors and physical processes controlling climate system
- CLO 3: understand the driving forces of Earth’s climate change
- CLO 4: recognize the history of Earth’s climate change

Pre-requisites: NIL

Offer in 2021 - 2022: Y 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F):

- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate critical use of data and results to draw appropriate and insightful conclusions. Show insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly.

- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Demonstrate correct use of data and results to draw appropriate conclusions. Show critical use of relevant information from sources and ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly.

- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Demonstrate mostly correct but some erroneous use of data and results to draw appropriate conclusions. Show use of relevant information from sources and ability to make comparisons between different interpretations and to quote/reference aptly.

- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Demonstrate limited ability to use data and results to draw appropriate conclusions. Show use and reference of several sources, but mainly through summary rather than analysis and comparison.

- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Demonstrate misuse of data and results and/or unable to draw appropriate conclusions. Show limited use of secondary sources and no critical comparison of them.

EASC1401

Offering Department: Earth Sciences

Course Co-ordinator: Dr P Bach, Earth Sciences

Teachers Involved: (Dr P Bach,Earth Sciences)

Course Objectives: The aim is to provide those students who are taking a first course in Earth System Sciences with a fundamental knowledge of how our diverse and living planet Earth works with weaving together an understanding of the dynamic and interactive processes in the Earth's lithosphere, hydrosphere, biosphere and atmosphere. In addition, students should become familiar with the way the study of Earth Sciences blends observation, information, hypothesis, communication and decision making for a better understanding of the future of our planet.

Course Contents & Topics: This introductory course will introduce and discuss the following topics:
- Introduction to Earth Systems and Habitable Planet Earth
  - Lithosphere (Earth Materials, Plate Tectonics, Volcanism, Earthquakes, Surface Processes and Rock Cycle)
  - Hydrosphere (Surface- and Groundwater, Oceans and Water Cycle)
  - Atmosphere (Composition, Weather, Climate, Green House Effect, Oxygen Cycle)
  - Biosphere (Life, Ecosystems, Evolution and Extinction, Geochemical Cycles)
  - Concepts and Evolution of Dynamic Earth Systems, Human Interactions with Planet Earth (Earth Resources, Geological Hazards, Climate Change, Human Impact and Environmental Changes)

Course Learning Outcomes: On successful completion of this course, students should be able to:

- CLO 1: understand the terminology and nomenclature appropriate to the introductory study of Earth Sciences
- CLO 2: demonstrate knowledge and understanding of the underlying concepts associated with the study of the Earth Systems and their dynamic interactive processes

Academic Year: 2021

Department of Earth Sciences

875
Department of Earth Sciences

CLO 3 understand the extent and nature of global change and environmental concerns around us
CLO 4 demonstrate the ability to make and record observations on Earth Systems processes in natural field environments
CLO 5 develop skills to synthesize observation and knowledge in a report in essay form

Pre-requisites
NIL

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023 : Y

Grade Descriptors
A
- Demonstrate thorough mastery of extensive knowledge / competencies/skills at an Earth Science introductory level required for attaining most or all of the course learning outcomes. Shows clear understanding of introductory terminology and concepts and strong abilities to apply and relate them in a range of complex interactive processes between Earth Systems. Demonstrates highly effective observational skills in field as well as organizational skills to present important observations made and uses them to draw appropriate and insightful conclusions with an impressive level of depth and original thoughts.

B
- Demonstrate substantial command of knowledge / competencies/skills at an Earth Science introductory level required for attaining most of the course learning outcomes. Shows evidence for understanding of introductory terminology and concepts and some abilities to apply and relate them in a range of complex interactive processes between Earth Systems. Demonstrates moderately effective observational skills in field as well as organizational skills to present observations made mostly correct but with some erroneous use and results to draw appropriate conclusions.

C
- Demonstrate general but incomplete command of knowledge / competencies/skills at an Earth Science introductory level required for attaining most of the course learning outcomes. Shows evidence for some understanding of introductory terminology and concepts and some abilities to apply and relate them in some interactive processes between Earth Systems. Demonstrates moderately effective observational skills in field as well as organizational skills to present observations made mostly correct but with some erroneous use and results to draw appropriate conclusions.

D
- Demonstrate partial but limited command of knowledge / competencies/skills at an Earth Science introductory level required for attaining some of the course learning outcomes. Shows evidence of limited understanding of introductory terminology and concepts and limited abilities to apply and relate them in some interactive processes between Earth Systems. Demonstrates limited observational skills in field. Applies limited or barely effective organizational and presentational skills to present observed details and facts correctly. Limited ability to draw appropriate conclusions.

Fail
- Demonstrate little or no evidence of command of knowledge / competencies/skills at an Earth Science introductory level required for attaining the course learning outcomes. Shows little or no evidence of understanding of introductory terminology and concepts and little or no abilities to apply and relate them in interactive processes between Earth Systems. Demonstrates poor observational skills in field. Applies incoherent organizational and poor presentational skills. Ineffective presentation of observed details and facts unable to draw appropriate conclusions.

Murphy, B and Damian N.: Earth Science Today (1999)

EASC1402 Principles of geology (6 credits)

Offering Department
Earth Sciences

Course Co-ordinator
Dr M C Cheung, Earth Sciences (hmcc@hku.hk)

Teachers Involved
(Dr J A King,Earth Sciences)
(Dr M C Cheung,Earth Sciences)
(Prof M Sun,Earth Sciences)

Course Objectives
This course is an introduction to fundamental principles and concepts in geology.

Course Contents & Topics
- Earth's formation, history and geological time scale
- Rocks and rock cycle
- Plate tectonics: a unifying theory
- Earthquakes and Earth's interior
- Igneous processes and igneous rocks
- Geomorphology and surficial processes
- Sedimentary rocks
- Folds, Faults and Metamorphism
- Metamorphic rocks
- Principles of stratigraphy; stratigraphic dating methods
- Biostratigraphic methods; fossils and index fossils
- Radiometric dating methods

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 describe the rock cycle and the rock material in the earth's crust
CLO 2 describe the overall structure of the earth and the key external and internal processes
CLO 3 explain the major geological phenomena in the context of plate tectonics theory
CLO 4 describe the methods in geological dating
CLO 5 name the major events in earth's history

Pre-requisites

Learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

- **B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

- **C** Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

- **D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

**Fail**

Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### EASC1404 Early life on earth (6 credits)

**Offering Department**: Earth Sciences  
**Course Co-ordinator**: TBC, Earth Sciences  
**Teachers Involved**: Dr S H Li, Earth Sciences  
**Course Objectives**: This course focuses on the origins of life. It provides an overview of Earth’s early environments, how life is thought to have originated on Earth, and how the Earth’s dynamic environment impacted the origin of life. This course will also provide a basic overview of habitable environments on Earth and elsewhere in the Solar system.

**Course Contents & Topics**: This course will cover the following topics: the composition and properties of the early Earth and Earth’s first oceans; the central role of water in life; abundance of biological elements on the early Earth and elsewhere in the Solar system; possible conditions for the synthesis of life’s first building blocks; the (geo)chemical roots of early life on Earth and the search for life’s signatures in the solar system and beyond.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:
- CLO 1 describe the basic physical and chemical conditions on the early Earth
- CLO 2 explain and describe the role of water and extreme geochemical conditions in the synthesis of biological molecules
- CLO 3 understand the role that different geological environments played during the origins of life
- CLO 4 identify challenges associated with each step in the origins of life
- CLO 5 investigate a current origins of life topic

**Pre-requisites (and Co-requisites and Impermissible combinations)**: NIL

**Offer in 2021 - 2022**: N  
**Examination**: Examination  

**Grade Descriptors (A+ to F)**
- **A**: Student demonstrates thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Shows strong analytical and critical abilities and logical thinking, with evidence of original thought, and the ability to apply his/her knowledge to a wide range of problems that center around “origins of life” topics, and at the same, can combine knowledge from the natural sciences to better understand potential early life processes on Earth and elsewhere. Student shows the ability to apply highly effective organizational and presentational skills.
- **B**: Student demonstrates substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and apply his/her knowledge to a range of problems in the field of the “origins of life”, and at the same, is capable to combine knowledge from the natural sciences to better understand potential early life processes on Earth and elsewhere. Student shows the ability to apply effective organizational and presentational skills.
- **C**: Student demonstrates general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply his/her knowledge to a range of problems in the field of the “origins of life”. Student shows the ability to apply moderately effective organizational and presentational skills.
- **D**: Student demonstrates partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability understand key topics in the “origins of life” field. Student shows the ability to apply limited or barely effective organizational and presentational skills.
- **Fail**: Student demonstrates little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Shows very little or no ability to apply knowledge to understand basic topics related to the origins of life. Organization and presentational skills are minimally effective or ineffective.

### EASC1405 Peaceful use of nuclear technologies (6 credits)

**Offering Department**: Earth Sciences  
**Course Co-ordinator**: Dr S H Li, Earth Sciences (shli@hku.hk)  
**Teachers Involved**: Dr S H Li, Earth Sciences  
**Course Objectives**: To provide students with the science backgrounds and knowledge on application of nuclear technologies in daily life and to invoke an awareness of current applications of nuclear sciences by case studies.

**Course Contents & Topics**: Man and radiation; principles of nuclear technology; case studies of nuclear techniques applied in arts, engineering, biological, physical and social sciences; radiation on earth and beyond; industrial application of nuclear techniques; nuclear techniques in medical study. Future development in nuclear technologies.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:
- CLO 1 recognize the science fundamentals in nuclear technologies
- CLO 2 explain and describe the principles of nuclear technologies applied
- CLO 3 have the awareness of current applications of nuclear sciences
- CLO 4 demonstrate the knowledge and understanding of the underlying concepts associated with nuclear technologies

**Pre-requisites (and Co-requisites and Impermissible)**: NIL

**Communication-intensive Course**

To be announced

**EASC1406**

**Course Type**

Lecture-based course

**Course Teaching & Learning Activities**

**Grade Descriptors (A+ to F)**

- **A**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show clear understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Able to understand the interactions between human beings and the nature only happens as the latest processes on Earth.

- **B**: Demonstrate understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Can demonstrate the interactions between human being and the nature only happen in the latest geological time.

- **C**: Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.

- **D**: Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentation skills.

- **Fail**: Get no or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability to apply knowledge to solve problems. Poor organization and presentation skills.

**Course Contents & Topics**

- A habitable planet; the carbon cycle; plate tectonics, climate and life; mountains and climate change; the emergence and persistence of life; life in the Phanerozoic; the Earth at extremes; the future of the Human-Earth system.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 understand the co-evolution of the inanimate world and the living world on Earth through deep geological time

- CLO 2 explain why the Earth is a habitable planet

- CLO 3 understand the biological process as an agent of the modern and past Earth system

- CLO 4 demonstrate knowledge and understanding of the natural carbon cycle and the impacts of human activities

- CLO 5 analyze qualitatively questions related to systematic structure and evolution of the Earth-life system

- **A**: Demonstrate thorough and complete grasp of the subject in order to fulfill most or all learning outcomes. Show clear understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Able to understand the interactions between human beings and the nature only happens as the latest processes on Earth.

- **B**: Demonstrate understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Can demonstrate the interactions between human being and the nature only happen in the latest geological time.

- **C**: Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.

- **D**: Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentation skills.

- **Fail**: Get no or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability to apply knowledge to solve problems. Poor organization and presentation skills.
EASCI407

Dinosaur Ecosystems (6 credits)

Offering Department: Earth Sciences

Course Co-ordinator: TBC, Earth Sciences (/)

Course Type: Lecture with laboratory component course

Course Teaching & Learning Activities:

- Lectures: e-lectures (video recordings) 24
- Laboratory: literature and specimen-based labs 24
- Tutorials: group discussions 12
- Reading / Self study: course textbook, topical scientific papers and other self study 90

Assessment Methods and Weighting:

- Test: one in-class examination 80 CLO 1,2,3,4,5
- Assignments: lab assignments 60 CLO 1,2,3,4
- Examination: 2-hour examination 30 CLO 1,2,3,4
- Test: online weekly assessments (multiple-choice quizzes) 10 CLO 1,2,3,4

Communication-intensive Course: N

Course Objectives:

This course aims to introduce:

- Dinosaur biology.
- How palaeontologists reconstruct ancient ecosystems using fossil and modern evidence.
- Traits and significance of a Late Cretaceous ecosystem.

In addition to these subject-specific aims, the course style and structure - particularly incorporated e-learning tools - are specifically designed to encourage the development of analytical skills and critical, logical, and lateral thinking. The course also provides opportunities to apply newly acquired knowledge.

Course Contents & Topics:

The course covers five topics:

1. Introduction to dinosaurs:
   - Dinosaur biology ranging from their appearance, classification and diet to their evolution and extinction.
   - Introduction of the main field site visited virtually and discussed in the course: Late Cretaceous site of Erlian in the southern Gobi Desert of China.

2. Meat-eating dinosaurs - theropods:
   - Theropods discovered in Erlian, including their biology and insights into the preserved ecosystem.

3. Plant-eating dinosaurs - sauropodomorph and ornithischian dinosaurs:
   - Erlian’s herbivores from the dominant hadrosaurian ornithischians to the rare sauropodomorphs and the rarer non-hadrosaurian ornithischians. Insights into herbivore biology at the time and into the local ecosystem.

4. Living with dinosaurs:
   - Non-dinosaurian reptiles, mammals, fish and invertebrates that lived with the dinosaurs of Erlian and their roles in the ecosystem.

5. Bringing dinosaurs and their ecosystems to life: evidence palaeontologists use to gain insight into dinosaur diet, behaviour, and growth.

Pre-requisites (and Co-requisites and Impermissible combinations): NIL

Offer in 2021 - 2022: N

Grade Descriptors (A+ to F):

- A: Demonstrate thorough mastery of the knowledge and skills required for attaining all the course learning outcomes. Show strong analytical abilities and strong critical and logical thinking. Evidence of lateral thinking and original thought. Ability to apply knowledge to a wide range of complex situations, both familiar and unfamiliar.

- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of good analytical abilities and good critical and logical thinking. Rare instances of lateral thinking and original thought. Ability to apply knowledge to familiar situations.

- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical abilities and some critical and logical thinking. Ability to apply knowledge to most familiar situations.

- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but only limited analytical abilities and limited critical thinking. Show limited ability to apply knowledge to solve problems.

- Fail: Demonstrate little or no command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical abilities and lack of critical thinking, logical thinking and coherent thinking. Show little or no ability to apply knowledge to solve problems.

Recommended reading (e-books and regular books):

Department of Earth Sciences

Offering Department: Earth Sciences

Course Co-ordinator: Dr K H Lemke, Earth Sciences (kono@hku.hk)

Course Objectives and Content:
- This course provides an overview of the physical and chemical principles that govern Earth processes
- List topics with approximate number of weeks:
  - Energy exchange in Earth environments: convection, conduction and radiation (2)
  - Kinetics, reaction rates and isotope fractionation on geological time scales (1)
  - Newtonian mechanics and basic laws of motion (1)
  - Fluid flow and particle transport (1)
  - Gravitational, geostrophic and centripetal forces (1)

Assessment Methods:
- Written examination (60%)
- Laboratory exercises (20%)
- Project report (20%)

Communication-intensive Course:
- Lecture with laboratory component course

Course Teaching & Learning Activities:
- Activities: 12 sessions x 2 hour
- Details: Paper exercises
- No. of Hours: 24
- Reading / Self study: 100

Assessment Methods and Weighting:
- Project report: 3 projects
- Weighting in final course grade (%): 45
- Assessment Methods to CLO Mapping: CLO 1,2,3,4,5
- Test: Two in-class examination (one for 15% and another one for 40%)
- Weighting in final course grade (%): 55
- Assessment Methods to CLO Mapping: CLO 1,2,3,4,5

Required/recommended reading and online materials:

CLOs:
- CLO 1 understand basic principles of equilibrium thermodynamics as applied to the Earth Sciences
- CLO 2 use phase diagrams to explain processes of fluid/solid interactions, in particular systems containing melts and solids
- CLO 3 describe how energy is exchanged throughout the Earth System.
- CLO 4 demonstrate an understanding of principles governing isotope exchange reactions in single phase systems and across fluid/solid and fluid/gas interfaces.
- CLO 5 comprehend the principles of motion and the basic forces affecting movement of gases, liquids and solids on Earth

Grade Descriptors (A+ to F):
- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining all the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Project report:
- 3 projects
- Weighting in final course grade (%): 45
- Assessment Methods to CLO Mapping: CLO 1,2,3,4,5

Test:
- Two in-class examination (one for 15% and another one for 40%)
- Weighting in final course grade (%): 55
- Assessment Methods to CLO Mapping: CLO 1,2,3,4,5

Additional Course Information:
- This course is a flipped-classroom version of the award-winning HKU MOOC Dinosaur Ecosystem (Faculty of Science Teaching Innovation in E-learning Award and nominee of edX Prize for Exceptional Contributions in Online Teaching and Learning). E-learning components are hosted on the easy-to-use HKU Online Learning platform (https://learning.hku.hk/catalog/), whilst tutorials and labs are in person and include fossil specimens from the Department of Earth Sciences, Stephen Hui Geological Museum and the HKU Vertebrate Palaeontology Laboratory.
This course is hands-on field and laboratory-based that introduces basic geological and geomorphological field and mapping techniques and the use of geological equipment and air photographs, an overview of the geology and natural environment of Hong Kong.

- Maps and map reading, map reference system (lectures and class practice)
- Interpretation of geological and topographic maps: topographic and geological cross sections, geological structures from outcrop patterns and structural contour lines (horizontal, inclined strata, folded, and faulted strata, unconformities (lectures and class practice)
- Interpretation and use of air photographs (class practice)
- Field observation and description of rocks, outcrops (with fieldtrips in Hong Kong)
- Field observation and description of landscape units (with fieldtrips in Hong Kong)
- Laboratory equipment and techniques (lectures and lab sessions)

On successful completion of this course, students should be able to:

CLO 1 read geological maps and comprehend 3-D geological structures from 2-D geological maps
CLO 2 construct a geological cross section showing interpreted subsurface rocks and structures, and natural landscape units
CLO 3 demonstrate techniques for basic field observations, measurements and identifications
CLO 4 create and interpret an internally consistent geological and landscape maps from a set of collected field observations and data
CLO 5 develop skills in integrating geological field data in determining a geological landscape history and writing a structured field report
CLO 6 understand to the basics of a series of laboratory techniques for geological and environmental studies

Pre-requisites (and Co-requisites and Impermissible combinations) Offer in 2021 - 2022
Pass in EASC1401 or EASC1402

Grade Descriptors (A+ to F)

- A Demonstrate thorough and complete grasp of the subject in order to fulfil most or all learning outcomes. Shows strong ability to record observations on earth processes in the field and to apply knowledge to familiar and unfamiliar situations. Evidence of strong independent analytical, critical and logical thinking. Shows strong ability to synthesize all observations made and knowledge in a field report and geological map with highly effective organizational and presentational skills.
- B Demonstrate substantial grasp of the subject required for most of the learning outcomes. Shows evidence of ability to record observations on earth processes in the field and to apply knowledge to familiar and some unfamiliar situations. Evidence of independent analytical, critical and logical thinking. Shows ability to synthesize all observations made and knowledge in a field report and geological map with effective organizational and presentational skills.
- C Demonstrate general but incomplete grasp of the subject required for most of the learning outcomes. Shows evidence of ability to record observations on earth processes in the field and apply knowledge to most familiar situations. Evidence of some independent analytical, critical and logical thinking. Shows ability to synthesize most observations made and knowledge in a field report and geological map with moderately effective organizational and presentational skills.
- D Demonstrate partial but limited grasp of the subject required for most of the learning outcomes. Evidence of limited ability to record observations on earth processes in the field and show very little or no ability to apply knowledge to solve problems. Evidence of little or lack of analytical and critical abilities, coherent and logical thinking. Shows very little or no ability to synthesize observations made and knowledge in a field report and geological map with incoherent organizational and poor presentational skills.
- Fail Demonstrate little or no grasp of the subject required for most of the learning outcomes. Little or no evidence of ability to record observations on earth processes in the field and show very little or no ability to apply knowledge to solve problems. Evidence of little or lack of analytical and critical abilities, coherent and logical thinking. Shows very little or no ability to synthesize observations made and knowledge in a field report and geological map with incoherent organizational and poor presentational skills.

EASC2404 Introduction to atmosphere and hydrosphere (6 credits) Academic Year 2021

Offering Department Earth Sciences Quota 50

Course Co-ordinator Dr B Zhang, Earth Sciences (binzh@hku.hk)

Teachers Involved Dr B Zhang, Earth Sciences Dr J R Ali, Earth Sciences

Course Objectives This course introduces the atmosphere and hydrosphere systems, and explains at a basic level how they interact with one another.

Course Contents & Topics Introduction and course plan, Earth within a broader context (Solar System and other key features); Geological forces shaping the floor of the Oceans and Seas; Water Structure, Ocean Structure and Seawater Composition/Chemistry; Introduction to the Atmosphere; Heating Earth's surface and Atmosphere; Temperature, Moisture and Atmospheric Stability; Forms of condensation and precipitation; Hydrological Cycle - an overview; Air Pressure and Winds; Intro to Atmospheric Circulation and Weather Systems; Ocean Circulation; Waves; Tides; Coasts; Groundwater basics; Groundwater usage, contamination, caves and karst; Glaciers and glacial landscapes; Climate system, proxy data, causes of climate change; Effects of climate change.

Course Learning Outcomes

CLO 1 understand the important features which distinguish Earth from the other planets within our Solar System
particularly with regards to its outer fluid envelopes

CLO 2 appreciate that on a geological timescale, the ocean basins and the seas are continually changing their location and morphology, and why this is the case

CLO 3 understand the key features of water, and the critical role the compound plays in the Atmosphere-Hydrosphere system

CLO 4 understand the basic physical phenomena associated with the Atmosphere and the Oceans/Seas and their important lower-order elements

CLO 5 have an awareness of the scientifically "hot" Atmosphere and Hydrosphere topics

| Additional Course Information | If by any chance it is not possible for the group presentations to carried out, as was the case in Semester 1 2019 (November) due to the University campus activities being suspended, the associated individual essay mark will be increased from 25 to 30 and the group presentation score will be dropped. |

| EASC2406 | Geochemistry (6 credits) | Academic Year | 2021 |
| Offering Department | Earth Sciences |
| Course Co-ordinator | S H Li, Earth Sciences (shli@hku.hk) |
| Teachers Involved | (Sh Li,Earth Sciences) |
| Course Objectives | This course provides an understanding of the fundamentals and approaches for geochemical analysis. It introduces students to the basic chemical principles, modern techniques and quantitative analysis for studying the earth. |
| Course Contents & Topics | - Physical and chemical state of the earth, |
| | - Differentiation of and cosmic abundance of elements, |
| | - Aqueous solutions and chemistry of natural water, |
| | - Trace element, |
| | - Chemistry of igneous rocks, |
| | - Chemical controls on soil formation, |
| | - Radiative dating and studies of petrogenesis and climate changes |
| | - Stable isotopic geochemistry, |
| | - Oxidation and reduction, |
| | - Chemical weathering |
| Course Learning Outcomes | On successful completion of this course, students should be able to: |
| | CLO 1 demonstrate an understanding of basic principles of geochemistry and their applications to geological studies |
| | CLO 2 describe element distribution in major rocks |
| | CLO 3 apply the principles of isotopes to dating and studies of petrogenesis and climate changes |
| | CLO 4 demonstrate knowledge of the chemical weathering processes |

EASC2407 Mineralogy (6 credits) Academic Year 2021
Offering Department Earth Sciences Quota 30
Course Co-ordinator Prof M F Zhou, Earth Sciences (mfzhou@hku.hk)
Teachers Involved (Prof M F Zhou, Earth Sciences) (Prof M Sun, Earth Sciences)
Course Objectives To provide essential knowledge of mineralogy, to familiarize students with common minerals that are basis for study of petrography of igneous, sedimentary and metamorphic rocks.

Course Contents & Topics
- Mineral crystallization, mineral chemistry
- Mineral symmetry, Miller indices
- Physical properties of minerals
- Mineral composition, structure and classification
- Identification of rock forming minerals-hand specimens
- Use of petrographic microscope
- Optical properties under plane polarized light
- Optical properties under orthoscopic illumination
- Optical properties under conoscopic illumination
- Identification of rock forming minerals in thin sections
- Chemical variations of minerals

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 describe the methods and systems used in classification of minerals
CLO 2 apply the physical properties to identify rock-forming minerals
CLO 3 describe the principle of optical mineralogy
CLO 4 identify the common rock-forming minerals in hand specimens and thin sections

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC1402

Offer in 2021 - 2022 Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

<tr>
<td>This course provides students with an introduction to the origin, evolution, structure, composition and distribution of matter in the Solar System condensed in the form of planets, satellites, comets, asteroids and rings, with particular emphasis on surface features, internal structures and histories from a geological point of view. The course incorporates the findings from recent space investigations, planetary imagery, remote sensing and Earth analogues to extraterrestrial features into a fascinating portrayal of the geological activities and histories in our Solar System.</td>
<td></td>
</tr>
</tbody>
</table>

**Course Contents & Topics**  
Formation, evolution, internal structure and surface processes of planetary bodies; the terrestrial planets Mercury, Venus, the Earth-Moon system, and Mars; the giant planets Jupiter, Saturn, Uranus, and Neptune and their moons; Pluto, Charon and the Kuiper Belt; asteroids, meteorites, comets and the Oort cloud; Origin of our Solar System.

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:

- CLO 1 describe the basic features of our Solar System and its constituents
- CLO 2 explain how this knowledge is acquired through observations and experiments
- CLO 3 demonstrate knowledge and understanding of the key geological, physical and chemical processes governing the structure, formation and evolution of planetary bodies
- CLO 4 compare and contrast our own planet Earth with other planetary bodies

**Pre-requisites**  
Pass in EASC1401 or EASC1402 or PHYS1650

**Assessment Methods and Weighting**

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: Demonstrate an advanced level of understanding of the geology of the study sites, ability to give a detailed account of the geological history of the study region, as well as strong ability to produce good-quality reports on independent field measurements.
- CLO 2: Demonstrate a satisfactory understanding of the geology of the study sites with evidence on efforts to unravel the geological history of the study region and acceptable level of competence in field measurement techniques.
- CLO 3: Could only demonstrate an incomplete understanding of the geological study sites and some ability to make field observations and a basic knowledge on field measurement techniques.
- CLO 4: Show limited understanding of the geology of the study sites and lack of ability in making field observations and applying field measurement techniques.

Additional Course Information

Priority for being able to take this course is given to Year 3 and 4 students, especially those who have already participated in the linked field trip in the preceding academic year and completed the associated assignment(s), and those doing the Geology/Geology Intensive majors.

The Taiwan trip will be early January of each year, the Kyushu trip will start in March of each year. However, in light of the current COVID-19 outbreak situation, the exact arrangement of Taiwan trip and Kyushu trip for 2020-2021 have yet to be confirmed.

The Jan 2020 fieldtrip to Taiwan (part of EASC2409) will be led by Dr Jason Ali. If the COVID-19 pandemic development makes it not viable to go to Taiwan in Jan, the Taiwan field trip will be postponed to May 2020 or a 6-day session for local field exposures will be an alternative of the Taiwan field trip (to run it preferably in early January but possibly in late May/early June)

A virtual version of Kyushu field trip (or somewhere else) will be an alternative option for the second part of EASC2409 to be carried out during the March Reading/Field trip week, subject to the COVID-19 development.

EASC2410

Data analysis and modeling in earth sciences (6 credits)

Offering Department
Earth Sciences

Course Co-ordinator
Dr B Zhang, Earth Sciences (binzh@hku.hk)

Teachers Involved
Dr B Zhang, Earth Sciences

Course Objectives
This course uses a hands-on approach to introduce the basic principles of data analysis and mathematical modeling in earth sciences using Python through practical examples.

Course Contents & Topics
Python programming basics; NumPy and Matplotlib; Data wrangling with Pandas; Visualisation, Maps; Statistical data analysis including distributions, hypothesis testing, regression; Time series analysis including spectrum and decomposition; Introduction to geospatial data analysis; numerical solutions to mathematical equations.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: Explain basic statistical concepts and their applications to earth science data processing and modeling
- CLO 2: Demonstrate knowledge in basic numerical methods, their applications in earth sciences, and limitations
- CLO 3: Apply appropriate methods to analyze, process and visualize earth science data, with the help of computer software

Pre-requisites (and Co-requisites and Impermissible combinations)

<td>(Dr Y Li, Earth Sciences)</td>
</tr>
</tbody>
</table>

**Course Objectives**
This course provides students with an introduction to the biosphere, including physical, chemical, geological and biological interpretations on the co-evolution of life, atmosphere, hydrosphere and geosphere through deep geological time, the current Earth-Life interactions with the influence of human impact and the future of the Human-Earth system.

**Course Contents & Topics**
A habitable planet; the carbon cycle; plate tectonics, climate and life; mountains and climate change; the emergence and persistence of life; life in the Phanerozoic; the Earth at extremes; the future of the Human-Earth system.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 understand the co-evolution of the inanimate world and the living world on Earth through deep geological time
- CLO 2 explain why the Earth is a habitable planet
- CLO 3 understand the biological process as an agent of the modern and past Earth system
- CLO 4 demonstrate knowledge and understanding of the natural carbon cycle and the impacts of human activities
- CLO 5 analyse qualitatively questions related to systematic structure and evolution of the Earth-life system

**Pre-requisites**
Pass in EASC1401
Not for students who have passed in EASC1406

<table>
<thead>
<tr>

**Grade Descriptors (A+ to F)**

- A: Demonstrate thorough and complete grasp of the subject in order to fulfills most or all learning outcomes. Show clear understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Able to understand the interactions between human beings and the nature only happens as the latest processes on Earth.
- B: Demonstrate understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Can demonstrate the interactions between human beings and the nature only happen in the latest geological time.
- C: Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.
- D: Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentation skills.
- Fail: Get no or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability for solving problems. Poor organization and presentation skills.

**Grade Descriptors (A+ to F)**

- A: Demonstrate thorough and complete grasp of the subject in order to fulfills most or all learning outcomes. Show clear understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Able to understand the interactions between human beings and the nature only happens as the latest processes on Earth.
- B: Demonstrate understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show understanding of the connections between the geosphere, hydrosphere and biosphere of the modern Earth and in the geological past. Can demonstrate the interactions between human beings and the nature only happen in the latest geological time.
- C: Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.
- D: Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentation skills.
- Fail: Get no or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability for solving problems. Poor organization and presentation skills.
### Course Objectives
This course will explore the role of humans in global change and the environmental responses to such changes. Causes and impacts of climate change will be discussed.

### Course Contents & Topics
Global warming, greenhouse gas emission, past climates, climatic and environmental changes vs. culture evolution, natural vs. anthropogenic climate change, model projections of future climate change, scientific uncertainty, impacts of climate change, including sea level, fresh water, food, ecosystems and human health.

### Course Learning Outcomes

<table>

### Course Objectives

to give students an understanding of the features in sedimentary, igneous and metamorphic rocks, as well as the ability to identify major rock types and their textures and structures in both hand specimens and under microscope.

### Course Contents & Topics

- Magma and magmatism; textures and structures of igneous rocks, classification of igneous rocks, including volcanism and plutonism
- Basic igneous rocks
- Intermediate igneous rocks
- Acid igneous rocks
- Sedimentary diagenesis, classification of sedimentary rocks; textures and structures of sedimentary rocks.
- Clastic sedimentary rocks: conglomerate and sandstone, siltstone and mudstone
- Biochemical sedimentary rocks: limestone and dolostone
- Metamorphism; controlling factors of metamorphism; textures and structures of metamorphic rocks; classification of metamorphic rocks
- Meta-pelitic rocks
- Meta-basic rocks
- Meta-carbonate rocks and meta-felsic rocks

EASC3403 Sedimentary environments (6 credits) Academic Year 2021
Offering Department Earth Sciences Quota ---
Course Co-ordinator Dr N R McKenzie, Earth Sciences (ryan00@hku.hk)
Teachers Involved Dr J King, Earth Sciences
(Dr N R McKenzie, Earth Sciences)
Course Objectives This course discusses the origin, diagenesis, classification and economic importance of sedimentary rocks. Students will learn features and processes of sedimentary geology, paleontology and depositional processes.
Course Contents & Topics - Overview of sedimentary geology - Physics of erosion, transportation and sedimentation - Sedimentary structures - Depositional environments (non-marine) - Depositional environments (marine) - Sequence stratigraphy - Basin analysis - Sedimentary environment around Hong Kong - Sedimentary environment on Mars
Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 describe the nature and significance of sedimentary features and structures
CLO 2 identify carbonate and siliciclastic rocks in hand sample
CLO 3 describe the facies in a depositional environment
CLO 4 undertake detailed study of a stratigraphic section in the field
CLO 5 conduct basic observations and interpretations from outcrops
Pre-requisites (and Co-requisites and Impermissible combinations) Pass in EASC2402 or EASC3402
Offer in 2021 - 2022 Y 2nd sem Offer in 2022 - 2023 : Y Examination May
Grade Descriptors (A+ to F) A Demonstrate thorough grasp of the subject. Show strong analytical abilities and logical thinking, with evidence of original thought. Apply highly effective lab/fieldwork skills and techniques. Apply highly effective organizational and presentational skills.
B Demonstrate substantial grasp of the subject. Show strong analytical abilities and logical thinking. Apply effective lab/fieldwork skills and techniques. Apply highly effective organizational and presentational skills.
C Demonstrate general but incomplete grasp of the subject. Show some analytical abilities and logical thinking. Apply moderately effective lab/fieldwork skills and techniques. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited grasp of the subject. Show some analytical abilities and logical thinking. Apply partially effective lab/fieldwork skills and techniques. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no grasp of the subject. Evidence of little or lack of analytical abilities and logical thinking. Apply minimally effective lab/fieldwork skills and techniques. Organization and presentational skills are ineffective.

### Course Objectives

Structural Geology is the study of rock deformation. Participants in this course will learn about the geometries, kinematics, and mechanics of rock deformation, and how to answer structural geology questions. The course will involve heavy use and generation of geological maps and cross sections and explore their utility for interpreting structure.

### Course Contents & Topics

Class-room based: lecture and laboratory
- Introduction: basics on stress, strain, stress-strain relation
- Stress
- Stereons
- Deformation mechanisms
- Strain
- Joints
- Rheology
- Faults and fault systems
- Fault plane solutions
- Folds
- Shear Zones
- Fabrics (foliations, lineations)
- Contractual and extensional systems
- Kink method for cross-section construction
- Structurally focused map interpretation
- Balanced cross sections
- Key Structures in HK

Fieldwork
- Joints - Pokfulam Reservoir plus an associated day of self-survey work
- Folds plus - Ma Shi Chau
- Shear zone - Sai O; and overturned fold limb Ma Tso Lung

### Course Learning Outcomes

On successful completion of this course, students should be able to:

<table>
<thead>
<tr>
<th>CLO 1</th>
<th>understand a moderate level rock deformation</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLO 2</td>
<td>interpret structural data from a geology map</td>
</tr>
<tr>
<td>CLO 3</td>
<td>plot and interpret structural data on a stereonet</td>
</tr>
<tr>
<td>CLO 4</td>
<td>appreciate 3D rock and 4D rock-time relationships</td>
</tr>
</tbody>
</table>

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC2402 and EASC3402

Offer in 2021 - 2022: Y

### Grade Descriptors (A+ to F)

- **A** Thorough grasp of the subject; evidence of strong critical abilities and logical thinking; apply knowledge to a wide range of complex, familiar and unfamiliar situations; highly effective fieldwork skills and techniques; critical use of data and results to draw appropriate and insightful conclusions; integration of the full range of appropriate theories, principles, evidence and techniques.
- **B** Substantial grasp of the subject; evidence of critical abilities and logical thinking; apply knowledge to familiar and some unfamiliar situations; effective fieldwork skills and techniques; correct use of data and results to draw appropriate conclusions; general integration of theories, principles, evidence and techniques.
- **C** General but incomplete grasp of the subject; evidence of some critical abilities and logical thinking; apply knowledge to most familiar situations; moderately effective fieldwork skills and techniques; mostly correct but some erroneous use of data and results to draw appropriate conclusions; some partial integration of theories, principles, evidence and techniques.
- **D** Limited grasp of the subject, retention of some relevant information of the subject; evidence of limited critical abilities; limited ability to apply knowledge to solve problems; partially effective fieldwork skills and techniques; limited ability to use data and results to draw appropriate conclusions; limited integration of theories, principles, evidence and techniques.
- **Fail** Little or no grasp of the knowledge and understanding of the subject; little or no evidence of critical abilities and coherent thinking; very little or no ability to apply knowledge to solve problems; minimally effective or ineffective fieldwork skills and techniques; misuse of data and results and/or unable to draw appropriate conclusions; little or no integration of theories, principles, evidence and techniques.

### Environmental remote sensing (6 credits)

**Offering Department:** Earth Sciences  
**Quota:** 54

<table>
<thead>
<tr>
<th>Course Objectives</th>
</tr>
</thead>
<tbody>
<tr>
<td>This course serves as an introduction to remote sensing of the Earth and other planets. In this course, we will focus on remote sensing of the Earth using visible, infrared, and microwave radiation. Familiarity with remote sensing data is an essential skill for the modern day geoscientist and environmental scientist. This course will teach you not only about the fundamentals of remote sensing, but also practical skills such as: 1) how to obtain remote sensing data, 2) how to process, correct and interpret images, 3) how to apply results to scientific problems, 4) how to report on your results, 5) how to use cutting edge software, and 6) how to represent your new skills on your CV.</td>

Reconstruction of past climate (6 credits)

Offering Department: Earth Sciences
Course Co-ordinator: Dr S H Li, Earth Sciences (shli@hku.hk)
Teachers Involved: (Dr S H Li, Earth Sciences) (Prof Z H Liu, Earth Sciences)

Course Objectives:
This course provides students with an understanding of how dynamic earth is and how it has changed over the last 2.6 million years. This course introduces the theory and methods of climate reconstructions.

Course Contents & Topics:
The Quaternary period (1),
Climate changes in the last 2.6 million years (1),
Driven forces of climate change (1)
Quantitative reconstruction methods (1)
Pollen analysis and biological proxies (2)
Climate change in arid regions (1)
Quaternary geochronology (1)
Climate changes in East Asia (1)
Climate change impacts on human evolution and society (1)
Global warming and future climate change (1)
Climate change in Asia and Europe

Course Learning Outcomes:
On successful completion of this course, students should be able to:
CLO 1 understand the earth climate change during last 2.6 million years
CLO 2 understand the driving forces of climate changes in different scales
CLO 3 learn the methods for palaeo-environment reconstruction
CLO 4 understand the impacts of climate changes
CLO 5 synthesize and interpret data sets of climate change proxies

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC2401

Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show high effective analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

W.F. Ruddiman: Earth's climate: Past and future (Freeman, 2008, 2nd ed.)

Previous course code & title: EASC2131 A Cool World: Ice Ages and Climate Change

Geophysics (6 credits)

Offering Department: Earth Sciences
Course Co-ordinator: Dr B Zhang, Earth Sciences (binzh@hku.hk)
Teachers Involved: (Dr B Zhang, Earth Sciences) (Prof L S Chan, Earth Sciences)

Course Objectives:
An overview of the geophysical characteristics and processes of the solid earth and a survey of the various
geophysical disciplines, including seismology, gravity, geothermometry, geomagnetism, as well as exploration geophysical methods for studying the earth’s interior and near subsurface structure.

Course Contents & Topics
- Gravity and gravity anomalies
- Geomagnetism
- Thermal Properties of the Earth
- Seismology

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1: describe the approaches and methods geophysicists use to study the interior of the earth
CLO 2: apply basic techniques in measurements of earthquakes and interpret a seismogram
CLO 3: describe the procedure to determine gravity anomalies and their interpretation
CLO 4: understand the methods of paleomagnetism and describe the processes of rock magnetisation
CLO 5: describe how density, pressure and temperature of the earth’s interior are determined

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC2401 or PHYS2250

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023: Y Examination No Exam

Grade Descriptors (A+ to F)
A Demonstrated an in-depth understanding of the subject well above the expected level of an university undergraduate and achieving over 80% of total marks and an ability to pursue advance-level study in some of the geophysics subdisciplines.
B Demonstrated an understanding of the subject at the appropriate level of a university student and achieving 70% of the total course marks. A greater effort and further preparation are needed if student plans to pursue further study of geophysics.
C Coursework and examination results reflect only a basic understanding of the subject without the ability to carry out in-depth analysis. Achieved 60-70% of total course marks.
D Demonstrated an insufficient understanding of the subject as total course mark achieved is below 60%. The pass grade is reflective of the time the student puts in on the subject.
Fail A total lack of effort and insufficient ability to understand the subject and failure to achieve 50% of the available course marks.

EASC3409 Igneous and metamorphic petrogenesis (6 credits) Academic Year 2021
Offering Department Earth Sciences Quota 30
Course Co-ordinator Prof G Zhao, Earth Sciences (gzhao@hku.hk)
Teachers Involved (Prof G Zhao,Earth Sciences)
(Prof M Sun,Earth Sciences)

Course Objectives
To provide a comprehensive coverage of the principles and techniques used in the study of petrogenesis of igneous and metamorphic rocks and their cause-and-effect relationships with tectonic settings and crustal evolution.

Course Contents & Topics
- Magma generation: physiochemical conditions and tectonic settings.
- Application of trace elements and isotopes to the study of magma genesis
- Basaltic magmatism and mantle characteristics
- Granitic magma and crustal characteristics
- Magmatism at convergent boundaries
- Magmatism and crustal growth
- Types of metamorphism
- Chemical equilibrium/disequilibrium in metamorphism; metamorphic phase diagrams (ACF, A'KF, AFM, etc)
- Metamorphic processes and reactions
- Metamorphic petrogenesis and evolution of pelitic rocks
- Metamorphic petrogenesis and evolution of mafic rocks
- Metamorphism in different tectonic settings; metamorphic pressure-temperature-time (P-T-t) paths and their tectonic implications.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 use rock associations, textures, structures and geochemical characteristics to infer the petrogenesis of major igneous rocks.
CLO 2 use magmatic rocks to study the mantle and crustal characteristics
CLO 3 apply mineral assemblages, microtextures, mineral reaction relationships and metamorphic P-T paths to infer the tectonothermal evolution of metamorphic rocks.
CLO 4 demonstrate knowledge and understanding of magmatic and metamorphic processes and their cause-and-effect relationships with tectonic settings and crustal evolution.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC3402

Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023: Y Examination May

Grade Descriptors (A+ to F)
A Demonstrate extensive knowledge and skills at an advanced level required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, and ability to apply highly effective lab skills and techniques to solve problems. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply effective lab skills and techniques to solve problems. Correct use of data of results to draw appropriate conclusions. Apply effective organizational
This course aims to introduce some basic concepts and theories of groundwater flow with special reference to case studies in HK. It consists of three components: 1) fundamentals of groundwater physics; 2) well hydraulics and evaluation of groundwater as a resource; and 3) influence of groundwater on geotechnical and environmental engineering.

### Course Objectives

On successful completion of this course, students should be able to:

- **CLO 1**: Understand basic concepts of hydrological cycle and water balance, and interaction between groundwater and surface water.
- **CLO 2**: Understand basic concepts of hydrological cycle and water balance, and interaction between groundwater and surface water.
- **CLO 3**: Appreciate the close relationship between groundwater system and geology and topography.
- **CLO 4**: Understand basic concepts of aquifer and aquifer properties, hydraulic head, flow net, and basic principles of groundwater flow.
- **CLO 5**: Use basic field aquifer tests to estimate some important aquifer parameters.

Engineering geology (6 credits)
Dr L N Y Wong, Earth Sciences

Course Objectives
To provide students with knowledge about the classification of mineral deposits and their basic features; to understand the processes that lead to their formation; to gain hand on experience with mining procedures. In addition, students should gain knowledge about the world wide distributions of mineral and industrial resources.

Course Contents & Topics
Concepts in mineral deposits and mining industrial; exploration and mining methods, classification of mineral deposit, mineral deposit models, magmatic oxide and sulfide deposits, skarn deposits, porphyre deposits, volcanogenic massive sulfide deposits, coal, oil and gas, resource evaluation.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand the terminology and nomenclature in the mining industrial and mineral deposits
- CLO 2 understand factors that are key to the formation of metallic and industrial resources
- CLO 3 understand the controls of earth resources in a global scale
- CLO 4 understand methods of exploration and exploitation for mineral deposits

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC2402 or EASC3402

Offer in 2021 - 2022 Y

Grade Descriptors (A to F)
A Demonstrate thorough understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking. Evidence of original thoughts, excellent field observation and ability to solve problems. Highly effective organization and presentation skills.
B Demonstrate substantial understanding at an advanced level of extensive knowledge and skills with evidence for attaining all the course learning outcomes. Show analytical and critical abilities and logical thinking. Evidence of original thoughts and abilities of field observation. Effective organization and presentation skills.
C Demonstrate general but incomplete understanding required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking. Moderately effective organization and presentation skills.
D Demonstrate partial but limited understanding for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to solve problems. Apply limited or barely effective organizational and presentation skills.
Fail No or little knowledge about the subject. No evidence for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Very little or no ability for field observation and for solving problems. Poor organization and presenational skills.

