# SECTION I Aim and Learning Outcomes

# Degree : Bachelor of Arts and Sciences in Applied Artificial Intelligence

Aim

: The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to recruit excellent students, equip them with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences.

# **Learning Outcomes of Applied AI Programme**

By the end of this programme, students should be able to:

- (1) apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (2) be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (3) acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- (4) communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems
   (by means of coursework and tutorial classes and/or research-based project in the curriculum)

### SECTION II Credit Unit Statement of the BASc(AppledAI) Degree Curriculum

### 1. General guideline for contact hour requirement in the BASc(AppliedAl) Degree Curriculum

- (a) A 6-credit course has around 120 total study hours, including contact hours, study time, assignment and assessment.
- (b) About 30% of the total study hours are actual contact hours in the form of a class, e.g. lecture and tutorial/discussion hours.
- (c) A 6-credit course has around 24-36 lecture hours.
- (d) For lecture-based courses, normally there will be tutorial/discussion sessions.
- (e) For courses employing a non-lecture or lab-based approach, e.g. IT-based or project-based courses, students are expected to devote about 120-180 hours for a 6-credit course, and 240-360 hours for a 12-credit course.
- (f) The total number of student learning hours is 4,800 hours.

### 2. Credit Unit Statement of the BASc(AppliedAl) Degree Curriculum

The BASc(AppliedAI) degree curriculum consists of three major types of courses based on the learning activities. The majority of courses in the programmes are 6 credits. Examples of the contact hour requirements for the three categories of courses are described as follows.

### (a) Lecture-based courses (6 credits)

Contact hours: 24-36 hours of lectures and/or tutorials for 6 credits

These courses are taught predominantly by lectures and tutorials. Assessment is by a combination of examination (0-75%) and continuous assessment (25-100%). Continuous assessment tasks include written assignments (totaling no more than 8,000 words) such as essays and project reports, and oral presentations. The requirement for a 3-credit lecture-based course will be about one-half of that of a 6-credit lecture-based course. Details of the assessment tasks can be found in the description of individual courses.

### (b) Lecture with laboratory component courses (6 credits)

Contact hours for 30-36 hours of lectures and/or tutorial

These courses are taught by a combination of lectures and laboratory/practical sessions. Assessment is by a combination of examination (0-50%) and continuous assessment (50-100%). Continuous assessment tasks include coursework (totalling no more than 8,000 words) such as assignments, essays, laboratory reports, and project reports, and oral presentations. Details of the assessment tasks can be found in the description of individual courses.

### (c) Project-based courses (6 and 12 credits)

These courses aim at providing students with an opportunity to pursue their own research interest under the supervision of a teacher. The teacher normally meets with the student weekly to discuss project progress. Assessment task is normally through research reports or a dissertation (totalling no more than 10,000 words for a 6-credit course and 20,000 words for a 12-credit course). Oral presentation will form part of the assessment. Details of the assessment tasks can be found in the description of individual courses.

### (d) Internship (6 credits)

Internships aim to offer students the opportunity to gain work experience related to their major of study. The teacher meets with the student regularly to discuss work progress. Students have to undertake at least 160 hours of internship work arranged formally. Assessment tasks (100%) normally include the following outputs: a written report of no more than 2000 words, feedback from the internship supervisor and an oral presentation on students' internship experience. Details of the assessment tasks can be found in the description of the individual course.

# SECTION III List of BASc(AppliedAI) Courses\* on offer in 2023/2024 and 2024/2025

# SECTION IV Equivalency of HKDSE and other qualifications

# Table of Equivalence between HKDSE and Other Qualifications

HIZDGE	6.1	Equivalent Qualification to HKDSE										
HKDSE	Grade	IB	GCE	SATII	AP	Gao Kao (高考)						
Biology	3 or above	Biology (SL/HL)	Biology (AL)	Biology	Biology							
Chemistry	3 or above	Chemistry (SL/HL)	Chemistry (AL)	Chemistry	Chemistry							
Physics	3 or above	Physics (SL/HL)	Physics (AL)	Physics	Physics B or C	Equivalent to						
Mathematics	2 or above	Mathematics (SL)/Mathematical Studies (SL)	Mathematics (AL)	Mathematics Level 1 or 2		HKDSE requirements						
Mathematics + (M1 or M2)	2 or above	Mathematics (HL)/Mathematical Studies (HL)	Pure Mathematics (AL) Further Mathematics (AL)		Calculus AB or BC							

Note:

HL: Higher Level SL: Standard Level AL: Advanced Level

### Remarks:

For science students admitted through non-JUPAS scheme, the equivalent subject qualification(s) to HKDSE, if possessed, can be identified by the SIS for on-line course selection.

For any non-science students admitted through non-JUPAS scheme, they are still required to obtain the approval from the Course Selection Adviser (or designated Course Approver) of the course offering department/school via Science Online Application Submission System (OASS) https://webapp.science.hku.hk/intranet/OnlineFormUG.html even they have possessed the equivalent HKDSE subject qualification(s) to meet the course prerequisite requirement. Once approval is given, they need to forward it to their home faculties to add the course on-line.

Offered to students

admitted to Year 1 in

### **Objectives:**

The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to equip students with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences. Students will learn to develop the intellectual capacity essential for meeting new challenges and resolving new problems in the future.

### **Learning Outcomes:**

By the end of this programme, students should be able to:

2023

- PLO 1: apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 2: be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 3: acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 4: communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 5: gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems (by means of coursework and tutorial classes and/or research-based project in the curriculum)

### Impermissible Combinations:

Major in Decision Analytics

This Major will not be offered to non-BASc(AppliedAI) students as a second major.