# Meteorology (6 credits)

**Course Co-ordinator**  
Dr Jed Kaplan, Earth Sciences (jkaplan@hku.hk)

**Teachers Involved**  
(Dr J O Kaplan, Earth Sciences)

**Course Objectives**  
This course will cover the five major components of meteorology: (1) thermodynamics, (2) physical meteorology, (3) observation and analysis, (4) dynamics, and (5) weather systems (cyclones, fronts, thunderstorms). The aim is to provide students with a modern understanding of drivers and behavior of weather by examining the processes that govern atmospheric structure and behavior, weather elements, and weather systems.

**Course Contents & Topics**  
- Atmospheric Basics  
- Solar & Infrared Radiation  
- Thermodynamics  
- Water Vapor  
- Atmospheric Stability  
- Clouds  
- Precipitation Processes  
- Satellites & Radar  
- Weather Reports & Map Analysis  
- Atmospheric Forces & Winds  
- General Circulation  
- Fronts & Air Masses  
- Thunderstorm Fundamentals  
- Thunderstorm Hazards  
- Tropical Cyclones

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:  
- CLO 1 describe key aspects of weather phenomena  
- CLO 2 explain essential elements of atmospheric processes governing weather  
- CLO 3 apply physical principles to construct models for some basic aspects of weather  
- CLO 4 explain synoptic charts (weather maps)  
- CLO 5 interpret Hong Kong weather (typhoons etc.)

**Pre-requisites (and Co-requisites and Impermissible combinations)**  
Pass in EASC2404

<table>
<thead>

# Earth through time (6 credits)

**Course Objectives**
To present key concepts of modern geochemistry and geochronology and their application to environmental and Earth science problems.

**Course Contents & Topics**
1. Principles of radiogenic isotopic dating and modern instruments
2. Zircon U-Pb isotopic dating and its application
3. Principles and techniques for dating mineral deposits
4. Introduction to Quaternary geochronology
5. Principle, development and applications of Luminescence dating

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge of concepts and ideas of modern geochemistry
- CLO 2 explain principles of radiogenic isotopic dating
- CLO 3 understand how modern analytical techniques are applied to dating earth materials
- CLO 4 understand how geochemical methods are applied to gain insight into process in environmental and Earth sciences

**Pre-requisites**
Pass in EASC2401 or EASC2406 or EASC2407

**Offer in 2021 - 2022**
N  Offer in 2022 - 2023 : N

**Grade Descriptors (A+ to F)**
- A: Student demonstrates thorough mastery at an advanced level of extensive knowledge and skills required for attaining all course learning outcomes. Shows strong analytical and critical abilities and logical thinking, with evidence of original thought, and the ability to apply his/her knowledge to a wide range of problems in geochemistry, and at the same, can combine fundamental knowledge in geochemistry to understand the interactions among minerals, fluids and gases and how these processes impact fluxes of materials over geological time periods and on a global scale.
- B: Student demonstrates substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Shows evidence of analytical and critical abilities and logical thinking, and apply his/her knowledge to a range of problems in geochemistry, and at the same combine knowledge in geochemistry to understand material fluxes among minerals, fluids and gases over geological time periods and on a global scale.
- C: Student demonstrates general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Shows evidence of some analytical and critical abilities and logical thinking, and ability to apply his/her knowledge to a range of problems in geochemistry and how interactions among minerals, fluids and gases impact material fluxes on a global scale. Student shows the ability to apply effective organizational and presentational skills.
- D: Student demonstrates partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Shows evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Shows limited ability to understand key topics in geochemistry and limited capability to transfer this knowledge to geological phenomena. Student shows the ability to apply limited or barely effective organizational and presentational skills.
- Fail: Student demonstrates little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Shows very little or no ability to apply knowledge to understand basic topics related to the geochemistry and the application of these principles to geological problems. Organization and presentational skills are minimally effective or ineffective.

Geochemistry by William M. White (Wuley, Apr 1, 2013)
## Course Objectives & Topics

This course offers students an opportunity to explore coastal systems through classroom studies, lab sessions and fieldtrips. Teaching material covers short-term to long-term processes of different coastal systems, natural and human drivers for coastal landform formation and evolution, and economic development and natural hazards on coastal environments.

**Course Contents & Topics**

- Major coastal environments: rocky coast, beaches and dunes, lagoons, estuaries, river deltas
- Natural drivers for coastal processes: wave, tide, coastal currents, freshwater and sediment discharge
- Coastal processes: sediment transport and deposition, biological activity
- Human drivers for coastal change: settlements, infrastructures and coastal hazards
- Short and long term coastal change: storms, climate and sea-level change

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 Describe the tectonic geomorphological processes that shape landscapes
- CLO 2 Assess quantitatively uplift and erosion
- CLO 3 Demonstrate knowledge of weathering processes and relationship to climate
- CLO 4 Understand fundamental elemental cycles at Earth's surface
- CLO 5 Apply methods and proxies for Earth surface process studies

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in EASC2401 and EASC2402 OR Pass in ENV2001

On successful completion of this course, students should be able to:

- CLO 1 Describe the tectonic geomorphological processes that shape landscapes
- CLO 2 Assess quantitatively uplift and erosion
- CLO 3 Demonstrate knowledge of weathering processes and relationship to climate
- CLO 4 Understand fundamental elemental cycles at Earth's surface
- CLO 5 Apply methods and proxies for Earth surface process studies

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in EASC2401 and EASC2402 OR Pass in ENV2001

Course Objectives
In this field-based course, students will study the structure and dynamic processes of coastal zones, mountain glaciers, deserts and loess landforms. Students will learn basic methods of field observation and survey so as to find out the systematic links between the different components of the Earth system.

Course Contents & Topics
Dynamic interactions between the atmospheric, oceanic, and terrestrial parts of the coastal zones; structure and dynamics of mountain glaciers; structure, mineral composition, and the role of wind in the formation of deserts and loess landforms.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 describe interactions between the sea, atmosphere and terrestrial environments at the coastal zone
- CLO 2 describe principal characteristics of mountain glaciers, deserts and loess
- CLO 3 explain causes and dynamic processes of these environments
- CLO 4 show knowledge and critical understanding of the systematic relationships between these environments
- CLO 5 demonstrate capability in analyzing the sustainable development of the human-environment relationships

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass one of the following 2000-level courses:
- EASC2402 or ENVS2001 or GEOG2137
Or upon special arrangement with the course coordinator

Offer in 2021 - 2022
Y Summer Offer in 2022 - 2023 : Y
Examination To be confirmed

Grade Descriptors (A to F)

- A: Demonstrate thorough mastery at an advanced level of knowledge and skills required for a planned field investigation. Show strong analytical and critical abilities and logical thinking, with evidence of insights, and the ability to apply the knowledge to analyze the Earth system structure. Can insightfully combine the field investigation and indoor analysis to understand the interactions between the different components of the Earth system and human impact. Show high competence in integrating knowledge and presentation skills.
- B: Demonstrates a substantial grasp of a wide range of knowledge and skills required for a planned field investigation. Show evidence of analytical and critical abilities and logical thinking, and apply the knowledge to analyze the Earth system structure. Can combine the field investigation and indoor analysis to understand the difference between the natural and human-impacted processes. Show competence in integrating knowledge and presentation skills.
- C: Demonstrates a general but incomplete grasp of knowledge and skills required for a planned field investigation. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply the knowledge to analyze some Earth System problems and the difference in rates and processes between natural and human-impacted processes. Shows the ability to integrate the learned knowledge and presentation skills.
- D: Demonstrates partial but limited command of knowledge and some skills required for attaining the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to understand key processes in Earth Systems and limited capability to link this knowledge to the other systems. Shows certain ability to apply limited or barely effective organizational and presentional skills.
- Fail: Demonstrate little evidence of getting the knowledge and skills required for attaining the course learning outcomes. Lack of analytical abilities, logical and coherent thinking. Show little ability to apply knowledge to understand the basic processes in Earth systems. Show little ability to integrate the collected materials and minimally effective or ineffective presentional skills.

Communication-intensive Course
N

Course Type Field camps

Course Teaching & Learning Activities
Activities Details No. of Hours
- Field work Field trip (23 days x 8 hours per day) 184
- Reading / Self study Preparation of final video (in groups)

Assessment Methods and Weighting
Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping
- Assignments Daily assessment 33 CLO 1.2.3
- Report Video project 34 CLO 1.2.3,4,5
- Test Oral examination 33 CLO 1.2.3,4

Required/recommended reading and online materials
Required reading to be announced. Three two-hour pre-trip course meetings, including two film screenings and discussion. Practical seminar with a documentary filmmaker.

Additional Course Information
Starting on the eastern slope of the Rocky Mountains in the northwestern U.S.A., we will make a three-week transect to the Pacific coast, covering more than 3900 km, and visiting a range of landscapes from glaciated alpine terrain, to loess plateaus, to sand dunes and deserts, and to coastlines. The Pacific Northwest of the United States encompasses range of landforms, climates, geology, soils, and biomes that are both relatively easy to access and visible over short distances. Priority of enrollment will be given to Earth System Science major students.

EASC3999 Directed studies in earth sciences (6 credits) Academic Year 2021
Offering Department Earth Sciences Quota ---

Course Objectives
To enhance the student’s knowledge of a particular topic and the student’s self-directed learning and critical
Course Contents & Topics
The student undertakes a self-managed study on a topic in earth sciences under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject, or a laboratory or field study that would enhance the student's understanding of the subject. The project may not require an element of originality.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 enhance the ability in self-learning, data-collection and analysis, critical thinking, doing independent research in earth sciences
CLO 2 write scientific dissertation, and conduct oral presentation of the research results

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology or Earth System Science Majors; and Cumulative GPA of 2.5 or above.
This course is not a capstone course and students cannot use this course to fulfill the capstone requirement of the Earth System Science and Geology Majors.
The earliest that a student is allowed to take this course is their year 3 study.

EASC4403 Biogeochemical cycles (6 credits) Academic Year 2021
Offering Department Earth Sciences Quota ---
Course Co-ordinator Dr Y Li, Earth Sciences (yiliang@hku.hk)
Teachers Involved (Dr Y Li,Earth Sciences)
Course Objectives
This course presents how the basic geochemistries of the Earth system, from atmosphere to the geosphere and to hydrosphere, have been and are being affected by the origin, evolution and existence of life. Human activities in particular, from the rapid consumption of resources to the destruction of the rainforests and the expansion of cities, are leading to rapid changes in the geochemistry of the Earth systems.

Course Contents & Topics
1) Origin of elements, the Solar system and the Earth
2) Geology and biogeochemical cycles: their role in the Earth system
3) Terrestrial biogeochemical cycles
4) Aquatic biogeochemical cycles
5) Marine biogeochemical cycles
6) Phosphorous cycle
7) Sulfur cycle
8) Carbon cycle
9) Nitrogen cycle
10) Biogeochemical cycles and impacts from human activities

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 describe the major geochemical cycles on Earth
CLO 2 illustrate the interactions between the geochemical cycles and the main environments on Earth
CLO 3 draw connections between changes to the Earth systems and the cause/effect relationships of changes to biogeochemical cycles
CLO 4 knows why the anthropogenic activities become a significant part of globe change

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC4343 or EASC4346 or ENV53313

Course Objectives

To review the concepts and processes that shape the configuration of the Earth, from core to crust. This course is intended to provide students with an understanding of the driving forces of Earth processes and the global outcome of these processes through an examination of direct and indirect observations, the evolution of hypotheses, and critical thinking.

Course Contents & Topics
- Plate tectonics; orogenesis; accretionary and collisional orogenesis.
- Mantle convection; hot spots and plumes;
- Methods of investigation of large scale structures and processes;
- Structure and physical properties of the planet;
- Sea floor spreading; ocean ridges; transform faults;
- Subduction zones; mountain belts and orogeny;
- Formation of continental crust;
- Continental rifts and continental margins;
- Sedimentary basins;
- Mechanism, consequence and implication of plate tectonics.
- Hadean Earth: Accretion of the Earth from the solar nebula; differentiation of the Earth; formation of the initial atmosphere and oceans; the earliest felsic crust; Late Heavy Bombardment.
- Archean cratons: greenstones and TTG gneisses; origin of komatites; role of mantle plumes in Archean crustal formation and evolution; when did plate tectonics start on Earth?
- Paleoproterozoic collision tectonics.
- Supercontinents in Earth history: the assembly, outgrowth and breakup of supercontinents Columbia (Nuna), Rodinia and Pangea.

EASC4406 Earth dynamics & global tectonics (6 credits)

Offering Department: Earth Sciences

Course Co-ordinator: Prof G Zhao, Earth Sciences (gzhao@hku.hk)

Teachers Involved: (Prof G Zhao, Earth Sciences)

Course Learning Outcomes

On successful completion of this course, students should be able to:
- CLO 1 have an appreciation of the Earth as a dynamic planet
- CLO 2 understand how energy release within the Earth is translated into geological processes
- CLO 3 appreciate the importance of a knowledge of the history of investigation of global scale tectonic processes
- CLO 4 distill a wide range of data to differentiate competing geological theories
- CLO 5 produce concise written and oral summaries of literature research on specific topics in global dynamics

Pre-requisites (and Co-requisites and Imprmissible combinations)

Pass in EASC3403 or EASC3404 or EASC3408 or EASC3409

Offer in 2021 - 2022

Y 2nd sem Off in 2022 - 2023 : Y

Examination: May

Grade Descriptors

A The student should show a thorough mastery of the knowledge and skills necessary to attain all of the course outcomes, have an in-depth grasp of the subject, and provide evidence of strong analytical and logical thinking, where possible with original thought. Show outstanding and effective organizational and presentation skills, and the insightful use of data, literature reviews and other sources to undertake a high level of critical analysis and draw appropriate conclusions. Be able to integrate the full range of appropriate theories, principles, and evidence.

B The student should show a substantial knowledge of a significant range of the skills necessary for attaining most, if not all, of the course outcomes, and have a substantial grasp of the subject. Show evidence of the ability to think critically and to have effective organizational and presentational skills and make critical use of relevant information from different sources, showing the ability to make comparisons between consequent interpretations. Be capable of the general integration of theories, principles and evidence.

C The student should have a general command of the knowledge, competencies and skills required for attaining the majority of the course outcomes, and a general grasp of the subject. Show some evidence of critical ability and logical thinking and moderately effective organizational and presentational skills. The student should be moderately effective in the use of data to draw appropriate conclusions, should be able to use relevant information from sources and be able to make comparisons between different interpretations, through partial integration of theories, principles and evidence.

D The student should have a partial but limited command of the knowledge, competencies and skills necessary for attaining a number of the course learning outcomes, and a limited grasp of the subject. Show evidence of some analytical competence and critical thinking and at least marginally effective organizational and presentational skills. Have limited ability to use data and results to draw appropriate conclusions and use and reference a variety of sources mainly in summary rather than through analysis and comparison.

Fail The student shows little or no evidence of knowledge and skills required for attaining even the minority of course learning outcomes, lacks an overall grasp of the subject area and shows an absence of analytical and critical thinking abilities. Shows little ability to apply knowledge to solve problems and has poor and ineffective presentation and/or organizational skills. Shows little evidence of the integration of theories, principles and evidence.

Communication-intensive Course: N
The course will cover the following aspects of planetary science. The following topics will be covered in lectures and case studies to explore how regional investigations integrating field-based and analytical research tools can test models for the evolution of large-scale geological systems. Likely case studies include exploration of various climate-tectonic interactions across mountain belts (Andes, Himalaya), the complex intraplate deformation of East Asia, and the progressive development of metamorphic core complexes via low-angle normal faults (N. America, NE China). Students will advance their abilities to synthesize and communicate geological knowledge by creating new Wikipedia pages complete with original figures on regional geological topics of their interest.

### Course Objectives
This course explores regional geologies as well as the approaches that geologists use to resolve regional geological questions.

### Course Contents
We will use case studies to explore how regional investigations integrating field-based and analytical research tools can test models for the evolution of large-scale geological systems. Likely case studies include exploration of various climate-tectonic interactions across mountain belts (Andes, Himalaya), the complex intraplate deformation of East Asia, and the progressive development of metamorphic core complexes via low-angle normal faults (N. America, NE China). Students will advance their abilities to synthesize and communicate geological knowledge by creating new Wikipedia pages complete with original figures on regional geological topics of their interest.

### Pre-requisites and Co-requisites
Pass in EASC3402; and (EASC3403 or EASC3404)

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 appreciate the influential (and commonly conflicting) models that have been proposed to explain a range of regional tectonic phenomena
- CLO 2 understand the various "tools" that are commonly used by geo-scientists to test and develop models for the evolution of tectonically complicated regions
- CLO 3 carry out an in-depth scientific literature review on a key regional geological issue and present the findings via visual and written communication in an engaging, comprehensive online format

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 identify various planetary materials in the Solar System and understand how they formed and evolve

CLO 2 understand how planetary events shaped the history of the Earth and the structure of our solar system

CLO 3 recognize and differentiate between the organic signatures of biotic and abiotic materials, and appreciate the use of particular chemical structures as molecular fossils to interpret past life based on understandings of extant life

CLO 4 evaluate contemporary theories on the origin of life and the formation of complex organic molecules in space and their delivery to planetary surfaces

CLO 5 use modern analytical techniques to reconstruct organic constituents in samples and interpret data generated from the latest planetary missions

CLO 6 nurture their interests and curiosity in the field of planetary science

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in any EASC3XXX or EASC4XXX course

Offer in 2021 - 2022

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes, and evidence of productive reading supplementing lectures. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to synthesize and apply knowledge to a wide range of complex, familiar and unfamiliar situations. Demonstrate critical use of data, literature reviews, and other sources to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to synthesize and apply knowledge to familiar and some unfamiliar situations, but falling short on excellence in some of these aspects. Demonstrate correct use of data, literature reviews, and other sources to draw appropriate conclusions. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to synthesize and apply knowledge to most familiar situations. Demonstrate mostly correct but some erroneous use of data, literature reviews, and other sources to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to synthesize and apply knowledge to solve problems. Demonstrate limited ability to use of data, literature reviews, and other sources to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to synthesize and apply knowledge to solve problems. Demonstrate misuse of data, literature reviews, and other sources and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

EASC4911 Earth system: contemporary issues (6 credits)

Offering Department Earth Sciences

Course Co-ordinator Dr S C Chang, Earth Sciences (suchin@hku.hk)

Teachers Involved (Dr S C Chang, Earth Sciences)

Course Objectives

This is a capstone course that provides students with an opportunity to synthesize and correlate the knowledge gained in previous courses in Earth System Science for them to gain a more in-depth appreciation and awareness of the Earth System as the interplay between its component parts, and some of the global issues. Students will also get some basic concepts on how to do strategic analysis on global trends of natural resources.

Course Contents

Introductions to Contemporary Environmental Issues
Department of Earth Sciences

Course & Topics

Overpopulation & Natural Resources
Overpopulation & Waste Management
Global Trend in Green Technology
Global Trend in Space Exploration
Contemporary Environmental Issues & Solutions

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 Comprehend the nature of the issues confronting humankind as part of the Earth System.
CLO 2 Understand the basis of interrelationships through feedback loops within the Earth System.
CLO 3 Synthesize scientific data available from a variety of sources and apply the data to problem solving, particularly in areas of contemporary concern.
CLO 4 Understand how past and present activities on the planet will affect its future.

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Earth System Science Major including at least two of the following courses: EASC3410, EASC3415 or ENVS3313.

This capstone course is for Earth System Science Major students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022

Integrated field studies (6 credits)

Academic Year: 2021

Offering Department: Earth Sciences

Quota: 35

Course Co-ordinator: Dr J A King, Earth Sciences (jessking@hku.hk)

Teachers Involved: (Dr J A King, Earth Sciences)

Course Objectives

The aims of a geological field camp activities are to provide:
1) essential training and experience in geological mapping techniques.
2) the opportunity to gain confidence in independently applying these skills to areas of structural and stratigraphic complexity.
3) opportunities to study at first-hand areas of particular geological interest and importance of an overseas locality. The course requires integration of geological knowledge from multiple geological disciplines.

Course Contents & Topics

Students will visit areas of geological interest and will undertake independent and group mapping and problem solving exercises in each area. The curriculum comprised 3 x 6-day long projects (based on an ~25km area of interest), where each week long project is typically scheduled as follows:
Day 1-2: Instructor-lead learning.
Day 3-5: Technique application/independent field mapping and site visit.
Day 6: Field examination.
Day 7: Write up/Rest.

For each project area students are required to produce:
A detailed geologic map of the area. (15% x 3 = 45%)
A cross-section of the area. (5% x 3 = 15%)

To accompany these maps, the students must prepare ONE report (15%) - This field report should include the tectonic evolution of region, synthesized from the all three projects and site visits, complete with interpretations of depositional environments, magmatic events and structural data.

To assess field skills:
3 one-day field exam, where students, working INDEPENDENTLY of other students and faculty, construct a
Department of Earth Sciences

geologic map and cross sections in a small (~1km x ~1km) area that they have not previously visited. (5% for each one-day field exam)

10% will be awarded for professional conduct.

## Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** Describe the petrography and petrogenesis of rocks and minerals.
- **CLO 2** Identify geological setting from lithologies and stratigraphy.
- **CLO 3** Measure, record and analyse structural data.
- **CLO 4** Construct geological maps and cross-sections.
- **CLO 5** Synthesize varied geological information pertaining to an area in order to derive a basic model of tectonic evolution.

## Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology Major / Geology Major (Intensive).

This must include either a PASS in, or student must be already enrolled in EASCS403, EASCS404 and EASCS409.

This capstone course is for Geology Major/Geology Major (Intensive) students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

## Offer in 2021 - 2022

### Grade Descriptors (A+ to F)

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Apply highly fieldwork skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.</td>
</tr>
<tr>
<td>B</td>
<td>Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Apply effective fieldwork skills and techniques. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.</td>
</tr>
<tr>
<td>C</td>
<td>Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Apply moderately effective fieldwork skills and techniques. Mostly correct but some erroneous use of data and results to draw inappropriate conclusions. Apply moderately effective organizational and presentational skills.</td>
</tr>
<tr>
<td>D</td>
<td>Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Apply partially effective fieldwork skills and techniques. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.</td>
</tr>
<tr>
<td>Fail</td>
<td>Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Apply minimally effective or ineffective fieldwork skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.</td>

## Additional Course Information

Course Coordinator reserve the right to withdraw any students with unsatisfactory performance in pre-requisite courses underway during the semester (semester 2) prior to leaving for field camp (May/June). This will be decided on satisfactory mid-term examination result or laboratory performance.

## EASCS4966

**Offering Department**

Earth Sciences

**Course Co-ordinator**

Dr M C Cheung, Earth Sciences (hmcc@hku.hk)

**Teachers Involved**

(Dr M C Cheung, Earth Sciences)

**Course Objectives**

This course aims to offer students the opportunities to gain work experience in the industry related to their major of study. The workplace learning experience would be of great benefits to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the School/Departments.

**Course Contents & Topics**

1. Within the university: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor.
2. Outside the university: The student will work in an external agency related to the major of study. The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Department/School of the student (the Internal Supervisor).

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** gain at least 4 weeks of work experience in a geosciences-related firm or the Government
- **CLO 2** acquire an understanding and appreciation of the real work environment
- **CLO 3** have some experience with applying learned knowledge to solving real world problems

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology or Earth System Science Majors.

This course is not a capstone course and students cannot use this course to fulfill the capstone requirement of the Earth Science and Geology Majors.

The earliest that a student is allowed to take this course is their year 3 study.

**Offer in 2021 - 2022**

**Note:** Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
Introduction to environmental science (6 credits)

Earth sciences project (12 credits)

(A+ to F)

The earliest that a student is allowed to take this course is their year 3 study. Earth System Science and Geology Majors.

This course is not a capstone course and students cannot use this course to fulfill the capstone requirement of the Earth System Science Majors; and

Cumulative GPA of 2.7 or above.

Pre-requisites
Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology or Earth System Science Majors; and

Course Contents & Topics
The student undertakes a research project in the form of a senior thesis under the supervision of a staff member. The project could be based on a particular component of a staff member’s research or one proposed and designed by the student. The student must involve in the project in a non-trivial manner, and play a major role in the project formulation, data collection and analysis, and presentation. The project should contain an element of originality.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 acquire first-hand research experience in earth sciences by doing an individual research project independently under the supervision of a supervisor

CLO 2 select research topics, design research path, choose research technology, and more importantly use critical thinking

CLO 3 enhance the ability in doing independent earth/environmental research with field/laboratory components

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in the Geology or Earth System Science Majors; and Cumulative GPA of 2.7 or above. This course is not a capstone course and students cannot use this course to fulfill the capstone requirement of the Earth System Science and Geology Majors.

The earliest that a student is allowed to take this course is their year 3 study.

Offer in 2021 - 2022
Y Year long Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)
A Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and creative thinking, with evidence of original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of first-hand data and results to draw insightful conclusions and solve problems. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable creative thinking and additional work beyond that is required in wider areas relevant to the topic.]

B Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and creative thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of first-hand data of results to draw appropriate conclusions and solve problems. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and creative thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of first-hand data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use first-hand data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of first-hand data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

ENVS1401
Introduction to environmental science (6 credits)

Academic Year 2021

Offering Department Earth Sciences

Course Co-ordinator Dr C Not, Earth Sciences (cnot@hku.hk)

Teachers Involved Dr C Dingle, School of Biological Sciences; Dr C Not, Earth Sciences
**Course Objectives**
To provide students with an inter-disciplinary introduction to Environmental Science highlighting the interconnections between biological, geological, and chemical processes. To convey the basic science behind environmental interactions and place it within the context of human impacts and dependence on the natural world. To better understand how humans interact, manage, and sustain the environment within the context of our economies, governments and individual choices.

**Course Contents & Topics**
The teaching and learning will be organized around key issues, and loosely divided into three sections.

--- **Part I: The basics: application of science to solve environmental problems; key ecological, chemical, and earth science concepts essential to environmental science, understanding the underlying causes of environmental problems (human population growth and economics).**
--- **Part II: Using and conserving our resources: how we use and misuse key natural resources; the difficulty in assuring a sustainable supply of energy; waste management and air pollution issues.**
--- **Part III: Global issues: How do our actions change the face of the planet? Urban ecology and understanding our contribution to global climate change.**

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

- **CLO 1** Explain and describe connections between the physical and biological components of the environment.
- **CLO 2** Discuss the impacts of human activities on the environment. Discuss the potential solutions.
- **CLO 3** Explain the concept of environmental sustainability and give examples of how society can adapt behavior to achieve sustainability.
- **CLO 4** Understand how we are overusing our resources and compare different approaches to resolving specific problems presented in class.

--- **Pre-requisites**

Keller and Botkin: Essential Environmental Science (Wiley, 2008)
ENVS3007
Natural hazards and mitigation (6 credits)

Offering Department: Earth Sciences
Course Co-ordinator: Dr N S KHAN, Earth Sciences (nskhan@hku.hk)

Course Objectives:
This course introduces students the mechanisms of major natural hazards including earthquake, storm and flood, landslide and tsunami. The teaching emphasizes the fundamental concepts: natural hazards are not entirely natural, and understanding the frequency and processes of these hazards is essential in developing prevention, protection and mitigation measures. With case studies, the course will help students explore the political, economical and engineering means of dealing with natural hazards.

Course Contents & Topics:
Key characteristics of natural hazards
Geological hazards and mitigation measures
Climatic hazards and mitigation measures
Preparedness and responses to large natural disasters
Risk assessment and disaster management
Financial (insurance) instruments for economic recovery

Course Learning Outcomes:
On successful completion of this course, students should be able to:
CLO 1 demonstrate knowledge and critical understanding of the key characteristics of major natural hazards, the human aspects of the hazards, and technologies used to protect lives and properties

Pre-requisites:
Pass in EASC2404 or ENVS2001 or ENVS2002

Offer in 2021 - 2022:

ENVS3042
Pollution (6 credits)

Offering Department: Earth Sciences
Course Co-ordinator: Dr X Luo, Earth Sciences (xinluo@hku.hk)

Course Objectives:
This multi-disciplinary course will introduce students to the most important physical, chemical and biological contaminants that pollute the environment. The course will provide the basics of contaminant transport, toxicology, pollution monitoring and environmental risk assessment. The course will also explore in details different mechanisms and pathways for water, atmosphere, soil and land pollution. The student will also be invited to reflect on the socio-economic aspect of pollution and remediation.

Course Contents & Topics:
Overview of Global Pollution
Physical-Chemical Characteristic of Solids, water and the atmosphere
Physical, Chemical and Biological Contaminants
Contaminants Transport Processes
Environmental Toxicology
Water Pollution
Atmospheric Pollution
Soil, Land and subsurface Pollution
Urban and Household pollution
Monitoring and Risk Assessment Strategy
Course Learning Outcomes

Introduction to remediation, restoration, treatment and reuse
Global system and the human dimensions to environmental pollution

On successful completion of this course, students should be able to:

CLO 1 identify the most important pollutants
CLO 2 describe the mechanisms responsible for the transport of pollutants in the environment
CLO 3 evaluate the environmental toxicity of different type of contamination
CLO 4 present the most important cases of environmental pollution
CLO 5 analyze lab-generated data and communicate the results and interpretations

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in EASC2401 or CHEM2241 or BIOL2103 or ENVS2001

Environmental and Pollution Science, Third Edition, 2019 by Mark L. Brusseau (Author), Ian L. Pepper (Author), Charles P. Gerba (Author)

Additional Course Information
The tutorials include theoretical and practical assignments.

ENVS3313

Environmental oceanography (6 credits)
Academic Year 2021

Offering Department
Earth Sciences
Quota ---

Course Co-ordinator
Dr C Not, Earth Sciences (cnot@hku.hk)

Teachers Involved
Dr C Not, Earth Sciences

Course Objectives
To provide students with a thorough introduction to coastal and ocean processes with key questions to highlight the importance of the (paleo)oceanographic processes to environmental and ecological conditions. To convey the basic science behind ocean-atmosphere and ocean-biosphere interactions and place it within the context of human's connectedness and impact to the physical world.

Course Contents & Topics
To provide a solid foundation of knowledge about the physical processes dictating the oceans movements and their impacts on the environment and ecosystems. The oceans take up 71% of earth's surface and contain 98% of the water. By looking at the structure of the atmosphere, thermodynamic principals and properties governing sea rise, El Nino, and (paleo)climate will be used to connect oceanographic principles to environmental problems. Case studies specifically examining changes in sea level rise, El Nino, and (paleo)climate will be used to connect oceanographic principles to environmental problems.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 describe the major surface and deep currents of the ocean
CLO 2 identify and describe important processes in the ocean controlling large scale circulation and nutrient transport
CLO 3 describe sources and distribution of critical chemicals and sea water properties in the ocean
CLO 4 illustrate connections between physical ocean processes, climate systems and biological activity

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in BIOL2306 or EASC2404 or ENVS2001 or ENVS2002

Reading / Self study
by Mark L. Brusseau (Author), Ian L. Pepper (Author), Charles P. Gerba (Author)
Course Type: Directed studies in environmental science (6 credits)

Course Objectives:
This is a Capstone Course designed to provide an opportunity for Environmental Science students to integrate the knowledge obtained through their Environmental Science courses. Through this course, students will enhance their knowledge on a particular topic in environmental science and critical thinking skills through self-directed learning. Both the written and oral report emphasize communication skills.

Course Contents & Topics:
The directed study is typically a review of the literature on a specific topic related to environmental sciences, undertaken under the supervision of a staff member. However, the exact format of the project is flexible and alternative formats can be considered with the approval of the supervisor and the Course Coordinator. The topic is flexible, but must be related to the field of environmental science. Students should seek approval from a prospective supervisor prior to selecting this course. After admission to the course is approved by the course coordinator, students will work under the guidance of their supervisor to complete the study and the research report.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1: complete a research task independently in one or more topical areas of the major
- CLO 2: show competence in formulating their own scientific argument

Pre-requisites:
Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major.

This capstone course is for Environmental Science Major students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022: Y 1st sem 2nd sem Offer in 2022 - 2023: Y

Grade Descriptors (A to F):
A
Demonstrates excellent understanding of the topic, excellent development of argument, logical analysis and insight into the topic, with evidence of original thought. Insightful use and critical analysis of information drawn from a full range of high quality sources to draw appropriate and insightful conclusions. Presented in high academic standard. Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.

B
Most aspects of the chosen topic were addressed and researched adequately. Demonstrates understanding of most key concepts, evidence of elementary analysis and development of argument. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations. Presented in adequate standard.

C
Demonstrate general but incomplete grasp of the chosen topic. Most aspects of the chosen topic were addressed and researched at a very basic level. Mostly correct but some erroneous use of relevant information from sources, demonstrates mainly description, and shows basic understanding, but lacking depth.

D
Demonstrate partial but limited grasp of the chosen topic, with retention of some relevant information. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited to draw appropriate conclusions from the sources.

Fail
Show little or no grasp of the knowledge and understanding of the topic. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

ENVS4955
Offering Department: Earth Sciences
Course Co-ordinator: Dr M Yasuhara, Biological Sciences (yasuhara@hku.hk)
Teachers Involved: Dr M Yasuhara, Biological Sciences

Course Objectives:
To provide students experiential learning experience in the field of environmental science. The course is primarily based on an array of experiential studies covering essential areas of environmental science during a residential fieldtrip.

Course Contents:
Students to attend a residential field trip outside Hong Kong to learn about environmental science in practice. The
ENVS4966 Environmental science internship (6 credits) Academic Year 2021

Offering Department Earth Sciences

Course Co-ordinator Dr C Dingle, Biological Sciences (cdingle@hku.hk)

Teachers Involved Dr C Dingle, Biological Sciences

Course Objectives This course offers students the opportunity to gain work experience related to their major of study. This work experience will allow the students to apply their knowledge gained in their studies to the real environmental issues.

In the case of the work being carried out in an external agency, students will be supervised by a staff member of the external agency (the External Supervisor) and a staff member of the University (the Internal Supervisor). If the work is carried out within HKU, there is no need for an additional internal supervisor. The work to be performed by students will normally be instructed by the External Supervisor, with prior agreement of the Internal Supervisor.

Course Contents & Topics

On successful completion of this course, students should be able to:

- CLO 1: gain at least 4 weeks of work experience environmental-related firm or the Government
- CLO 2: acquire an understanding and appreciation of the real work environment
- CLO 3: have some experience with applying learned knowledge to solving real world problems

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major.

Offer in 2021 - 2022 Y 1st sem 2nd sem Summer Offer in 2022 - 2023: Y

Grade Descriptors Distinction/Pass/Fail Distinction: Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
ENVS4999

Course Type
- Internship

Offering Department
- Earth Sciences

Course Co-ordinator
- Dr C Dingle, Biological Sciences (cdingle@hku.hk)

Teacher Involved
- (Various teachers (ERS), Earth Sciences)
- (Various teachers (SBS), Biological Sciences)

Course Objectives
- The objective of this course is to provide an opportunity for students to integrate and apply their knowledge and skills obtained from the Environmental Science major. Students will gain experience in designing and carrying out a scientific study, and in communicating the results of their research in a professional manner.

Course Contents & Topics
- Students will undertake a research project in the form of an undergraduate dissertation under the supervision of a staff member. The dissertation will be written in the style of a scientific paper. The research topic is flexible but should be related to the field of Environmental Science. Students should seek approval from a prospective supervisor prior to selecting this course. After admission to the course is approved by the course coordinator, students will work under the guidance of their supervisor to complete the research project.

Course Learning Outcomes
- On successful completion of this course, students should be able to:
  - CLO 1: complete a dissertation project of undergraduate level in one of the four areas of the major
  - CLO 2: show competence in formulation, data collection, analysis, and presentation of a research project

Pre-requisites (and Co-requisites and Impermissible combinations)
- Pass in at least 24 credits of advanced level (level 3 or 4) disciplinary core/elective courses in Environmental Science Major; and
- This capstone course is for Environmental Science Major students only.
- The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022
- Y

Year long
- Offer in 2022 - 2023: Y

Examination
- No Exam

Grade Descriptors (A+ to F)
- A: Demonstrates excellent understanding of the topic, excellent development of argument, logical analysis and insight into the topic, with evidence of original thought. Insightful use and critical analysis of information drawn from a full range of high quality sources to draw appropriate and insightful conclusions. Presented in high academic standard. [Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.]
- B: Most aspects of the chosen topic were addressed and researched adequately. Demonstrates understanding of most key concepts, evidence of elementary analysis and development of argument. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations. Presented in adequate standard.
- C: Demonstrate general but incomplete grasp of the chosen topic. Most aspects of the chosen topic were addressed and researched at a very basic level. Mostly correct but some erroneous use of relevant information from sources, demonstrates mainly description, and shows basic understanding, but lacking depth.
- D: Demonstrate partial but limited grasp of the chosen topic, with retention of some relevant information. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited to draw appropriate conclusions from the sources.
- Fail: Show little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

**MATH1009**

**Offering Department**: Mathematics

**Course Co-ordinator**: Dr Y M Chan (1st sem); Dr K H Law (2nd sem), Mathematics (ymchan@maths.hku.hk; lawkaho@connect.hku.hk)

**Course Objectives**: This course aims at introducing important topics of mathematics for introductory or intermediate level courses in Business and Economics. Mathematical concepts and methods, as well as some Business and Economics applications, would be emphasized so that students could be furnished with the essential mathematical skills for the senior courses in these disciplines.

**Course Contents & Topics**
1. Logic
2. Linear Equations
3. Quadratic Equations
4. Graphs and Functions
5. Differentiation
6. Unconstrained optimization
7. Partial differentiation
8. Constrained optimization
9. Integration
10. Geometric series
11. Difference equations (optional)
12. Differential equations (optional)
13. Matrix algebra (optional)

**Course Learning Outcomes**: On successful completion of this course, students should be able to:
1. CLO 1 demonstrate knowledge and understanding of the essential mathematics used in business and economics
2. CLO 2 apply mathematical skills to model and solve basic problems in business and economics
3. CLO 3 be more capable of coping with a higher level of mathematics required in various economic disciplines

**Pre-requisites (and Co-requisites and Impermissible combinations)**
- NIL

**Pre-requisites**: The course has no pre-requisite, but students are expected to have already achieved Level 2 or above in HKDSE Mathematics or equivalent. Not for students who have passed MATH1011 or MATH1013, or have already enrolled in these courses.

**This course is exclusively for non-Science and non-Engineering students (i.e. not for students from the Faculty of Science or Engineering).**

**Offer in 2021 - 2022**: Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

**Grade Descriptors (A+ to F)**
- A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- F: Fail: Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

**Teachers Involved**: (Dr H Y Zhang, Mathematics)

**Course Objectives**: This course aims at students with only HKDSE Mathematics (or equivalent) background and provides them with basic knowledge of mathematics that serves as essential foundation in various disciplines. It is expected to be followed by MATH1013.

**Course Contents & Topics**
- Sets, Venn diagram, set operations.
- Permutations, combinations and elementary probabilities.
- Mathematical induction.
- Exponential and logarithmic functions.
- Trigonometric functions, trigonometric formulae.
- Limits of algebraic, exponential and logarithmic functions.

---
- Derivatives of algebraic, exponential and logarithmic functions.
- Differentiation rules: addition, product, quotient and chain rule.
- Maxima and minima.
- Indefinite and definite integrals.
- Area.
- Integration by substitution.
- Trapezoidal rule with error estimation.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 use the set notations; calculate probabilities; and prove by induction
CLO 2 solve problems involving exponential, logarithmic and trigonometric functions
CLO 3 evaluate limits and derivatives
CLO 4 compute simple definite and indefinite integrals
CLO 5 solve practical problems such as determining maxima and minima; finding area

Pre-requisites (and Co-requisites and Impermissible combinations)

Not for students: (a) with Level 2 or above in M1 or M2 of HKDSE Math or equivalent; (b) have passed or already enrolled in any of following courses: MATH1009, 1013, 1821, 1851, PHYS1150, CHEM1044, level 2 or above math courses; (c) have passed MATH1853.

MATH1013

University mathematics II (6 credits)

Offering Department

Mathematics

Course Co-ordinator

Dr C W Wong, Mathematics (cwongab@hku.hk)

Teachers Involved

(Dr C W Wong, Mathematics)

Course Objectives

This course aims at students with Core Mathematics plus Module 1 or Core Mathematics plus Module 2 background and provides them with basic knowledge of calculus and some linear algebra that can be applied in various disciplines. It is expected to be followed by courses such as MATH2012, MATH2101, MATH2102, MATH2211, and MATH2241.

Course Contents & Topics

- Functions; graphs; inverse functions.
- Limits; continuity and differentiability.
- Mean value theorem; Taylor's theorem; implicit differentiation; L'Hopital's rule.
- Higher order derivatives; maxima and minima; graph sketching.
- Radian, calculus of trigonometric functions.
- Definite and indefinite integrals; integration by substitutions; integration by parts; integration by partial fractions.
- Complex numbers, polar form, de Moivre's formula.
- Applications: Solving simple ordinary differential equations.
- Basic matrix and vector (of orders 2 and 3) operations, determinants of 2x2 or 3x3 matrices.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe properties of functions and inverse functions
CLO 2 evaluate limits, and determine continuity and differentiability of functions
CLO 3 apply advanced rules/techniques of differentiation and integration to compute derivatives and integrals; sketch graphs of functions; approximation of functions
CLO 4 solve problems involving complex numbers
CLO 5 solve simple first and second order ordinary differential equations

Pre-requisites (and Co-requisites and Impermissible combinations)

Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1009 or MATH1101; and Not for students who have passed MATH1821, or (MATH1851 and MATH1853), or have already enrolled in this course.
This course aims to use SageMath, a Python based free and open source mathematical software system to explore various examples of Mathematical Modeling. The course will begin with the introduction of the basic Python programming language, and a quick introduction of SageMath software along with plotting 2D and 3D objects. The main focus will be on using SageMath to explore topics in Calculus, Linear Algebra and numerical methods for Mathematical Modeling. No prior knowledge on these topics is assumed.

On successful completion of this course, students should be able to:

- CLO 1 recognize the importance of numerical methods in mathematical modeling
- CLO 2 demonstrate basic algebraic and arithmetic computations in the Scilab environment
- CLO 3 write and interpret programs in Scilab programming language
- CLO 4 solve simple numerical problems by using interactive Scilab commands
- CLO 5 solve moderately complicated numerical problems by writing Scilab programs

Communication-intensive Course

Course Co-ordinator: Dr C W Wong  
Teachers Involved: (Dr C W Wong, Mathematics)

Course Objectives

This course is the first of the two mathematics courses designed to provide actuarial science students with a solid background of calculus of one and several variables and an introduction to linear algebra. The course focuses on single variable calculus and elementary matrix theory. It aims at students with Core Mathematics plus Module 1 or Core Mathematics plus Module 2 background.

Course Contents & Topics

- Functions; graphs; inverse functions.
- Limits, continuity and differentiability.
- Mean value theorem; implicit differentiation; L'Hopital's rule.
- Bisection method and Newton's method.
- Higher order derivatives, maxima and minima, graph sketching.
- Taylor approximation and error estimation.
- Improper integrals, partial fractions, integration by parts.
- Numerical integration, Trapezoidal rule and Simpson's rule.
- Basic matrix and vector (of orders 2 and 3) operations, determinants.
- Simple differential equations.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 describe properties of a function and an inverse function
- CLO 2 evaluate various kinds of limits, and determine continuity and differentiability of functions
- CLO 3 apply advanced rules/techniques of differentiation and integration to compute derivatives and integrals; sketch graphs of functions
- CLO 4 approximate integrals by numerical methods
- CLO 5 perform matrix and vector operations, compute determinants
- CLO 6 solve simple first and second order ordinary differential equations

Pre-requisites (and Co-requisites and Impermissible combinations)

Level 4 or above in HKDSE Mathematics plus Module 1, or Level 4 or above in HKDSE Mathematics plus Module 2, or equivalent; and
Not for students who have passed MATH1013 or (MATH1851 and MATH1853), or have already enrolled in these courses.

For BSc(ActuarSc) students only.

Offer in 2021 - 2022: Y  
Grade Descriptors (A+ to F)

- A  Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations correctly and correctly, and with some innovative approaches to solving problems.
- B  Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C  Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D  Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- Fail  Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

George B. Thomas; as revised by Maurice D. Weir and Joel Hass: Thomas’ Calculus (Addison Wesley, 12th edition)

Course Website

http://moodle.hku.hk/

Additional Course Information

MATH1851  
Calculus and ordinary differential equations (6 credits)  
Academic Year: 2021

Offering Department: Mathematics
Course Co-ordinator: Prof Y K Lau (1st sem); Dr X Zhang (2nd sem), Mathematics (yklaus@maths.hku.hk; xzhang@maths.hku.hk)
Teachers Involved: (Dr L Xu, Mechanical Engineering)
In this course, students will be introduced to fundamental concepts of calculus and ordinary differential equations with a view on applications in different engineering fields. A concrete foundation of mathematics that underpins the various engineering subjects will be built. Mathematical concepts and principles, as well as some typical engineering applications, would be emphasized so that students could enhance their mathematical skills in solving engineering problems, and be well prepared in learning a higher level of applied mathematics required in different engineering disciplines.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** demonstrate knowledge and understanding of basic calculus and ordinary differential equations as well as their relationship with some typical physical/engineering applications; unerringly perform the calculation details for the solution, and accurately correlate the solution approach with the fundamental concepts involved.