# Required courses of the Major in Applied Artificial Intelligence (96 credits)

# 1. Introductory Level Disciplinary Core Courses (48 credits)

APAI1001 Artificial intelligence: foundation, philosophy and ethics (6)

COMP1117 Computer programming (6)

COMP2119 Introduction to data structures and algorithms (6)

COMP2120 Computer organization (6)
MATH1013 University mathematics II (6)

MATH2014 Multivariable calculus and linear algebra (6)

STAT2601 Probability and statistics I (6) STAT2602 Probability and statistics II (6)

### 2. Advanced Level Disciplinary Core Courses (18 credits)

COMP3340 Applied deep learning (6)
MATH3904 Introduction to optimization (6)
STAT3612 Statistical machine learning (6)

### 3. Concentration (Disciplinary Electives) (24 credits)

At least 24 credits selected from the following courses:

(For fulfilling the requirement of a concentration, students should choose at least 18 credits, with at least 6 credits of which should be at advanced-level, from the corresponding list)

# (a) Concentration: Al Technology (at least 18 credits)

COMP3271 Computer graphics (6)

COMP3356 Robotics (6)

APAI3010 Image processing and computer vision (6) APAI4011 Natural language processing (6)

APAI4012 High-performance computing (6)
APAI4099 Special topics of applied AI (6)

### (b) Concentration: Al in Business and Finance (at least 18 credits)

COMP3320 Electronic commerce technology (6)

MATH3901 Operations research I (6)
MATH3906 Financial calculus (6)
STAT3613 Marketing analytics (6)
STAT4601 Time-series analysis (6)
APAI4099 Special topics of applied AI (6)

# (c) Concentration: Al in Medicine (at least 18 credits)

STAT3655
Survival analysis (6)
STAT4610
Bayesian learning (6)
APAI3021
Modern biostatistics (6)
APAI4022
Omics data analysis (6)
APAI4023
Medical image analysis (6)
APAI4099
Special topics of applied AI (6)

(d) Concentration: AI in Smart City (at least 18 credits)

### (e) Concentration: Al in Neurocognitive Science (at least 18 credits)

PSYC1001 Introduction to psychology (6) PSYC2007 Cognitive psychology (6)

PSYC2051 Perception (6)

PSYC2066 Foundations of cognitive science (6)
PSYC2067 Seminars in cognitive science (6)
APAI4099 Special topics of applied AI (6)

### **List of Other Elective Courses:**

COMP3250 Design and analysis of algorithms (6)

COMP3278 Introduction to database management systems (6)

MATH3601 Numerical analysis (6) MATH3911 Game theory and strategy (6)

MATH3943 Network models in operations research (6)

STAT3600 Linear statistical analysis (6)
STAT3622 Data visualization (6)
STAT4602 Multivariate data analysis (6)

### 4. Capstone Requirement (6 credits)

At least 6 credits selected from the following courses:

(If students take the 12-credit 'Applied AI project', they do not need to take a 6-credit elective from the 'List of Other Elective' Courses above. On the other hand, students who do not take the 12-credit 'Applied AI project' are allowed to take a course in one of the Concentrations as an elective.)

APAI3799 Directed studies in Applied AI (6)
APAI4766 Applied AI internship (6)
APAI4798 Applied AI project (12)

### Notes:

- 1. Students are expected to be in full-time status for eight academic semesters (in addition to their 6-month or longer full-time internships) in order to fulfill the degree requirements.
- 2. Students may optionally take Majors or Minors outside the BASc(Applied AI) programme, provided that they fully satisfy the requirements.
- 3. Students are reminded to take 3 BASc core courses: BASC9001, DESN9002 and STAT1016 to fulfill the BASc core course requirement.

### Remarks:

Offered to students

admitted to Year 1 in

### **Objectives:**

### 2. Advanced Level Disciplinary Core Courses (18 credits)

COMP3340 Applied deep learning (6)
MATH3904 Introduction to optimization (6)
STAT3612 Statistical machine learning (6)

### 3. Concentration (Disciplinary Electives) (24 credits)

At least 24 credits selected from the following courses:

(For fulfilling the requirement of a concentration, students should choose at least 18 credits, with at least 6 credits of which should be at advanced-level, from the corresponding list)

# (a) Concentration: Al Technology (at least 18 credits)

COMP3271 Computer graphics (6)

COMP3356 Robotics (6)

APAI3010 Image processing and computer vision (6)

APAI4011 Natural language processing (6)
APAI4012 High-performance computing (6)
APAI4099 Special topics of applied AI (6)

### (b) Concentration: Al in Business and Finance (at least 18 credits)

COMP3320 Electronic commerce technology (6)

MATH3901 Operations research I (6)
MATH3906 Financial calculus (6)
STAT3613 Marketing analytics (6)
STAT4601 Time-series analysis (6)
APAI4099 Special topics of applied AI (6)

# (c) Concentration: Al in Medicine (at least 18 credits)

STAT3655 Survival analysis (6)
STAT4610 Bayesian learning (6)
APAI3021 Modern biostatistics (6)
APAI4022 Omics data analysis (6)
APAI4023 Medical image analysis (6)
APAI4099 Special topics of applied AI (6)

# (d) Concentration: Al in Smart City (at least 18 credits)

(e) Concentration: Al in Neurocognitive Science (at least 18 credits)

PSYC1001 Introduction to psychology (6) PSYC2007 Cognitive psychology (6)

PSYC2051 Perception (6)

PSYC2066 Foundations of cognitive science (6)
PSYC2067 Seminars in cognitive science (6)
APAI4099 Special topics of applied AI (6)

**List of Other Elective Courses:** 

COMP3250 Design and analysis of algorithms (6)

COMP3278 Introduction to database management systems (6)

MATH3601 Numerical analysis (6) MATH3911 Game theory and strategy (6)

MATH3943 Network models in operations research (6)

STAT3600 Linear statistical analysis (6)
STAT3622 Data visualization (6)
STAT4602 Multivariate data analysis (6)

4. Capstone Requirement (6 credits)

At least 6 credits selected from the following courses:

(If students take the 12-credit 'Applied AI project', they do not need to take a 6-credit elective from the 'List of Other Elective' Courses above. On the other hand, students who do not take the 12-credit 'Applied AI project' are allowed to take a course in one of the Concentrations as an elective.)

APAI3799 Directed studies in Applied AI (6)
APAI4766 Applied AI internship (6)
APAI4798 Applied AI project (12)

### Notes:

- 1. Students are expected to be in full-time status for eight academic semesters (in addition to their 6-month or longer full-time internships) in order to fulfill the degree requirements.
- 2. Students may optionally take Majors or Minors outside the BASc(Applied AI) programme, provided that they fully satisfy the requirements.
- 3. Students are reminded to take 3 BASc core courses: BASC9001, DESN9002 and (STAT1005/STAT1015) to fulfill the BASc core course requirement.

### Remarks:

Offered to students

admitted to Year 1 in

### **Objectives:**

The aim of this curriculum that spans across Architecture, Engineering, Science and Social Sciences is to equip students with theoretical foundations of artificial intelligence, as well as the necessary problem-solving (both qualitative and quantitative) and analytical skills, and nurture them to transfer interdisciplinary scientific knowledge into a wide range of integrated applications and technological innovations, generating in the process valuable practical experiences. Students will learn to develop the intellectual capacity essential for meeting new challenges and resolving new problems in the future.

### **Learning Outcomes:**

By the end of this programme, students should be able to:

2019

- PLO 1: apprehend the concepts of artificial intelligence and its underlying theory in relation to a broad range of related disciplinary areas (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 2: be proficient with artificial intelligence techniques, and offer effective recommendations for innovative initiatives and solutions (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 3: acquire the necessary critical thinking, creative problem solving and communication skills for effective work and collaboration (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 4: communicate to people effectively and efficiently with professionalism and accuracy (by means of coursework and tutorial classes and/or research-based project in the curriculum)
- PLO 5: gain insights into current advances and comprehensive knowledge of artificial intelligence to solve real-life problems (by means of coursework and tutorial classes and/or research-based project in the curriculum)

### Impermissible Combinations:

Major in Decision Analytics

This Major will not be offered to non-BASc(AppliedAI) students as a second major.

# Required courses of the Major in Applied Artificial Intelligence (96 credits)

### 1. Introductory Level Disciplinary Core Courses (48 credits)

APAI1001 Artificial intelligence: foundation, philosophy and ethics (6)

COMP1117 Computer programming (6)

COMP2119 Introduction to data structures and algorithms (6)

COMP2120 Computer organization (6)
MATH1013 University mathematics II (6)

MATH2014 Multivariable calculus and linear algebra (6)

STAT2601 Probability and statistics I (6) STAT2602 Probability and statistics II (6)

### 2. Advanced Level Disciplinary Core Courses (18 credits)

COMP3340 Applied deep learning (6)
MATH3904 Introduction to optimization (6)
STAT3612 Statistical machine learning (6)

### 3. Concentration (Disciplinary Electives) (24 credits)

At least 24 credits selected from the following courses:

(For fulfilling the requirement of a concentration, students should choose at least 18 credits, with at least 6 credits of which should be at advanced-level, from the corresponding list)

# (a) Concentration: Al Technology (at least 18 credits)

COMP3271 Computer graphics (6)

COMP3356 Robotics (6)

APAI3010 Image processing and computer vision (6)
APAI4011 Natural language processing (6)

APAI4012 High-performance computing (6) APAI4099 Special topics of applied AI (6)

### (b) Concentration: Al in Business and Finance (at least 18 credits)

COMP3320 Electronic commerce technology (6)

MATH3901 Operations research I (6)
MATH3906 Financial calculus (6)
STAT3613 Marketing analytics (6)
STAT4601 Time-series analysis (6)
APAI4099 Special topics of applied AI (6)

### (c) Concentration: Al in Medicine (at least 18 credits)

STAT3655 Survival analysis (6)

STAT3955 Survival analysis (6)

STAT4610 Bayesian learning (6)
APAI3021 Modern biostatistics (6)
APAI4022 Omics data analysis (6)
APAI4023 Medical image analysis (6)
APAI4099 Special topics of applied AI (6)

Take either STAT3655 or STAT3955 to fulfill the requirement; but not both. STAT3655 and STAT3955 are mutually exclusive.

Take either STAT3655 and STAT3955 to fulfill the requirement; but not both. STAT3655 or STAT3955 are mutually exclusvie.

### (d) Concentration: AI in Smart City (at least 18 credits)

URBS1003 Theories and Global Trends in Urban Development (6)
URBS1005 Urban Problems, Interventions and Design Thinking (6)
GEOG2090 Introduction to geographic information systems (6)

GEOG3202 GIS in environmental studies (6)
GEOG3420 Transport and society (6)
APAI4099 Special topics of applied AI (6)

# (e) Concentration: Al in Neurocognitive Science (at least 18 credits)

PSYC1001 Introduction to psychology (6) PSYC2007 Cognitive psychology (6)

PSYC2051 Perception (6)

PSYC2066 Foundations of cognitive science (6)
PSYC2067 Seminars in cognitive science (6)
APAI4099 Special topics of applied AI (6)

### **List of Other Elective Courses:**

COMP3250 Design and analysis of algorithms (6)

COMP3278 Introduction to database management systems (6)

MATH3601 Numerical analysis (6) MATH3911 Game theory and strategy (6)

MATH3943 Network models in operations research (6)

STAT3600 Linear statistical analysis (6) STAT3622 Data visualization (6) STAT4602 Multivariate data analysis (6)

# 4. Capstone Requirement (6 credits)

At least 6 credits selected from the following courses:

(If students take the 12-credit 'Applied AI project', they do not need to take a 6-credit elective from the 'List of Other Elective' Courses above. On the other hand, students who do not take the 12-credit 'Applied AI project' are allowed to take a course in one of the Concentrations as an elective.)

Course Co-ordinator	Dr A S M L	.au, Statistics & Actuaria	al Science (ade	elalau@hku.hk)		
Teachers Involved	(Dr A S M Lau, Statistics & Actuarial Science)					
Course Objectives	Natural language processing (NLP) is a subfield of artificial intelligence, focusing on understanding huma language. In essence, NLP is interested in building a tool that can use language like humans. This course we introduce the mathematical, statistical and computational challenges in natural language processing. It covers material applications of NLP techniques and a range of models in structured prediction and deep learning. In this course students will gain a thorough introduction to cutting-edge machine learning and deep learning techniques for NLP.					
Course Contents & Topics	This course covers a broad range of topics in natural language processing (NLP), including text classific sentiment analysis, neural network, word embedding, sequence models, language models, machine transl topic detection, chatGPT. The underlying techniques from probability, statistics, machine learning, transforme deep learning will also be introduced.					
Course Learning	On succes	sful completion of this o	ourse, student	s should be able to:		
Outcomes	CLO 1	learn about the techn	iques behind r	nodern NLP		
	CLO 2			thods on real-world da	ta