- **CLO 2** apply mathematical skills to model and solve some basic physical/engineering problems: analyze the given problem, identify the appropriate mathematical skills, articulate a convincing rationale for the approach used, clearly give the mathematical formulation, and correctly find the solution.

- **CLO 3** understand well established methods to solve differential equations, and correlate qualitatively with potential applications in engineering topics like oscillations and electric circuits. Identify the occurrence of resonance where large amplitude displacements can be expected.

- **CLO 4** explore the technique and usage of integral transform, using the Laplace transform as an illustrative example. Appreciate the power of these techniques in initial value problems and applications like vibrations and signal processing.

- **CLO 5** be well prepared to cope with a higher level of engineering mathematics required in different engineering disciplines.

### Course Contents & Topics

- **Differential and integral calculus (single variable)** (limits and continuity, derivatives, (higher-order) derivatives of elementary functions, derivatives by implicit differentiation, the mean value theorem, L'Hôpital's rule, parametric representation of curves, polar coordinates, indefinite integrals, integration by parts, partial fractions decomposition, definite integrals, the fundamental theorem of calculus, and their applications)

- **Ordinary differential equations** (first order equations, integrating factors and linear equations, Bernoulli equations, separable equations, homogeneous equations, exact differential equations, higher-order homogeneous linear equations with constant coefficients, characteristic polynomials, methods of undetermined coefficients and variation of parameters, higher-order inhomogeneous linear ordinary differential equations, choice of particular solutions and physical implication of resonance, Cauchy-Euler equations, and their applications)

- **Laplace transforms** (Laplace transforms of elementary functions, inverse Laplace transforms, transforms of physical implication of resonance, Cauchy-Euler equations, and their applications)

### Pre-requisites (and Co-requisites and Impermissible combinations)

Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011. (This course is exclusively for Engineering students.)

### Offer in 2021 - 2022

- CLO 1,2,3,4,5

### Required/recommended reading and online materials

- **Textbook**: Introduction to Calculus and Differential Equations (Pearson)

### Course Website

- http://moodle.hku.hk/

### Additional Course Information

- There will be no 'make-up' for a missed test or assignment under normal circumstances. Students are advised not to take MATH1851 and MATH1853 together in the same semester.
- This course is offered by the Department of Mathematics and the Faculty of Engineering.
- Timetable:
**Course Code**: MATH1853  
**Offering Department**: Mathematics  
**Course Co-ordinator**: Prof G Han, Mathematics (ghan@maths.hku.hk)  
**Teaching Team**: Prof G Han, Mathematics (ghan@maths.hku.hk)  
**Course Objective**: As the complementary course of MATH1851, students will be introduced to more topics of mathematics commonly applied in engineering so that students could be further enhanced with a concrete skill in mathematics underpinned for different engineering subjects. The course emphasizes mathematical concepts, principles, analysis, and their relationship to the modelling of engineering systems. Students could be furnished with the essential mathematical skills to analytically tackle some typical engineering problems to prepare for all the engineering subjects.  
**Course Contents & Topics**:  
- Linear algebra [vectors and scalars, inner product, vector projection, linear dependence and independence, matrix, determinant, matrix inverse, system of linear equations, matrix equation, Gaussian elimination, Cramer's rule, matrix rank, eigenvalue, eigenvector, matrix diagonalization, positive, negative and semi-definiteness, and their applications]  
- Elementary complex variables [arithmetics of complex numbers, representations of complex numbers, De Moivre's theorem, roots of unity, complex functions, and their applications]  
- Basic probability theory [axioms of probability, conditional probability, Bayes' theorem, the total probability formula, random variable, (joint) probability distribution, expectation, variance, independence, and their applications]  
- Commonly used distributions [Bernoulli, Binomial, Geometric, Negative Binomial, Exponential, Poisson and Normal distribution, and their applications]  
- Basic statistics [point estimates, sample mean, sample variance with known or unknown mean, confidence interval for a population mean with known or unknown population variances, inference for proportion, and their applications]  
**Pre-requisites (and Co-requisites and Impermissible combinations)**:  
Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011, or take MATH1011 and MATH1853 concurrently in the same semester. (This course is exclusively for Engineering students.)  
**Offer in 2021 - 2022**: Y  
**Course Learning Outcomes**: On successful completion of this course, students should be able to:  
- CLO 1 demonstrate knowledge and understanding of linear algebra, complex numbers, probability theory and statistics as well as their relationship with some typical physical/engineering applications: unnerving perform the calculation details for the solution, and accurately correlate the solution approach with the fundamental concepts involved  
- CLO 2 apply such knowledge and understanding to solve certain practical problems that are relevant to physical/engineering applications: analyze the given problem, identify the appropriate mathematical skills, articulate a convincing rationale for the approach used, and clearly give the mathematical formulation, and correctly find the solution  
- CLO 3 be well prepared to cope with a higher level of engineering mathematics required in different engineering disciplines  
**Assessment Methods and Weighting**:

**Course Teaching & Learning Activities**:  
- Activities  
  - Lectures: 36  
  - Tutorials: 12  
  - Reading / Self study: 100  
**Additional Course Information**: There will be no 'make-up' for a missed quiz or assignment under normal circumstances. Students are advised not to take MATH1851 and MATH1853 together in the same semester. This course is offered by the Department of Mathematics and the Faculty of Engineering. Timetable:  
**Course Website**: http://moodle.hku.hk/
Course Co-ordinator: Dr Y M Chan, Mathematics (ymchan@maths.hku.hk)

Course Objectives:
To provide students with a solid foundation in calculus of several variables and linear algebra, which they will need in the study of mathematics related subjects.

Course Contents & Topics:
- Vectors and Matrices: Vectors in space, dot product and cross product, determinants (with geometric interpretations).
- Partial Derivatives: Functions of several variables, partial derivatives, extreme values and Lagrange multipliers, Taylor's formula.
- Multiple Integrals: Double and triple integrals, substitution in multiple integrals.
- Matrix Algebra: Matrix addition and multiplication, system of linear equations as a matrix equation.
- Vectors Spaces: The Euclidean spaces as vector spaces, its subspaces, span of vectors, linear independence, basis and dimension.
- Eigenvalues and Eigenvectors: Diagonalization and computing powers.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1 understand the geometric meaning of partial and directional derivatives
- CLO 2 optimize multivariate objective functions (with/without constraints)
CLO 3: evaluate integrals over curvilinear regions in space
CLO 4: understand the concept of vector spaces, basis, dimension
CLO 5: solve simple eigenvalue problems and apply the theory to practical problems

Pass in MATH1013 or (MATH1851 and MATH1853). Not for students who have passed MATH2822 or [(MATH2101 or MATH2102) and MATH2211], or have already enrolled in these courses.

Offer in 2021 - 2022: Y

Grade Descriptors (A+ to F)

A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analyzing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.

B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analyzing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analyzing problems with poor argument and presentation or a number of minor computational errors.

D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analyzing problems with poor argument or presentation or with substantial computational errors.

Fail: Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

MATH2101

Linear algebra I (6 credits) Academic Year: 2021

Offering Department: Mathematics

Quota: -

Teachers Involved:
Dr T W Ching (1st sem); Dr K H Law (2nd sem), Mathematics (lmtching@maths.hku.hk; lawkaho@connect.hku.hk)
Dr K H Law,Mathematics
Dr T W Ching,Mathematics

Course Objectives

This is a first university level course on linear algebra, which aims at introducing to students the basic concept of linear structure through many concrete examples in the Euclidean spaces. The course also enriches students' exposure to mathematical rigor and prepares them for studying more advanced mathematical courses.

Course Contents & Topics

- Matrix Algebra: Matrix addition and multiplication, determinant and inverse of square matrices, system of linear equations as a matrix equation.
- Systems of Linear Equations: Gauss-Jordan elimination, elementary row operations, row echelon form, elementary matrices, matrix inversion.
- Vector Spaces: Coordinate system in R^n, the Euclidean spaces as vector spaces, its subspaces, span of vectors, linear independence, basis, dimension, applications.
- Linear Transformations: Definition and examples of linear transformations in R^n and R^m, standard matrices of linear transformations.
- Eigenvalue Problem: Eigenvalues and eigenvectors, diagonalization of matrices, applications.
- Inner Product: Gram-Schmidt process, least square problems.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1: handle matrix operations and use them in some practical problems
CLO 2: solve systems of linear equations by Gauss-Jordan elimination and also compute inverses of square matrices
CLO 3: understand the concept of vector spaces, basis, dimension, and linear transformations and compute the matrix representations of some linear transformations
CLO 4: solve some simple eigenvalue problems and apply the theory to some practical problems
CLO 5: solve some practical problems involving the least square concept

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in MATH1013 or MATH1821 or (MATH1851 and MATH1853)

Offer in 2021 - 2022: Y

Grade Descriptors (A+ to F)

A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analyzing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.

B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analyzing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analyzing problems with poor argument and presentation or a number of minor computational errors.
## Course Objectives

On successful completion of this course, students should be able to:

1. Vector spaces: definition of field, subspaces/quotient spaces, direct sum, existence of basis, dual space.
2. Linear transformations: kernel and image, isomorphisms, matrix representations of linear transformations, determinant.
3. Linear operator: eigenvalues and eigenspaces, algebraic/geometric multiplicity, diagonalizability, invariant subspaces, cyclic subspaces, Cayley-Hamilton theorem, Jordan canonical form.
4. Inner product space: inner product, orthonormal basis, orthogonal complement and projection.
5. Linear operators on inner product space: adjoints of operators, orthogonal/unitary operators, orthogonal/unitary diagonalization of self-adjoint/normal operators, symmetric bilinear form and quadratic form.
6. Additional selected topics up to the instructor.

## Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in MATH2101 or (MATH1821 and MATH2822)

## Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 identify vector space structures and apply relevant knowledge to some practical problems.
- CLO 2 understand the notion of subspaces and compute basis, dimension, etc.
- CLO 3 understand the base-free nature of linear transformations/operators. Relate the calculations of linear transformations to that of matrices by choosing particular basis.
- CLO 4 be able to solve eigenvalue problem for linear operators and apply it to the problem of diagonalization.
- CLO 5 understand the notions of inner product space and adjoints of operators. Be able to do calculation involving properties of adjoints.

- Timetable: [http://hkumath.hku.hk/~math/Timetable/timetable2122_S2.pdf](http://hkumath.hku.hk/~math/Timetable/timetable2122_S2.pdf)
### Course Objectives

To introduce students to the basic ideas and techniques of mathematical analysis.

Students of this course will learn the theory of multivariable calculus and learn how to apply the theory to solve practical problems. This is a required course for Mathematics and Mathematics/Physics Majors, and is suitable for all students in Science, Engineering, Economics and Finance, and other students who will use multivariable calculus in their areas of study. This is also a required course for all Minors offered by the Department of Mathematics, and is a pre-requisite of many advanced level mathematics courses.

### Course Contents & Topics

- Vectors: vectors in 2-, 3-, and n-dimensions; dot product and cross product; lines and planes; polar, cylindrical, and spherical coordinates.
- Differentiation in several variables: limits and derivatives; the chain rule; directional derivatives and gradients.
- Vector-valued functions: parametrized curves; arc-length; vector fields; gradient, divergence, curl, and the del operator.
- Maxima and minima: differentials and Taylor's Theorem of several variables; extrema of functions; Lagrange multipliers; applications of extrema.
- Multiple integration: double and triple integrals; change of variables; applications.
- Line integrals: scalar and vector line integrals; Green's Theorem; conservative vector fields.
- Surface integrals and vector analysis: parametrized surfaces; surface integrals; Stokes' and Gauss' Theorems.
- Vector-valued functions: parametrized curves; arc-length; vector fields; gradient, divergence, curl, and the del operator.
- Differentiation in several variables: limits and derivatives; the chain rule; directional derivatives and gradients.
- Vector-valued functions: parametrized curves; arc-length; vector fields; gradient, divergence, curl, and the del operator.
- Maxima and minima: differentials and Taylor's Theorem of several variables; extrema of functions; Lagrange multipliers; applications of extrema.
- Multiple integration: double and triple integrals; change of variables; applications.
- Line integrals: scalar and vector line integrals; Green's Theorem; conservative vector fields.
- Surface integrals and vector analysis: parametrized surfaces; surface integrals; Stokes' and Gauss' Theorems.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 understand and demonstrate the basic theory of calculus of functions in several real variables
- CLO 2 evaluate partial derivatives and multiple integrals; compute line integrals and surface integrals
- CLO 3 apply the knowledge to solve some practical problems, such as constrained optimization problems and other problems involving differentiation and integration of multivariable functions

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in MATH1013 or MATH1821 or (MATH1851 and MATH1853)

### Course Website

http://moodle.hku.hk/

http://hkumath.hku.hk/~math/Timetable/timetable2122_S2.pdf
Course Contents & Topics
- The real number system: the real numbers as an ordered field, supremum and infimum, the completeness axiom, denseness of the rational numbers.
- Sequences and series of real numbers: limits of sequences, properties of convergent sequences, monotone sequences and Cauchy sequences, subsequences, series, tests of convergence for series.
- Continuity of real-valued functions: properties of continuous functions, the extreme value theorem, the intermediate value theorem, uniform continuity, limits of functions.
- Differentiation: properties of differentiable functions, the mean value theorem, Taylor's theorem and its applications.
- Integration: construction of the Riemann integral using Darboux sums and Riemann sums, the fundamental theorem of calculus.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1: Comprehend and use abstract mathematical arguments such as the epsilon-delta argument
CLO 2: Demonstrate convergence or non-convergence of a sequence/series using properties of convergent sequences/series
CLO 3: Elucidate important properties of continuous functions such as the extreme value theorem and the intermediate value theorem.
CLO 4: Elucidate important properties of differentiable functions such as the mean value theorem, and to understand and apply Taylor's Theorem
CLO 5: Articulate the construction of the Riemann integral and its relation to differentiation

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH1013 or (MATH1851 and MATH1853) or MATH2822.
Students are strongly recommended to have taken MATH2012 if they wish to take this course.

Offer in 2021 - 2022
Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)
A Demonstrate a thorough mastery of the mathematical notions and proof techniques taught in the course by being able to handle abstract mathematical arguments, to apply appropriate theorems correctly, and to make use of those proof techniques in novel situations. Ability to present solutions clearly and logically, and the use of innovative ideas in solving problems are expected.
B Demonstrate a substantial command of the mathematical notions and proof techniques taught in the course by being able to handle abstract mathematical arguments, to apply appropriate theorems correctly, and, with guidance, to make use of those proof techniques in novel situations. Ability to present solutions clearly and logically, and evidence of innovative ideas in solving problems are expected.
C Demonstrate a good understanding of the mathematical notions and proof techniques taught in the course by being able to handle abstract mathematical arguments and to apply appropriate theorems correctly. Ability to present solutions clearly and logically is expected.
D Demonstrate some understanding of the mathematical notions taught in the course by being able to correctly identify appropriate theorems for applications, and to carry out logical arguments that are leading to complete solutions.
E Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems for applications, or not being able to apply the theorems correctly.

MATH2822
Mathematical methods for actuarial science II (6 credits)

Offering Department
Mathematics

Quota
---

Course Co-ordinator
Dr T W Ching, Mathematics (lmtching@maths.hku.hk)

Teachers Involved
Dr T W Ching, Mathematics

Course Objectives
This course is the second of the two mathematics courses designed to provide actuarial science students with a solid background of calculus of one and several variables and an introduction to linear algebra. The course focuses on multivariable calculus and linear algebra. It aims at students with MATH1821. It can be followed by other 2000 or 3000 level mathematics courses.

Course Contents & Topics
- Functions of several variables; partial differentiation.
- Gradients and directional derivatives.
- Taylor approximation.
- Maxima and minima; Lagrange multipliers.
- Double and triple integrals, areas and volumes.
- Matrices, systems of linear equations, determinants.
- Vector spaces and subspaces.
- Eigenvalues and eigenvectors, diagonalization of matrices.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1: Understand and recognize various topics in linear algebra such as the basic arithmetic of matrices, determinants, systems of linear equations, eigenvalues and eigenvectors, diagonalizable matrices, basis and dimension, and the rank-nullity theorem.
CLO 2: Understand and recognize various topics in functions of several variables including partial differentiation, the Hessian test for local extrema, vector-valued functions, Jacobians, the method of Lagrange multipliers, double/triple integrals and the change of variable formula.
Development of mathematical ideas (6 credits)

Offering Department
Mathematics

Course Co-ordinator
TBC, Mathematics (/)

Teachers Involved

Course Objectives
To acquaint the students with the origin and growth of basic mathematical concepts. To assist the students to gain a deeper insight and broader view of mathematics as a discipline and human endeavour. To provide the students with an opportunity to write on and talk about mathematics, and to engage in independent study.

Course Contents & Topics
- Selected topics in the development of mathematics from ancient to modern times depending on interest of the students and the lecturer, with attention paid to the evolution of mathematical ideas and the process of mathematical thinking and problem solving.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 understand and describe the origin and development of basic mathematical concepts
CLO 2 recognize and demonstrate the intellectual and the socio-cultural aspects of mathematics, and appreciate mathematics as both an academic discipline and a human endeavour
CLO 3 discuss, argue, and write about the development of various mathematical concepts and ideas
CLO 4 engage in independent study on a topic about the history or development of mathematics

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH1821. For BSc(ActuarSc) students only.

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
C Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
D Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

### MATH3002 Mathematics seminar (6 credits)

**Offering Department**
Department of Mathematics

**Course Co-ordinator**
Prof T W Ng; Dr C Y Hui, Mathematics

**Teachers Involved**
(Prof T W Ng, Mathematics)

**Course Objectives**
This is a seminar style course intended for those who have very strong interests and good ability in mathematics. Students will be given book chapters and elementary research articles for private study and then make presentations in front of the whole class. Individual meetings with the instructors will be arranged prior to their presentations. Active participation in all the discussions is expected. The aim of the course is to let students learn how to initiate self/independent study in mathematics.

**Course Contents & Topics**
Topics chosen by the instructors, including chapters from books and elementary research articles.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- Initiate private independent study on some interesting mathematical topics

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in MATH2012, MATH2101, MATH2211 and MATH2241

**Offer in 2021 - 2022**

### MATH3301

**Offering Department**
Department of Mathematics

**Course Co-ordinator**
Prof Y K Lau, Mathematics

**Teachers Involved**
(Prof Y K Lau, Mathematics)

**Course Objectives**
This course aims to present those fundamental topics and techniques of algebra that are finding wide applications in mathematics and the applied sciences. It is complete in itself, and may also be followed by MATH4302 Algebra II and MATH7502 Topics in Applied Discrete Mathematics.

**Course Contents & Topics**
- Groups: examples of groups, subgroups, cosets, Lagrange theorem, quotient groups, normal subgroups, group homomorphisms, direct product of groups, group actions.
- Rings: examples of rings, integral domains, ideals, fields of fractions, principal ideal domains, unique factorization domains.
- Fields: definition and examples of fields.
- Polynomials: polynomial rings in one variable over fields and over the integers.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 write down the precise definitions of the basic concepts in the "Course Contents"
- CLO 2 give examples for each of the concepts in the "Course Contents"
### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH2101

### Grade Descriptors (A+ to F)
- A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- Fail: Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

### Required/recommended reading and online materials
- To be decided by the course instructor.

### Course Website
- http://moodle.hku.hk/

### Additional Course Information
- Timeetable:

### Course Objectives
- CLO 1: have a good understanding on matrices, determinants, linear transformations, eigenvalues and eigenvectors
- CLO 2: understand the concept of similar matrices and the eigenvalue decomposition
- CLO 3: understand the concept of orthogonality
- CLO 4: understand the concept of unitary, normal, and Hermitian matrices
- CLO 5: find the singular value decomposition of a matrix and apply the theory of singular values to study polar decomposition, pseudo inverse and spectral norm of matrices
- CLO 6: understand the concept of the Jordan blocks, Jordan matrices and the Jordan canonical form of a matrix

### Course Contents & Topics
- Matrix theory has a close connection with other mathematical subjects such as linear algebra, functional analysis, and combinatorics. It also plays an important role in the development of many subjects in science, engineering, and social sciences. In this course, students will be taught the fundamentals of matrix analysis and its application to various kinds of practical problems. Mathematical software may be used in the course, so that students can learn how to use the computer to solve matrix problems.
- Eigenvalues and eigenvectors: similarities, applications on difference equations and differential equations.
- Orthogonality: inner products and the induced norms, orthogonality of null spaces and column spaces, applications to over- or under-determined systems, least squares fit. Unitary, normal, and hermitian matrices: Schur's triangularization theorem. Variational description of eigenvalues: applications in optimization and in eigenvalue estimation.

### Course Learning Outcomes
- On successful completion of this course, students should be able to:
  - CLO 1: have a good understanding on matrices, determinants, linear transformations, eigenvalues and eigenvectors
  - CLO 2: understand the concept of similar matrices and the eigenvalue decomposition
  - CLO 3: understand the concept of orthogonality
  - CLO 4: understand the concept of unitary, normal, and Hermitian matrices
  - CLO 5: find the singular value decomposition of a matrix and apply the theory of singular values to study polar decomposition, pseudo inverse and spectral norm of matrices
  - CLO 6: understand the concept of the Jordan blocks, Jordan matrices and the Jordan canonical form of a matrix

### Co-requisite
- Pass in MATH3303 and MATH2102

### Offer in 2022 - 2023

### Grade Descriptors (A+ to F)
- A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- Fail: Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

### Title
- MATH3303: Matrix theory and its applications (6 credits)

### Academic Year
- 2021

### Offering Department
- Mathematics

### Quota
- ---
**Course Objectives**
To provide students with basic concepts about numbers, their properties and basic knowledge on the arithmetic of congruences. The prime numbers are the building blocks of all the natural numbers under multiplication. The interplay between the multiplicative and additive properties of prime numbers is particularly interesting. The course will study further properties and the distribution of the prime numbers, and some of the longstanding open problems concerning them. Important applications of number theory to modern cryptography will also be introduced.

**Course Contents & Topics**
- The course will begin with some basic notions in number theory, including divisibility, greatest common divisor, Euclidean algorithm, congruences, etc. It will then be followed by several fundamental theorems, such as Chinese remainder theorem, solutions of linear and polynomial congruences, Fermat's Little theorem, and the quadratic reciprocity law.
- Many well-known open problems will be introduced. Application of number theory to public key cryptography will be explained. Some current research on the prime numbers will be discussed.
- Depending on the time available, the course will cover a selection of further topics, such as the prime number theorem, sum of squares, Dirichlet's theorem on diophantine approximations, continued fractions, etc.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 solve a system of linear congruences
- CLO 2 solve polynomial congruences
- CLO 3 determine the solubility of quadratic congruences by computation of the Legendre symbol
- CLO 4 determine the existence of primitive roots and use them in solving some exponential congruences
- CLO 5 understand the prime number theorem
- CLO 6 understanding some longstanding problems in number theory

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in MATH2101 and MATH2211

**Grade Descriptors (A+ to F)**

**Course Contents & Topics**

- Review of elementary differential equations.
- Existence and uniqueness theorems.
- Second order differential equations, Wronskian, variation of parameters.
- Power series method, Legendre polynomials, Bessel functions.
- Linear systems, autonomous systems.
- Qualitative properties of solutions.
- The Laplace transform.

**Course Learning Outcomes**

- CLO 1 solve simple first order and second order (linear or non-linear) ODEs by various techniques, including auxiliary equations, variation of parameters, Laplace transform, and series method.
- CLO 2 solve systems of first order linear ODEs with constant coefficients, of which the number of equations and the number of unknown functions are no more than three.
- CLO 3 discuss qualitatively the solutions of nonlinear ODEs or systems of nonlinear ODEs by studying their linear approximations or their phase diagrams.
- CLO 4 apply the theory of differential equations to study quantitatively/qualitatively problems arising from physical and life sciences.

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822)
### Department of Mathematics

#### MATH3408

**Course Type**
Computational methods and differential equations with applications (6 credits)

**Offering Department**
Mathematics

**Course Co-ordinator**
Prof W K Ching, Mathematics (wching@hku.hk)

**Course Objectives**
This course covers topics in the fields of differential equations, mathematical modelling and numerical analysis which are of importance to sciences students. The emphasis is practical applications of basic principles.

**Course Contents & Topics**
- Solution of linear difference equations.
- Mathematical modelling and dynamical systems.
- Numerical differentiation and integration.
- LU factorization for solving linear system of equations.
- Matrix norms and iterative solutions of matrix equations.
- Solution of nonlinear systems of equations.
- Elementary differential equations and power series method.
- Numerical solutions of ordinary and partial differential equations.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

CLO 1 construct and implement numerical methods for numerical integration and differentiation, and the solution of linear and nonlinear system of equations

CLO 2 explain mathematical ideas of numerical methods and mathematical modelling in solving linear difference equations, ordinary and partial differential equations

CLO 3 construct one-step and linear multistep methods for the numerical solution of initial-value problems for ordinary differential equations and systems of such equations and analyze their stability and accuracy properties

CLO 4 construct finite difference methods for the numerical solution of partial differential equations and analyze their stability and accuracy properties

CLO 5 implement numerical methods for solving initial and boundary value problems by software packages like MATLAB

**Pre-requisites and Co-requisites**
Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822)

### MATH3541 Introduction to topology (6 credits)

**Offering Department:** Mathematics  
**Course Co-ordinator:** Dr K H Law, Mathematics (lawkaho@connect.hku.hk)  
**Teachers Involved:** (Prof J H Lu, Mathematics)  
**Course Objectives:** This course aims at introducing students to fundamental knowledge in topology and some of its applications. We will emphasize more on building geometric intuition and links between topology and other subjects. It can help prepare students for more advanced Mathematics and Physics courses and future research in Mathematics, Physics, Computer Science and Biology.

**Course Contents & Topics**
Topics will be chosen among the following:
- (i) Basic point-set topology: topological spaces, product and quotient spaces.  
- (ii) Topological groups and orbit spaces.  
- (iii) Fundamental groups, covering spaces, surfaces.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 understand basic constructions in point-set topology  
- CLO 2 give examples and counter examples for concepts in the "course contents"  
- CLO 3 understand basic ideas of fundamental groups and its application to the surface classification problem

**Pre-requisites**  
Students are recommended to have passed or already enrolled in MATH3301 and MATH3401.

**Offer in 2021 - 2022**
Y  
**Grade Descriptors (A+ to F)**
- A: Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- B: Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- C: Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- D: Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- Fail: Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

### MATH3600 Discrete mathematics (6 credits)

**Offering Department:** Mathematics  
**Course Co-ordinator:** Dr K H Law, Mathematics (lawkaho@connect.hku.hk)  
**Teachers Involved:** (Dr K H Law, Mathematics)  
**Course Objectives:** To introduce students to the basic ideas and techniques of discrete mathematics.

**Course Contents & Topics**
- Counting: combinations, permutations, pigeonhole principle, inclusion-exclusion, recurrence relations, and generating functions.  
- Graph theory: paths, circuits, trees, connectivity, planarity, etc.  
- Applications of counting techniques and graph theory.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge and understanding of the basic ideas and techniques of discrete mathematics  
- CLO 2 solve various real-world problems by using counting techniques and graph theory  
- CLO 3 develop their ability to read, comprehend, and create mathematical arguments

**Pre-requisites**
Pass in (MATH1013 and any 1 of Level 2 MATH courses) or (MATH1851 and MATH1853 and any 1 of level 2 MATH courses) or MATH2014 or (MATH1821 and MATH2822)
### Course Description
This course covers both the theoretical and practical aspects of numerical analysis. Emphasis will be on basic principles and numerical methods of solution, using high speed computers.

- Simple initial value problems for Ordinary Differential Equations.
- Numerical differentiation and integration.
- Direct and iterative methods for solving linear systems.
- Solution of equations of one variable.
- Polynomial interpolation and function approximation.

### Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: construct and implement algorithms to find the zeros of functions, apply the bisection, Newton, Secant and fixed point iteration methods; and construct and implement Newton's method to solve a system of nonlinear equations.
- CLO 2: apply direct and iterative methods for solving linear system equations.
- CLO 3: construct interpolations polynomials in Lagrange, Newton, Hermite and spline forms.
- CLO 4: understand the basic numerical integration and differentiation methods.
- CLO 5: apply Euler methods and Runge-Kutta methods to solve initial value problems.
- CLO 6: use software package such as Scilab or Matlab or Python to solve numerical problems.

### Assessment
- **Assignments**: 10% (CLO 1, 2, 3)
- **Examinations**: 50% (CLO 1, 2, 3)
- **Final Examination**: 40% (CLO 1, 2, 3)

### Course Website
http://moodle.hku.hk/

### Required Textbook
Richard A. Brualdi: Introductory Combinatorics (Pearson)

### Additional Resources
- Lecture online materials:
  - http://moodle.hku.hk/

### Pre-requisites
Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822)

934
This course introduces students to the theory and techniques of optimization, aiming at preparing them for further study of operations research. There is an equal emphasis on all three aspects of theories, algorithms and applications. The course serves, together with the course MATH3943 Network Models in Operations Research, as essential concept and background for more advanced studies in operations research.

Course Contents & Topics
- Linear programming
- Duality theory
- Sensitivity analysis and parametric linear programming
- Ellipsoid methods
- Interior point methods

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand the fundamental concept and approach of linear programming appropriate to the further study of operations research

CLO 2 demonstrate knowledge and understanding of the underlying techniques of the simplex method and its extensions such as the dual simplex algorithm and the decomposition method

CLO 3 understand and apply the theory of integer programming

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH2014 or MATH2101 or MATH2102

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023: Y Examination Dec

Grade Descriptors (A+ to F)
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and to solve problems with some innovative approaches.

B Demonstrate a good understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C Demonstrate an acceptable understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

D Demonstrate some understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.

Fail Demonstrate poor and inadequate understanding by not being able to identify basic principles, appropriate theorems, algorithms or their applications, or not being able to complete or compute the solution.

MATH3904 Introduction to optimization (6 credits) Academic Year 2021

Offering Department Mathematics
Course Co-ordinator Prof W Zang, Mathematics (wzang@maths.hku.hk)

Course Objectives
This course introduces students to the theory and techniques of optimization, aiming at preparing them for further studies in operations research, mathematical economics and related subject areas.

Course Contents & Topics
- Unconstrained and constrained optimization.
- Necessary conditions and sufficient conditions for optimality, convexity, duality.
- Algorithms and numerical examples.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 demonstrate knowledge and understanding of the basic theory and techniques of optimization

CLO 2 solve various optimization problems encountered in practice

CLO 3 understand the connection between the purely analytical character of an optimization problem and the behavior of algorithms for solving it

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822)

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023: Y Examination Dec

Grade Descriptors (A+ to F)
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.

B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C Demonstrate an acceptable understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

D Demonstrate some understanding of key concepts and ideas by being able to identify the appropriate theorems, algorithms and their applications but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

Fail Demonstrate poor and inadequate understanding by not being able to identify the basic principles, appropriate theorems, algorithms or their applications, or not being able to complete or compute the solution.
## Queueing theory and simulation (6 credits)

### Course Objectives
This course introduces students to the models and theory of queuing system, as well as the technique of simulation as a practical tool of analysis.

### Course Contents & Topics
- Simulation of queueing models and discrete-event systems.
- Introduction of the Monte Carlo (MC) method and Markov Chain Monte Carlo (MCMC) method.

### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 understand the terminology and nomenclature appropriate to queueing theory
- CLO 2 demonstrate knowledge and understanding of various queueing models
- CLO 3 formulate concrete problems using queueing theoretical approaches
- CLO 4 become familiar with fundamental principles of simulation and compare different simulation techniques
- CLO 5 use Monte Carlo method and Markov Chain Monte Carlo method to conduct numerical simulations

### Pre-requisites
Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822)

### Offer in 2021 - 2022

### Required/recommended reading and online materials
- R.B. Cooper: Introduction to Queueing Theory (Edward Arnold, 1981, 2nd ed.)

### Course Website
http://moodle.hku.hk/
### Course Objectives

This course gives an elementary treatment for the modeling of financial derivatives, asset pricing and market risks from an applied mathematician's point of view. Stochastic calculus and solution methods will be introduced.

### Course Contents & Topics

- An introduction to financial instruments: stocks, bonds, options, forward and future contracts.

### Course Learning Outcomes

On successful completion of this course, students should be able to:
- CLO 1 understand the terminology and nature of bonds, interest rates, forwards, futures, stocks, options, and the no-arbitrage-principle
- CLO 2 demonstrate knowledge on using binomial tree models to find option prices via the risk-neutral concept
- CLO 3 describe basic properties of a Brownian motion and the Black-Scholes stock price model
- CLO 4 implement stochastic calculus (such as Ito's Lemma) to derive Black-Scholes pricing partial differential equation on various type of options; and find a solution to this partial differential equation

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in (MATH2101 and MATH2211) or MATH2014 or (MATH1821 and MATH2822) or STAT2601

Course Website Information: http://hkumath.hku.hk/~math/Timetable/timetable2122_S2.pdf

MATH3943 Network models in operations research (6 credits) Academic Year 2021

Offering Department: Mathematics

Course Co-ordinator: Dr. K H Law, Mathematics (lawkaho@connect.hku.hk)

Course Objectives:
The objective is to provide a fundamental account of the basic results and techniques of network models in operations research. There is an equal emphasis on all three aspects of understanding, algorithms and applications. The course serves, together with a course on linear programming, to provide essential concept and background for more advanced studies in operations research.

Course Contents & Topics:
- Graphs and algorithms
- Trees, matchings and paths
- Network models of transportation and assignment problems
- Ford-Fulkerson network flow theory and computation for maximum flow and minimum cost flow algorithms
- Applications to combinatorial optimization problems such as allocation, location and sequencing
- Project networks, if time permits

Course Learning Outcomes:
On successful completion of this course, students should be able to:

CLO 1 understand the fundamental concept and approach of graphs and network models appropriate to the further study of operations research

CLO 2 demonstrate knowledge and understanding of the underlying techniques of the various graph and network algorithms and their extensions

CLO 3 understand the theory of network flows and the duality aspects in such methods of flow computations

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in (MATH2101 and MATH2211) or MATH2014

Grade Descriptors (A+ to F):
A
- Demonstrate an excellent understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and to solve problems with some innovative approaches.

B
- Demonstrate a good understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C
- Demonstrate some understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

D
- Demonstrate poor and inadequate understanding by not being able to identify basic principles, appropriate theorems, algorithms or their applications, or not being able to complete or compute the solution.
**Course Objectives**
This course is designed for students who would like to have early experiences on research related independent studies. The subject matter of the project will be determined by consultation between the student and the supervisor. The student must achieve good standing and get the approval from both the prospective supervisor and the course coordinator to take this course.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1: study independently a topic that is not available in the regular curriculum
- CLO 2: understand how mathematical theories are applied and/or extended in problem-solving
- CLO 3: gain experience in project writing and oral presentation

**Pre-requisites (and Co-requisites and/or combinations)**
This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department.

**Offer in 2021 - 2022**
Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

**Grade Descriptors (A+ to F)**
- A: Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Insightful use and critical evaluation of information drawn from a broad range of high quality sources and to reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.
- B: Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.
- C: Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.
- D: Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.
- Fail: Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

**Additional Course Information**
The offered topics and application procedure are released by email from the Department. Sophomore or above students who have declared Major in Mathematics/ Mathematics (Intensive) will receive emails in June. The application results will be announced in late July or early August. For enquiry, please contact the Department. The final report must be submitted by the end of the semester. The deadline for submission will be announced in the due course.

characteristic method.
- Green's function, generalized functions and fundamental solutions.
- Maximum principle, existence, uniqueness and continuous dependence on data.
- If time permits Cauchy-Kowalevski theorem, variational method, nonlinear partial differential equations.

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: apply the tools of calculus, linear algebra, mathematical analysis in a coherent way to PDE problems
- CLO 2: understand the basic theory of partial differential equations and the methods to solve them
- CLO 3: apply the knowledge of partial differential equations to physical sciences and engineering

### Pre-requisites
Pass in MATH2101, MATH2102, MATH2241; and
Pass in MATH3405, or already enrolled in this course.

### Course Objectives
As geometric forms often appear in nature, the study of geometry helps us to understand better the universe in which we live. Moreover, geometry has much intrinsic beauty and the study of it is an excellent training in intuitive thinking. In this course we study the differential geometry of curves and surfaces in 3-space. In the study of regular surfaces in 3-space we exhibit geometric notions that are definable in terms of metrical properties of these surfaces alone, leading to the intrinsic geometry of surfaces.

### Course Contents & Topics
- Plane and space curves, regular surfaces in three-dimensional Euclidean space.
- The Gauss map, Gaussian and mean curvatures, Gauss's Theorem Egregium, geodesics, Gauss-Bonnet Theorem.
- Riemannian Geometry of surfaces; applications.
- Some applications, e.g. to Maxwell theory of electromagnetism.

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand the fundamental properties of curves and surfaces in space
- CLO 2: compute and interpret the Frenet apparatus, fundamental forms and their derived quantities
- CLO 3: understand the basics of intrinsic geometry of surfaces

### Pre-requisites (and Co-requisites and impermissible combinations)
Pass in (MATH2101 and MATH2211); and
Pass in (MATH3401 or MATH3403 or MATH3405).
Students are strongly recommended to have taken MATH3401.

### Offer in 2021 - 2022

### MATH451

**Introduction to differentiable manifolds (6 credits)**

**Offering Department**
Mathematics

**Course Co-ordinator**
Prof J H Lu, Mathematics (jhu@maths.hku.hk)

**Course Contents & Topics**
- Review on functions of several variables, inverse mapping theorem, implicit function theorem.
- Differentiable manifolds: definitions and examples.
- Maps between manifolds, submanifolds. Differential forms and exterior differentiation.
- Integration on manifolds.
- Further topics.

**Pre-requisites**
Pass in MATH3401 or MATH3541. It would be helpful if students have also taken or are concurrently taking MATH4402.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 speak the language of differentiable manifolds such as that of vector fields, differential forms, vector bundles, and integration on manifolds.
- CLO 2 present a number of examples of differentiable manifolds and carry out explicit calculations on such examples.

**Grade Descriptors (A+ to F)**
- **A** Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- **B** Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- **C** Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
- **D** Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
- **Fail** Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

### Communication-intensive Course

**Course Type**
Lecture-based course

**Assessment Methods and Weighting**
- **Examination** 100 CLO 1,2,3
- **Tutorials** 12 CLO 1,2,3
- **Lectures** 36 CLO 1,2,3
- **Reading / Self study** 100 CLO 1,2,3
Course Objectives
To learn some basic theoretical and computational techniques for solving scientific computing problems.

Course Contents
This course covers matrix computation problems, lead squares problems, numerical methods in differential equations and partial differential equations, etc. The contents may slightly vary from year to year.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: apply direct methods to solve linear systems
- CLO 2: apply iterative methods to solve linear systems
- CLO 3: apply basic numerical methods to compute eigenvalues and eigenvectors of a matrix
- CLO 4: implement singular value decomposition and understand its applications
- CLO 5: understand basic theory and numerical methods for least squares problems
- CLO 6: apply numerical methods to solve differential equations and partial differential equations

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH3601

Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and numerical algorithms and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.

B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and numerical algorithms and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems and numerical algorithms or their applications and presentation or with some minor computational errors.

C Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems and numerical algorithms, but with some inadequacies in applying them through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

D Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems and numerical algorithms, but with substantial inadequacies in applying them through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.

MATH4902 Operations research II (6 credits)

Offering Department Mathematics
Quota ---

Course Co-ordinator Dr G Han, Mathematics (ghan@maths.hku.hk)

Course Objectives
The objective is to provide a fundamental account of the basic results and techniques of dynamic programming (DP), Markov decision processes (MDP), Queueing Theory (QT) and simulation in operations research. There is emphasis on aspects of algorithms as well as applications. The course serves, together with courses on linear programming and network models, to provide essential optimization concept and algorithms for more advanced studies in operations research.

Course Contents
- Dynamic programming (deterministic/stochastic)
- Markov decision process (discounted/average costs)
- Queueing Theory
- Simulation

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand the terminology and nomenclature appropriate to dynamic programming, Markov decision process, queueing theory and simulation
- CLO 2: explain the typical techniques employed in dynamic programming, Markov decision process, queueing theory and simulation
- CLO 3: demonstrate the knowledge on algorithms for a variety of problems in operations research

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH2101, MATH2211 and MATH3603.

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify basic principles, appropriate
theories, algorithms and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to verify computations carefully and correctly, and to solve problems with some innovative approaches.

B Demonstrate a good understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

C Demonstrate an acceptable understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.

D Demonstrate some understanding of key concepts and ideas by being able to identify basic principles, appropriate theorems, algorithms and their applications but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.

Fail Demonstrate poor and inadequate understanding by not being able to identify basic principles, appropriate theorems, algorithms or their applications, or not being able to complete or compute the solution.

MATH4907

Numerical methods for financial calculus (6 credits)

Offering Department Mathematics

Course Co-ordinator Dr G Li, Mathematics (lotusli@maths.hku.hk)

Teachers Involved (Dr G Li, Mathematics)

Course Objectives
This course aims at providing effective numerical methods as well as their theoretical aspects for solving problems arising from financial derivatives and asset pricing.

Course Contents & Topics
- Introduction to the mathematical theory of vanilla and exotic options, both the PDE and the Martingale approach.
- Lattice methods, Monte Carlo simulations and their performance analyses.
- Neural networks for option pricing & hedging.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 demonstrate knowledge and understanding of the martingale theory in option pricings as well as related financial derivatives

CLO 2 implement and analyse various numerical methods on the Black-Scholes pricing differential equation

CLO 3 understand the connection between the binomial tree method and the finite difference method of the Black-Scholes pricing differential equation

CLO 4 implement and analyse Monte Carlo simulation methods on the martingale pricing formula

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH3906 or equivalent.

Offer in 2021 - 2022 Y

Required/recommended reading and online materials
Alison Etheridge: A Course in Financial Calculus (Cambridge University Press)
### Department of Mathematics

**MATH4910**

**Offering Department:** Mathematics  
**Course Co-ordinator:** Dr X Zhang; Dr T K Wong (xzhang@maths.hku.hk; takkwong@maths.hku.hk)  
**Teachers Involved:** Dr T K Wong, Mathematics (Dr T K Wong, Mathematics)  
**Course Objectives:** This seminar style capstone course aims to provide students with the experience of intense reading of journal articles and book chapters, followed by group discussions through which knowledge acquisition and synthesis will be attained. Students will look at particular mathematical topics in depth, and will master the topics through reading, listening, discussing and writing.  
**Course Contents & Topics:** This seminar course may be in the form of research seminar, reading seminar, or a combination of both. Research seminar provides first-hand research experience to students, who will discuss the advancement of knowledge brought about by the readings, and the difficulties they encounter in the research process. Reading seminar involves discussions on arguments delivered by the authors of books or articles, and how convincing the arguments are. Participants will experience the process of argumentation in the construction of knowledge and development of research idea. Student performance is manifested in their preparedness, quality of comments, responsiveness to comments and overall engagement in the seminar. The end product is a research paper or written report and oral presentations. Topics will be chosen by the instructors, including journal articles and book chapters.  
**Course Learning Outcomes:** On successful completion of this course, students should be able to:  
- **CLO 1:** Explain and discuss the contents of the topics they studied  
- **CLO 2:** Critique and argue about the ideas and theories of the work they studied  
- **CLO 3:** Organize and synthesize the material they have learned, and report orally and in writing using mathematical language.  
**Pre-requisites (and Co-requisites and Impermissible combinations):** This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department.  
**Offer in 2021 - 2022:**  
- **Y 2nd sem**  
- **Examination:** No Exam  
**Grade Descriptors (A+ to F):**  
- **A:** Demonstrate an excellent understanding of the material by lucid exposition. Engage constructively by providing insightful analyses and raising critical points in group discussion. Demonstrate clear and critical analysis, coherent synthesis, and effective application of the knowledge through writing and oral presentation using mathematical language.  
- **B:** Demonstrate a good understanding of the material by mostly clear and effective presentation. Engage actively in group discussion most of the time by providing helpful points and asking questions that advance the discussion. Demonstrate mostly clear and effective analysis, synthesis, and application of the knowledge through writing and oral presentation using mathematical language.  
- **C:** Demonstrate a general understanding of the material by moderately effective presentation. Engage in group discussion most of the time with some useful input. Demonstrate moderately clear and effective analysis, synthesis, and application of the knowledge through writing and oral presentation using mathematical language.  
- **D:** Demonstrate a basic but limited understanding of the material by partially effective presentation. Plays a passive role, or gives limited useful contribution to group discussion. Demonstrate limited or barely effective analysis, synthesis, and application of the knowledge through writing and oral presentation using mathematical language.  
- **Fail:** Demonstrate inadequate understanding of the material by barely effective or ineffective presentation. Little or no participation in and contribution to group discussion. Demonstrate inadequate or ineffective analysis, synthesis, and application of the knowledge through writing and oral presentation using mathematical language.  
**Communication-intensive Course:** N  
**Course Type:** Project-based course  
**Course Teaching & Learning Activities:**  
- **Meeting with supervisor:** Seminars: Students take turns to give presentations to the whole class; group discussions.  
- **Reading / Self study:** Reading material and preparation for presentations and discussions; writing of reports/research papers.  
**Assessment Methods and Weighting:**  
- **Methods:** Oral presentation, Research report  
- **Weighting in final course grade (%):** 60, 40  
- **Assessment Methods to CLO Mapping:** CLO 1,2,3  
**Required/recommended reading and online materials:** TBC

| Course Objectives | This course aims to provide students an experience of engaging in a project which requires integration and/or application of the mathematical knowledge they have acquired. |
| Course Contents & Topics | Students will work collaboratively in small groups on a project under the guidance of their supervisor(s). Emphasis of this capstone project is on the integration and/or application of mathematical knowledge acquired by the students. The project topic is not limited to academic context, but can also be extended to a community or corporate outreach project. Projects may take the form of a combination of literature research, survey, data analysis, creation of artifacts or media contents, exhibition, public lectures, development of solution plan for the problem under study, etc. Assessment may take the form of written report, oral presentation, media production, portfolio, and/or peer evaluation, etc. Topics are either chosen by the supervisor(s), or proposed by the students and approved by their supervisor(s). |
| Course Learning Outcomes | On successful completion of this course, students should be able to: CLO 1 integrate and apply mathematical knowledge they have previously acquired CLO 2 work collaboratively with others CLO 3 communicate their project topic to experts and/or lay audiences through suitable media using appropriate mathematical terms and language |
| Pre-requisites (and Co-requisites and Impermissible combinations) | This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. This course is for third and fourth year students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department. |
| Offer in 2021 - 2022 | N Offer in 2022 - 2023 : N Examination --- |
| Grade Descriptors (A+ to F) | A Demonstrate excellent and creative integration and/or application of the mathematical knowledge previously acquired. Take initiative in, and collaborate highly effectively on, the project. Communicate effectively through suitable media using appropriate mathematical terms and language. B Demonstrate good integration and/or application of the mathematical knowledge previously acquired. Participate actively in, and collaborate mostly effectively on, the project. Communicate mostly effectively through suitable media using appropriate mathematical terms and language. C Demonstrate a general level of integration and/or application of the mathematical knowledge previously acquired. Demonstrate moderately effective collaboration on the project. Moderately effective communication using mathematical terms and language. D Demonstrate some partial integration and/or application of the mathematical knowledge previously acquired. Demonstrate barely effective collaboration on the project. Show limited ability to effectively communicate using mathematical terms and language. Fail Demonstrate weak or poor integration and/or application of the mathematical knowledge previously acquired. Show passive participation in, and ineffective collaboration on, the project. Communicate ineffectively using mathematical terms and language. |

| Additional Course Information | The offered topics and application procedure are released by email from the Department. Sophomore or above students who have declared Major in Mathematics/Mathematics (Intensive) will receive emails in June. The application results will be announced in late July or early August. For enquiry, please contact the Department. The final report must be submitted by the end of the semester. The deadline for submission will be announced in the due course. |
| MATH4966 | Mathematics internship (6 credits) |
| Offering Department | Mathematics |
| Teachers Involved | Dr T K Wong, Mathematics (internship@maths.hku.hk) (All teaching staff, Mathematics) |
| Course Objectives | This course aims to offer students the opportunities to gain work experience in the industry related to their major study. The workplace learning experience would be of great benefits to the students to apply their knowledge gained in the study to the real work environments. Students have to take on at least 160 hours of internship work either within the University or outside the University arranged by the department. |
| Course Contents & Topics | Within the university: each student will be supervised by a staff member (supervisor), working on a project or various tasks as instructed by the supervisor. Outside the university: each student will carry out approved work under the guidance and supervision of an external supervisor. |
| Course Learning Outcomes | On successful completion of this course, students should be able to: CLO 1 gain work experience in an industry related to mathematical sciences |
This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department.

MATH4999 Mathematics project (12 credits) Academic Year 2021
Offering Department Mathematics Quota ---
Course Co-ordinator Prof X Yuan, Mathematics (xmyuan@hku.hk)
Teachers Involved (All teaching staff,Mathematics)
Course Objectives The aim of the course is to provide students with the opportunity to formulate and to investigate, in depth, problems of practical interest and/or to have a foretaste of mathematical research. The work, to be done on an individual basis, is considered a highly desirable part of the training of a mathematician.

Course Contents The subject matter of the project will be determined by consultation between the student and his/her supervisor. The projects will be selected from areas of pure and applied mathematics. Students must achieve good standing and get the approval from both the prospective supervisor and the course co-ordinator to take this course.

Course Learning Outcomes On successful completion of this course, students should be able to:

- CLO 1: study independently and in depth an advanced topic that is not available in the regular curriculum
- CLO 2: analyze and synthesize information gathered from different sources
- CLO 3: articulate their findings and conclusions
- CLO 4: give an exposition of their work in a written report

Pre-requisites (and Co-requisites and Impermissible combinations) This capstone course is for Mathematics / Mathematics (Intensive), and Mathematics/Physics Majors students only. The earliest that a student is allowed to take this capstone course is their year 3 study. Pass in at least 24 credits of advanced level disciplinary core/elective mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) in the Mathematics/ Mathematics (Intensive), and Mathematics/Physics Majors; and subject to approval by the Department.

Offer in 2021 - 2022 Y Year long Offer in 2022 - 2023 : Y Examination No Exam
Department of Mathematics

### MATH7101 Intermediate complex analysis (6 credits) 
**Academic Year:** 2021

**Offering Department:** Mathematics

**Course Co-ordinator:** Prof T W Ng; Dr. X Zhang, Mathematics (ntw@maths.hku.hk; xzhang@maths.hku.hk)

**Teachers Involved:** (Dr X Zhang, Mathematics)

**Course Objectives:**
- The objective is to familiarize students with analytic, algebraic and geometric concepts and techniques in the study of Complex Analysis in a single variable beyond an introductory course on functions of a complex variable.
- In the course we study meromorphic functions on compact Riemann surfaces and on open Riemann surfaces using analytic and algebraic techniques. Topics on meromorphic functions include the constructions of meromorphic functions on compact Riemann surfaces, elliptic functions, Poincare series, the Mittag-Leffler Problem and the Weierstrass Problem on compact Riemann surfaces and on open Riemann surfaces.
- A choice of other topics may be included. Examples of possible topics include normal families, the Riemann Mapping Theorem, Little Picard Theorem, geometric theory of holomorphic mappings, potential theory in one complex variable, complex dynamics, and special functions.

**Course Contents & Topics:**
- A choice of other topics may be included. Examples of possible topics include normal families, the Riemann Mapping Theorem, Little Picard Theorem, geometric theory of holomorphic mappings, potential theory in one complex variable, complex dynamics, and special functions.

**Course Learning Outcomes:** On successful completion of this course, students should be able to:
- CLO 1 analyze rational functions on the Riemann Sphere and analyze elliptic functions, equivalently meromorphic functions, on elliptic curves
- CLO 2 formulate various classical existence problems on meromorphic functions and reduce them to analytic or cohomological problems, being able to solve them in certain typical cases
- CLO 3 identify the key arguments in the proofs of various mathematical results concerning meromorphic functions on compact Riemann surfaces or on plain domains and apply them in solving problems
- CLO 4 identify the key elements in the theoretic foundation of various additional topics covered in the course and apply them in solving problems

**Pre-requisites (and Co-requisites and Impermissible combinations):** Pass in a first course in Complex Analysis such as MATH3403, and approval by the course coordinator.

**Assessment Methods:**
- Written midterm test and written/oral end-of-term assessment
- Method: Test
  - Details: Written midterm test and written/oral end-of-term assessment
  - Weighting in final course grade (%): 100
  - Assessment Methods to CLO Mapping: CLO 1, 2, 3, 4

**Communication-intensive Course:** N

**Course Type:** Lecture-based course

**Course Teaching & Learning Activities:**
- Activities: Lectures, Reading / Self study

### MATH7201 Topics in geometry (6 credits) 
**Academic Year:** 2021

**Offering Department:** Mathematics

**Course Co-ordinator:** TBC, Mathematics

**Teachers Involved:**

**Course Objectives:**
- The topic varies according to the year and the instructor. For example, it can be one of (but not restricted to) the following:
  1. Riemannian geometry: affine and Levi-Civita connection, Riemann curvature tensor, spinor bundles, Laplace...
and Dirac operators, harmonic forms and spinors, applications in relativity;
(ii) Symplectic geometry: symplectic vector spaces, symplectic manifolds, Lagrangian submanifolds, Hamiltonian group actions, moment maps, symplectic quotients, convexity theorems, localization;
(iii) Vector bundles: vector bundles, connection and curvature, characteristic forms and classes, superconnections, transgression, topological K-theory, introduction to index theory.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 have a working knowledge of the calculus of differential forms beyond the level of MATH3511
CLO 2 understand the keys points of the particular subject chosen and be ready to learn other topics in Geometry

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in (MATH4402 or MATH4501) and (MATH4511 or the approval of the course coordinator)

Offer in 2021 - 2022
N Offer in 2022 - 2023 : N

Grade Descriptors (A+ to F)
A Demonstrate an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
B Demonstrate a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications or presentation or with some minor computational errors.
C Demonstrate an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with some inadequacies in applying the theorems through incorrectly analysing problems with poor argument and presentation or a number of minor computational errors.
D Demonstrate some understanding of key concepts and ideas by being able to correctly identify appropriate theorems, but with substantial inadequacies in applying the theorems through incorrectly analysing problems with poor argument or presentation or with substantial computational errors.
Fail Demonstrate poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.

MATH7202 Complex manifolds (6 credits)

Offering Department Mathmatics
Course Co-ordinator Prof N Mok, Mathematics (nmok@hku.hk)
Teachers Involved (Prof N Mok, Mathematics)
Course Objectives
This course aims to present the foundation of the theory of complex manifolds and to introduce students to a variety of research topics, focusing on compact complex manifolds.

Course Contents & Topics
- This course contains an introductory part on basic notions on complex manifolds including sheaf cohomology, cohomology theories in terms of differential forms, Hermitian and Kahler manifolds, and Hermitian holomorphic vector bundles.
- It proceeds to introduce the theory of harmonic forms, establishing fundamental results on compact complex manifolds including Serre duality, the Kodaira Vanishing Theorem, the Kodaira Embedding Theorem and Hodge decomposition on compact Kahler manifolds.
- The course concludes with a choice of topics on analytic and geometric aspects of the theory of complex manifolds. Examples of such topics include:
  (i) Siegel's Theorem on the field of meromorphic functions on a compact complex manifold;
  (ii) geometry of compact quotients of bounded symmetric domains and Hermitian symmetric manifolds;
  (iii) an introduction to the deformation theory of compact complex submanifolds in a complex manifold.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 grasp the notion of holomorphic line bundles, understand various ways for establishing the existence of global holomorphic sections of line bundles, and to relate them to the embedding of compact complex manifolds
CLO 2 grasp the relationship between sheaf cohomology, de Rham cohomology and d-bar cohomology, and make use of the relationship to solve various existence problems by means of vanishing theorems on harmonic forms
CLO 3 grasp the basics of complex differential geometry such as notions of connections and curvature on Kahler manifolds and on Hermitian holomorphic vector bundles, and be able to relate various notions of positivity of curvature and apply them to vanishing and embedding theorems
CLO 4 identify the key elements in the theoretical foundation of various additional topics covered in the course and to make use of them in solving problems

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH3403 or MATH4501 or MATH7101.

Offer in 2021 - 2022

Topics in financial mathematics (6 credits)

### Course Objectives
This course aims at introducing students to fundamental knowledge in financial mathematics and risk management. It can help preparing students to research or take more advanced courses in those directions.

### Course Contents & Topics
- Investment models and portfolio theory.
- Interest rate modeling.
- Mathematics of financial derivatives, pricing and hedging.
- Estimation and modeling of volatilities.
- Risk measures and risk management.

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand and be able to utilize various models and results in investment and interest rate management.
- CLO 2: grasp the methodology in derivative pricings and the modeling of volatilities.
- CLO 3: understand and be able to utilize the concept of risk measures and risk management, subject to the topics chosen that year.

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in an advanced level mathematics courses (MATH3XXX, MATH4XXX, or MATH7XXX) and subject to the approval of the course coordinator.

Topics in applied functional analysis (6 credits)

| Academic Year | 2021 |
### MATH7224

#### Offering Department
Mathematics

#### Course Co-ordinator
TBC, Mathematics (/)

#### Teachers Involved
TBC, Mathematics

### Course Objectives
This is a graduate to advanced undergraduate university level course on applied functional analysis, which aims at introducing to students the basic knowledge of using functional analysis on various applied topics in mathematics. This course would lay a foundation for students in studying more advanced mathematical courses.

### Course Contents & Topics
- Generalized functions (also called distributions), delta function, generalized Fourier Transform. Applications to differential equations, Fundamental solution, Green’s function.
- Sobolev spaces, Sobolev Embedding Theorem, Trace.
- Hilbert space linear operator theory (bounded operators, compact operators, closed unbounded operators), spectral theory. Applications to differential equations (infinite-dimensional generator, semigroup of linear operators).
- Applications to optimization problems.

Wherever needed, we shall also review techniques for Metric spaces (Category Theorem), Banach spaces (Hahn-Banach Theorem, Opening Mapping Theorem, Closed Graph Theorem and Uniform Boundedness Principle) and Hilbert spaces (Orthogonality and best approximation, Fourier isometry).

### MATH7501
**Topics in algebra (6 credits)**

**Offering Department**: Mathematics

**Course Co-ordinator**: Dr Z Hua, Mathematics (huazheng@maths.hku.hk)

**Teachers Involved**: Dr Z Hua, Mathematics

**Course Objectives**

To provide students specializing in mathematics with the opportunity to study some topics in algebra in greater depth.

**Course Contents & Topics**

- A selection of advanced topics in algebra such as group theory; rings and modules; Galois theory; quadratic forms; multilinear algebra; algebraic number theory; group representations; commutative algebra; Grobner basis theory; introduction to algebraic geometry. Topics may vary from year to year.

On successful completion of this course, students should be able to:

1. **Linear algebra method**: rank argument, eigenvalue technique, polynomial technique, general position method.
2. **Probabilistic method**: basic method, linearity of expectation, deletion method, Lovász local lemma, second moment method.
3. **Additional techniques**: if time permits.

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in MATH4302

**Offer in 2021 - 2022**: N

**Academic Year**: 2021

**Course Grade (%)**

- **Fail**: Demonstrates poor and inadequate understanding by not being able to identify appropriate theorems or their applications, or not being able to complete the solution.
- **B**: Demonstrates an excellent understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, clearly and elegantly presenting correct logical reasoning and argumentation and being able to carry out computations carefully and correctly, and with some innovative approaches to solving problems.
- **C**: Demonstrates an acceptable understanding of key concepts and ideas by being able to correctly identify appropriate theorems, applications and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- **D**: Demonstrates a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.
- **A**: Demonstrates a good understanding of key concepts and ideas by being able to identify the appropriate theorems and their applications through correctly analysing problems, but with some minor inadequacies in arguments, identifying the appropriate theorems or their applications and presentation or with some minor computational errors.

## Topics in mathematical programming and optimization (6 credits)

### Pre-requisites and Co-requisites
- Pass in (MATH5301 or MATH5600), and approval of the course coordinator.

### Course Objectives
- To learn a selection of advanced and up-to-date topics in mathematical programming and continuous optimization, including theory, numerical algorithms and applications.

### Course Contents & Topics
- A deeper and wider study in some advanced topics related to optimization and its applications. This course covers a selection of topics including convex programming, nonconvex programming, saddle point problems, variational inequalities, optimization theory and algorithms suitable for contemporary applications in various areas such as machine learning, artificial intelligence, imaging processing, and computer vision. The selected topics may vary from year to year.
- A deeper and wider study in some advanced topics related to optimization and its applications. This course covers a selection of topics including convex programming, nonconvex programming, saddle point problems, variational inequalities, optimization theory and algorithms suitable for contemporary applications in various areas such as machine learning, artificial intelligence, imaging processing, and computer vision. The selected topics may vary from year to year.

### Course Learning Outcomes
- On successful completion of this course, students should be able to:
  - CLO 1 understand the advanced concept and approach of the mathematical programming topic(s) and/or optimization approaches as appropriate in Scientific Computing, Operations Research, Data Science, etc.
  - CLO 2 demonstrate knowledge and understanding of the underlying theory and techniques of the various formulations and algorithms plus their extensions.

### MATH7504

#### Geometric topology (6 credits)

**Offering Department**: Mathematics  
**Course Co-ordinator**: TBC, Mathematics

**Teachers Involved**: CLO 1,2

**Course Objectives**

- The aim of the course is to introduce the basic ideas and techniques of measure theory and the Lebesgue integral. The emphasis throughout will be on the geometric motivations and applications of the theory.  
- On successful completion of this course, students should be able to:  
  - CLO 1 understand basic ideas and constructions which are important both in pursuing the deeper theories as well as in many applications in algebraic topology  
  - CLO 2 understand the ideas of attaching space, complexes, lifting and extension properties, and surgery on manifolds  

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in MATH3301 and MATH3401

#### Real analysis (6 credits)

**Offering Department**: Mathematics  
**Course Co-ordinator**: Dr C Y Hui, Mathematics (chuy@maths.hku.hk)

**Teachers Involved**: Dr C Y Hui, Mathematics

**Course Objectives**

The aim of the course is to introduce the basic ideas and techniques of measure theory and the Lebesgue integral. The emphasis throughout will be on the geometric motivations and applications of the theory. The Lebesgue Integral: The Lebesgue Integral, Modes of Convergence, Convergence Theorems. - Differentiation and Integration: Functions of Bounded Variation, Differentiation of an Integral, Absolute Continuity. - The L^{p} Spaces: The L^{p} spaces, Convergence and Completeness, Bounded Linear Functionals. - General Theory: Measurable Spaces, Measurable Functions, Integration, Convergence Theorems, Radon-Nikodym Theorem.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 describe basic properties of Lebesgue measure and measurable functions and understand and apply various convergence theorems  
- CLO 2 construct the Lebesgue integral, elucidate its basic properties and appreciate the existence of other useful integration theories besides Riemann's

(De C Ling, Physics)

Course Objectives

This course offers a comprehensive training of physics for engineers. It covers the major physical laws on mechanics, electricity and magnetism. A calculus-based approach is adopted.

Course Contents & Topics

This course will introduce and discuss the following topics:

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe and explain the physical principles of mechanics, electricity and magnetism

CLO 2 apply these principles to situations of the physical and engineering world

CLO 3 analyze and solve basic problems using the calculus-based approach

CLO 4 acquire and interpret experimental data to examine the physical laws

Pre-requisites (and Co-requisites and Impermissible combinations)

Level 3 or above in HKDSE Physics or Combined Science with Physics components or equivalent; and

(Level 2 or above in Module 1, or Module 2 of HKDSE Mathematics or equivalent, or Pass in MATH1011)

This course is exclusive for Engineering students.

Course Objectives

This course will introduce and discuss the following topics:

- This course is exclusive for Engineering students.

- Students should have completed at least one of the following courses:
  - PHYS1000 Physics for Engineers (4 credits)
  - PHYS1010 Physics for Engineers (4 credits)

- Students should have basic knowledge of calculus and differential equations.

- Students should have completed at least one of the following courses:
  - MATH1010 Calculus for Science and Engineering (4 credits)
  - MATH1020 Calculus for Science and Engineering (4 credits)

- Students should have completed at least one of the following courses:
  - PHYS1000 Physics for Engineers (4 credits)
  - PHYS1010 Physics for Engineers (4 credits)

- Students should have completed at least one of the following courses:
  - MATH1010 Calculus for Science and Engineering (4 credits)
  - MATH1020 Calculus for Science and Engineering (4 credits)

- Students should have completed at least one of the following courses:
  - PHYS1000 Physics for Engineers (4 credits)
  - PHYS1010 Physics for Engineers (4 credits)

- Students should have completed at least one of the following courses:
  - MATH1010 Calculus for Science and Engineering (4 credits)
  - MATH1020 Calculus for Science and Engineering (4 credits)

- Students should have completed at least one of the following courses:
  - PHYS1000 Physics for Engineers (4 credits)
  - PHYS1010 Physics for Engineers (4 credits)

- Students should have completed at least one of the following courses:
  - MATH1010 Calculus for Science and Engineering (4 credits)
  - MATH1020 Calculus for Science and Engineering (4 credits)

- Students should have completed at least one of the following courses:
  - PHYS1000 Physics for Engineers (4 credits)
  - PHYS1010 Physics for Engineers (4 credits)

- Students should have completed at least one of the following courses:
  - MATH1010 Calculus for Science and Engineering (4 credits)
  - MATH1020 Calculus for Science and Engineering (4 credits)

This course is designed for students in all disciplines and all years who are curious about science in daily life. The course covers the working principles and mechanisms of the things and phenomena around us. Logical thinking and appreciation of science are emphasized with mathematics kept at a minimum. Students are trained to develop scientific intuition and to understand that many "magical" things in everyday life can be predictable. Developments in optical recording, medical imaging for diagnosis and the magnetic levitated trains in public transportation are introduced as examples of the modern technology. Contents of the course are constantly updated to reflect the advances in modern science and technology.

### Course Objectives

This course is designed for students in all disciplines and all years who are curious about science in daily life. The course covers the working principles and mechanisms of the things and phenomena around us. Logical thinking and appreciation of science are emphasized with mathematics kept at a minimum. Students are trained to develop scientific intuition and to understand that many "magical" things in everyday life can be predictable.

### Course Contents & Topics

Topics include: the science in the household and the science of driving, sports and amusement. Daily applications are explored with simple and lucid explanations. Developments in optical recording, medical imaging for diagnosis and the magnetic levitated trains in public transportation are introduced as examples of the modern technology. Contents of the course are constantly updated to reflect the advances in modern science and technology.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** describe and discuss the physical principles that are behind the household appliances and the scientific issues in daily life.
- **CLO 2** demonstrate their knowledge to related topics qualitatively.
- **CLO 3** criticize and express views in logical and effective ways.
- **CLO 4** recognize the significance of science and technology.

**Course Co-ordinator**: Dr F C C Ling, Physics (ccling@hku.hk)

**Teachers Involved**
- Dr F C C Ling, Physics
- Dr P W Li, Hong Kong Observatory
- Mr H W Tong, Hong Kong Observatory
- Mr W K Wong, Hong Kong Observatory

**Course Objectives**: Weather and climate play an important role in human activities and history. In this course, we shall introduce to students the fundamentals of weather, climate and climate changes, to arouse their interests in the scientific and technological advancements.

**Course Contents & Topics**: The course will encompass topics on: basic physical principles on weather phenomena like: wind, temperature, humidity, cold/warm fronts, thunderstorms and tropical cyclones; introductory weather analysis, forecast and climate. Through real life examples, students will get familiarized with the weather/climate science and interpretation of meteorological information, climatology and climate change.

Experts from the Hong Kong Observatory (HKO) will participate in the course to cover aspects on daily weather forecasts, public weather services, local severe weather phenomena, tropical cyclones, climatology of Hong Kong, and climate change. Tentatively, there will be visit to the HKO to study the meteorological facilities and understand the operational activities on weather and climate.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:
- **CLO 1**: recall the basic principles of weather and climate
- **CLO 2**: apply the principles to interpret weather / climate information, for example from the HKO web site, internet or media
- **CLO 3**: identify and explain the differences of weather and climate in Hong Kong as compared to other parts of the world
- **CLO 4**: explain the basic causes of climate change and its potential impacts
- **CLO 5**: describe and discuss the daily operational activities in the HKO

## PHYS1150: Problem solving in physics (6 credits)

### Course Objectives

This is the first course in our course series that introduces problem solving, mathematical and computational skills that are commonly used in the study of university-level physics. Instead of adopting a cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the second level courses in this series, namely, PHYS2150 and/or PHYS2155 and/or PHYS2160. (Knowledge of Module 1 or Module 2 in HKDSE Mathematics, or MATH1011, or equivalent is advantageous, though not required.)

### Assessment Methods and Weighting

</tr>
</tbody>
</table>

### Course Contents & Topics

This course trains students to think and act as physicists by introducing basic problem solving, mathematical and computational skills that are commonly used in the study of university-level physics. Topics include: the use of vectors and their operations, differentiation, integration, differential equations, several variables differentiation, matrix operation, complex numbers, and rudiment of numerical methods in tackling simple physics problems. Basic MATLAB commands will be introduced and used in this course.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 state physical systems by the language of mathematics and employ mathematical logic and reasoning to read physics
- CLO 2 apply calculus to solve problems
- CLO 3 review the features of various solving tools in physics as well as plan and select appropriate tools when solving physical problems
- CLO 4 describe the connections between mathematical equations and physical problems
- CLO 5 formulate and operate physical problems both qualitatively and quantitatively
- CLO 6 interpret and judge the physical meaning of result after calculations

### Pre-requisites (and Co-requisites and Impermissible combinations)

Level 3 or above in HKDSE Physics or equivalent, or Pass in PHYS1240

### Offer in 2021 - 2022

### PHYS1240

**Offering Department**: Physics

**Academic Year**: 2021

**Course Co-ordinator**: Dr F K Chow, Physics (judychow@hku.hk)

**Teachers Involved**: (Dr F K Chow, Physics)

**Course Objectives**

This course aims at providing students a solid background and knowledge in physics as well as its connection with our daily life phenomena and activities. It is targeted to those with little physics background and is conducted with no descriptions in differential and integral calculus. After completing this course, interested students may move on to take PHYS1150 or PHYS1250.

**Course Contents & Topics**

The course has a general coverage in most physics topics and is conducted with no descriptions in differential and integral calculus. Emphasis will be stressed on the understanding of various physical phenomena in daily life through qualitative and simple quantitative analysis. The course contents cover: Mechanics, Heat, Optics, Waves, Electricity and Magnetism.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 describe and distinguish the concepts and principles in introductory study of physics
- CLO 2 recognize the underlying physical principles behind various daily life phenomena
- CLO 3 explain physical phenomena using proper physical laws and theories
- CLO 4 apply simple mathematical techniques for quantitative analysis in solving physics problems

**Pre-requisites (and Co-requisites and Impermissible combinations)**

- NIL
- Not for students with level 3 or above in HKDSE Physics; and
- Not for students who have passed in PHYS1050 or PHYS1150 or PHYS1250, or already enrolled in these courses; and
- Not for students who have passed in any level 2 PHYS course or above.

**Offer in 2021 - 2022**: Y 2nd sem  Offer in 2022 - 2023 : Y

**Examination**: May

PHYS2055

Introductory relativity (6 credits)  Academic Year 2021

Offering Department

Physics

Teachers Involved

Dr K M Lee, Physics (kmlee@llly.physics.hku.hk)

Course Objectives

This course aims at introducing students the essence of special relativity. It is designed as an elective for students in all disciplines and all years with science background. It is also a discipline elective for the physics major/minor and astronomy minor. Completion of this course is one of the pre-requisites for PHYS4653 and PHYS4654.

Course Contents & Topics

Topics include: "Common-sense" concepts of space and time versus Einstein's conceptions of space and time, Examples of time dilation and space contraction, Paradoxes of relativity including the famous twin paradox and the "pole-in-the-barn," Four vectors and Lorentz invariant, Some discussion on general relativity.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: recall the setup and significance of Michelson-Morley experiment
- CLO 2: state the basic postulates and the spacetime concept of special relativity
- CLO 3: explain time dilation and length contraction
- CLO 4: describe Lorentz transformation and its applications
- CLO 5: state the resolution of the twin and pole-in-the-barn paradoxes

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in PHYS1050 or PHYS1150 or PHYS1250 or ENGG1300

Offer in 2021 - 2022

### Course Objectives

This is one of the second level courses in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. Instead of the cookbook approach, we focus on training students how to think and work as physicists through tackling simple physics problems by both analytical and numerical means. After completion, interested students may take the other second level courses in this series PHYS2150 and/or PHYS2160 or the third level course in this series PHYS3150.

### Course Contents & Topics

This course introduces the principles and theories of various mathematical methods and skills that are essential for studying university physics. Topics include: matrices and vector spaces, systems of linear algebraic equations and systems of linear differential equations, Line integrals, surface integrals and volume integrals, Fourier analysis, and further numerical computation techniques in physics. Applications to physical systems and various practical problems solving skills are discussed. Further MATLAB programming will be introduced and used in this course.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** review the theory and principles of mathematical methods and compare the features of various methods
- **CLO 2** describe the connections between mathematical equations and physical problems
- **CLO 3** state and set up mathematical equations to describe the dynamics and evolution of physics systems

- **D**  
  Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

- **Fail**  
  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Lecture notes provided by Course Coordinator

- David Poole: Linear Algebra: A Modern Introduction (Cengage Learning, 2015, 4th edition)

**Course Website**  
http://moodle.hku.hk
Course Contents & Topics
Topics include: basics of computer programming; Python programming for physicists; introduction to object-oriented programming in Python; scientific programming with Matplotlib, NumPy, and SciPy; simple error analysis in scientific programming; solution of non-linear equations with application in quantum physics; Calculus and numerical methods with relevant examples in physics; numerical solution of ordinary differential equations with application to pendulum motion.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 demonstrate knowledge in basic computational techniques and methods in physics
- CLO 2 apply Python programming language and relevant packages to solve simple physical problems
- CLO 3 employ appropriate numerical methods for solving ordinary differential equations that commonly arise in physics
- CLO 4 review the numerical methods for simulation of various physical systems

Grade Descriptors
- A (90-100) Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.
- B (80-89) Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar situations. Apply moderately effective organizational and presentional skills. Apply moderate lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.
- C (70-79) Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.
- D (60-69) Show evidence of some logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.
- E (50-59) Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.
- F (0-49) Show evidence of some logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

PHYS2255 Introductory electricity and magnetism (6 credits)  

**Course Description**
This calculus-based course covers the foundation of electricity and magnetism in one semester. It is a core course for physics majors, providing an essential understanding of topics such as electric and magnetic fields, charge and current, and the basic principles of electromagnetism. The course aims to develop students' analytical and problem-solving skills, as well as their ability to apply theoretical knowledge to practical situations.

**Course Objectives**
This course will help students achieve the following outcomes:
- Understand and apply the fundamental principles of electricity and magnetism.
- Develop the ability to analyze and solve problems related to electricity and magnetism.
- Gain insight into the historical development and applications of electromagnetism.

**Course Contents & Topics**
- Electric field and force
- Gauss' law and electric conductors
- Electric potential and energy
- Capacitance and DC circuits
- Magnetic force
- Magnetic field and Ampere's law
- Faraday's law of induction
- Inductance and Lenz's law
- Maxwell's equations
- Wave nature of light

### Course Objectives

This course covers the foundation of heat and waves in one semester. It serves as a core course for students who are planning to take physics, astronomy, or mathematics/physics as major. It also serves students who intend to take physics as minor. Both conceptual ideas and mathematical treatment in heat and waves are emphasized.

### Course Contents & Topics

Topics include: type of waves; Sinusoidal wave including transverse velocity and phase, Wave propagation through a stretched string as an example for transverse wave, Sound wave as an example for longitudinal wave, Wave equation, Energy in wave motion, The principle of superposition, Interference of waves, Standing waves and resonance, Beats, The Doppler Effect, Light wave as an electromagnetic wave, Reflection, Refraction, Double slit interference, Interference from thin films, Single slit diffraction, Multiple slit and grating, Polarization, Temperature and equilibrium, Ideal gas law, Molecular view of pressure, Mean free path, distributions of molecular speed and energy, Concept of heat, First law of thermodynamic, Work done on or by an ideal gas, Internal energy of an ideal gas, Molar heat capacities at constant volume and constant pressure, Different thermodynamic processes including adiabatic, isothermal, constant-volume, cyclical and free expansion, Reversibility of process, definition of entropy change, The second law of thermodynamic, Carnot engine, Statistical view of entropy.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: explain the fundamental physical principles
- CLO 2: apply these principles, together with logical and mathematical reasoning, to situations of the physical world
- CLO 3: analyse and solve problems with the aids of mathematics
- CLO 4: acquire and interpret experimental data to examine the physical laws

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in PHYS1050 or PHYS1250

### Pre-requisites

Pass in PHYS1050 or PHYS1250

### Course Objectives

- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show some evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presenational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presenational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.
- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presenational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

## PHYS2261

### Introductory heat and thermodynamics (6 credits)

#### Academic Year
2021

#### Offering Department
Physics

#### Course Co-ordinator
Dr S Z Zhang, Physics (shizhong@hku.hk)

#### Teachers Involved
(Dr S Z Zhang, Physics)

#### Course Objectives
This calculus-based course covers the basics of thermodynamics and kinetic theory in one semester. It is a core course for physics major, a discipline elective for physics minor, as well as an elective course for those who want to learn fundamental thermodynamics concepts and to link them up with their studies in fields like engineering, chemistry and mathematics. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. Upon completion, interested students may take PHYS3550 to further their study in thermodynamics and statistical mechanics.

#### Course Contents & Topics
Topics include: thermodynamic system, equilibrium state and its characterization; thermodynamic state function and equation of state and state transformation; first law of thermodynamics, adiabatic process, Carnot cycle; entropy and second law of thermodynamics; various thermodynamic potentials and their applications in phase equilibrium and mixtures; third law of thermodynamics and Nernst theorem. It also includes a discussion on kinetic theory.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: describe and explain the fundamental physical principles
- CLO 2: apply these principles, together with logical and mathematical reasoning, to situations of the physical world
- CLO 3: analyse and solve problems with the aids of mathematics
- CLO 4: acquire and interpret experimental data to examine the physical laws

### Introductory quantum physics (6 credits)

#### Academic Year
2021

#### Offering Department
Physics

#### Course Co-ordinator
Dr F K Chow, Physics (judychow@hku.hk)

#### Teachers Involved
(Dr F K Chow, Physics)
### Course Objectives
This calculus-based course covers the foundation of quantum physics in one semester. It is a core course for physics majors, a discipline elective for physics minors, as well as an elective course for those who want to learn fundamental quantum physics and to link them up with their studies in fields like engineering, chemistry and mathematics. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. Upon completion, interested students may take PHYS3351 to further their study in quantum mechanics.

### Course Contents & Topics
Topics include: the birth of modern physics; electromagnetic waves behaving as particles; matter behaving as waves; the Schrodinger equation; solutions of time-independent Schrodinger equation to bound and unbound systems; structure of the atom; the hydrogen atom; many-electron atoms.

### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 describe and explain the fundamental physical principles
- CLO 2 apply these principles, together with logical and mathematical reasoning, to situations of the physical world
- CLO 3 analyse and solve problems with the aids of mathematics
- CLO 4 acquire and interpret experimental data to examine the physical laws

### Course Objectives
This course takes you from the beginnings to the forefronts of contemporary astronomical research - in a journey from the Solar System to the Big Bang - with an emphasis on the most important methodologies and discoveries in astronomy. Advanced physical concepts are explained with a minimum of mathematics: you will only be required to know and manipulate simple algebra. An intermediate astronomy course for students in all disciplines and all years, it also is the second course in our series of two compulsory courses to introduce basic astronomy knowledge, methods, and recent advances for astronomy minors. This primary aim of this course is to take students to the cutting-edge of contemporary astronomy. After completing this course, interested students may take PHYS3650, PHYS3653 and/or PHYS3960, which are core or discipline elective courses for astronomy minor and astrophysics theme of physics major.

### Course Contents & Topics
Scale of the Solar and Exo-planetary Systems, Astrometry and Scale of the Galaxy, Scale of the Universe, Expansion and Accelerated Expansion of the Universe, Hubble Parameter, Dark Matter and Dark Energy, Cosmology, Critical Density, Cosmic Structure, Cosmic Microwave Background, Inflation, Neutrino Astrophysics

### Course Learning
On successful completion of this course, students should be able to:
**Outcomes**

| CLO 1 | Describe the methodologies used to determine the scale of the Solar System, Galaxy, and the Universe |
| CLO 2 | Explain how astronomical observations imply that the Universe is expanding at an accelerated rate |
| CLO 3 | Discuss critically why Dark Matter and Dark Energy is required to explain astronomical observations |
| CLO 4 | Describe the importance of precise measurements of the Hubble parameter |
| CLO 5 | Perform computations and provide reasoned explanations to demonstrate competence on and understanding of the concepts learnt |

**Course Objectives**

- This course will introduce students to the fundamentals of atomic physics and rudimentary nuclear physics. It aims to provide a coherent and concise coverage of traditional atomic and nuclear physics. Important topics of current research interest will be also discussed, such as laser cooling and trapping which plays an important role in the realization of Bose-Einstein condensate in atomic vapors.

**Course Contents & Topics**

- Topics include: Atomic structure of hydrogen and hydrogen isotopes, spectroscopy, laser trapping and cooling; nuclear structure, shell model and nuclear reactions. Applications of the basic principles of atomic and nuclear physics will be mentioned when appropriate.

**Course Learning Outcomes**

- On successful completion of this course, students should be able to:
  - CLO 1 apply general considerations of quantum physics to atomic and nuclear system; make general orders of magnitude of estimation of physical effects
  - CLO 2 explain how light interacting with atom; the working principle of laser trapping and cooling
  - CLO 3 recognize the general features of atomic/nuclear spectroscopy
  - CLO 4 apply quantum physics to understand the basic features of simple nuclei, binding of deuterons etc.

**Pre-requisites and Co-requisites**

- Pass in PHYS2265

**Offer in 2021 - 2022**

**Grade Descriptors (A+ to F)**

- **A**
  - Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

- **B**
  - Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

- **C**
  - Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

- **D**
  - Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Limited ability or barely effective organizational and presentational skills.

- **Fail**
  - Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### PHYS3150

#### Theoretical physics (6 credits)

| Academic Year | 2021 |

#### Offering Department
Physics

#### Quota
---

#### Course Co-ordinator
Dr C J Wang, Physics (cjwang@hku.hk)

#### Teachers Involved
Dr C J Wang (Physics)

#### Course Objectives
This is the third level course in our series of courses that introduces problem solving, mathematical and computational skill sets that are commonly used in the study of university-level physics. We focus on the analytical and computer algebra techniques in solving physics problems. It is one of the core electives for physics major and an elective course for the computational physics and theoretical physics themes. This is also an essential course for those who plan to pursue postgraduate studies in mathematical and theoretical physics.

#### Course Contents & Topics
This course will introduce and address the following topics: (i) Functions of a complex variable and their applications (Cauchy's integral formula, calculus of residues, etc); (ii) Advanced methods in solving and classifying differential equations commonly appears in physics (such as series solution, second solution, Green's function, and singular points); (iii) Properties of special functions widely used in Physics (Gamma functions, Beta functions, Bessel functions, spherical harmonics etc.), (iv) Integral transforms (Fourier transforms and Laplace transforms); (v) The use of Mathematica in solving simple analytical problems appearing in topics (i)-(iv).

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: Analyse and examine the analytical properties of complex functions
- CLO 2: Calculate various definite integrals using the method of residues
- CLO 3: Analyse and solve typical partial differential equations
- CLO 4: Apply the special functions in handling various physical problems
- CLO 5: Use the Fourier series and Fourier transform in analysing periodic functions and waves, and understand the basics of Laplace transforms
- CLO 6: Use Mathematica to solve simple analytical problems in physics

#### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in MATH2211 or PHYS2150 or PHYS2155

#### Offer in 2021 - 2022

#### Required/recommended reading and online materials
- Lecture notes provided by Course Coordinator
# PHYS3151: Machine Learning in Physics (6 Credits)

**Offering Department:** Physics  
**Course Co-ordinator:** Dr Z Y Meng, Physics (zymeng@hku.hk)  
**Teachers Involved:** Dr Z Y Meng, Physics  
**Course Objectives:** Machine learning is a technique that enables computers to learn without being explicitly "programmed". It is an essential part of big data science and has been widely used in different fields of physics. This course introduces the basics of machine learning, from key concepts to practical algorithms, with a focus on real-world applications in physics. It is an elective course for the computational physics theme. This is also an essential course for those who plan to apply machine learning techniques in their postgraduate studies or in their future work. 

**Course Contents & Topics:** Machine learning software packages in Python, Supervised and Unsupervised learning, Regression, Classification, Principal component analysis, Singular value decomposition, Support vector machines, Clustering, K-Nearest Neighbors, Decision trees, Neural Networks, Deep Learning, Application of machine learning in physics research with examples drawing from fields such as astrophysics, particle physics and complex systems. 

**Course Learning Outcomes:** On successful completion of this course, students should be able to: 
- CLO 1 demonstrate knowledge in essential methods and techniques for machine learning and its application in physics 
- CLO 2 apply the techniques of machine learning in data analysis 
- CLO 3 use Python machine learning packages to solve simple problems 
- CLO 4 use of effective written and verbal communication skills through oral presentation 

**Pre-requisites (and Co-requisites and Impermissible combinations):** Pass in MATH2014 or MATH2101 or MATH2111 or PHYS2155 or PHYS2160. 

**Offer in 2021 - 2022:** Y  
**Grade Descriptors (A+ to F):** 
- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions. 
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions. 
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. 
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions. 
- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

# PHYS3350: Classical Mechanics (6 Credits)

**Offering Department:** Physics  
**Course Co-ordinator:** Prof S Q Shen, Physics (ssshen@hku.hk)  
**Teachers Involved:** Prof S Q Shen, Physics  
**Course Objectives:** This course covers Lagrangian mechanics in the advanced undergraduate level with rigorous mathematical treatment. It is one of the core electives for physics major and an elective course for the theoretical physics theme. This is also an essential course for those who plan to pursue postgraduate studies in physics or related disciplines. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. 

**Course Contents & Topics:** This course will be essentially divided into two parts. In the first part, fundamental concepts related to Lagrangian mechanics will be treated. Topics include the variational principle, conservation laws and its relation to Newtonian mechanics. In the second part, we shall discuss applications of the Lagrangian mechanics. Topics include the central force problem, the coupled harmonic oscillators and rigid-body dynamics. Lagrangian mechanics in non-inertial frame will also be discussed. 

---

**References:**
## Course Learning Outcomes
On successful completion of this course, students should be able to:

- **CLO 1** understand the logical structure of Lagrangian mechanics and its advantage over the Newtonian formulation;
- **CLO 2** write down the form of Lagrangian for a mechanical system and solve the dynamic equations in simple cases;
- **CLO 3** understand the connection between classical mechanics and other mechanics.

## Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in PHYS2150 and PHYS2250

## Course Contents
This course covers the basics of quantum mechanics in the advanced undergraduate level with rigorous mathematical treatment. It is one of the core electives for physics major and an elective course for the theoretical physics theme. This is also an essential course for those who plan to pursue postgraduate studies in physics or related disciplines. Problem solving and analytical skills will be extensively used. They are supplemented by numerical skills occasionally. Upon completion, interested students may take the sequel course PHYS4351 to further their studies in quantum mechanics.

## Course Learning Outcomes
On successful completion of this course, students should be able to:

- **CLO 1** describe the statistical interpretation of quantum mechanical systems, and calculate expectation values and uncertainty of physical observables;
- **CLO 2** formulate energy eigenvalue problems, and solve them in examples where potentials have simple analytical forms;
- **CLO 3** formulate time evolution of the wavefunction and the expectation value of physical observables with known energy eigenfunctions;
- **CLO 4** judge the applicability of time-independent perturbation theory and formulate leading order energy corrections in certain perturbations applied to the physical system.

PHYS3550

**Statistical mechanics & thermodynamics (6 credits)**

**Offering Department**
Physics

**Course Contents & Topics**
This course includes the following topics: statistical description of macroscopic systems in terms of its microscopic constituents; canonical distribution and its applications in simple systems; classical and quantum statistical mechanics; Bose and Fermi distributions; Bose and Fermi gas; condensation; photon gas and Planck radiation law; theory of Brownian motion; theory of fluctuation, first order and continuous phase transition.

**Course Objectives**
On successful completion of this course, students should be able to:
- **CLO 1** understand the logical structure of statistical mechanics
- **CLO 2** apply Gibbs-Boltzmann distribution and partition function in various simple situations
- **CLO 3** understand the Bose and Fermi distributions and apply them in correct situations
- **CLO 4** describe the classification of phase transitions and understand the use of mean field theory in second order phase transition

**Pre-requisites**
Pass in PHYS2150 and (PHYS2260 or PHYS2261)

**Offer in 2021 - 2022**

PHYS3551

**Introductory solid state physics (6 credits)**

**Offering Department**
Physics

**Course Contents & Topics**
To provides a broad introduction to modern theories of the behaviour and properties of the solid state of matter. It is designed as a self-contained course which at the same time will serve as a basis for more advanced courses and projects in solid state physics.

**Course Objectives**
On successful completion of this course, students should be able to:
- **CLO 1** demonstrate knowledge for crystal structures and characterization
- **CLO 2** describe the behavior of solid matter and explain the underlying physical concepts
- **CLO 3** apply physical principles and mathematical equations to discuss the physical properties of materials
- **CLO 4** apply essential skills of making measurements with appropriate instruments in physics experiments
- **CLO 5** interpret the experimental data and compare with the prediction of underlying physical principle

**Pre-requisites**
Pass in PHYS2260 and PHYS2265

**Course Website**
http://moodle.hku.hk
Grade Descriptors (A+ to F)

A  Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Critical use of data and results to draw appropriate and insightful conclusions.