Course Objectives	body at of those in r is to pro- processing information	Medical imaging has been a critical part in modern healthcare procedures. Its primary use is to visualize the huma body at different levels (e.g., at organ, tissue, cell, and molecular levels) using different imaging modalities (e.g those in radiology, pathology, dermatology, ophthalmology, microscopy, and genetics). The objective of this cours is to provide students with an overview of the machine learning and deep learning methods in medical imag processing and analytics. We will study many of the current methods used to enhance and extract useful information from medical images. A variety of medical image diagnostic scenarios will be used as examples to motivate the methods.					
Course Contents & Topics	methods) - An over - An over - Tradition - Basics of	This course covers the basic concepts and computational methods (especially machine learning and deep learning methods) in medical image analysis. Topics covered in this course include but are not limited to:  - An overview of medical imaging modalities, - An overview of medical image analysis applications and their challenges, - Traditional image processing techniques for medical image analysis, - Basics of machine learning/deep learning techniques, - Machine learning/deep learning for medical image analysis, and

APAI4099	Special	Academic Yea	ır 2023				
Offering Department	Statistics & Actuarial Science Quota						
Course Co-ordinator	TBC, Statistics & Actuarial Science (ug_enquiry@saas.hku.hk)						
Teachers Involved	(Guest speakers,)						
Course Objectives	based on (esp. indu	This course aims to cover selective topics of applied AI in various disciplines. Student seminars are to be based on reading the predefined list of research papers. Guest lectures are to be delivered by invited spe (esp. industrial experts) to discuss the cutting-edge AI technologies in business and finance, medicine, smar neurocognitive science and other areas.					
Course Contents & Topics	The follow - Applied A	The following topics will be covered in the course.  - Applied Al technology in investment and trading, risk management  - Applied Al technology in medical diagnosis, health surveillance  - Applied Al technology in transportation optimization and public safety  - Applied Al technology in brain-computer interface  - Applied Al technology in marketing, advertisements, e-commerce  - Applied Al technology in robotics and automation					
Course Learning	On succes	ssful completion of this of	course, students should be able t	0:			
Outcomes							
Pre-requisites (and Co-requisites and Impermissible combinations)	TBC For BASc	(AppliedAI) students onl	y.				
Offer in 2023 - 2024	N Offe	er in 2024 - 2025 : N		Examination			
Grade Descriptors (A+ to F)	В	Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining al learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizeresentational skills.  Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of					
		learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to and some unfamiliar situations. Apply effective organizational and presentational skills.					
	С	Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learn outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to n familiar situations. Apply moderately effective organizational and presentational skills.					
	D	Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcome. Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to app knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.					
	Fail  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problems. Organization and presentational skills are minimally effective or ineffective.

APAI4766	Applied Al internship (6 cred	its)	Academic Year	2023				
Offering Department	Statistics & Actuarial Science		Quota					
Course Co-ordinator	Dr E A L Li, Statistics & Actuarial Sc							
Teachers Involved	(Various teachers as the assessors of oral presentations and written reports, Statistics & Actuarial Science, Mathematics, Computer Science)							
Course Objectives	This course is offered to BASc(AppliedAI) students who take on a minimum of 160 hours of project-driven internship work related to his/her major disciplines. It provides students with first-hand experience in the applications of academic knowledge in a real-life work environment.							
Course Contents & Topics	Upon completion of the internship, each student is required to submit a written report and to give a presentation or his/her internship experience. The report should emphasize important working/educational experiences encountered by the student during his/her internship. In many situations, this would mean a report of the project(s that the student has been involved in during his/her internship.							
Course Learning	On successful completion of this course, students should be able to:							
Outcomes	CLO 1 gain first-hand work experie							
	CLO 2 apply knowledge in applied							
	CLO 3 understand contexts for sp		· · · · · · · · · · · · · · · · · · ·					
	CLO 4 communicate specialist kno							
Pre-requisites (and Co-requisites and Impermissible combinations)	Pass in at least 24 credits of advincluding COMP3340, MATH3904 a This internship course is only for BAThe earliest that a student is allowed.	and STAT3612. ASc(AppliedAI) students.	<b>.</b>	oliedAI) programme				
Offer in 2023 - 2024		•	Examination	No Exam				
Grade Descriptors Distinction/Pass/Fail	Y 1st sem 2nd sem Summer Offer in 2024 - 2025 : Y Examination No Exam  Distinction Demonstrates excellent ability in applying knowledge to solve problems in the workplace. Demonstrates excellent performance in handling and carrying out the work required in the job or assigned by supervisor(s). Establishes highly effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, with excellent performance in written and oral report, and excellent evaluation by supervisor(s), etc.							
	Pass Able to apply knowledge to solve problems in the workplace. Successfully handles and carries out the work required in the job or assigned by supervisor(s). Establishes effective collaboration and communication with supervisor(s), colleagues, and clients in the job. Successfully fulfills the requirements set out in the Course Description regarding working hours, written and oral report, and evaluation by supervisor(s), etc. Students demonstrating excellent performance in the above would be awarded a grade of "Distinction".  Fail Very limited or no ability to solve problems in the workplace. Fails to handle or carry out the work required in the job or assigned by supervisor(s). Fails to establish effective collaboration or communication with supervisor(s), other colleagues, or clients in the job. Fails to satisfy the requirements set out in the Course Description regarding working hours, written and oral report, or							
	evaluation by supervisor(s),