B  Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply highly effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.

C  Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.

D  Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.

Fail  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

PHYS3650

Observational astronomy (6 credits)

Offering Department

Physics

Quota

---

Course Objectives

This course introduced tools of contemporary observational astronomy, with a focus on those used at optical wavelengths. Practical applications of these tools in both amateur astronomy as well as astronomical research will be described. It is a core course for astronomy minor and an elective course for the astrophysics theme.

Course Contents & Topics

Topics include: properties and workings of optical telescopes and astronomical detectors (e.g., CCDs); properties of light, effects of Earth’s atmosphere and interstellar medium on astronomical observations; astronomical imaging and magnitude system; astronomical photometry and spectroscopy; observations of stars and galaxies including blackbody radiation, color-magnitude system, emission and absorption spectrum, and astronomical redshifts.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 describe and explain the workings of astronomical telescopes and detectors at optical wavelengths
- CLO 2 describe how the inherent properties of light, the Earth’s atmosphere, and the interstellar medium affect astronomical observations
- CLO 3 explain how astronomical photometry and spectroscopy are conducted
- CLO 4 perform computations to demonstrate competence on and understanding of the concepts learnt

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in PHYS2255 or PHYS2650
**Department of Physics**

**Phys3651**

**Offering Department** Physics

**Course Co-ordinator** Dr K M Lee, Physics (kmlee@lily.physics.hku.hk)

**Teachers Involved** (Dr K M Lee, Physics)

**Course Objectives**
To introduce basic physical principles of astronomy and build a foundation in modern astrophysics.

**Course Contents & Topics**
Topics include: special relativity, Doppler effect; interaction of light and matter, spectral lines; single-dish telescopes and interferometers; binary stars and stellar parameters, exoplanets; classification of stellar spectra.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1 calculate the transformation between different celestial coordinate systems
- CLO 2 describe the formation of spectral lines and basic structures of telescopes
- CLO 3 derive the orbits in two body problem from first principle
- CLO 4 recall the radiative transfer equation

**Pre-requisites** (and Co-requisites and Impermissible combinations)
Pass in PHYS1650 and (PHYS2250 or PHYS2265)

**Offer in 2021 - 2022** N

**Examination** 2-hour written exam 60 CLO 1,2,3,4

**Assessment Methods and Weighting**
- Assignments 12 CLO 1,2,3,4
- Examination 2-hour written exam 60 CLO 1,2,3,4

**Assessment Methods**
- Assignments
- Examination
- Presentation
- Test

**Grade Descriptors (A to F)**
- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. ---
Course Objectives

This course is a beginner course in astrophysics - we will introduce the most basic and direct connection between astronomy and physics, which will help you gain a better understanding of various astronomical objects and phenomena from first principles. This course will also aim to develop skills in approaching problems in astrophysics, which will set the stage for taking more advanced astrophysics courses and conducting scientific research. It is one of the core electives for astronomy minor and an elective course for the astrophysics theme. Upon completion, interested student may take its sequel PHYS4656 to further their studies in astrophysics.

Course Contents & Topics

Topics include: celestial orbital dynamics, gravitation, binary systems, special relativity and its application in astronomy; basics of radiative processes including blackbody radiation, emission and absorption, atomic structure and spectral lines; order-of-the-magnitude calculations in astrophysics and other selected topics.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 describe the fundamental physics underlying a wide range of astronomical phenomena
- CLO 2 apply the physical formulae learnt through the course to study astrophysical problems and perform calculations
- CLO 3 develop skills to simplify, analyze and solve problems in astrophysics

Pre-requisites

Pass in PHYS2250 or PHYS2265 or PHYS2650

Grade Descriptors (A to F)

A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities, clear logical thinking, evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar, and unfamiliar situations. Apply highly effective organizational and presentational skills.

B: Demonstrate substantial command of the knowledge and skills required for attaining all the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

C: Demonstrate general but incomplete command of knowledge and skills required for attaining all the course learning outcomes. Show evidence of some analytical and critical abilities, logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Assessment Methods

Method: 2-hour written exam
Details: 80
Weighting in final course grade (%): 35
Assessment Methods to CLO Mapping: CLO 1,2,3
PHYS3660  Astronomy laboratory (6 credits)  
Offering Department: Physics  
Course Co-ordinator: Dr S C Y Ng, Physics (ncy@astro.physics.hku.hk)  
Teachers Involved: (Dr S C Y Ng, Physics)  

Course Objectives: 
This course trains students with basics of extracting scientific information with astronomical observations. The focus is on practical experience in operating telescopes, data acquisition and reduction, and interpretation of the results rather than verification of known astronomical theories. It is one of the core electives for astronomy minor and an elective course for the astrophysics and experimental physics themes. Upon completion, interested students may apply the techniques learnt here in observational astronomy related capstone courses.  

Course Contents & Topics: 
This course will cover the following topics: basics working principles of optical telescopes and CCDs; setting up and hands-on operations of small optical telescopes; error analysis and basic statistics related to the astronomy laboratories; introduction to the magnitude system and celestial coordinates, the color magnitude diagram; observations and data reduction techniques in multi-wavelength astronomy; introduction to data analysis software packages.  

Course Learning Outcomes: 
On successful completion of this course, students should be able to:  
- CLO 1 acquire astronomy observation techniques  
- CLO 2 conduct observations to verify the physical principle(s) in astronomy  
- CLO 3 apply analytical methods required to interpret and analyze results, and draw from the data  
- CLO 4 use of effective written and verbal communication skills through written laboratory reports and oral presentation  

Pre-requisites (and Co-requisites and Impermissible combinations): 
Pass in (PHYS2265 or PHYS2650); and Pass in PHYS3650, or already enrolled in this course.  

Grade Descriptors (A+ to F):  
- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.  
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.  
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.  
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.  
- Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.  

Communication-intensive Course Type:

Physics of nanomaterials (6 credits)

**Offering Department**

Physics

**Course Co-ordinator**

TBC, Physics

**Teachers Involved**

(TBC, Physics)

**Course Objectives**

This course is designed to let senior undergraduate students and fresh postgraduate students know fundamental concepts and physical properties of nanomaterials including two-dimensional quantum wells, one-dimensional quantum wires and zero-dimensional quantum dots.

**Course Contents & Topics**

Introduction to nanomaterials and quantum size effect. Dimensionalities and density of states of various nanomaterials. Optical and transport properties of quantum wells, superlattices and two-dimensional electron gas. Physical properties of carbon nanotubes and semiconductor nanowires. Physical properties of quantum dots and nanocrystals. Fundamental principles of scanning tunneling microscopy and advanced thin-film growth techniques such as molecular beam epitaxy and metalorganic chemical vapor deposition.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 recall basic concepts and knowledge of dimensionality, density of states, quantum size effect
- CLO 2 identify and compare optical and transport properties of quantum wells, superlattices and two-dimensional electron gas
- CLO 3 recognise the fundamental principles of scanning tunneling microscopy and advanced thin-film growth techniques such as molecular beam epitaxy and metalorganic chemical vapor deposition
- CLO 4 describe the basic physics of carbon nanotubes and semiconductor nanowires
- CLO 5 explain physical properties of zero-dimensional quantum dots and nanocrystals

**Pre-requisites (and Co-requisites and Impermissible)**

Pass in PHYS3351; and Pass in PHYS3351, or already enrolled in this course.
### PHYS3760

**Offering Department:** Department of Physics  
**Course Co-ordinator:** Dr T T Luu, Physics  
**Teachers Involved:** (Dr J H C Lee,Physics)  
**Course Objectives:**  
This course trains students with experimental knowledge and skills, as well as the understanding on how to prove physics principles with measurements. The focus is on advanced lab skills and techniques, including data acquisition, and data analysis by computers rather than verification of known physical theories. It is one of the core electives for physics major and a required course for the experimental physics theme. Upon completion, interested students may apply the techniques learnt here in experiment-oriented capstone courses.

**Course Contents & Topics:**  
This course equips students with the necessary experimental techniques commonly used in advanced university level physics experiments drawn from classical mechanics, electromagnetism, statistical mechanics and thermodynamics, and quantum mechanics. After introducing the basics in a few lectures, students have to work all the way from experimental setup, data acquisition to data analysis, possibly with the aid of a computer, either in a small group or an individual. In addition to eight labs, they also have to conduct a small experimental project and present their result orally. Contents of the experiments and small projects may vary from year to year.

**Course Learning Outcomes:**  
On successful completion of this course, students should be able to:

- CLO 1 acquire advanced physics experimental techniques
- CLO 2 design and conduct experiments to verify the physics principle(s) commonly used in advanced university-level physics courses
- CLO 3 apply analytical methods required to interpret and analyze results, and draw conclusions from the data
- CLO 4 make use of effective written and verbal communication skills through written laboratory reports and oral presentation

**Pre-requisites:** Pass in any two of the following courses: PHYS3350, PHYS3351, PHYS3450, PHYS3550

**Offer in 2021 - 2022:** Y  
**Grade Descriptors (A to F):**

## PHY3850
### Physical Optics (6 credits)

**Offering Department**: Physics  
**Course Co-ordinator**: Dr D K Ki (dkki@hku.hk)

**Course Objectives**
This course covers the development of modern physical optics, with particular attention to the physical properties and applications of light in the advanced undergraduate level. It is an elective course for the experimental physics theme.

**Course Contents & Topics**
Wave theory of electromagnetic radiations and light; Review of geometric optics; The propagation and superposition of light waves; Interference, Diffraction and Coherence of light; Fourier optics; Some topics of modern optics.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- **CLO 1** explain and calculate the fundamental properties including propagation, reflection, refraction, polarization, interference and diffraction of light waves by using the theory of waves.
- **CLO 2** apply the theory of optics to design optical arrangements for measuring optical properties of materials, such as refractive index.
- **CLO 3** apply essential theories to design various optical components or devices, such as anti-reflection and reflection-enhancement films.

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in PHY3225 and PHY32255

**Offer in 2021 - 2022**: Y

Course Objectives

This course covers the fundamentals of atomic physics and nuclear physics and their applications in astrophysics and atomic and nuclear science in the advanced undergraduate level. Experimental topics will also be included, such as detection methods and principles of experiments with hand-on experience. It is an elective course for the experimental physics theme. This is also an essential course for those who plan to pursue postgraduate studies or work in atomic and nuclear physics and related disciplines.

Course Contents & Topics

Properties of atoms and nuclei; nuclear composition; liquid drop model; shell model in atoms and nuclei; particle & gamma decay; nuclear reactions; radiation detectors; nuclear astrophysics; frontier research and applications in atomic and nuclear science.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: describe and explain the basic features of atoms and nuclei
- CLO 2: apply general considerations of quantum mechanics to atomic and nuclear system
- CLO 3: make general orders of magnitude in estimation of physical effects in atoms and nuclei
- CLO 4: describe nuclear decay processes and nuclear reactions in nucleosynthesis
- CLO 5: apply basic experimental skill for radiation detection

Pre-requisites (and Co-requisites and Immissible combinations)

Pass in PHYS2265; and Pass in PHYS3351, or already enrolled in this course.

Offer in 2021 - 2022

N

Grade Descriptors (A+ to F)

- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective lab skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills. Apply effective lab skills and techniques. Correct use of data of results to draw appropriate conclusions.
- C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective lab skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.
- D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills. Apply partially effective lab skills and techniques. Limited ability to use data and results to draw appropriate conclusions.
- F: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective. Apply minimally effective or ineffective lab skills and techniques. Misuse of data and results and/or unable to draw appropriate conclusions.

PHYS3999

Directed studies in physics (6 credits)

Academic Year 2021

Offering Department

Physics

Course Co-ordinator

Dr F C Ling, Physics (ccling@hku.hk)

Teachers Involved

(Various teachers in the department, Physics)

Course Objectives

This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It should be taken normally in their final year of study. Students investigate a small problem, either theoretical, experimental or numerical, under the supervision of an academic staff using the subject materials they have learnt in all years of their major studies. The available projects range from small scale research, critical literature review and comment, and to development of university-level physics teaching tools. Passing a pre-approved directed studies is recognized as having completed an elective in one of the four themes.

Course Contents & Topics

Students interested in taking this course should contact their prospective supervisors in May to determine the contents and the nature of their projects in the coming academic year. They must get the approval from both the prospective supervisor and the course coordinator to take this course.

Students will receive training in research literature reading and reviewing, under the supervision of a staff member. For theoretical project, students may need to fill in mathematical gaps of some sophisticated derivations and the critically analyze the research methods used in the field. For numerical projects, students need to use computers to reproduce existing numerical or simulation results. For experimental projects, students have to understand the design of the experiment, carrying it out and analyze the sources of errors.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: review the knowledge of a physics or astronomy problem in depth through literature review of books and research journals based on what they have learnt in their majors.
CLO 2: Criticize existing approaches for solving the selected physics or astronomy problem.

CLO 3: Describe and explain connections between the physical principles and the study problem.

CLO 4: Identify the key issues of the problem and solve them independently, either by analytical or numerical means, and compare the results with predictions or existing solutions.

CLO 5: For experimental projects, propose and execute physics experiments or astronomical observations, analyze results and sources of errors, and present their conclusions in comparison with predictions.

CLO 6: Collaborate and communicate effectively in the team, which may comprise people from different cultural, gender, and national backgrounds.

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level (3XXX level or above) disciplinary core elective courses of the Physics Major, Physics (Intensive) Major, Mathematics/Physics Major or Astronomy Major curriculum.

This capstone course is for Astronomy, Mathematics/Physics, Physics, and Physics (Intensive) Majors students only. The earliest that a student is allowed to take this capstone course is their Year 3 study.

Activities: Meeting with supervisor, Reading / Self study.
Details: No. of Hours

Assessment Methods and Weighting

Methods: Oral presentation including supervisor's comments (10%), Research report 70.
Details: Weighting in final course grade (%): 30, 70.
Assessment Methods to CLO Mapping: CLO 1, 3, 4, 5, CLO 1, 2, 3, 4, 5, 6.

Required/recommended reading and online materials

To be provided by individual project supervisor.

PHYS4150

Computational physics (6 credits)

Offering Department: Physics

Academic Year: 2021

Offering Year: 2021-2022

Course Co-ordinator: Dr Z Y Meng, Physics (zymeng@hku.hk)

Teachers Involved: (Dr Z Y Meng, Physics)

Course Objectives

This course shows the power of computational approach to solving physics and related problems, which in the era of artificial intelligence and big data, is quickly becoming the new paradigm of physics research besides the traditional experimental and theoretical approaches. Students are expected to spend a significant fraction of time in actual programming. This is an elective course for the computational physics theme. This is also an essential course for those who plan to pursue postgraduate studies in fields like computational physics, condensed matter physics, astrophysics, chemistry and engineering or work in related areas.

Course Contents & Topics

The course will cover the following topics: Introduction to computational physics; interpolation and extrapolation; partial differential equations (such as the Maxwell's equations, the diffusion equation, and the Schrodinger equation); matrix methods (such as eigenvalue problems applied to Poisson's equation and diagonalization of spin chain); Monte Carlo (Metropolis algorithm for statistical physics problems and physics transitions); quantum Monte Carlo methods (working on electron systems); density matrix and tensor network renormalization; and other applications of machine learning and AI in physics problems, and several physics projects.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: Demonstrate knowledge in essential methods and techniques for numerical computation in physics
- CLO 2: Apply Monte Carlo method and other simulation methods to solve small classical and quantum few-body and many-body problems
- CLO 3: Employ appropriate numerical method to interpolate and extrapolate data collected from physics experiments and use machine learning techniques to extract features from physical data
- CLO 4: Use appropriate numerical method to solve the differential equations governing the dynamics of physical systems and matrix methods for eigenvalue problems for physical systems

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in (MATH3001 or MATH3401 or MATH3403 or MATH3405 or PHYS2160 or PHYS3151) and (PHYS3350 or PHYS3351 or PHYS3350 or PHYS3352).

Offer in 2021 - 2022

Critical use of data and results to draw appropriate and insightful conclusions.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Course Type: Lecture with laboratory component course.

Course Contents & Topics:
Basic data analysis techniques such as linear and non-linear fittings, determination of the goodness of the fit, commonly used hypothesis testing techniques in physics; modeling physics and related systems via continuous, discrete and agent-based approaches; introduction to complex systems, complex adaptive systems and nonlinear dynamics; the use of computer packages such as Matlab and Mathematica in modeling and data analysis although the emphasis is on the basic principles and concepts behind rather than features and usage of those packages; depending on mutual interests of the course coordinator and students, illustrative examples will be drawn from conventional fields such as classical mechanics, electromagnetism and quantum mechanics as well as more recent fields like biophysics, econophysics and sociophysics.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
CLO 1 describe and explain state-of-the-art modeling methods used in physics
CLO 2 apply basic modeling techniques, together with logical and mathematical reasoning, to situations of the physical world
CLO 3 analyse and solve problems with the aid of computer packages such as Matlab
CLO 4 critically interpret experimental data from physics experiments

Pre-requisites (and Co-requisites and Impermissible combinations):
Pass in (MATH3301 or MATH3401 or MATH3403 or MATH3405 or PHYS2160 or PHYS3150); and (PHYS3350 or PHYS3351 or PHYS3450 or PHYS3550)

Offer in 2021 - 2022
Offer in 2022 - 2023: Y

Grade Descriptors (A to F):
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective computer modeling skills and techniques. Critical use of data and results to draw appropriate and insightful conclusions.

B Demonstrate substantial command of the knowledge and skills required for attaining most of the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills. Apply highly effective computer modeling skills and techniques. Critical use of data and results to draw appropriate conclusions.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills. Apply moderately effective computer modeling skills and techniques. Mostly correct but some erroneous use of data and results to draw appropriate conclusions.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Limited ability to use data and results to draw appropriate conclusions.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Limited ability to use data and results to draw appropriate conclusions.

#### Course Objectives
Build on the advanced undergraduate level course PHYS3350, this course further discusses concepts and mathematical techniques in classical mechanics through special topics and applications. It serves as an elective course to better prepare students for their postgraduate studies in physics or other related disciplines.

#### Course Contents & Topics
Topics include: Hamiltonian principles, Lagrangian formulation of dynamics, nonlinear problems, many-body systems, variational principle, generalized coordinates, simple application of Lagrangian equation.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: Understand the difference between Newtonian mechanics and analytical mechanics
- CLO 2: Solve the mechanical problems using Lagrangian formalism
- CLO 3: Discuss the connection between classical mechanics and quantum mechanics from Hamiltonian formalism
- CLO 4: Apply the variational principle to real physical situations

PHYS4550
Advanced statistical mechanics (6 credits)

Offering Department
Physics

Course Objectives
Build on the advanced undergraduate level course PHYS3550, this course further discusses concepts and mathematical techniques in statistical mechanics through special topics and applications. It serves as an elective course to better prepare students for their postgraduate studies in physics or other related disciplines.

Course Contents & Topics
Topics include: Statistical ensembles for isolated and open systems. Equilibrium fluctuations. Order and disorder phase transition. Mean field and Landau theory. Classical ideal gas, quantum ideal gas. Quantum fluid. Semi-classical model of electron dynamics; Boltzmann equation, transport and optical properties of metals and semiconductors; interaction and collective excitations. If time permits, magnetism and superconductivity will also be covered.

Assessment Methods and Weighting

CLO 1: demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

CLO 2: demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

CLO 3: demonstrate partial but limited command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

CLO 4: demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

## Communication-intensive Course

Y

## Grade Descriptors (A+ to F)

- **A**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B**: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C**: Demonstrate partial but limited command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **D**: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail**: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

## Assessment Methods

- **Examination**: 2-hour written exam
- **Assignments**: 20
- **Course Grade (%)**: 60
- **CLO Mapping**: CLO 1,2,3,4

## Required/recommended reading and online materials

- Lecture notes provided by course coordinator.
- Online materials (ncy@astro.physics.hku.hk)
Selected topics in astrophysics (6 credits)

Offering Department: Physics
Course Coordinator: Prof K S Cheng
Course Objectives:
To introduce students some current topics in astrophysics. It may be taken as a self-contained course or as background to research work in astrophysics.

Course Contents & Topics:

Course Learning Outcomes:
On successful completion of this course, students should be able to:
- CLO 1 apply physics principles to describe the physical properties of various astrophysical systems
- CLO 2 explain the observed phenomena of some selected astrophysical objects
- CLO 3 demonstrate knowledge and discuss the underlying physical concepts associated with the astrophysical systems and their dynamic interactive processes

Pre-requisites:
Pass in PHYS3351 or PHYS3450 or PHYS3550 or PHYS3651

Grade Descriptors (A+ to F)
A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
F: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

PHYS4652
Planetary science (6 credits)

Academic Year: 2021
Offering Department: Physics
Quota: ---

Course Co-ordinator: Dr M H Lee, Physics (mhhlee@hku.hk)
### Course Objectives
This course provides students with a modern advanced-level understanding of the properties of our Solar System and planetary systems around other stars and of the physical, chemical, and geological processes that govern them. This is an elective course for the astrophysics theme. This is also an essential course for those who plan to pursue postgraduate studies in planetary science.

### Course Contents & Topics
Terrestrial planets, giant planets, moons and minor bodies in our Solar System; planetary dynamics; energy transport; planetary atmospheres, surfaces, and interiors; planet formation; extrasolar planets.

### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 describe key aspects of our Solar System and extrasolar planetary systems acquired through observations and experiments
- CLO 2 explain essential elements of the processes governing the properties of planetary bodies
- CLO 3 apply physical principles to construct models for some basic aspects of the structure, formation, and evolution of planetary bodies

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in PHYS3651 or PHYS3653 or (PHYS3350 and PHYS3350)

- Lecture notes provided by Course Coordinator
- B. Schutz: A First Course in General Relativity (Cambridge University Press, 2009)
Course Website: http://moodle.hku.hk

Course Title: Interstellar medium (6 credits)

Academic Year: 2021

Offering Department: Physics

Course Co-ordinator: Dr M H Lee, Earth Sciences (mthlee@hku.hk)

Teachers Involved: Dr M H Lee, Earth Sciences

Course Objectives: This course provides students with an advanced-level understanding of the processes responsible for the absorption and emission of continuum and line radiation from gas and dust in stellar atmospheres and interstellar space, and their astrophysical applications and implications. This is an elective course for the astrophysics theme. This is also an essential course for those who plan to pursue postgraduate studies in astronomy and astrophysics.

Course Contents & Topics: Gas, dust, atoms, molecules, radiation; physical and radiative properties of hydrogen, helium and heavier elements; hydrogen clouds, molecular clouds; HII regions, nebulae, supernovae.

Course Learning Outcomes: On successful completion of this course, students should be able to:

CLO 1: express what exists between stars in spiral and elliptical galaxies

CLO 2: apply physical principles to describe excitation/ionization and de-excitation/recombination of atoms and ions

CLO 3: recognize which process or processes occur or dominate in which object or phase of the interstellar medium

Pre-requisites: Pass in PHYS3651 or PHYS3653 or (PHYS3351 and PHYS3550)

Offer in 2021 - 2022: N

Offer in 2022 - 2023: Y

PHYS4656 Advanced astrophysics (6 credits)

Academic Year: 2021

Offering Department: Physics

Course Co-ordinator: Dr S C Y Ng, Physics (ncy@astro.physics.hku.hk)

Teachers Involved: Dr S C Y Ng, Physics

Course Objectives: Built on PHYS3653, this course covers selected astrophysics topics at the advanced undergraduate level. Foci include high energy processes, basic theory of stellar structure and evolution, and introduction to compact objects. It follows a vigorous mathematical treatment that stresses on the underlying physical processes. This is an elective course for the astrophysics theme. This is also an essential course for those who plan to pursue postgraduate studies in astrophysics.

Course Contents & Topics: Topics include: radiation mechanisms; stellar structure equations; polytropic model; elementary stellar radiation processes; simple stellar nuclear processes; stellar formation; late stage of stellar evolution; supernova explosion; compact stellar; cosmic rays; if time permits, additional selected topics will be covered.

Course Learning Outcomes: On successful completion of this course, students should be able to:

CLO 1: describe what is stars and to classify different types of stars

CLO 2: analytically calculate and solve problems related to the structure and evolution of stars including the use of stellar structure equations and Saha equations

CLO 3: critically examine the physical processes occurring in stars and how these processes affect the evolution of stars

CLO 4: apply physics principles to describe the physical properties of various astrophysical systems

CLO 5: demonstrate knowledge and discuss the underlying physical concepts associated with the astrophysical systems and their dynamic interactive processes

CLO 6: assess selected research papers in the field of stellar astrophysics

Pre-requisites: Pass in PHYS3651 or PHYS3653 or (PHYS3351 and PHYS3450)

**Offering Department**: Physics

**Course Co-ordinator**: Dr Y J Tu (yanjuntu@hku.hk)

**Teachers Involved**: Dr Y J Tu, Physics

**Course Objectives**: This course covers both theoretical and experimental aspects of particle physics at the advanced undergraduate level. This is an elective course for the theoretical physics and experimental physics themes. This is also an essential course for those who plan to pursue postgraduate studies or work in high energy particle physics.

**Course Contents & Topics**: Topics include: fundamental particles and interactions; symmetry and conservation law; the Standard Model; particle accelerator; particle detection; frontier particle experiments; Large Hadron Collider data analyses.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:

- Describe and explain the fundamental physical principles for the standard model of particle physics.
Course Content

Students will work as an intern for at least 160 hours within the University or outside the University in a company, government department or NGO. The work nature must be related to physics or astronomy. The internship should be arranged by the Department or obtained by students themselves. In the latter case, it must be approved before the commencement of the internship.

Assessment Method

The capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It should be taken normally in the summer immediately before their final year of study. Students gain working experience in the field of physics or astronomy through intern placement. They should use what they have learnt in their majors in this internship. Passing a pre-approved internship is recognized as having completed an elective in one of the four themes.

Pass in at least 24 credits of advanced level (3XXX level or above) disciplinary core/elective courses of the Physics Major, Physics (Intensive) Major, Mathematics/Physics Major or Astronomy Major curriculum.

Required/recommended reading and online materials

Course Objectives

This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It should be taken normally in the summer immediately before their final year of study. Students gain working experience in the field of physics or astronomy through intern placement. They should use what they have learnt in their majors in this internship. Passing a pre-approved internship is recognized as having completed an elective in one of the four themes.

Required/recommended reading and online materials

Lecture notes provided by Course Coordinator

This capstone course is offered to students majoring in physics, physics (intensive), math/physics or astronomy. It is designed for those who are interested in tackling a research project in physics and/or astronomy. It should be taken normally in their final year of study. Students investigate a specific problem, either theoretical, experimental or numerical, under the supervision of an academic staff using the knowledge the student gained in all years of their major studies. The available projects are close to postgraduate level research in physics and/or astronomy. Passing a pre-approved project is recognized as having completed an elective in one of the four themes.

Students interested in taking this course should contact their prospective supervisors in May to determine the contents and the nature of their projects in the coming academic year. They must get the approval from both the prospective supervisor and the course coordinator to take this course.

For theoretical and numerical projects: Students will receive training in research literature reading and reviewing, and make investigation which is close to research work in nature, under the supervision of a staff member. The student may need to perform some original calculations, to fill in mathematical gaps of some sophisticated derivations, or a combination of both. For numerical projects, students also need to use computers to find numerical or simulation results.

For experimental projects: Students will carry out experiments in research labs under the supervision of a staff member. The student will receive a comprehensive training in advanced experimental techniques, including preparation of samples, determination of physical properties, measurement of small signals obscured by noise, laser, high-vacuum and low-temperature techniques and so on. Wide reading of the relevant scientific literature and originality in experimental design are expected.

On successful completion of this course, students should be able to:

- **CLO 1** plan and execute a theoretical, numerical or experimental research project on a topic in physics or astronomy
- **CLO 2** review the knowledge of a physics or astronomy problem in depth through literature review of books and research journals based on what they have learnt in their majors
- **CLO 3** criticize existing approaches for solving the selected physics or astronomy problem
- **CLO 4** describe and explain connections between the physical principles and the study problem
- **CLO 5** (for theoretical or computational projects) identify the key issues of the problem and solve them independently either by analytical or numerical means, and compare the results with predictions or existing solutions
- **CLO 6** (for experimental projects) propose and execute physics experiments or astronomical observations, analyze results and sources of errors of the experiment or observation in comparison with predictions
- **CLO 7** (for projects involving team work) collaborate and communicate effectively in the team, which may comprise of people of different culture, gender and nationality

Pass in at least 24 credits of advanced level (3XXX level or above) disciplinary core/elective courses of the Physics Major, Physics (Intensive) Major, Mathematics/Physics Major or Astronomy Major curriculum.

This capstone course is for Astronomy, Mathematics/Physics, Physics, and Physics (Intensive) Majors students only.

The earliest that a student is allowed to take this capstone course is their year 3 study.

**Pre-requisites (and Co-requisites and impermissible combinations)**
Pass in at least 24 credits of advanced level (3XXX level or above) disciplinary core/elective courses of the Physics Major, Physics (Intensive) Major, Mathematics/Physics Major or Astronomy Major curriculum.

**Offer in 2021 - 2022**

### Course Objectives

This graduate level course covers the theory of classical electromagnetic field, enabling them to master key analytical tools for solving real physics problems. This is an elective course for the theoretical physics theme.

### Course Contents & Topics

This course will introduce and discuss the following topics: boundary-value problems in electrostatics and Green Function method; electrostatics of media; magnetostatics; Maxwell's equations and conservation laws; gauge transformations; electromagnetic waves and wave guides.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: Analyse and solve various electrostatic and magnetostatic problems with Green's Function method.
- CLO 2: Comprehend and explain many electromagnetic phenomena.
- CLO 3: Recognise and comprehend the important concepts of conservation laws and gauge transformations, which should be very helpful for doing research in future.

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in PHYS3150 and PHYS4450.

J. J. Sakurai: Modern Quantum Mechanics (Addison-Wesley, 1994)

### Grade Descriptors

- **A**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B**: Demonstrate substantial command of the knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C**: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **D**: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail**: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
PHYS7550  Graduate statistical mechanics (6 credits)  Academic Year 2021
Offering Department Physics  Quota ---
Course Co-ordinator Dr G Chen, Physics (gangchen@hku.hk)
Teachers Involved (Dr G Chen, Physics)
Course Objectives This graduate level course covers advanced topics in equilibrium statistical physics. This is an elective course for the theoretical physics theme.
Course Contents & Topics Ensemble theory: the micro-canonical ensemble, the canonical ensemble, and the grand canonical ensemble; quantum mechanical ensemble theory; theory of simple gases, ideal Bose systems, ideal Fermi systems; statistical mechanics of interacting systems; some topics in the theory of phase transition may be selected.
Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 discuss the various classical ensembles and quantum ensembles
CLO 2 solve the statistical mechanics problems using ensemble theory
CLO 3 explain the connection between classical statistical mechanics and quantum statistical mechanics
CLO 4 explain the concept of density matrix
Pre-requisites Pass in (PHYS3550 and PHYS4351) or PHYS4550

Offer in 2021 - 2022

PHYS7551  Graduate solid state physics (6 credits)  Academic Year 2021
Offering Department Physics  Quota ---
Course Co-ordinator Prof J Wang, Physics (jianwang@hku.hk)
Teachers Involved
Course Objectives To provide students with an understanding of more advanced topics in selected areas of solid state physics.
Course Contents & Topics Bloch theory. Nearly free electrons and tight binding model. Band structure calculations for realistic systems. The semi-classical model of electron dynamics. Ab initio total energy calculations and other advanced topics.
Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 discuss various methods to calculate the band structures and the major approximations that have been used
CLO 2 discuss various minimization methods
CLO 3 discuss the concepts of density functional theory
CLO 4 explain the concept of first principle calculation and various approximations used
Pre-requisites Pass in PHYS3551 and PHYS4351

Offer in 2021 - 2022
Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presenational skills.
C Demonstrate general but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Objectives
This course is designed to let fresh postgraduate students know fundamental concepts and principles of nano physics, such as two-dimensional electron gas, quantum Hall effects, one-dimensional electron system, quantum wires and nanotubes, zero-dimensional electron systems, single electron effects and quantum dots.

Course Contents & Topics
Introduction to nano physics and quantum size effect. Dimensionalities and density of states. Optical and transport properties of two-dimensional electron gas formed at heterostructures and within novel graphene monolayers with external fields. Quantum Hall Effects. Physics of one-dimensional electron systems including carbon nanotubes and semiconductor nanowires. Fundamental physics of zero-dimensional electron systems. Single electron effects. Quantum dots and nanocrystals. Fundamental principles and applications of scanning tunneling microscopy in the study of nano physics. If time permits, the making and application aspects of nanomaterials will also be discussed.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 recall basic concepts and knowledge of dimensionality, density of states, quantum size effect
CLO 2 identify and compare optical and transport properties of two-dimensional electron gas with external fields, especially quantum Hall effects.

CLO 3 recognize the fundamental principles and important applications of scanning tunneling microscopy in the study of nano physics.

CLO 4 describe the basic physics of one-dimensional electron systems including carbon nanotubes and semiconductor nanowires.

CLO 5 understand the central physics of zero-dimensional quantum dots and nanocrystals, single electron effects.

Pre-requisites
- Pass in PHYS3551 and PHYS4351

And Impermissible
- Pass in CHEM2041 or ENVS2001 or ENVS2002 or PHYS2265

Course Objectives
- In this course, students will learn about various kinds of radiations in the environment, the experimental techniques to detect them, the methods to trace them and to assess their hazard to the environment, and the ways to reduce the hazard in events of nuclear accidents or incidents.

Course Contents
- Environmental radiation (6 credits)

Course Learning Outcomes
- On successful completion of this course, students should be able to:
  - CLO 1: realise sources and transport of radionuclides in the environment
  - CLO 2: explain and assess the impact to the environment from the use of nuclear energies
  - CLO 3: detect and measure low level radioactivities in environmental samples
  - CLO 4: justify, optimize, and assess the risk of using radiation and nuclear technologies
  - CLO 5: compare and contrast the environmental impacts from nuclear energy and other forms of energy

Pre-requisites
- Pass in CHEM2041 or ENVS2001 or ENVS2002 or PHYS2265

Offer in 2021 - 2022
- N Offer in 2022 - 2023: Y

Department of Physics
In this course, the students will learn about sustainability and environmental impact of different energy technologies, including conventional energy sources as well as renewable and/or clean energy sources. The technological challenges, potential for future development, and environmental impacts (community, regional, and global) will be discussed.

The course will cover energy production and use, environmental impact of energy use, fossil fuels and methods for making them more sustainable, clean fuels, electricity generation, renewable energy technologies (with emphasis on biomass, wind and solar energy), hydrogen, energy storage, and energy conservation.

ENTR2001

Professional and leadership development (6 credits)

Offering Department: Faculty
Offering Department: Dr R Law, Faculty (rockylaw@hku.hk)

Course Co-ordinator: (Dr R Law, Faculty of Science)
(Ms J Lloyd, CEDARS)

Course Objectives:
This course is to provide opportunity for:
1. Students to develop an entrepreneurial mindset and be better prepared for entering into any entrepreneurial environment.
2. Students to further sharpen their communication skills, such as presentation and pitching of ideas.
3. Students to further enhance their networking skills, such as in social events.
4. Students to understand how different personalities and working / leadership styles fit into team work.

Course Contents & Topics:
This course students’ awareness of some important entrepreneurial skills and providing them with platforms to hone essential skills necessary to succeed as a leader in operating an entrepreneurial venture. One of the course components will also allow students to self-reflect and develop practical sense on how different personalities and work styles can help build leadership capacity as well as foster stronger team collaboration.

Course Learning Outcomes:
On successful completion of this course, students should be able to:
1. Stimulate students to contemplate how business opportunities can be generated from science and technology.
2. Teach students the process of translating scientific ideas to commercial products and/or services and the challenges therein.
3. Help students to understand the different regulatory requirements for science and technology based business opportunities, and the different stages of clinical trial required for biomedical products/services.
4. Inspire students to identify potential business ideas from science and technology research and to synthesise a feasible action plan for a start-up company.

Course Descriptors:

All level 1 undergraduate course

Grade Descriptors:

Distinction/Pass/Fail

Distinction: Demonstrate excellence in applying knowledge to solve problems in the course work. Demonstrate excellence in handling and carrying out the work assigned by teacher(s) and external professional trainer(s). Establishes highly effective collaboration and communication with supervisor(s) and team members in the course. Successfully fulfills the requirements set out in the Course Description regarding attendance, assignments, reports, and evaluation by teacher(s), external trainer(s), etc.

Pass: Able to apply knowledge to solve problems in the course work. Successfully handles and carries out the work assigned by teacher(s) and external professional trainers. Establishes effective collaboration and communication with supervisor(s) and team members in the course. Successfully fulfills the requirements set out in the Course Description regarding attendance, assignments, reports, and evaluation by teacher(s) and external professional trainer(s), etc.

Fail: Very limited or no ability to solve problems in the course work. Fails to handle or carry out the work assigned by teacher(s) and external professional trainer(s). Fails to establish effective collaboration or communication with supervisor(s) and team members. Fails to satisfy the requirements set out in the Course Description regarding attendance, assignments, reports, or evaluation by teacher(s) and external professional trainer(s), etc.

Assessment Methods and Weighting:

Methods: Details | Weighting in final course grade (%) | Assessment Methods to CLO Mapping

Assignments: Include in class and home assignments | 40 | CLO 1, 2, 3, 4

Essay: Experiential learning activities and reflective journal | 10 | CLO 1, 2, 3, 4

Project reports: Include Job Application Review & Mock Interview and Group Presentation | 50 | CLO 1, 2, 3, 4

Required/recommended reading and online materials:
Business and Administrative Communication by Kitty Locker and Donna Kienzler
Organizational Behavior by Stephen P. Robbins and Timothy A. Judge
Group Dynamics by Donelson R. Forsyth
Talk Like TED: The 9 Public-Speaking Secrets of the World’s Top Minds by Carmine Gallo

Additional Course Information:
This course is opened up for year 2 students or beyond. However, priority will be given to year 3 students.

ENTR3001

Science-based innovation development (6 credits)

Offering Department: Faculty
Offering Department: Dr M Kotaka, Biomedical Sciences (masayo@hku.hk)

Course Co-ordinator: (Dr B H Yuen, Biomedical Sciences)
(Mr J E Broer, Biomedical Sciences)

Course Objectives:
1. Stimulate students to contemplate how business opportunities can be generated from science and technology.
2. Teach students the process of translating scientific ideas to commercial products and/or services and the challenges therein.
3. Help students to understand the different regulatory requirements for science and technology based business opportunities, and the different stages of clinical trial required for biomedical products/services.
4. Inspire students to identify potential business ideas from science and technology research and to synthesise a feasible action plan for a start-up company.

Course Contents & Topics:
Topics will include identification of business opportunities from science and technology, the stages involved in translation of science into a commercial product, understanding the challenges of translating scientific ideas into products, understanding the regulatory requirements for technology-based products.

Course Learning:
On successful completion of this course, students should be able to:
### Course Description

#### Course Title
Customer analysis and strategic marketing (6 credits)

#### Course Objectives
1. Students to master techniques to identify customers' needs and market situations.
2. Students to learn how to define strategies to satisfy customers' needs and to capture market shares.
3. Students to learn how to develop systematic approaches for commercializing an innovation from the result of analyzing the current market condition and customers' need.
4. Students to evaluate local and international cases on disruptive/market driven innovation.
5. Students to synthesize and implement their own approaches to invent for the need and develop a business solution to address the need by an innovative idea/new product.

#### Course Contents & Topics
This course focuses on data collection and analysis of market and customers' need, through which innovation and commercial opportunities could be identified together with systematic approaches addressing them. The students will learn about practical way of data collection and analysis and about how data-driven business decision will be made wisely. Local and international case studies on disruptive/market driven innovation will also be analyzed and evaluated.

#### Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1: demonstrate an understanding on how science and technology can generate business opportunities.
- CLO 2: acquire knowledge of the process and stages involved in translating a scientific idea into a commercial product.
- CLO 3: identify the challenges encountered in translating scientific ideas into product and understand how to generate solutions to those challenges.
- CLO 4: have a clear understanding of the different regulatory requirements for different technology-based products, as well as the different stages of clinical trials required for the development of biomedical-related products.
- CLO 5: demonstrate the ability to critically evaluate cases of science-based business success or failures in written assessments.
- CLO 6: evaluate cutting-edge science and technology research to identify potential business opportunities and to devise and deliver a feasible action plan to bring the science into product in the form of an oral presentation with visual or digital aid.

#### Offer in 2021 - 2022
<table>
<thead>
<tr>
<th>Y</th>
<th>2nd sem</th>
<th>Offer in 2022 - 2023: Y</th>
</tr>
</thead>
</table>

#### Grade Descriptors

- **A**
  - Candidate has consistently demonstrated a thorough understanding and skills required for attaining all the course learning outcomes. S/he has shown the ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. S/he has demonstrated highly effective organizational and presentation skills.

- **B**
  - Candidate frequently demonstrated a substantial understanding and skills required for attaining at least most of the course learning outcomes. S/he has shown the ability to apply knowledge to familiar and unfamiliar situations. S/he has demonstrated effective organizational and presentation skills.

- **C**
  - Candidate demonstrated general but incomplete understanding and skills required for attaining most of the course learning outcomes. Some of the responses are well organized, clear but with insufficient elaboration – there is significant room for improvement to achieve a more satisfactory level. S/he has demonstrated moderately effective organizational and presentation skills.

- **D**
  - Candidate demonstrated partial but limited understanding and skills required for attaining some of the course learning outcomes. Solutions to questions and problems contain unstructured but relevant observations. Candidate has shown marginal interest in the subject. S/he has demonstrated limited or barely effective organizational and presentation skills.

- **Fail**
  - Candidate showed little or no evidence of basic familiarity with the subject, nor demonstration of sufficient effort to basic project and course requirement. Organizational and presentation skills are minimally effective or ineffective.

#### Additional Course Information
Further to what has been described in the assessment section, participation and engagement in the class and tutorial is required in this course.

ENTR4966  Entrepreneurship internship (6 credits)  Academic Year 2021
Offering Department  Faculty  Quota 24
Course Co-ordinator  Dr R Law, Faculty (rockylaw@hku.hk)
Teachers Involved  (All academic staff in Faculty of Science.)
Course Objectives  This course is to provide opportunity for students:
1. To practice what they learned related to entrepreneurship through prior university coursework in real-life work environment.
2. To acquire first-hand experience in industries for the preparation of their own business ventures.
Course Contents & Topics  Students taking this course will work as an intern for at least 160 hours in at least 20 working days within the University or outside the University in a company (preferably technology based startup company). The internship may be arranged by the Faculty or obtained by students themselves.
1. Within the university: The student will be supervised by a staff member (Supervisor), working on a project or various tasks as instructed by the Supervisor.
2. Outside the university: The student will be supervised under a staff member of the external agency (the External Supervisor) and a staff member of the Faculty/ School/Department of the student (the Internal Supervisor).
Course Learning Outcomes  On successful completion of this course, students should be able to:
CLO 1 to integrate and apply knowledge gained in coursework in a real-life setting
CLO 2 to experience the culture of a real organization and challenges encountered in entrepreneurship
CLO 3 to further improve problem-solving and collaborative skills in a real-life setting
CLO 4 to gain hand-on experience from external startup companies or internal research group about their daily operations and special activities that will help them to prepare for their own startup venture in the near future
Pre-requisites (and Co-requisites and Impermissible combinations)  Pass in ENTR3001 and ENTR3002
Students must be in their Year 3 study or beyond, as well as minoring in Science Entrepreneurship.
Offer in 2021 - 2022  Y  Summer  Offer in 2022 - 2023 : Y
Grade Descriptors Distinction/Pass/Fail  Distinction  Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
Pass  Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of “Distinction”.
Fail  Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.

---

**ENTR4999: Entrepreneurship project (6 credits)**

**Offering Department:** Faculty

**Course Co-ordinator:** Dr R Law, Faculty (rockylaw@hku.hk)

**Teachers Involved:** (All academic staff in Faculty of Science.)

### Course Objectives

- This course is aimed to provide opportunity for students to:
  1. Apply entrepreneurship-related knowledge gained through prior university coursework and hand-on experiences gained from prior internship course to carry out in-depth business potential evaluation and to develop start-up proposals.
  2. Students to further develop leadership and teamwork experience via collaboration in multi-disciplinary environments.

### Course Contents & Topics

- This course is offered to students as the final course in the minor programme in Science Entrepreneurship. Under the supervision and guidance of an academic staff, students are to use the knowledge they have gained in all years of study to practice entrepreneurship. This can be achieved by conducting technology trend, market analysis and product identification for defining market-product fit solutions. Students are expected to participate, with the result from their hands-on experience in projects, competitions (such as the HKU DreamCatchers initiative, various Hackathon activities and “Challenge Cup” National Competition... etc.) and to develop start-up companies thereafter.

### Course Learning Outcomes

- On successful completion of this course, students should be able to:
  - CLO 1: to integrate and apply theoretical knowledge in a real-life setting
  - CLO 2: to adopt appropriate tools to analyze real-life entrepreneurship issues
  - CLO 3: to further improve presentation, problem-solving and collaborative skills in tackling real-life problems
  - CLO 4: to build a team, with members from different specialized areas, that is ready for business venture
  - CLO 5: to prepare a viable business plan that is ready for fund raising activities

### Pre-requisites (and Co-requisites and Impermissible combinations)

- Pass in ENTR3001 and ENTR3002
- Students must be in their Year 3 study or beyond, as well as minoring in Science Entrepreneurship.

SCNC1111  Scientific method and reasoning (6 credits)  Academic Year 2021

Offering Department Faculty
Course Co-ordinator Dr R K W Lui, Faculty (lui2012@hku.hk)
Teachers Involved (Dr R K W Lui, Faculty of Science)

Course Objectives

The objectives are to give students a holistic view of the science discipline in terms of its nature, concepts and impact on civilization and society; to equip students with basic skills of logical and quantitative reasoning; and to introduce to students mathematical and statistical methods for science studies and research.

Course Contents & Topics

Part I: The nature and methodology of science
- Demarcation between science and non-science
- Shared features of the sciences
- Scientific method
- The role of mathematics in the historical development of science

Part II: Quantitative reasoning
Topics selected from the following ones, which are grouped under three categories:

a. Mathematics
- Foundation of mathematics
- Mathematics and advancement of science - an introduction
- Mathematical modelling - an introduction
- Guessimation
- Difference equations
- Linear algebra and matrices
- Calculus and differential equations
- Fractals and Chaos

b. Statistics
- Probability rules
- Probabilistic methods
- Statistical inference
- Confidence intervals estimation
- Hypothesis testing
- Decision making with statistics
- Statistical modelling, and use and misuse of statistics

c. Data Analysis and Programming using Microsoft Excel
- Performing operations by using formulas and functions
- Managing charts

Outcomes

On successful completion of this course, students should be able to:

CLO 1 describe key aspects of scientific methodology
CLO 2 describe the key elements of the foundation of mathematics and statistics
CLO 3 identify the mathematics that underlies scientific problems
CLO 4 apply logical and quantitative reasoning to re-formulate both real life and scientific problems in mathematical terms, and to interpret their solutions

Pre-requisites (and Co-requisites and Impermissible combinations)

NIL
(This course is compulsory for all students taking a Science major offered by the Faculty of Science, except those who are eligible for exemption. Students should take this course in their first year.)

Offer in 2021 - 2022

Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of familiar and unfamiliar situations. Carry out computations carefully and correctly. Apply highly effective organizational and presentational skills.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Carry out computations mostly in a careful and correct way, but commit some minor computational errors. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Commit a number of minor computational errors. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Commit some substantial computational errors. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Commit serious computational errors. Organization and presentational skills are minimally effective or ineffective.

### Science Faculty

| Course Co-ordinator | Dr J C S Pun, Physics  
| Offerer Department | Faculty  
| Year Offered | 2022 - 2023 : Y  
| Additional Course Information | Candidates who have been admitted to Year 1 in 2020-21 (and thereafter) and have achieved any one of the following qualifications are exempted from taking SCNC1111. It is optional for them to take this course. Those who do not take this course should take a B-credit disciplinary elective course of the science major in lieu.  
- Level 4 or above in Mathematics Extended Part Module 1 or 2 in the Hong Kong Diploma of Secondary Education (HKDSE)  
- Level 5 or above in Mathematics Higher Level in International Baccalaureate (IB)  
- Grade B or above in Mathematics and Further Mathematics in General Certificate of Education Advanced Level (GCEAL)  
- Mathematics qualification in Gao Kao will be considered on a case-by-case basis  
| Course Contents & Topics |  
| (1) Universal principles and unifying concepts of science  
- Motion, force and gravity  
- Energy and Heat  
- Entropy and Order  
(2) Important reactions for the physical and the living world  
- Atoms and Molecules  
- Electronic configuration  
- Chemical bonds  
- Chemical reactions: acid-base, and redox  
- Chemical kinetics and thermodynamics  
(3) The living world  
- Definition and origin of life  
- Molecules of life  
- Genomics and DNA; Genetics and inheritance  
- Cells and systems  
- Evolution  
- Ecology and environment  
(4) Evolution in the physical world  
- Solid Earth, Earth’s atmosphere and hydrosphere  
- Earth’s motion in space  
- Planets and the solar system  
- Stars and the Sun, and the solar system  
- Cosmology  
| Course Learning Outcomes | On successful completion of this course, students should be able to:  
CLO 1 acquire an understanding of the historical development of modern science, the essence and spirit of scientific inquiry methods, and the role of science in the advancement of civilization over time  
CLO 2 understand and be familiar with the fundamental scientific principles and concepts  
CLO 3 appreciate the diversity of different scientific disciplines and develop multidisciplinary and interdisciplinary perspectives on scientific issues  
CLO 4 critically and creatively appraise received ideas and established knowledge through writing  
CLO 5 develop curiosity in science and an appreciation of sciences as related to different Science Majors and as a form of life-long learning  
CLO 6 describe the contemporary developments of a topic in science through group presentations  
| Pre-requisites (and Co-requisites and Impermissible combinations) | NIL  
| This course is compulsory for all students taking a Science major offered by the Faculty of Science, except those who are eligible for exemption. Students should take this course in their first year.  
| Offer in 2021 - 2022 | Y  
| Examination | Dec  
| Grade Descriptors (A+ to F) | A  
Demonstrate thorough mastery of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills.  
| B  
Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.  
| C  
Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.  
| D  
Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

The big history of our planet: a scientific perspective on everything that has ever happened (6 credits)

Offering Department
Faculty

Course Co-ordinator
Dr W M Y Cheung, Faculty (willmyc@hku.hk)

Teachers Involved
(Prof H F Yu, Physics)
(Prof Q A Parker, Physics)

Course Objectives
By exploring the Big History of our planet: from the Big Bang of the Universe, the synthesis of different chemical substances, through the evolution of various species on Earth, to the establishment of modern human society, the course aims to:

1. Discuss the process of scientific discovery, and how our current body of knowledge about Nature was established;
2. Develop students’ understanding of the multi-disciplinary nature of science;
3. Develop students’ understanding of the importance of science and technology to our society, in formulating policies in the society, and solving the future problems of our planet;
4. Increase scientific literacy.

Course Contents & Topics
Part I: From the Cosmos to the Atom
Main theme: How fundamental interactions between the building blocks of matter shape the Universe today as we know it;
Topics include: Big bang, nucleosynthesis, cosmic expansion, cooling of the universe, star formation, and thermal equilibrium of our planet Earth.

Part II: From the Atom to Life
Main theme: How we understand the transition from non-living matter to the diversified biosphere on earth today;
Topics include: Origin of life, evolution, natural selection and tree of life.

Part III: From Life to Mind to Society
Main theme: How our modern civilised society emerges through the development of intelligence and accumulation of knowledge; how science, technology, human society and environment influence one another;
Topics include: Neural networks and the emergence of intelligence, historical development of modern science, the role of science in human civilisation and the contemporary world.

Part IV: Looking into the Future
Main theme: Outlook on the future of science, technology, human society and environment; key challenges to be faced by humankind that could be addressed by science and technology;
Topics include: Students will attend one of several parallel modules on topics that suit their interests, such as nanotechnology, climate change, energy crisis, bioethics and artificial intelligence.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1: Appreciate and elaborate on the significance of major events in the development and formation of our Universe, our Earth system and our modern society.
CLO 2: Explain, with some level of depth and details, how a number of major theories allows us to understand the workings of the world.
CLO 3: Understand how different science disciplines fit and emerge from one another as a collective effort of the humankind to understand Nature.
CLO 4: Critically assess the mutual influence between science and human society, the role of science in our society as well as the making of science policy in our local region.
CLO 5: Evaluate some of the major challenges faced by humankind, and discuss solutions from a multi-disciplinary perspective.
CLO 6: Test claims and engage in historical analysis based on theories and practices from multiple disciplines.
Pre-requisites (and Co-requisites and Impermissible combinations)
Level 3 or above in at least one science subject at the pre-university level (HKDSE Physics, Chemistry, Biology, Combined/Integrated Science or equivalent).
This course is not offered to students in the 6901 BSc or 6119 BEd&BSc programmes.

Offer in 2021 - 2022: N

SCNC2121 Sustainable food production (6 credits)

Offering Department
Faculty

Course Co-ordinator
Dr H S El-Nezami, Biological Sciences (elnnezami@hku.hk)

Teachers Involved
(Elnezami@hku.hk)

Course Objectives
This course is designed to provide students with the opportunity to experience the inner-workings of a sustainable, campus farming operation, and to make connections between the ecosystems that nourish the thriving, urban communities surrounding the farm. Students will participate in plenary sessions with course instructors and guest lecturers from the UBC Faculty of Land and Food Systems, in guided group discussions, field trips on and off-campus, and in a variety of seasonal, hands-on farming activities.

Course Contents & Topics
The MacMillan building, home of the UBC Faculty of Land and Food Systems, will be the site of the plenary sessions, guest speaker lectures, and morning group discussion sessions. The south campus farm in UBC is the site of the majority of farming activities, including afternoon group discussions, harvest Fridays and market Saturdays. Students will have a chance to explore the UBC campus sustainability hot-spots, including the LFS orchard garden, the world-class CIRS green building, Place Vanier, home of an innovative campus chef, Steve Golleib, and the wiggle worm project in the Student Union Building/SUB. Students will also venture off-campus to the Vancouver Farmers’ Market and to Granville Island Public Market to provide a comparative view of marketing systems and the regionally grounded food system context.

The main approach to learning with this course is student-centered learning and hands-on experience. To meet course learning objectives, students are expected to attend and participate in all sessions, to contribute to group discussions and the group oral presentation, and to complete a series of reflective journals on each of the four main course themes—soils, biodiversity, seeds, marketing.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 connect underlying agroecosystem concepts and soil science fundamentals with principles and practices of sustainable farming
- CLO 2 observe and compare multiple models of agricultural food production in an urban and campus farm setting
- CLO 3 identify multiple strategies for creating on-farm biodiversity
- CLO 4 demonstrate a basic understanding of composting fundamentals
- CLO 5 demonstrate the ability to perform a select set of basic crop maintenance, harvest, washing, and packing techniques in a sustainable campus farm setting
- CLO 6 demonstrate best practices with post-harvest handling and food safety protocols
Pre-requisites (and Co-requisites and Impermissible combinations)

Students are expected to have passed at least 30 credits of level 1 and/or level 2 science courses. Students will also need to pass an interview in order to be enrolled in the course.

SCNC2122

Marine life science: a North East Pacific perspective (6 credits)

Academic Year: 2021

Quota: 32

Offering Department

Faculty

Course Co-ordinator

Dr T Vengatesen, Biological Sciences (rajan@hku.hk)

Teachers Involved

Dr T Vengatesen, Biological Sciences

(Prof G A Williams, Biological Sciences)

(Prof R S S Wu, Biological Sciences)

(Prof S Kwok, Earth Sciences)

Course Objectives

Marine Life Science is an integrated study of how the oceans influence large and small scale patterns of marine biology through biophysical interactions. By studying the temperate cold waters of the NE Pacific Ocean, students will learn marine habitats as habitable planet, to appreciate the dynamics of marine biodiversity, the complex interactions between the physical and biological components, fishery, and the services the coastal oceans provide to human. This course will provide an excellent opportunity for students to experience the diversity of marine life on the other side of the Pacific.

Course Contents & Topics

Lectures from both HKU and UBC teachers will introduce 'marine life science'; with a focus on biodiversity, abundance and distribution of species, productivity, coastal pollution, fisheries, aquaculture and climate change. The course will also introduce the commercial aspects of marine life, i.e. eel-grass, aquaculture and climate change mitigation through management of coastal ecosystems. All these lectures will be discussed through a series of field observations, presentations from guest lecturers and group discussions. There will be an excellent opportunity to touch and learn about Canada's wonderful marine life diversity in the Vancouver Aquarium, and the other side of the Pacific. Marine biodiversity survey techniques and methods of studying marine life in the field will be emphasized. Students will be exposed to a different learning environment involving not only HKU teachers and students but also UBC teachers and students, bringing diverse range of expertise, cultures, and learning opportunities from both sides of
## Course Learning Outcomes

On successful completion of this course, students should be able to:
- **CLO 1** understand the basics of marine life science and the marine habitable planet
- **CLO 2** explain the major types, causes, and effects of marine threats such as pollution, overfishing, global warming and ocean acidification, and invasive species, as well as describe the consequences of these threats for marine communities and ecosystem services
- **CLO 3** describe the difference between coastal marine biodiversity and harbors in Hong Kong and Canada
- **CLO 4** discover the reasons why marine biodiversity and ecosystem services in Hong Kong are so different from the North Pacific coastal ecosystems

## Pre-requisites (and Co-requisites and Impermissible combinations)

Students are expected to have passed at least 30 credits of level 1 and/or level 2 science courses. Students will also need to pass an interview in order to be enrolled in the course.

## SCNC3111

Frontiers of science honours seminar course (6 credits) Academic Year 2021

### Offering Department

<table>
<thead>
<tr>
<th>Faculty</th>
</tr>
</thead>
</table>

### Course Co-ordinator

Dr R K W Lui, Faculty (lui2012@hku.hk)

### Teachers Involved

- Dr C Zheng, Biological Sciences
- Dr D Yu, Faculty of Science
- Dr E K M Leung, Faculty of Science
- Dr R K W Lui, Faculty of Science

### Course Objectives

- To introduce the research being done by our Faculty's professors
- To broaden and enrich students' scientific knowledge in and outside of their chosen major
- To foster intellectual discussions between our research professors and students
- To observe how research is done and note the thinking processes and paths that lead to scientific discoveries
- To enhance students' awareness of the importance of science to solve some of the problems facing the society
- To collaborate with and learn from peers from different academic backgrounds in a scientific setting
- To develop essential written and spoken communication skills
- To serve as a potential mentor-mentee matching platform for faculty members and students
- To develop an awareness of research ethics

### Course Contents & Topics

Professors from different departments will be featured in the honours seminar course, and they will discuss their latest research with students. The topics will span the areas of Biological Sciences, Chemistry, Earth Sciences, Physics, as well as Mathematics/Statistics & Actuarial science. In addition, the following topics to prepare students for conducting and communicating research will also be introduced: Introduction to Different Search Engines for Scientific Journals and/or Decoding a Scientific Paper and/or Effective Communication for Scientists (Writing, Oral and Poster Presentations).

### Course Learning Outcomes

On successful completion of this course, students should be able to:
- **CLO 1** describe and discuss in an informed manner the fields of research of some of our research professors
- **CLO 2** identify how professors with different scientific training solve their research problems
CLO 3: apply literature search skills to identify and develop a research topic
CLO 4: practice and master scientific writing and presentation skills
CLO 5: demonstrate interpersonal skills in collaborating with their peers in a scientific setting
CLO 6: devise a research proposal and evaluate their peers’ works

Pass in a level 2 science course.
The course is for Science students only.
Students who participated or will participate in ORF/SRF must take this course.

Pre-requisites
Pass in a level 2 science course.
The course is for Science students only.
Students who participated or will participate in ORF/SRF must take this course.

Department of Statistics & Actuarial Science

STAT1005

Offering Department
Statistics & Actuarial Science

Course Co-ordinator
Dr A S M Lau, Statistics & Actuarial Science (adelalau@hku.hk)

Teachers Involved
- (Dr A S M Lau, Statistics & Actuarial Science)
- (Dr R Luo, Computer Science)
- (Dr Y Huang, Statistics & Actuarial Science)

Course Objectives
The course introduces basic concepts and methodology of data science to junior undergraduate students. The teaching is designed at a level appropriate for all undergraduate students with various backgrounds and without pre-requisites.

Course Contents & Topics
- General introduction to data science
  - Overview with selected case studies. General discussion on origins and forms of data, associated questions and types of tools for their analysis.
- Data management and exploration
  - Data sources, data collection and its impact on visualization, modeling and generalizability of results; data cleaning/extraction; Quick introduction to high level programming language and Integrated Development Environment (IDE) (Python, R); Exploratory Data Analysis (EDA); Summaries, aggregation, smoothing, distributions of data; Data visualization
- Data analytics
  - Complements on programming;
  - Statistics (1): model for randomness, random variables, distributions, histograms, correlations.
  - Statistics (2): independent sample, estimation of mean and variance, confidence interval, hypothesis testing with p-value.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 Explore and wrangle over data; summarize and visualize data
CLO 2 Formulae problems and bring elementary concepts in estimation, prediction, and inference to bear
CLO 3 Write basic functions and simple data analysis codes using state-of-art computing software

Pre-requisites (and Co-requisites and Impermissible combinations)
Not for students who have passed or already enrolled in any of the following courses: COMP2501, STAT1015; and
Not for Year 2 or above BSc(ActuarSc) and BEng(CompSc) students; and
Not for Year 4 or above students majoring in Computer Science/Decision Analytics/Risk Management/Statistics; and
Not for students who have passed or already enrolled in any of the following courses: COMP2501, STAT1015; and
Not for Year 2 or above students majoring in Computer Science/Decision Analytics/Risk Management/Statistics; and
Not for Year 4 or above students from any curriculum.

1016
Course Objectives
The course introduces basic concepts and methodology of data science to junior undergraduate students. The teaching is designed at a level appropriate for all undergraduate students with various backgrounds and without pre-requisites.

Students will engage in a full data work-flow including collaborative data science projects. They will study a full spectrum of data science topics, from initial investigation and data acquisition to the communication of final results.

Specifically, the course provides exposure to different data types and sources, and the process of data curation for the purpose of transforming them to a format suitable for analysis. It introduces elementary notions in estimation, prediction and inference. Case studies involving less-manicured data are discussed to enhance the computational and analytical abilities of the students.

Course Contents & Topics
- General introduction to data science
  * Overview with selected case studies. General discussion on origins and forms of data, associated questions and types of tools for their analysis.
- Data management and exploration
  * Data sources, data collection and its impact on visualization, modeling and generalizability of results; data cleaning/extraction; Quick introduction to high level programming language and Integrated Development Environment (IDE) (Python, R); Exploratory Data Analysis (EDA); Summaries, aggregation, smoothing, distributions of data; Data visualization
- Data analytics
  * Complements on programming;
  * Statistics (1): model for randomness, random variables, distributions, histograms, correlations.
  * Statistics (2): independent samples, estimation of mean and variance, confidence interval, hypothesis testing with p-value.
- STAT1015 Workshops: these workshops cover a few selected topics on advanced knowledge of the contents above. Potential topics include advanced data visualization, advanced hypothesis testing and automated variable selection in regression models.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 Explore and wrangle over data; summarize and visualize data
CLO 2 Formulate problems and bring elementary concepts in estimation, prediction, and inference to bear
CLO 3 Write basic functions and simple data analysis codes using state-of-art computing software
CLO 4 Complete a real data analysis project using advanced methods

STAT1600 Statistics: ideas and concepts (6 credits)
Offering Department Statistics & Actuarial Science
Academic Year 2021
Quota ---

Course Co-ordinator Dr C W Kwan, Statistics & Actuarial Science (ckwkw@hku.hk)
Teachers Involved
- Dr C W Kwan, Statistics & Actuarial Science
- (Dr E A L Li, Statistics & Actuarial Science)
- (Dr Y K Chung, Statistics & Actuarial Science)
Course Objectives
The course aims at providing a broad overview of statistics for students who aspire to major in Statistics or Risk Management. It focuses on the roles of statistics as a scientific tool with applications to a wide spectrum of disciplines, and as a science of reasoning which has revolutionized modern intellectual endeavours. It lays a panoramic foundation for a formal study of statistics at the university level.

Course Contents & Topics
- Data collection: observational studies versus designed experiments
- Data presentation: tables; graphs; frequency distributions; correlations; trends
- Probability: randomness; probability models; distributions; measures of central tendency and dispersion
- Inference: estimation; tests of significance and hypotheses; confidence intervals; regression; prediction
- Further issues: controversies; misuse of statistics; ethics.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand the role of statistics as a tool for scientific reasoning
CLO 2 present data in a useful and informative way
CLO 3 acquire basic concepts and perspectives of statistical modelling and inference
CLO 4 distinguish between good and bad statistical practices
CLO 5 pursue a major study in Statistics or Risk Management with a well-established conceptual foundation

Pre-requisites (and Co-requisites and Impermissible combinations)
Not for students who have passed in any of the following courses: STAT1602, STAT1603, STAT3902.

STAT1601 Elementary statistical methods (6 credits)

Offering Department
Statistics & Actuarial Science

Course Co-ordinator
TBC; Statistics & Actuarial Science ()

Teachers Involved

Course Objectives
Research findings are usually supported by data. Data collected in an experiment/survey are often concerned with situations involving variability and uncertainty. They are used to estimate the true value of a certain quantity or to test the acceptability of a certain new hypothesis. Valid methods of analysing the data are thus essential to any successful investigation. The course aims to present the fundamentals of statistical methods widely used by researchers. Microsoft Excel might be used to carry out some statistical analysis. There is no demand of sophisticated technical mathematics.

Course Contents & Topics
The course will introduce and study the following topics:
- Presentation of data, Measures of Central Tendency, Measures of Variability and Uncertainty, Basic Probability Laws, Common Probability Distributions such as Uniform, Binomial, Poisson, Hyper-geometric, Geometric and Normal distributions, Random Sampling. Distribution of the Mean, Normal Sampling Theorem, Point Estimation, Confidence Intervals, Sample Size Determination, Hypothesis Testing, Inferences for Mean and Proportion, Chi-squared tests, Simple Regression and Correlation

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 select and use appropriate statistical methods to analyze data
CLO 2 perform statistical analysis with calculator and Microsoft Excel
CLO 3 understand and apply basic concepts of probability
CLO 4 gain familiarity with the fundamental concepts of random variables
CLO 5 make inferences on a population based on sample data
CLO 6 determine the most appropriate statistical method to use for a given statistical problem
CLO 7 write appropriate conclusions based on the statistical results
CLO 8 understand the basic principles of simple linear regression and correlation and their applications to practical problems
Outcomes

Course Learning Outcomes

1. Understand the methods for describing sets of data
2. Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show some analytical and critical abilities and logical thinking, and ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
3. Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
4. Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Pre-requisites (and Co-requisites and Impermissible combinations)
Level 2 or above in HKDSE Mathematics or equivalent; and Not for students with Level 2 or above in HKDSE Mathematics Extended Module 1 or 2; and Not for students who have passed or already enrolled in any of the following courses: STAT2901, STAT1602, STAT2601, STAT1603, ECON1280

Offer in 2021 - 2022

Grade Descriptors (A+ to F)
A. Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B. Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply moderately effective organizational and presentational skills.
C. Demonstrate general but incomplete command of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply moderately effective organizational and presentational skills.
D. Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Academic Year 2021

Quota ---

Course Co-ordinator Dr J T Y Wong, Statistics & Actuarial Science (jefftywong@hku.hk)
Teachers Involved (Dr J T Y Wong, Statistics & Actuarial Science)

Course Objectives The discipline of statistics is concerned with situations involving uncertainty and variability. Variability greatly affects the interpretation of data. Thus statistics forms an important descriptive and analytical tool. This elementary course, which is taught without much technical mathematics, presents many standard situations of data analysis and interpretation with emphases on business examples. The statistical tests of these situations are presented. Microsoft Excel might be used to carry out some statistical analysis.

Course Contents & Topics The course will introduce and discuss the following topics: Presentation of Data, Measures of Central Tendency, Measures of Variability and Uncertainty, Elementary Probability and Rules and Basic Probability Distributions such as Binomial, Normal, Poisson, Hyper-geometric and Geometric, Random Sampling, the Normal Sampling Theorem, Point Estimation, Confidence Intervals and Sample Size Determination, Hypothesis Testing involving Inferences for Means and Proportions as well as the Chi-square tests, Simple Regression and Correlation, Elementary Time Series and Index Numbers

Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 understand the methods for describing sets of data
CLO 2 perform statistical analysis with calculator and Microsoft Excel, draw conclusions from data using numerical summaries
CLO 3 understand and apply basic concepts of probability
CLO 4 gain familiarity with the fundamental concepts of random variables
CLO 5 make inferences on a population based on sample data
CLO 6 determine the most appropriate statistical method to use for a given statistical problem
CLO 7 gain familiarity with the fundamental concepts of statistical inference as they apply to a variety of problems
CLO 8 understand the basic principles of simple linear regression and correlation and their applications to practical problems in today's society

Pre-requisites (and Co-requisites and Impermissible combinations)
Not for students who have passed or already enrolled in any of the following courses: STAT1601, STAT2601, STAT1603, STAT2901 or ECON1280

Offer in 2021 - 2022

Grade Descriptors (A+ to F)
A. Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B. Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply highly effective organizational and presentational skills.
C. Demonstrate general but incomplete command of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply moderately effective organizational and presentational skills.
STAT1603 Introductory statistics (6 credits)

Offering Department
Statistics & Actuarial Science

Course Type
Lecture-based course

Course Description
The discipline of statistics is concerned with situations involving uncertainty and variability. The interpretation of data needs special techniques when variability plays a role, as it usually does. Thus statistics forms an important descriptive and analytical tool of many scientific disciplines. Candidates with a mathematical background will find this course suitable, because the language of mathematics allows the subject of statistics to be presented with economy and clarity.

Course Objectives
On successful completion of this course, students should be able to:
- CLO 1 compute different measures of central tendency and dispersion
- CLO 2 make use of the basic probability theory and techniques to solve practical problems
- CLO 3 know how to construct confidence intervals and use hypotheses testing to carry out inference on the population
- CLO 4 use linear regression and correlation methods to solve problems in science and in social and business environment

Pre-requisites (and Co-requisites and Impermissible combinations)
(Level 2 or above in HKDSE Mathematics Extended Module 1 or 2 or equivalent) or
(Pass or already enrolled in any of these courses: MATH1009, MATH1011, MATH1013, MATH1851, MATH1853); and
Not for students who have passed or already enrolled in any of these courses: STAT1601, STAT1602, STAT2601, STAT2901

Grade Descriptors (A to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Lack of analytical and critical abilities, logical and coherent thinking. Students may have difficulty in applying knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Communication-intensive Course
N

Course Type
Lecture-based course

Course Objectives
The course aims to introduce students to the basic concepts and methods of statistics, with a focus on practical applications in various fields. Students will learn how to analyze and interpret data using statistical tools and techniques, as well as how to communicate statistical findings effectively.

Outcomes
- CLO 1: Students will be able to compute different measures of central tendency and dispersion.
- CLO 2: Students will be able to make use of the basic probability theory and techniques to solve practical problems.
- CLO 3: Students will be able to know how to construct confidence intervals and use hypotheses testing to carry out inference on the population.
- CLO 4: Students will be able to use linear regression and correlation methods to solve problems in science and in social and business environment.

Pre-requisites
Not for students who have passed or already enrolled in any of these courses: STAT1601, STAT1602, STAT2601, STAT2901.

Offer in 2021 - 2022
Y 1st sem 2nd sem Offer in 2022 - 2023: N

Assessment Methods
- Examination: One 2-hour written examination (75% of the course grade)
- Assignments: Coursework (assignments, tutorials, and a class test) (25% of the course grade)

### Department of Statistics & Actuarial Science

#### Probability and statistics I (6 credits)

**Offering Department:** Statistics & Actuarial Science

**Course Co-ordinator:** Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)

**Teachers Involved:** (Dr K P Wat, Statistics & Actuarial Science)

**Course Objectives**

The discipline of statistics is concerned with situations in which uncertainty and variability play an essential role and forms an important descriptive and analytical tool in many practical problems. Against a background of motivating problems this course develops relevant probability models for the description of such uncertainty and variability. Sample spaces; Operations of events; Probability and probability laws; Conditional probability; Independence; Discrete random variables; Cumulative distribution function (cdf); Probability mass function (pmf); Bernoulli, binomial, geometric, and Poisson distributions; Continuous random variables; Cumulative distribution function (cdf); Probability density function and normal distribution (pdf); Exponential, gamma and chi-square distributions; Functions of a random variable; Joint distributions; Marginal distributions; Conditional distributions; Independent random variables; Functions of jointly distributed random variables; Expected value; Variance and standard deviation; Covariance and correlation.

**Course Contents & Topics**

- Sample spaces; Operations of events; Probability and probability laws; Conditional probability; Independence
- Discrete random variables; Cumulative distribution function (cdf)
- Probability mass function (pmf); Bernoulli, binomial, geometric, and Poisson distributions
- Continuous random variables; Cumulative distribution function (cdf)
- Probability density function and normal distribution (pdf)
- Exponential, gamma and chi-square distributions
- Functions of a random variable; Joint distributions; Marginal distributions; Conditional distributions; Independent random variables
- Functions of jointly distributed random variables
- Expected value; Variance and standard deviation
- Covariance and correlation

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** understand the basic concepts in probability theory
- **CLO 2** gain some insights to statistics and inference
- **CLO 3** solve real-world problems by using probability calculations
- **CLO 4** pursue their further studies in statistics and quantitative analysis

**Pre-requisites (and Co-requisites & Impermissible combinations)**

Pass or already enrolled in MATH2104 or (MATH2101 and MATH2211); and not for students who have passed in STAT1603, STAT2901 or already enrolled in these courses; and not for BSc(ActuarialSc) students.

</tbody>
</table>
Course Objectives

This course is designed to provide a first-level introduction to the popular and powerful statistical programming language R. This course focuses on learning the basic programming skills in R with examples and applications in elementary statistical analysis. The programming skills involved can be applied to input and output of data sets, work with different data types, manipulation and transformation of data, random sampling, descriptive data analysis, and production of professional summary reports with high-quality graphs.

Course Contents & Topics

1. R basics: first steps; language essentials.
2. The R environment: session management; the graphics subsystem; R programming; data entry.
3. Probability and distributions: random sampling; probability calculations and combinatorics; discrete distributions; continuous distributions; the built-in distributions in R.
4. Descriptive statistics and graphics: summary statistics for a single group; graphical display of distributions; summary statistics by groups; graphics for grouped data; graphical display of tables.
5. Simple linear regression: residuals and fitted values; prediction and confidence bands; correlation.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 access online help and documents for R
CLO 2 use R to input data, perform data transformation and merging, output data
CLO 3 summarize data in tables and graphs for descriptive data analysis
CLO 4 work with numeric, character, and other unstructured data types
CLO 5 be able to write functions, loops and control flows
CLO 6 perform data management using SQL language in R
CLO 7 perform Monte Carlo simulations to validate statistical concepts

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT1600 or MATH1821, or already enrolled in this course

- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

- **B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

- **C** Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar situations. Apply moderately effective organizational and presentational skills.

- **D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Organization and presentional skills are minimally effective or ineffective.

- **Fail** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

**Course Objectives**

- The course covers the major methods for studying demographic and socio-economic statistics, with a quantitative evidence-based approach to understand the socio-economic well-being of residents in a territory. The course aims to provide students with:
  - 1) essential underlying principles and the pertinent methods behind internationally adopted statistical indicators; and
  - 2) skills in the statistical descriptions and further analysis for application to planning, policy-making and commercial endeavours of a territory.

| Course Objectives   | Demographic and socio-economic statistics with a quantitative evidence-based approach to understand the socio-economic well-being of residents in a territory. The course aims to provide students with:
  - 1) essential underlying principles and the pertinent methods behind internationally adopted statistical indicators; and
  - 2) skills in the statistical descriptions and further analysis for application to planning, policy-making and commercial endeavours of a territory. |

| Course Contents & Topics | Demographic statistics on population structure, fertility, mortality, migration, life tables, population projections; Socio-economic statistics on housing, labour, and social equity; Economic statistics on external trade, innovation, prices and GDP measurements (with emphasis on methods pertaining to some important economic sectors in the territory of GDP). Sources, theory and methods of such statistics; Examples would be especially drawn from Hong Kong, neighbouring economies or comparable economies. |

| Course Learning Outcomes | On successful completion of this course, students should be able to:
  - CLO 1 describe and interpret major official & other publicly disseminated socio-economic statistics of a territory
  - CLO 2 further appraise and analyse the socio-economic well-being of a territory with particular reference to Hong Kong, neighbouring economies or comparable economies
  - CLO 3 predict a future situation by extrapolating or referencing from appropriate statistics
  - CLO 4 critically assess statistics reporting |

| Pre-requisites (and Co-requisites and Impermissible combinations) | (Level 2 or above in HKDSE Mathematics or Level 2 or above in HKDSE Mathematics Extended Module 1 or 2 or equivalent); and Pass or already enrolled in BIOL2102, ECON1280, STAT1601, STAT1602, STAT2601, STAT1603, STAT2901 |

**Course Title:** Probability and statistics: foundations of actuarial science (6 credits)

**Offering Department:** Statistics & Actuarial Science

**Course Co-ordinator:** Prof S M S Lee, Statistics & Actuarial Science (amslee@hku.hk)

**Teachers Involved:** (Prof S M S Lee, Statistics & Actuarial Science)

**Course Objectives:**
- The purpose of this course is to develop knowledge of the fundamental tools in probability and statistics for quantitatively assessing risk. Applications of these tools to actuarial science problems will be emphasized. Students will have a thorough command of probability topics and the supporting calculations.

**Course Contents & Topics**
1. **General probability**
   - Basic elements of probability in set notation
   - Mutually exclusive events
   - Addition and multiplication rules
   - Independence of events
   - Combinatorial probability
   - Conditional probability and expectations
   - Bayes theorem / Law of total probability
   - Random variables
2. **Univariate probability distributions** (including binomial, negative binomial, geometric, hypergeometric, Poisson, uniform, exponential, chi-square, beta, Pareto, lognormal, Weibull and normal) and bivariate normal
   - Probability functions and probability density functions
   - Cumulative distribution functions
   - Mode, median, percentiles and moments
   - Variance and measures of dispersion
   - Central limit theorem
3. **Sampling distributions and introduction of estimation**

**Course Learning Outcomes:**
- On successful completion of this course, students should be able to:
  - CLO 1 understand the mathematical theory underlying the modern practice of statistics
  - CLO 2 develop skills in probabilistic analysis for problems involving randomness
  - CLO 3 apply techniques in probability and statistics to solve actuarial science problems

**Pre-requisites (and Co-requisites and Impermissible combinations):**
- Passes in MATH1821 [for BSc(ActuarSc) students] or already enrolled in this course, or
- Passes in MATH1013 or already enrolled in this course [for students outside the BSc(ActuarSc) programme]; and
- Not for students who have passed or enrolled in any of these courses: STAT1601, STAT1602, STAT1603, STAT2601

**Communication-intensive Course:**
- N

**Course Type:** Lecture-based course

**Course Teaching & Learning Activities**
- Activities: Details
  - Lectures: 36
  - Tutorials: 12
  - Reading / Self study: 100

**Assessment Methods and Weighting**
- Methods: Details
  - Assignments: Coursework (assignments, tutorials and a test)
  - Examination: One 2-hour written examination
- Weighting in final course grade (%): Assessment Methods to CLO Mapping
  - Assignments: 25 CLO 1.2.3
  - Examination: 75 CLO 1.2.3

**Required/recommended reading and online materials**

**Course Website:** http://moodle.hku.hk
Course Contents & Topics
Key topics include: measurement of interest, annuities certain; discounted cash flow analysis; yield rates; amortization schedules and sinking funds; bonds and related securities; practical applications such as real estate mortgage and short sales; stochastic approaches to interest; and key terms of financial analysis such as yield curves, spot rates, forward rates, duration, convexity, and immunization.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand basic concepts of financial mathematics
CLO 2 understand and formulate elementary financial problems
CLO 3 apply compound interest theory to tackle some practical financial problems
CLO 4 show an understanding of the term structure of interest rates
CLO 5 show an understanding of simple stochastic models for investment returns

Pre-requisites (and Co-requisites and Impermissible combinations)
Not for students who have passed in STAT3615, or already enrolled in this course.

Offer in 2021 - 2022
Y 2nd sem Offer in 2022 - 2023 : Y Examination May

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### Pre-requisites
Pass in STAT2602 and (COMP2113 or COMP2119 or COMP2396).

### Course Contents & Topics
- Study design techniques including randomized and observational designs
- Continuous, categorical and person-time data analysis
- Longitudinal and correlated data analysis
- Meta-analysis methods
- Measurement error methods
- Missing data methods
- Confounding and selection bias adjustment
- Large-scale inference

### Course Objectives
On successful completion of this course, students should be able to:

1. Understand the basic concepts of study designs
2. Learn statistical analysis for various types of biomedical data
3. Learn statistical methods for evidence synthesis
4. Learn statistical methods for handling various types of data
5. Learn statistical methods for handling large-scale inference

### Course Learning Outcomes
- Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, and ability to apply limited knowledge to most familiar situations. Apply limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- Fail

### STAT3600 Linear statistical analysis (6 credits)

**Offering Department:** Statistics & Actuarial Science  
**Course Co-ordinator:** Prof T W K Fung, Statistics & Actuarial Science (wingfung@hku.hk)

**Teachers Involved:** Prof T W K Fung, Statistics & Actuarial Science

**Course Objectives:**

The analysis of variability is mainly concerned with locating the sources of the variability. Many statistical techniques investigate these sources through the use of "linear" models. This course presents the theory and practice of these models.

- **(1) Simple linear regression:** least squares method, analysis of variance, coefficient of determination, hypothesis tests and confidence intervals for regression parameters, prediction.
- **(2) Multiple linear regression:** least squares method, analysis of variance, coefficient of determination, reduced vs full models, hypothesis tests and confidence intervals for regression parameters, prediction, polynomial regression.
- **(3) One-way classification models:** one-way ANOVA, analysis of treatment effects, contrasts.
- **(4) Two-way classification models:** interactions, two-way ANOVA for balanced data structures, analysis of treatment effects, contrasts, randomised complete block design.
- **(5) Universal approach to linear modelling:** dummy variables, 'multiple linear regression' representation of one-way and two-way (unbalanced) models, ANCOVA models, concomitant variables.
- **(6) Regression diagnostics:** leverage, residual plot, normal probability plot, outlier, studentized residual, influential observation, Cook's distance, multicollinearity, model transformation.

**Course Learning Outcomes:**

- On successful completion of this course, students should be able to:
  - CLO 1: understand linear regression model with one or multiple independent variables
  - CLO 2: understand ANOVA models for one and two factors
  - CLO 3: understand general linear model with categorical and continuous independent variables

**Pre-requisites (and Co-requisites and Impermissible combinations):**

- Pass in STAT2602; and
- Not for students who have passed in STAT3907, or have already enrolled in this course.

Course Contents & Topics

1. Decision problem - frequentist approach: loss function; risk; decision rule; admissibility; minimaxity; unbiasedness; Bayes' rule.
2. Decision problem - Bayesian approach: prior and posterior distributions, Bayesian inference.
3. Estimation theory: exponential families; likelihood; sufficiency; minimal sufficiency; completeness; UMVU estimators; information inequality; large-sample theory of maximum likelihood estimation.
4. Hypothesis testing: uniformly most powerful test; monotone likelihood ratio; UMP unbiased test; large-sample theory of likelihood ratio; confidence set.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 form a panoramic view of classical developments in mathematical statistics
CLO 2 gain thorough insight into the essentials of statistical inference
CLO 3 build a solid foundation for future research studies in statistics and related areas
Pass in STAT2602 or STAT3902

Pre-requisites

Not for students who have passed in STAT3903, or have already enrolled in this course.
Not for students who have passed in MATH3603, or have already enrolled in this course; and

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y

Grade Descriptors

(A+ to F)

A

Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B

Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

C

Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

D

Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

F

Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3603 Stochastic processes (6 credits)

Offering Department

Statistics & Actuarial Science

Course Co-ordinator

Prof J J F Yao, Statistics & Actuarial Science (jeffyao@hku.hk)

Teachers Involved

(Prof J J F Yao, Statistics & Actuarial Science)

Course Objectives

This is an introductory course in stochastic processes. It will cover the basic concepts of the theory of stochastic processes and explore different types of stochastic processes including Markov chains, Poisson processes and Brownian motions.

Course Contents & Topics

Introduction to probability theory, conditional probability and expectation, Markov chains, random walk models, classification of states in a Markov chain, calculation of limiting probabilities and mean time spent in transient states, Poisson process, distribution of inter-arrival time and waiting time, conditional distribution of the arrival time, Brownian Motion, hitting time and maximum variable, geometric Brownian motion, the Black-Scholes option pricing formula, Gaussian bridge, and stationary processes. Birth-and-death process, branching process and renewal process may also be covered (if time permits).

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 apply the conditioning method to calculate the mean and probability
CLO 2 understand the essentials of Markov chains, the Poisson process, and Brownian motion
CLO 3 understand how stochastic models can be applied to the study of real-life phenomena
Pass in STAT2601; and

Pre-requisites

Not for students who have passed in MATH3603, or have already enrolled in this course; and
Not for students who have passed in STAT3903, or have already enrolled in this course.

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y

Grade descriptors

(A+ to F)

A

Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Apply highly effective organizational and presentational skills.

B

Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
### Course Objectives

Scientific research often requires proper design and analysis of experiments. This course aims to introduce the basic principles of experimental design; to explain the concepts and to develop the statistical skills in model-based analysis of experiment.

### Course Contents & Topics

Basic principles and guidelines for designing experiments. Analysis for experiments with a single factor, randomised block, crossed and nested factorial structure. Balanced incomplete factorial experiments. Latin squares and related designs. Fixed/random effects models.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1: develop a conceptual understanding of experimental design
- CLO 2: acquire the fundamental statistical tools of experimental design and the understanding to use them appropriately
- CLO 3: select appropriate experimental designs for different problems
- CLO 4: select appropriate statistical model and to know how to validate the model

### Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT2602 or STAT3611 or STAT3902

### Quality control and management (6 credits)

**Offering Department**: Statistics & Actuarial Science

**Course Co-ordinator**: TBC, Statistics & Actuarial Science

**Course Objectives**

The successful control of quality in production is a matter of primary importance to a company's prosperity. This course provides an overview of quality compromise which involves both the producer and the consumer. It presents a variety of statistical solutions including control charts, acceptance and sequential sampling plans, reliability, and life-testing. Contemporary quality management systems such as total quality control, zero defects, six-sigma, and ISO-9000 will be introduced. The student is brought to the frontier of today's quality control and management ideas.

**Course Contents & Topics**

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1**: appreciate the practicality of statistical concepts and methods in general
- **CLO 2**: understand how certain specific statistical methods can benefit various production situations
- **CLO 3**: know the traditional and modern systems of quality management

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or STAT2602 or (STAT1603 and any University level 2 course) or STAT3902

**Offer in 2021 - 2022**: N

**Examination**: Examination One 2-hour written examination 7

**Grade Descriptors (A+ to F)**

- **A**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B**: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C**: Demonstrate general but incomplete command of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar situations. Apply moderately effective organizational and presentational skills.
- **D**: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail**: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### Business logistics (6 credits)

**Offering Department**: Statistics & Actuarial Science

**Offering Department**: Statistics & Actuarial Science

**Course Co-ordinator**: Dr O T K Choi, Statistics & Actuarial Science (ochao@hku.hk)

**Course Objectives**

Modern business corporations are increasingly using logistics as a management tool, for example, in capital budgeting problems, production planning, scheduling, transportations and deciding location for a new factory. This course addresses the business applications of logistics.

**Course Contents & Topics**

In this course, students will apply the analytical skills with aid of computer techniques in solving the business logistic problems. Topics include optimization techniques applied in allocation of resources, financial planning, transportation, assignment, inventory control and queuing problems.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1**: solve linear programming with Graphical approach, Simplex method and hands-on Excel Solving function
- **CLO 2**: set up and solve network flow problems using least-cost approach, MODI method and Vogel's approximation.
- **CLO 3**: understand decision theory and its applications.
Course Objectives

In clinical research, medical data are often observed which motivates the application of statistical methodology to the clinical observational and decision-making process. Also, statistical problems often arise from clinical trial designs. It involves phase I, II, III and IV clinical trial designs, both Bayesian and frequentist approaches, sample size and power calculation. No knowledge in biology or medicine is assumed; the course provides the necessary biomedical background when the statistical problems are introduced.

Course Contents & Topics

The contents of the course include contingency tables, regression models, survival analysis, categorical data analysis, Bayesian designs, dose-finding methods, sample size and power calculation, phase I, II and III trial designs, hypothesis testing, adaptive designs.

Course Learning Outcomes

Upon successful completion of this course, students should be able to:
- CLO 1: understand the basic concepts in medical statistics
- CLO 2: design clinical trials and compute sample sizes
- CLO 3: conduct statistical inference and apply regression models
- CLO 4: solve medical problems by using various statistical tests

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT2602 or STAT3902

Offer in 2021 - 2022

N

Grade Descriptors (A to F)

A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

C: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Additional Course Information

- Other references:

Course Objectives

This course aims to provide students with a fundamental knowledge of DNA profiling in human identification and genetic epidemiology in gene mapping and to understand how statistical theory and methods are applied to solve forensic DNA and genetic problems.

Course Contents & Topics

This course will cover the following topics: background of genetics; Mendelian inheritance; Hardy-Weinberg equilibrium; linkage equilibrium; chi-square test; likelihood ratio test; exact test; match probability; paternity testing and kinship analysis; DNA mixed stain; relatedness; population structure; gene mapping; parametric linkage analysis; non-parametric linkage analysis; linkage disequilibrium; association designs; case-control analysis; family-based association study; quantitative traits.