STAT1015	Introduction to data science (	6 credits)	Academic Yea				
Offering Department	Statistics & Actuarial Science		Quota	40			
Course Co-ordinator Teachers Involved	TBC, Statistics & Actuarial Science (	ug_enquiry@saas.hku.hk)					
Course Objectives	The course introduces basic concer	nts and methodology of data scie	nce to junior undergrad	uate students. The			
000.00 0.3,000.1100	The course introduces basic concepts and methodology of data science to junior undergraduate students. Th teaching is designed at a level appropriate for all undergraduate students with various backgrounds and without pre-requisites.						
	Students will engage in a full data spectrum of data science topics, from	n initial investigation and data acqu	isition to the communica	ation of final results.			
Course Contents	Specifically, the course provides exp the purpose of transforming them to prediction and inference. Case stud and analytical abilities of the students - General introduction to data science	o a format suitable for analysis. It i ies involving less-manicured data s.	ntroduces elementary n	otions in estimation			
& Topics	* Overview with selected case stu and types of tools for their analysis.	dies. General discussion on origi	ns and forms of data, a	ssociated question			
	<ul> <li>Data management and exploration</li> <li>* Data sources, data collection a cleaning/extraction; Quick introduce Environment (IDE) (Python, R); Explored data; Data visualization</li> </ul>	ction to high level programming	g language and Integ	rated Developmen			
	- Data analytics  * Complements on programming;  * Statistics (1): model for randomne  * Statistics (2): independent samp with p-value.  * Statistics (3): regression models, f	oles, estimation of mean and varia	ince, confidence interva				
	- STAT1015 Workshops: these work above. Potential topics include adva selection in regression models.						
Course Learning	On successful completion of this cou	rse, students should be able to:					
Outcomes	CLO 1 Explore and wrangle over da	ata; summarize and visualize data					
	CLO 2 Formulate problems and brir	ng elementary concepts in estimati	on, prediction, and inferen	ence to bear			
	CLO 3 Write basic functions and sir	mple data analysis codes using sta	te-of-art computing softv	vare			
	CLO 4 Complete a real data analys	is project using advanced methods					
Pre-requisites	Not for students who have passed in	STAT1005, STAT1016, STAT1018	or already enrolled in th	is course; and			
(and Co-requisites and Impermissible combinations)	This course is exclusive for BASc(Ap	ppliedAI) and BASc(FinTech) stude	nts.				
Offer in 2023 - 2024	N Offer in 2024 - 2025 : N		Examination				
Grade Descriptors (A+ to F)	learning outcomes. Show strong	y at an advanced level of extensive know g analytical and critical abilities and logical lange of complex, familiar and unfamiliar	hinking, with evidence of original	nal thought, and ability to			
	B Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the course learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to familiar and some unfamiliar situations. Apply effective organizational and presentational skills.						
	C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical abilities and logical thinking, and ability to apply knowledge to most familiar situations. Apply moderately effective organizational and presentational skills.  D Demonstrate partial but limited command of knowledge and skills required for attaining some of the course learning outcomes.						
	Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to apply knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.  Fail  Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Lack of analytical and critical abilities, logical and coherent thinking, Show very little or no ability to apply knowledge to solve problems.

STAT2602	Probabil	ity and statistics II	(6 credits)	Academic Year	2023			
Offering Department	Statistics 8							
Course Co-ordinator	Dr D Y Zhang, Statistics & Actuarial Science (doraz@hku.hk)							
Teachers Involved	(Dr D Y Zhang, Statistics & Actuarial Science)							
	(Dr T Wong, Statistics & Actuarial Science)							
Course Objectives	major area	This course builds on STAT2601, introducing further the concepts and methods of statistics. Emphasis is on the two major areas of statistical analysis: estimation and hypothesis testing. Through the disciplines of statistical modelling, inference and decision making, students will be equipped with both quantitative skills and qualitative						
Course Contents		perceptions essential for making rigorous statistical analysis of real-life data.  1. Overview: random sample; sampling distributions of statistics; moment generating function; large-sample						
& Topics	laws of larg 2. Estimati Lower Bou 3. Hypothe Pearson Lo	ge numbers and Centra ion: estimator; bias; m ind; efficiency; method esis testing: types of emma; generalized like	al Limit Theorem; likelihood; sufficience an squared error; standard error; of moments; maximum likelihood est hypotheses; test statistics; p-value; elihood ratio test; Pearson chi-square be level; confidence limits; equal-taile	cy; factorisation criterion; consistency; Fisher inforn imator; size; power; likelihood d test; Wald tests;	mation; Cramer-Rad			
Course Learning	On succes	sful completion of this	course, students should be able to:					
Outcomes	CLO 1 ap	prehend the objective	s of statistics and its relation to proba	bility theory				
	CLO 2 re	late a real-life problem	to a formal framework for statistical i	nference				
	CLO 3 cc	onduct standard param	etric statistical inference by means of	estimation and hypothes	is testing			
	CLO 4 re	ckon the general appli	cability of statistics in a broad range o	of subject areas				
Pre-requisites (and Co-requisites and Impermissible combinations)		AT2601; and dents who have passe	d in STAT3902, or already enrolled in	this course.				
Offer in 2023 - 2024	Y 1st s	sem 2nd sem Offer	in 2024 - 2025 : Y	Examination	Dec May			
Grade Descriptors (A+ to F)	В	Demonstrate thorough mastery at an advanced level of extensive knowledge and skills required for attaining all the learning outcomes. Show strong analytical and critical abilities and logical thinking, with evidence of original thought, and apply knowledge to a wide range of complex, familiar and unfamiliar situations. Apply highly effective organizative presentational skills.  Demonstrate substantial command of a broad range of knowledge and skills required for attaining at least most of the learning outcomes. Show evidence of analytical and critical abilities and logical thinking, and ability to apply knowledge to						
	and some unfamiliar situations. Apply effective organizational and presentational skills.  C Demonstrate general but incomplete command of knowledge and skills required for attaining most of the course learning outcomes. Show evidence of some analytical and critical and interest of spills are apply that the state of the course learning outcomes. Show evidence of some analytical and critical and presentational skills.							
	D	Show evidence of some coherent and logical thinking, but with limited analytical and critical abilities. Show limited ability to appl knowledge to solve problems. Apply limited or barely effective organizational and presentational skills.						
	Pail Demonstrate little or no evidence of command of knowledge and skills required for attaining the course learning outcomes. Logical and critical abilities, logical and coherent thinking. Show very little or no ability to apply knowledge to solve problet Organization and presentational skills are minimally effective or ineffective.

# SECTION VII Degree Regulations

# REGULATIONS FOR THE DEGREE OF BACHELOR OF ARTS AND SCIENCES IN APPLIED ARTIFICIAL INTELLIGENCE [BASc(AppliedAI)]

For students admitted in 2019-2020 and thereafter

(See also General Regulations and Regulations for First Degree Curricula)

#### **Definitions**

AAI 1 In these Regulations, and in the Syllabuses for the degree of BASc(AppliedAI), unless the context otherwise requires

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabus.

'Credits' means the value assigned to each course to indicate its study load relative to the total load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classrooms, and includes contact hours and time spent on assessment tasks and examinations.

'Pre-requisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

This regulation should be read in conjunction with UG 1 of the Regulations for First Degree Curricula.

### Admission to the degree

- AAI 2 To be eligible for admission to the degree of BASc(AppliedAI), candidates shall
  - (a) comply with the General Regulations;
  - (b) comply with the Regulations for First Degree Curricula; and
  - (c) satisfy all the requirements of the curriculum in accordance with these regulations and the syllabuses.

### Period of study

AAI 3 The curriculum shall normally require eight semesters of full-time study, extending over not fewer than four academic years, and shall include any assessment to be held during and/or at the end of each semester. Candidates shall not in any case be permitted to extend their studies beyond the maximum period of registration of six academic years, unless otherwise permitted or required by the Board of the Faculty.

# Curriculum requirements and progression in curriculum

- AAI 4 (a) Candidates shall satisfy the requirements prescribed in UG 5 of the Regulations for First Degree Curricula<sup>1</sup>, except that in the case of the Common Core Curriculum, 24 credits shall be required, comprising one course from each Area of Inquiry. Specific requirements are spelt out in the syllabuses.
  - (b) Candidates shall complete not fewer than 240 credits of courses.

<sup>&</sup>lt;sup>1</sup> Candidates who have achieved Level 5 or above in English Language in the Hong Kong Diploma of Secondary Education Examination (HKDSE), or equivalent, are exempted from taking "CAES1000 Core University English". In exceptional circumstances, strong candidates who have achieved Level 4 may be considered for admission to the curriculum but they will be required to take "CAES1000 Core University English" as supplementary credits and complete 246 credits for graduation from the University.

- (c) Candidates shall successfully complete not fewer than 96 credits of courses for the major, including 66 credits of core courses, 18-24 credits of disciplinary electives, 6-12 credits of capstone experience requirement.
- (d) Candidates shall successfully complete 18 credits of BASc core courses.
- (e) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the final semester of study when the number of outstanding credits required to complete the curriculum requirements may be fewer than 24 credits.
- (f) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load of 288 credits for the normative period of study specified in AAI 3, save as provided for under AAI 4(g).
- (g) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load of 432 credits for the maximum period of registration specified in AAI 3.

### **Selection of courses**

AAI 5 Candidates who wish to change their selection of courses at the beginning of each semester may do so up to 2 weeks after the commencement of the semester. Requests for changes beyond the 2-week deadline will not be permitted, except for medical or other reasons accepted by the Board of the Faculty, and candidates' withdrawal from any course without permission will result in a fail grade.

### Assessment

- AAI 6 Candidates shall be assessed in each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits. Grades shall be awarded in accordance with UG 8 of the Regulations for First Degree Curricula.
- AAI 7 Candidates are required to make up for failed courses in the following manner
  - (a) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
  - (b) re-submitting failed coursework, without having to repeat the same course of instruction; or
  - (c) repeating the failed course by undergoing instruction and satisfying the assessments; or
  - (d) for elective courses, taking another course in lieu and satisfying the assessment requirements.
- AAI 8 Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- AAI 9 There shall be no appeal against the results of examinations and all other forms of assessment.

### **Discontinuation of studies**

AAI 10 Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:

- (a) failed to complete 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters; or
- (b) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester); or
- (c) exceeded the maximum period of registration specified in AAI 3.

#### Absence from examination

AAI 11 Candidates who are unable, because of illness, to be present at the written examinations of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the first semester of the following academic year. Any such application shall normally be made on the form prescribed within seven calendar days of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.

### **Advanced standing**

AAI 12 Advanced standing may be granted to candidates in recognition of studies successfully completed before admission to the University in accordance with UG 2 of the Regulations for First Degree Curricula. Advanced credits shall not normally be included in the calculation of the GPA unless otherwise permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

## Credit transfer

AAI 13 Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total credits normally required under the degree curricula of the candidates during their candidature at the University.

### Award of the degree

- AAI 14 To be eligible for award of the degree of BASc(AppliedAI), candidates shall have
  - (a) achieved a Graduation GPA of 1.00 or above;
  - (b) passed a minimum of 240 credits, comprising 96 credits of the required courses of the Applied Artificial Intelligence major as prescribed in the degree of BASc(Applied AI) curriculum, and 18 credits of BASc core courses; and
  - (c) satisfied the requirements in UG 5 of the Regulations for First Degree Curricula, and specified in AAI 4(a).

### **Honours classification**

AAI 15 (a) Honours classification shall be awarded in five divisions: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduation GPA (GGPA) scores, with all courses taken (including failed courses) carrying weightings which are proportionate to their credit values:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in AAI 15(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all the degree requirements shall be posted on Faculty noticeboards.

# REGULATIONS FOR FIRST DEGREE CURRICULA<sup>1</sup>

(See also General Regulations)

### **UG 1 Definitions:**

For the purpose of regulations and syllabuses for all first degree curricula unless otherwise defined —

An 'academic year' comprises two semesters, the first semester to commence in September and end in December, and the second semester to commence in January and end in May/June, on dates as prescribed by the Senate. It includes, normally at the end of each semester, a period during which candidates are assessed. For some curricula, a 'summer semester' may be organized in addition to the normal two semesters. Clinical curricula have extended semesters.

A 'summer semester' normally comprises seven to eight weeks of intensive timetabled teaching and assessment to commence four weeks after the end of the second semester assessment period, and to conclude about one week before the start of the next academic year.

The 'maximum period of registration' is equivalent to a period which is 150% of the curriculum's normative period of study as specified in the degree regulations, provided that where this results in a residual fraction of an academic year, the fractional period shall be extended to one full academic year.

'Degree curriculum' means the entire study requirements for the award of an undergraduate degree.

'Major programme' means the study requirements, including a capstone experience, for a single major area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 72 credits nor more than 96 credits, as prescribed in the syllabuses for a degree curriculum.

'Minor programme' means the study requirements for a single minor area of disciplinary, interdisciplinary or multidisciplinary study, accumulating not fewer than 36 credits nor more than 48 credits, as prescribed in the syllabuses for a degree curriculum.

'Professional core' refers to the study requirements, including a capstone experience, prescribed in the regulations and syllabuses for disciplinary studies in degree curricula which are not structured as major/minor programmes for reasons relating to professional qualification and/or accreditation.

'Course' means a course of study, with a credit value expressed as a number of credit-units as specified in the syllabuses for a degree curriculum.

'Disciplinary elective course' or 'Disciplinary Elective' means any course offered in the same major or minor programme or the professional core which can be taken by candidates to fulfill the curriculum requirements as specified in the syllabuses of the degree curriculum.

'Elective course' or 'Elective' means any course offered within the same or another curriculum, other than compulsory courses in the candidate's degree curriculum, that can be taken by the candidate in order to complete the credit requirements of the degree curriculum.

'Capstone experience' refers to one or more courses within the major programme or professional core which are approved by the Board of the Faculty for the purpose of

<sup>&</sup>lt;sup>1</sup> These regulations are applicable to candidates admitted from 2022-23 onwards. Reference in these regulations to the powers of the Boards of Faculties shall be applicable to Senate Boards of Studies which administer first degree curricula.

integrating knowledge and skills acquired, and which are prescribed in the syllabuses of the degree curriculum.

'Syllabus' means courses taught by departments, centres, and schools, offered under a degree curriculum.

'Prerequisite' means a course or a group of courses which candidates must have completed successfully or a requirement which candidates must have fulfilled before being permitted to take the course in question.

'Corequisite' means a course which candidates must take in conjunction with the course in question.

'Credits' or 'credit-units' means the value assigned to each course to indicate its study load relative to the total study load under a degree curriculum. The study load refers to the hours of student learning activities and experiences, both within and outside the classroom, and includes contact hours and time spent on assessment tasks and examinations. Candidates who satisfactorily complete courses with a credit value earn the credits assigned to these courses.

'Grade Points' are standardized measurements of candidates' academic achievement in courses taken to satisfy the requirements of the degree curriculum and are expressed as a scale prescribed in these regulations.

'Grade Point Average' is a numerical measure of a candidate's academic achievement over a specified period of time. Each course attempted (including each failed course) is assigned a numerical value, with all courses carrying equal weighting. This numerical value is the product of grade points earned for the course and the credit value of that course. The 'Grade Point Average' is the sum of these numerical values divided by the total number of credits attempted:

$$GPA = \frac{\sum\limits_{i}^{\Sigma} Course\ Grade\ Point \times Course\ Credit\ Value}{\sum\limits_{i}^{\Sigma} Course\ Credit\ Value}$$

(where 'i' stands for all passed and failed courses taken by the student over a specified period)

'Semester Grade Point Average' or 'Semester GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given semester.

'Year Grade Point Average' or 'Year GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) during a given academic year.

'Cumulative Grade Point Average' or 'Cumulative GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the time of calculation.

'Graduation Grade Point Average' or 'Graduation GPA' is the GPA in respect of courses attempted by a candidate (including failed courses) at the point of graduation. For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core courses with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

'Assessment' refers to judgment about the quality and extent to which a student has achieved the stated learning objectives or learning outcomes. It includes all types of assessment activities which allow for such a judgment to be made. For the purpose of interpreting the relevant provisions of the Ordinance and the Statutes and where appropriate, reference to 'examination' or 'examinations' in the Ordinance and the Statutes shall include and cover all forms of 'assessment' and its related processes.

A 'transcript' refers to a transcript of the record of study of a candidate, issued by the

# **UG 2** Advanced standing:

Advanced standing may be granted to candidates in recognition of studies completed successfully before admission to the curriculum. Candidates who are awarded Advanced Standing will not be granted any further credit transfer for those studies for which Advanced Standing has been granted. The amount of credits to be granted for advanced standing shall be determined by the Board of the Faculty, in accordance with the following principles:

- (a) at least half the number of credits of the degree curriculum normally required for award of the degree shall be accumulated through study at this University or from transfer of credits for courses completed at other institutions in accordance with Regulation UG 4(d); and
- (b) in accordance with Statute III.5 and notwithstanding the granting of advanced and/or transfer credits, a minimum of two semesters of study at this University shall be required before a candidate is considered for the award of a first degree, other than a degree in medicine or surgery, and a minimum of four semesters of study at this University shall be required before a candidate is considered for a first degree in medicine or surgery.

Credits granted for advanced standing shall not normally be included in the calculation of the GPA unless permitted by the Board of the Faculty but will be recorded on the transcript of the candidate.

# **UG 3** Period of study:

The period of study of the curriculum shall be specified in the regulations governing the degree. To be eligible for award of the degree, a candidate shall fulfill all curriculum requirements within the maximum period of registration, unless otherwise permitted or required by the Board of the Faculty.

# **UG 4** Progression in curriculum:

- (a) Candidates shall normally be required to take not fewer than 24 credits nor more than 30 credits in any one semester (except the summer semester) unless otherwise permitted or required by the Board of the Faculty, or except in the last semester of study when the number of outstanding credits required to complete the curriculum requirements is fewer than 24 credits.
- (b) Candidates may, of their own volition, take additional credits not exceeding 6 credits in each semester, and/or further credits during the summer semester, accumulating up to a maximum of 72 credits in one academic year. With the special permission of the Board of the Faculty, candidates may exceed the annual study load of 72 credits in a given academic year provided that the total number of credits taken does not exceed the maximum curriculum study load for the normative period of study specified in the curriculum regulations, save as provided for under UG4(c).
- (c) Where candidates are required to make up for failed credits, the Board of the Faculty may give permission for candidates to exceed the annual study load of 72 credits provided that the total number of credits taken does not exceed the maximum curriculum study load for the maximum period of registration specified in the curriculum regulations.
- (d) Candidates may, with the approval of the Board of the Faculty, transfer credits for courses completed at other institutions at any time during their candidature. The number of transferred credits may be recorded in the transcript of the candidate, but the results of courses completed at other institutions shall not be included in the calculation of the GPA. The number of credits to be transferred shall not exceed half of the total

- credits normally required under the degree curricula of the candidates during their candidature at the University.
- (e) Unless otherwise permitted by the Board of the Faculty, candidates shall be recommended for discontinuation of their studies if they have:
  - (i) failed to complete successfully 36 or more credits in two consecutive semesters (not including the summer semester), except where they are not required to take such a number of credits in the two given semesters, or
  - (ii) failed to achieve an average Semester GPA of 1.0 or higher for two consecutive semesters (not including the summer semester), or
  - (iii) exceeded the maximum period of registration specified in the regulations of the degree.

# **UG 5** Requirements for graduation:

To be eligible for admission to the degree, candidates shall fulfill the following requirements in addition to the requirements prescribed in the regulations and syllabuses governing the degree curriculum within the maximum period of registration:

- (a) successful completion of 12 credits in English language enhancement, including 6 credits in Core University English<sup>2</sup> and 6 credits in an English in the Discipline course<sup>3</sup>;
- (b) successful completion of 6 credits in Chinese language enhancement<sup>4</sup>;
- (c) unless otherwise prescribed in the curriculum regulations and syllabuses, successful completion of 36 credits of courses in the Common Core Curriculum, comprising at least one and not more than two courses from each Area of Inquiry with not more than 24 credits of course being selected within one academic year except where candidates are required to make up for failed credits;
- (d) successful completion of a capstone experience as specified in the syllabuses of the degree curriculum; and
- (e) successful completion of any other non-credit bearing courses as required.

# **UG 6** Exemption:

Candidates may be exempted, with or without special conditions attached, from any of the requirements in UG 5 by the Senate in exceptional circumstances. Candidates who are so exempted must replace the number of exempted credits with courses of the same credit value.

- (b) Candidates declaring double Majors can, if they fail in the ED course for one of the Majors, either (i) re-take and successfully complete that failed ED course, or (ii) successfully complete the ED course for the other Major, irrespective of whether the Major is offered within or outside of the candidates' home Faculty.
- (c) Candidates who undertake studies in double Majors or double degrees are not required to take a second ED course but may be advised by the Faculty to do so.

<sup>&</sup>lt;sup>2</sup> Candidates who have achieved Level 5 or above in English Language in the Hong Kong Diploma of Secondary Education Examination, or equivalent, are exempted from this requirement, and Core University English is optional. Those who do not take this course should take an elective course in lieu, see *Regulation UG6*.

<sup>3 (</sup>a) To satisfy the English in the Discipline (ED) requirement, candidates who have passed the ED course for a Major but subsequently change that Major are required to pass the ED course for the new Major, or either of the double Majors finally declared upon graduation irrespective of whether the second Major is offered within or outside of the candidates' home Faculty.

<sup>&</sup>lt;sup>4</sup> Candidates who have not studied Chinese language during their secondary education may be exempted from this requirement and should take an elective course in lieu, see *Regulation UG6*.

### **UG 7** Assessment:

- (a) Candidates shall be assessed for each of the courses for which they have registered, and assessment may be conducted in any combination of continuous assessment of coursework, written examinations and/or any other assessable activities. Only passed courses will earn credits.
- (b) Candidates who are unable, because of illness, to be present at the written examination of any course may apply for permission to present themselves at a supplementary examination of the same course to be held before the beginning of the First Semester of the following academic year. Any such application shall be made on the form prescribed within two weeks of the first day of the candidate's absence from any examination. Any supplementary examination shall be part of that academic year's examinations, and the provisions made in the regulations for failure at the first attempt shall apply accordingly.
- (c) Candidates suspended under Statute XXXI shall not be allowed to take, present themselves for, and participate in any assessments during the period of suspension, unless otherwise permitted by the Senate.
- (d) Candidates shall not be permitted to repeat a course for which they have received a D grade or above for the purpose of upgrading.
- (e) Candidates are required to make up for failed courses in the following manner as prescribed in the curriculum regulations:
  - (i) undergoing re-assessment/re-examination in the failed course to be held no later than the end of the following semester (not including the summer semester); or
  - (ii) re-submitting failed coursework, without having to repeat the same course of instruction; or
  - (iii) repeating the failed course by undergoing instruction and satisfying the assessments; or
  - (iv) for elective courses, taking another course *in lieu* and satisfying the assessment requirements.
- (f) There shall be no appeal against the results of examinations and all other forms of assessment.

# **UG 8** Grading system:

(a) The grades, their standards and the grade points for assessment shall be as follows<sup>5</sup>:

Grade		Standard	Grade Point
A+	1		4.3
A	}	Excellent	4.0
A-	J		3.7
B+	)		3.3
В	}	Good	3.0
B-	J		2.7
C+	)		2.3
C	}	Satisfactory	2.0
C-	J	•	1.7
D+	l	Pass	1.3
D	ſ	rass	1.0
F		Fail	0

(b) Special permission may be given by Senate for courses in individual curricula to be graded as 'Pass', 'Fail' or 'Distinction'. Such courses will not be included in the calculation of the GPA.

<sup>&</sup>lt;sup>5</sup> UG 8 is not applicable to the respective Professional Core of the BDS and MBBS curricula.

## **UG 9** Honours classifications:

(a) Honours classifications shall be awarded in five divisions<sup>6</sup>: First Class Honours, Second Class Honours Division One, Second Class Honours Division Two, Third Class Honours, and Pass. The classification of honours shall be determined by the Board of Examiners for the degree in accordance with the following Graduate GPA scores (GGPA), with all courses taken (including failed courses) carrying weightings which are proportionate to their credit values<sup>7</sup>:

Class of honours	GGPA range
First Class Honours	3.60 - 4.30
Second Class Honours	(2.40 - 3.59)
Division One	3.00 - 3.59
Division Two	2.40 - 2.99
Third Class Honours	1.70 - 2.39
Pass	1.00 - 1.69

- (b) Honours classification may not be determined solely on the basis of a candidate's Graduation GPA and the Board of Examiners for the degree may, at its absolute discretion and with justification, award a higher class of honours to a candidate deemed to have demonstrated meritorious academic achievement but whose Graduation GPA falls below the range stipulated in UG9(a) of the higher classification by not more than 0.1 Grade Point.
- (c) A list of candidates who have successfully completed all degree requirements shall be posted on Faculty noticeboards.

<sup>&</sup>lt;sup>6</sup> UG 9 is not applicable to the BChinMed, BDS and MBBS curricula.

<sup>&</sup>lt;sup>7</sup> For students in the 2017-18 intake and thereafter who have successfully completed six Common Core courses, the calculation of Graduation GPA is subject to the proviso that either five Common Core course with the highest grades (covering all four Areas of Inquiry), or all six courses will be counted towards Graduation GPA, depending on which generates the higher Graduation GPA.

# SECTION VIII Teaching Weeks

Teaching Weeks 2023-24 for Undergraduate and Taught Postgraduate Students

	SUN	MON	TUE	WED	THUR	FRI	SAT	FIRST SEMESTER: SEP 1 - DEC 23, 2023	Week
						1	2	First Day of Teaching: Sep 1, 2023	1