Course Learning Outcomes

On successful completion of this course, students should be able to:
- CLO 1 understand the fundamental principles in statistical DNA forensics and genetic epidemiology
- CLO 2 know the usefulness and possible limitations of statistical methodology in human identification and gene mapping
- CLO 3 provide statistical solutions to specific problems in the field

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT2602 or STAT3902

STAT3609 The statistics of investment risk (6 credits) Academic Year 2021
Offering Department Statistics & Actuarial Science
Course Co-ordinator Dr K P Wat, Statistics & Actuarial Science (watkp@hku.hk)
Teachers Involved Dr K P Wat, Statistics & Actuarial Science
Course Objectives
Most investments involve some risk. The decision to invest or not is usually made against a background of uncertainty. Whilst prediction of the future is difficult, there are statistical modelling techniques which provide a rational framework for investment decisions, particularly those relating to stock markets and the markets for interest rates, commodities and currencies. Building upon research, both in Hong Kong and abroad, this course presents the prevailing statistical theories for prices and price-change in these vital markets.

Course Contents & Topics
Concept of market efficiency, mean-variance portfolio theory, capital asset pricing model, arbitrage pricing theory, portfolio performance and management, behavioural finance.

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 measure risk and return of portfolios
CLO 2 apply different approaches in constructing optimal investment portfolios
CLO 3 explain and apply asset pricing models and evaluate investment performance
CLO 4 explain the concepts of market efficiency and apply appropriate testing procedures to assess different forms of market efficiency

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT2602, or already enrolled in this course, or
Pass in (STAT1603 and any University level 2 course); and
Not for students who have passed in FINA2320, or have already enrolled in this course; and
Not for BSc(Actuarial Science) students

Offer in 2021 - 2022 Y 1st sem Offer in 2022 - 2023 : Y Examination Dec
Grade Descriptors (A* to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to some specific problem situations. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3610 Risk management and insurance (6 credits) Academic Year 2021
Offering Department Statistics & Actuarial Science
Course Co-ordinator Dr R W L Wong, Statistics & Actuarial Science (rwong@hku.hk)
Teachers Involved (Dr R W L Wong, Statistics & Actuarial Science)
Course Objectives
This course provides knowledge on basic risk and its management, as well as basic financial planning through insurance products, to students. It allows students to understand the statistical, financial and legal principles underlying the techniques for managing the insurable risks faced by organisations and individuals. This course aims at students who have minimal background in quantitative methods, it involves very minimal quantitative calculations.

Course Contents & Topics
The course introduces and explains:
- risk in our society,
- insurance and risk,
- introduction to risk management,
- fundamental legal principles, and analysis of insurance contracts,
- life insurance, their contractual provisions,
- individual health insurance coverages.
Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand the general risks faced by organisations and individuals and the generic risk management principle
CLO 2 demonstrate knowledge and understanding of the underlying financial and legal principles of the insurance industry
CLO 3 understand how risk can be managed through insurance
CLO 4 compare and contrast different types of commercial and personal insurance products
CLO 5 plan for and arrange their own personal insurance needs

Pre-requisites
Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or (STAT2601 or (STAT1603 and any University level 2 course) or STAT2901.

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

STAT3611 Computer-aided data analysis (6 credits)

Offering Department Statistics & Actuarial Science

Academic Year 2021

Quota ---

Teachers Involved
Dr E K F Lam, Statistics & Actuarial Science (hmtlkf@hku.hk)

Course Objectives
A wide range of statistical analyses and methods are presented using data sets from social sciences research and scientific studies. Measuring uncertainty, describing patterns of variability and the inter-relationship between several variables are essential aspects of scientific investigations that require good understanding of statistics. This computer-oriented but non-mathematical course develops the important concepts and methods of statistics. The course makes extensive use of computers through the user friendly statistical software JMP. No knowledge of a programming language is required.

Course Contents & Topics
Data exploration, formulation of testable hypotheses, the evaluation of evidence and forecasting on the basis of past experience.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 summarize and describe the quantitative and qualitative data using some simple statistical measures
CLO 2 describe the patterns of variability and the inter-relationship between several continuous or discrete variables
CLO 3 carry out simple statistical analyses based on some real life data, formulate testable hypotheses, make appropriate statistical inferences and make interpretations on the findings

Pre-requisites
Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or (STAT2601 or (STAT1603 and any University level 2 course) or STAT2901.

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

**Additional Course Information**
For CoGSc or CompSc students having taken STAT1301 should obtain approval from the dept.

**Course Objectives**

- **Machine learning:**
  - Machine learning is the study of computer algorithms that build models of observed data in order to make predictions or decisions. Statistical machine learning emphasizes the importance of statistical theory and methodology in the algorithmic development. This course provides a comprehensive and practical coverage of essential machine learning concepts and a variety of learning algorithms under supervised and unsupervised settings.

- **Course Learning Outcomes:**
  - On successful completion of this course, students should be able to:
    - CLO 1: get familiar with the workflow of a data science or machine learning project
    - CLO 2: understand and apply a wide range of statistical machine learning methods, and recognize their characteristics, strengths and weaknesses
    - CLO 3: identify and use appropriate techniques for a particular data science project
    - CLO 4: evaluate the quality of the resulting model in terms of prediction accuracy and model explainability
    - CLO 5: apply R programming for solving data-scientific problems

- **Pre-requisites (and Co-requisites and Impermissible combinations):**
  - Pass in STAT2602 or (STAT1603 and any University level 2 course) or STAT3902; and
  - Pass in STAT3600 or STAT3907, or already enrolled in these courses; and
  - Not for students who have passed in STAT4904, or already enrolled in this course; and
  - Not for BSc(Actuarial Science) students.

- **BSc(Actuarial Science) students are advised to take STAT4904 Statistical learning for risk modelling instead.**

STAT3613 Business forecasting (6 credits) Academic Year 2021
Offering Department Statistics & Actuarial Science
Course Co-ordinator Dr C W Kwan, Statistics & Actuarial Science (ckwan@hku.hk)
Teachers Involved (Dr C W Kwan, Statistics & Actuarial Science)
Course Objectives
This course is designed to provide an overview and practical application of trends, technology and methodology used in the marketing survey process including problem formulation, survey design, data collection and analysis, and report writing. Special emphasis will be put on statistical techniques particularly for analysing marketing data including market segmentation, market response models, consumer preference analysis and conjoint analysis. Students will analyse a variety of marketing case studies.

Course Contents & Topics
Marketing decision models, Market response models, Survey research, Statistical methods for segmentation, Statistical methods for positioning, Statistical methods for new product design

Course Learning Outcomes
On successful completion of this course, students should be able to:
CLO 1 develop hands-on skills of curve fitting and analyzing data with SAS procedures or R packages
CLO 2 understand marketing decision models
CLO 3 understand cluster analysis, factor analysis, multidimensional scaling, correspondence analysis, conjoint analysis, choice models, confirmatory factor analysis, and discriminant analysis in market segmentation, positioning and new product design

Pre-requisites (and Co-requisites and impermissible combinations)
Pass in BIOL2102 or (ECON1280 and any University level 2 course) or (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) or STAT2601 or (STAT1603 and any University level 2 course) or STAT2901

Offer in 2021 - 2022 Y 1st sem Offer in 2022 - 2023 : Y Examination

STAT3614 Business forecasting (6 credits) Academic Year 2021
Offering Department Statistics & Actuarial Science
Course Co-ordinator Dr R W L Wong, Statistics & Actuarial Science (rwong@hku.hk)
Teachers Involved
Course Objectives
In daily business operations, forecasts are routinely required on different aspects of the economy, the market and individual companies. Numerous statistical techniques have been developed in the past decades to provide forecasts for the business decision-maker. This course considers a wide range of such techniques that have proven useful to practitioners. The course will involve the use of computer software, EXCEL, in the teaching process.

Course Contents & Topics
Review of basic statistical concepts; autocorrelation analysis; evaluation and combination of forecasts; moving averages and smoothing methods; simple linear regression; multiple regression; growth curves; time series regression; the handling of seasonal cycles; decomposition methods.

Course Learning On successful completion of this course, students should be able to:
### Course Objectives
On successful completion of this course, students should be able to:
- CLO 1 solve practical problems relating to annuities certain, simple and compound interest
- CLO 2 carry out discounted cash flow analysis
- CLO 3 apply amortization schedules and sinking funds to the practical problems such as real estate mortgage

### Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in (STAT1601 and any University level 2 course) or (STAT1602 and any University level 2 course) and (STAT1603 and any University level 2 course), or (STAT1603 and any University level 2 course); and
Not for students who have passed or already enrolled in any of these courses: STAT2601, STAT2901, STAT3907, STAT4601, ECON2280.

### Grade Descriptors (A to F)

- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C** Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **E** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
- **F** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

---

- **E** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
- **F** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.
Advanced SAS programming (6 credits)

### Course Objectives

This course aims to equip students, who have taken STAT2603, with a high level of proficiency in SAS programming for automation of procedures and data processing in solving complex problems more efficiently.

### Course Contents & Topics

Overview of SAS underlying parts. Macro programming. Advanced programming techniques including data simulation, advanced data look-up techniques, modifying transaction datasets and controlling I/O processing and memory.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1**: Understand the system of SAS and basic programming.
- **CLO 2**: Use the BY statement for parallel processing to aid automation.
- **CLO 3**: Use the output dataset without printing to OUTPUT windows for piping data to SOLVE equations.
- **CLO 4**: Use SAS MACRO to develop customized and automated applications.
- **CLO 5**: Use advanced SAS programming statements and techniques to solve complex problems.

### Pre-requisites

Pass in STAT2601 or STAT2901

(Students are strongly recommended to take STAT2603 or STAT2604 prior to taking this course.)

### Assessment Methods

- **Assignments**: Coursework (assignments, tutorials, and a class test)
  - Weighting: 50%
  - Assessment Methods to CLO Mapping: CLO 1, 2, 3
- **Examination**: One 3-hour written examination
  - Weighting: 50%
  - Assessment Methods to CLO Mapping: CLO 1, 2, 3

- **Grade Descriptors**
  - **A**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
  - **B**: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
  - **C**: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
  - **D**: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
  - **Fail**: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

responses and missing data. Case studies of major applications of sample survey methods in the public and private sectors, with some examples on the analysis and application of the statistical data thus produced, will be discussed.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 demonstrate knowledge and understanding of the various steps to be taken in the planning and implementation of sample surveys

CLO 2 design different sample schemes and select the most efficient and suitable one for adoption for a particular survey - make statistical inference on parameters based on a sample

CLO 3 judge whether the statistics presented by other survey takers are trustworthy

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass or already enrolled in BIOL2102, or (ECON1280 and any University level 2 course), or (STAT1601 and any University level 2 course), or (STAT1602 and any University level 2 course), or STAT2601, or (STAT1603 and any University level 2 course), or STAT2601.

Offer in 2021 - 2022

Y 2nd sem Offer in 2022 - 2023 : Y Examination May

Grade Descriptors

(A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B Demonstrate full mastery at a high level of extensive knowledge and skills required for attaining all the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Assessment Methods and Weighting

Methods Details Weighting in final course grade (%) Assessment Methods to CLO Mapping

Assignments Coursework (assignments, tutorials, and a class test) 25 CLO 1,2,3

Examination One 2-hour written examination 75 CLO 1,2,3

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 use futures, forwards, options and swaps to formulate financial strategies

CLO 2 determine the payoff and the value of various derivative products using binomial tree and Black-Scholes formula

CLO 3 explain how derivative products can be used as tools to manage financial risk

CLO 4 recognize how to decompose complicated derivatives into a portfolio of standard derivatives

Course Contents & Topics

Review of futures, forwards and options and the no-arbitrage principle; hedging strategies using futures; pricing of forwards and futures; interest rate futures and swaps; trading strategies using options; put-call parity; valuation of European and American options using the binomial-tree model; valuation of European and American options using the Black-Scholes option pricing model; the Greeks: their calculation and interpretation; implied volatility; delta hedging and the role of market-makers; exotic options: Asian options, barrier options, compound options, gap options and exchange options.

Course Objectives

Nowadays all risk managers must be well versed in the use and valuation of derivatives. The two basic types of derivatives are forwards (having a linear payoff) and options (having a non-linear payoff). All other derivatives can be decomposed to these underlying payoffs or alternatively they are variations on these basic ideas. This course aims at demonstrating the practical use of financial derivatives in risk management. Emphases are on pricing and hedging strategies, and the no-arbitrage principle.

Course Contents & Topics

Review of futures, forwards and options and the no-arbitrage principle; hedging strategies using futures; pricing of forwards and futures; interest rate futures and swaps; trading strategies using options; put-call parity; valuation of European and American options using the binomial-tree model; valuation of European and American options using the Black-Scholes option pricing model; the Greeks: their calculation and interpretation; implied volatility; delta hedging and the role of market-makers; exotic options: Asian options, barrier options, compound options, gap options and exchange options.

Wasserman, L.: All of Nonparametric Statistics (Springer, 2016) |

| Course Website | http://moodle.hku.hk |
**Course Objectives**

Building on prior coursework in statistical methods and modeling, students will get a deeper understanding of the entire process of data analysis. The course aims to develop skills of model selection and hypotheses formulation so that questions of interest can be properly formulated and answered. An important element deals with model review and improvement, when one’s first attempt does not adequately fit the data. Students will learn how to explore the data, to build reliable models, and to communicate the results of data analysis to a variety of audiences.

**Course Contents & Topics**

Descriptive statistics, presentation and visualization of data; Simple statistical analyses for the one-sample and two-sample case using parametric and nonparametric methods; Regression analyses: model fitting; variable selection and model diagnostic checking; Analysis of Variance (ANOVA): 1-way, two-way and higher-way ANOVA; Covariance analysis; Categorical and count data: binary logistic regression, Poisson regression.

Real data sets will be presented for modelling and analysis using statistical software for gaining hands-on experience.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1 make good sense of the problem and identify what to measure for the question of interest
- CLO 2 summarize and describe the quantitative and qualitative data using some simple appropriate statistical measures
- CLO 3 identify the association among several continuous or discrete variables
- CLO 4 carry out appropriate and comprehensive statistical analyses based on real life data including model selection, perform model diagnostics, formulate testable hypotheses, make appropriate statistical inferences, make interpretations on the findings and report writing

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in STAT3600 or STAT3907

(Students are strongly recommended to take STAT2603 or STAT2604 prior to taking this course.)

Course Objectives
This course is concerned with how models which predict the survival pattern of humans or other entities are established. This exercise is sometimes referred to as survival-model construction.

Course Contents & Topics
The nature and properties of parametric and nonparametric survival models will be studied. Topics to be covered include: the introduction of some important basic quantities like the hazard function and survival function; some commonly used parametric survival models; concepts of censoring and/or truncation; parametric estimation of the survival distribution by maximum likelihood estimation method; nonparametric estimation of the survival functions from possibly censored samples by means of the Kaplan-Meier estimator, the Nelson-Aalen estimator; and the kernel density estimator or the Ramlau-Hansen estimator and comparisons of k independent survival functions by means of the generalized log-rank test; parametric regression models; Cox's semiparametric proportional hazards regression model; and multivariate survival analysis.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 acquire a clear understanding of the nature of failure time data or survival data, a generalization of the concept of death and life
- CLO 2 perform estimation for some commonly used survival models under different types of censoring mechanisms
- CLO 3 analyze survival data using the Cox's semiparametric proportional hazards model
- CLO 4 extend the Cox's model to a multivariate setup to accommodate multivariate survival data

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT3902, or already enrolled in this course; or
Pass in STAT3600 or STAT3901; and
Not for students who have passed in STAT3955, or already enrolled in this course.

Directed studies in statistics (6 credits)
Academic Year
2021
Offering Department
Statistics & Actuarial Science
Quota
50
Course Co-ordinator
Prof S M S Lee, Statistics & Actuarial Science (smslee@hku.hk)
Teachers Involved
Various teachers as the assessors of oral presentations and written reports, Statistics & Actuarial Science
Course Objectives
To enhance students’ knowledge of a particular topic and students’ self-directed learning and critical thinking skills.
Course Contents & Topics
The student undertakes a self-managed study on a topic in statistics under the supervision of a staff member. The topic is preferably one not sufficiently covered in the regular curriculum. The directed study can be a critical review or a synthesis of published work on the subject, or a laboratory or field study that would enhance students’ understanding of the subject. The project may not require an element of originality.
Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 gain first-hand experience in solving a research or applied problem in statistics or related areas
- CLO 2 develop skills in important technical tools, including the use of computer software or programs, for typical statistical research and data analyses
- CLO 3 write succinct reports on the findings of a research study
- CLO 4 make concise oral presentation of the findings of a research study

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics Majors; and Not for students who have already enrolled in STAT4790 in this academic year.
This capstone course is only for students majoring in Decision Analytics/Risk Management/Statistics; and subject to the consent of course coordinator. This course is mutually exclusive with STAT4710.
The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022
Y 1st sem 2nd sem Offer in 2022 - 2023 : Y

Grade Descriptors (A+ to F)
A
Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. (Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.)

B
Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.

C
Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D
Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

Fail
Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

STAT3902
Statistical models (6 credits)

Offering Department
Statistics & Actuarial Science

Course Co-ordinator
Dr J F Xu, Statistics & Actuarial Science (jxf@hku.hk)

Teachers Involved
(Dr J F Xu, Statistics & Actuarial Science)

Course Objectives
This course is on the basis of ‘STAT2901 Probability and Statistics: Foundation of Actuarial Science’. It will further study the concepts and methods of mathematics. The course will lay emphasis on the estimation and hypothesis testing, the two major areas of statistical inference. Through the study of this course, students will be equipped with both quantitative skills and qualitative perceptions essential for making rigorous statistical analysis of data. This course is an approved course for VEE Mathematical Statistics from the Society of Actuaries.

Course Contents & Topics
Distribution and density of function of random variables; order statistics, central limit theorem, maximum likelihood estimator (MLE), moment estimator, Bayesian estimator, properties of estimators, limiting properties of MLE; confidence interval estimations for normal mean, the difference of two normal means, normal variance, the ratio of two normal variances, and large-sample confidence intervals; power function, Neyman-Pearson Lemma, likelihood ratio test, and goodness of fit test.

Course Learning Outcomes
On successful completion of this course, students should be able to:

CLO 1 understand the importance of sufficient statistic(s) in data reduction and statistical inferences such as point estimation, confidence interval estimation, and testing hypothesis
CLO 2 derive maximum likelihood estimators of parameters to calculate maximum likelihood estimates
CLO 3 locate pivotal quantity to construct confidence intervals of parameters
CLO 4 find testing statistic to test hypotheses associated with one-sample and/or two-sample normal distributions with small sample sizes and non-normal distributions with large sample sizes

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT2901; and Not for students who have passed in STAT2602, or already enrolled in this course; and For BSc(Actuarial Science) students only.

Offer in 2021 - 2022
Y 1st sem Offer in 2022 - 2023: Y Examination Dec

Grade Descriptors (A+ to F)
A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and
### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1**: Apply the conditioning method to calculate the mean and probability
- **CLO 2**: Understand the essentials of Markov chains, the Poisson process, and Brownian motion
- **CLO 3**: Understand how stochastic models can be applied to the study of real-life phenomena

### Pre-requisites

Pass in STAT2901; and not for students who have passed in MATH3603, or have already enrolled in this course; and not for students who have passed in STAT3603, or have already enrolled in this course; and for BSc(Actuarial Science) students only.

Course Objectives
This course is designed for actuarial science students to receive finance component of VEE Accounting and Finance from the Society of Actuaries. The objective of this course is to introduce students to the fundamental principles of corporate finance. The course will provide students with a systematic framework within which to evaluate investment and financing decisions for corporations.

Course Contents & Topics
The first part of the course will give an introduction to corporate finance and provide an overview of some topics covered in STAT2902 and STAT3615. These include financial markets and companies, time value of money, and measures and performance assessment of financial performance. The main part of the course will focus on some important topics of corporate finance including: portfolio theory, Markowitz mean-variance analysis, capital asset pricing model, weighted average cost of capital, market efficiency, capital structure and dividend policy, financial leverage and firm value, and option pricing models.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 describe the tasks of a financial manager and the financial decisions made by a corporation
- CLO 2 recall the use of present and future values in calculating the value of bonds and stocks
- CLO 3 assess financial performance using various investment criteria and techniques of project analysis
- CLO 4 analyze the mean-variance portfolio theory, capital asset pricing model and arbitrage pricing theory
- CLO 5 identify the factors to be considered by a company when deciding on its capital structure and dividend policy, and also the impact of financial leverage and long/short term financing policies on capital structure
- CLO 6 describe the various forms of market efficiency
- CLO 7 calculate the value of options using the binomial option pricing model

Pre-requisites (and Co-requisites and Impermissible combinations)
([Pass in ACCT1101 and STAT2902) or (Pass in STAT3610 and STAT3615)]; and
Not for students who have passed in FINA1310, or have already enrolled in this course.

### Department of Statistics & Actuarial Science

#### Pre-requisites (and Co-requisites and Impermissible combinations)
- Pass in STAT2902, and Not for students who have passed in STAT3618, or have already enrolled in this course; and For BSc(Actuarial Science) students only.

#### Offer in 2021 - 2022
- **Y** 1st sem **Offer in 2022 - 2023 : Y**

#### Grade Descriptors (A+ to F)
- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C** Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

#### Communication-intensive Course
- **Course Type** Lecture-based course

#### Course Teaching & Learning Activities
- **Activities**
  - Lectures: 36
  - Tutorials: 12
  - Reading / Self study: 100

#### Assessment Methods and Weighting
- **Methods**
  - Assignments: Coursework (assignments, tutorials, and a class test) - 25 CLO 1,2,3
  - Examination: One 2-hour written examination - 75 CLO 1,2,3

#### Course Contents & Topics
- **Course Contents & Topics**
  - Severity models; frequency models; collective risk models; coverage modifications; risk measures.

#### Course Learning Outcomes
- **On successful completion of this course, students should be able to:**
  - CLO 1 understand the individual risk model and the collective risk model, evaluate the distribution and expectation of the total claim amounts
  - CLO 2 estimate the premium of a policyholder and the total claim amounts using the information of the claim amounts made in previous years
  - CLO 3 calculate some commonly used risk measures and explain their use and limitation

#### Required/recommended reading and online materials
- **McDonald, R. L.: Derivatives Markets (Pearson, 2013, 3rd edition), Chapters 1-9.**

#### Course Website
- http://moodle.hku.hk

#### STAT3906 Risk theory I (6 credits)
- **Offering Department** Statistics & Actuarial Science
- **Course Co-ordinator** Dr K C Cheung, Statistics & Actuarial Science (kccg@hku.hk)
- **Teachers Involved** (Dr K C Cheung,Statistics & Actuarial Science)
- **Course Objectives** Risk theory is one of the main topics in actuarial science. Risk theory is the applications of statistical models and stochastic processes to insurance problems such as the premium calculation.
- **Course Contents & Topics** Severity models; frequency models; collective risk models; coverage modifications; risk measures.
- **Course Learning Outcomes**
  - On successful completion of this course, students should be able to:
    - CLO 1 understand the individual risk model and the collective risk model, evaluate the distribution and expectation of the total claim amounts
    - CLO 2 estimate the premium of a policyholder and the total claim amounts using the information of the claim amounts made in previous years
    - CLO 3 calculate some commonly used risk measures and explain their use and limitation
- **Pre-requisites (and Co-requisites and Impermissible combinations)**
  - Pass in STAT3903, or already enrolled in this course; or Pass in MATH3603 or STAT3803

#### Communication-intensive Course
- **Course Type** Lecture-based course

#### Course Teaching & Learning Activities
- **Activities**
  - Lectures: 36

**Linear models and forecasting (6 credits)**

**Offering Department**
Statistics & Actuarial Science

**Course Co-ordinator**
Prof G Li, Statistics & Actuarial Science (gdli@hku.hk)

**Teachers Involved**
(Prof G Li, Statistics & Actuarial Science)

**Course Objectives**
This course deals with applied statistical methods of linear models and investigates various forecasting procedures through using linear models and time series analysis.

**Course Contents & Topics**
Regression and multiple linear regression; predicting; time series models including autoregressive, moving average, autoregressive-moving average and integrated models; forecasting.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:
- CLO 1: fit a simple or multiple linear regression model to real data
- CLO 2: do ANOVA analysis
- CLO 3: identify and fit a suitable AR, MA or ARMA model to real data
- CLO 4: perform residual analysis
- CLO 5: do forecasting with these fitted models

**Pre-requisites (and Co-requisites and Impermissible combinations)**
Pass in STAT2602 or STAT3902, or already enrolled in this course; and Not for students who have passed in STAT3600, or have already enrolled in this course; and Not for students who have passed in STAT4601, or have already enrolled in this course; and Not for students who have passed in ECN2280, or have already enrolled in this course; and For BSc(Actuarial Science) students only.

STAT3909 Life contingencies II (6 credits)
Offering Department Statistics & Actuarial Science
Quota Quota

Course Co-ordinator Dr D Lee, Statistics & Actuarial Science (leedav@hku.hk)
Teachers Involved (Dr D Lee, Statistics & Actuarial Science)
Course Objectives This course aims at introducing some topics in non-traditional life insurance. Emphasis will be placed on applications of more advanced theories of life contingencies.
Course Contents & Topics This course is a continuation of the materials covered in STAT3901. We shall discuss the following topics: future loss random variable; policy values, expenses and asset shares; multiple state models and their applications; profit testing.

Course Learning Outcomes On successful completion of this course, students should be able to:
CLO 1 calculate policy values for life insurances and annuities
CLO 2 incorporate expenses in gross premium and calculate policy values based on the gross premium for life insurances and annuities
CLO 3 calculate probabilities and actuarial present values under the multiple state model framework
CLO 4 analyze multiple decrement models and calculate the life insurances and annuities in models with multiple decrements
CLO 5 analyze multiple life models and calculate the life insurances and annuities in models with multiple lives
CLO 6 explain the concept of profit testing

Pre-requisites (and Co-requisites and Impermissible combinations) Pass in STAT3901, or already enrolled in this course; and For BSc(Actuarial Science) students only.

STAT3910

Financial economics I (6 credits)

Offering Department
Statistics & Actuarial Science

Course Co-ordinator
Prof H L Yang, Statistics & Actuarial Science (hlyang@hku.hk)

Teachers Involved
Prof H L Yang, Statistics & Actuarial Science

Course Objectives
This course is on option pricing and hedging. The course will concentrate on the theory and idea of derivatives pricing and risk management.

Course Contents & Topics
- Option market; European and American options; conditional expectation and discrete-time martingale, discrete-time option-pricing theory; binomial model and its Greeks; true probabilities vs. risk-neutral probabilities; estimating volatility; the Black-Scholes formula; implied volatility; option Greeks; market-making and hedging; exotic options.

For obtaining IFoA credit, the assessment is different. The assessment becomes final exam (60%), mid-term test (10%) and computer-based assignment (30%).

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1 calculate option price using binomial tree, including European option, American options, options on currencies, options on futures contracts, and options on bonds.
- CLO 2 understand the risk neutral probability, and how to price option using real probability.
- CLO 3 understand the Black-Scholes formula, including the assumptions, the Greek letters, option elasticity, and implied volatility.
- CLO 4 understand the hedging strategies and portfolio, market-maker risk, self-financing portfolio.
- CLO 5 understand the market-maker’s profit.
- CLO 6 understand exotic options, including Asian options, barrier options, compound options, gap options, and exchange options.
- CLO 7 understand interest rate models, including Vasicek model, Cox-Ingersoll-Ross model and Black-Derman-Toy model.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT2602 or STAT3902; and Not for students who have passed in STAT3618, or have already enrolled in this course; and Not for students who have passed in FINA2322, or have already enrolled in this course.

Course Website

http://moodle.hku.hk
Course Objectives

This course is an advanced course on the option pricing theory. The course covers Black-Scholes equation and stochastic calculus, and interest models.

Course Contents & Topics

Brownian motion; introduction to stochastic calculus; arithmetic and geometric Brownian motion; Itô formula; Sharpe ratio and risk premium; Black-Scholes equation; risk-neutral stock-price process and option pricing; option's elasticity and volatility; Vasicek, Cox-Ingersoll-Ross, and Black-Derman-Toy models; delta-hedging for bonds and the Sharpe-ratio equality constraint; Black's model; options on zero-coupon bonds; interest-rate caps and caplets.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understanding measure theory based probability
CLO 2 understanding conditional probability and martingale
CLO 3 understand Brownian motion and its properties
CLO 4 understand the Itô calculus and Itô formula
CLO 5 understand the Black-Scholes model and option pricing theory

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in MATH3603 or STAT3603 or STAT3903 or STAT3910

Grade Descriptors (A to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Co-ordinator

Dr D Lee, Statistics & Actuarial Science (leedav@hku.hk)

Teachers Involved

Dr D Lee, Statistics & Actuarial Science

Course Objectives

This course covers more advanced stochastic models and actuarial techniques used in the field of life and non-life insurance.

Course Contents & Topics

Topics cover further analysis of the multiple state model; graduation and related tests; unit-linked contracts; cost of guarantees and options; equity-linked life-contingent insurance products and their valuation; simple ruin models for non-life insurance portfolios.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 obtain transition probabilities in continuous-time multiple state models and evaluate expected state-dependent cash flows
CLO 2 estimate age-dependent transition probabilities
CLO 3 explain the concept of graduation and apply statistical tests for mortality table comparisons
CLO 4 apply the Esscher transform on probability distributions and stochastic processes
CLO 5 price various equity-linked insurance products using Esscher transforms and risk-neutral methods
CLO 6 formulate simple ruin models and evaluate ruin probabilities as well as related quantities.

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT3909; and
Pass in STAT3910, or already enrolled in this course; and
For BSc(Actuarial Science) students only.

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y

Grade Descriptors

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
### Course Objectives

The main objective of this course is to introduce students to some of the methods and procedures commonly used in the management of an investment portfolio. Emphasis will be placed on methods to tackle problems faced by insurance industry such as investment strategy formulation and interest rate risk management.

### Course Contents & Topics

This course provides an overview on the problems faced by actuaries when applying fundamental actuarial concepts to investment practice. This course will cover the following topics: Investment Management Process, Asset Allocation, Managing Fixed Income Portfolios and Performance Measurement.

### Course Learning Outcomes

On successful completion of this course, students should be able to:

- **CLO 1** explain how an investment policy and an investment strategy can help manage risk
- **CLO 2** identify the obligations of a fiduciary in managing investment portfolios
- **CLO 3** describe how to select an investment strategy for an individual and the particular issues influencing investment strategies for institutional investors
- **CLO 4** explain principles of risk-based capital management
- **CLO 5** describe asset allocation strategies that can be used to construct an asset portfolio
- **CLO 6** identify and describe financial and non-financial risks faced by an entity
- **CLO 7** define risk metrics to quantify major types of risk exposure, apply ALM principles to the establishment of investment policy and strategy
- **CLO 8** select or build a benchmark for a given portfolio or portfolio management style, describe and assess performance measurement methodologies for investment portfolios

### Pre-requisites

- Pass in STAT3901; and
- Not for students who have passed in FINA2320, or have already enrolled in this course; and
- For BSc(Actuarial Science) students only.

### Course Grade Descriptors

- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **C** Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **Fail** Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Statistics & Actuarial Science  

**Teachers Involved**  
Dr A G Benchimol, Statistics & Actuarial Science (benchi@hku.hk)

**Course Objectives**  
This course teaches students about the business environment and exposes them to practical real-world situations using the actuarial control cycle as a framework.

**Course Contents & Topics**  
This course provides an overview on selected materials relating to the following topics: Role of the Professional Actuary, External Forces, Risk in Actuarial Problems, Design and Pricing of Actuarial Solutions. Emphasis will be placed on applications to various financial security programmes including individual life insurance, group insurance, social security plans, retirement plans, investment funds and property and casualty insurance.

**Course Learning Outcomes**  
On successful completion of this course, students should be able to:

**A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

**B** Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentential skills.

**C** Demonstrate control of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar situations and some unfamiliar situations. Apply moderately effective organizational and presentational skills.

**D** Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

**Fail**  
Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organizational and presentational skills are minimally effective or ineffective.

Course Objectives

This course aims at providing practical elements for actuarial students including daily life actuarial practice and the basic capability to understand, research in and handle the laws as and when situations would arise, which will benefit students in their coming future career.

Course Contents & Topics

This course covers a full range of topics related to both areas including 1) Practical Actuarial Practice and 2) Actuaries’ Legal Thinking.

For Practical Actuarial Practice: It covers the major practical topics in both Life and Casualty areas. For Life Insurance, it covers the full picture of actuarial control cycle including Product Pricing, Valuation, Financial Reporting and Experience Analysis. For General Insurance, it covers the backbone areas including Product Pricing and Valuation.

For Actuaries’ Legal Thinking: This is the 7th year of the course and the full start of a new course structure echoing changes in the market for basic legal and general insurance skills for actuaries. Intellectually stimulating recent legal materials with heavy involvement of actuarial and other general insurance expertise would dominate the course, alongside with basic legal research skills and fundamental legal thinking. Sharing of experience from guests from the General Insurance Industry would also infiltrate the course.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 have a basic understanding regarding Actuarial Control Cycle from A to Z for Life Insurance and General Insurance
- CLO 2 possess some experience regarding fundamental actuarial practice through practical project
- CLO 3 possess basic understanding of the legal system in Hong Kong
- CLO 4 possess fundamental knowledge in certain core legal aspects such as the law of contract and the law of tort
- CLO 5 possess fundamental knowledge of the law of insurance
- CLO 6 conduct elementary legal researches when facing with legal problems
- CLO 7 understand the basic elements of a routine judgment, the matrix of the facts and the law involved

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT3901, or already enrolled in this course; or Pass in STAT3909, or already enrolled in this course; or For BSc(Actuarial Science) students only.

STAT3955 Survival analysis (6 credits)

Offering Department Statistics & Actuarial Science

Course Co-ordinator Dr J F Xu, Statistics & Actuarial Science (xufj@hku.hk)

Teachers Involved Dr J F Xu, Statistics & Actuarial Science

Course Objectives

This course is concerned with how models which predict the survival pattern of humans or other entities are established. This exercise is sometimes referred to as survival-model construction.

Course Contents & Topics

The nature and properties of parametric and nonparametric survival models will be studied. Topics to be covered include: the introduction of some important basic quantities like the hazard function and survival function; some commonly used parametric survival models; concepts of censoring and/or truncation; parametric estimation of the survival distribution by maximum likelihood estimation method; nonparametric estimation of the survival functions from possibly censored samples by means of the Kaplan-Meier estimator, the Nelson-Aalen estimator; and the kernel density estimator or the Ramlau-Hanssen estimator and comparisons of k independent survival functions by means of the generalized log-rank test; parametric regression models; Cox's semiparametric proportional hazards regression model, and multivariate survival analysis.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 acquire a clear understanding of the nature of failure time data or survival data, a generalization of the concept of death and life
- CLO 2 perform estimation for some commonly used survival models under different types of censoring
Course Objectives

This course covers the basics of pension plan design and pension fund management, as well as the fundamentals of pension plan valuations using different actuarial cost methods. The students will be introduced to the application of actuarial valuation techniques to the funding and accounting of pension plans.

Natural language processing (6 credits)

**Offering Department**

Statistics & Actuarial Science

**Course Co-ordinator**

Dr L Yu, Statistics & Actuarial Science (lhyu@hku.hk)

**Teachers Involved**

(Dr L Yu,Statistics & Actuarial Science)

**Course Objectives**

Natural language processing (NLP) is a subfield of artificial intelligence, focusing on understanding human language. In essence, NLP is interested in building a tool that can use language like humans. This course will introduce the mathematical, statistical and computational challenges in natural language processing. It covers main applications of NLP techniques and a range of models in structured prediction and deep learning. In this course, students will gain a thorough introduction to cutting-edge machine learning and deep learning techniques for NLP.

**Course Contents & Topics**

This course covers a broad range of topics in natural language processing (NLP), including text classification, sentiment analysis, neural network, word embedding, sequence models, language models, neural encoder-decoder models, machine translation, question answering, and contextualized world representation. The underlying techniques from probability, statistics, machine learning and deep learning will also be introduced.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- **CLO 1** learn about the techniques behind modern NLP
- **CLO 2** implement basic algorithms and methods on real-world data
- **CLO 3** gain hands-on experience on building NLP models
- **CLO 4** learn backgrounds to understand current research
- **CLO 5** get exposed to linguistic concepts and tasks in NLP

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in STAT2602 and (COMP2113 or COMP2119 or COMP2396).
Recommended: familiarity with deep learning or machine learning; strong programming skills (e.g., Python)

**Offer in 2021 - 2022**

Y 2nd sem Offer in 2022 - 2023 : Y

**Grade Descriptors (A+ to F)**

- **A** Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. # Course Information

**Course Co-ordinator:** Dr D Y Zhang, Statistics & Actuarial Science (doraz@hku.hk)

**Teachers Involved:**
- Dr D Y Zhang, Statistics & Actuarial Science
- Prof G Li, Statistics & Actuarial Science

**Course Objectives:**
This course introduces omics data acquisition techniques and emphasizes advanced statistical tools to analyze the high-throughput omics data. This course is designed for learners with basic background knowledge in molecular biology who are interested in different aspects of omics and bioinformatics. This course aims to introduce the tools and techniques needed to obtain, analyze, and interpret a variety of modern genomic-scale data. Topics include:

- Introduction to molecular biology, omics, and high-throughput technologies, analysis of microarray data, analysis of high-throughput data, experimental design commonly encountered in genomic data analysis, functional genomics, enrichment analysis.

**Course Contents & Topics:**
- STAT4601 Time-series analysis (6 credits)
- Pre-requisites and Co-requisites
- Knowledge in basic molecular biology/biochemistry/bioinformatics, undergraduate level statistics knowledge and programming skills are needed.

**Pre-requisites and Impermissible combinations**
Pass in STAT3602, and pass or already enrolled in STAT3612

**Offer in 2021 - 2022**
- **Grade Descriptors (A+ to F)**
  - A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
  - B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
  - C: Demonstrate general but limited command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
  - D: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
  - Fail: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

**Assessment Methods**
- Examination: One 2-hour written examination: 40 CLO 1,2,3,4
- Assignments: Coursework (assignments; may include project report): 60 CLO 1,2,3,4

**Course Website**
http://moodle.hku.hk

## STAT4601

**Time-series analysis (6 credits)**

**Offering Department**
Statistics & Actuarial Science

**Course Co-ordinator**
Prof G Li, Statistics & Actuarial Science (gdl@hku.hk)

**Teachers Involved**
(Prof G Li, Statistics & Actuarial Science)

**Course Objectives:**
A time series consists of a set of observations on a random variable taken over time. Time series arise naturally in climatology, economics, environment studies, finance and many other disciplines. The observations in a time series are usually correlated; the course establishes a framework to discuss this. This course distinguishes different type of time series, investigates various representations for the processes and studies the relative merits of different forecasting procedures. Students will analyse real time-series data on the computer.

**Course Contents & Topics**
- Stationarity and the autocorrelation functions; linear stationary models; linear non-stationary modes; model identification; estimation and diagnostic checking; seasonal models and forecasting methods for time series.

**Course Learning Outcomes**
On successful completion of this course, students should be able to:

- CLO 1: Recognize a stationary vs non-stationary time series
- CLO 2: Understand some basic properties of commonly used time series models, such as AR (autoregressive), MA (moving average) and ARMA models
- CLO 3: Transform non-stationary time series into stationary ones
- CLO 4: Identify different time series models based on autocorrelation functions
- CLO 5: Fit a suitable AR, MA or ARMA model to real data using SAS (after transforming to stationarity if necessary)
- CLO 6: Perform goodness of fit tests for such models

**Pre-requisites and (and Co-requisites and Impermissible combinations)**
Pass in STAT3600, and for STAT3614, or have already enrolled in this course; and for STAT3607, or have already enrolled in this course.

**Offer in 2021 - 2022**
- **Y** 2nd sem Offer in 2022 - 2023: Y

**Grade Descriptors (A+ to F)**

- A: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- B: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar
and some unfamiliar situations. Apply effective organizational and presentational skills.

C Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

A Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Failure Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

Course Contents & Topics

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 analyze multivariate data with main SAS procedures, such as PROC IML, PROC REG, PROC CORR, PROC CANCORR, PROC PRINCOMP, PROC FACTOR, PROC DISCRIM, PROC CANDISC and etc

CLO 2 compare the mean structure of multiple measurements for one or more than one population(s) by multivariate MANOVA and profile analysis

CLO 3 investigate the linear associations among one/two group(s) of variables by multiple, partial and canonical correlation and multivariate regression

CLO 4 explore the latent linear structure of a data set with multiple measurements by principal components analysis and factor analysis

CLO 5 classify observations of a population with one or more than one measurements by discriminant analysis

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT3600 or STAT3907

Offer in 2021 - 2022

Offering Department

- Statistics & Actuarial Science

Course Co-ordinator

- Dr O T K Choi, Statistics & Actuarial Science (ochi@hku.hk)

Teachers Involved

- Dr O T K Choi, Statistics & Actuarial Science

Course Objectives

This course is to broaden the students knowledge of risk management by considering current topics in risk management. These topics will build on the theory and methods covered in the core courses. The topics offered each year depend on staff availability.

Course Contents & Topics

- Liquidity risk; Operational risk; Model risk; Enterprise risk management; Cutting edge risk analytics and innovations in risk management.

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in (STAT3618 or FINA2322)

Offer in 2021 - 2022

- Y 1st sem Offer in 2022 - 2023 : Y

Graduate Outcomes

- On successful completion of this course, students should be able to:
  - CLO 1 gain insights into current advances in risk management
  - CLO 2 understand current risk management pitfalls and development
  - CLO 3 make effective use of models and techniques for managing various kinds of risk

Module Assessment

- Assignments
- Coursework (assignments, tutorials, class test(s) and project (6))
- Examination One 2-hour written examination

Assessment

- Weighting in final course grade (%)
  - Assignments 50 CLO 1,2,3
  - Examination 50 CLO 1,2,3

Required/recommended reading and online materials

- Basel Committee on Banking Supervision: Basel III: A global regulatory framework for more resilient banks and banking systems (BIS, 2010)

  - Assignments 50 CLO 1,2,3
  - Examination 50 CLO 1,2,3
Credit risk analysis (6 credits)

A 100 2021

Dr K P Wat, Statistics & Actuarial Science

Course Information

- design and establishment of a risk management framework,
- the importance of people and corporate culture,
- the complete risk management cycle,
- measurement and management of credit, market and operational risks,
- Basel accords and the capital treatments for credit, market and operational risks,
- key developments (eg: Know-Your-Customers, Anti-Money laundering, Sarbanes-Oxley) and critical issues,
- the importance of business continuity,
- design and implementation of a business continuity plan.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand the importance, nature and classification of various risks, and the risk management principle and cycle
CLO 2 design and establish a risk management framework
CLO 3 demonstrate knowledge and understanding of the measurements of credit, market and operational risks
CLO 4 explain and describe Basel accords and its capital treatments for credit, market and operational risks
CLO 5 appreciate the importance of, design and implement a business continuity plan

Pre-requisites

Pass in STAT3618 or STAT3910 or STAT3905 or (FINA2322 and any University level 3 course)

Offer in 2021 - 2022

N Offer in 2022-2023: N

Additional Course Information

This course is previously called STAT2320 as the prerequisite changed to STAT3303.

Course Content

- Credit risk has always been a significant financial risk in the banking industry. It is related to the possibility of loss arising from defaults on debts, swaps, or other counterparty instruments. Credit risk may also result from a change in the value of an asset resulting from a change in the counterparty's creditworthiness. This course will introduce students to quantitative models for measuring and managing credit risk. It also aims to provide students with an understanding of the credit risk methodology used in the financial industry and the regulatory framework in which the credit risk models operate.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand the Basel requirements for credit risk
CLO 2 estimate credit scores using the logit model
CLO 3 understand and estimate default probabilities using various approaches such as Moody's KMV and the mortality method
CLO 4 understand the concept of credit Value-at-Risk and the CreditMetrics approach
CLO 5 estimate default correlations
CLO 6 assess credit rating systems

Pre-requisites

Pass in STAT3618 or STAT3905 or STAT3910 or (FINA2322 and any University level 3 course)
Market risk analysis (6 credits)

Offering Department
Statistics & Actuarial Science

Course Co-ordinator
Dr K Zhu, Statistics & Actuarial Science (mazhuke@hku.hk)

Teachers Involved
(De K Zhu, Statistics & Actuarial Science)

Course Objectives
Financial risk management has experienced a revolution in the last decade thanks to the introduction of new methods for measuring risk, particularly Value-at-Risk (VaR). This course introduces modern risk management techniques covering the measurement of market risk using VaR models and financial time series models, and stress testing.

Course Contents & Topics
Risk Measures; Value-at-Risk (VaR) models (parametric, Monte Carlo simulation and Historical simulation); Risk factor mapping; Advanced VaR models (GARCH-type models, extreme-value theory and normal-mixture); Principal Component Analysis and VaR; Backtesting and stress testing.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- Understand VaR and expect VaR models (GARCH-type models, extreme-value theory and normal-mixture): Principal Component Analysis and VaR; Backtesting and stress testing.
- Understand VaR and expected shortfall as risk measures.
- Compute VaR and expected shortfall.
- Model volatility using GARCH-type models.
- Understand extreme-value theory.
- Understand backtesting and stress testing.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT3907 and STAT3910; or Pass in STAT4601 and (FINA2320 or STAT3609)

Grade Descriptors
(A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.

C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply moderately effective organizational and presentational skills.

D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

Fail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### Course Objectives

**Course Objectives**

This course aims to introduce Bayesian methodologies and computational techniques of Markov Chain Monte Carlo methods, and applications in machine learning.

**Course Contents & Topics**

This course covers the fundamental Bayesian formulation, prior elicitation, posterior inference. For Markov Chain Monte Carlo methods, the contents include the Gibbs sampler, the Metropolis-Hastings algorithm, approximate Bayesian computation, the Hamiltonian Monte Carlo algorithm. For more advanced Bayesian modeling, hierarchical models and nonparametric Bayes are covered.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1: generate samples from any distribution
- CLO 2: use Monte Carlo methods for approximation
- CLO 3: apply MCMC methods to real problems
- CLO 4: develop nonparametric Bayesian models
- CLO 5: apply Bayesian methods in machine learning tasks

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Pass in STAT3600 or STAT3602 or STAT3603 or STAT3902

**Pre-requisites**

Pass in STAT3600 or STAT3602 or STAT3603 or STAT3902

**Course Type**

### Communication-intensive Course

N

### Course Teaching & Learning Activities

**Activities**

- Lectures: 36
- Tutorials: 12
- Reading / Self study: 100

### Communication Skills

- **CLO 1**: Develop further logical, critical thinking, creativity, technical report writing, communication and consultation skills
- **CLO 2**: Advocate to others the appreciation of statistics/risk management as to its relevance to our daily life
- **CLO 3**: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- **CLO 4**: Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- **CLO 5**: Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.
- **CLO 6**: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.
- **CLO 7**: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

### STAT4710

**Capstone experience for statistics undergraduates (6 credits)**

**Offering Department**

Statistics & Actuarial Science

**Course Co-ordinator**

Prof G Yin, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)

**Teachers Involved**

(Various teachers as the assessors of oral presentations and written reports, Statistics & Actuarial Science)

**Course Objectives**

This project-based course aims to provide students with capstone experience to formulate and investigate real life problems in the area of statistics, risk management, finance, climate, social science, medicine and scientific research by integrating and applying the statistical theories and quantitative techniques learnt in their junior university years.

**Course Contents & Topics**

No formal teaching. Students are expected to devote 120-140 hours working on this project. Students will work in groups of three to five under the supervision of a teacher. Students are required to give a presentation on their work two to three weeks before the end of the semester, and submit their final report at the end of the semester.

It aims to help the students to establish a good and solid foundation of life-long learning skills, and to enable students to equip with hands-on experience in solving real life problems starting from identification of the key variable(s) of interest, literature search, model formulation, data analysis or simulation, technical report writing and presentation of the results. Students will need to find an interesting topic of their own, conduct literature search regarding the most recent research related to the problem, make suggestions to improve the current situations or even solve the problem identified in their project.

**Course Learning Outcomes**

On successful completion of this course, students should be able to:

- CLO 1: formulate a problem using statistical or risk management ideas for a particular issue we are facing with and determine ways in which statistics/risk management can be used to solve the problems or to make predictions
- CLO 2: integrate theory and practice, and to understand limitations of their current knowledge
- CLO 3: work in a team and to collaborate with people with different background
- CLO 4: express ideas effectively in both written and oral forms
- CLO 5: develop further logical, critical thinking, creativity, technical report writing, communication and consultation skills
- CLO 6: advocate to others the appreciation of statistics/risk management as to its relevance to our daily life

**Pre-requisites (and Co-requisites and Impermissible combinations)**

Students are expected to have satisfactorily completed at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics Majors. Students who are interested in taking the course should submit their applications to the Department.

This capstone course is only for students majoring in Decision Analytics/Risk Management/Statistics, and is mutually exclusive with STAT3799, STAT4766 and STAT4799.

The earliest that a student is allowed to take this capstone course is their year 3 study.
### STAT4798

**Course Title**: Capstone experience for actuarial science undergraduates (6 credits)

**Offering Department**: Statistics & Actuarial Science

**Course Co-ordinator**: Prof G Yin, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)

**Course Objectives**

- This project-based course aims to provide students with capstone experience to formulate and investigate practical problems in actuarial science by integrating and applying actuarial theories and techniques learnt in their university years. It aims to help the students to establish a good and solid foundation of self-learning skills, and to enable students to equip with hands-on experience in solving practical problems including definition of the problem, designing the solution, and presentation of the results.

- Topics acceptable for projects in this course can be related to any of the traditional actuarial areas of practice such as life insurance, pension, finance, investment, enterprise risk management and general insurance. Students are also encouraged to suggest topics in non-traditional actuarial areas provided they can find a suitable teacher and/or industry supervisor. All topics for this course will be subject to final approval by the Department to ensure relevance to actuarial science.

- Students will need to decide on the topic for a practical project, conduct market research regarding industry activities related to the topic, and make suggestion on a solution of the problem identified in their project.

**Course Contents & Topics**

- No formal teaching will be given for this course. Students are expected to devote 120-140 hours working on this project. Students will work in groups of three to five under the supervision of a teacher and/or an industry supervisor. Students are required to give a presentation on their work two to three weeks before the end of the semester, and submit their final report at the end of the semester.

- Topics acceptable for projects in this course can be related to any of the traditional actuarial areas of practice such as life insurance, pension, finance, investment, enterprise risk management and general insurance. Students are also encouraged to suggest topics in non-traditional actuarial areas provided they can find a suitable teacher and/or industry supervisor. All topics for this course will be subject to final approval by the Department to ensure relevance to actuarial science.

**Course Learning Outcomes**

- On successful completion of this course, students should be able to:
  - CLO 1 define a practical problem, discuss the issues faced by different stakeholders, and design workable solutions for the problems
  - CLO 2 integrate theoretical results and practical approaches, and to specify limitations of current developments
  - CLO 3 work in a team and to collaborate with members with different background
  - CLO 4 deliver actuarial results effectively in a written report and in oral presentations
  - CLO 5 develop further logical, critical thinking, creativity, technical report writing, communication and consultation skills

**Pre-requisites and Co-requisites**

- Pass in at least 24 credits of advanced level disciplinary core/elective courses in BSc(Actuarial Science) programme including (Pass in STAT3901, or already enrolled in this course; or Pass in STAT3909, or already enrolled in this course); and
- This capstone course is only for BSc(Actuarial Science) students, and is mutually exclusive with STAT4767 and STAT4798.

Project-based course

**Course Teaching & Learning Activities**
- Activities: Reading / Self study
- Details: Tutorials, group work/project, reading/self-study
- No. of Hours: 120

**Assessment Methods and Weighting**
- Oral presentation: oral presentation, progress, attendance and in-class discussion (50% CLO 1,2,3,4,5,6)
- Research report: written report (50% CLO 1,2,3,4,5)

**Course Website**
http://moodle.hku.hk

**Course Objectives**
- Upon completion of the internship, each student is required to submit a written report and to give an oral presentation on the internship experience. Supervisors will assess the students based on their performance.

**Course Contents & Topics**
- This course is designed for students majoring in Decision Analytics/Risk Management/Statistics, and it provides students with hands-on experience in a real-life work environment.

**Pre-requisites (and Co-requisites and Impermissible combinations)**
- Pass in at least 24 credits of advanced level disciplinary core/elective courses in the Decision Analytics/Risk Management/Statistics.

**Course Learning Outcomes**
- On successful completion of this course, students should be able to:
  - CLO 1 gain first-hand work experience in an industry related to decision analytics, risk management or statistics
  - CLO 2 apply knowledge in decision analytics, risk management or statistics to solve practical problems in the workplace
  - CLO 3 understand context for specific quantitative skills developed in basic decision analytics, risk management or statistics courses
  - CLO 4 communicate specialist knowledge in decision analytics, risk management or statistics to non-experts in a work environment

**Offer in 2021 - 2022**
Y 1st sem 2nd sem Summer Offer in 2022 - 2023 Y

**Grade Descriptors Distinction/Pass/Fail**
- Distinction: Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.
- Pass: Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of "Distinction".
- Fail: Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or evaluation by supervisor(s), etc.

**Communication-intensive Course**
N

**Course Type**
Internship

**Course Teaching & Learning Activities**
- Activities: Internship work
- Details: it is expected that students are to work at least 160 hours (or equivalent to 4 weeks full-time)
- No. of Hours: 160

**Assessment Methods and Weighting**
- Oral presentation: oral presentation and in-class discussion (40% CLO 1,2,3,4)
- Written report: written report (60% CLO 1,2,3,4)

**Course Website**
http://moodle.hku.hk

**Additional Course Information**
- Upon completion of the internship, each student is required to submit a written report and to give an oral presentation on their internship experience. Supervisors will assess the students based on their performance during the internship period (in the case of internships outside the university, the internal supervisor will assess the student based on the feedback by the external supervisor).
- Satisfactory completion of this course can be counted towards the Capstone requirement. Details of internship will be recorded on the student's transcript. This course will be assessed on "Pass/Fail" basis. Students who are interested to enrol in this course should contact the Department to obtain the approval.
- Enrolment of this course is not conducted via the online course selection system and should be made through the relevant Department/School office after approval has been obtained from the course coordinator.
Course Objectives

This course is offered to actuarial science students who take on a 6-month full time or similar internship. The objective is for a student to complete this course as a project based on his/her internship.

Course Contents & Topics

This course will include a written report which should emphasize important working/ educational experiences encountered by the student during his/her internship. In many situations, this would mean a report of the project(s) that the student has been involved in during his/her internship.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 gain practical experiences during internship
- CLO 2 describe basic actuarial practices learned during the internship
- CLO 3 explain how actuarial theories learned in University can be applied in practice
- CLO 4 provide context for specific technical skills developed in basic actuarial courses

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in at least 24 credits of advanced level disciplinary core/elective courses in BSc(Actuarial Science) programme including STAT3901; and

This capstone course is only for BSc(Actuarial Science) students; and is mutually exclusive with STAT4711.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Offering Department

Statistics & Actuarial Science

Course Co-ordinator

Prof S M S Lee, Statistics & Actuarial Science (smlse@hku.hk)

Teachers Involved

(Various teachers as the assessors of oral presentations and written reports, Statistics & Actuarial Science)

Course Objectives

Each year a few projects suitable for Actuarial Science students will be offered to provide students with practical experience in approaching a real problem, in report writing and in oral presentation.

Course Contents & Topics

These projects, under the supervision of individual staff members, involve the applications of statistics and/or probability in a wide range of problems of practical and/or academic interests.

Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 formulate meaningful research problems
- CLO 2 learn and apply advanced techniques in probability and/or statistics to solve real life problems
- CLO 3 summarize and present research findings in a professional manner

Pre-requisites (and Co-requisites and Impermissible combinations)

- Pass in at least 24 credits of advanced level disciplinary core/elective courses in BSc(Actuarial Science) programme including STAT3902 and STAT3907; and
- Pass or already enrolled in at least one of the following courses: STAT3911, STAT4602, STAT4904; and
- This capstone course is only for BSc(Actuarial Science) students; and subject to the consent of course coordinator.

The course is mutually exclusive with STAT4711.

The earliest that a student is allowed to take this capstone course is their year 3 study.

Offer in 2021 - 2022

Y 1st sem 2nd sem Offer in 2022 - 2023: Y

Grade Descriptors (A to F)

A

- Demonstrate thorough grasp of the subject. Show strong analytical and critical abilities and logical thinking, with evidence of original thought. Insightful use and critical analysis / evaluation of information drawn from a full range of high quality sources and to quote/reference aptly. Critical use of data and results to draw appropriate and insightful conclusions. Apply highly effective organizational and presentational skills. [Work of A+ should show considerable additional work beyond that is required in wider areas relevant to the topic.]

B

- Demonstrate substantial grasp of the subject. Evidence of analytical and critical abilities and logical thinking. Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.

C

- Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to

Critical use of relevant information from sources, showing ability to make meaningful comparisons between different secondary interpretations and to quote/reference aptly. Correct use of data of results to draw appropriate conclusions. Apply effective organizational and presentational skills.

C

Demonstrate general but incomplete grasp of the subject. Evidence of some analytical and critical abilities and logical thinking. Use of relevant information from sources, showing ability to make comparisons between different interpretations and to quote/reference aptly. Mostly correct but some erroneous use of data and results to draw appropriate conclusions. Apply moderately effective organizational and presentational skills.

D

Demonstrate partial but limited grasp, with retention of some relevant information, of the subject. Evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Demonstrate use and reference of several sources, but mainly through summary rather than analysis and comparison. Limited ability to use data and results to draw appropriate conclusions. Apply limited or barely effective organizational and presentational skills.

F

Fail

Demonstrate evidence of little or no grasp of the knowledge and understanding of the subject. Evidence of little or lack of analytical and critical abilities, logical and coherent thinking. Limited use of secondary sources and no critical comparison of them. Misuse of data and results and/or unable to draw appropriate conclusions. Organization and presentational skills are minimally effective or ineffective.

Additional Course

Approval is subject to past academic performance.
Course Objectives
This course is an advanced course in risk theory which extends various topics discussed in STAT3906. It discusses utility theory, ruin theory, aggregate claims process, and related topics.

Course Contents & Topics
Utility theory; discrete ruin model; compound Poisson risk model; ruin probability; reinsurance; adjustment coefficient; Lundbergs inequality; Tijms approximation; non-homogeneous birth process; contagion model; mixed Poisson process; inflation model; IBNR (Incurred But Not Reported) claims; mixed Erlang distributions; stop-loss moments; equilibrium distributions.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand utility theory including some commonly used utility functions, Jensen's inequality, risk aversion and utility maximization.
- CLO 2: define discrete and continuous ruin models.
- CLO 3: calculate the adjustment coefficient, Lundbergs inequality and Tijms approximation in ruin theory.
- CLO 4: understand the effect of reinsurance and change of parameters on ruin probability.
- CLO 5: understand non-homogeneous birth process and its applications as contagion models for claim frequencies.
- CLO 6: understand mixed Poisson process and its applications including the inflation model and the IBNR model.
- CLO 7: derive the relationship between stop-loss moments and equilibrium distributions.

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT3906

Course Objectives
This course is an advanced course in actuarial science which discusses selected topics which potential graduate students will find useful. It focuses on tools that are in the frontier of actuarial risk management with examples on applications.

Course Contents & Topics
The contents will be chosen from the following topics:
- Enterprise risk management; Risk identification and taxonomy; Copulas; Extreme value theory; Applications to risk management with emphasis in insurance; Other topics as determined by the instructor.

Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand, identify and classify different types of risks.
- CLO 2: understand and apply copula to model risk dependence.
- CLO 3: understand and apply extreme value theory.
- CLO 4: explain approaches for managing risks.

Pre-requisites (and Co-requisites)
Pass in STAT3906
## Course Objectives

The purpose of this course is to develop knowledge of the basic techniques for ratemaking and estimating claim liabilities for general insurance. Application of the actuarial techniques to resolve general insurance problems will be emphasized. The course also provides general knowledge on the general insurance markets in Hong Kong and China. Students will acquire the fundamental concept on general insurance actuarial science together with the supporting calculations.

## Course Contents & Topics

1. General Insurance Markets in Hong Kong, Taiwan and PRC
   - Introduction of general insurance markets
   - Regulations on general insurance

2. Basic techniques for ratemaking
   - How to read and use manual rate pages
   - Ratemaking related to exposures
   - Ratemaking related to premiums
   - Ratemaking related to loss and loss adjustment expenses
   - Calculate the underwriting expense provisions
   - Pure premium methods
   - Loss ratio methods
   - Rating differential and relativities
   - Considerations when selecting the final rates

3. Estimating claim liabilities
   - Data requirement
   - Build and analyze claim development triangles
   - Reserving techniques
   - Considerations when estimating the claim liabilities
   - Estimate recoveries and unpaid claim adjustment expenses
   - Appraise and validation of the estimated results

4. Applications using predictive modeling in General Insurance
   - e.g. predictive modeling, Enterprise Risk Management, etc.

## Course Learning Outcomes

On successful completion of this course, students should be able to:

- CLO 1 understand the feature and underlying risk of general insurance products
- CLO 2 calculate the premium rate for basic general insurance products
- CLO 3 estimate the claims liabilities for general insurance products

## Required/recommended reading and online materials

### Course Information

#### Offered Department
Statistics & Actuarial Science

#### Course Co-ordinator
Dr C Wang, Statistics & Actuarial Science (statcw@hku.hk)

#### Teachers Involved
(Dr C Wang, Statistics & Actuarial Science)

#### Course Objectives
To make sense of the vast and complex data sets that have emerged in insurance and finance, it is essential to have a firm understanding of the basic statistical modelling and prediction techniques. This course introduces some useful predictive analytics techniques, such as principal component analysis, naive Bayes, decision tree models, and cluster analysis. The R programming language will be used for actual implementation.

#### Course Contents & Topics
Basics of statistical learning, cross-validation, linear model selection and regularization (subset selection, shrinkage methods, dimensional reduction methods), generalised linear model, tree-based methods (decision trees, bagging, boosting, random forests), principal component analysis, naïve Bayes classification, cluster analysis (K-means clustering, hierarchical clustering).

#### Course Learning Outcomes
On successful completion of this course, students should be able to:

- CLO 1: understand and apply a wide range of predictive analytics techniques for risk modelling
- CLO 2: apply the techniques by using the R programming language and interpret the outputs
- CLO 3: recognize and compare the characteristics, strengths, and weaknesses of different methods

Pre-requisites (and Co-requisites and Impermissible combinations)
Pass in STAT3907 or STAT3600; and
Not for students who have passed in STAT3612, or already enrolled in this course; and
For BSc(Actuarial Science) students only.

This course introduces some statistical concepts and methods which potential graduate students will find useful in preparing for work on a research degree in statistics. Focus is on applications of state-of-the-art statistical techniques and their underlying theory.

Course Contents & Topics
Contents may be selected from:

1. Basic asymptotic methods: modes of convergence; stochastic orders; laws of large numbers; central limit theorems; delta method; Edgeworth expansions; saddlepoint approximations.
2. Parametric and nonparametric likelihood methods: high-order approximations; profile likelihood and its variants; signed likelihood ratio statistics; empirical likelihood.
3. Nonparametric statistical inference: sample quantities; sign and rank tests; Kolmogorov-Smirnov test; nonparametric regression; density estimation; kernel methods.
4. Computationally-intensive methods: cross-validation; bootstrap; permutation methods.
5. Robust methods: measures of robustness; M-estimator; L-estimator; R-estimator; estimating functions.
7. Other topics as determined by the instructor.

Course Objectives

This course aims to give undergraduate and postgraduate students in statistics a background in modern computationally intensive methods in statistics. It emphasizes the role of computation as a fundamental tool of discovery in data analysis, of statistical inference, and for development of statistical theory and methods.

Course Contents & Topics

Contents include: Bayesian statistics, Markov chain Monte Carlo methods including Gibbs sampler, the Metropolis-Hastings algorithm, and data augmentation; Generation of random variables including the inversion methods, rejection sampling, the sampling/importance resampling method; Optimization techniques including Newton’s method, expectation-maximization (EM) algorithm and its variants, and minorization-maximization (MM) algorithms; Integration including Laplace approximations, Gaussian quadrature, the importance sampling method; and other topics such as Hidden Markov models, neural networks, and Bootstrap methods.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO 1 understand the importance of the technique for generating random variables in Bayesian statistics, Monte Carlo integration and bootstrapping methods

CLO 2 realize the advantages and disadvantages of the Newton-Raphson algorithm and the Fisher scoring algorithm and apply them to fit generalized linear models

CLO 3 understand the essence and basic principle of the EM-type algorithms and MM-type algorithms, realize their range of application, and apply them to solve practical problems

CLO 4 apply EM-type algorithms to find the posterior mode and apply Markov chain Monte Carlo methods to generate posterior samples

CLO 5 apply Bootstrap methods to obtain estimated standard errors of estimators and confidence intervals of parameters for both parametric and non-parametric cases

Pre-requisites (and Co-requisites and Impermissible combinations)

Pass in STAT3600 or STAT3907

Offer in 2021 - 2022

Y 1st sem Offer in 2022 - 2023 : Y Examination Dec

Grade Descriptors (A+ to F)

A Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.

### STAT7614

**Advanced statistical modelling (6 credits)**

**Offering Department**: Statistics & Actuarial Science

**Course Co-ordinator**: Prof G Yin, Statistics & Actuarial Science (gyin@hku.hk)

**Teachers Involved**: (Dr E K F Lam, Statistics & Actuarial Science) (Dr Y K Chung, Statistics & Actuarial Science) (Prof G Yin, Statistics & Actuarial Science)

**Course Objectives**: This course introduces modern methods for constructing and evaluating statistical models and their implementation using popular computing software, such as R or Python. It will cover both the underlying principles of each modelling approach and the model estimation procedures.

**Course Contents & Topics**: Topics from: (i) Linear regression models; (ii) Generalized linear models; (iii) Model selection and regularization; (iv) Kernel and local polynomial regression; selection of smoothing parameters; (v) Generalized additive models; (vi) Hidden Markov models and Bayesian networks.

**Course Learning Outcomes**: On successful completion of this course, students should be able to:

- CLO 1: Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the course learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and ability to apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizational and presentational skills.
- CLO 2: Demonstrate substantial command of a broad range of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.
- CLO 3: Demonstrate general but incomplete command of knowledge and skills required for attaining more of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.

- CLO 4: Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.

- CLO 5: Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

**Pre-requisites**

**Required/recommended reading and online materials**

- R.H. Myers et al., 2010: Generalized Linear Models (2nd ed.), Wiley
This course covers statistical methods and models of importance to risk management and finance and links finance theory to market practice via statistical modeling and decision making. Emphases will be put on empirical analyses to address the discrepancy between finance theory and market data.

Course Contents & Topics
Contents include: Elementary Stochastic Calculus; Basic Monte Carlo and Quasi-Monte Carlo Methods; Variance Reduction Techniques; Simulating the value of options and the value-at-risk for risk management; Review of univariate volatility models; multivariate volatility models; Value-at-risk and expected shortfall; estimation, back-testing and stress testing; Extreme value theory for risk management.

Course Learning Outcomes
On successful completion of this course, students should be able to:
- CLO 1 apply Monte Carlo methods to determine the value of options and other derivative securities
- CLO 2 predict volatility of a set of securities using appropriate models
- CLO 3 estimate the value-at-risk under extreme value theory

Degree Regulations
SECTION X  Degree Regulations

REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic year 2017-18 and thereafter, students admitted directly to the second year in the academic year 2018-19 and thereafter, and students admitted directly to the third year in the academic year 2019-20 and thereafter.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1  For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

“Science course” means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

“Advanced Science course” means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

“Course” means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

“Syllabus” means courses taught by departments, centres, and schools, offered under a degree curriculum.

“Credits” or “credit-units” means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2  To be eligible for admission to the BSc degree, candidates shall:

(a) comply with the General Regulations;

(b) comply with the Regulations for First Degree Curricula; and

(c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3  The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

1  This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.
Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

(a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.

(b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.

(c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.

(d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.

(e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).

(f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.

(g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(h) Candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.
Advanced standing

Sc6  Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

Sc7

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.

(e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

Sc8  To be eligible for the award of the BSc degree, candidates shall have:

(a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the regular major programme, or 144 credits (or a higher credit requirement by the accredited bodies) of the prescribed courses in the intensive major programme, of the BSc degree curriculum.
Honours classification

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as ‘Pass’, ‘Fail’ or ‘Distinction’) carrying weightings which are proportionate to their credit values:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>GGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

---

2 For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.
REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic year 2015-16 and 2016-17, students admitted directly to the second year in the academic year 2017-18, and students admitted directly to the third year in the academic years 2017-18 and 2018-19.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1 For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

“Science course” means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

“Advanced Science course” means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

“Course” means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

“Syllabus” means courses taught by departments, centres, and schools, offered under a degree curriculum.

“Credits” or “credit-units” means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

(a) comply with the General Regulations;

(b) comply with the Regulations for First Degree Curricula; and

(c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

1 This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.
Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

(a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.

(b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.

(c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.

(d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.

(e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).

(f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.

(g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(h) Candidates shall be recommended for discontinuation of their studies if they have:

   (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

   (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

   (iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.
**Advanced standing**

**Sc6** Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

**Assessment**

**Sc7**

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.

(e) There shall be no appeal against the results of examinations and all other forms of assessment.

**Award of BSc Degree**

**Sc8** To be eligible for the award of the BSc degree, candidates shall have:

(a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the regular major programme, or 144 credits (or a higher credit requirement by the accredited bodies) of the prescribed courses in the intensive major programme, of the BSc degree curriculum.
Honours classification

Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Graduation GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as ‘Pass’, ‘Fail’ or ‘Distinction’) carrying equal weighting:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>GGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

Honours classification may not be determined solely on the basis of a candidate’s Graduation GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.
REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic years 2014-15, and students admitted directly to the third year in the academic years 2016-17.

(See also General Regulations and Regulations for First Degree Curricula)

---

**Award of BSc Degree**

**Sc8** To be eligible for the award of the BSc degree, candidates shall have:

(a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.
Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as ‘Pass’, ‘Fail’ or ‘Distinction’) carrying equal weighting:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>CGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Cumulative GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.
REGULATIONS FOR THE DEGREE OF BACHELOR OF SCIENCE (BSc)

These regulations apply to students admitted under the 4-year curriculum to the BSc degree curriculum to the first year in the academic year 2013-14, and students admitted directly to the third year in the academic year 2015-16.

(See also General Regulations and Regulations for First Degree Curricula)

Definitions

Sc1 For the purpose of these regulations and the syllabuses for the BSc degree, unless the context otherwise requires:

“Science course” means any course offered by the Faculty of Science, and the School of Biomedical Sciences.

“Advanced Science course” means any level 3, 4 or above course offered by the Faculty of Science and the School of Biomedical Sciences.

“Course” means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

“Syllabus” means courses taught by departments, centres, and schools, offered under a degree curriculum.

“Credits” or “credit-units” means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

Admission to the BSc degree

Sc2 To be eligible for admission to the BSc degree, candidates shall:

(a) comply with the General Regulations;

(b) comply with the Regulations for First Degree Curricula; and

(c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

Period of study

Sc3 The curriculum for the BSc degree shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years.

1 This regulation should be read in conjunction with UG1 of the Regulations for First Degree Curricula.
Selection of courses

Sc4 Candidates shall select their courses in accordance with these regulations and the guidelines specified in the syllabuses before the beginning of each semester. Any change to the selection of courses shall be made only during the add/drop period of the semester in which the course begins, and such changes shall not be reflected in the transcript of the candidate. Requests for changes after the designated add/drop period of the semester shall not be considered.

Curriculum requirements and progression in curriculum

Sc5

(a) Candidates shall satisfy the requirements prescribed in UG5 of the Regulations of First Degree Curricula.

(b) Candidates shall take not fewer than 240 credits, in the manner specified in these regulations and the syllabuses.

(c) Candidates shall take at least 96 credits of Science courses including all required courses of the major programme of the BSc degree curriculum.

(d) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.

(e) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in the curriculum regulations, save as provided for under Sc5(f).

(f) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in the curriculum regulations.

(g) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits will be recorded on the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(h) Candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in Sc3, unless otherwise permitted by the Board of the Faculty.
Advanced standing

**Sc6** Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere in accordance with UG2 of the Regulations for First Degree Curricula. Credits granted for advanced standing will be recorded on the transcript of the candidate but shall not be included in the calculation of the GPA.

Assessment

**Sc7**

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(d) Candidates are required to make up for failed courses in the following manner: repeating the failed course by undergoing instruction and satisfying the assessment, or for elective courses, taking another course in lieu and satisfying the assessment requirements.

(e) There shall be no appeal against the results of examinations and all other forms of assessment.

Award of BSc Degree

**Sc8** To be eligible for the award of the BSc degree, candidates shall have:

(a) satisfied the requirements in UG5 of the Regulations for First Degree Curricula;

(b) passed not fewer than 240 credits, comprising 96 credits of the required courses as prescribed in the major programme of the BSc degree curriculum.
Honours classification

Sc9

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the Degree of BSc in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses, but not including courses approved by the Senate graded as ‘Pass’, ‘Fail’ or ‘Distinction’) carrying equal weighting:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>CGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Cumulative GPA and the Board of Examiners for the Degree of BSc may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.
REGULATIONS FOR FIRST DEGREE CURricula

1 Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2019-20 and thereafter, and students admitted directly to the second year in the academic year 2020-21 and thereafter, and students admitted directly to the third year in the academic year 2021-22)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An ‘academic year’ comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a ‘summer semester’ may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A ‘summer semester’ normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The ‘maximum period of registration’ is equivalent to a period which is 150% of the curriculum’s normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

‘Degree curriculum’ means the entire study requirements for the award of an undergraduate degree.

‘Major programme’ means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

‘Minor programme’ means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

‘Professional core’ refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

‘Course’ means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

‘Disciplinary elective course’ or ‘Disciplinary Elective’ means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

‘Elective course’ or ‘Elective’ means any course offered within the same or another curriculum, other than compulsory courses in the candidate’s degree curriculum, that can be

1 These regulations are applicable to candidates admitted from 2019-20 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.
taken by the candidate in order to complete the credit requirements of the degree curriculum.

‘Capstone experience’ refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

‘Syllabus’ means courses taught by departments, centres, and schools, offered under a degree curriculum.

‘Prerequisite’ means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

‘Corequisite’ means a course which candidates must take in conjunction with the course in question.

‘Credits’ or ‘credit-units’ means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

‘Grade Points’ are standardized measurements of candidates’ academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

‘Grade Point Average’ is a numerical measure of a candidate’s academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The ‘Grade Point Average’ is the sum of these numerical values divided by the total number of credits attempted:

\[ GPA = \frac{\sum_{i} \text{Course Grade Point} \times \text{Course Credit Value}}{\sum_{i} \text{Course Credit Value}} \]

(where ‘i’ stands for all passed and failed courses taken by the student over a specified period)

‘Semester Grade Point Average’ or ‘Semester GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

‘Year Grade Point Average’ or ‘Year GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

‘Cumulative Grade Point Average’ or ‘Cumulative GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

‘Graduation Grade Point Average’ or ‘Graduation GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

‘Assessment’ refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,
reference to ‘examination’ or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of ‘assessment’ and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

(a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and

(b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

(a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.

(b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).

(c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The
number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5  Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

(a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English\(^2\) and 6 credits in an English in the Discipline course\(^3\);

(b) successful completion of 6 credits in Chinese language enhancement\(^4\);

(c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry\(^5\) with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and

(d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6  Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so

---

\(^2\) Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

\(^3\) (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.

(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.

(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

\(^4\) Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

\(^5\) Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.
exempted must replace the number of exempted credits with courses of the same credit value.

**UG 7 Assessment:**

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.

(d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:

(i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or

(ii) re-submitting failed coursework, without having to repeat the same course of instruction; or

(iii) repeating the failed course by undergoing instruction and satisfying the assessments; or

(iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.

(f) There shall be no appeal against the results of examinations and all other forms of assessment.

**UG 8 Grading system:**

(a) The grades, their standards and the grade points for assessment shall be as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Standard</th>
<th>Grade Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>Excellent</td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>
<td></td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td></td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>Good</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td></td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td></td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>Satisfactory</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td></td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td></td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>Pass</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td></td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>Fail</td>
<td>0</td>
</tr>
</tbody>
</table>

6 UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.
(b) Special permission may be given by Senate for courses in individual curricula to be graded as ‘Pass’, ‘Fail’ or ‘Distinction’. Such courses will not be included in the calculation of the GPA.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values.

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>GGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

---

7 UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.
8 For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.
REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2018-19, students admitted directly to the second year in the academic year 2019-20, and students admitted directly to the third year in the academic year 2020-21)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An ‘academic year’ comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a ‘summer semester’ may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A ‘summer semester’ normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The ‘maximum period of registration’ is equivalent to a period which is 150% of the curriculum’s normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

‘Degree curriculum’ means the entire study requirements for the award of an undergraduate degree.

‘Major programme’ means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

‘Minor programme’ means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

‘Professional core’ refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

‘Course’ means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

‘Disciplinary elective course’ or ‘Disciplinary Elective’ means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

‘Elective course’ or ‘Elective’ means any course offered within the same or another
curriculum, other than compulsory courses in the candidate’s degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

‘Capstone experience’ refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

‘Syllabus’ means courses taught by departments, centres, and schools, offered under a degree curriculum.

‘Prerequisite’ means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

‘Corequisite’ means a course which candidates must take in conjunction with the course in question.

‘Credits’ or ‘credit-units’ means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

‘Grade Points’ are standardized measurements of candidates’ academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

‘Grade Point Average’ is a numerical measure of a candidate’s academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The ‘Grade Point Average’ is the sum of these numerical values divided by the total number of credits attempted:

\[
GPA = \frac{\sum_{i} \text{Course Grade Point} \times \text{Course Credit Value}}{\sum_{i} \text{Course Credit Value}}
\]

(where ‘i’ stands for all passed and failed courses taken by the student over a specified period)

‘Semester Grade Point Average’ or ‘Semester GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

‘Year Grade Point Average’ or ‘Year GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

‘Cumulative Grade Point Average’ or ‘Cumulative GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

‘Graduation Grade Point Average’ or ‘Graduation GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

‘Assessment’ refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of
interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to ‘examination’ or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of ‘assessment’ and its related processes.

A ‘transcript’ refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

**UG 2 Advanced standing:**

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

(a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and

(b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

**UG 3 Period of study:**

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

**UG 4 Progression in curriculum:**

(a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.

(b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).

(c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
(iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

(a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English² and 6 credits in an English in the Discipline course³;
(b) successful completion of 6 credits in Chinese language enhancement⁴;
(c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry⁵ with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and
(d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

² Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

³ (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.
(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.
(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

⁴ Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

⁵ Candidates registered for dual degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.
requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG 7 Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.

(d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
   (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
   (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
   (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
   (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.

(f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Standard</th>
<th>Grade Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>Excellent</td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>
<td>Excellent</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td></td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>Good</td>
<td>3.3</td>
</tr>
<tr>
<td>B</td>
<td>Good</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td></td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>Satisfactory</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td></td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>Pass</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>Pass</td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>Fail</td>
<td>0</td>
</tr>
</tbody>
</table>

UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.
(b) Special permission may be given by Senate for courses in individual curricula to be graded as ‘Pass’, ‘Fail’ or ‘Distinction’. Such courses will not be included in the calculation of the GPA.

**UG 9 Honours classifications:**

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores, with all courses taken (including failed courses) carrying equal weighting which are proportionate to their credit values:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>GGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>2.40 – 3.59</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

---

7 UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

8 For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.
REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2017-18, students admitted directed to the second year in the academic year 2018-19 and students admitted directly to the third year in the academic year 2019-20)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An ‘academic year’ comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a ‘summer semester’ may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A ‘summer semester’ normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The ‘maximum period of registration’ is equivalent to a period which is 150% of the curriculum’s normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

‘Degree curriculum’ means the entire study requirements for the award of an undergraduate degree.

‘Major programme’ means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

‘Minor programme’ means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

‘Professional core’ refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

‘Course’ means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

‘Disciplinary elective course’ or ‘Disciplinary Elective’ means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

1 These regulations are applicable to candidates admitted from 2017-18 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.
‘Elective course’ or ‘Elective’ means any course offered within the same or another curriculum, other than compulsory courses in the candidate’s degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

‘Capstone experience’ refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

‘Syllabus’ means courses taught by departments, centres, and schools, offered under a degree curriculum.

‘Prerequisite’ means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

‘Corequisite’ means a course which candidates must take in conjunction with the course in question.

‘Credits’ or ‘credit-units’ means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

‘Grade Points’ are standardized measurements of candidates’ academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

‘Grade Point Average’ is a numerical measure of a candidate’s academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The ‘Grade Point Average’ is the sum of these numerical values divided by the total number of credits attempted:

$$ GPA = \frac{\sum_i Course \ Grade \ Point \times \ Course \ Credit \ Value}{\sum_i Course \ Credit \ Value} $$

(where ‘i’ stands for all passed and failed courses taken by the student over a specified period)

‘Semester Grade Point Average’ or ‘Semester GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

‘Year Grade Point Average’ or ‘Year GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

‘Cumulative Grade Point Average’ or ‘Cumulative GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

‘Graduation Grade Point Average’ or ‘Graduation GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

‘Assessment’ refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of
assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to ‘examination’ or ‘examinations’ in the Ordinance and the Statutes shall include and cover all forms of ‘assessment’ and its related processes.

A ‘transcript’ refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

---

**UG 2 Advanced standing:**

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

(a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and

(b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

---

**UG 3 Period of study:**

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

---

**UG 4 Progression in curriculum:**

(a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.

(b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).

(c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

(a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English\(^2\) and 6 credits in an English in the Discipline course\(^3\);

(b) successful completion of 6 credits in Chinese language enhancement\(^4\);

(c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry\(^5\) with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and

(d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

---

\(^2\) Candidates who have achieved Level 5\(^**\) in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

\(^3\) (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.

(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.

REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic years in 2014-15, 2015-16 and 2016-17, students admitted directed to the second year in the academic year 2017-18, and students admitted directed to the third year in the academic years 2016-17, 2017-18 and 2018-19)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An ‘academic year’ comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a ‘summer semester’ may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A ‘summer semester’ normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The ‘maximum period of registration’ is equivalent to a period which is 150% of the curriculum’s normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

‘Degree curriculum’ means the entire study requirements for the award of an undergraduate degree.

‘Major programme’ means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

‘Minor programme’ means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

‘Professional core’ refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

1 These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year ‘2012 curriculum’, the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BED(LangEd), BED&BSc, BED&BSocSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BCHinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

(The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year ‘2012 curriculum’ can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)
‘Course’ means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

‘Disciplinary elective course’ or ‘Disciplinary Elective’ means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

‘Elective course’ or ‘Elective’ means any course offered within the same or another curriculum, other than compulsory courses in the candidate’s degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

‘Capstone experience’ refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

‘Syllabus’ means courses taught by departments, centres, and schools, offered under a degree curriculum.

‘Prerequisite’ means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

‘Corequisite’ means a course which candidates must take in conjunction with the course in question.

‘Credits’ or ‘credit-units’ means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

‘Grade Points’ are standardized measurements of candidates’ academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

‘Grade Point Average’ is a numerical measure of a candidate’s academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The ‘Grade Point Average’ is the sum of these numerical values divided by the total number of credits attempted:

\[
GPA = \frac{\sum_i \text{Course Grade Point} \times \text{Course Credit Value}}{\sum_i \text{Course Credit Value}}
\]

(where ‘i’ stands for all passed and failed courses taken by the student over a specified period)

‘Semester Grade Point Average’ or ‘Semester GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

‘Year Grade Point Average’ or ‘Year GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

‘Cumulative Grade Point Average’ or ‘Cumulative GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

‘Assessment’ refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate,
reference to ‘examination’ or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of ‘assessment’ and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

UG 2 Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

(a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and

(b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

UG 3 Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

UG 4 Progression in curriculum:

(a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.

(b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).

(c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The
number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

(a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English and 6 credits in an English in the Discipline course;

(b) successful completion of 6 credits in Chinese language enhancement;

(c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits; and

(d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the

2 Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.

(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.

(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

4 Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

5 Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.
requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG 7 Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.

(d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:

   (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
   (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
   (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
   (iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.

(f) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8 Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows:  

<table>
<thead>
<tr>
<th>Grade</th>
<th>Standard</th>
<th>Grade Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>Excellent</td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>
<td>Excellent</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td></td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>Good</td>
<td>3.3</td>
</tr>
<tr>

</tr>
<tr>
<td>D</td>
<td>Pass</td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>Fail</td>
<td>0</td>
</tr>
</tbody>
</table>

6 UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.
(b) Special permission may be given by Senate for courses in individual curricula to be graded as ‘Pass’, ‘Fail’ or ‘Distinction’. Such courses will not be included in the calculation of the GPA.

UG 9 Honours classifications:

(a) Honours classifications shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Cumulative GPA scores, with all courses taken (including failed courses) carrying equal weighting:

<table>
<thead>
<tr>
<th>Class of honours</th>
<th>CGPA range</th>
</tr>
</thead>
<tbody>
<tr>
<td>First Class Honours</td>
<td>3.60 – 4.30</td>
</tr>
<tr>
<td>Second Class Honours</td>
<td>(2.40 – 3.59)</td>
</tr>
<tr>
<td>Division One</td>
<td>3.00 – 3.59</td>
</tr>
<tr>
<td>Division Two</td>
<td>2.40 – 2.99</td>
</tr>
<tr>
<td>Third Class Honours</td>
<td>1.70 – 2.39</td>
</tr>
<tr>
<td>Pass</td>
<td>1.00 – 1.69</td>
</tr>
</tbody>
</table>

(b) Honours classification may not be determined solely on the basis of a candidate’s Cumulative GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Cumulative GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.

(c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

---

7 UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.
REGULATIONS FOR FIRST DEGREE CURRICULA

Regulations for First Degree Curricula (for students admitted under the 4-year curriculum to the first year in the academic year 2013-14, and students admitted directly to the third year in 2015-16)

(See also General Regulations)

UG 1 Definitions:

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An ‘academic year’ comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a ‘summer semester’ may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A ‘summer semester’ normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The ‘maximum period of registration’ is equivalent to a period which is 150% of the curriculum’s normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

‘Degree curriculum’ means the entire study requirements for the award of an undergraduate degree.

‘Major programme’ means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

‘Minor programme’ means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

‘Professional core’ refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

‘Course’ means a course of study, with a credit value expressed as a number of credit-units

---

1 These regulations are applicable to candidates admitted from 2016-17 onwards to the first year of first degree curricula under the 4-year ‘2012 curriculum’, the 2-year curriculum in respect of the BSc(IM), the 5-year curriculum in respect of the BA&BEd(LangEd), BEd&BSc, BEd&BSoSc, BSc(Sp&HearSc), and BNurs, and the 6-year curriculum in respect of the BChinMed, BDS and MBBS. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

(The Regulations for First Degree Curricula applicable to cohorts admitted in 2012-13 and 2013-14 under the 4-year ‘2012 curriculum’ can be found in the Calendar for 2013-14, and in the Calendar for 2014-15 for the cohorts admitted in 2014-15 and 2015-16.)
as specified in the syllabuses for a degree curriculum.
‘Disciplinary elective course’ or ‘Disciplinary Elective’ means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

‘Elective course’ or ‘Elective’ means any course offered within the same or another curriculum, other than compulsory courses in the candidate’s degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

‘Capstone experience’ refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

‘Syllabus’ means courses taught by departments, centres, and schools, offered under a degree curriculum.

‘Prerequisite’ means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

‘Corequisite’ means a course which candidates must take in conjunction with the course in question.

‘Credits’ or ‘credit-units’ means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

‘Grade Points’ are standardized measurements of candidates’ academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

‘Grade Point Average’ is a numerical measure of a candidate’s academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The ‘Grade Point Average’ is the sum of these numerical values divided by the total number of credits attempted:

\[
GPA = \frac{\sum \text{Course Grade Point} \times \text{Course Credit Value}}{\sum \text{Course Credit Value}}
\]

(where ‘i’ stands for all passed and failed courses taken by the student over a specified period)

‘Semester Grade Point Average’ or ‘Semester GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

‘Year Grade Point Average’ or ‘Year GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

‘Cumulative Grade Point Average’ or ‘Cumulative GPA’ is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

‘Assessment’ refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to ‘examination’ or 'examinations' in the Ordinance and the Statutes shall include
and cover all forms of ‘assessment’ and its related processes.

A ‘transcript’ refers to a transcript of the record of study of a candidate, issued by the Registry of the University.

**UG 2  Advanced standing:**

Advanced standing may be granted to candidates in recognition of studies completed successfully in an approved institution of higher education elsewhere. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

(a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and

(b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

**UG 3  Period of study:**

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

**UG 4  Progression in curriculum:**

(a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.

(b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).

(c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.

(d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The
number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

(e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

(i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or

(ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or

(iii) exceeded the maximum period of registration specified in the regulations of the degree.

UG 5 Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

(a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English and 6 credits in an English in the Discipline course;

(b) successful completion of 6 credits in Chinese language enhancement;

(c) successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of courses being selected within one academic year except where candidates are required to make up for failed credits; and

(d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum.

UG 6 Exemption:

2 Candidates who have achieved Level 5** in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, may at the discretion of the Faculty be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

3 (a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates’ home Faculty.

(b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates’ home Faculty.

(c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

4 Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see Regulation UG6.

5 Candidates registered for double degree studies are required to successfully complete 24 credits of courses in the Common Core Curriculum, selecting one course from each Area of Inquiry, within the curriculum of the first degree, as appropriate.
Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

UG 7  Assessment:

(a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.

(b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate’s absence from any examination. Any supplementary examination shall be part of that academic year’s examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

(c) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.

(d) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:

(i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or

(ii) re-submitting failed coursework, without having to repeat the same course of instruction; or

(iii) repeating the failed course by undergoing instruction and satisfying the assessments; or

(iv) for elective courses, taking another course in lieu and satisfying the assessment requirements.

(e) There shall be no appeal against the results of examinations and all other forms of assessment.

UG 8  Grading system:
